PREFACE

The purpose of this bibliographical series is to supply descriptions of the outstanding scientific, medical and technical books written by citizens of Canada and the United States of America, published in the U S A., and available for both domestic and foreign distribution. Its origins are fully described in the Preface to the first volume published in 1946 under the title "Scientific, Medical and Technical Books Published in the United States of America 1930–1944 a Selected List of Titles in Print, with Annotations edited by R. R. Hawkins."

A primary motive in the establishment of the series was the furthering of cultural relations between the United States of America and other nations. Experience with the first volume and its supplement has shown that the series has considerable usefulness in our own country as well as in foreign countries. The original work represented a selection from books published during fifteen years, 1930–1944 The first supplement, published in 1950 provided a selection of books published in original or substantially revised editions during the years 1945–1948 This second supplement describes a selection of books published in original or substantially revised editions during the years 1949–1952

The scope in regard to kinds of publications is the same as in the 1930–1944 and 1945–1948 compilations. Again, books published in regular book trade channels predominate. Monographs, symposia and papers published by American scientific and technical societies are included, but these are not so fully presented as trade books primarily because many such publications are printed for members of the publishing society and for exchange with other societies rather than for general distribution. A selection of documents published by the National Government is included, but the publications of state and local governments are not represented, except for books published by state university presses and distributed through established book trade channels. Manufacturer's publications except for one or two titles have been excluded. Suggestions as to other sources of information about American publications in these categories are given in the Introduction to the original volume.

The subject scope of this work is indicated in the title and in more detail in the Table of Contents. Medicine, the pure and applied sciences, and technology are covered, but there are certain exceptions. The social sciences are omitted except for certain works in such fields as nursing and psychology where some books which are listed are equally useful for sociological and technical information. A few small areas of technology for example the technical aspects of printing and allied arts are not covered at all and other semi technical fields of which gardening is an example are covered less thoroughly than such fields as electrical engineering. In these semi-technical fields the editorial policy was to include the books of good quality which were turned up in the course of work on other parts of the list but not to pursue the subjects to the extent of special research. No books are listed in the second supplement under the headings, Fire arms Military Science or Naval Science. These topics were dropped because so much of the current literature that has research value is not available for general distribution.

Several new headings have been added. Most of them were made necessary by the appearance of a substantial body of literature on topics having little or no book literature when the earlier compilations were made. One heading—Handicrafts—has been added because there appeared to be a considerable interest abroad in the outstanding American books written for amateur craftsmen.

As in the original volume, the selection in most fields of knowledge is a liberal one. Throughout the selection process the aim has been to choose the books of merit among those which met the gross qualifications of date of publication, author's citizenship and availability The selections on a given subject are intended to represent the books that would be available in a well-stocked American library with an active collection in that subject. The list should be viewed as one of important and useful books rather than a list of 'best books.

Elementary and secondary school textbooks and books written on these educational levels have been excluded but well-written books for lay readers and a select number of vocational school textbooks have been included. Among these books, preference has been given to books

suitable for home reading and self-instruction. Well-established college textbooks and new texts which possess useful novel features have been included because of the usefulness of such books in libraries and to some persons no longer attending schools but no effort was made to include all or even most of the 'standard" texts currently used in American colleges and universities.

Books known to be out of print when the manuscript of the first volume in our series was ready for the printer were omitted from it. Both the first and this second supplement also are primarily lists of in print books. However, because shorter periods are covered and also because of a change in the routine of sending the manuscript to press, somewhat less attention was paid to eliminating all known out-of print books If it was discovered that a book was not available before the manuscript description was mailed to the printer the book was dropped but if the discovery was made after the description was set in type, the type was sometimes allowed to stand. The traditional o.p." standing for out-of print" therefore appears in place of the price in a few of the descriptions in this volume.

Although most American publishers cooperated wholeheartedly with the Committee and the Editor in the supplying of information and of copies of their books for examination, several ignored our requests or failed to supply examination copies. Since the editorial procedure required examination of the books, a few titles are not listed because no copy was available to the editorial staff

The procedure of selection was as follows As the first step the Editor and his staff read through the comprehensive *Cumulative Book Index* and selected lists such as *United States Quarterly Book List Science News Letter* and *New Technical Books* and made out slips for all of the books which appeared to be eligible. These slips were arranged by publishers. A statement of the purpose of the Committee's work and the general eligibility requirements was drawn up. Each publisher represented in the preliminary lists was sent a copy of this statement together with the list of books published by him which appeared to be eligible. The publishers were asked to eliminate any books which did not meet the Committee's general requirements for eligibility for example, those by foreign authors, and were asked to suggest additional titles which appeared to be eligible. Examination copies of all books to be considered were requested.

When the books were received, they were examined by the Editor and his associates Books which were patently ineligible were eliminated at this stage. Descriptions similar to and in many cases identical with, the descriptions in the present book were prepared for the books which survived this preliminary test. Next, these descriptions were classified by subject and the subject lists were sent to specialists in various fields who had agreed to act as consultants to the Committee. Our consultants made many valuable suggestions, both as to books which could be dropped from the lists and books which should be added. Several of them even undertook the rewriting of some of the annotations in order to improve the accuracy of the descriptions.

Eventually the final selection of books was made by the Editor on the basis of his own judgment, the reviews in periodicals and the recommendations of the consultants. The Editor is responsible also for the final form of the notes. As is customary he assumes the responsibility for all of the faults of the selections and the book descriptions. Nevertheless whatever excellent qualities the work has are definitely the result of collaboration among the Editor his assistants, the Committee, and the consultants.

Classification of scientific and technical literature is a vexatious problem which constantly grows more difficult as areas of knowledge which once had fairly definite boundaries tend to merge with adjacent areas. Classification of a comprehensive small list is even more difficult than classification of a comprehensive large list. Furthermore, the principles of good typography made it inadvisable to set up either a main heading or a subheading and enter only one or two books under it. Accordingly many of the subheadings found in our previous volumes are not present in this supplement. In several fields the subheading "General now includes several very specialized books which were not numerous enough to justify specific subheadings. In some instances it proved necessary to telescope several of the subgroups formerly used An effort was made in the preparation of the subject index to compensate for inadequacies of the classification.

The bibliographical descriptions and abbreviations used in the first volume proved to be adequate and have been repeated without change in this one. In most cases no attention has been paid to preliminary matter included before the start of the main paging, hence the number of pages given represents the body of

Preface

the book. However when two sets of pages are indicated, for example, "143 21 p." supplementary paging has been noted. Illustrative material is described simply Any graphic or pictorial matter aside from printed text has been indicated by the phrase "Illus." Colored illustrations have been indicated by the abbreviation "col d." Colored illustrations combined with black and white are indicated by "(part col d)" The only dimension included is height, expressed in centimeters, abbreviated "cm." When binding is not described cloth or other "hard" binding can be assumed in most cases. Paper bindings were indicated when it was known to the editor that the books were supplied only in paper When both paper and cloth bindings are available both bindings are listed with their respective prices.

All publishers were asked to supply the current prices of their books and also to indicate any special prices or additional charges made to buyers in other countries. The prices given in the printed work represent the information supplied by the publishers but not all publishers were careful to supply information on foreign charges. Prices in this book are therefore not guaranteed. Inquiries about current prices should be made of the publisher in all cases where it is essential to have an accurate price.

The headings listed under *"Contents"* have been taken directly from the books. When it was necessary to abridge the table of contents of a book, an effort was made to select headings which illustrate the book's scope and special features. The notes are designed to supplement the information given out in the *titles and tables of contents especially to bring* out unusual features, indicate uses and reader groups not indicated in the titles and to mention the more significant changes in new editions. The number or numbers that follows the word *"Note"* is a reference to a numbered entry in our original volume or the first supplement a plain number indicates the original volume—a number followed by an asterisk, the first supplement. In most instances the reference is to a description of an earlier edition. In a few cases, the reference is made to a description of a companion or related book. Some of the notes were taken with little or no change from the New York Public Library's bimonthly *New Technical Books* As already mentioned a few were written or revised by our consultants. All of the others were written by the editor and his staff

As in the preparation of the original work and the first supplement, an Executive Subcommittee acted for the larger Committee in overseeing preparation of the manuscript and its printing Of this group Dr Fulton gave judicious advice on editorial matters and Mr Crane kept all questions concerning finance from falling on the Editor's shoulders.

Again Mr Daniel C. Haskell assumed and carried out the tasks of marking copy for the printing and reading the proofs of the whole book. Jack E. Brown compiled the author and subject indexes supervised the organization of part of the manuscript, and wrote some of the notes. Joseph C. Borden as usual, contributed many notes. The Editor's secretary Mrs. Joan Dunn carried the major burden of "keeping track of things" the letters to publishers, the arrival of books the whereabouts of various portions of the manuscript, in addition to doing most of the typing.

The following persons, in addition to the Committee, gave advice or served as consultants and the thanks of both the Editor and the Committee are gratefully extended to them

Scientific, Medical, and Technical Books

SCIENCE

GENERAL

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

Centennial collected papers presented at the centennial celebration, Washington D C., September 13–17 1948. Washington American *Association for the Advancement of Science*, 1950 313 p. illus. 27 cm. $5.00 1

Contents: Sciences of society: Is economics necessary? by K. E. Boulding. Have civilizations a life history? by A. L. Kroeber. Sociology and the strategy of social science, by S. A. Stouffer. Science and the control of human population, by W S. Thompson. Educational potentials: Growth potentials of the human infant, by A. Gesell. The social environment of the educational process, by T. Parsons. Educability and the schools, by R. W Tyler. Human individuality: The human frontier, by R. J. Williams. Primary mental abilities, by L. L. Thurstone. The genetic approach to human individuality by L. H. Snyder. The individual and the culture process, by L. A. White. Nutrition: Nutrition and the climatic pattern of soil development, by W A. Albrecht. Seven decades of nutrition research, by A. C. Elvehjem. Cultural contexts of nutritional patterns, by M. Mead. Housing: Housing—where the natural and social sciences meet, by B. J. Hovde. The contribution of science to housing, by L. W Hamann. Housing in the redevelopment of American cities, by C. Woodbury World health problems: The global concept of disease, by E. C. Faust. Public health in the international scene, by L. A. Scheele. Medical research—operation humanity by A. C. Ivy. The influence of modern developments in nuclear energy on public health problems, by S. L. Warren. Science, psychiatry survival, by K. E. Appel. Sources of energy: Solar energy by F Daniels. Energy from fossil fuels, by M. K. Hubbert. Atomic energy by E. P Wigner. The upper atmosphere: The sun and the earth, by D. H. Menzel. The circulation of the upper troposphere and lower stratosphere, by C. G. Rossby and H. C. Willett. The world's natural resources: On living in the biosphere, by G. E. Hutchinson. Plants and agriculture as exhaustible resources, by S. A. Cain. Biological problems of the ocean, by D. Merriman. Wood in an industrial world, by J. A. Hall. The exploitation of mineral resources, by T S. Lovering. Genes and cytoplasm: Genes as determiners of cellular biochemistry by D M. Bonner The role of cytoplasm in heredity by T M. Sonneborn. The effects of changes in quantity combination, and position of genes, by C. Stern. High polymers: Polyelectrolytes, by R. M. Fuoss. Structure and behavior of rubberlike substances, by H. M. James. Interactions of matter and radiation The elementary particles of physics, by C. D. Anderson. Oxygen isotopes in nature and in the laboratory by H. C. Urey New worlds for study by J. Hillier Waves and rhythms: Rhythmic behavior of the nervous system, by H. Hoagland. Sound waves and rhythms, by V O. Knudsen.

Note: Some of the papers in the volume were published previously elsewhere, but the majority are original.

BAITSELL GEORGE ALFRED editor

The centennial of the Sheffield Scientific School. New Haven Yale University Press, 1950. 206 p. illus. 24 cm. (Yale University Mrs. Hepsa Ely Silliman Memorial Lectures) $3.00 2

Contents: High energy physics, by E. O. Lawrence. Chemical achievement and hope for the future, by L. Pauling. Virus research—achievement and promise, by W M Stanley Genes and biological enigmas, by G. W Beadle. Citations for honorary degrees, by E. W Sinnott. The Sheffield Scientific School from 1847 to 1947, by C. H. Warren. Science and the whole man, by E. W Sinnott. Benjamin Silliman in his lighter moments, by J F Fulton. Greetings, by C. Seymour. The relationship of the Sheffield School to agriculture, by H. R. Vickery *Centennial greetings to the Sheffield Scientific School from Sigma Xi*, by G. A. Baitsell.

Note: The first four papers in this volume constitute the twenty-ninth series of the Mrs. Hepsa Ely Silliman Memorial Lectures. They are addressed primarily to educated laymen and they summarize significant recent advances in several scientific fields. The rest of the volume consists of special addresses on the occasion of the Centennial of the Sheffield Scientific School, the establishment of which in 1847 marked "the acceptance of science in America as an important and necessary part of education and of life in general.

BAITSELL, GEORGE ALFRED editor

Science in progress. Sixth series. New Haven Yale University Press, 1949 322 p. illus. 24 cm. (The Society of the Sigma Xi. National lectureships 1947 and 1948 and the Silliman lectures 1947) $5.00. 3

Contents: Preface, by G. A. Baitsell. From X-rays to nuclear fission, by H. D. Smyth. Elementary particle physics, by J. A. Wheeler High energy physics, by E. O. Lawrence. The eight new synthetic elements, by G. T Seaborg. Chemical achievement and hope for the future, by L. Pauling. Chromatography and spectroscopy in organic chemistry and stereochemistry by L. Zechmeister. Virus research: achievement and promise, by W M. Stanley The tubercle bacillus and tuberculosis, by R. J. Dubos. Genes and biological enigmas, by G. W Beadle. The evolution and function of genes, by A. H. Sturtevant. Modern soil science, by C. E. Kellogg. References. Index.

—— Science in progress. Seventh series. New Haven Yale University Press, 1951 512 pp. 26 cm. (The Society of the Sigma Xi. National lectureships, 1949 and 1950) $6.00 4

Contents: The first heart beats and the beginning of embryonic circulation, by B. M. Patten. The reproductive cycle of the rhesus monkey by G. W Corner. Human infancy and the embryology of behavior by A. Gesell. Radiation damage to the genetic material, by H. J. Muller Beyond the gene—two years later by T M. Sonneborn. The macromolecular structure of biological materials, by R. W G. Wyckoff. The elementary particles of physics, by C. D. Anderson. Atomic and solar energy F Daniels. Atomic structure and energy by J. R. Dunning. The theory of bonds, by E. Artin. History of the fauna of Latin America, by G. G. Simpson. The physical chemistry of polymers, by R. M. Fuoss. References. Index.

Note: (5th) Each volume of this series contains papers developed from lectures delivered under the sponsorship of the Society of the Sigma Xi at leading American universities. The purpose is to enable outstanding scientists to report on the progress being made in various fields of scientific research and to describe their own recent work. As in the preceding volumes, the topics are diversified, but there is some emphasis on the biological sciences. The authors have written primarily for audiences of trained scientists, but some of the papers have appeal for mature laymen who are versed in scientific terminology and basic concepts.

BAWDEN ARTHUR TALBOT

Man s physical universe a survey of physical science for colleges. Third edition. New York The Macmillan Company 1950 822 p. illus. 22 cm. $6.00 5

Contents (abridged): The intelligent solution of problems as they arise is the price of liberty The universe is vast system of parts moving and changing under the influence of flow of energy Continuous changes in the earth's surface have brought about conditions which make possible the life of modern man. Man has applied his knowledge of physical properties and physical changes to overcome many physical limitations. Man has discovered and harnessed

different forms of energy Energy may be propagated through the ether and through matter by means of vibrations. The applications of magnetism and electricity have greatly modified the activities of mankind. Man is mastering his material world through an ever increasing understanding of its nature. Creative chemistry has contributed greatly to man's physical progress. Man's physical welfare is the most important problem of physical science.

Note: (47) One of the more successful of the "cultural" type of introductions to science. Descriptions of applications of physics and chemistry make up most of the text, but a fair amount of space is given to geology astronomy and other sciences. There is practically no use of mathematics, and numerous headings in bold-face type, short paragraphs, readable style, and over 300 illustrations have been used to lure the unwilling student. Much new matter, most of it concerned with recent applications of science, has been introduced in this edition.

BURCHARD, JOHN ELY, editor

Mid-century—the social implications of scientific progress. Verbatim account of the discussions held at the Massachusetts Institute of Technology on the occasion of its mid-century convocation, March 31 April 1 and April 2 1949 Cambridge Mass. Published jointly by The Technology Press of the Massachusetts Institute of Technology and John Wiley & Sons, Inc. New York, 1950 549 p 23 cm. $7.50 6

Contents. The state of science. The twentieth century Man against nature Man against man. Science, materialism and the human spirit. The role of the individual in world [illegible] institutions. The problem of specialization in twentieth century education. The state, industry and the university The stars of the future. The obligations and ideas of an institute of technology Appendices. Biographical notes. Index.

Note In this book some 34 contemporaries who are famous for their work in science or in other fields, such as politics, discuss matters which are more or less related to the impact of science upon our society There is some emphasis, but not an overwhelming amount, on the special contributions and problems of universities. The speeches themselves are copiously supplemented by comments from the editor and others.

BUSH, GEORGE POLLOCK, AND LOWELL H. HATTERY editors

Scientific research its administration and organization. Washington The American University Press 1950 190 p. 25 cm. $3.25 7

Contents: Introduction: New challenge in administration, by L. H. Hattery Part one, Research organization Administration of sponsored research, by C. W Good. Problems in the coordination of Federal research, by L. R. Hafstad. Responsibility for planning research: committee versus staff, by E. W Scott. Government research contracts, by R. B Brewer. Part two, Administrative processes: Responsibilities of research directors, by H. L. Dryden. Planning research programs, by L. W Bass. Maintaining schedules for research activities, by H. A. Martin and D. L. Williams. Part three, Research personnel: Recruitment and selection of the research worker by E. U. Condon. Professional development of personnel, by A. H. Hausrath. Significance of fellowships in training scientific workers, by M. H. Trytten. Incentives from the viewpoint of scientist, by R. L. Zwemer. Incentives from the viewpoint of psychologist, by M. D. Hansen. Part four Aids to research Budgeting and analyzing costs for the research program, by A. F Siepert. Budgeting the research program, by Robert Curry Budgeting and cost accounting in research institutions, by W F Harwood. Internal [illegible] aids to research, by R. R. Shaw Part five, Research product Replication of research effort, by E. W Truffinger Duplication of effort in research and development programs, by N T Ball. Duplication in research and development, by R. R. Alexander Jr Publication and dissemination of research results, by H. A. Barton. Research reporting, evaluation and utilization, by G W Irving, Jr Part six, Conclusion. Principles of administration in the research environment, by G. P Bush Index of names. Index of subjects.

Note: A book made up of short papers presented at the first Institute on the Administration of Scientific Research and Development, held in Washington, D. C., under the joint sponsorship of the American University the National Research Council, and the American Association for the Advancement of Science. Most of the papers are informal and confined more or less to contemporary problems and recent developments. Together they present quick review of the current problems, efforts, and techniques of organized research rather than a comprehensive treatment. Some of the papers are accompanied by bibliographical footnotes, but there is no systematic list of references.

CHRISTMAN, RUTH C , editor

Soviet science. A symposium presented on December 27 1951 at the Philadelphia meeting of the American Association for the Advancement of Science. Arranged by Conway Zirkle and Howard A. Meyerhoff Published with the aid of a grant from the National Science Foundation Washington D C. American Association for the Advancement of Science, 1952 108 p 24 cm. $1.25 8

Contents: Russian genetics, by T Dobzhansky Russian physiology and pathology by W H. Gantt. Russian psychology and psychiatry by I. D. London. Scientific method and social science: East and West, by E. L. Ackoff. Russian contribution to soil science, by J. S. Joffe. Soviet physics and chemistry by J. Turkevich. Soviet mathematics, by J. R. Kline. Science and intellectual freedom in Russia, by L. Volin. An appraisal of science in the USSR, by C. Zirkle.

Note: The emphasis in this work is on Soviet science in our times; however, most of the papers contain references to earlier times and especially to Russian scientists who made great contributions to their field. Relationships between Soviet politics and Soviet science today are discussed. Contemporary journals and scientific institutions are mentioned.

COHEN, I BERNARD

Some early tools of American science an account of the early scientific instruments and mineralogical and biological collections in Harvard University With a foreword by Samuel Eliot Morison. Cambridge Harvard University Press, 1950 201 p illus. 25 cm. $4 75 9

Contents: Introduction, The history of science at Harvard. Note on the government of Harvard College. Scientific instruments at Harvard before the fire of 1764. Instruments for the study of natural philosophy after the fire of 1764. The beginnings of chemistry at Harvard. The biological sciences, the Museum, and The mineral cabinet. Conclusion. Appendixes: Thomas Hollis' gift of philosophical apparatus. The philosophical apparatus in 1779 Some early instruments and specimens at Harvard University The chemical laboratory in 1831. Bibliographical note. References and notes. Index.

Note: Harvard University maintains notable collection of old scientific instruments, dating from about 1764 This volume is essentially an illustrated catalogue of these instruments as they with some mineralogical and biological specimens, were exhibited in February 1949 It is more valuable, however as contribution to the history of science and science teaching in America. The actual description of the various pieces of apparatus is preceded by discussion of how such instruments were obtained and the manner of their use in teaching and research during the colonial period.

COHEN, I. BERNARD AND FLETCHER G WATSON, editors

General education in science. With a foreword by James Bryant Conant. Cambridge Harvard University Press, 1952 217 p. 22 cm. $4.00 10

Contents: Science for the nonscientist Science and the layman, by E. J. Dubos. General education and special education in the sciences, by E. J French. The assimilation of science into general education, by P. B. Sears. The philosophy of science and the teaching of science: The role of philosophy in general education course in physical science, by E. C. Kemble. What teachers of general education courses in the sciences should know about philosophy by P Frank. The history of science and the teaching of science: The history of science and the teaching of science, by I. B. Cohen. The use

of historical cases in science teaching, by L. K. Nash. Acquiring knowledge of the history of science, by F G. Kilgour The sciences in technical civilization: Applications of science and the teaching of science, by P Le Corbeiller. What the layman needs to know about science, by S. A. Goudsmit. Education for citizenship in technical civilization, by E. C. Fuller. Some problems in the teaching of biology: An approach to the teaching of biology to nonscientists, by E. S. Castle. The general education course in biology—laboratory work and general objectives, by G. E. Erikson. The evaluation problem: Can general education courses in the sciences be evaluated? by H. S. Dyer. What the instructor can do about evaluation—techniques and examples, by F G. Watson.

Note: Papers which were originally presented at the Workshop in Science in General Education held at the Harvard Summer School in July 1950, are collected in this volume. Their purpose cannot be described better than in the words of Dr Conant "A major educational problem that now confronts those concerned with teaching science is how to start the student down road that will insure his arriving at some degree of scientific literacy even though he devotes his college years to the study of some nonscientific subject. This is problem to which the papers collected in this volume are primarily addressed.

COLEMAN, HARRY SHIPP editor

Laboratory design National Research Council report on design construction and equipment of laboratories. With an introduction by Roland Wank. New York Reinhold Publishing Corporation 1951 393 p. illus. 30 cm. $12.00 11

Contents (abridged) Part 1. Materials, facilities, services and equipment—general discussions: Introduction, by R. A. Wank. Interior construction materials, by E. M. Jenkins. Plumbing, by J. E. York. Laboratory lighting, by J. L. Tugman. Electric power by J. H. Eagan. Laboratory ventilation, by W C. L. Hemeon. Safety precautions, by F A. Van Atta. Part 2, Teaching laboratories: Site selection, design and construction, by H. F Lewis. The general science building, by W A. Manuel. The analytical chemistry laboratory by E. J. Meehan. The organic chemistry laboratory by C. D. Hurd. The physical and electrochemical laboratory by L. O. Case. Biochemical and related laboratories, by A. A. Christman. The chemical engineering laboratory by C. C. Winding. The metallographic laboratory by R. C. Ernst and G. C. Williams. Part 3, Industrial laboratories: Details and description of an analytical control laboratory, by R. L. Clarke and others. Metallurgical laboratories, by H. K. Work. Animal rooms and equipment, by C. P Carpenter. Industrial laboratories for physical measurements, by H. F Kling. The design of laboratories for the safe handling of radioisotopes, by M. R. Hawkins. Constant-temperature-humidity rooms, by M. E. Dunlap. High-pressure laboratories, by R. L. Savage. Pilot plant laboratories, by W L. Faith. Part 4, Concise descriptions of some modern laboratories: Illinois Institute of Technology Laboratory by M. Kilpatrick. Reed College Laboratory by A. F Scott. Battelle Memorial Institute research buildings, by W A. Welcker jr Mellon Institute research laboratories, by H. S. Coleman. Bell Telephone Laboratories, by C. S. Fulton. Johns-Manville Research Center, by E. M. Jenkins. Esso Research Center—Industrial Laboratory by W R. Hunt. B. F Goodrich Research Center, by D. H. Cornell. Selected bibliography Index.

Note: An authoritative and comprehensive reference book on modern teaching and research laboratories. The book is of interest to all scientists whose work includes responsibility for laboratory organization or direction and to engineers and architects interested in the design and construction of laboratories. The descriptions of specific modern laboratories in the fourth part are brief but they are supplemented by many excellent pictures.

CONANT, JAMES BRYANT

Modern science and modern man New York. Columbia University Press, 1952 111 p. 21 cm. (Bampton lectures in America. Number 5) $2.25 12

Contents: Science and technology in the last decade. The changing scientific scene, 1900–1950. Science and human conduct. Science and spiritual values.

Note: A book presentation of the four Bampton lectures delivered at Columbia University in 1952. In it the author outlines the fundamental changes which have occurred in scientific knowledge since 1900, then discusses the philosophical and spiritual implications of this new insight into the nature of the universe. *Although of interest to scientists,* the book is addressed more to educated people in other fields.

CONANT, JAMES BRYANT

Science and common sense. New Haven Yale University Press 1951 271 p. 21 cm. $4.00 13

Contents: Science and the American citizen. What is science? Concerning the alleged scientific method. The development of the concept of atmospheric pressure. Some recurring patterns in experimental inquiry Geometrical reasoning and quantitative experimentation. The origin of conceptual scheme the chemical revolution. The study of living organisms: natural history and experimental biology Experiment and observation in biology: Illustrations from the controversy concerning spontaneous generation. The study of the past. The impact of science on industry and medicine. Science, invention, and the state. Bibliography Index.

Note: The author's *On understanding science* (1947) was primarily proposal for new program of teaching the meaning of science to college students preparing for work in law journalism, and other non-scientific fields. The present book is addressed to the lay reader and, although some material from *On understanding science* has been included, the pedagogy has been left out. The subject is mainly "the tactics and strategy of science, and the discussion includes accounts of "case histories, such as Boyle's experiments with atmospheric pressure, Roentgen's discovery of X-rays, etc. In the last two chapters the author turns to the social aspects of modern science, showing that science is major and essential part of the present-day social fabric.

DE VRIES LOUIS

French English science dictionary for students in agricultural, biological and physical sciences with a supplement of terms in aeronautics electronics radar radio television. Second edition. New York McGraw Hill Book Company Inc., 1951 596 p. 19 cm. $6.50 14

Note: (11a) A standard reference book in which is contained well-chosen selection of terms from several scientific fields and also some terms from the literary language. The first edition appeared in 1940. Except for the correction of few errors, the text of the present edition is the same to the end of page 533. However supplement of aeronautical, electronic, and communications terms—which runs from page 535 to page 584—has been added.

KNAPP, ROBERT HENRY AND H. B GOODRICH

Origins of American scientists a study made under the direction of a committee of the faculty of Wesleyan University Chicago, Illinois The University of Chicago Press, 1952 450 p. illus. 25 cm. $7.50 15

Contents (abridged) The undergraduate origins of American scientists. The indexes of production of scientists. The design of the statistical study The analysis of the college sample. The analysis of the university sample. The design of the case study Four institutions of broad intellectual emphasis: Reed, Swarthmore, Oberlin, and Antioch. Five men's liberal arts colleges: Amherst, Haverford, Wabash, Wesleyan, and Williams. Western liberal arts colleges of distinguished performance Central, Colorado, Cornell, Earlham, Kalamazoo, Marietta, and Whitman. Two prosperous colleges of superior achievement: Pomona and DePauw Two colleges of minority constituency: Hope and St. Olaf. Two liberal arts colleges of special interest Iowa Wesleyan and Linfield. The statistical analysis of departmental ratings. The distinguished teacher. Summary of findings. Speculations and interpretations. Conclusion. Appendices. General index. Index of institutions.

Note: The findings of systematic study of the educational origins of American scientists and of other factors which led them to choose scientific careers are reported in this book. It is based on statistical assessment of the records of 490 universities and colleges in the production of scientists. Twenty-two selected liberal arts colleges—named in the chapter titles—were the subjects of special study and firsthand investigation. The study was conducted under the joint sponsorship of the Carnegie Foundation and Wesleyan University under the direction of the Committee on Education of Scientists of Wesleyan.

NATIONAL RESEARCH COUNCIL

Scientific, medical and technical books published in the United States of America, a selected list of titles in print with annotations. Supplement of books published 1945–1948 Edited by R. R. Hawkins prepared under the direction of the National Research Council's Committee on Bibliography of American Scientific and Technical Books. Washington, D C. National Research Council, 1950 514 p 30 cm. $10 00 16

Contents: Science. Mathematics. Astronomy Physics. Meteorology Chemistry Geology Oceanography Biology. Botany Zoology Man. Human anatomy Physiology Biochemistry Bacteriology Medicine. Gynecology and obstetrics. Surgery Dentistry Industrial medicine. Public health. Nursing. Hospitals. Personal hygiene and first aid. Psychosomatic medicine. Psychiatry Mental hygiene and popular psychiatry Psychology Engineering. Civil engineering. Sanitary engineering. Mechanical engineering. Electrical engineering. Communications engineering. Chemical engineering. Applied chemistry Heat and power engineering. Mining engineering. Metallurgy and metallography Shipbuilding and boat building. Marine engineering. Navigation. Aeronautics. Photography Food technology Miscellaneous technology Industrial management. Agriculture. Forestry Forest products. Firearms. Military science. Naval science. Directory of publishers. Author index. Subject index.

Note. More than 2500 books, issued by about 275 publishers, are described in this classified bibliography The descriptions include not only the usual bibliographical information, but also publisher's price, table of contents, and a supplementary annotation. Only works of citizens and residents of the United States and Canada are included, and the books of Canadian authors have been listed only when published in the United States. The series now includes the original volume which covered books published 1930–1944 the supplement here described, and the second supplement in hand.

PERSONS STOW, editor

Evolutionary thought in America. New Haven Yale University Press 1950 462 p illus 24 cm. $5 00 17

Contents: Part I, The theory of evolution: The rise and impact of evolutionary ideas, by E. Stoon. Evolution in its relation to the philosophy of nature and the philosophy of culture, by F S. C. Northrop. The genetic nature of differences among men, by T Dobzhansky *Part II, Evolutionary thought in America* Evolution and American sociology by R. E. L. Faris. The impact of the idea of evolution on the American political and constitutional tradition, by E. S. Corwin. Evolutionism in American economics, 1800–1944, by J J Spengler The influence of evolutionary theory upon American psychological thought, by E G. Boring Naturalism in American literature, by M. Cowley The idea of organic expression and American architecture, by D D Egbert. Evolution and moral theory in America, by W F Quillian, Jr. Evolution and theology in America, by S. Persons. Index.

Note A collection of original papers which were prepared for delivery at Princeton University during the academic year 1945–46 as part of its special program in American civilization. Although the treatment is on an upperclass undergraduate level, the book as a whole presents an authoritative and well rounded picture of its subject and, therefore, merits reading by persons outside of colleges who are interested in the impact of science on social thought or upon the history of organic evolution. Bibliographical citations and scholarly notes accompany most of the chapters.

POOLE, LYNN

Science via television Baltimore The Johns Hopkins Press 1950 198 p illus. 23 cm. Paper $2 00 18

Contents: Science—via television. The master plan. Participants. Selecting the subject. Developing the theme. Choosing the visual material. Writing the script. The opening and the closing. Setting the stage. Camera angles. Rehearsing the program. How it was done. *Outline of programs.* Glossary of tele-terms. Books on television. Television magazines. Index.

Note. A valuable book from two viewpoints. It presents in careful detail the multitudinous problems of preparing and presenting an educational program on television; second, it demonstrates how successful series of telecasts devoted to science—the Johns Hopkins Science Review—was developed, written, directed, rehearsed, and broadcast. The material included ranges from script writing and format to discussions of very specialized points, such as precautions to be taken when it is necessary to include glass objects in televised scenes.

POOLE, LYNN

Today's science and you. Illustrated by Jeanne Bendick. New York Whittlesey House, McGraw Hill Book Company Inc., 1952 208 p illus. 21 cm. $2 75 19

Contents: Today's scientists and you. X-ray the sleuth. The magnificent microscope. Higher and higher 100,000 miles to go with. An industrial headache. Schistosomiasis. No one wants flies. Human engineering. What is an isotope? Trace elements. X disease. Bronze disease. Is there science in art? Key to the past. Who knows? Index.

Note: A popular book based on the *Johns Hopkins Science Review* television program which received the Peabody Award in 1951. Although the book is good reading for the layman who wants to know something about current activities of scientists, it is more important as a pioneer example of the interpretation of scientific achievements via a new medium—television. Recent scientific developments and research in progress in a variety of fields such as television and atomic physics are discussed in elementary language so as to reveal the significance of the scientific method in contemporary living.

THE SCIENTISTS LOOK AT OUR WORLD. By W V Houston W Albert Noyes Jr., Curt Stern Alan Gregg, Wendell H. Camp. Introduction by John M. Fogg Jr Philadelphia University of Pennsylvania Press 1952 147 p. 22 cm. (The Benjamin Franklin Lectures of the University of Pennsylvania) $3 00. 20

Contents: Introduction, by J M. Fogg, Jr. Description of the physical world, by W V Houston. The varied uses of chemistry by W A. Noyes, Jr. Genetics and the world today by C. Stern. The true extravedness of medicine, by A. Gregg. Plant sciences in the world today by W H. Camp.

Note. Five stimulating lectures, first delivered as the 1951 series of Benjamin Franklin Lectures at the University of Pennsylvania, are printed in this book. Developments, which are still of fundamental significance, and the social importance of current science are emphasized to some extent but, in general, each essay is an interesting account of selected facets of a major branch of science. The style is non-technical.

TRELEASE SAM FARLOW

The scientific paper how to prepare it, how to write it a handbook for students and research workers in all branches of science. Second edition Baltimore The Williams & Wilkins Company 1951 163 p. illus. 19 cm. $2.50 21

Contents. The research problem. Writing the paper. Good form and usage. Tables. Illustrations. Prepublication review. Proofreading. Bibliography. Index.

Note. (19') A relatively brief but useful book of guidance and practical information for those who must write scientific papers and reports. Actually this is the fifth edition since three earlier editions appeared under the title *Preparation of scientific and technical papers* and one under the present title. Again, the book has been reorganized and substantially revised. Revision is most apparent in such parts as the "List of Index and abstract tools"; but in many other parts, sentences and paragraphs have been rewritten and amplified.

UNITED STATES LIBRARY OF CONGRESS. NAVY RESEARCH SECTION

Scientific personnel. A bibliography, compiled by Mabel H. Eller and Jack Weiner

Edited by Barton Bledsoe. Prepared for the Office of Naval Research. Washington The Library of Congress, 1950 164 p. 26 cm. Paper, $1 15 22

Note: A selected, unannotated bibliography of literature published 1930-1948 inclusive. There are 1746 items arranged alphabetically by name of author The subject index is detailed and includes a number of subheadings, for instance, "Engineering education—accelerated program," which add considerably to the usefulness of the list.

UTINOMI, HUZIO

Bibliography of Micronesia (Bibliographia Micronesica scientiae naturalis et cultus) Compiled by Huzio Utinomi. Translated by Mitsuno Fukuda and others. Edited and revised by O A. Bushnell and others. Honolulu, Hawaii University of Hawaii Press, 1952 157 p. 21 cm. $2.50 23

Contents: Editor's preface. Author's preface. Plan of the book. Botany Zoology Geology mineralogy and seismology Limnology Oceanography Geophysics. Medicine. Anthropology and ethnology Geography Publications cited.

Note: The original edition of this bibliography was published in Tokyo in 1944. In that edition articles written in Japanese were cited in Japanese. In this edition all Japanese titles have been translated into English including not only the titles of articles but also the titles of books and periodicals. Titles in Occidental languages have not been translated. The material has been rearranged somewhat and errors that were discovered have been corrected. The work is a comprehensive list of all the scientific writings published about Micronesia to 1944. No new references were added in this edition.

WILSON, EDGAR BRIGHT JR.

An introduction to scientific research. New York McGraw-Hill Book Company Inc., 1952 375 p. illus. 24 cm. $6.00. 24

Contents: The choice and statement of a research problem. Searching the literature. Elementary scientific method. The design of experiments. The design of apparatus. The execution of experiments. Classification, sampling, and measurement. The analysis of experimental data. Errors of measurement. Probability, randomness, and logic. Mathematical work. Numerical computations. Reporting the results of research. Conclusion. Index.

Note: The basic knowledge of research methods which a research scientist must possess in order to use his time and experimental material efficiently is outlined in this book. Some of the chapters are very brief; for example, that on searching the literature is only 11 pages long. Some chapters are considerably longer; the one on the design of apparatus being nearly 60 pages long. Even so, the reader is told how to go about designing apparatus rather than how to design it. All of the chapters are equipped with excellent selected bibliographies. The book is well organized and is written in a style which is easy to read. Beginning research scientists will find it invaluable and experienced ones may profit from reading at least some sections.

HISTORY

CONANT JAMES BRYANT general editor

Robert Boyle's experiments in pneumatics. Edited by James B Conant. Cambridge Harvard University Press 1950 70 p illus. 23 cm. (Harvard case histories in experimental science. Case 1) Paper $1 10 25

Contents (abridged): The air pump or vacuum pump as a new scientific instrument The behavior of a Torricellian barometer in vacuum. Boyle's experiments on air as a medium for transmitting sound. The discovery of Boyle's law Notes on the development of science in the middle of the seventeenth century

—— The overthrow of the phlogiston theory the chemical revolution of 1775–1789 Edited by James B Conant. Cambridge Harvard University Press, 1950 59 p illus. 23 cm. (Harvard case histories in experimental science. Case 2) Paper $1.00 26

Contents (abridged): The opening phase of the chemical revolution. English translation of the two versions of the Easter memoir of Lavoisier. Priestley's comment on Lavoisier's Easter memoir. The steps leading to Priestley's discovery of oxygen. The final collapse of the phlogiston theory

—— The early development of the concept of temperature and heat the rise and decline of the caloric theory Prepared by Duane Roller Cambridge Harvard University Press, 1950 106 p illus. 23 cm. (Harvard case histories in experimental science. Case 3) Paper $1.50 27

Contents (abridged): Evolution of the thermometer Joseph Black's discoveries of specific and latent heats. Count Rumford's investigation of the weight ascribed to heat. Count Rumford's experiments on the source of the heat that is excited by friction. Humphry Davy's early work on the production of heat by friction.

—— The atomic-molecular theory By Leonard K. Nash. Cambridge Harvard University Press 1950 115 p. 23 cm. (Harvard case histories in experimental science. Case 4) Paper $1.50 28

Contents (abridged): The application of the atomic theory to chemistry Gay-Lussac's law of combining volumes. The apparent inconsistency of the atomic theory and the law of combining volumes. Avogadro's reconciliation. Sources and references.

—— Plants and the atmosphere. By Leonard K. Nash Cambridge Harvard University Press 1952 122 p. illus 23 cm. (Harvard case histories in experimental science. Case 5) Paper $1.50 29

Contents (abridged): A problem emerges. The problem is brought to a sharp focus by discrediting the facile explanation. Priestley picks up the trail. Ingen-Housz assumes the lead. The evolution of Senebier's theoretical views, 1782–1792. The development of Ingen-Housz's ideas, 1779–1796. De Saussure reviews the data and reconstructs the theories. Bibliography

—— Pasteur's study of fermentation. Edited by James Bryant Conant. Cambridge Harvard University Press 1952 57 p. illus. 23 cm. (Harvard case histories in experimental science. Case 6) Paper $1 00 30

Contents (abridged): Some elementary principles of biochemistry Pasteur's early work on optical activity which resulted in his study of fermentation. Translation of portions of Pasteur's memoir on lactic formation. Theories of fermentation from Liebig to the present day Tyndall's lecture on fermentation.

Note. This series represents a planned effort to make available materials from the history of modern science that illustrate the methods of science. The series is addressed particularly to undergraduate college students who are pursuing courses in the humanities and the social sciences and its primary purpose is to give such students a "feeling" for science that will facilitate the appreciation of science and technology as a segment of the social activity of civilized man. The series is also suitable for reading by laymen with mature interests in the methods and history of science. Each of the booklets in the series contains an analysis of a major scientific development. Extensive use is made of excerpts from the scientists' own accounts of their experiments and hypotheses, but there is also much text written by the editor or author of each booklet. The series is not a mere collection of excerpts or "readings." Some of the booklets contain lists of suggested readings; others, bibliographies of sources.

GUERLAC, HENRY

Science in western civilization, a syllabus. New York The Ronald Press Company 1952 197 p 24 cm. $3 00 31

Note. This exemplary work contains an outline of the development of science in western civilization, set up under the head of 91 lectures. The lectures bear such titles as "The Mesopotamian civilization, Greek medical science, Alchemy and Arabic chemistry "The evolution of the calculus, "Development of the atomic theory and "Science in the United States. For each lecture there is an outline of topics and list of suggestions for reading. A classified list of general references is placed at the end of the volume. The author is Professor of History of Science at Cornell University

NEUGEBAUER, OTTO EDUARD

The exact sciences in antiquity Princeton New Jersey Princeton University Press, 1952 191 p illus. 24 cm. $5 00 32

Contents. List of plates. Introduction. Numbers. Babylonian mathematics. The sources—their decipherment and evaluation. Egyptian mathematics and astronomy Babylonian astronomy Origin and transmission of Hellenistic science. The zodiacal signs. Chronological table. Index.

Note: Although limited chiefly to mathematics and to certain aspects of astronomy this work is an important contribution to the general history of science. It is based on extensive research in source materials. In it new light is shed on the antiquity of some mathematical concepts and on the debt of Hellenistic science to Babylonian and Egyptian science. There are interesting sidelights on archaeology particularly on the scattering or loss of clay tablets after they have been excavated. Each chapter is accompanied by an annotated bibliography and helpful short discussions in the form of notes. The material was delivered originally as "Messenger lectures" at Cornell University in 1949

OEHSER, PAUL HENRY

Sons of science the story of the Smithsonian Institution and its leaders New York Henry Schuman 1949 220 p. illus. 22 cm. $4.00 33

Contents: James Smithson and his will. Interlude. What to do with half million dollars. Joseph Henry builds an institution. Baird and the National Museum. George Brown Goode, the young genius. Samuel Pierpont Langley A geologist takes the helm. Rounding out century Chronology of principal events in Smithsonian history Selected bibliography Index.

Note: By organizing his material around the lives and accomplishments of six men, Joseph Henry Spencer Fullerton Baird, George Brown Goode, Samuel Pierpont Langley Charles Walcott and Charles Greeley Abbot, of whom all but Goode were secretaries of the Smithsonian Institution, the author of this book has produced very readable outline of the history and development of the Smithsonian Institution from its beginning down to the year 1948. The biographical accounts include personal data, such as dates of birth and schools attended, but are largely devoted to activities at the Smithsonian Institution and its affiliated organizations. The narrative material is supplemented by thirty-nine well-chosen illustrations, chronology of outstanding events in the history of the Smithsonian, and selected bibliography

SARTON, GEORGE

A guide to the history of science. A first guide for the study of the history of science with introductory essays on science and tradition Waltham, Mass. Chronica Botanica Company, 1952 316 p. illus. 23 cm. $7.50 34

Contents (abridged) Part I, Introductory essays: Science and tradition. Part II, A first guide for the study of the history of science. A, History: Historical methods. Historical tables and summaries. Historical atlases. Gazetteers. Encyclopedias. Biographical collections. B Science: Scientific methods and philosophy of science. Science and society Catalogues of scientific literature. Union lists of scientific periodicals. General scientific journals. Abstracting and review journals, by C. F Mayer. National academies and national scientific societies. C, History of science: Chief reference books on the history of science. Treatises and handbooks on the history of science. Scientific instruments. History of science in special countries. History of science in special cultural groups. History of special sciences. Journals and serials concerning the history and philosophy of science, by C. F Mayer D Organization of the study and teaching of the history of science: National societies devoted to the history of science. International organization of the history of science. The teaching of the history of science. Institutes, museums, libraries. International congresses. Prizes. Index of proper names.

Note: The first part of this book, which contains lectures titled as indicated in the table of contents, occupies only 66 pages. The rest of the space is devoted to bibliographies of histories of science and related publications and to descriptions of societies, institutes, museums and libraries with special interests or collections of materials bearing on the history of science. Although the bibliographical and directory parts are valuable for reference, the special emphasis on the history of science has resulted in certain weakness that is most apparent in the list of institutes, museums, and libraries. Here number of small institutions (including at least one that has been out of existence for several years) are fully described but larger institutions which possess much more material that is valuable to historians of science are not listed because they do not emphasize the field above other fields of knowledge. The index covers personal names adequately but does not include the names of the congresses, societies, museums, etc., that are described in the book.

SARTON GEORGE

A history of science ancient science through the golden age of Greece. Cambridge Harvard University Press, 1952 646 p illus. 25 cm. $10.00 35

Contents: Part one, Oriental and Greek origins. The dawn of science. Egypt. Mesopotamia. Dark interlude. The dawn of Greek culture—Homer and Hesiod. Assyrian intermezzo. Ionian science in the sixth century Pythagoras. Part two, The fifth century: Greece against Persia—the glory of Athens. Philosophy and science to the death of Socrates. Mathematics, astronomy and technology in the fifth century Geographers and historians of the fifth century Greek medicine of the fifth century chiefly Hippocratic. The Hippocratic corpus. Coan archaeology Part three, The fourth century: Plato and the Academy Mathematics and astronomy in Plato's time. Xenophon. Aristotle and Alexander—the Lyceum. Mathematics, astronomy and physics in Aristotle's time. The natural sciences and medicine in Aristotle's time. Aristotelian humanities and historiography in the second half of the fourth century B. C. Other theories of life and of knowledge—the garden and the porch. Epilogue: The end of cycle. General bibliography Index.

Note. In contrast to the author's well-known *Introduction to the history of science*, this work is designed for reading rather than for reference. Its scope is almost as broad as that of the *Introduction* and the style is as erudite. The content of Greek science is examined in minute detail, and the author points out numerous unexpected relationships. The subject content of the work is such that it will be of interest not only to students of the history of science but also to students of archaeology and anthropology Almost every page contains one or more footnotes which amplify or document points made in the main text. The general bibliography noted in the table of contents is, however, only short list of principal authorities.

MATHEMATICS

GENERAL

BIRKHOFF, GEORGE DAVID

Collected mathematical papers. New York American Mathematical Society 1950. 3 vol. 24 cm. $18 00 36

Note: Professor G. D. Birkhoff, one of the great mathematicians of the first half of the twentieth century published his research papers widely in journals in all parts of the world. These three volumes contain all of his published mathematical work except his published books and certain articles, such as reviews and others, which do not have permanent interest.

HILDEBRAND FRANCIS BEGNAUD

Methods of applied mathematics. New York Prentice-Hall Inc., 1952 523 p illus. 22 cm. (Prentice-Hall mathematics series Albert A. Bennett, editor) $7 75 37

Contents: Matrices, determinants, and linear equations. Calculus of variations and applications. Difference equations. Integral equations. Appendix: The Crout method for solving sets of linear algebraic equations. Answers to problems. Index.

Note: The author has stated that this book is designed to serve as an introduction to "four fields of mathematics which usually are not treated in courses of the 'advanced calculus' type, but which are useful in varied fields of applications. The fields covered are named in the chapter titles. Although intended for readers whose main interests lie in such fields as physics and engineering, mathematics rather than applications are emphasized and proofs are, generally speaking, included. It is suitable for use both as text in graduate courses and self instruction manual for graduate scientists and engineers. A feature which facilitates its use by the latter group is the independent treatment of each method and technique. In other words, it is not necessary to have mastered chapter 1 in order to make use of chapter 3 for instance.

JAMES GLENN AND ROBERT C JAMES, editors

Mathematics dictionary by Armen A. Alchian, Edwin F Beckenbach, Clifford Bell Homer V Craig Glenn James, Robert C James, Aristotle D Michal and Ivan S Sokolnikoff. New York D Van Nostrand Company Inc., 1949 432 p illus. 24 cm. $8 00 38

Note: (72) A standard reference book for mathematicians, students, engineers, and others who use mathematics in their professions. The older editions provided definitions of words and terms in the range beginning with arithmetic and extending through calculus. The new edition adds definitions of the basic terms in the following fields: matrix differential geometry, theory of functions of real and complex variables, advanced calculus, differential equations, theory of groups, theory of matrices, theory of summability point-set topology general analysis, analytic mechanics, and theory of potential. Also included is an extensive coverage of statistical terms Generally speaking definitions are expressed in technical terminology not intended for the uninitiated layman.

KERSHNER, RICHARD B., AND L. R. WILCOX

The anatomy of mathematics. New York The Ronald Press Company 1950 416 p. illus. 23 cm. $6.00 39

Contents (abridged). Language. The development of mathematics. The primitive materials of mathematics. Further materials of mathematics. The postulational method. Groups. The positive integers. Fundamental relations on the positive integers. Extended operations and applications. Infinite sets. Isomorphism and categorical systems of axioms. Equivalence and order relations. The positive rational numbers. One-dimensional continua. Fields. Conclusion. Appendix Suggestions and answers for the projects. Index.

Note The authors describe this book as treatise on the axiomatic method. The hint in the title should also be noted. The two ideas can be combined by stating that in the book certain concepts and methods of proof of abstract mathematics are dissected, and axioms are thereby revealed to be the true anatomy of mathematics. The first six chapters ar largely "non-mathematical" and can be read by any interested person who can follow mature prose. Beginning with chapter seven, the going becomes more strenuous. The readers of the book include advanced students who are preparing to specialize in mathematics and lay readers who pursue mathematics for the pleasure of it.

KUHN HARRY WALDO, AND ALBERT WILLIAM TUCKER, editors

Contributions to the theory of games. Princeton New Jersey Princeton University Press, 1950 201 p. illus. 26 cm. (Annals of mathematics studies. Number 24) Paper $3.00. 40

Contents: Part Finite games: The elementary theory of convex polyhedra, by H. Weyl. Elementary proof of minimax theorem due to von Neumann, by H. Weyl. Basic solutions to discrete games, by L. S. Shapley and R. N Snow Solutions of finite two-person games, by D. Gale and S. Sherman. Solutions of discrete two-person games, by H. F Bohnenblust and others. Solutions of games by differential equations, by G. W Brown and J. von Neumann. On symmetric games, by D. Gale and others. Reductions of game matrices, by D. Gale and others. A simplified two-person poker by H. W Kuhn. A simple three-person poker game, by J F Nash and L. S. Shapley Isomorphism of games and strategic equivalence, by J. C. C. McKinsey Part II, Infinite games: Operator treatment of minimax principle, by S. Karlin. On theorem of Ville, by H. F Bohnenblust and S. Karlin. Polynomial games, by M. Dresher and others. Games with continuous, convex pay-off, by H. F Bohnenblust and others. Bibliography

Note. A collection of original contributions to the mathematical theory of games of which *Theory of games and economic behavior* by J. von Neumann and O. Morgenstern is the landmark work. All but two of the papers are restricted to zero-sum two-person games. The current status of the theory of games and of the problems still unsolved is outlined in the book's preface.

MAZIARZ, EDWARD A.

The philosophy of mathematics. New York Philosophical Library 1950 286 p 21 cm. $4.00 41

Contents: Introduction: The problem of the philosophy of mathematics. Part I, The history of the philosophy of mathematics: The historical relation between mathematics and philosophy Ancient conceptions. The Cartesian era. British empiricism. Idealism and positivism. Contemporary directions. Part II, The philosophy of mathematics: The distinction of speculative sciences. The nature of mathematical abstraction. Mathematical abstraction and contemporary mathematics. Conclusion. Bibliography Index.

Note: A critical study of the origins and purposes of mathematical thinking in relation to man's other activities. In the first part, which occupies about half of the volume, the views of great mathematicians and philosophers on the subject are digested and discussed. In the second part the author attempts philosophy of mathematics of his own. The book is of interest chiefly to students

of the philosophy of mathematics and the philosophy of science in general. It was prepared originally as a doctorate thesis, and it is liberally equipped with literature citations and supplementary notes.

RIDER, PAUL REECE

First-year mathematics for colleges. New York The Macmillan Company 1949 714 p illus. 22 cm. $5 00 42

Contents: Review of elementary algebra. Factoring. Fractions. Rectangular coordinates. Functions and graphs. Linear equations. Exponents and radicals. Quadratic equations. Inequalities. Systems of equations involving quadratics. Proportion and variation. Mathematical induction and the binomial formula. Progressions. Approximate numbers and computation. Logarithms. Logarithmic and exponential curves. Power functions and their graphs. Mathematics of investment. Trigonometric functions of acute angles. Solution of right triangles. Logarithmic solution of right triangles. Trigonometric functions of any angle. Solution of oblique triangles. Trigonometric formulas and identities. Radian and mil. Trigonometric curves. Inverse trigonometric functions and curves. Trigonometric equations. Complex numbers. Polynomials. Theory of equations. Equation and locus. Straight line. Circle. Parabola, ellipse, hyperbola. Curve sketching. Parametric equations. Polar coordinates. Curve fitting. Permutations and combinations. Probability. Determinants. Partial fractions. Infinite series. Rectangular coordinates and directions in space. Plane and line. Surfaces and curves. Tables. Index. Answers to odd-numbered exercises.

Note The wide scope of this book is obvious from the chapter titles. The author has designed it for use by both liberal arts and engineering students. An exceptionally full index makes the book useful for occasional reference and personal and public library collections. The author is Professor of Mathematics in Washington University

SHANNON CLAUDE ELWOOD AND WARREN WEAVER

The mathematical theory of communication Urbana The University of Illinois Press 1949 117 p illus. 24 cm. $2 50 43

Contents: The mathematical theory of communication, by C. E. Shannon. Recent contributions to the mathematical theory of communication, by W Weaver

Note: Ninety-one of the 117 pages in this book are occupied by the article by Claude E. Shannon which was first published in 1948 in the *Bell telephone technical journal* and is reprinted here essentially unchanged. In this paper the theory is presented for communications engineers. He are concerned with such problems as the message capacities of telephone and other communications channels. The second and much shorter paper extends the concept of communication to include all human behavior and interprets the first paper in this light. The book is of interest both to communications engineers and to social scientists.

WILDER RAYMOND L

Introduction to the foundations of mathematics. New York John Wiley & Sons Inc. 1952 385 p illus. 24 cm. $5 75 44

Contents: Part I, Fundamental concepts and methods of mathematics: The axiomatic method. Analysis of the axiomatic method. Theory of sets. Infinite sets. Well-ordered sets, ordinal numbers. The linear continuum and the real number system. Groups and their significance for the foundations. Part II, Development of various viewpoints on foundations. The early developments. The Frege-Russell thesis—mathematics an extension of logic. Intuitionism. Formalism. The cultural setting of mathematics. Bibliography Index of symbols. Index of topics and technical terms. Index of names.

Note: Essentially this is a book about the nature of modern mathematics. The first part is devoted to the fundamental methods, such as the axiomatic method, and to fundamental concepts, such as that of "set. The second part is a study mainly philosophical, of the nature of this foundation material. Here, the more significant contributions to this aspect of mathematics are reviewed succinctly and critically The book is a development of a course given by the author at the University of Michigan, and is designed primarily as a text. Laymen who pursue the study of mathematics for its cultural value and others who are interested in the meaning of science to society will be interested in at least the final chapters.

HISTORY

BELL, ERIC TEMPLE

Mathematics queen and servant of science. New York McGraw Hill Book Company Inc., 1951 437 p illus 21 cm. $5 25 45

Contents: Points of view Mathematical truth. Breaking bounds. "The same, yet not the same. The art of abstraction. Oaks from acorns. *Pictorial thinking.* Landmarks old and new Groups. A metrical universe. The queen of mathematics. Abstraction and prediction. From Cyclops to Neptune. Two kinds of picture. The chief instrument of applied mathematics. Further calculuses. Waves and vibrations. Choice and chance. "Mocking the heavens. Retreat. Index.

Note: A lively popular account of the history and basic concepts of mathematics. It is not a "mathematics-is-amazingly-simple" popularization, but it is designed for general reading and is so organized and written that the general reader who has a mathematical bent will be inclined to read it to the end. The author has used material from his *The queen of the sciences* (1931) and *The handmaiden of the sciences* (1937) but by revision and amplification, together with reorganization, he has produced what is essentially a new work.

KRAMER, EDNA ERNESTINE

The main stream of mathematics. New York Oxford University Press 1951 321 p. illus. 22 cm. $5 00 46

Contents: Mathematical genesis. Nature, art, and geometry The binding energy of thought. The mathematics of the forbidden. The human equation. Ascent without rockets. The father of modern mathematics and his legacy Science and the sweepstakes. The distaff side. A world in flux. From Alice to Einstein. The realm of relativity The paradise of mathematicians.

Note: The first several pages of this excellent book for lay readers are devoted to the Hindu legend about Lilavati, daughter of Bhaskara, whose name is attached to the Hindu mathematical work in which our number system is first clearly set forth. The last pages are devoted to Zeno's famous paradoxes on motion and the concept of infinity In between there is considerably more narrative than mathematical equations; nevertheless, the development of mathematics is skilfully outlined and some of its major concepts are made as clear as they can be made to the nonmathematical mind.

TABLES

HARVARD UNIVERSITY COMPUTATION LABORATORY

Tables of the Bessel functions of the first kind of orders fifty two through sixty three. Cambridge, Mass. Harvard University Press 1949 544 p. 28 cm. (Harvard University Computation Laboratory Annals. Vol. XII) $8 00 47

—— Tables of the Bessel functions of the first kind of orders sixty four through seventy eight. Cambridge, Mass. Harvard University Press 1949 566 p. 28 cm. (Harvard University Computation Laboratory Annals. Vol. XIII) $8 00 48

—— Tables of the Bessel functions of the first kind of orders seventy-nine through one hundred thirty five. Cambridge, Mass. Harvard University Press 1951 614 p. 28 cm. (Harvard University Computation Laboratory Annals. Vol. XIV) $8.00 49

Note. (54) These volumes bring to completion a series of tables begun in 1947 The tabulations were made on Harvard University's

automatic sequence controlled calculator and are carried to ten decimal places (tables for orders zero to three are carried to eighteen places). The tables are reproduced by offset lithography directly from pages typed by typewriters controlled by the calculating machine, thus avoiding errors that might occur in typesetting. Methods of computation and directions for interpolating are given in the first volume of the series.

HARVARD UNIVERSITY COMPUTATION LABORATORY

Tables of the error function and of its first twenty derivatives By the staff of the Computation Laboratory Cambridge Harvard University Press, 1952 276 p. 27 cm. (Harvard University Computation Laboratory Annals. Vol. XXIII) $8 00 50

Contents: Introduction: The error function and its derivatives. Computation of the tables. Applications. Zeros of the derivatives. Table I: $\phi^{(-1)}(x) - \phi^{(4)}(x)$ for values of the arguments from 0.000 to 4.444 at intervals of 0.004. Table II: $\phi^{(5)}(x) - \phi^{(9)}(x)$ for values of the arguments from 0 000 to 5.216 at intervals of 0.004. Table III: $\phi^{(10)}(x) - \phi^{(15)}(x)$ for values of the arguments from 0.000 to 8.616 at intervals of 0.002. Table IV: $\phi^{(16)}(x) - \phi^{(20)}(x)$ for values of the arguments from 0.000 to 10.902 at intervals of 0.002.

Note: This volume is a series sponsored by the U. S. Air Force in tabulation of the error function $\phi^{(-1)}(x) = \frac{1}{\sqrt{2\pi}}\int^{x} e^{-t^2/2}dt$ and its derivatives. The Automatic Sequence Controlled Calculator was used for this work, and it is believed that the error in any tabular value is less than six units in the first place not printed. Examples of the application of the error function in statistics and probability physics, and noise and communication problems are given.

HARVARD UNIVERSITY COMPUTATION LABORATORY

Tables of the function $\frac{\sin \phi}{\phi}$ and of its first eleven derivatives. By the staff of the Computation Laboratory Cambridge Harvard University Press, 1949 241 p. 27 cm. (Harvard University Computation Laboratory Annals. Vol. XXII) $8.00 51

Contents: Introduction—Computation of the tables—applications. The tables.

Note: "The values of the function $g(\phi) = \frac{\sin \phi}{\phi}$ and its first eleven derivatives have been tabulated in this volume to nine decimal places for values of ϕ from 0 to 20π radians. The present tables of the basic function (ϕ) are more extensive in range, accuracy and density than any previous tables. The tables are useful in the solving of problems connected with the Fourier transforms of distribution functions. They were prepared on the Automatic Sequence Controlled Calculator at the request of the United States Air Force.

HARVARD UNIVERSITY COMPUTATION LABORATORY

Tables of the generalized exponential-integral functions. By the staff of the Computation Laboratory Cambridge Harvard University Press, 1949 416 p 27 cm. (Harvard University Computation Laboratory Annals. Vol. XXI) $8 00 52

Contents. Introduction: The generalized exponential-integral functions. Computation of the tables. Interpolation. Applications. The generalized exponential-integral functions: Table I, For values of the arguments from 0.000 to 0.049 at intervals of 0 001 Table II, For values of the arguments from 0.000 to 0.098 at intervals of 0.002. Table III, For values of the arguments from 0.000 to 0 245 at intervals of 0 005. Table IV For values of the arguments from 0.00 to 0.49 at intervals of 0.01. Table V For values of the arguments from 0 00 to 0.98 at intervals of 0.02. Table VI, For values of the arguments from 0.00 to 2 45 at intervals of 0.05. Table VII, For values of the arguments from 0.0 to 4.9 at intervals of 0.1. Table VIII, For values of the arguments from 0 0 to 9.8 at intervals of 0.2.

Note: Part of series sponsored by the U. S. Air Force and calculated on the Automatic Sequence Controlled Calculator at Harvard University It contains tabulations of values to six decimal places for the integrals $E(a,x) = \int^{x} \frac{1 - e^{-a\,\cdots}}{\cdots}dx$, $E_s(a,x) = \int^{x} \frac{e^{-a\,\cdots}\sin}{\cdots}dx$, and $E_c(a,x) = \int^{x} \frac{1 - e^{-a\,\cdots}\cos}{\cdots}dx$.

HARVARD UNIVERSITY COMPUTATION LABORATORY

Tables of generalized sine- and cosine-integral functions. Parts I and II. By the staff of the Computation Laboratory Cambridge, Massachusetts Harvard University Press, 1949 2 v illus. 28 cm. (The annals of the Computation Laboratory of Harvard University Vol. XVIII–XIX) $8 00 53

Contents: The generalized sine- and cosine-integral functions. Computation of the tables. Interpolation. Applications. Tables of the functions.

Note. Another work in the series of tables prepared at the request of the United States Office of Naval Research and calculated on *Harvard University's automatic sequence controlled calculator.* The tabulations are carried to six decimal places and have wide application in the investigation of problems in such fields as electromagnetics, hydrodynamics, theory of sound, and theory of elasticity

HARVARD UNIVERSITY COMPUTATION LABORATORY

Tables of inverse hyperbolic functions. By the staff of the Computation Laboratory Cambridge Harvard University Press 1949 290 p. 27 cm. (Harvard University Computation Laboratory Annals. Vol. XX) $8.00 54

Contents. Introduction: Contents of the tables. Computation of the tables. Interpolation in the tables. Bibliography of tables of inverse hyperbolic functions. Table The inverse hyperbolic tangent $\tanh^{-1}$ for $0 \leq \; < 1$. Table The inverse hyperbolic sine $\sinh^{-1}$ for $0 \leq \; < 3.5$. Table III The inverse hyperbolic cosine $\cosh^{-1}$ for $1 \leq \; < 3.5$. Table IV: The inverse hyperbolic sine and cosine $\sinh^{-1}$ $\cosh^{-1}$ for $3.5 \leq \; \leq 22{,}980$.

Note: The tables in this volume were calculated on the Automatic Sequence Controlled Calculator at Harvard University and are tabulated to nine decimal places with possible error in the ninth place of not more than 0.6 unit.

SPENCELEY GEORGE WELLINGTON AND OTHERS

Smithsonian logarithmic tables to base e and base 10 Prepared by George Wellington Spenceley Rheba Murray Spenceley and Eugene Rhodes Epperson. Washington, D C. The Smithsonian Institution 1952 402 p 24 cm. (Smithsonian miscellaneous collections. Vol. 118 (whole volume) Publication 4054) $4.50 55

Contents: Preface, by G. W and R. M. Spenceley Introduction, by E. R. Epperson. Logarithms of powers of 10. Table 1 Natural logarithms (to base e) Table 2 Common logarithms (to base 10).

Note: These new logarithmic tables represent an adaptation of Hobel's factorizing method of computing logarithms. A 20 place Hobel table of natural logarithms was used by the compilers in the preparation of their *Smithsonian elliptic functions tables*, 1947 (59*) and these tables are an outgrowth of the preparation of the earlier work. Table 1 presents 23-decimal-place values of the natural logarithms, Table 2 presents 23-decimal-place values of the common logarithms, of XXXX, 1.0*XXXX, and 1.0*XXXX, the range of XXXX being from 1 to 10,000. The compilation of the tables was carried out at Miami University and funds for the publication were granted by the Research Corporation of New York.

TODD JOHN

Table of arctangents of rational numbers Issued March 30 1951 Washington D C. Government Printing Office, 1951 105 p 27 cm. (United States. National Bureau of Standards. Applied mathematics series 11) $1.50 56

Contents: Introduction. Table 1, arctan $\frac{m}{n}$, arccot $\frac{m}{n}$ and reductions of arctan $\frac{m}{n}$ for $0 < m < n \leq 100$. Table 2, Reductions of arctan n, for reducible $n \leq 2089$.

Note: A set of tables of arctangents with rational arguments prepared in response to need for the same, especially in differential equations of importance in many atomic collision problems. Table 1, in addition to $m^2 + n^2$ and arctan (m/n), also gives arccot (m/n). The angles are expressed in radians to 12 decimals and the complete reductions of arctan (m/n) are given for $0 < m < n \leq 100$. Table 2 gives a list of those integers n not exceeding 2089 for which arctan n is reducible and the corresponding complete reductions. The work was done in the Computation Laboratory of the National Bureau of Standards under the partial sponsorship of the Office of Naval Research of the Navy Department.

UNITED STATES NATIONAL BUREAU OF STANDARDS

Tables of the binomial probability distribution. Issued January 27 1950 Washington D C. Government Printing Office 1949 387 p. 27 cm. (United States. National Bureau of Standards. Applied mathematics series 6) $2.50. 57

Contents: Introduction. Table 1, Individual terms $\binom{n}{r}p^r q^{n-r}$ [p = .01(.01).50, q = 1 − p, n = 2(1)49, r = 0(1)n − 1; 7D.] Table 2, Partial sums $\sum_{s=r}^{n} \binom{n}{s}p^s q^{n-s}$ [p = .01(.01).50, q = 1 − p, n = 2(1)49, r = 1(1)n; 7D.]

Note: The binomial (or Bernoulli) distribution, which gives the probability of 0, 1, 2, ... occurrences in n independent trials of an event whose probability of occurrence in any single trial is p, is one of the most important discrete probability distributions, both in the theory of probability and in its applications, particularly in the biological sciences and engineering. The two tables published to seven decimal places in this volume present this distribution in readily available form for the first time. They were prepared for restricted use in mimeographed form by a branch of the United States Army just after the close of World War II. The present edition is a photographic reproduction of the mimeographed tables, somewhat rearranged, with the addition of a foreword and a new introduction.

UNITED STATES NATIONAL BUREAU OF STANDARDS COMPUTATION LABORATORY

Tables of the Bessel functions $Y_0(z)$ and $Y_1(z)$ for complex arguments. Prepared by the Computation Laboratory Conducted under the sponsorship of the National Bureau of Standards. Arnold N Lowan, Chief The Computation Laboratory New York Columbia University Press 1949 432 p. 27 cm. $7.50 58

Note: (42*) Most of the space in this reference work is devoted to the main table in which "along each of the rays ϕ = 0° 5° ... 90° ten-place values of the real and imaginary parts of $Y_0(z)$ are given for values of (z) ranging from 0 to 10 at intervals of .01. The book is a companion volume to United States. National Bureau of Standards. Mathematical Tables Project, *Table of the Bessel functions $J_0(z)$ and $J_1(z)$ for complex arguments*, second edition, 1947

UNITED STATES. NATIONAL BUREAU OF STANDARDS. COMPUTATIONAL LABORATORY

Tables of Bessel functions of fractional order Volume II. Prepared by the Computation Laboratory of the National Applied *Mathematics Laboratories National* Bureau of Standards. New York Columbia University Press 1949 365 p illus. 28 cm. $10.00 59

Contents (abridged) Introduction to volume II. Constants. Tables of $I_\nu(x)$. Tables of $e^{-x}I_\nu(x)$. Everett interpolation coefficients. Table of $L_\nu(x)$—for interpolating in the ν-direction.

Note: (46*) These tables give functional values to ten decimal places of $I_\nu(x)$ for $\pm\nu$ = 1/4, 1/3, 2/3, 3/4, with a range of 0 to 25 for x. Values of $J_\nu(x)$ for the same orders were given in volume I published in 1948. The tabulations have value in the solution of problems in such fields as elasticity heat conductivity and hydrodynamics.

UNITED STATES NATIONAL BUREAU OF STANDARDS COMPUTATION LABORATORY

Tables of the confluent hypergeometric function $F(\frac{n}{2}, \frac{1}{2}, x)$ and related functions. Issued January 21 1949 Washington D C. Government Printing Office, 1949 73 p illus. 26 cm. (United States. National Bureau of Standards. Applied mathematics series 3) Paper $0.35 60

Contents: Introduction. Interpolation charts. Table of $F\left(\frac{n}{2}, \frac{1}{2}, x\right)$. Table of $F\left(\frac{n}{2}, \frac{1}{2}, x\right) / \cosh\sqrt{(2n-1)x}$. Table of $\log_e F\left(\frac{n}{2}, \frac{1}{2}, x\right) / \sqrt{2nx}$.

Note: Tabulated in this publication for a = 1/2 and for a wide range of values of n and x is a simple transformation of the confluent hypergeometric function F(a, γ, x). The tables are an outgrowth of a tabulation prepared at the request of the Statistical Research Group of Columbia University for the purpose of facilitating the construction of the sequential t-test.

UNITED STATES NATIONAL BUREAU OF STANDARDS COMPUTATION LABORATORY

Tables of the exponential function e^x prepared by National Bureau of Standards Computation Laboratory Issued June 29 1951 (supersedes MT2 second edition) Washington D C Government Printing Office, 1951 537 p. 27 cm. (United States National Bureau of Standards Applied mathematics series 14) $3.25 61

Contents: Introduction. Bibliographic notes. Ascending exponentials [0.0000(0.0001)1.0000; 18D] Ascending exponentials [1.0000(0.0001)2.5000; 15D] Ascending exponentials [2.5000(0.001)5.000; 12D] Ascending exponentials [5.00(0.01)10.00; 12D] Descending exponentials [0.0000(0.0001)2.5000; 18D] Ascending and descending exponentials [0.000000(.000001)0.000100; 18D] Ascending and descending exponentials [1(1)100; 19S] Ascending and descending exponentials at decimal intervals from 1 × 10^{-10} to 9 × 10^{-1}; 18D. Values of e and 1/e; 2556D.

Note: The third edition of a set of tables useful to a range of computations in mechanics, the kinetic theory of matter, quantum mechanics, electricity magnetism, statistical mechanics, chemical kinetics, theory of probability or mathematical statistics. The work is for the most part a page-for-page reproduction of the tables given in the first and second editions. In this edition several misprints have been corrected, and the values of e and of 1/e to 2556 decimal places have been added.

UNITED STATES NATIONAL BUREAU OF STANDARDS COMPUTATION LABORATORY

Table of sines and cosines to fifteen decimal places at hundredths of a degree. Issued May 2 1949 Washington D C. Govern

ment Printing Office, 1949 95 p. 26 cm. (United States. National Bureau of Standards. Applied mathematics series 5) Paper, $0 45 62

Contents: Introduction. Table of sine and cosine $x = [0°(0.01°)90°; 15D]$ Supplementary table I, of sine and cosine $x = [1°(1°)90°; 30D]$ Reprinted from Herrmann. Bestimmungen der trigonometrischen Functionen aus den Winkeln und der Winkel aus den Functionen, bis zu einer beliebigen Grenze der Genauigkeit. *Kaiserliche Akademie der Wissenschaften, Wien, Mathematisch-naturwissenschaftliche Classe, Sitzungsberichte* 1 pt. IV p. 164–180 (1848). Supplementary table II, table of $E(p)$ and $F(p)$ $p = [0(.001)1; 8D]$

Note: Trigonometric tables with decimal subdivision of the degree are of great convenience in numerous problems of applied mathematics. The present volume, to meet the need for such tables, provides a tabulation of the sine and cosine to 15 decimal places at intervals of one-hundredth of a degree. The work was done with the financial support of the Office of Naval Research of the Navy Department.

UNITED STATES. NATIONAL BUREAU OF STANDARDS. COMPUTATION LABORATORY

Tables relating to Mathieu functions characteristic values, coefficients, and joining factors. Prepared by the Computation Laboratory of the National Applied Mathematics Laboratories National Bureau of Standards. New York Columbia University Press, 1951 278 p illus. 27 cm. $8.00 63

Contents: Introduction. Graphs of $be_r(s)$ and $bo_r(s)$. Bibliography Constants. Table of characteristic values $be_r(s)$. Table of characteristic values $bo_r(s)$. Table of coefficients $De_r(s)$. Table of coefficients $Do_r(s)$. Table of joining factors. Values of $Ez(p)$ and $Fz(p)$ $p = [0(.001)1; 7D]$ Values of $\frac{1}{2}p(1-p)$. Sines and cosines $[0(1°)90°]$ Multiples of $\frac{1}{2}\pi$.

Note: A reference book of tables compiled by the laboratory mentioned in the book's title. The tables are considerably more comprehensive than those available hitherto.

CALCULATING MACHINES

BERKELEY, EDMUND CALLIS

Giant brains or machines that think. New York John Wiley & Sons Inc., 1949 270 p. illus. 22 cm. $4.00 64

Contents: Can machines think? Languages. A machine that will think. Counting holes. Measuring. Accuracy to 23 digits. Speed—5,000 additions a second. Reliability—no wrong results. Reasoning. An excursion. The future. Social control. Supplements. Index.

Note: A well-written popular book. Not only does it explain the *principles of such bewildering machines as Harvard's IBM Automatic* Sequence-Controlled Calculator, the Electronic Numerical Integrator and Calculator (ENIAC) and the Kalin-Burkhart Logical-Truth Calculator but it conveys also a sound idea of the principles of calculation by machine and of what may be accomplished by machine calculators and by related ideas such as automatic stenographers and translators. It is written for general reading, but it is not a superficial popularization. To grasp all of it, the lay reader will have to apply himself about as vigorously as in comprehending a text in elementary algebra. A useful feature for serious students and librarians is an extensive, organized bibliography

ENGINEERING RESEARCH ASSOCIATES INC.

High-speed computing devices. Supervised by C. B Tompkins and J H. Wakelin. Edited by W W Stifler jr New York McGraw-Hill Book Company Inc. 1950 451 p. illus. 24 cm. $7.00 65

Contents: Part I, The basic elements of machine computation. Introduction. Preliminary considerations. Counters as elementary components. Switches and gates. A functional approach to machine design. Arithmetic systems. Numerical analysis. Part II, Computing systems: Desk calculators. Punched-card computing systems. Large-scale digital computing systems. Analog computing systems. The form of a digital computer. Part III, Physical components and methods: Arithmetic elements. Transfer mediums. Data-conversion equipment. Special techniques and equipment for possible use in computing systems. *Factors affecting choice of equipment.* Index.

Note: A survey of the principles, chief components, and applications of mechanical and electronic computing machines. It is written largely from the viewpoint of engineers and scientists interested in these machines from the standpoint of design or applications. The concise final chapter on choosing computing equipment is of potential interest to business and laboratory executives. The book is well organized and well written. A fair amount of familiarity with technical and mathematical concepts is essential to understanding it, but it is by no means a specialist's book. It was prepared originally under an Office of Naval Research contract.

HARTREE DOUGLAS RAYNER

Calculating instruments and machines. Urbana University of Illinois Press 1949 138 p. illus. 27 cm. $4.50 66

Contents: Introduction. The differential analyzer. The differential analyzer and partial differential equations. Some other instruments. Introduction to large automatic digital machines. Charles Babbage and the analytical engine. The first stage of development. Projects and prospects. High-speed automatic digital machines and numerical analysis. References. Name index. Subject index.

Note: Not as general in scope as the title indicates, this book is nevertheless a useful introduction to present-day automatic calculators. Desk machines and conventional punch-card devices are not included, but the principles of analog machines and digital computers are explained clearly. The operating principles of the Harvard Mark I Calculator and of the Edsac are described in some detail. The book originated as a series of lectures delivered at the University of Illinois in the fall of 1948. There is a bibliography of 122 references.

HARVARD UNIVERSITY COMPUTATION LABORATORY

Description of a magnetic drum calculator By the staff of the Computation Laboratory Cambridge, Mass. Harvard University Press, 1952 318 p. illus. 27 cm. (Harvard University *Computation Laboratory Annals.* Vol. xxv) $8 00 67

Contents: Organization of the calculator. Basic circuits. Storage system. Arithmetic units. The elementary functions. Numerical *input and output devices. Sequencing and control. Instructional* tape preparation table. Operation of the calculator. Problem preparation *and solution of typical examples.* Appendixes: Constants in fast storage. List of codes. Index.

Note: Various aspects of the construction, theory and operation of an electronic digital calculator employing magnetic drums and magnetic tape for the storage of numerical and instructional information are discussed in this work. The book is a rather specific description of the Mark III Calculator built by Harvard University for the Bureau of Ordnance of the United States Navy. However it is of general interest to mathematicians and other scientists who are interested in either the construction or applications of such machines. There are numerous illustrations.

HARVARD UNIVERSITY COMPUTATION LABORATORY

Proceedings of a second symposium on large-scale digital calculating machinery Jointly sponsored by the Navy Department *Bureau of Ordnance* and *Harvard University* at the Computation Laboratory 13–16 September 1949 Cambridge, Mass. Harvard University Press, 1951 393 p. illus. 27 cm. (The Annals of the Computation Laboratory of Harvard University Vol. 26) $8 00 68

Contents (abridged). The Mark III calculator, by B. L. Moore. The Bell computer Model VI, by E. G. Andrews. An electrostatic memory system, by J. P Eckert, jr The Raytheon electronic digital computer, by R. M. Bloch. Semiautomatic instruction on the Zephyr, by H. D. Huskey. Static magnetic delay lines, by W D.

Wee. Coincidence tubes for use with electrostatic storage tubes, by R. S. Julian and A. L. Samuel. Electrochemical computing elements, by J. R. Bowman. Logical syntax and transformation rules, by G. W. Patterson. Mathematical methods in large-scale computing units, by D. H. Lehmer. Numerical methods associated with Laplace's equation, by W. E. Milne. An iteration method for the solution of the eigenvalue problem of linear differential and integral operators, by C. Lanczos. On the Monte Carlo method, by S. M. Ulam. Double refraction of flow and the dimensions of large asymmetric molecules, by H. A. Scheraga and others. Computational problems in nuclear physics, by H. Feshbach. Computing machines in aeronautical research, by R. D. O'Neal. A statistical method for certain nonlinear dynamical systems, by G. R. Stibitz. Combustion aerodynamics, by H. W. Emmons. Application of computing machinery to research in the oil industry, by M. Muskat. Application of computing machinery to the solution of problems of the social sciences, by F. Mosteller. Computational aspects of certain econometric problems, by H. Chernoff. The selectron, by J. Rajchman. Traits caractéristiques de la calculatrice de la machine à calculer universelle de l'Institut Blaise Pascal, by L. Couffignal. The future of computing machinery, by L. N. Ridenour.

Note: Altogether there are in this volume 39 original papers, classified under such headings as "Recent developments in computing machinery," "Numerical methods," "Computational problems in physics," and "The economic and social sciences." The authors are scientists and technologists who are closely associated with progress in the field. Most of the papers are short but practically all of them contain valuable information for persons who are interested in either the development or applications of high-speed computers.

HARVARD UNIVERSITY COMPUTATION LABORATORY

Synthesis of electronic computing and control circuits. Cambridge Harvard University Press, 1951 278 p. 24 cm. (Harvard University Computation Laboratory Annals. [no.] XXVII) $8 00 69

Contents: Introduction. Vacuum-tube operators. Switching functions of two and three variables. Switching functions of variables. Minimizing charts. Pyramids and rectangles. Multiple-output circuits. Triggers, rings, and digit counters. Time variables. Rectifiers. Coding systems. Adders and accumulators. Multipliers. Appendix II Switching functions of four variables.

Note In this work the design of electronic circuits for use in computing and controlling mechanisms is treated from the standpoint of fundamental principles. The treatment leans heavily upon algebra, and there are many more mathematical symbols than electronic symbols in the text. However, the main viewpoint is practical. The book will be of primary interest to physicists, mathematicians, and engineers interested in the design of electronic computers. Electrical engineers not working in this field, but whose work includes the design of circuits for industrial electronic equipment, will find it of interest.

JOHNSON LEE H.

The slide rule. New York D Van Nostrand Company Inc. 1949 242 p. illus. 24 cm. $4.00. 70

Contents: Introduction. Multiplication and division. Squares, square roots, cubes, and cube roots. The log log scales. Trigonometric scales. Special operations. The Polyphase and Mannheim slide rules. Table of conversion factors. Answers to problems. Index.

Note: A comparatively full discussion of the use of modern slide rules in the solution of engineering problems. Most of the material has to do with the Duplex rule, but there is also fair amount of material on the Mannheim and Polyphase slide rules. The author's purpose is to teach students and practicing engineers to use their rules rapidly and expertly. He stresses correct handling of the rule, and describes in detail its manipulation in variety of problems. There are 118 figures and many of these consist of several illustrations.

KORN GRANINO ARTHUR, AND THERESA M. KORN

Electronic analog computers (d-c analog computers) New York McGraw Hill Book Company Inc. 1952 378 p. illus. 24 cm. $7.00. 71

Contents. Introduction to d-c analog computers. Practical setup procedure. The application of d-c analog computers to representative practical problems. Theory and design of linear computing elements—operational amplifiers and networks. D-c amplifiers for computer applications. Multiplication and function generation. Auxiliary circuits and computer operation. The design of complete d-c analog-computer installations. Appendix: Some properties of parallel-feedback-type operational amplifiers. Bibliography Author index. Subject index.

Note: Electronic computers are divisible into two main types: (1) digital computers, which are essentially machines that add or subtract in one-by-one fashion but do it very rapidly, and (2) analog computers which are similar in principle to slide rules. Digital computers are usually complicated, expensive, and highly accurate, while analog computers are relatively simple, inexpensive, and less accurate. This is book on the most useful variety of analog computer. It covers the theory of such computers, their proved and some of their potential applications, their main elements, and their design. Somewhat more space is given to design aspects than to uses. The book is for scientists, electronic engineers, and other persons who are familiar with electrical and electronic terminology and principles.

ALGEBRA

BIRKHOFF, GARRETT

Lattice theory Revised edition. New York American Mathematical Society, 1948 283 p. 26 cm. (American Mathematical Society Colloquium publications. Vol. XXV) $6 00 72

Contents: Partially ordered sets. Lattices. Chains and chain conditions. Complete lattices. Modular lattices. Applications to algebra. Semi-modular lattices. Complemented modular lattices. Distributive lattices. Boolean algebras. Applications to set theory. Applications to logic and probability. Lattice-ordered semigroups. Lattice-ordered groups. Vector lattices. Ergodic theory. Bibliography. Subject index. Author index.

Note The first edition appeared in 1940. In the past fifteen years the new subject of lattice theory has been undergoing rapid development. It has unified and generalized the foundations of algebra, topology projective and affine geometry logic, measure, probability functional analysis, and ergodic theory. It complements group theory to which it is similar in many ways. This second edition contains about twice as much material as the first edition of *Lattice theory*. New topics include, simply ordered sets, the axiom of choice, free lattices, residuated lattices, the algebra of relations, closure algebras, and lattice-ordered groups.

BOROFSKY, SAMUEL

Elementary theory of equations. New York The Macmillan Company, 1950 302 p. 22 cm. $4 50 73

Contents: The complex number system. Polynomials in one variable. Polynomials in the complex domain. Derivatives and multiple roots. Polynomials with real coefficients. Theorems of Budan and Sturm. Approximations to real roots. Cubic and quartic equations. Ruler and compass constructions. Algebraic number fields. Symmetric polynomials. Determinants. Linear equations. Elimination. Appendices. Numerical answers. Index.

Note An introductory work designed to be studied after the student has mastered elementary algebra. The notions of field and polynomial over field are used throughout the exposition, and to simplify the grasp of these concepts, polynomials are defined as functions rather than as elements of rings. The author is member of the faculty of Brooklyn College.

BRINK, RAYMOND WOODWARD

College algebra. Second edition. New York Appleton-Century-Crofts, Inc., 1951 495 p. illus. 22 cm. (The Appleton-Century mathematics series, Raymond W Brink, editor) $3 75 74

Contents (abridged) The fundamental operations. Factoring. Linear equations in one unknown. Functions and their graphs. Exponents and radicals. Quadratic equations. Variation, ratio and proportion. Progressions. Logarithms. The binomial theorem. Complex numbers. Theory of equations. Permutations and combinations. Determinants. Infinite series. The mathematics of investment. Curve fitting and least squares. Index.

Note: A standard text designed to meet the needs of college students who have completed at least one course in algebra in secondary school. The first edition was published in 1931. This edition has been extensively revised and new chapters have been added on real numbers and curve fitting. The author is Professor of Mathematics in the University of Minnesota.

CHEVALLEY, CLAUDE

Introduction to the theory of algebraic functions of one variable. New York American Mathematical Society 1951 188 p 26 cm. (American Mathematical Society Mathematical surveys, No. vi) $4.00 75

Contents: Places and divisors. The theorem of Riemann-Roch. The p-adic completions. Extensions of fields of algebraic functions of one variable. Extensions of the field of constants. Exact differentials. The Riemann surface. Index.

Note. Expositions of the theory of algebraic functions of one variable are more or less bound to lay more emphasis either on the algebraico-arithmetic aspect of the subject or the geometric aspect. This book favors the algebraico-arithmetic approach as originally advanced by Dedekind and Weber and later developed by Hensel and Landsberg. The main difference between the present treatment and earlier ones is that the constants of the fields of algebraic functions to be considered are not necessarily the complex numbers but the elements of a completely arbitrary field. This book includes only the elementary part of the theory. More advanced topics, such as class field theory and the theory of correspondences, have been omitted. However a suitable background of knowledge for the study of these more advanced topics has been provided.

DWYER, PAUL SUMNER

Linear computations. New York John Wiley & Sons Inc. 1951 344 p. 24 cm. (Wiley publications in statistics, Walter A. Shewhart, editor) $6.50 76

Contents (abridged): Computation with approximate numbers. The principles of computational design. The solution of simultaneous equations with the method of multiplication and subtraction. The method of multiplication and subtraction with (exact) division—method of determinants. The solution of equations with approximate methods. Relations between the coefficients. The evaluation of determinants and determinantal ratios. The evaluation of linear forms. An introduction to the algebra of matrices. The inverse matrix and its calculation with approximate methods. The calculation of the adjoint and inverse with the method of determinants. Other methods. The errors of linear computations. Application to statistics. Author references. Index.

Note: The author has published many papers on problems pertaining to the solution of simultaneous linear equations. In this book he has synthesized the material and presented it essentially for those who are not specialists in mathematics. In his words, "special emphasis is given to solutions with direct pivotal condensation methods that are particularly applicable to the modern desk calculator." The first chapter contains a concise discussion of certain fundamental operations of modern computing machines and a helpful bibliography. The book is of interest to scientific workers in many fields, including statistics.

JACOBSON NATHAN

Lectures in abstract algebra. Volume I—Basic concepts. New York D Van Nostrand Company Inc., 1951 217 p illus. 24 cm. (The university series in higher mathematics) $5.00 77

Contents: Introduction—Concepts from set theory the system of natural numbers. Semi-groups and groups. Rings, integral domains and fields. Extensions of rings and fields. Elementary factorization theory. Groups with operators. Modules and ideals. Lattices. Index.

Note: A work based on lectures given by the author at the University of North Carolina, Johns Hopkins University and Yale University. It is designed for use in graduate courses, and when complete—three volumes are planned—it will cover basic concepts, the theory of vector spaces, the algebraic structure of fields. It is introductory to this area of mathematics but of course the treatment assumes a considerable degree of mathematical sophistication on the part of the reader.

LASS HARRY

Vector and tensor analysis. New York McGraw Hill Book Company Inc., 1950 347 p. 24 cm. (International series in pure and applied mathematics William T Martin consulting editor) $5.50 78

Contents: The algebra of vectors. Differential vector calculus. Differential geometry. Integration. Static and dynamic electricity. Mechanics. Hydrodynamics and elasticity. Tensor analysis and Riemannian geometry. Further applications of tensor analysis. References. Index.

Note: An introductory textbook in which considerable attention is given to indicating the applications of vector and tensor analysis. Numerous fully worked examples form a part of the exposition. The applications discussed in the final chapter include Einstein's law of gravitation.

MIDDLEMISS ROSS RAYMOND

College algebra. New York McGraw Hill Book Company Inc., 1952 344 p. illus. 24 cm. $3.50. 79

Contents: Real numbers. Fundamental operations. Operations with polynomials and rational fractional expressions. Equations. Functions and graphs. Systems of equations. Inequalities. Negative and fractional exponents. The exponential function. Logarithms. Variation. Progressions. Mathematical induction. The binomial theorem. Compound interest and annuities. Theory of equations. Determinants. Complex numbers. Permutations and combinations. Probability. Tables. Answers. Index.

Note: A modern introductory text intended both for science majors and liberal arts students. Considerable emphasis is placed on precision in stating hypotheses. The author is Professor of Mathematics in Washington University.

MILLER EARLE BRENNEMAN, AND ROBERT M THRALL

College algebra. New York The Ronald Press Company 1950 493 p. illus. 21 cm. $4.00 80

Contents (abridged): Part I, Introductory topics: The number system of algebra. Review topics. Part II, Functions of real variables; solution of equations: Linear functions and equations. Quadratic functions and equations. Functions and equations of the third and fourth degrees. Functions and equations of the nth degree. Rational functions. Exponential functions and logarithms. Part III, Functions of integers: Sequences and series. Arithmetic, harmonic, and geometric progressions. Mathematical induction. The binomial theorem. Part IV Other topics: Permutations and combinations. Probability. Matrices, determinants, and systems of linear equations. Complex numbers. Appendix. Index.

Note: A college textbook of intermediate level. It is designed for students who have had a course of elementary algebra and who are planning to major in mathematics or in some branch of science where algebra is used at more than an elementary level. The first-named author is Professor of Mathematics in the Illinois College and the second-named author is Associate Professor of Mathematics in the University of Michigan.

PERLIS SAM

Theory of matrices. Cambridge, Mass. Addison Wesley Press Inc., 1952 237 p. 23 cm. (Addison Wesley mathematics series, Eric Reissner consulting editor) $5.50 81

Contents: Introductory concepts. Vector spaces. Equivalence, rank, and inverses. Determinants. Congruence and Hermitian congruence. Polynomials over a field. Matrices with polynomial elements. Similarity. Characteristic roots. Linear transformations. References. Index.

Note: An introductory textbook written particularly for students of engineering and other fields who are mainly interested in matrix theory for its potential practical applications. However, as the author points out, it is suitable also for mathematics majors who are taking their first course in the subject. Basic ideas and techniques

are emphasized, and each point and manipulation is carefully and fully discussed when first introduced. The author is Associate Professor of Mathematics at Purdue University

RITT, JOSEPH FELS

Differential algebra. New York American Mathematical Society 1950 184 p 26 cm. (American Mathematical Society Colloquium publications. Vol. XXXIII) $4 40 82

Contents: Differential polynomials and their ideals. Algebraic differential manifolds. Structure of differential polynomials. Systems of algebraic equations. Constructive methods. Analytical considerations. Intersections of algebraic differential manifolds. Riquier's existence theorem for orthonomic systems. Partial differential algebra. Questions for investigation. Bibliography Index.

Note. The body of algebra deals with the operations of addition and multiplication. T these may be adjoined differentiation. There results theory in which algebra and analysis, without fusing, play coördinate roles. One obtains thus an enlarged algebraic phylum in which classical entities appear as evolutionary predecessors of entities of more complex structure. Differential algebra throws strong light on such analytical matters as the singular solutions of algebraic differential equations and the order of system of such equations. The present book sets forth considerable part of what has thus far been contributed to differential algebra. Concrete algebra and some knowledge of existence theorems are, essentially the requirements put on the reader. An appendix presents questions for investigation.

SCHATTEN, ROBERT

A theory of cross-spaces Princeton Princeton University Press, 1950 153 p. 25 cm. (Annals of mathematics studies, Emil Artin and Marston Morse, editors. Number 26) $2 50 83

Contents. Introduction. Notations and conventions. The algebra of expressions $\Sigma_{i=1} f_i \otimes g_i$. Crossnorms. Cross-spaces of operators. Ideals of operators. Crossed unitary spaces. Appendix Reflexive crossnorms. Reflexive cross-spaces. Limited" crossnorms. Appendix A "self associate crossnorm. References.

Note The problem attacked in this study is: given two linear vector spaces L_1 and L_2, is it possible to construct linear vector space, say denoted with the symbol $L_1 \otimes L_2$ of formal products $f \otimes g$ for which the distributive multiplication laws hold? The discussion is on an advanced mathematical level.

SCHILLING OTTO FRANCIS GEORGE

The theory of valuations. New York American Mathematical Society 1950 253 p 26 cm. (American Mathematical Society Mathematical surveys. no IV) $6 00 84

Contents. General properties of valuations. Complete fields. The ramification theory of valuations. Special ideal theory Arithmetic of simple algebras Local class field theory The structure of complete fields. The general Galois theory Facts about linear algebras. Glossary

Note. The theory of valuations is branch of topological algebra. Valuation theory plays an important part in such fields of algebra as class field theory the structure of commutative rings, and the foundations of algebraic geometry This volume concentrates on the general significance of valuation theory for the algebraic and arithmetic structure of fields, division rings, and simple algebras. Each chapter has its own bibliography and major part of the literature on valuations is covered

SOKOLNIKOFF IVAN STEPHEN

Tensor analysis theory and applications. New York John Wiley & Sons Inc., 1951 335 p 24 cm. (Applied mathematics series, edited by I. S. Sokolnikoff) $6.00 85

Contents: Linear vector spaces—matrices. Tensor theory Geometry Analytical mechanics. Relativistic mechanics. Mechanics of continuous media. Bibliography Index.

Note: An introduction to tensor analysis written on the graduate level and slanted for those interested in the applications of the subject rather than in its theory No special field of application is emphasized, however; and in the words of the author, "Perhaps the best evidence of the remarkable effectiveness of the tensor apparatus in the study of Nature is in the fact that it was possible to include, between the covers of one small volume, large amount of the material that is of interest to mathematicians, physicists, and engineers. The treatment of relativistic mechanics is intentionally brief because the author felt no need to duplicate the contents of available books on relativity of which Bergmann, *An introduction to the theory of relativity* (New York, 1942) and Rainich *Mathematics of relativity* (New York, 1950) are mentioned in the bibliography

TARSKI, ALFRED

A decision method for elementary algebra and geometry Second edition revised. By Alfred Tarski. Prepared for publication with the assistance of J C C. McKinsey Berkeley Calif University of California Press, 1951 63 p illus. 28 cm. Paper $2 75 86

Contents. Introduction. The system of elementary algebra. Decision method for elementary algebra. Extensions to related systems. Notes. Bibliography Supplementary notes.

Note. In this monograph is presented method for deciding on the truth of sentences of the elementary algebra of real numbers and hence also of elementary geometry In mathematical research, both pure and applied, arise problems as to the truth of complicated sentences of elementary algebra or geometry The decision method here presented gives the mathematician the assurance that he will be able to solve every such problem by working at it long enough. The publication is divided into three major sections: the first section contains description of the system of algebra to which the decision method applies; in the second section the author develops the decision method itself in detailed way; in the third, are discussed some extensions of the results as well as some related problems. The notes at the end contain, in addition to historical and bibliographical references, the discussion of various points of theoretical interest hich are not directly related to the question of constructing decision machine. A short bibliography of 24 items refers to the previous known writings in this field. The second edition is a photographic reproduction of the 1948 edition with misprints and minor flaws corrected and three additional pages of notes.

WADE THOMAS L.

The algebra of vectors and matrices. Cambridge Addison Wesley Press, Inc., 1951 189 p 22 cm. $4.50 87

Contents: Basic concepts. Vectors of two and three dimensions. Vector methods in geometry; linear dependence of vectors. Vectors of dimensions. Elementary properties of matrices. Related and special matrices. Groups, matrices, and transformations. The characteristic equation of matrix. Rank of matrix. Matrices and algebraic forms. Some applications of matrix algebra. Appendixes. Bibliography Index. Answers to exercises.

Note: An introduction for students ho desire only working knowledge and who will not pursue the subject any further than this book. On the other hand, the treatment is developed against the background of modern algebra; hence it can be used as an introduction to the whole field of modern algebra.

WALKER, ROBERT JOHN

Algebraic curves. Princeton Princeton University Press, 1950. 201 p 24 cm. (Princeton mathematical series edited by Marston Morse and A. W Tucker No. 13) $4.00 88

Contents: Algebraic preliminaries. Projective spaces. Plane algebraic curves. Formal power series. Transformations of curves. Linear series. Index.

Note: An introductory text in algebraic geometry In order to keep the presentation simple, the book has been limited to the theory of curves. All theorems are proved, and exercises are included in the text for students to work. The study is carried as far as the theorem of Riemann-Roch.

ARITHMETIC AND THEORY OF NUMBERS

DUBISCH, ROY

The nature of numbers, an approach to basic ideas of modern mathematics. New York The Ronald Press Company, 1952 159 p. illus. 22 cm. $4.00 89

Contents: Counting from one to a googol. Writing numbers from one to a googol. God made the integers. Creation completed. Zero again—and less. Fractions are easy now. The unspeakable. The great *i* solves all. A shot in the arm for complacent algebraists of the nineteenth century. How lasting was the shot? Last-minute edition of the *Algebra gazette*. The author's lament. Appendix. Suggestions for further reading. Answers to problems. Index.

Note: A refreshing exposition of the nature or ideas of present-day mathematics. The author begins it by showing that the mathematics of common knowledge, particularly arithmetic, is based on the acceptance of abstractions. After this he takes up the basic concepts of mathematics such as *matrix algebra and function theory*. The book is written for laymen, and it should be useful to anyone who desires to learn what professional mathematicians concern themselves with.

JONES, BURTON WADSWORTH

The arithmetic theory of quadratic forms. New York The Mathematical Association of America. *Distributed by John Wiley & Sons Inc.*, 1950 212 p. 19 cm. (The Carus mathematical monographs. No. 10) $3.00 90

Contents: Forms with real coefficients. Forms with *p*-adic coefficients. Forms with rational coefficients. Forms with coefficients in *R* (*p*). Genera and semi-equivalence. Representations by forms. Binary forms. Ternary quadratic forms. Bibliography. Problems. Theorem index. Index.

Note: A self-contained presentation of this mathematical topic. The author has assumed that *his readers will be familiar with* matrix theory and the theory of numbers. The work is of interest to graduate students specializing in mathematics, and to professional mathematicians who need an introduction to this special subject. The author is a member of the faculty of the University of Colorado.

LARSEN, HAROLD DANIEL

Arithmetic for colleges. New York The Macmillan Company 1950 275 p. illus. 21 cm. $4.00 91

Contents: Number. Casting out nines and elevens. Addition. Subtraction. Multiplication. Division. Common fractions. Decimal fractions. Percentage. Units of measure and dimensional relations. *Approximate numbers and computation. Square root. Introduction to the slide rule.* References. Appendix. Index. Answers.

Note: An unusual treatment of arithmetic because it is designed primarily for college students. Rather than a review of principles and techniques usually studied in elementary school, it is a fresh treatment suitable for persons who will teach arithmetic in elementary schools and for others who desire a treatment for mature readers. The bibliography *is selective but includes outstanding* "popular" treatments of mathematics, books on mathematical recreation, standard treatises on such topics as numbers, and books and articles on the teaching of arithmetic.

POLLARD, HARRY

The theory of algebraic numbers. New York The Mathematical Association of America. *Distributed by John Wiley and Sons Inc.* 1950 142 p 19 cm. (The Carus mathematical monographs. No 9) $3.00 92

Contents: Divisibility. The Gaussian primes. Polynomials over a field. Algebraic number fields. Bases. Algebraic integers and integral bases. Arithmetic in algebraic number fields. The fundamental theorem of ideal theory. Consequences of the fundamental theorem. Class-numbers and *Fermat's* problem. Minkowski's lemma and the theory of units. References. Index.

Note: An introductory presentation of classical algebraic number theory. *In general theorems are proved, but in the case of Gelfond and Schneider's theorem for the transcendence of algebraic numbers,* the reader is referred to a paper in a mathematical journal for the proof. The book is of interest to advanced students who are majoring in mathematics, to mathematicians who have specialized in other fields but wish some knowledge of this one, and to lay readers who are mathematically mature and pursue mathematics as a recreation.

STEWART, BONNIE MADISON

Theory of numbers. New York Macmillan Company, 1952 261 p. illus. 22 cm. $5.50 93

Contents (abridged): Preliminary considerations. Mathematical induction. *Representation of the integers. The fundamental theorem of arithmetic.* Prime and composite integers. The bracket function. Groups of transformations: matrices and determinants. Diophantine equations of the first degree. Pythagorean triplets. Fermat's method of descent. Euler's phi-function. Introduction to the congruence notation. Linear congruences. Exponents, primitive roots, and indices. The quadratic reciprocity law. Sums of four squares. Introduction to quadratic forms. Peano's axioms for the natural integers. Rational numbers. Decimal representation of rational numbers. The fundamental theorem reconsidered.

Note: An introductory text developed in courses given at Michigan State College.

ANALYSIS

BELLMAN, RICHARD

A survey of the theory of the boundedness stability and asymptotic behavior of solutions of linear and non-linear differential and difference equations. Washington D. C. Office of Naval Research, Department of the Navy 1949 156 p. 27 cm. (Navexos P-596) Paper 94

Contents: Introduction: Boundedness, stability and asymptotic behavior of *solutions of systems of linear differential equations.* Theorems on stability. Theorems on boundedness. Theorems on asymptotic behavior. Non-linear differential equations: Methods. Stability. The equation $dx/dt = Ax + f(x,t)$, A constant. Continuation. $A(t)$ a periodic matrix. Generalization to $dx/dt = Ax + f(x, dx/dt, t)$. $A(t)$ a variable matrix. A general condition. A counter-example. One characteristic root zero. Asymptotic behavior of solutions. *Transformation of equations. All characteristic roots zero. Solutions in* trigonometric form. The magnitude of solutions of non-linear differential equations. Asymptotic behavior of solutions of a special class of equations. On the solutions of second order linear differential equations: A preliminary transformation. The boundedness of solutions of $u'' + a(t)u = 0$. Counter-examples. *L* stability. *Asymptotic* behavior of solutions of $u'' \pm [a^2 + \varphi(t)]u = 0$. The Liouville-*Jeffreys-Wentzel-Kramers-Brillouin approximation.* The *asymptotic* behavior of solutions of $(ru')' + k^2ru = 0$. Periodic coefficients. Almost periodic coefficients. Oscillation of solutions of $u'' + \varphi(t)u = 0$. Oscillation of solutions of $u'' + f(u,t) = 0$. Magnitude of oscillations of solutions of $u'' + \varphi(t)u = 0$. Non-oscillation theorems. Difference equations: The equation $y(t+1) = Ay(t)$, A a constant matrix. An important lemma. The linear equation $y(t+1) = [A + B(t)]y(t)$. *The non-linear equation* $y(t+1) = Ay(t) + f(y)$. Asymptotic behavior of solutions. Magnitude of solutions of non-linear difference equations. Difference equations with arbitrary real spans.

Note: In this work are collected and correlated the known results *of solutions to the class of differential equations of the form*

$$\frac{dx_i}{dt} = f_i(x_1, x_2, \ldots, x_n, t), \quad 1 \leqslant i \leqslant n,$$

where $x_1, x_2, \ldots, x_n$ and t are real variables, a class of differential equations for which practical applications have been found in such diverse fields as aerodynamics, astrophysics, and electronics. It is from a survey of the literature of these fields as well as of mathematics, and with a view to preventing further duplication and to stimulating research on outstanding problems, that the present work was compiled and published. As central themes, three principal properties of solutions were selected: boundedness, stability and asymptotic behavior. The work includes bibliographies, which appear at the ends of the chapters.

BERGMAN STEFAN

The kernel function and conformal mapping. New York American Mathematical Society 1950 161 p. 26 cm. (American Mathematical Society Mathematical surveys. no v) $4 00 95

Contents Orthogonal functions. The kernel function and associated minimum problems. The invariant metric and the method of the minimum integral. Kernel functions and Hilbert space. Representation of the classical domain functions. Canonical conformal transformations. Orthogonalization over the boundary Variational methods. Existence proofs. Partial differential equations. Functions of two complex variables and pseudo-conformal mapping. Bibliography Index.

Note. This survey presents number of methods and principles which are of wide applicability in such branches of analysis as function theory partial differential equations, differential geometry etc. The special emphasis here, however is on conformal mappings. The underlying idea is to consider linear classes of functions in which norm can be introduced and the notion of orthogonality defined. For each complete system of orthonormal functions in the class kernel function is defined. The classical domain functions, such as Green's and Neumann's harmonic measures, etc., are shown to be intimately related to the kernel function. Since the latter is defined in terms of an orthonormal system, it is possible to solve many conformal mapping problems numerically T read this volume considerable mathematical background is required.

BERNSTEIN DOROTHY LEWIS

Existence theorems in partial differential equations. Princeton Princeton University Press 1950 228 p illus. 25 cm. (Annals of mathematics studies, Emil Artin and Marston Morse, editors. No 23) $2 50 96

Contents: Introduction. The initial value problem and the problem of Cauchy for first order differential equations. Second order differential equations. Partial differential equations of order >2 Bibliography

Note. This study is intended to list the existence theorems used in solving partial differential equations, with special emphasis on those which may be utilized in the solution of such equations by means of digital computing machines. Two opposite approaches to the use of computing machines in problems involving partial differential equations are illustrated by (1) those persons who believe that computing machines can be used to solve all such problems if the equations are set up correctly and (2) those who will not attempt to use them in solving partial differential equation unless it can be shown to hav at least one unique solution. In this book an attempt has been made to reach compromise by providing the reader with an opportunity to draw an analogy between his problem and the ones the author has worked out. This should enable him to see if solution exists for his problem. The author is Professor of Mathematics in the University of Rochester.

BOCHNER, SALOMON AND K. CHANDRASEKHARAN

Fourier transforms. Princeton Princeton University Press, 1949 219 p. 23 cm. (Annals of mathematics studies. No. 19) Paper $3.50 97

Contents: Fourier transforms in L_1 (one variable) Fourier transforms in L_1 (several variables) L_2-spaces. Fourier transforms in L_2. General transforms in L_2. General Tauberian theorem. Notes. Glossary

Note. A series of studies of interest to advanced graduate students and professional mathematicians. Altogether 93 theorems are stated and proved.

COURANT RICHARD

Dirichlet's principle, conformal mapping, and minimal surfaces. With an appendix by M. Schiffer New York Interscience Publishers Inc. 1950 330 p illus. 23 cm. (Pure and applied mathematics a series of texts and monographs, edited by H. Bohr, R. Courant and J J Stoker) $6.50 98

Contents: Dirichlet's principle and the boundary value problem of potential theory Conformal mapping on parallel-slit domains. Plateau's problem. The general problem of Douglas. Conformal mapping of multiply connected domains. Minimal surfaces with free boundaries and unstable minimal surfaces. Bibliography Appendix: Some recent developments in the theory of conformal mapping Green's function and boundary value problems. Dirichlet integrals for harmonic functions. Variation of the Green's function. Bibliography to appendix. Index.

Note. Dirichlet's principle is of wide interest in analysis and higher geometry In this book the author not only presents the principle and its proofs but illustrates the application of the concept to various problems in mathematics, especially problems of minimal surfaces. Though no applications to technology are indicated in the book, nevertheless the book's contents are applicable to such practical problems as the analysis or mapping of electromagnetic fields.

FRANKLIN, PHILIP

Fourier methods New York McGraw Hill Book Company, Inc., 1949 289 p illus. 21 cm. $5 00 99

Contents. Complex quantities. Impedance. Fourier series and integrals. Partial differential equations. Boundary value problems. Laplace transforms. Transients. Bibliography Index.

Note: A brief and general introduction to the use of Fourier series and Laplace transforms. Emphasis is on methods rather than theory and the treatment assumes knowledge of elementary calculus. The text is intended for college students majoring in applied mathematics, engineering, and physics, and the illustrative exercises and review problems have particular application in these fields. The author is Professor of Mathematics at Massachusetts Institute of Technology

GOLOMB, MICHAEL, AND MERRILL SHANKS

Elements of ordinary differential equations. New York McGraw Hill Book Company Inc., 1950 356 p 24 cm. (International series in pure and applied mathematics William Ted Martin consulting editor) $4.50. 100

Contents: Review and collection of formulas. Geometric fundamentals for first-order differential equations. Techniques for solving first-order equations; applications. Second-order differential equations. Linear differential equations of higher order; constant coefficients. Algebra of inverse operators; systems of linear differential equations. Linear equations with variable coefficients. Solution in power series; some classical equations. Appendices. Bibliography Answers. Index.

Note: An introductory textbook designed for use in courses offered to college students who have completed course in elementary calculus. Special pedagogical features listed by the authors in the preface are "early emphasis on geometric and numerical methods, use of the superposition principle, use of the existence theorems in development of techniques, elementary but mathematically sound development of operational calculus, systems of equations treated carefully without use of matrices, use of Green's functions and elementary but precise treatment of power series. The authors are members of the faculty of Purdue University

HALMOS PAUL RICHARD

Measure theory New York D Van Nostrand Company Inc. 1950 304 p illus. 24 cm. (The university series in higher mathematics, Editorial board M H. Stone, chairman) $6.25 101

Contents: Sets and classes. Measures and outer measures. Extension of measures. Measurable functions. Integration. General set functions. Product spaces. Transformations and functions. Probability Locally compact spaces. Haar measure. Measure and topology in groups. References. Bibliography List of frequently used symbols. Index

Note This work is both textbook for graduate students of mathematics and treatise of interest to professional mathematicians who are working in the more advanced areas of analysis and topology The text proper is limited more or less to the fundamentals of measure theory but in certain of the exercises the author has assumed on the part of the reader knowledge of advanced concepts

in topology etc. Thus he has made the book of interest both to beginners and to those who have done previous work in the field. He is Associate Professor of Mathematics at the University of Chicago.

HOLMES, CECIL THOMAS

Calculus and analytic geometry New York McGraw Hill Book Company Inc., 1950. 416 p illus. 24 cm. $5 00 102

Contents: Algebra and geometry in cooperation. Elements of the differential calculus. The conic sections. Maxima, minima, and inflections. First notions of the integral calculus. Algebraic functions. Curvilinear motion—vectors—parametric equations—arc length—area of surface of revolution. The logarithmic and the exponential functions—integration by parts. The trigonometric functions. Calculus with the trigonometric functions—applications. Infinite series—expansion of functions. Ordinary differential equations. Solid analytic geometry. Differential calculus for functions of more than one variable. Integral calculus with functions of more than one variable. Formulas for reference. Answers to exercises. Index.

Note. An introductory textbook developed at Bowdoin College where the author is Professor of Mathematics. It is organized so that the student who stays with the course only through the fifth chapter will have been presented with a survey of the main concepts and techniques of plane geometry and of calculus, while the student who takes the whole course will in addition acquire considerable practice in the use of the calculus. Most theorems are proved.

KAPLAN WILFRED

Advanced calculus. Cambridge Mass Addison Wesley Press Inc. 1952 679 p 24 cm. (Addison Wesley mathematics series Eric Reissner consulting editor) $8.50 103

Contents: Introduction. Vectors. Differential calculus of functions of several variables. Vector differential calculus. Integral calculus of functions of several variables. Vector integral calculus. Infinite series. Fourier series and orthogonal functions. Ordinary differential equations. Functions of a complex variable. Partial differential equations. Index.

Note: A college textbook for students who have completed courses in introductory algebra at the college level, analytic geometry and elementary calculus. Although fairly frequent discussions of applications—for instance the application of conformal mapping in hydrodynamics—indicate that the book is designed for engineering students rather than for mathematicians, the treatment is rigorous. Literature references accompany the chapters. The author is Associate Professor of Mathematics in the University of Michigan.

LEFSCHETZ, SOLOMON editor

Contributions to the theory of nonlinear oscillations. Princeton Princeton University Press, 1950 350 p. illus 24 cm. (Annals of mathematics studies edited by Emil Artin and Marston Morse. No. 20) $4 00 104

Contents: On systems of ordinary differential equations, by S. P Diliberto. Oscillation of a third order nonlinear autonomous system, by L. L. Rauch. Nonlinear difference-differential equations, by F H. Bowrall. Forced oscillations in nonlinear systems, by M. L. Cartwright. Singular perturbations of a Van der Pol equation, by J G. Wendel. The existence of forced periodic solutions of second order differential equations near certain equilibrium points of the unforced equation, by C. E. Langenhop and A. E. Farnell. The construction of periodic solutions of singular perturbation problems, by W Wasow

Note: A collection of short monographs on nonlinear periodic motions in dissipative systems. Most of them have engineering as well as mathematical interest—in fact five of the papers were prepared under research contracts with the Office of Naval Research.

LEFSCHETZ SOLOMON editor

Contributions to the theory of nonlinear oscillations. Volume II. By M. L. Cartwright, E. A. Coddington, H. G DeBaggis, S Lefschetz, N Levinson J McCarthy and H. L. Turrittin. Princeton Princeton University Press 1952 122 p. 26 cm. (Annals of mathematics studies. No 29) Paper $1.50 105

Contents: Van der Pol's equation for relaxation oscillations, by M. L. Cartwright. Perturbations of linear systems with constant coefficients possessing periodic solutions, by E. A. Coddington and N. Levinson. Dynamical systems with stable structures, by H. F DeBaggis. Notes on differential equations, by S. Lefschetz. A method for the calculation of limit cycles by successive approximation, by J. McCarthy Asymptotic expansions of solutions of systems of ordinary linear differential equations containing a parameter by H. L. Turrittin.

Note: In this second collection of original contributions, all but one of the papers bear on the solution of oscillatory problems by techniques of differential equations. Literature references are included in both volumes.

MCKELVEY JOSEPH VANCE

Calculus. Revised edition. New York The Macmillan Company 1951 405 p illus. 22 cm. $4.50 106

Contents (abridged) Differential calculus: Functions. Limits and continuity Increments—derivatives. Differentiation of algebraic functions. Transcendental functions. Differentials. Parametric equations. Rolle theorem—mean value theorem—indeterminate forms. Functions of more than one variable. Curvature. Singular points. Integral calculus: Integration by parts—substitutions—rational fractions. The definite integral. Length of arc—area of surface of revolution. Improper integrals. Multiple integrals. Fluid pressure—moments—work. Infinite series. Differential equations. Theory of limits—continuity Answers to exercises. Table of integrals. Index.

Note: (1st ed. 1930) An established introductory text in which the author has followed the pedagogical principle of illustrating new ideas first and giving definitions, terminology and theorems afterwards. The present edition represents a moderate amount of revision with one newly added chapter many new problems, and numerous lesser changes. The author is Professor of Mathematics in Iowa State College.

MCKINSEY J C C

Introduction to the theory of games. The Rand Corporation. New York McGraw Hill Book Company Inc. 1952 571 p illus. 24 cm. (The Rand series) $6.50 107

Contents: Rectangular games. The fundamental theorem for rectangular games. The solutions of a rectangular game. A method of approximating the value of a game. Games in extensive form. Games in extensive form—general theory. Games with infinitely many strategies. Distribution functions. Stieltjes integrals. The fundamental theorem for continuous games. Separable games. Games with convex payoff functions. Applications to statistical inference. Linear programming. Zero sum n-person games. Solution of n-person games. Games without zero-sum restriction—the von Neumann-Morgenstern theory. Some open problems. Bibliography. Index

Note: The subject of this work is the mathematical theory of games and strategy. The theory has application not only to such games as chess and poker but also to military strategy, certain problems related to business competition, etc. However, applications are not stressed. The book is addressed to college students who have a knowledge of introductory calculus and classical algebra. Other mathematical concepts, such as the properties of matrices and distribution functions, are explained in the book. The author is a member of the faculty of Stanford University

MARDEN MORRIS

The geometry of the zeros of a polynomial in a complex variable. New York American Mathematical Society 1949 183 p. 26 cm. (American Mathematical Society Mathematical surveys. no III) $5 00 108

Contents: Introduction. The critical points of a polynomial and some of their generalizations. Investigative formulation. Composite polynomials. The critical points of a rational function which has its zeros and poles in prescribed circular regions. The critical points of a polynomial which has only some prescribed zeros. Bounds for the zeros as functions of all coefficients. Bounds for p zeros as functions of $p+1$ coefficients. The number of zeros in a half-plane or sector. The number of zeros in a given circle. Bibliography. Index.

Note: The problems treated here center about the study of the zeros of a polynomial as functions of various parameters, usually the

coefficients of the polynomial. The first contributors to this subject were Gauss and Cauchy. This survey is a detailed exposition bringing together, unifying, and simplifying the many results at present scattered throughout the mathematical journals.

MAY, KENNETH OWNSWORTH

Elementary analysis. New York, John Wiley & Sons, Inc. 1952. 635 p. illus. 22 cm. $5.00 109

Contents: Introduction. Logic. Numbers and elementary operations. Linear functions. The quadratic function. The power functions. The exponential and logarithmic functions. Circular functions. Analytic geometry. The complex number system. Conic sections. Polynomials. Algebraic functions. Functions of two variables. Tables. Index.

Note: An introductory textbook for beginning college students. It provides a unified treatment of concepts and techniques from logic, number theory, algebra, analytic geometry, trigonometry, and introductory calculus. It is characterized by patient and clear explanations. The author is Chairman of the Department of Mathematics in Carleton College.

MILLER, FREDERIC HOWELL

Analytic geometry and calculus: a unified treatment. New York, John Wiley & Sons, Inc., 1949. 658 p. illus. 22 cm. $5.50 110

Contents: Functional relations and loci. The straight line. Limits and the derivative concept. Differentiation of algebraic functions. The integral concept. Elementary applications of calculus. The circle. Coordinate transformations. The conic sections. Differentiation of transcendental functions. Integration processes. Parametric equations. Further applications of differential calculus. Further applications of integral calculus. Polar coordinates. Points, planes, and lines in space. Surfaces and curves in space. Partial differentiation. Multiple integrals. Infinite series. Appendices. Answers to odd-numbered exercises. Index.

Note. A distinctive feature of this college text is its integration of plane and solid analytic geometry with differential and integral calculus. The unified presentation is thought to have definite advantages over the study of analytic geometry and calculus as separate branches of mathematics. Numerous illustrative examples are worked out as part of the exposition. There are about 3,000 exercises for the student, and a fair number of these illustrate applications in physics or engineering. The author is Professor of Mathematics in the Cooper Union School of Engineering.

MILNE, WILLIAM EDMUND

Numerical calculus: approximations, interpolation, finite differences, numerical integration and curve fitting. Princeton, New Jersey, Princeton University Press. 1949. 393 p. 24 cm. $3.75 111

Contents: Simultaneous linear equations. Solution of equations by successive approximations. Interpolation. Numerical differentiation and integration. Numerical solution of differential equations. Finite differences. Divided differences. Reciprocal differences. Polynomial approximation by least squares. Other approximations by least squares. Simple difference equations. Appendixes: Notation and symbols. Texts, tables, and bibliographies. Classified guide to formulas and methods. Tables. Index.

Note: The translation of theoretical analysis into numerical results is the basic theme in this book. Written for upperclass undergraduate college students who have some knowledge of calculus and differential equations, it points the way to practical applications of more advanced mathematical methods. The specific methods covered are named in the chapter titles. The bibliography, which is annotated, lists books and pamphlets on related techniques not covered in this work.

PHILLIPS, HENRY BAYARD

Differential equations. Third edition revised. New York, John Wiley & Sons, Inc. 1951. 149 p. illus. 22 cm. $3.00 112

Contents: Differential equations of the first order with variables separable. Other equations of the first order. Special types of second order equations. Linear equations with constant coefficients. Answers. Index.

Note: A standard textbook for use in undergraduate college courses. It is concisely and clearly written. Most of the examples worked out in the text illustrate applications in science and engineering. The author is a member (emeritus) of the faculty of Massachusetts Institute of Technology.

PÓLYA, GYORGY, AND GABOR SZEGŐ

Isoperimetric inequalities in mathematical physics. Princeton, Princeton University Press. 1951. 279 p. 25 cm. (Annals of mathematics studies. Emil Artin and Marston Morse, editors. No. 27) $3.00 113

Contents: Definitions, methods and results. The principles of Dirichlet and Thomson. Applications of the principles of Dirichlet and Thomson to estimation of capacity. Circular plate condenser. Torsional rigidity and principal frequency. Nearly circular and nearly spherical domains. On symmetrization. On ellipsoid and lens. Surface-area and Dirichlet's integral. On continuous symmetrization. On spherical symmetrization. On a generalization of Dirichlet's integral. Heat-conduction on a surface. On membranes and plates. Virtual mass and polarization. Tables for some set-functions of plane domains. Bibliography. List of symbols.

Note: The purpose of this book is to facilitate the estimation of physical quantities on the basis of geometrical data, or the obtaining of less accessible quantities in terms of more accessible ones. The authors show that whereas the area enclosed by a curve cannot be determined merely by knowing its perimeter, the knowledge of the perimeter sets certain limits for the area. Other quantities such as the moment of inertia, with respect to the centroid, of a homogeneous plate bounded by the curve, the torsional rigidity of an elastic beam the cross-section of which is bounded by the given curve, the principal frequency of a clamped plate of the same size and shape, and the electrostatic capacity can be determined from the size and shape of a curve. The study is a product of a project sponsored by the Office of Naval Research. An especially useful section is the tabular presentation of quantities in the final chapter.

RAINVILLE, EARL DAVID

Elementary differential equations. New York, The Macmillan Company, 1952. 392 p. illus. 21 cm. $5.00 114

Contents: Definitions, elimination of arbitrary constants. Equations of the first order and first degree. Orthogonal trajectories. Hyperbolic functions. Linear equations with constant coefficients. Nonhomogeneous equations: undetermined coefficients—operational methods. Applications. Electric circuits and networks. Variation of parameters and other methods. Equations of order one and higher degree. Special equations of order two. The power series method. Solutions near regular singular points. The existence of solutions. Numerical methods. Partial differential equations. Fourier series. Boundary value problems. Index.

Note: A textbook designed for use in full-length, introductory courses in differential equations. Because particular attention is paid to methods of solving differential equations, it is especially suitable for students majoring in a science or in engineering. However direct applications to problems in physics and engineering are concentrated in two chapters. The first 13 chapters are a reprint of the material published as the author's *Short course in differential equations*, New York, The Macmillan Company 1949 210 p., $3.00.

RANDOLPH, JOHN F

Calculus. New York, The Macmillan Company. 1952. 483 p. 24 cm. $5.00 115

Contents. Functions, limits, derivatives. The definite integral. Applications of derivatives. Transcendental functions. Indefinite integration. Solid geometry. Partial derivatives. Multiple integrals. Further applications. Approximations. Series. Appendix. Table of integrals. Answers. Index.

Note: An introductory college textbook with several interesting pedagogical features. The author believes in the gradual introduction of important concepts and techniques, hence the exposition of ideas new to the student is usually foreshadowed by the introduction to material that demonstrates the necessity for it. The direct connection between analytic geometry and calculus is shown in the first part. The derivatives of sine and cosine functions are introduced early and definite integrals are taken up before indefinite integrals. The author is Chairman of the Department of Mathematics of the University of Rochester.

REDDICK, HARRY WILFRED

Differential equations. Second edition. New York John Wiley & Sons, Inc., 1949 288 p. illus. 22 cm. $3 75 116

Contents: Preliminary ideas. The formation of differential equations. Differential equations of first order. Linear equations with constant coefficients. Some special higher order equations. Simultaneous equations. The linear equation of second order. Series solutions. Answers. Index.

Note: (204) A standard introductory text. Although it is designed for use in both liberal arts and engineering schools, it is especially suited to the latter because of the preponderance of engineering problems. Only ordinary differential equations are dealt with. Major changes in this edition include new sections on hyperbolic functions and systems of curves, a new chapter on the linear equation of second order and many additional problems. Answers are given for all of the problems.

SCARBOROUGH JAMES BLAINE

Numerical mathematical analysis. Second edition Baltimore The Johns Hopkins Press 1950. 511 p. illus. 24 cm. $6 00 117

Contents: The accuracy of approximate calculations. Interpolation—differences—Newton's formulas of interpolation. Interpolation—central-difference formulas. Interpolation—Lagrange's formula—inverse interpolation. The accuracy of interpolation formulas. Interpolation with two independent variables—trigonometric interpolation. Numerical differentiation and integration. The accuracy of quadrature formulas. The solution of numerical algebraic and transcendental equations—equations in one unknown—simultaneous equations. Graeffe's root-squaring method for solving algebraic equations. The numerical solution of ordinary differential equations—equations of the first order—equations of the second order and systems of simultaneous equations—the differential equations of exterior ballistics—other methods of solving differential equations numerically. The numerical solution of partial differential equations. The numerical solution of integral equations. The normal law of error and the principle of least squares. The precision of measurements. Empirical formulas. Harmonic analysis of empirical functions. Appendix. Tables of the probability integral. Index. Answers to exercises.

Note: (211) The principles of numerical analysis, methods for obtaining numerical results, and methods for checking the accuracy of these results are explicitly described in this work. Several methods are described for some operations. The exposition contains a number of worked examples and—in some chapters—is also supplemented by rather full verbal discussions of the uses and limitations of the various methods. The first edition was published in 1930. A good deal of rewriting and some augmentation has gone into this edition. The author is Professor of Mathematics at the United States Naval Academy

SCHAEFFER, ALBERT CHARLES AND DONALD CLAYTON SPENCER

Coefficient regions for schlicht functions. New York American Mathematical Society 1950 311 p illus. (part col'd) 26 cm. (American Mathematical Society Colloquium publications. Vol. xxxv) $6 00 118

Contents (abridged) History of schlicht functions and elementary properties of the nth region. Variations of schlicht functions. The critical points of the differential equation. The Γ structure. Functions which are regular in $|z| < 1$ and satisfy the differential equation. The length-area principle. Löwner curves. Linear forms and the supporting surface. The portion of the boundary of V corresponding to single analytic slits. Parametrization of the boundary of V_n. The region V. A method for investigating the conjecture $|a_4| \leq 4$. The region of values of the derivative of a schlicht function, by Arthur Grad. Appendix. Bibliography. Index.

Note: This monograph is a presentation of the results of the investigations by the authors during the last four years of the family of extremal schlicht functions. Most of the material is new. In the calculus of variations there are two classical approaches (a) study of specific problems using local variations (b) study of a whole class of extremal problems and the investigation of the structure of the class as a whole. In this monograph the authors have sought to develop a systematic approach to problems of type (b) In order to keep the treatment within manageable length the authors have confined themselves to extremal problems relating to finite number of the coefficients in the Taylor expansion of a function which is regular and schlicht inside the unit circle. A chapter by Dr A. Grad in which he investigates the region of possible values of the derivative of a schlicht function at a fixed point inside the unit circle provides a further example of these methods.

SIEGEL, CARL LUDWIG

Transcendental numbers Princeton Princeton University Press, 1949 102 p. 23 cm. (Annals of mathematics studies, Emil Artin and Marston Morse, editors. Number 16) $2 00 119

Contents: The exponential function. Solutions of linear differential equations. The transcendency of e^{β} for irrational algebraic β and algebraic $\alpha \neq 0, 1$ Elliptic functions. Bibliography.

Note: By explaining some special transcendency problems, it is attempted in this study to evolve a method of investigation which will be useful in the search for more general results and the formulation of a theory of transcendental numbers. Rather than one continuous argument, the work is a collection of essays originally presented as lectures at Princeton University in 1944.

SPRAGUE ATHERTON HALL

Calculus. New York The Ronald Press Company 1952 576 p. illus. 24 cm. $6.50. 120

Contents: Function—limit—continuous function. The derivative. Further derivative formulas and techniques. Maxima and minima—related rates. Inverse functions—parametric equations. The trigonometric functions. The exponential and logarithmic functions. Differentials. Polar coordinates. Curvature. Curvilinear motion. The mean value theorem. Curve tracing. Integration. The definite integral. Geometric applications of the definite integral. Physical applications of the definite integral. Infinite series. Solid analytic geometry Partial differentiation. Curves and surfaces in space. Multiple integrals. Table of integrals. Formulas for reference. Answers to problems. Index.

Note An introductory textbook for college students who have completed courses in plane trigonometry and plane analytic geometry In the words of the author: "The purpose of this book is to present the elements of the calculus as simply as possible without sacrificing rigor. Hence analytic proofs which might cause difficulty are accompanied by detailed explanation. Applications of the material to geometry and physics are shown and many illustrative problems are provided. The author is Professor of Mathematics in Amherst College.

THOMAS, GEORGE BRINTON JR.

Calculus and analytic geometry Cambridge, Mass. Addison-Wesley Press, Inc. 1951 685 p. illus. 24 cm. (Addison Wesley mathematics series Eric Reissner consulting editor) $6.50 121

Contents. The rate of change of a function. Derivatives of algebraic functions. Applications. Integration. Applications of integration to physics. Plane analytic geometry Polar coordinates. Transcendental functions. Hyperbolic functions. Methods of integration. Vectors and parametric equations. Determinants and linear equations. Solid geometry and vectors. Partial differentiation. Multiple integrals. Infinite series. Complex numbers and functions. Answers to problems. Index.

Note: An introductory textbook which was developed at the Massachusetts Institute of Technology where the author is Associate Professor of Mathematics. The exposition is slanted somewhat for students who are majoring in physics or engineering.

VON NEUMANN, JOHN

Functional operators. Princeton Princeton University Press, 1950 Volume I, 261 p Volume II, 107 p 26 cm. (Annals of mathematics studies, edited by Emil Artin and Marston Morse. Vol. 21–22) Vol. I $3.50 Vol. II, $2 25 122

Contents: Volume I, Measures and integrals: Point set theory Outer measure. Measure. Inner measure. Invariance of measure

under transformation. Covering theorems. Non-measurable sets. Lebesgue integral. Monotonic functions. General measure functions and outer measures. Properties of the general integral. Volume II, The geometry of orthogonal spaces: Linear spaces. Linear operators. Commutativity reducibility

Note: A notable contribution to operator theory. It is based on lectures that were given at the Institute for Advanced Study in the years 1933–34 and 1934–35 and is addressed to professional mathematicians and to other scientists with extensive mathematical experience.

WALSH JOSEPH LEONARD

The location of critical points of analytic and harmonic functions New York American Mathematical Society 1950 384 p 26 cm. (American Mathematical Society Colloquium publications. Vol. XXXIV) $6 00 123

Contents: Fundamental results. Real polynomials. Rational functions. Rational functions with symmetry. Analytic functions. Green's functions. Harmonic functions. Bibliography. Index.

Note: A classical problem is the study of the location of the zeros of the derivative (that is, the critical points) of a polynomial $p(z)$ relative to the zeros (assumed given) of $p(\ )$ itself. This book is concerned with the geometric problem in the plane of the complex variable, the determination of point sets depending on the zeros of $p(z)$ which contain all critical points of $p(\ )$ point sets preferably bounded by easily constructed lines, circles, and conics; the book does not deal with the enumeration of critical points in an arbitrary region. The original theory was developed by Gauss, Lucas, Laguerre, Jensen, and others, was extended by Bôcher to include the critical points of rational functions, and now the present comprehensive unified theory included polynomials, rational functions, periodic functions, Green's functions, harmonic measure, and various other harmonic functions. Cases in which symmetry occurs are emphasized. Many of the methods are elementary and require no previous knowledge of the topic. The results are presented in form convenient for reference, and are of significance in connection with conformal mapping, level curves of analytic and harmonic functions, extremal polynomials, extremal problems in analytic functions, potential theory and hydrodynamics.

WEINSTOCK ROBERT

Calculus of variations, with applications to physics and engineering. New York Mc Graw Hill Book Company Inc. 1952 326 p illus. 24 cm. (International series in pure and applied mathematics, William Ted Martin consulting editor) $6.50 124

Contents: Introduction. Background preliminaries. Introductory problems. Isoperimetric problems. Geometrical optics—Fermat's principle. Dynamics of particles. Two independent variables—the vibrating string. The Sturm-Liouville eigenvalue-eigenfunction problem. Several independent variables—the vibrating membrane. Theory of elasticity. Quantum mechanics. Electrostatics. Bibliography. Index.

Note. The calculus of variations is usually treated as an area of pure mathematics. However it has wide applications in physics and engineering. This introductory book is devoted primarily to the basic concepts and techniques, but the examples that are worked out in the exposition and the problems that are included for the student to solve usually pertain to physics or engineering. For readers who are familiar with differential and integral calculus and basic physics, including the elements of modern physics.

ZYGMUND ANTONI AND OTHERS

Contributions to Fourier analysis. By A. Zygmund, W Transue, M Morse, A. P Calderón and S Bochner Princeton Princeton University Press 1950 192 p. 26 cm. (Annals of mathematics studies. No 25) Paper $3.00 125

Contents: Localization of best approximation, by S. Bochner. Dirichlet problem for domains bounded by spheres, by S. Bochner. The Fréchet variation and Pringsheim convergence of double Fourier series, by M. Morse and W. Transue. Norms of distribution functions associated with bilinear functionals, by M. Morse and W Transue. Note on the boundary values of functions of several complex variables, by A. P. Calderón and A. Zygmund. On the theorem of Hausdorff-Young and its extensions, by A. P. Calderón and A. Zygmund.

Note. The original papers named above are presented in this volume.

STATISTICAL METHODS

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on bulk sampling. Presented at the fifty fourth annual meeting American Society for Testing Materials Atlantic City, N J June 18 1951 Philadelphia American Society for Testing Materials 1952 65 p illus 23 cm. (Special technical publication no 114) Paper $1 75 126

Contents: Introduction, by W. E. Deming. Materials handling for bulk sampling, by J Manuele. Economic accumulation of variance data in connection with bulk sampling, by L. Tanner and M. Lerner. Two-stage acceptance sampling by attributes, by C. W Dunnett and J. W. Hopkins. Coal sampling problems, by A. A. Orning. The analysis of variance in a sampling experiment, by W. M. Bertholf. The design of coal sampling procedures, by W. M. Bertholf.

Note: A collection of original papers dealing with the methods of determining the average quality of products handled in bulk. The practical problems connected with the selection of a true sample are discussed, but emphasis is placed on theory and on statistical methods. The discussions following each paper are a vital part of the symposium.

ANDERSON, RICHARD LOREE, AND T A. BANCROFT

Statistical theory in research I, *Basic statistical theory* II, *Analysis of experimental models by least squares* New York Mc Graw Hill Book Company Inc., 1952 399 p. illus 24 cm. $7.00 127

Contents (abridged) Part I, Basic statistical theory: Probability. Univariate parent population distributions. Properties of univariate distribution functions. Bivariate and multivariate distributions and their properties. Derived sampling distributions and orthogonal linear functions. Derived sampling distributions—normal parent population. Introduction to point estimation and criteria of goodness. Interval estimation. Tests of hypotheses. Special uses of chi-square. Part II, Analysis of experimental models by least squares: Regression analysis. General regression model with fixed variates. Computational methods and methods of analysis for general regression model. Curvilinear regression—orthogonal polynomials. Least squares for experimental design models. The analysis of designs in complete blocks. The analysis of incomplete-blocks designs. Factorial experiments. The analysis of covariance. Analysis of data with both random and fixed effects (mixed model). The recovery of interblock information in incomplete-blocks designs. Summary of needed research. Appendix. Index.

Note: A book that is useful both as a text for college students and as a reference guide for scientists and other professional workers who make practical use of statistical theory and techniques, particularly in the design of experiments and the analysis of experimental results. The topics named in the chapter titles are treated in a clear, direct style and the authors have made frequent use of worked examples in their exposition of important points. The primary emphasis is on the basic theory but the treatment of this is definitely addressed to non-specialists in statistics and frequent mentions are made of applications. Selected literature references are included in the chapters.

BERKELEY SYMPOSIUM ON MATHEMATICAL STATISTICS AND PROBABILITY 1ST

Proceedings of the Berkeley Symposium on Mathematical Statistics and Probability held at the Statistical Laboratory Department of Mathematics, University of California, August 13–18 1945 January 27–29 1946

Berkeley Calif. University of California Press, 1949 501 p. illus. 27 cm. $7.50 128

Contents: Philosophical foundations of probability, by H. Reichenbach. The place of statistics in the university by H. Hotelling. Discussion on Professor Hotelling's paper. A postulational characterization of statistics, by A. H. Copeland. Remarks on computing the probability integral in one and two dimensions, by G. Pólya. Distributions which lead to linear regressions, by E. Fix. Non-parametric statistical inference, by J. Wolfowitz. Remarks on characteristic functions, by G. Pólya. Statistical mechanics and its applications to physics, by V F Lenzen. Systematic and representative design of psychological experiments, with results in physical and social perception, by E. Brunswik. Continuous index numbers and quantitative study of the general economy by F W Dresch. The mathematical formulation of strategic problems, by F Bitter. The reality of regularities indicated in sequences of observations, by G. F McEwen. Contribution to the theory of the X^2 test, by J. Neyman. Practical problems of matrix calculations, by H. Hotelling. The statistical study of the galactic star system, by R. J Trumpler. Time series and harmonic analysis, by J. L. Doob. Some techniques for simple classification, by C. F Kossack. An extension of an algorithm of Hotelling, by A. T Lonseth. The limiting distribution of functions of sample means and application to testing hypotheses, by P L. Hsu. On the theory of stochastic processes, with particular reference to applications, by W Feller. Extension of the Kolmogorov-Bartlett-Scheffé test, by E. W Barankin. Some comments on large sample tests, by E. L. Lehmann. The work of the California Forest and Range Experiment Station, by A. M. Wyckoff. The land-variability factor in cattle-grazing experiments, by A. L. Hormay and J. R. Bentley. The problem of sampling rainfall in mountainous areas, by R. L. Hamilton. Long-term silvicultural experiment on methods of cutting, by A. A. Hasel. Selection problems in animal breeding, by E. R. Dempster and I. M. Lerner. Wheat-bunt field trials, II, by G. A. Baker and F H. Briggs. Biological association of insects parasite and host populations, by J. K. Holloway

Note: In this volume are published the original papers presented at the first Berkeley Symposium on Mathematical Statistics and Probability. The subjects range from experimental problems requiring statistical treatment through statistical theory to philosophical paper analyzing the concept of probability. Included is group of papers on the organizational set-up best suited to making the services of mathematical statistics available to research workers in other fields. For the most part the papers are of an advanced nature and for that reason will chiefly interest professional mathematical statisticians. Most of the papers include bibliographical references.

BERKELEY SYMPOSIUM ON MATHEMATICAL STATISTICS AND PROBABILITY, 2ND

Proceedings of the second Berkeley Symposium on Mathematical Statistics and Probability held at the Statistical Laboratory Department of Mathematics, University of California, July 31–August 12, 1950 Edited by Jerzy Neyman. Berkeley University of California Press, 1951. 666 p. illus. 26 cm. $11.00 129

Contents: Part I, Mathematical statistics Asymptotic minimax solutions of sequential point estimation problems, by A. Wald. Some applications of the Cramér-Rao inequality by J. L. Hodges, Jr., and E. L. Lehmann. A generalized T test and measure of multivariate dispersion, by H. Hotelling. Tolerance intervals for linear regression, by W A. Wallis. Bayes and minimax estimates for quadratic loss functions, by M. A. Girshick and L. J Savage. Confidence regions for linear regression, by P G. Hoel. "Optimum" nonparametric tests, by W Hoeffding. Comparison of experiments, by D. Blackwell. The asymptotic distribution of certain characteristic roots and vectors, by T W Anderson. Asymptotically subminimax solutions of compound statistical decision problems, by H. Robbins. Characterization of the minimal complete class of decision functions when the number of distributions and decisions is finite, by A. Wald and J Wolfowitz. On median tests for linear hypotheses, by G. W Brown and A. M. Mood. Conditional expectation and convex functions, by E. W Barankin. Part II, Probability: Wiener's random function, and other Laplacian random functions, by P Lévy On some connections between probability theory and differential and integral equations, by M. Kac. Recent suggestions for the reconciliation of theories of probability, by B. De Finetti. Diffusion processes in genetics, by W Feller. Random ergodic theorems and Markoff processes with stable distribution, by S. Kakutani. A problem on random walk, by E. S. Lukacs. Continuous parameter martingales, by J. L. Doob. On almost sure convergence, by M. Loève. Some mathematical models for branching processes, by T E. Harris. A contribution to the theory of stochastic processes, by H. Cramér. The strong law of large numbers, by K. L. Chung. Some problems on random walk in space, by A. Dvoretzky and P Erdős. A remark on characteristic functions, by A. Zygmund. Random functions from Poisson process, by R. Fortet. Part III, Astronomy: An approach to the dynamics of stellar systems, by B. Lindblad. The problem of stellar evolution considered statistically by O. Struve. Statistical studies relating to the distribution of the elements of spectroscopic binaries, by E. L. Scott. Correction of frequency functions for observational errors of the variables, by R. J. Trumpler. Hydrodynamical description of stellar motions, by L. G. Henyey. Part IV Biometry: Improvement by means of selection, by W G. Cochran. Relative precision of minimum chi-square and maximum likelihood estimates of regression coefficients, by J. Berkson. Part V, Econometrics: Nonlinear programming, by H. W Kuhn and A. W Tucker. Why "should" statisticians and businessmen maximize "moral expectation"? by J. Marschak. An extension of the basic theorems of classical welfare economics, by K. J. Arrow Part VI, Physics: The concept of probability in quantum mechanics, by R. P Feynman. Statistical questions in meson theory by H. W Lewis. Statistical mechanics of continuous media (vibrating string with fixed ends) by J. Kampé de Fériet. Philosophical problems of the statistical interpretations of quantum mechanics, by V F Lenzen. Correlation of position for the ideal quantum gas, by G. Placzek. Part VII, Traffic engineering: Distribution of vehicle speeds and travel times, by D. S. Berry and D. M. Belmont. Statistical techniques in the field of traffic engineering and traffic research, by T W Forbes. Part VIII, Wave analysis: Correlograms for Pacific Ocean waves, by P Rudnick. Experimental correlogram analyses of artificial time series (with special reference to analyses of oceanographic data) by H. R. Seiwell.

Note: Original papers which were presented at the symposium named in the book's title have been collected here. The authors include foremost scientists of the United States of America and several other countries, and in many instances their papers contain hitherto unpublished advances in statistical methods.

BUROS OSCAR KRISEN, editor

Statistical methodology reviews 1941–1950 New York John Wiley & Sons, Inc. 1951 457 p. 27 cm. $7 00 130

Contents: Preface. How to use this volume. Review writing and editing. Books and reviews. Periodical directory and index. Publishers directory and index. Index of titles. Index of names. Classified index to books.

Note (314a-b) This reference work is both guide to books on statistical method and application and digest of reviews of them. Entries are arranged alphabetically by names of authors of the books. Following each entry is an excerpt from one or more critical reviews published in professional journals. Many of the excerpts are some hundreds of words long. The work is useful aid to librarians, scientists, etc., in selecting books on statistical methodology It serves also to bring together books that are published in separate fields, for example, education and medicine. The editor has addressed it also to book reviewers and editors of reviewing periodicals in the hope that it will lead to improvement of published reviews. This is the third volume in the series.

CATTELL, RAYMOND BERNARD

Factor analysis an introduction and manual for the psychologist and social scientist. Under the editorship of Gardner Murphy New York Harper and Brothers 1952 462 p. illus. 22 cm. $6.50 131

Contents (abridged) Part I, Basic concepts in factor analysis: The place of factor analysis in scientific method. Interpretation of correlations as clusters and factors. On obtaining factors from correlation matrix. Rotation of factors for scientific meaning. Factor estimation and the specification equation. The covariation chart and the possibilities of obliqueness, order and efficacy Part II, Specific aims and working methods: The chief alternative designs in factorizing matrix. Working methods for centroid extraction including communality estimation. The clustering methods of factor extraction. The elementary spatial computations in rotations. The special problems of oblique factors. General techniques and criteria of factor resolution. The home art of rotation by graphs Part III, General principles and problems: The effects of errors. True factor resolution and the design of experiment. Structuring variables by combinations of factor analysis with controlled experiment. Strategy and tactics of economy in computing. Glossary Appendix: Essential

steps in matrix multiplication by electronic digital calculators. Bibliography. Index of names. Index of subjects.

Note: In this book the techniques of factor analysis, a statistical method of wide potential applications in psychology and the social sciences, are explained for the benefit of advanced college students and graduate research workers. As indicated in the title, the treatment is introductory but adequate material is included to make the book useful as a practical guide for scientists interested in the use of factor analysis. References from statements in the text to citations of source articles in the bibliography are carefully given. The author is Research Professor of Psychology and Director of the Laboratory of Personality Assessment and Group Behavior of the University of Illinois.

COCHRAN, WILLIAM GEMMELL, AND GERTRUDE M. COX

Experimental designs. New York John Wiley & Sons Inc., 1950 454 p 24 cm. (Wiley mathematical series W. A. Shewhart, editor) $6.50. 132

Contents: Introduction. Methods for increasing the accuracy of experiments. Notes on the statistical analysis of the results. Completely randomized, randomized block, and latin square designs. Factorial experiments. Confounding. Factorial experiments with main effects confounded: split-plot designs. Factorial experiments confounded in quasi-latin squares. Balanced and partially balanced incomplete block designs. Lattice and cubic lattice designs. Balanced incomplete blocks. Lattice squares. Incomplete latin squares (Youden squares). Analysis of the results of a series of experiments. Random permutations of 9 and 16 numbers. Selected bibliography. List of author references. Index.

Note: Interpretation of the range of data obtained in a series of experiments is a problem (sometimes rather a complex one) in statistics. In most cases more valid conclusions can be drawn from observed data if the experiment is planned so as to satisfy the demands of sound statistical theory. This book presents detailed plans for some hundreds of experiments designed for a variety of conditions. The pertinent statistical theory is outlined, but the authors have assumed that their readers will have some familiarity with the basic principles of the analysis of variance. The book is of interest to research workers in many fields of science.

DEMING, WILLIAM EDWARDS

Some theory of sampling. New York John Wiley & Sons Inc. 1950 602 p. illus. 23 cm. $9.00. 133

Contents (abridged): Part I, The specification of the reliability required: The various errors of a survey. Part II, Some elementary theory for design: Moments and expected values. Multistage sampling, ratio-estimates, and choice of sampling unit. Allocation in stratified sampling. Distinction between enumerative and analytic studies. Control of the risks in acceptance sampling. Part III, Some theory for analysis and estimation of precision. The sample as a basis for action. Part IV Applications of some of the foregoing theory: Inventories by sampling. A population sample for Greece. Part V Some further theory for design and analysis: Detailed study of some binomial and related distributions. The gamma and beta functions. Tests for hypotheses in normal theory. The distribution of the external and internal variances. Appendix: A page of random numbers. Index.

Note: This important contribution to the application of statistical theory deals with obtaining accurate information by counting or examining only a portion of the "population" about which information is desired. This technique is often used in opinion polls, consumer surveys, census estimates, etc. It has application also to the planning of scientific experiments and interpretation of the results obtained. The work is written strictly from the viewpoint of applied statistics and is intended for professional workers and graduate students who have already mastered the elements of general statistical theory.

DIXON, WILFRID JOSEPH AND FRANK J MASSEY, JR.

Introduction to statistical analysis. New York McGraw Hill Book Company Inc., 1951 370 p. illus. 23 cm. $4.50 134

Contents: Introduction. Distributions. Introduction to measures of central value and dispersion. Universe and sample. The normal distribution. Various measures of central value and dispersion. Statistical inference. The variance: estimation and tests of hypotheses. The mean: estimation and tests of hypotheses. Analysis of variance. Regression and correlation. Analysis of covariance. Enumeration statistics. Probability of accepting a false hypothesis. Macrostatistics. Microstatistics. Nonparametric statistics. Sequential analysis. Sensitivity experiments. Appendix. Index.

Note: In this book statistics is viewed as "the science of experimentation." The work is a textbook written for a basic statistics course to be taken by students from all fields in which statistics finds application. The order and emphasis of topics are largely based upon the recommendations for a basic course in statistics stated by the Committee on Teaching of Statistics of the National Research Council. The appendix includes tables, etc., for reference work.

EDWARDS, ALLEN LOUIS

Experimental design in psychological research. New York Rinehart & Company Inc., 1950 446 p illus. 22 cm. $5.00 135

Contents: The nature of psychological research. Principles of experimental design. Probability and experimental design. The normal and χ^2 approximations of the binomial probabilities. Experiments involving a comparison of the difference between 2 frequencies or proportions. The application of the χ^2 distribution to research problems involving more than 1 degree of freedom. Testing hypotheses about correlation coefficients. The *t* test and the significance of means and differences between means. Heterogeneity of variance and the *t* test. An introduction to the analysis of variance. Heterogeneity of variance and transformations of the scale. The 2^n factorial design for experiments in which variables are varied in only 2 ways. Complex factorial designs. Experimental designs involving matched groups. Experimental designs involving repeated measurements of the same subjects. The Latin square design in psychological research. Applications of the analysis of covariance. Bibliography. List of formulas. Appendix. Index of names. Index of subjects.

Note: This book is concerned with the planning of experiments and with the analysis of experimental data, primarily in the fields of psychology, sociology and education. It presents for students in these fields standard techniques and some of the newer developments in statistical analysis, particularly with respect to small-sample theory. The reader or student needs a working knowledge of algebra and an elementary knowledge of applied statistics in order to understand this work.

FELLER, WILLIAM

An introduction to probability theory and its applications. Volume one. New York John Wiley & Sons Inc., 1950 419 p. illus. 23 cm. (Wiley mathematical statistics series Walter A. Shewhart, editor) $6.50 136

Contents: Introduction: The nature of probability theory. The sample space. Elements of combinatorial analysis. Stirling's formula. The simplest occupancy and ordering problems. Combination of events. Conditional probability statistical independence. The binomial and the Poisson distributions. The normal approximation to the binomial distribution. Unlimited sequences of Bernoulli trials. Random variables—expectation. Laws of large numbers. Integral valued variables—generating functions. Recurrent events—theory. Applications to runs and renewal theory. Random walk and ruin problems. Markov chains. Algebraic treatment of finite Markov chains. The simplest time-dependent stochastic processes. Answers to problems. Index.

Note: In this work probability theory is presented rigorously as a branch of mathematics. The discussions are confined to mathematical concepts and theorems are proved. However, in order to increase the book's usefulness, material on practical applications has been inserted in various places and is distinctively marked so that readers who are interested only in the mathematical exposition can skip it. As the chapter titles indicate, elementary subjects are considered first, but rather advanced ones are taken up in the last chapters. The work is designed for use as a textbook in advanced college classes, but it is potentially of interest to persons out of college who are beginning to work in fields where a thorough knowledge of probability theory is essential.

GORE, W L.
Statistical methods for chemical experimentation. New York Interscience Publishers, Inc. 1952 210 p. illus. 18 cm. $3.50. 137

Contents: Introduction. Statistical concepts. The reliability of estimates. Analysis of variance. Design of experiments. Correlation and regression. Attribute statistics. Appendices: Tables. Index to formulas. Glossary Bibliography Subject index.

Note: A useful, relatively brief collection of the statistical methods most used in the design of chemical experiments at the Du Pont Experimental Station, with which the author is associated. The style is direct and explicit. The book is well suited for the guidance of practical chemists who do not have time to master statistical theory Books which offer fuller treatments are listed in the annotated bibliography

GOULDEN, CYRIL HAROLD
Methods of statistical analysis Second edition. New York John Wiley & Sons, Inc., 1952 467 p. 24 cm. (Wiley publications in statistics Walter A. Shewhart editor) $7.50. 138

Contents: Introductory concepts. Variation, statistics, and the frequency table. Theoretical frequency distributions. Tests of significance. The analysis of variance. Linear regression analysis. Correlation. Partial and multiple regression and correlation. The analysis of covariance. Non-linear regression. Basic experimental designs. Factorial experiments. Incomplete block experiments. The treatment of non-orthogonal data. Goodness of fit. Tests of independence. The discriminant function. Probit analysis. Quality control and sampling for inspection and verification. Appendix. Index.

Note: (343) A text and reference book designed for research workers in the sciences. There is some emphasis on experimental design in the fields of agriculture and biology However this emphasis is not heavy enough to lessen the value of the book for students and students workers in other fields such as psychology. The first edition appeared in 1939. This edition represents very extensive revision and considerable increase in size. Each of the chapters is supplemented by substantial list of the pertinent literature. The author is Chief of the Cereal Division of the Central Experimental Farm in Ottawa, Canada.

GUILFORD, JOY PAUL
Fundamental statistics in psychology and education. Second edition. New York McGraw Hill Book Company, Inc. 1950. 633 p illus. 24 cm. (McGraw-Hill publications in psychology Clifford T Morgan consulting editor) $5 75 139

Contents: Counting and measuring. Frequency distributions. Measures of central tendency Measures of variability Cumulative distributions and curves. The normal distribution curve Correlation. The reliability and significance of statistics. Introduction to analysis of variance. Testing hypotheses. Test scales and norms. Special correlation, methods, and problems. Prediction of attributes. Prediction of measurements. Multiple prediction. Reliability of measurements. Validity of measurements. Scaling procedures. Appendixes: Some selected mathematical proofs and derivations. Tables. A glossary and index of symbols. Author index. Subject index.

Note (346) An introductory work for students interested in the applications of statistics in the two fields mentioned in the title. The first edition was strictly textbook but in the present the work has been expanded so much that it can be used also as working manual by graduates. It was almost completely rewritten for this edition and is now approximately almost twice as long.

HOUSEHOLDER, ALSTON S., AND OTHERS, editors
Monte Carlo method. Proceedings of a symposium held June 29 30 and July 1 1949 in Los Angeles, California, under the sponsorship of the Rand Corporation, and the National Bureau of Standards, with the co-operation of the Oak Ridge National Laboratory Edited by A. S Householder with the assistance of G E. Forsythe and H. H. Germond. Washington D C. Government Printing Office, 1951 42 p. illus. 26 cm. (United States. National Bureau of Standards. Applied mathematics series 12) Paper $0.30 140

Contents. Showers produced by low-energy electrons and photons, by R. R. Wilson. An alignment chart for Monte Carlo solution of the transport problem, by B. I. Spinrad, G. H. Goertzel, and W. S. Snyder. Neutron age calculations in chains applied to particle transmission through matter by W C. De Marcus and L. Nelson. Stochastic methods in statistical mechanics, by G. W King. Report on Monte Carlo calculation performed with the Eniac, by M. Mayer. Calculation of shielding properties of water for high energy neutrons, by P. C. Hammer. A Monte Carlo technique for estimating particle attenuation in bulk matter by R. A. Shaw and others. Estimation of particle transmission by random sampling, by H. Kahn and T. E. Harris. History of RAND'S random digits—summary by G. W Brown. The mid square method of generating digits, by P C. Hammer Generation and testing of random digits at the National Bureau of Standards, Los Angeles, by G. E. Forsythe. Various techniques used in connection with random digits, by J von Neumann. Round table discussion summary by H. H. Germond.

Note: Here are reprinted most of the papers presented by physicists and others at symposium held in 1949 at the University of California, Los Angeles. The audience for these papers included professional mathematical statisticians. The papers tell of initial efforts to apply the Monte Carlo method—which involves combination of sampling theory and numerical analysis—made almost independently by number of different groups and individuals. The round-table discussion at the close of the symposium presented criticisms and suggestions and evaluation of the Monte Carlo method as contribution to the art of computing.

JOHNSON PALMER OLIVER
Statistical methods in research. New York Prentice-Hall, Inc. 1949 377 p. illus. 24 cm. $6 65 141

Contents: The realm of statistics. Probability and likelihood. Sampling distributions. The testing of statistical hypotheses. Current procedures in testing statistical hypotheses. The estimation of population parameters. Normal and normalized distributions in statistics. Statistical analysis of data under nonnormal assumptions. Sampling theory and practice. Analysis of variance and covariance. Applications of the analysis of variance and covariance method. The principles of experimentation. Applications of the principles of experimentation. Multiple regression problems. Appendix: Table of normal distribution. Table of t. Table of X^2 Table of F Table of L Index.

Note: An intermediate-level work designed to provide students in the biological and social sciences with the knowledge of statistical principles and techniques which are necessary in designing experiments and observational projects and for analyzing and interpreting the results. The author has assumed that the users of the book will have had course in introductory or descriptive statistics.

KEMPTHORNE, OSCAR
The design and analysis of experiments. New York John Wiley & Sons, Inc. 1952 631 p. 24 cm. (Wiley publications in statistics, W A. Shewhart editor) $8.50 142

Contents (abridged) The principles of experimental design. Elementary statistical notions. An introduction to the theory of least squares. The general linear hypothesis or multiple regression and the analysis of variance. The analysis of multiple classifications. Randomization. Latin squares. Plot technique. The sensitivity of randomized block and latin square experiments. Experiments involving several factors. Experiments involving factors with 3 levels. Split-plot experiments. Fractional replication. Quasifactorial or lattice and incomplete block designs. Lattice designs. Balanced incomplete block designs. Partially balanced incomplete block designs. Experiments on infinite populations and groups of experiments. Treatments applied in sequence. Appendix. Index.

Note. This book complements *Experimental designs* by Cochran and Cox, described above. It contains much fuller exposition of

theory and also discusses in more detail the bases of experimental design. However, it is intended primarily for the same audience, that is, advanced college students and other persons whose interest in statistics is based on their concern with experimental investigation in some field of science. For many years the author was engaged in statistical work at Rothamsted Experimental Station in England. He is now Professor of Statistics at Iowa State College.

MCNEMAR, QUINN

Psychological statistics. New York John Wiley & Sons Inc. 1949 364 p. illus. 22 cm. (Wiley publications in psychology Herbert S Langfeld advisory editor) $5 00 143

Contents: Introduction. Tabular and graphic methods. Describing frequency distributions. The normal curve and probability Sampling errors and statistical inference. Correlation introduction and computation. Correlation interpretations and assumptions. Factors which affect the correlation coefficient. Multiple correlation. Other correlation methods. Frequency comparison chi square. Small sample methods. Analysis of variance simple. Analysis of variance: complex. Analysis of variance: covariance method. Notes on sampling and statistical inference. Exercises. Appendix (tables) Index.

Note. A textbook intended for use in one-year college course. Its purpose is "to acquaint the student with the statistical techniques commonly used, to suggest economical computational procedures, and to state the assumptions and limitations of the various techniques. Sampling is fully covered, and three chapters are devoted to the meaning of the analysis of variance. The author is Professor of Psychology Statistics, and Education at Stanford University

MANN, H. B

Analysis and design of experiments analysis of variance and analysis of variance designs. New York Dover Publications Inc. 1949 198 p 20 cm. (The Dover series in mathematics and physics, W Prager consulting editor) $2 95 144

Contents: Chi-square distribution and analysis of variance distribution. Matrices, quadratic forms and the multivariate normal distribution. Analyses of variance in one way classification. Likelihood ratio tests and tests of linear hypotheses. Analysis of variance in an r-way classification design. The power of analysis of variance tests. Latin squares and incomplete balanced block designs. Galois fields and orthogonal Latin squares. The construction of incomplete balanced block designs Non-orthogonal data. Factorial experiments. Randomized designs, randomized blocks and quasifactorial designs. Analysis of covariance. Interblock estimates and interblock variance. Tables.

Note A brief but good introduction to statistical methods which are applicable to the design of scientific experiments. The author, who is Professor of Mathematics in Ohio State University had three groups of readers in mind. mature mathematicians who wish to acquire an understanding of the analysis of variance and of variance designs, advanced undergraduates and graduate college students in need of short textbook, and practical experimenters and statisticians who wish to grasp the mathematical principles and methods underlying the statistical application. The exposition sticks closely to the bare essentials of the subject. Frequent references are made to other books in which fuller treatments of basic mathematical concepts and techniques are available.

MOOD ALEXANDER MCFARLANE

Introduction to the theory of statistics. New York McGraw-Hill Book Company Inc., 1950 433 p illus. 24 cm. $5.50 145

Contents: Introduction. Probability and combinatorial methods. Discrete distributions. Distributions for continuous variates. Expected values and moments. Special continuous distributions. Sampling. Point estimation The multivariate normal distribution. Sampling distributions. Interval estimation. Tests of hypotheses. Regression and linear hypotheses. Experimental designs and the analysis of variance. Sequential tests of hypotheses. Distribution-free methods. Tables. Index.

Note: Although theory rather than applications is covered in this college text, the book is addressed to student scientists who will be more concerned with applications. The review problems illustrate applications in several fields of science. A knowledge of elementary calculus is presumed, and the treatment is not mathematically rigorous. Discussions of essential points are full rather than concise and the author's style reads easily hence the book is suitable one for the graduate scientist in need of an introduction to be studied without an instructor. The author is on the staff of the Rand Corporation.

MORSE, PHILIP MCCORD, AND GEORGE E KIMBALL

Methods of operations research. First edition revised. New York Published jointly by The Technology Press of Massachusetts Institute of Technology and John Wiley & Sons Inc., 1951 158 p illus 28 cm. $4 00 146

Contents: Introduction. Probability The use of measures of effectiveness. Strategical kinematics. Tactical analysis. Gunnery and bombardment problems. Operational experiments with equipment and tactics. Organizational and procedural problems. Tables. Bibliography Index.

Note This book deals with the application of statistical techniques to the evaluation of specific alternative procedures in military strategy business operations, etc. During World War II the techniques explained were applied to such varied operations as the depth bombing of submarines and the protection of ships against Japanese suicide planes. Though most of the examples given in this book are drawn from military and naval applications, the general principles and the methods described are fully applicable to variety of problems in administration. From this standpoint the book is of interest to industrial engineers, business executives, and also to scientists concerned with the planning of experiments.

NEYMAN, JERZY

First course in probability and statistics. New York Henry Holt and Company 1950 350 p. illus. 24 cm. $5 00 147

Contents: Introduction: Scope of the theory of probability and statistics. Probability Probabilistic problems in genetics. Random variables and frequency distributions. Elements of the theory of testing statistical hypotheses. Appendix: Tables of the normal integral. Index of names. Index of terms.

Note: A college text designed to meet the needs of two types of students—those who study the subject as general education course and those planning to specialize in the subject or its fields of application. Most of the content is elementary and the treatment presumes only knowledge of high school mathematics. However, some advanced material is included, which can be used or omitted at the instructor's discretion. The author is associated with the Statistical Laboratory of the University of California.

REICHENBACH HANS

The theory of probability an inquiry into the logical and mathematical foundations of the calculus of probability Second edition. English translation by Ernest H. Hutten and Maria Reichenbach. Berkeley and Los Angeles University of California Press 1949 492 p illus. 24 cm. $12.50 148

Contents: Introductory considerations. Introduction to symbolic logic. Elementary calculus of probability Theory of the order of probability sequences. Probability sequences with coördinated elements. Continuous extensions of the concept of probability sequence. The frequency properties of probability sequences. Theory of probabilities of higher level. The problem of application. Probability logic. Induction. Index.

Note. The first English-language edition of notable work which appeared first as *Wahrscheinlichkeitslehre*, 1935. It presents comprehensive system of probability based upon mathematical, philosophical, and logical methods of reasoning. One of the key notions is the replacement of classical induction by statistical induction which leads to predictions about sequences of events rather than individual events. The theory is important not only in mathematics but also in modern physics. In comparison to the original edition, this one embodies many revisions and rearrangements by the author who is now Professor of Philosophy in the University of California.

WALD ABRAHAM

Statistical decision functions. New York John Wiley & Sons, Inc. 1950 179 p. illus.

23 cm. (Wiley publications in statistics, W A. Shewhart editor) $5.50 149

Contents: The general statistical decision problem, definitions and preliminary discussion. Zero sum two-person games with infinitely many strategies. Development of a general theory of statistical decision functions. Properties of Bayes solutions when the chance variables are independently and identically distributed and the cost of experimentation is proportional to the number of observations. Application of the general theory to various special cases. Bibliography. Index.

Note: An important contribution to statistical theory. It contains the first full statement of a general theory of statistical decision functions. The work has particular application to multi-stage scientific experiments, quality control procedures, etc., where steps beyond the first are selected or modified on the basis of the results of the first experiment or sample. However, it is written on the theoretical plane, and is chiefly of interest to persons who are experts in statistics or who at least have a fair knowledge of basic statistical theory and technique.

YOUDEN, WILLIAM JOHN

Statistical methods for chemists. New York John Wiley & Sons, Inc., 1951 126 p. 23 cm. $3.00. 150

Contents: Precision and accuracy. The measurement of precision. The comparison of averages. The regulation of errors. Statistics of the straight line. The analysis of variance. Interaction between factors. Requirements for data. Arrangements for improving precision. Experiments with several factors. List of publications referred to in the text. Appendices: Critical values of *t*. Critical values of *F* at 5 per cent level. Critical values of *F* at 1 per cent level. Table of squares. Index.

Note: In this book both statistical theory and proofs are largely absent, and the text is confined to exposition of statistical techniques that will be useful to chemists in planning experiments and in interpreting data derived from experiments. Brevity has been achieved by limiting the scope rather than by compact treatment. Discussions of the points that are included are adequately full and include numerous worked examples. The author, who is associated with the National Bureau of Standards, is a recognized expert on statistical methods, in addition to being a noted research chemist.

TOPOLOGY

EILENBERG SAMUEL AND NORMAN STEENROD

Foundations of algebraic topology Princeton, N J Princeton University Press 1952 328 p 24 cm. (Princeton mathematical series editors Marston Morse and A. W Tucker No. 15) $7.50 151

Contents: Axioms and general theorems. Simplicial complexes. Homology theory of simplicial complexes. Categories and functors. Chain complexes. Formal homology theory of simplicial complexes. The singular homology theory. Systems of groups and their limits. The Čech homology theory. Special features of the Čech theory. Applications to euclidean spaces. Index.

Note: An introduction to homology theory for advanced students of mathematics and graduate mathematicians who are familiar with the concepts of algebra and of point set topology. To use the authors' words "The principal contribution of this book is an axiomatic approach to the part of algebraic topology called homology theory. It is the oldest and most extensively developed portion of algebraic topology and may be regarded as the main body of the subject. The present axiomatization is the first which has been given. The dual theory of cohomology is likewise axiomatized.

LEFSCHETZ SOLOMON

Introduction to topology Princeton Princeton University Press 1949 218 p. illus. 24 cm. (Princeton mathematical series, edited by Marston Morse and others) $4.00 152

Contents: Introduction, a survey of some topological concepts. Basic information about sets, spaces, vectors, groups. Two-dimensional polyhedral topology. Theory of complexes. Transformations of complexes—simplicial approximations and related questions. Further properties of homotopy—fixed points—fundamental group—homotopy groups. Introduction to manifolds—duality theorems. Bibliography. List of symbols. Index.

Note: A text designed for the use of graduate students of mathematics. The first three chapters survey the basic concepts of topology with emphasis on the principles of algebraic topology. The remainder of the volume is concerned with the fundamentals of polyhedral topology. Because of the introductory nature of the book the author has not attempted to include proofs for all propositions. Review problems are given in each chapter and the references cited in the bibliography are limited to those which will be of value to the beginner in topology

STEENROD, NORMAN

The topology of fibre bundles. Princeton N J Princeton University Press, 1951 224 p illus. 24 cm. (Princeton mathematical series editors Marston Morse and A. W Tucker No. 14) $5.00 153

Contents (abridged): Part I, The general theory of bundles: Coordinate bundles and fibre bundles. The product bundle. The Ehresmann-Feldbau definition of bundle. Factor spaces of groups. Associated bundles and relative bundles. Homotopies of maps of bundles. Covering spaces. *Part II, The homotopy theory of bundles:* Homotopy groups. Universal bundles and the classification theorem. The fibering of spheres by spheres. The homotopy groups of spheres. The homotopy groups of manifolds. On the non-existence of fiberings of spheres by spheres. Part III, The cohomology theory of bundles: Bundles of coefficients. The obstruction cocycle. The primary difference of two cross-sections. The Whitney characteristic classes of a sphere bundle. Complex analytic manifolds and exterior forms of degree 2. Bibliography. Index.

Note: The concept of fibre bundles as a phase of algebraic topology was first enunciated in 1935. This treatise provides a systematic account of the development of the subject from then to the present time. It offers little that is new to mathematicians acquainted with the subject, but rather presents in organized form, the theory as it stands today. The author is Professor of Mathematics at Princeton University

WILDER, RAYMOND LOUIS

Topology of manifolds. New York American Mathematical Society, 1949 395 p. 26 cm. (American Mathematical Society Colloquium publications. Vol. XXXII) $7.00. 154

Contents: Elementary concepts; characterizations of E^n and S^n. Locally connected spaces; fundamental properties of the Euclidean n-sphere. Peano spaces; characterizations of P and the 2-manifolds. Non-metric LC spaces, with applications to subsets of the 2-sphere. Basic algebraic topology. Local connectedness and local co-connectedness. Application of homology and cohomology theory to the theory of continua. Generalized manifolds; dualities of the Poincaré and Alexander type. Further properties of n-GMs, regular manifolds and generalized n-cells. Subsemifields of manifolds; decomposition into cells. LC^n subsets of an n-GM. Accessibility and its applications. Appendix. Bibliography. Index.

Note: This is a self-contained book, which can serve as an introduction to topology. Properties of general topological spaces, compact spaces and continua, homology and cohomology theory of general spaces are developed, with applications to Euclidean spaces, local connectedness and continua. Manifolds are characterized axiomatically among the general topological spaces, the classical manifolds forming special cases of the generalized types. Basic duality theorems of the Poincaré and Alexander-Pontrjagin type are established, and both the local and in-the-large properties of manifolds studied.

GEOMETRY

ALBERT ABRAHAM ADRIAN

Solid analytic geometry New York Mc Graw-Hill Book Company Inc., 1949 162 p. illus. 24 cm. $3.50 155

Contents: Coordinates and lines. Planes. Surfaces and curves. Spheres. Quadric surfaces. Theory of matrices. Rotations of axes and applications. Spherical coordinates. Elements of projective geometry. Index.

Note: A textbook in which the author has used the algebraic vector approach to the subject in order to tie it up with the theory of vec

ASTRONOMY

GENERAL

BAKER, ROBERT H.

Astronomy a textbook for university and college students Fifth edition. New York D Van Nostrand Company, Inc., 1951 526 p illus 23 cm. $4 00 168

Contents: Aspects of the sky The earth in motion. Time and place. Light and the telescope. The moon. Eclipses of the moon and sun. The solar system. The other planets. The solar system, continued. The sun. The stars. Variable stars. Binary stars. Stellar atmospheres and interiors. Interstellar dust and gas. Star clusters. The galactic system. Extragalactic systems. Reference books. Index.

Note: (14th) A revised edition of this standard, introductory college textbook of which the first edition was published in 1930 and the fourth in 1944. The addition of information on such topics as meteors, microwave radiations from the sun, and circumstellar envelopes brings recent discoveries into focus and points up the problems that are undergoing investigation today Only an elementary knowledge of physics and mathematics is required for use of the book.

BUDDHUE, JOHN DAVIS

Meteoritic dust. Albuquerque The University of New Mexico Press, 1950 102 p. illus. 23 cm. (University of New Mexico Publications in meteoritics. No two A monograph of the Institute of Meteoritics of the University of New Mexico Lincoln LaPaz and Frederick C. Leonard, editors) 169

Contents (abridged) Historical review Methods of collecting dust. Types of particles. Size of particles. Physical tests. Chemical tests. The annual deposit. Dust in hail and snow Interstellar matter. The origin of meteoritic dust. The rate of fall of meteoritic dust. Appendixes: Details concerning spheroid particles. Localities where deep-sea spheres have been found. Bibliography

Note The brief historical review with which this study opens is summary with literature references of previous studies of meteoritic dust. From page 23 to the end of the volume the methods and results of the author's own studies are presented and are related to previous studies by other investigators. Detailed data on the aspects of the subject which are named in the contents above are presented and discussed. A bibliography of 108 literature citations and plates containing 16 photographs of dust specimens are included.

KROGDAHL WASLEY SVEN

The astronomical universe an introductory text in college astronomy New York The Macmillan Company 1952 599 p. illus. 24 cm. $6.25 170

Contents: Introduction. Part I, The solar system: How the system behaves. Earth and sky The moon. The planets. The lesser bodies of the solar system. Part II, The anatomy of star The sun. Part III, The stellar population: How do we know? The vital statistics of the normal stars. The peculiar stars. Part IV The organization of the universe: The Milky Way galaxy All else. Part The evolution of the universe: Beginnings and endings. Appendixes: The constellations. The magnitude system. Telescopes and observatories. Bibliography Index. Star maps.

Note. A textbook designed chiefly for college students who take courses in astronomy for its cultural rather than professional value. As might be expected, it contains no advanced mathematics, in fact, little mathematics of any kind. Nevertheless the author has succeeded well in describing the general content of astronomy showing how astronomers arrive at their principal deductions, and in conveying picture of the nature and complexities of the universe. The 375 illustrations include reproductions of some remarkable photographs taken at the Mt. Wilson-Palomar Observatory and other observatories.

LEE, OLIVER JUSTIN

Measuring our universe from the inner atom to outer space. New York The Ronald Press Company, 1950 170 p. illus. 22 cm. $3 00 171

Contents: The romance of distances. How our units of distance developed. Precision measuring machines. The magic of light waves. Man lives by parallax. Distance to the sun—yardstick of the gods. Our little solar system. Accuracy is like the flavor of costly wines. Private interviews with stars. Spectra yield the distances of stars. Michelson plays with light. Cepheid variables tell some secrets. The giant reflector of Palomar; the Hale telescope. Thinking it over. Appendix. Index.

Note: In this interesting book the author tells how units of measurement were evolved, conveys an idea of the importance of precision measurement, and describes the techniques that are used by scientists in making precise measurements. Most of his text pertains to measurement in astronomy but the book has appeal beyond the areas of this field. Lay readers of science should find it interesting, whether or not they are interested in astronomy The book replaces the author's *Beyond yonder* (Boston, 1930) and it contains much material not in that work.

MAYALL, ROBERT NEWTON, AND MARGARET L. MAYALL

Skyshooting, hunting the stars with your camera. New York The Ronald Press Company 1949 174 p. illus. 24 cm. $3 75 172

Contents. Looking it over Star trails. Auroras. Meteors. Stars. Variable stars—new stars—comets. Clusters and nebulae. The sun. The moon. The planets. Fun for the family Plates and films, developing, printing, enlarging. Sidereal (star) time. Mountings with mechanical drives. How to use the setting circles. Keeping records. Appendix. The library Index.

Note: An excellent book on subject which has seldom been treated from the standpoint of amateur photographers or astronomers. Considerable point is made of the fact that expensive photographic equipment is not essential. Only about fifteen pages are devoted to discussions of cameras, films, and related photographic apparatus. The remainder of the book deals with the categories of astronomical objects which are available for photographing, and with the simpler techniques of star photography which are within the reach of most amateurs. The junior author is on the staff of the Harvard College Observatory

NININGER, HARVEY HARLOW, AND ADDIE D NININGER

The Nininger collection of meteorites, a catalog and a history Winslow Arizona The American Meteorite Museum, 1950. 144 p. illus. 26 cm. $3 00 173

Contents: Introduction. Maps. Catalog. Field notes. Summary. Supplement. Appendix. Explanation of plates. Plates.

Note. Most of the space in this book is devoted to detailed listing of the meteorites in the Nininger collection, which is now known as the American Meteorite Museum. The descriptions are arranged by locality in which the specimens were found. In most instances the year of the find is given and there is always mineralogical designation, statement of the weight, and if more than one specimen is in the collection, statements of the weight of the various fragments. The word descriptions are supplemented by 18 plates of reproductions of photographs, most of which show

several specimens. Although essentially a catalogue of a museum collection, the book is also a unique record of the results of planned program aimed at discovering meteorites.

NININGER HARVEY HARLOW

Out of the sky an introduction to meteoritics. Denver The University of Denver Press, 1952 336 p. illus. 24 cm. $5 00 174

Contents (abridged) Early man and meteorites. Typical falls. The great meteor of March 24, 1933. Sound from passing meteors. Fireball clusters and processions. A planned program of search. Composition of meteorites. Etching and preservation. Size of meteorites. The great Greenland meteorites. Weathering of meteorites. Shapes and shaping. Meteorite craters. An explosion crater. Meteoritic clouds. Origin of meteorites. Cosmic heating. Tektites. Great meteorite collections. Proposed National Institute of Meteoritics. Publications by H. H. Nininger. Index.

Note: Detailed reports of observations of meteorites and meteors are combined in this book with specific data on composition, structures, weights, etc., of meteorites. The author is widely known as pioneer investigator of meteor phenomena and as collector of meteorites. He formed the Nininger Collection. In one of the chapters of this book he proposes national institute devoted to the study of meteoritics. The illustrations include 52 plates, most of which are reproductions of photographs of meteorites.

VAN DE KAMP, PETER

Basic astronomy New York Random House, 1952 400 p. illus. 21 cm. $3 75 175

Contents (abridged) Part one, A survey of the solar system: Sky and telescope. Matter and light. Sun, earth and moon. The planetary system. Part two, The mechanics of stars and planets: The earth as observational center of the universe. Motions of the planets as viewed from earth and sun. The motions of the stars. The mechanics of double stars. Kepler's laws of planetary motion. Newton's law of gravitation. The masses of earth, sun, moon, planets and stars. Part three, The physical-chemical properties of sun and stars: The composition of starlight. The nearest stars. Atomic structure and radiation. The atmospheres of sun and stars. The interiors of sun and stars. The source of solar and stellar energy Part four, The Milky Way system and beyond: The arrangement of the stars—the galactic system. Interstellar matter and the dimming of starlight. Patterns of stellar motions. The galactocentric viewpoint. The rotation of the galactic system. The extragalactic objects. A selected bibliography Index.

Note: An introductory survey that is so written and organized that it may be used either as text in college courses or as source of information for general readers. Not "popular" astronomy in the sense that the wonders of astronomy are stressed, it is nevertheless book that can be read by mature readers without the aid of an instructor. The bibliography includes books only and is intended for students and general readers who wish to pursue the subject by themselves. The author is Professor of Astronomy at Swarthmore College and Director of the Sproul Observatory

ASTROPHYSICS

GAMOW GEORGE

The creation of the universe. New York The Viking Press 1952 147 p illus. 22 cm. $3 75 176

Contents: Introduction. Evolution versus permanence. The great expansion. The making of atoms. The hierarchy of condensations. The private lives of the stars. Conclusion. Appendix. Index.

Note: The history and evolution of the universe is discussed in this book which rounds out the author's trilogy that began with *The birth and death of the sun,* which was followed by *Biography of the earth.* A lively style and easily understood analogies make the account available to all educated readers in spite of rather liberal use of technical terms. The book is an extreme popularization of very advanced data and theory but it is scientifically accurate and will appeal not only to lay readers but also to scientists reading outside their own fields.

HALL, JOHN SCOVILLE, AND A. H. MIKESELL

Polarization of light in the galaxy as determined from observations of 551 early-type stars. Washington United States Printing Office, 1950 62 p. illus. 29 cm. (United States. Naval Observatory Publications. Second series, vol. XVII, part I) 177

Contents: Introduction. Method of observation. Ritchey-Chretien aplanatic reflector. Apparatus. The observations: Earth's atmosphere. Color effects. Systematic differences. Internal agreement. List of observations. Summary of data. Comparison with observations of W. A. Hiltner. Discussion of data: Space distribution. Apparent magnitude. Galactic latitude. Color excess. Interstellar lines. Distance. Angular separation. Visual observation. Stars of special interest. Anomalous regions.

Note: Data collected in 1314 measurements of 551 stars are presented in this publication in two principal tables, the first of which is record of the individual observations and the second summary of the data. The first-mentioned table identifies the star by number, gives the date of the observation, the position angle and the percent of polarization. The following table includes further information on space distribution, magnitude, spectra type, color excess, etc. The tabulated data are discussed and compared with the results from other observers in the final 17 pages of the pamphlet. The work is of interest to professional workers in astronomy and astrophysics.

HYNEK, JOSEPH ALLEN, editor

Astrophysics. A topical symposium commemorating the fiftieth anniversary of the Yerkes Observatory and a half century of progress in astrophysics. New York Mc Graw-Hill Book Company Inc., 1951. 703 p. illus. 24 cm. $12.00. 178

Contents: Introduction: On the development of astrophysics during the last half century by B. Strömgren. Part one, Spectroscopic astrophysics: Classification of stellar spectra, by P C. Keenan and W W Morgan. Interpretation of normal stellar spectra, by L. H. Aller. The analysis of peculiar stellar spectra, by O. Struve. Molecular spectra in cosmic sources, by P Swings. The growth of our knowledge of the physics of the stars, by B. Strömgren. Part two, Physics of the solar system: The sun and stellar radiation, by E. Pettit. Comets, by N T Bobrovnikoff. On the origin of the solar system, by G. P Kuiper Part three, Physics of binary and variable stars: Visual binary stars and stellar parallaxes, by G. Van Biesbroeck. Spectroscopic binaries and stars with composite spectra, by J. A. Hynek. Eclipsing binaries, by M. L. Pierce. The intrinsic variable stars, by C. Payne-Gaposchkin. Part four, Physics of cosmic matter: Interstellar matter, by J. L. Greenstein. The structure, the composition, and the source of energy of the stars, by S. Chandrasekhar. Name index. Star index. Subject index.

Note: Each of the papers in this outstanding collection is the work of one or more scientists of international reputation, most of whom have been associated with the Yerkes Observatory Generally speaking, in each paper the development of specific area of astrophysics during the last half-century is outlined, its present state is described, and there is some discussion of problems that still challenge the scientists. The papers are addressed essentially to graduate students and young scientists who are beginning work in astrophysics.

KUIPER, GERARD PETER, editor

The atmospheres of the earth and planets. Revised edition. Chicago The University of Chicago Press 1952 434 p. illus. 24 cm. $8.50 179

Contents: Introduction, by G. P Kuiper. On the nature of the general circulation of the lower atmosphere, by C. G. Rossby Scattering in the atmosphere of the earth and planets, by H. C. van de Hulst. The upper atmosphere studied from rockets, by J. L. Greenstein and others. Seasonal variations in the density of the upper atmosphere, by F L. Whipple and others. The spectra of the night sky and the aurora, by P Swings and A. B. Meinel. The terrestrial atmosphere above 300 km., by L. Spitzer, Jr. Geological evidence on the evolution of the earth's atmosphere, by R. T. Chamberlin. Rare gases and the formation of the earth's atmosphere, by H. Brown. Selected topics in the infrared spectroscopy of the solar system, by A. Adel. On the presence of atmospheric ozone from infrared telluric bands, by M. V Migeotte. Spectroscopic observations of the planets at Mount Wilson, by T. Dunham, Jr. Planetary atmospheres and their origin, by G. P Kuiper. Laboratory absorption spectra obtained with long paths, by G. Herzberg. Appendix. Index.

Note: A collection of papers which were originally prepared for the Symposium on Planetary Atmospheres held at the University of Chicago in September, 1947 in connection with the fiftieth anniversary of the Yerkes Observatory Among the authors are prominent meteorologists, astrophysicists, and specialists in upper atmosphere research. Some of the experimental methods and results reported were not published previously to the appearance of this volume. In all of the papers the presentation is technical, hence the volume is of primary usefulness only to persons with scientific education pertinent to the field. The first edition appeared in 1949 For the present edition most of the authors revised their chapters and some made very substantial revisions.

THE STRUCTURE OF THE GALAXY a symposium held in connection with the dedication of the Heber Doust Curtis memorial telescope, June 22–24 1950 Ann Arbor, Michigan University of Michigan Press 1951 86 p illus. 32 cm. (University of Michigan. Observatory publications. Vol. x) Paper $2.50 180

Contents: Heber Curtis and the Michigan telescope, by J Stebbins. Galaxies—present day problems, by W Baade. Comparison of rotational motions observed in the spirals M31 and M33 and in the galaxy by N. U Mayall. Galactic distribution of planetary nebulae and Be stars, by R. Minkowski. Application of the principle of natural groups to the classification of stellar spectra, by W W Morgan. Distribution of early type stars of high luminosity near the galactic equator, by J J. Nassau and W W Morgan. Utilization of faint star counts at intermediate latitudes, by F D Miller Dynamical interpretation of velocity distribution and structural details in the galaxy, by B. Lindblad. Some features of galactic structure revealed by stellar motions, by A. N. Vyssotsky Recent investigations concerning the stellar luminosity function, by S. W McCuskey H-alpha emission objects in the Magellanic clouds, by K. G. Henize and F D. Miller. Comparison of the Magellanic clouds with the galactic system, by H. Shapley

Note: A collection of original papers presented—with one exception—at the symposium named in the title. The exception is the first paper which was delivered as an address on the occasion of the dedication of the Schmidt Telescope of the University of Michigan on June 24, 1950. "The collective contributions are intended to summarize the then existing state of knowledge concerning the broad outlines of the arrangement of the galaxy and to describe the methods now being employed for its advancement. The volume is of interest to graduate scientists working in the field of astronomy

STRUVE, OTTO

Stellar evolution an exploration from the observatory Princeton Princeton University Press 1950 266 p illus. 24 cm. $4 00 181

Contents: Probing the stars' chemical composition. Some problems of stellar evolution. The origin and development of close double stars. Index.

Note: A substantial contribution to the literature of astrophysics. Essentially it is an exploratory survey for theory or hypothesis that will explain the evolution of the stars in terms of the accumulated observational data. Earlier hypotheses are examined critically The author gives special attention to the ideas of von Weizsacker Unsold, and Ambartsumian among others, and also puts forth some tentative conclusions of his own. The style of the book is rather technical but, as the author points out, the work is not intended for astronomers but rather for such scientists as physicists and chemists who desire some insight into current astrophysical problems.

SUN AND SOLAR SYSTEM

BALDWIN RALPH BELKNAP

The face of the moon. Chicago The University of Chicago Press, 1949 239 p illus. 25 cm. $5.00 182

Contents: Scientists look at the moon. Surface features. Suggested crater-forming processes. Terrestrial meteorite craters. Fossil terrestrial meteorite craters. Relationships. Correlations. Evaluation. The lunar atmosphere. Ancient history The circular Maria. Other planets. Appendixes: Derivation of the relationship between the distance of the moon and geologic time. The lunar tidal bulge as function of the moon's distance. The penetrating power of projectiles. The diameters of the meteorites hich produced the craters. Bibliography Index.

Note: The greater part of this significant book is devoted to evidence in support of the theory which holds that the craters visible on the surface of the moon were made by explosions resulting from the impact of meteors. Other hypotheses, particularly those which attempt to explain the craters on the basis of volcanic action, are examined and their faults are pointed out. Much interesting information is included on related topics, such as the question of whether the moon has an atmosphere and the history and characteristics of craters on the earth which appear to have meteoritic origin. The work is addressed to both scientists and laymen. The author made no obvious effort to avoid technical terminology but both his subject and style are suited to serious general readers who are attracted to modern science.

MENZEL, DONALD HOWARD

Our sun. Cambridge Harvard University Press, 1949 326 p. illus. 22 cm. (The Harvard books on astronomy, edited by Harlow Shapley and Bart J Bok) $4.50 183

Contents: Meet the sun. A panoramic sunscape. Light, atoms, and test tubes. The message of sunlight. Solar chemistry Sunspots—solar cyclones. Fine details of the solar surface. Prominences—geysers and volcanoes. The corona mystery Atomic energy and the solar interior. Solar eclipses—old and new. The sun—and you! Index.

Note. What is known about the sun, how the knowledge was gained, and some of the applications and implications of this knowledge are the subjects of this book. It is written for the more advanced kind of lay reader who is not turned aside by some technical terminology Known solar phenomena are described and explained, usually in terms of atomic structure and behavior. A fair amount of tabulated reference material, such as table of solar eclipses, is included; and the principles of the chief astronomical instruments used for studying the sun are carefully explained. Fringe subjects, such as probable future uses of solar energy and the relation of sun spot cycles to human affairs, are discussed conservatively

MITCHELL, SAMUEL ALFRED

Eclipses of the sun. Fifth edition. New York Columbia University Press, 1951 445 p illus. 23 cm. $6.50 184

Contents: The beginnings of astronomy Biblical and classical eclipses. The prediction of eclipses. The verification of eclipses. The spectroscope. Eclipses before the year 1900. Personal experiences in 1900, 1901, and 1905. Eclipses from 1918 to 1929 Eclipses since 1930. The structure of the atom. Series relationships in spectra. Photographing the flash spectrum. Ionization and the flash spectrum. Solar problems and their interpretation through heights. The sun's reversing layer Coronal information obtained from eclipses. Our present knowledge of the corona. Solar problems solved and unsolved. Index.

Note: (448) A standard non-technical presentation of theory history, and observational techniques. It is addressed to the nonspecialists, especially to general readers and to scientists outside the field of astronomy who want reliable survey and book of reference. The fourth edition appeared in 1935. The work has been extensively revised in this edition. Although many pages shorter it contains much new information. The additional material is not limited to accounts of recent eclipses but includes also recent advances in the understanding of solar physics. Also, less space is given to observation of eclipses in ancient times and to details of the author's travels in connection with his own observations.

MOHLER, ORREN C. AND OTHERS

Photometric atlas of the near infra-red solar spectrum λ8465 to λ25,242 By Orren C. Mohler A. Keith Pierce, Robert R. McMath and Leo Goldberg. McMath Hulbert Observatory of the University of Michigan Ann Arbor University of Michigan Press 1950. 7 p., 117 leaves illus. 48 × 32 cm. Paper $4.00 185

Note: Except for an introduction in which instrumentation and recording techniques are described, this book consists entirely of graphs of tracings made at the Mount Wilson Observatory with an instrument set-up composed of Snow telescope and recording spectrometer, the sensitive element in the latter being lead-sulfide

photoconductive cell. The graphs are photo offset reproductions of the original records. The work is complementary to M. Minnaert and others, *A photometric atlas of the solar spectrum*, Amsterdam, 1940.

United States. Nautical Almanac Office

Coordinates of the five outer planets 1653–2060 By W J Eckert, Dirk Brouwer G. M Clemence. Washington United States Government Printing Office 1951 327 p 29 cm. (U S. Nautical Almanac Office. Astronomical papers prepared for the use of the American Ephemeris and Nautical Almanac. Vol. XII) o. p. 186

Contents: The differential equations. Method of integration. The machine calculation. Data recorded. Accuracy of the integration. Comparison with observation and constants of integration. Arrangement of the printed coordinates. Tabular comparisons. Table of Everett coefficients. Coordinates of Jupiter. Coordinates of Saturn. Coordinates of Uranus. Coordinates of Neptune. Coordinates of Pluto. Basic data.

Note: "This volume contains the heliocentric coordinates of Jupiter Saturn, Uranus, Neptune, and Pluto, at forty-day intervals from 1653–2060. They were obtained by numerical integration on the IBM Selective Sequence Electronic Calculator. These coordinates will be useful in discussing the motions of the planets themselves and in computing their effects on comets and other objects. —Preface.

Urey Harold Clayton

The planets their origin and development. New Haven Yale University Press, 1952 245 p. 25 cm. $5.00 187

Contents: The origin of the solar system. The moon. The terrestrial planets. Chemical processes during the formation of the planets. The heat balance of the earth. The abundances of the elements and the chemical composition of the solar system. Summary and conclusions. Appendices. Index.

Note: A new hypothesis pertaining to the formation of the earth and other solar planets is put forth in this book. The main points are in the author's words: "The earth and other terrestrial planets were formed at much lower temperatures than were generally thought to be the case up to the present time. A more uniform distribution of iron throughout the silicate phases of the earth existed in the past than exists now and the iron core of the earth has been formed at least partly during geologic time. A considerable part of the book is written in the terminology and concepts of physical chemistry and the author has sought theory that would accommodate such facts as the absence of dense cores in some planets and the widely varying chemical composition of the planets and satellites. The book is addressed to astrophysicists, physical chemists, and others with considerable education in the physical sciences.

STARS

Dugan, Raymond Smith, and Newton Lacy Pierce

Photometric researches, twenty four eclipsing variables. Observed by Raymond Smith Dugan and Newton Lacy Pierce. Arranged by Frank Bradshaw Wood. Princeton N J Published by the Observatory 1951 117 p. 32 cm. (Contributions from the Princeton University Observatory No 25) $3.00 188

Contents: Introduction. RT Andromedae. WZ Andromedae. XZ Andromedae. AA Andromedae. SU Aquarii. ZZ Aurigae. UW Bootis. SV Camelopardalis TT Ceti. U Coronae Borealis. RW Coronae Borealis. GO Cygni. 64 Eridani. RU Eridani. RW Geminorum. UV Leonis. RW Mon. EW Orionis. TY Pegasi. RT Persei. Y Piscium. AM Tauri. RW Ursae Majoris. AO Virginis.

Note: In this publication observed variations in light intensities for 24 systems of eclipsing variable stars are tabulated. The observations were made with the 23½ inch refractor and polarizing photometer of the Princeton University Observatory

Kopal, Zdenek

The computation of elements of eclipsing binary systems. Cambridge Massachusetts The Observatory 1950 181 p 27 cm. (Harvard University Harvard Observatory monograph number eight) Cloth $5.00 paper $4.00 189

Contents: Preface. Introduction. Observational data and their treatment. Computation of the intermediary elements. Differential corrections. Effects of orbital eccentricity. Computation of the elements of distorted eclipsing systems. Appendices: Solution of least squares systems and computation of the errors. Survey of the methods. Epilogue.

Note: Essentially this work is manual of methods of computation on desk-type computing machines—methods which have been developed since the semi graphical methods published by Russell and Shapley in 1912. It points the way to more precise calculations based on the more accurate observations of eclipsing binaries which the methods of photo-electric photometry have made possible. Some of the methods are new and tentative, while others have reached high state of development. The book is intended for graduate work ers in astronomy

Merrill, John Ellsworth

Tables for solution of light curves of eclipsing binaries coefficient of limb-darkening x = 0.0 x = 0.2, x = 0 4 x = 0 6, x = 0.8 Princeton New Jersey Princeton University Observatory 1950. 1 v in 5 parts. 30 cm. (Princeton University Observatory Contributions. No 23) Paper $15.00 190

Note These tables represent an extension and refinement of an earlier work initiated and published in 1912 by Henry N. Russell in *Astrophysical Journal*, v. 35 June, 1912. They are designed to assist astronomers and astrophysicists in determining the orbits of those stars which eclipse each other at every revolution. Four degrees of partial darkening are tabulated and the data are grouped according to darkening coefficient.

Olivier, Charles Pollard and others

Magnitudes and coordinates of comparison stars in 35 regions of variable stars and magnitudes of other variables. Philadelphia University of Pennsylvania Press, 1952 98 p 28 cm. (Publications of the University of Pennsylvania. Astronomical series. Vol. VII, part II) Paper $3.00 191

Note: A complementary work to the authors' *Magnitudes and coordinates of comparison stars in 32 regions of variable stars and magnitudes of 284 variables*, published in 1940 as Vol. part III of the same series. It contains the data derived from considerable range of additional observations. Data given include the photometric magnitude, visual magnitude, and an adopted magnitude for each of the comparison stars In addition, the booklet in hand contains section entitled "Naked-eye variables" in hich observations made by Olivier over long period of years of the magnitude of selected variable stars are tabulated.

Payne Gaposchkin Cecilia

Stars in the making. Cambridge Harvard University Press 1952 160 p illus. 25 cm. (The Harvard books on astronomy, edited by Harlow Shapley and Bart J Bok) $4.25 192

Contents: Introduction Cosmic evolution. Part one, The physical stars. Dust and atoms. Part two, The scene. Pairs of stars. Clusters of stars. Systems of stars. Part three, The drama: The ages of things. The evolution of galaxies. The evolution of the stars. Suggestions for further reading. Index.

Note: This book by an internationally famous contemporary astronomer is addressed to general readers and others who have

non-specialist interest in the stars. It presents vivid picture of what astronomers know at the present time about the behavior of stars and their evolution. The narrative is supplemented by 67 plates of reproductions of photographs of stars and galaxies. The bibliography is short edited list of books suitable for the further enlightenment of non-specialist readers.

RUSSELL, HENRY NORRIS, AND JOHN ELLSWORTH MERRILL

The determination of the elements of eclipsing binaries. Princeton, N J Published by the Observatory 1952 96 p illus. 31 cm. (Contributions from the Princeton University Observatory No 26) $5 00 193

Contents: Introduction. The spherical model. Chapter III, Part I, Nomographic solution; Part II, Determination of the solutions. The rectifiable model. Intermediary solutions. Miscellaneous notes. Precepts for the computer.

Note: A complementary work to Merrill, *Tables for solutions of light curves of eclipsing binaries*, described above, and to volume of nomographs published as number 24 of the same series. It is presentation of the theory and the computational techniques useful in the analysis of eclipsing binary phenomena and in the compilation of such aids as the tables and nomographs just mentioned. The third chapter on nomographic solutions is of special interest and this is the first publication of the method.

PHYSICS

GENERAL

BRIDGMAN, PERCY WILLIAMS

The nature of some of our physical concepts. New York Philosophical Library 1952 64 p. 24 cm. $2 75 194

Note: Three lectures delivered at the University of London in 1950 have been collected in this volume, after having been published in three 1951 numbers of the *British journal for the philosophy of science.* The lectures pertain to the contemporary school of physical thought that is usually designated as operational analysis or operational philosophy. The author is one of the principal contributors to this school, and in the book at hand he has both modified and extended some of his previous writings on the subject.

BRIDGMAN, PERCY WILLIAMS

Reflections of a physicist. New York Philosophical Library 1950 392 p. 23 cm. $5.00 195

Contents (abridged) Group I, General points of view: Operational analysis. Science—public or private? Freedom and the individual. Group II, Applications to scientific situations: The new vision of science. Permanent elements in the flux of present-day physics. Statistical mechanics and the second law of thermodynamics. The time scale. Group III, Primarily social: The struggle for intellectual integrity. Society and the intelligent physicist. Science and freedom—reflections of a physicist. Group IV Specific situations: "Manifesto by a physicist. Scientific freedom and national planning. Group Prophetic: The prospect for intelligence. New vistas for intelligence. Index.

Note: A collection of 23 nontechnical essays by a well-known scientist. All but three of them are reprinted from periodicals and other publications. Two of the papers deal explicitly with the author's "operational analysis," a concept which he applied first to the philosophy of science in his *The logic of modern physics* (1934) The book will appeal most to persons interested in the philosophy and social implications of science. However, the essays on scientific freedom and the potentialities of human intelligence are of interest to general readers.

DUSHMAN SAUL

Scientific foundations of vacuum technique. New York John Wiley & Sons Inc. 1949 882 p Illus. 24 cm. $15.00 196

Contents: Kinetic theory of gases. Flow of gases through tubes and orifices. Mechanical pumps. Steam-jet ejectors and mercury-vapor pumps. Vapor pumps using organic liquids. Manometers for low gas pressures. Sorption of gases and vapors by solids. Sorption of gases by "active" charcoal, silicates (including glasses) and cellulose. Gases and metals. Chemical and electrical clean-up of gases at low pressures. Vapor pressures and rates of evaporation. Dissociation pressures of oxides, hydrides, and nitrides and rates of oxidation. Significance of reference abbreviations. Name index. Subject index.

Note: Although pumps and other apparatus used in the production and measurement of high vacua are thoroughly described as to principles, characteristics and limitations, this book is not primarily a description of apparatus and its manipulation. Rather it is a presentation of fundamental information from the fields of physics, chemistry and metallurgy which has application to high vacuum technique. It is written on a professional level and is intended for scientists and engineers. There are numerous footnote references to the pertinent literature. It contains much more material than was contained in the author's *Production and measurement of high vacuum* (Schenectady N Y 1922).

EINSTEIN, ALBERT

The meaning of relativity Princeton N J Princeton University Press, 1950. 150 p. 21 cm. $2.50 197

Contents: Space and time in pre-relativity physics. The theory of special relativity. The general theory of relativity. Appendix for the second edition. Appendix II. Generalized theory of gravitation.

Note: One of the landmarks of modern knowledge. In this edition apparently no changes were made in the main body of the text nor in the first appendix. Only appendix II is new but it contains Mr. Einstein's general theory of gravitation, the purpose of which is to interrelate the observed phenomena of gravity, electromagnetic energy etc., in such a way that all physical phenomena can be explained in a single theory. The book is addressed to professional physicists whose mathematical knowledge and other training enable them to understand the mathematical expressions of relativity.

MARGENAU, HENRY

The nature of physical reality a philosophy of modern physics. New York McGraw Hill Book Company Inc., 1950 479 p. illus. 24 cm. $7.00 198

Contents (abridged) Ways of arriving at reality. What is immediately given? Departure from the immediate—constructs. Metaphysical requirements of constructs. Empirical confirmation. Space and time. Systems, observables, and states. Physics of discrete systems. Physics of continua. Thermodynamics. The role of definitions in science. Probability. Statistical mechanics. The breakdown of physical models. Basic ideas of quantum mechanics. Uncertainty and measurements. Causality. The exclusion principle. The contours of reality. Name index. Subject index.

Note: A significant contribution to the philosophy of science. The author states that he believes the attitudes of uncritical realism, unadorned operationalism and radical empiricism which pervade most of the discussion and much of the thinking on subjects of science, to be outmoded and in disharmony with the successful phases of contemporary physics. He defines reality in terms of "verifacts," which derive their validity from systems of experience rather than from the "pointer readings" of operationalism. The book is addressed more to physicists than to philosophers but it does contain thought of interest to the latter group too. It is arranged for use as a textbook in college courses, but it can be read independently by any reader who has a basic understanding of philosophical and physical terminology.

RAINICH, GEORGE YURI

Mathematics of relativity New York John Wiley & Sons, Inc., 1950 173 p. illus. 23 cm. $4 00 199

Contents (abridged) I, Old physics: Motion of a particle. The inverse square law. Two pictures of matter. Maxwell's equations. General equations of motion. The complete tensor. II, New geometry: Analytic geometry of four dimensions. Tensor analysis. Complications resulting from imaginary coordinates. Are the equations of physics invariant? Curves in the new geometry. III, Special relativity: Equations of motion. Addition of velocities. Light corpuscles or photons. The complete tensor. IV Curved space: Generalizations. The Riemann tensor. Tensors in general coordinates. Riemann tensor in general coordinates. Equations of physics in general coordinates. V General relativity: The law of geodesics. Solution of the field equations. Newtonian motion of a planet. Relativity motion of a planet. Deflection of light. Conclusion. Index.

Note: An introductory exposition of the mathematical concepts and techniques necessary to a full comprehension of relativity. The book is designed for upperclass and graduate college students majoring in mathematics or physics. The author is Professor of Mathematics in the University of Michigan, and the book is a development of a course which he has taught there for more than twenty years.

TEXTBOOKS

BERGMANN, PETER GABRIEL

Basic theories of physics mechanics and electrodynamics New York Prentice-Hall, Inc. 1949 280 p illus. 22 cm. (Prentice-Hall physics series Donald H. Menzel, editor) $7.35 200

Contents: Part I, Classical mechanics: Mechanics of mass points. Analytical mechanics. Matter in bulk. Summary of classical mechanics. Part II, Electrodynamics. Electrostatics and magnetostatics. Electromagnetic interaction. The electromagnetic field. Waves. Relativity. Optics. Conclusion. Further reading. Index.

Note. A brief textbook presenting the theoretical foundations of classical physics, that is, Newton's mechanics and Maxwell's electrodynamics, and tracing the development of classical physics through to the special theory of relativity. Attention is concentrated on physical ideas, and the mathematical techniques are considered as tools and discussed as needed. The work is intended for graduate students in theoretical physics. A companion volume is described above.

BROWN THOMAS BENJAMIN

Foundations of modern physics. Second edition New York John Wiley & Sons Inc. 1949 391 p illus 24 cm. $5.50 201

Contents. The elementary electric charge and the electron. Dimensions of atoms. The wave character of light. Polarized light. Electrical oscillations and electromagnetic waves. The electromagnetic spectrum—infrared light, ultraviolet light, and X-rays. Light particles and electron waves. The hydrogen spectrum and the hydrogen atom. Optical spectra and atomic structure. X-ray spectra and more about atoms. Molecular motions. Molecular energy. Crystals. Black-body radiation. Radioactivity. Nuclear discovery. Nuclear research. Nuclear energy. Cosmic rays. Epilogue. Appendices. Index.

Note. A textbook for college use in which the discoveries and theories of the past century which form the basis for present-day developments in physics are discussed. Emphasis is placed on experimental methods and only elementary mathematics is employed. This edition has been revised in the light of recent developments in the field, and the chapter on nuclear theory has been expanded to form three new chapters covering nuclear energy and its applications. Review problems and suggested readings are again included at the end of each chapter

CABLE, EMMETT JAMES, AND OTHERS

The physical sciences. By Emmett James Cable, Robert Ward Getchell, William Henry Kadesch, with chapters on astronomy by Harry E. Crull. Third edition. New York Prentice-Hall, Inc., 1951 496 p illus. (part col'd) 25 cm. $7.65 202

Contents (abridged) The dawn of science. Weights and measures. Energy utilized. Energy wasted. Force and motion. Fluids and fluid pressure. Building stones of matter. States of existence. The behavior of molecules. Heat as a form of energy. Our atmosphere. Winds and weather. Optical instruments. Spectra. Electrostatics and magnetism. Electric currents. Electrical communication. X-rays. Radioactivity. Some fundamental chemical processes. Ionization and equilibrium. Nitrogen and its compounds. The halogens. The classification of the elements. Sulfur. Some common metals. Organic and food chemistry. The earth and its rocks. Ground water and its work. Diastrophism, an ever-working process. Earthquakes and volcanism. The earth as an astronomical body. The moon and eclipses. Other members of the solar system. The sun and its radiation. The stars and nebulae. The Milky Way and extragalactic systems. Science and the world of tomorrow. Questions. References. Index.

Note (32) A survey of the physical sciences in language as non-technical as the subject matter permits. The book indicates the essential unity of the physical sciences and the pronounced effect they have had upon modern life. In the third edition the book has been given a larger and more attractive format, and the number of illustrations has been increased from 329 to 345. The section on astronomy has been completely rewritten, and the list of questions and problems has undergone revision. The work was particularly written for use in freshman survey courses in science in teachers' colleges. It may also be used to advantage by non-academic readers interested in an introductory view of the physical sciences.

HOLTON, GERALD

Introduction to concepts and theories in physical science. Cambridge, Mass. Addison-Wesley Press, Inc., 1952 650 p. illus. 22 cm. $6.50 203

Contents (abridged) Part A, The study of motion. Galileo and the kinematics of free fall. Projectile motion. Part B, The study of forces: Newton's laws of motion. Rotational motion. Part C, The laws of planetary motion and universal gravitation: The astronomy of ancient Greece. Copernicus' heliocentric theory. The nature of scientific theory. Kepler's laws. Galileo's contribution to astronomy. Newton's law of universal gravitation. Part D, On structure and method in physical science: Concepts. The growth of science. Part E, The laws of conservation. The law of conservation of matter. The laws of conservation of momentum. The law of conservation of energy. Part F, Origins of the atomic theory in physics and chemistry: The physics of gases and of heat. The atomic theory of chemistry. Part G, Quantum theory and the nuclear atom. Electrostatics. Properties of light. The quantum theory of light. Radioactivity and the nuclear atom. Bohr's model of the atom. Appendixes: Fundamental constants. Table of conversion factors. Alphabetic list of the elements. Periodic table of the elements. Summary of some trigonometric relations. Natural trigonometric functions. Common logarithms. Index.

Note: A new textbook which is designed for use in introductory college courses. Its organization and content reflect the critical examination of college instruction in science which has been going on in recent years under the leadership of James Bryant Conant. As the chapter titles show selected basic concepts from both classical and present-day physics are emphasized and there is also considerable discussion of the history of science and of scientific methods. The author is Assistant Professor of Physics and of General Education in the Physical Sciences in Harvard University

HULL GORDON FERRIE

Elementary modern physics. A revision of *An elementary survey of modern physics* New York The Macmillan Company 1949 503 p illus. 22 cm. $5.75 204

Contents Molecules. The electron, discovery. Radiation. The photoelectric effect. Orbits. Atomic spectra and the Bohr theory. X-rays. Electron tubes. Electric phenomena in gases and solids. The Zeeman and Raman effects. Radioactivity. Rutherford's discovery of transmutation of atoms. Cosmic rays, photons or particles? Transmutation of the elements. Waves and particles. Limitations imposed by nature. Fission discovered by Hahn and Strassmann. Appendix. Index.

Note: (387a) A well-written introduction to modern physics, suitable for students and other readers who have completed courses in basic physics. Such topics as light pressure, how the mean free path of molecules is calculated, and nuclear fission are discussed briefly and lucidly. The present edition includes much material that was not in the original edition published in 1936.

KOLIN, ALEXANDER

Physics its laws ideas and methods. New York McGraw-Hill Book Company Inc., 1950 890 p illus. 24 cm. $7.00 205

Contents Part A, Phenomenological approach to physics: Mechanics of points and of rigid bodies. Mechanics of fluids. Vector fields. Heat as a form of energy. Part B, Theoretical approach in physics using mechanical model theories: A mechanical explanation of heat phenomena. A mechanical explanation of electrical phenomena. A mechanical explanation of electromagnetic phenomena. Part C, Transition from mechanical model theory to an electromagnetic field theory: Periodic motion of matter and wave propagation in material media. Wave propagation in the hypothetical ether. Periodic motion of electric charges and propagation of electromagnetic waves. Part D, The failure of the classical mechanical and electromagnetic theories and the revision of the fundamental assumptions of physics. Inability of classical electrodynamics to explain emission and absorption of light. Replacement of deterministic description by statistical laws. Modification of our ideas on the immutability of elements and on the permanence of mass and energy. Revision of our concepts of space and time. Tables. References for further study. Index.

Note: An introductory textbook developed at the University of Chicago. The basic phenomena and laws usually presented in a textbook for first college courses are covered, but the applications introduced are largely biological. This emphasis and the attention given to the scientific method suit the book to the needs of

students whose main interest is biology or some area of science other than physics. However, the physics content of the book has not been skimped nor are physical ideas treated superficially

LINDSAY, ROBERT BRUCE

Concepts and methods of theoretical physics. New York D Van Nostrand Company Inc. 1951 515 p. 23 cm. $7 00 206

Contents: The nature of theoretical physics. Part I, Particle physics: Kinematics—the geometry of motion. Concepts of the theory of mechanics—the principles of dynamics. Motion of a particle in a straight line—oscillations. Motion of a particle in a plane. Motion of a collection of particles. Dynamics of a rigid body. Minimal principles—Lagrange's equations. The transformation theory of mechanics—atomic structure. Statistical mechanics and thermodynamics. Quantum theory. Part II, Field physics: Scalar and vector fields. Deformable material media and tensor fields. Wave motion in solid and fluid media. The electromagnetic field. Electromagnetic radiation. Electron theory and relativity. Problems. Index.

Note: This book is a text for upperclass undergraduate college students who are majoring in physics. The author has assumed that his readers will have completed courses in advanced calculus and elementary partial differential equations. For readers with the necessary preparation the book provides an introductory and fairly simple treatment of some of the basic ideas and the chief mathematical techniques of present-day physics.

MARGENAU, HENRY, AND OTHERS

Physics principles and applications, by Henry Margenau, William W Watson and Carol G. Montgomery New York McGraw Hill Book Company Inc. 1949 760 p. illus. 23 cm. $6.50. 207

Contents (abridged) The methods of physics. Introduction to mechanics; forces. Elasticity. Force and acceleration; dynamics. Dynamics of a rigid body. Oscillations. Hydrodynamics. Calorimetry. Properties of gases and vapors. The laws of thermodynamics. Meteorology. Dielectrics and capacitance. Electric currents. Magnetic fields and poles. Electronics. Wave motion. The nature of light. Optical instruments. Spectra and color. Diffraction. Nuclear physics. Appendixes. Index.

Note: A new textbook of considerable importance. In their preface, the authors—all members of the faculty of Yale University—state that their purpose is to present an account of physics which is "rigorous, vital, and modern. Most of the space is devoted to classical physics, as would be expected in an introductory work; but the main concepts of modern physics, including quantum mechanics, are introduced and explained at least briefly. Applications are described but are not emphasized. Calculus is employed in the exposition and the problems.

MENDENHALL CHARLES ELWOOD, AND OTHERS

College physics. Third edition. By C. E. Mendenhall, A. S. Eve, D A. Keys, and R. M. Sutton. Boston D C. Heath and Company 1950 657 p. illus. 24 cm. $6.00 208

Contents (abridged) Statics. Force and motion. Energy and power. Friction and machines. Rotation. Elasticity. Gravitation. Hydrostatics. Mechanics of gases. Properties of fluids. Vibrations and oscillations. Wave motion and sound. Applications of sound. The measurement of temperature. Kinetic theory of gases. Calorimetry. Transfer of heat. Change of state. Magnetism. Electrostatics. Condensers and capacitance. Current electricity. Magnetic fields and motion. Electromagnetic induction. Conduction of electricity through gases. Radio. The nature of light and photometry. Lenses. Optical instruments. Photoelectricity. Radioactivity. Atomic structure. Nuclear physics and atomic energy. Appendix. Answers to problems. Index to tables in text. Index to text.

Note: (1946) An introductory college text for students whose main interest in this subject is cultural. The mathematical requirements are simple. Readers' interests are stimulated by illustrations on almost every page and by mentions of applications of physical principles in familiar machines and devices. A substantial number of changes in the discussion, illustrations, and problems have been made in this edition.

MICHELS, WALTER CHRISTIAN, AND A. L. PATTERSON

Elements of modern physics. Illustrations by Richard Barbera and George Berk. New York D Van Nostrand Company, Inc., 1951 659 p. illus. 24 cm. $6.50 209

Contents (abridged) Length and time. Linear motions. Mass, momentum, and force. Motions in space. Some properties of matter. Mechanical energy. Wave motion. Thermal energy. Radiation. Optical instruments. Rotation. Fields of force. Electric currents and potentials. Molecules and atoms. The behavior and theory of gases. Electromagnetic induction. Atomic and nuclear structure. The behavior and theory of liquids and solids. Oscillations. Electromagnetic waves. Waves and particles. Atomic theory. Appendices. Index.

Note: A new textbook for college courses in which the authors have made a special effort to treat introductory physics from the viewpoint of present-day physicists. The conventional division into mechanics and electricity has been abandoned. Physics is presented as a unified body of thought in which there is no fundamental cleavage between classical physics and "modern" physics or between introductory physics or advanced physics. As an instance of the method may be cited the discussion of the speed of protons and the experimental methods of measuring this speed in chapter three. Throughout the book the authors use analogies which are very helpful in presenting physical concepts and facts as logical ideas. The book was developed at Bryn Mawr College where the first-named author is Professor of Physics.

SEARS, FRANCIS WESTON, AND MARK W ZEMANSKY

College physics. Second edition. Cambridge, Mass. Addison Wesley Press Inc. 1952 912 27 p. illus. (part col d) 24 cm. (Addison Wesley physics series Francis Weston Sears, consulting editor) $8.50. 210

Contents (abridged) Composition and resolution of vectors. Statics. Rectilinear motion. Newton's second law. Motion of a projectile. Work and energy. Impulse and momentum. Circular motion. Rotation. Elasticity. Harmonic motion. Hydrostatics. Hydrodynamics and viscosity. Temperature. Transfer of heat. The first law of thermodynamics. Thermal properties of matter. The second law of thermodynamics. Wave motion. Vibrating bodies. Acoustical phenomena. The electric field. Potential. Properties of dielectrics. Current and resistance. Principles of electrochemistry. The magnetic field. Induced electromotive force. Magnetic properties of matter. Capacitance and inductance. Alternating currents and electromagnetic waves. Electronics. The nature and propagation of light. Lenses and lens aberrations. Optical instruments. Illumination. Color. Interference and diffraction. Polarization. Spectra and atomic physics. Radioactivity and nuclear physics. Tables. Index. Answers to problems.

Note: (1947) A textbook for use in one-year courses. In it basic principles are developed with little attention to the practical applications or the historical background of the subject. Abridged from the author's *Principles of physics* which was developed for a two-year course in physics at the Massachusetts Institute of Technology the first edition of this title was published in 1947. The present edition includes newly added material on surface tension, the kinetic theory of gases, convection coefficients, acoustical phenomena, electricity and light, and a new set of problems.

SEMAT HENRY

Fundamentals of physics. Revised edition. New York Rinehart & Company Incorporated, 1951 849 p illus. 24 cm. $6.00. 211

Contents (abridged): Part I, Mechanics: Forces and equilibrium. Motion of a particle. Periodic motion. Work and energy. Fluids at rest. Fluids in motion. Properties of matter. Rotational motion. Part II, Heat: Heat and work. Kinetic theory of matter. Change of phase. Transfer of heat. Heat engines. Application to meteorology. Part III, Wave motion and sound. Part IV Electricity and magnetism. Magnetism. Electrostatics. The electric circuit. Electrochemical effects. Electromagnetic effects. Electromagnetic induction. Alternating currents. Electrical communication. Part V Light: Photometry. Reflection and refraction. Optical instruments. Light as a wave motion. Part VI, Atomic physics: Charged particles. Spectra and atomic structure. Nuclear physics. Appendixes: Tables. Glossary. Index.

Note: (135*) The first edition of this college textbook was the result of a planned effort to produce a small book in which brevity was achieved largely by selection of the topics to be discussed. In the present revision that idea has been abandoned and the book is comparable in scope to other introductory texts intended for courses of standard length. The emphasis is on basic principles and phenomena and applications are mentioned only incidentally. The author is Professor of Physics in the College of the City of New York.

WINANS, JOHN GIBSON

Introductory general physics. New York Ginn and Company 1952 765 p illus. 24 cm. $5 75 212

Contents (abridged) Words and measurements. The algebra and geometry of physics. Work and power. Efficiency of machines. Forces acting on liquids at rest. Gases. Molecular forces. Vectors. Vector equations and projectile motion. Newton's laws of motion. Rotational motion. Combinations of rotational and translational motion. Sound waves and their sources. Heat. The molecular theory of matter. Magnetism. Electricity in motion. Chemical effects of electricity. Magnetic effects of electric currents. Electric waves. Radio. The conduction of electricity through gases. The intensity of light. The velocity of light. Optical instruments. Color and the spectrum. Atomic energy. Appendix. Index.

Note: The first edition of a college textbook which has a number of notable features. The concept of a vector is introduced early and is employed throughout most of the book. The numerous illustrations are well chosen. Outstanding are the numerous graphical demonstrations of physical principles and the reproductions of photographs of physical experiments. Discussions of recently developed devices such as the transistor are included. Although typical applications are described, the book is not a descriptive text in the usual sense of that term. However the mathematics is simple. The author is Associate Professor of Physics in the University of Wisconsin.

WEIGHTS AND MEASURES

NATIONAL CONFERENCE ON WEIGHTS AND MEASURES

Specifications tolerances, and regulations for commercial weights and measures and weighing and measuring devices. (Issued September 1, 1949) Washington D C. Government Printing Office, 1949 144 p 20 cm. (United States. National Bureau of Standards. Handbook 44 superseding Handbook 29) $1.25 213

Contents. Introduction. General code. Linear measures. Fabric-measuring devices. Tentative code for cordage-measuring devices. Taximeters. Odometers. Liquid measures. Graduates. Measure-containers. Milk bottles. Lubricating-oil bottles. Liquid-measuring devices. Grease-measuring devices. Vehicle tanks. Dry measures. Berry baskets and boxes. Scales: Application. Definitions. Specifications. Notes. Performance requirements except tolerances. Tolerances. Regulations. Weights. Sequential index.

Note: The specifications, tolerances, and regulations given in this handbook are recommended by the National Bureau of Standards for official promulgation in and use by the states of the United States of America in exercising their control of commercial weighing and measuring apparatus. The specifications, tolerances, and regulations comprise all of the current codes as adopted by the National Conference on Weights and Measures through 1949. Free correction sheets showing changes in and additions to the codes published in the handbook are issued from time to time conforming with the text of the handbook and printed only on one side of the page to simplify insertions. This handbook supersedes Handbook 29 published in 1943.

SMITH RALPH WEIR

Testing of measuring equipment. A manual for weights and measures officials. Issued May 15, 1951 Washington D C Government Printing Office, 1951 205 p. illus. 24 cm. (United States. National Bureau of Standards. Handbook 45) $1 25 214

Contents: Introduction. Inspection of measuring equipment. Adjustment, rejection, and sealing of measuring equipment. Linear measures. Fabric-measuring devices. Taximeters. Odometers. Liquid measures. Graduates. Measure-containers. Milk bottles. Lubricating-oil bottles. Liquid-measuring devices. Grease-measuring devices. Vehicle tanks. Dry measures. Berry baskets and boxes. Water, gas, and electricity meters.

Note: A manual for state and local weights and measures officials in which various types of commercial measuring equipment, the principles of their operation, and methods for their inspection and test are described. It is devoted primarily to procedures recommended for use by officials when exercising their routine regulatory controls over measuring equipment of all kinds. Testing procedures recommended are in general the minimum requirements considered necessary to enable the official to determine whether or not equipment should be approved for commercial use. This handbook is a companion volume to *Handbook 37 1945: Testing of weighing equipment.*

MECHANICS

BIRKHOFF, GARRETT

Hydrodynamics a study in logic, fact, and similitude. Princeton New Jersey Princeton University Press for University of Cincinnati, 1950 186 p illus. 22 cm. $3.50 215

Contents: Hydrodynamical paradoxes. Recent progress in free boundary theory. Modeling and dimensional analysis. Group theory and field mechanics. Virtual mass and groups. Bibliography. Index.

Note: An unusual book in which the author examines a number of noted paradoxes in fluid mechanics; shows "plausible reasoning" is not applicable in many hydrodynamic situations; discusses theory and practice in the use of models and the application of symmetry concepts; and then explores the applications of group-theoretic ideas to flow problems. The discussions are predominantly mathematical, and many of the ideas are original. The book is of interest to advanced workers in fluid mechanics, aeronautical design, etc.

CLEMENTS, GUY ROGER, AND LEVI THOMAS WILSON

Analytical and applied mechanics. Third edition. New York McGraw-Hill Book Company Inc., 1951 463 p. illus. 24 cm. $5.50. 216

Contents: Vectors. Concurrent forces. Coplanar forces—resultant. Coplanar forces—equilibrium. Framed structures and trusses. Forces in space. Cables. Center of gravity. Kinematics. Kinetics of a particle. Impulse and momentum. Dynamics of a body. Stress and strain. Beams. Struts and columns. Combined stress. Problems for review. Appendix. Answers to problems. Index.

Note: (193) An introductory text for use in college courses offered to students who are preparing to specialize in mechanical engineering or another division of engineering that requires a sound fundamental knowledge of mechanics. A fairly rigorous exposition of the basic mathematics and physics is combined with numerous worked examples. Though essentially the same as the text of the second edition published in 1943 revisions and additions have been made in numerous places. The authors are associated with the United States Naval Academy.

CORBEN HERBERT CHARLES, AND PHILIP STEHLE

Classical mechanics. New York John Wiley & Sons, Inc., 1950. 388 p. illus. 22 cm. $6 50 217

Contents: Kinematics of particles. The laws of motion. Conservative systems with one degree of freedom. Miscellaneous theorems on systems of particles. Lagrange's equations of motion. Applications of Lagrange's equations. Linear vector spaces. Small oscillations of conservative systems. Rigid bodies. Hamiltonian theory. Contact transformations. Contact transformations which simplify the equations of motion. Poisson brackets. Infinitesimal contact transformations. Further developments of transformation theory. Miscellaneous generalizations and analogues. Introduction to special relativity theory. The motion of particles in high energy accelerators. Index.

Note: A college textbook of interest to upperclass and graduate students who are majoring in physics. It presents the knowledge and concepts in classical mechanics which are valid and useful in present-day physics and affords a sound preparation for the understanding of quantum mechanics.

GOLDSTEIN, HERBERT

Classical mechanics. Cambridge, Mass. Addison Wesley Press Inc. 1950 399 p. illus. 24 cm. $7 50 218

Contents: Survey of the elementary principles. Variational principles and Lagrange's equations. The two-body central force problem. The kinematics of rigid body motion. The rigid body equations of motion. Special relativity in classical mechanics. The Hamilton equations of motion. Canonical transformations. Hamilton-Jacobi theory. Small oscillations. Introduction to the Lagrangian and Hamiltonian formulations for continuous systems and fields. Bibliography. Index of symbols. Index.

Note: A new presentation of classical mechanics for graduate students in physics. Instead of following the traditional pattern for this audience the author has selected those topics which are of greatest pertinence to modern physics. A further restriction is that such topics as elasticity which have already been thoroughly treated from the modern viewpoint in other books are not covered. The treatment assumes that the reader will have had courses in advanced calculus and analysis. The more difficult mathematical techniques such as matrix algebra are presented in the book itself.

GURNEY RONALD WILFRID

Introduction to statistical mechanics. New York McGraw Hill Book Company, Inc., 1949 268 p illus. 24 cm. (International series in pure and applied physics G P Harnwell, consulting editor) $6.00. 219

Contents (abridged): Groups of particles. The use of undetermined multipliers. The distribution of particles through alternative sets of energy levels. The partition function and properties of monatomic and diatomic gases. The relation between statistical mechanics and thermodynamics. Conditions of equilibrium for partially dissociated diatomic gas. Substitutional and interstitial solutions. The total energy shared by interacting particles. Classical mechanics. Vibration of molecules and of crystal lattices. The rotation of diatomic molecules. Particles in electric and magnetic fields. Appendix. Name index. Subject index.

Note: An attempt to simplify the exposition of statistical mechanics so that its chief concepts and methods will be available to scientists who are not professional mathematicians. The more abstract concepts are not introduced until the latter part of the book. In the first part the emphasis is on the mathematical techniques and some of their applications. Applications in chemistry and in physics are used throughout the book. The chapters are supplemented by problems for students to solve, but the work is intended for graduate students and graduate scientists already in industry rather than for undergraduates.

HALL, NEWMAN ARNOLD

Thermodynamics of fluid flow New York Prentice-Hall, Inc. 1951 278 p illus. 22 cm. $7.65 220

Contents: Introduction. Fluid friction. Energy and continuity. Momentum principles. Incompressible fluids. Perfect gases. Constant-area adiabatic flow. Varying area adiabatic flow. Shock regimes. Flow measurement and control. Diabatic flow. Propulsion systems. Appendixes: Conversion tables. Mathematical notes. Thermodynamic partial derivatives. Tables. Index.

Note: The combination of fluid mechanics and fluid flow is presented in this textbook to enable the student to grasp the fundamentals necessary to the analysis of fluid flow an understanding of which is important in chemical, aeronautical, and mechanical engineering. While the book includes some review of both fluid mechanics and thermodynamics, the author assumes that the reader will already have received fundamental training in the two fields separately. Theory is emphasized, with numerous examples showing the application of the theory in practical situations. Aside from its use as a textbook, the book can also be of some use as a reference source for engineers concerned with research and development in fields dependent on flow systems.

INGLIS DAVID RITTENHOUSE

Dynamic principles of mechanics. Philadelphia The Blakiston Company 1949 174 p. illus. 24 cm. $4.00 221

Contents: Kinematics of a particle. Dynamics of a particle. Coupled oscillators and normal coordinates. Inverse-square force and planetary motion. A dynamical system of several particles. Statics. Rotation of a rigid body. Impact. Index.

Note: A well-organized presentation intended for course use by advanced undergraduates and also by graduates who did not have a specialized course in dynamics as undergraduates. Previous courses in general physics and in calculus are assumed. It is designed as preparation for professional work in modern physics and chemistry; consequently, although the subject matter is all from classical physics, the treatment is such that the student is prepared, in habits of thinking at least, for the study of quantum mechanics. The author is Associate Professor of Physics at Johns Hopkins University

LINDSAY, ROBERT BRUCE

Physical mechanics an intermediate text for students of the physical sciences. Second edition. New York D Van Nostrand Company Inc., 1951 451 p illus. 22 cm. (University physics series, Leigh Page consulting editor) $5 00 222

Contents: The elemental concepts of mechanics. Rectilinear motion of a particle. Curvilinear motion in a plane. Energy in particle dynamics. Statics of a particle. Motion of a system of particles. Mechanics of a rigid body. Constrained motion. Oscillations. Deformable bodies and wave motion. Mechanics of fluids. Advanced mechanics. Index.

Note: (401) A substantial presentation of classical mechanics. Its primary use is as a textbook in courses offered to college students who are preparing for careers in physics and who have completed thorough courses in elementary physics and mathematics through calculus and introductory differential equations. The treatment is analytical and a considerable part of the exposition is expressed in mathematics. The first edition was published in 1933. In this edition discussions of several important topics have been reorganized and rewritten and a new chapter designed to give the student some idea of the scope of advanced mechanics has been added.

MOODY ERNEST A., AND MARSHALL CLAGETT

The medieval science of weights (Scientia de ponderibus) Treatises ascribed to Euclid, Archimedes, Thabit ibn Qurra, Jordanus de Nemore and Blasius of Parma. Edited with introductions, English translations, and notes, by Ernest A. Moody and Marshall Clagett. Madison The University of Wisconsin Press, 1952 438 p. illus. 24 cm. $5 00 223

Contents: General introduction, Part I, by M. Clagett—Part II, by E. A. Moody *Liber Euclidis de ponderoso et levi et comparatione corporum ad invicem*, edited by M. Clagett; introduction, translation and notes by E. A. Moody *Liber Archimenidis de incidentibus in humidum* (*Liber Archimenidis de ponderibus*) introduction by E. Moody and M. Clagett; text and translation by E. A. Moody; with additional variant readings by M. Clagett. *Liber de canonio* edited, with introduction, translation and notes, by E. A. Moody *Liber karastonis*, edited, with introduction, translation and notes, by M. Clagett. *Elementa Jordani super demonstrationem ponderum*, edited, with introduction, translation and notes, by E. A. Moody *Liber Jordani de ponderibus*, with another commentary (version "P") edited, with introduction, translation and notes by E. A. Moody *Liber Jordani de ratione ponderis*, edited, with introduction, translation and notes by E. A. Moody, with the assistance of R. Clements, A. Dobel, and J. L. Saunders. *Tractatus Blasii de Parma de ponderibus*, edited, with introduction, translation and notes by M. Clagett. Appendixes: A fragment of the Roman balance attributed to Euclid, edited by M. Clagett. Thomas Bradwardine's discussion of proposition one of the Liber de ponderibus, edited by E. A. Moody A fourteenth century commentary on proposition one of the Liber de ponderibus, edited by E. A. Moody A variant form of proposition eight of the Elementa Jordani, edited by M. Clagett. Variant readings. Sigla of manuscripts and editions. Critical notes. Bibliography. Index.

Note: In this work the medieval treatises named in the table of contents have been collected and translated into English. The book is organized so that the Latin text is printed on the left-hand page and the English translation on the right-hand page. The significance of the texts is discussed in the general introduction and also in the introductions to the separate works. The book as a whole represents a real contribution to the history of classical physics.

MURPHY, GLENN

Mechanics of fluids Second edition. Scranton, Pa. International Textbook Company 1952 309 p illus 25 cm. (International textbooks in civil engineering Benjamin A. Whisler consulting editor) $6 00 224

Contents: Properties of fluids. Fluids at rest. Buoyant forces. Flow of fluids. Uniform flow Non-uniform flow Forces developed by fluids in motion. Hydraulic machinery Unsteady flow Appendixes. Index.

Note: (406) In this introductory textbook basic principles underlying the behavior of fluids are presented for engineering students. Engineering applications are indicated and most of the problems pertain to such applications, but the emphasis is on the physical principles. Although about twenty pages shorter than the first edition published in 1942 material on such topics as torque converters and fluid couplings has been added. Several sections have been extensively rewritten.

STEPHENSON REGINALD JOSEPH

Mechanics and properties of matter New York John Wiley & Sons Inc., 1952 371 p. illus. 24 cm. $6.00 225

Contents: Kinematics. Force and motion of particles. Work and energy of particles. Newton's law of gravitation and some of its consequences. Free and forced harmonic oscillations. Translational and rotational motion of rigid bodies. Elasticity Statics. Hydrostatics and hydrodynamics. Wave motion. Problems Index.

Note. An intermediate-level textbook intended for college students who are majoring in physics or in engineering. More advanced aspects of mechanics are considered and the treatment of them is more rigorous than in elementary texts. On the other hand, the author has taken special pains to make the techniques and concepts clear Usually word explanation precedes the mathematical exposition and the expository material includes many fully worked examples.

STOKER JAMES JOHN

Nonlinear vibrations in mechanical and electrical systems. New York Interscience Publishers Inc. 1950 273 p 24 cm. $6.00 226

Contents (abridged) Linear vibrations Free vibrations of undamped systems with nonlinear restoring forces. Free oscillations with damping and the geometry of integral curves. Forced oscillations of systems with nonlinear restoring force. Self-sustained oscillations. Hill equation and its application to the study of the stability of nonlinear oscillations Appendices: Mathematical justification of the perturbation method. Bibliography Index.

Note Essentially this book is digest of the work done on linear vibrations from about the end of the nineteenth century when the fundamental contributions of Henri Poincaré were published, to about the end of 1930 together with selections from the significant work since that year. Applications of the mathematical techniques are indicated constantly; thus the book is of interest both to physicists and engineers who have sufficient knowledge of mathematics to follow the exposition It is also of interest to graduate students in mathematics and professional mathematicians who may wish to pursue research in the field

SYMPOSIA IN APPLIED MATHEMATICS

Proceedings Volume I Non-linear problems in mechanics of continua. New York American Mathematical Society, 1949 219 p 26 cm. $5.25 227

Contents: Hydrodynamics Non-linear problems in the theory of fluid motion with free boundaries, by A. Weinstein. Operator methods in the theory of compressible fluids, by S. Bergman. An existence theorem in two-dimensional gas dynamics, by L. Bers. Recent developments in free boundary theory by G. Birkhoff. Theory of the propagation of shock waves from cylindrical charges of explosive, by S. R. Brinkley Jr., and J. G. Kirkwood. The method of characteristics in the three-dimensional stationary supersonic flow of compressible gas, by H Cohen and C. L. Dolph. The numerical solution of the turbulence problem, by H. W. Emmons. On the stability of transonic flows, by Y H. Kuo. Stability of the laminar boundary layer in compressible fluid, by L. Lees. Remarks on the spectrum of turbulence, by C. C. Lin. Two-dimensional compressible flows, by L. Opatowski. Polygonal approximation method in the hodograph plane, by H. Polachek The boundary layer of yawed cylinders, by W. R. Sears. On shock-wave phenomena—interaction of shock waves in gases, by H. Polachek and R. J Seeger The breaking of waves in shallow water, by J. J Stoker On Hamilton principle for perfect compressible fluids, by A. H. Taub. Elasticity and plasticity: The foundations of the theory of elasticity, by F. D. Murnaghan. On dynamic structural stability by G. F Carrier Stress-strain relations for strain hardening materials, by D. C. Drucker The edge effect in bending and buckling with large deflections, by K. O. Friedrichs. Numerical methods in the solution of problems of non-linear elasticity by W Kaplan. Large deflection theory for rectangular plates, by S. Levy Discontinuous solutions in the theory of plasticity by W Prager. On finite deflections of circular plates, by E. Reissner

Note: Collected in this volume are the papers presented at the first Symposium in Applied Mathematics, held at Brown University in August, 1947 These symposia are the result of planned effort on the part of the American Mathematical Society to encourage activity in applied mathematics and to bring together mathematicians, physicists, engineers, and others professionally interested in the applications of advanced mathematics. This is the first publication for most of the papers, and for these the full text is given. Papers previously published elsewhere are given in abstract form.

QUANTUM MECHANICS

BOHM DAVID

Quantum theory New York Prentice-Hall Inc. 1951 646 p 24 cm. $10 65 228

Contents (abridged) Part I, Physical formulation of the quantum theory: The origin f the quantum theory Wave packets and De Broglie waves. The uncertainty principle. Wave vs. particle properties of matter Part II, Mathematical formulation of the quantum theory Wave functions, operators, and Schrödinger's equation. Fluctuations, correlations and eigenfunctions. Part III, Applications to simple systems. Solutions of wave equations for square potentials. The classical limit of quantum theory The harmonic oscillator Angular momentum and the three-dimensional wave equation. Matrix formulation of quantum theory Spin and angular momentum. Part IV Methods of approximate solution of Schrödinger's equation: Perturbation theory time-dependent and time-independent. Sudden and adiabatic approximations. Part V Theory of scattering. Part VI, Quantum theory of the process of measurement Relationship between quantum and classical concepts. Index.

Note. A relatively full introduction to the quantum theory for upperclass and graduate students majoring in physics. The author has made special effort to relate the concepts and laws of the quantum theory to classical physics and to the experiments upon which modern physics, particularly the quantum theory is based. However though extensive use is made of experimental results in the exposition, the mathematical aspects are not slighted. A short list of supplementary reading is given at the beginning of the book and there are occasional footnote references throughout the text.

FERMI ENRICO

Elementary particles New Haven Yale University Press 1951 110 p. 23 cm. $2.50. 229

Contents: Quanta of field as particles. Interaction of the fields. The interaction constants. Fermi, scheme, and anti scheme Appendices Quantization of the radiation field. Second quantization with Pauli principle. Measurability of the fields. Relativistic invariance. Relationships between interaction constants

Note. This book is in effect survey of current thought pertaining to the component particles of the atomic scheme and to their interactions Although it is based on the Silliman Memorial Lectures delivered by the author at Yale University in April, 1950, it is not addressed to the general public. Instead, the intended audience includes graduate students of physics and graduate physicists who are not specialists in nuclear physics but who desire some acquaintance with current concepts.

HOUSTON WILLIAM VERMILLION

Principles of quantum mechanics. Nonrelativistic wave mechanics with illustrative applications. New York McGraw Hill Book Company Inc. 1951 288 p. illus. 24 cm.

(International series in pure and applied physics, G P Harnwell, consulting editor) $6.00 230

Contents (abridged) Part I, General outline of quantum mechanics. Experimental necessity for the quantum theory Analysis of the inadequacy of classical mechanics. Formulation of quantum mechanics. The classical approximation. Motion of particle in central field. Approximate methods. Spin and the Pauli exclusion principle. Part II, Applications to spectroscopy Part III, Applications to collision problems. Part IV Applications to electrons in solids Quantum statistical mechanics. Behavior of an electron gas. Motion of an electron in periodic potential. Part Applications to electromagnetic radiation Quantization of electromagnetic radiation in empty space. Interaction of radiation and matter Mathematical appendix. Index.

Note: A comparatively short introduction to quantum mechanics. In addition to the quality of brevity the exposition tends to be clearer than in some lengthier texts. In the first three chapters series of noted experiments the results of hich illustrate the inadequacies of classical mechanics are described, the shortcomings of classical physics are further discussed, and we basic postulates of quantum mechanics, one for representing the state of system, the other for representing change in system when perturbed. Most of the remainder of the book is devoted to applications of these postulates to physical problems and systems. The book is for graduate students of physics who have had an introductory course in mathematical physics.

LANDE ALFRED

Quantum mechanics. New York Pitman Publishing Corporation 1951 307 p. illus. 24 cm. $5.50 231

Contents: The equivalence of waves and particles. The older quantum theory De Broglie waves—uncertainty. Elementary wave mechanics. Approximation methods. Matrix mechanics Nonconservative systems. Transitions in radiation. Spin and Pauli principle. Atomic and molecular spectra. Quantum statistics. The Dirac electron. The quantum theory of radiation. The meson theory of nuclear forces. Retrospect. Bibliography Index.

Note: An introductory work suitable chiefly for upperclass or graduate college students who are majoring in physics or mathematics. Essentially, the author's method is to develop the subject by painstaking analysis of notable experiments in physics, and to make these analyses in such way that they are related to classical physics with hich the student is presumably familiar Each chapter concludes with summary and finally there is summary of the entire book. *The author is Professor of Physics at Ohio State University*

PERSICO ENRICO

Fundamentals of quantum mechanics translated and edited by Georges M Temmer New York Prentice-Hall, Inc. 1950 484 p. illus. 22 cm. $8 00 232

Contents: Part I Historical development and experimental bases The atomic model. Energy quanta and light quanta. Energy levels. Quantum mechanics. Part II Wave mechanics of particle: Mathematical introduction. Probabilistic statement of atomic problems. One-dimensional problems. Three-dimensional problems. The Bohr-Sommerfeld theory Part III, General methods of quantum mechanics: Mathematical introduction. General theory of quantum mechanics. The matrix method. Perturbation theory Relativity and spin. Systems with identical particles. Bibliography Index.

Note: The first part of this book can be understood by practically anyone who has successfully completed an introductory course in college physics. The second part requires the mathematical knowledge that senior college student majoring in physics should have acquired. Although highly abstract mathematical methods have been avoided in the third part, the concepts of matrix algebra and Hilbert space are used, hence fairly high level of mathematical education is required to read it. The book can be used either as college textbook or as an introduction for persons out of college who have had the necessary training in basic physics and mathematics The author is Head of the Department of Physics of Laval University Quebec.

SCHIFF LEONARD ISAAC

Quantum mechanics. New York McGraw Hill Book Company Inc., 1949 404 p. illus. 23 cm. (International series in pure and applied physics, G P Harnwell, consulting editor) $6 00 233

Contents: The physical basis of quantum mechanics. The Schrödinger wave equation. Eigenfunctions and eigenvalues. Discrete eigenvalues: energy levels. Continuous eigenvalues: collision theory Matrix formulation of quantum mechanics. Approximation methods for stationary problems. Approximation methods for time-dependent problems. Identical particles and spin. Semiclassical treatment of radiation. Atoms, molecules, and atomic nuclei. Relativistic wave equations. The quantization of wave fields. Quantum electrodynamics. Index.

Note: A textbook designed for graduate and advanced undergraduate students who are preparing for professional work in physics. In the first chapter the author outlines the experimental evidence on hich quantum mechanics is based, criticizes the old quantum theory developed by Planck, Einstein, and Debye, and shows how quantum mechanics avoids the difficulty of the old theory The remainder of the book is devoted to the mathematical theories and techniques of quantum mechanics, and here the exposition is full and is supplemented by numerous worked examples.

SLATER JOHN CLARKE

Quantum theory of matter New York McGraw Hill Book Company, Inc. 1951 528 p. illus. 24 cm. (International series in pure and applied physics, G P Harnwell, consulting editor) $7.50. 234

Contents: De Broglie waves and wave mechanics. Schrödinger's equation. Average values and matrices. Perturbations and the action of radiation. The hydrogen atom. The central field model for atomic structure. Multiplet structure. The hydrogen molecule. Interatomic and intermolecular forces. The metallic state. Mechanical, chemical, and thermal properties of matter Electrical conductivity The nature of dielectrics. Magnetism. Appendices. Suggested references. Index.

Note. An introductory treatment of the quantum theory as it relates to the structure of atoms, molecules, and solids. One or two courses in basic mathematics at the college level on the part of the reader has been assumed. Most of the discussion is in narrative form rather than in mathematical equations. The book is addressed to advanced undergraduates and graduate students of chemistry metallurgy and physics It takes the place of the section on quantum mechanics in *Introduction to theoretical physics*, New York, 1933, by Slater and N. H Frank and forms part (though it can be read independently) of the expansion of that work into four volumes consisting of the present work and three others bearing the titles *Mechanics* by Slater and Frank, *Electromagnetism* by Slater and Frank, and *Introduction to chemical physics* by Slater alone.

ATOMIC AND NUCLEAR PHYSICS

ANNUAL REVIEW OF NUCLEAR SCIENCE. Volume 1 Stanford, Calif Annual Reviews, Inc., in co-operation with the National Research Council of the National Academy of Sciences, 1952 645 p illus. 23 cm. $6.00 235

Contents: Meson physics, by R. E. Marshak. Recent developments in the theory of nuclear structure, by E. Feenberg. Energy levels of light nuclei, by T Lauritsen. Nuclear moments, by N Ramsey Nuclear interactions of cosmic rays, by R V Adams. Mass and relative abundance of isotopes, by A. O Nier. High energy accelerators (standard cyclotron) by M. S. Livingston. High energy accelerators (synchrocyclotron) by M. S Livingston. High energy accelerators (proton synchrotron) by M. S Livingston. High energy accelerators (synchrotron) by J. E. Thomas, Jr. and others. High energy accelerators (linear accelerators), by J C. Slater. Detection of nuclear particles, by W H. Jordan. Chemistry of the actinide elements, by J. J Katz and W M. Manning. Electromagnetic separation of stable isotopes, by C. P Keim. Chemical separation of stable isotopes, by G. H. Clewett. Isotopic tracers in chemical systems, by R. R. Edwards Analytical nuclear chemistry, by C. J. Rodden Atomic and molecular spectroscopy by G. H Dieke. Low temperature phenomena, by C. T Lane. Progress in metallurgy by R. A. Rogers and F H. Spedding. Geochemistry by M. Fleischer and J. C. Rabbitt. Genetic effects of radiation, by E. F Kheling. Some aspects of the biological action of high energy radiations, by H. M. Patt. Radioisotopes in biochemical and medical research, by

C. A. Villee. Stable isotopes in biochemical research, by D. Rittenberg and T. D. Price. Radioisotopes in soils research and plant nutrition, by S. B. Hendricks and L. A. Dean. Indexes.

Note. The first volume of a new annual series the purpose of which is to survey significant developments in nuclear science. Developments during the year 1950 are emphasized, but few of the authors have confined themselves to this single year. In fact a number of the authors appear to have surveyed the literature from 1945 through 1950 and some have included a few papers published in 1951. Each of the chapters is essentially a literature digest and is supplemented by an extensive list of references. The series is sponsored by the Committee on Nuclear Science of the National Research Council. It is addressed to graduate scientists.

Bitter, Francis

Nuclear physics. Cambridge, Addison-Wesley Press, Inc. *1950* 200 p. illus. 23 cm. $5.50 236

Contents: The evolution of nuclear physics. Definitions and prerequisites. Protons, electrons, and quanta. Neutrons, neutrinos, and nuclei. Rays and beams. Masses and moments. Radioactivity. Nuclear reactions. The consequences of fission. Table of approximate values. Tables of conversion factors. Alphabetic list of the elements. Periodic table of the elements. A-W chart of nuclear data. Index.

Note: A college textbook designed for students who have already taken courses in introductory physics and in general atomic theory. Its scope is—as the title indicates—the physics of the nucleus. Cyclotrons and other machines for bombarding nuclei also are discussed briefly. The author is Associate Professor of Physics, Massachusetts Institute of Technology.

Blatt, John M., and Victor F. Weisskopf

Theoretical nuclear physics. New York, John Wiley & Sons. 1952. 864 p. illus. 24 cm. $12.50 237

Contents. General properties of the nucleus. Two-body problems at low energies. Nuclear forces. Two-body problems at high energies. Three- and four-body problems. Nuclear spectroscopy: I, General theory—II, Special models. Nuclear reactions: General theory—Applications of the theory to experiments. Formal theory of nuclear reactions. Spontaneous decay of nuclei. Interaction of nuclei with electromagnetic radiation. Beta-decay. Nuclear shell structure. Appendixes: A, Angular momentum operators and eigenfunctions—B, Multipole radiation. References. Index.

Note. Generally speaking the scope of this book is classical nuclear physics, or nuclear phenomena involving energies of about 50 Mev and below. Thus, cosmic rays and meson phenomena are not covered. Within this limitation the authors present the current theories, theoretical nuclear physics, and the experimental evidence which supports them, together with the pertinent mathematical formulas and manipulations. The book is addressed to graduate students of physics and graduate physicists already engaged in research. Readers need a previous introduction to quantum mechanics.

Bleuler, Ernst, and George J. Goldsmith

Experimental nucleonics. New York, Rinehart & Company, Inc. 1952. 393 p. illus. 24 cm. $6.50 238

Contents (abridged). Radiation protection. Laboratory equipment. Preparation of sources. Part I, General techniques: Technique of measurements with Geiger-Müller counters. Relative beta measurements. Absolute beta counting. Neutron activation of silver. The naturally occurring radioactive substances. Measurement of source strength by comparison with UX_2. Mean life of thermal neutrons in water. Absorption of continuous beta spectra. Absorption of gamma rays. Part II, Chemical techniques. Separation of active material by solvent extraction. The Szilard-Chalmers process with ethyl iodide. Separation by ion exchange. Electrochemical separations. Preparation of carrier-free source. Radioelements as tracers. Separation of nuclear isomers. Preparation of P^{32}. Measurement of C^{14} with an ionization chamber. Part III, Physical techniques. Range and energy loss of alpha particles. Tracks of particles in photographic plates. Scintillation counters. Coincidence measurements. Radiations of $Cs^{137}(Ba^{137})$. Cosmic rays. Appendix. Author index. Subject index.

Note: Primarily a laboratory manual for advanced college students who have acquired a fundamental knowledge of nuclear physics and chemistry. Specific procedures are described for 24 experiments, most of which can be performed with naturally radioactive materials. In each case the procedures are preceded by a thorough discussion of the points illustrated by the experiment together with their applications in nuclear physics and other fields of scientific investigation where radioactive materials are used. The authors are members of the faculty of Purdue University.

Cork, James Murle

Radioactivity and nuclear physics. Second edition. New York, D. Van Nostrand Company, Inc. 1950. 415 p. illus. 22 cm. $6.00. 239

Contents: Natural radioactivity. The detection of radiation. Induced radioactivity-apparatus. Alpha rays. Beta rays. Gamma radiation. Neutrons. Protons, deuterons, and tritons. Mesons (mesotrons). Cosmic radiation. Nuclear fission. Some applications of radioactivity. Health physics. Table of isotopes. References. Appendix: Fundamental constants. Useful information concerning electrons. Data on electrons. Useful information regarding protons in motion. Useful information regarding alpha particles. Excitation potentials for the elements, in kilovolts. Author index. Subject index.

Note: (1st) An introductory work designed primarily as a text for college students, but so organized and written that it is useful also to persons outside of college who have a moderate amount of technical education and are in need of a fairly substantial survey. Under each heading the historical background is sketched briefly then the current knowledge is summarized together with formulas and data. The first edition was published in 1947. This edition published only three years later contains much added information including the two new chapters on mesons and on health physics. The Table of Isotopes and the literature references have also been revised.

Dushman, Saul

Fundamentals of atomic physics. New York, McGraw-Hill Book Company, Inc., *1951* 294 p. *illus.* 24 *cm.* $6.00 240

Contents. A brief history of physics. Mathematical introduction. Kinetic theory of gases: molecular velocities. Kinetic theory of gases: mean free path and molecular diameter. Charge and mass of electron. Electronics. Photoelectric effect. X-rays. Bohr theory of the origin of spectral lines. Electron configurations in atoms and the periodic arrangement of the elements. Matter waves. Isotopes. Nuclear phenomena. Generators for acceleration of high-energy particles. Appendixes. Index.

Note. A book developed from material originally prepared to be used in short courses offered to high-school teachers of science under a program sponsored by the General Electric Company. The treatment is compact and a good deal of ground is covered. The reader needs a knowledge of basic physics and of elementary calculus, but aside from these requirements the book is not difficult to comprehend. It is suitable not only for teachers but also for such readers as engineers who want a fairly solid book for personal reading.

Finkelnburg, Wolfgang

Atomic physics, translated from the revised German edition in cooperation with the author by George E. Brown. New York, McGraw-Hill Book Company, Inc. 1950. 498 p. illus. 23 cm. (International series in pure and applied physics, G. P. Harnwell, consulting editor) $7.00 241

Contents (abridged). Introduction. Atoms, ions, electrons, atomic nuclei, photons. Atomic spectra and atomic structure. The atomic theory according to quantum mechanics. Nuclear physics. Molecular physics. Atomic physics of the liquid and solid state. Appendix: The most important constants and energy relations of atomic physics. Index.

Note: A comprehensive treatment of atomic and molecular physics designed for upperclass undergraduate college students who are majoring in physics and for graduate students. It should be useful also to physicists and chemists who completed their college studies before atomic physics was given its present emphasis. The chapters are supplemented by well-selected and rather extensive l… references. The first edition of the book was written in … published in Germany in 1948. The present edition … lated from the manuscript … of the revised German … the publication of

GLASSTONE, SAMUEL

Sourcebook on atomic energy New York D Van Nostrand Company Inc. 1950 546 p illus. 24 cm. $3 40 **242**

Contents: Foundations of the atomic theory. Constituents of the atom. Energy and radiation. The structure of the atom. Natural radioactivity. Measurement of radioactivity. Nuclear radiations. Isotopes. The acceleration of charged particles. Nuclear transmutation and artificial radioactivity. The neutron. Nuclear structure and nuclear forces. Nuclear fission. The utilization of nuclear energy. The new elements. The uses of isotopes. Cosmic rays and mesons. Radiation protection and health physics. Name index. Subject index.

Note: This book is not a popularization in the usual sense of the term, but is instead a reliable presentation in terms that such non-specialist readers as journalists, teachers, and industrial executives can understand. In each chapter the historical development of the particular facts under discussion is outlined, then a factual, reasonable detailed account of the present state of the subject is given, excepting, of course, information not yet released for publication by the Atomic Energy Commission. The names of scientists who have contributed to the development of atomic energy and the knowledge of the atom are mentioned frequently and are brought together in the author index; but there is no formal bibliography.

GRAVES ALVIN C., AND DAROL K. FORMAN, editors

Miscellaneous physical and chemical techniques of the Los Alamos project experimental techniques New York McGraw Hill Book Company Inc. 1952 323 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division v vol. 3) $4.25 **243**

Contents: Preparation of foils, by R. W. Dodson and others. Neutron sources, by A. C. Graves and others. The modulated betatron, by D. Kerst. Modulation and other techniques used with ion accelerators, by R. D. McDaniel and others. Topics on vacuum technique, by T. Snyder and D. Lipkin. Optical methods and instruments, by J. E. Mack. Index.

Note: Some of the techniques described in this book are similar to those already in fairly wide use in research laboratories. On the other hand, many of the techniques are original or were specially refined for use in the work of the Los Alamos project. The same is true of instruments and apparatus. For example, the chapter on vacuum techniques contains descriptions of four different pumps, two of which were special developments and two of which are commercially available. The book is of interest not only to research workers in the field of nuclear physics, but also to physicists and chemists working in a variety of research fields.

HALLIDAY DAVID

Introductory nuclear physics. New York John Wiley & Sons, Inc., 1950. 558 p. illus. 22 cm. $6 75 **244**

Contents. Basic nuclear concepts. Alpha and gamma emission. Electrons in disintegration processes. Interaction of charged nuclear radiations and photons with matter. Detection of charged particles and photons. Neutrons—production, detection, and interaction with matter. Nuclear masses, mass numbers, and mass abundances. Nuclear forces. Charged particle accelerators. Nuclear reactions. Nuclear fission. Cosmic rays. Nuclear spin and magnetism. Appendix. Author index. Subject index.

Note: A rather full and satisfactory presentation written in the terms of logical positivism or operational physics. Special attention has been given to indicate the experimental bases of theories, and the illustrations include many diagrams of experimental setups. Familiarity with algebraic computations has been assumed. However, the mathematics is not rigorous in the sense that derivations of all the equations are included. Related literature is cited both in the text and in footnotes, and the names of authors of cited articles are entered in the author index. The book is designed for upperclass and graduate students who have studied general physics.

LEVERENZ HUMBOLDT WALTER

An introduction to luminescence of solids. New York John Wiley & Sons, Inc. 1950. 569 p. illus. 24 cm. $15.00 **245**

Contents. The elements of matter and luminescence. Solids (crystals). Syntheses of luminescent solids (phosphors). Constitutions, structures, and energy levels of phosphors. Luminescence of phosphors. General properties of phosphors (résumé of useful phosphors). Uses of phosphors. Appendixes. Preparation of pure ZnS, CdS, and ZnSe. Properties of isolated and structurally adjacent impurity atoms, assuming a random distribution. Interconversion of some units of luminescence (surface brightness). General spectral characteristics of luminescence (radiance). Summary of some magnitudes and structures involved in the luminescence of solids. References. Formula index. Name index. Subject index.

Note: A systematic and inclusive presentation of theoretical and practical information on phosphors. It has been written for such persons as graduate physicists who are beginning to work in the field and for other nonspecialists who are familiar with basic physical concepts. The text is compact and is keyed to the bibliography which runs to 750 references. The author is associated with the RCA Laboratories and has himself made important contributions to the basic knowledge of the field.

MARSHAK ROBERT E.

Meson physics. New York McGraw Hill Book Company Inc., 1952 378 p. illus. 24 cm. (International series in pure and applied physics G P Harnwell consulting editor) $7.50 **246**

Contents: Single production of π mesons in photon-nucleon collisions. Single production of π mesons in nucleon-nucleon collisions. Nuclear production of single π mesons. Properties of π mesons. The capture and absorption of slow negative mesons. Properties of the μ mesons. Nuclear interaction of fast μ mesons. Production of π mesons at relativistic nucleon energies. New particles and new processes. Name index. Subject index.

Note: A survey of the accumulated knowledge on the production, properties, and nuclear interactions of mesons. It is based on recent experiments and the source articles and reports are cited in footnotes. The author points out that he has restricted himself to "real meson processes," and has not attempted to cover virtual meson theory. The book originated in a series of lectures delivered at the University of Rochester and at Columbia University in 1950. However pertinent information published in the literature since 1950 has been added. The book is addressed to advanced graduate students and to graduate physicists working in research in nuclear physics. The name index includes the authors of all the cited papers, hence it can be used as a guide to the recent literature.

MONTGOMERY, DONALD JOSEPH X.

Cosmic ray physics based on lectures given by Marcel Schein at Princeton University with special contributions by Shuichi Kusaka and Niels Arley Princeton Princeton University Press 1949 370 p. illus. 24 cm. $5 00 **247**

Contents. Introduction, survey of the history of cosmic ray studies. Present status of cosmic ray investigation. Principles underlying operation of some cosmic ray apparatus. Experimental methods in cosmic rays. Intensity of cosmic radiation. The hard component. The soft component, by Niels Arley. Heavy particles in cosmic radiation. Appendixes: The simple Störmer theory of the motion of a charged particle in the field of a magnetic dipole. Definition of intensities. Results from statistical shower theory. Pressure-altitude tables. Curves connecting momentum with energy loss and range in air, aluminum, and lead, for electrons, mesons, and protons. Index.

Note: A survey designed as an introduction for intermediate and advanced students of physics. Most of the chapters are essentially digests of the published literature with references to the original sources included in the text. The chapters on apparatus and experimental methods contain discussions of the principles of apparatus used in investigations, the special problems of research in the field, and the experimental techniques, but they do not cover laboratory manipulations or the mechanical or electronic details of apparatus. Observed phenomena that have not yet been adequately explained are given considerable space, and references are made to articles in which the problems of their interpretation are discussed.

MOORE, CHARLOTTE EMMA

Atomic energy levels as derived from the analyses of optical spectra. Volume I The spectra of hydrogen deuterium, tritium, he-

lium, lithium, beryllium, boron, carbon, nitrogen, oxygen fluorine neon sodium, magnesium aluminum, silicon, phosphorus sulfur, chlorine, argon potassium, calcium, scandium, titanium and vanadium. Washington D C Government Printing Office, 1949 309 p 30 cm. (United States. Department of Commerce. National Bureau of Standards. Circular 467 issued June 15 1949) $2 75 248

—— —— Volume II The spectra of chromium manganese, iron cobalt, nickel, copper zinc, gallium, germanium arsenic, selenium, bromine, krypton, rubidium strontium yttrium, zirconium and niobium. Washington, D C Government Printing Office 1952 227 p. 30 cm. (United States. Department of Commerce. National Bureau of Standards. Circular 467 issued August 15, 1952) $2.25 249

Note: These are the first two volumes in series "being prepared at the National Bureau of Standards as part of general program on the compilation of atomic energy levels derived from analyses of atomic spectra. In most instances the data are taken from published literature and references to the source articles are given. However information from unpublished material also is included. The series is an indispensable reference work for atomic physicists, astrophysicists, and even for chemists interested in atomic structure.

OLDENBERG OTTO

Introduction to atomic physics. New York McGraw Hill Book Company Inc., 1949 373 p illus. 24 cm. $5 50 250

Contents (abridged) Part I, Structure of matter as revealed in chemistry Part II, Gases. Explanation of pressure and temperature. Mean free path and viscosity Masses and sizes of atoms, Avogadro's number Part III, Structure of electricity: Determination of /m. Determination of the charge on the electron Electrons in metals. Part IV Structure of light: Photoelectric effect and the quantum of light. Fundamental law of photochemistry Part Electronic structure of atoms. Nuclear atom as revealed by alpha-ray scattering. Spectrum of the hydrogen atom and Bohr's theory Methods of observation. Periodic table of elements. X rays. Part VI, Nuclear structure Isotopes. Natural transmutation and radioactivity Artificial transmutation and radioactivity Cosmic rays. Part VII, Wave nature of matter Survey of history and method. Appendices. Index.

Note A relatively simple treatment of fundamental atomic theory It is designed for college students who have not studied calculus and have had only one year of introductory physics. Its outstanding quality derives from the care the author has taken to describe the experiments and observations upon which modern knowledge of the atom is based. It has been developed from material used in an introductory course in atomic physics which the author has given at Harvard University for many years.

POLLARD ERNEST CHARLES AND WILLIAM L DAVIDSON

Applied nuclear physics Second edition. New York John Wiley & Sons Inc., 1951 352 p illus. 24 cm. $5.00 251

Contents Randomness, masses and atomic energy Properties of nuclear particles The detection of nuclear particles. Methods of accelerating atomic particles. Transmutation Radioactivity Technique in artificial radioactivity Artificial radioactivity in practice. Stable isotopes and their applications. Nuclear fission Nuclear chain reactions. Nuclear theory and cosmic rays Appendix Author index. Subject index

Note (423) The first edition of this book, published in 1942, was one of the few pre-World War-II books to include an account of nuclear fission. Though there are now many others that contain information on this subject, this work is still one of the most readable and useful texts. A good deal of new material has been added in this edition, including discussions of pile theory nuclear chain reactions, and an extensive table of data on isotopes. The book is written on the college level and is intended for students who have studied general physics.

RICE, FRANCIS OWEN, AND EDWARD TELLER

The structure of matter New York John Wiley & Sons, Inc. 1949 361 p. illus. 24 cm. (Structure of matter series edited by Maria Goeppert Mayer) $5 50 252

Contents Introduction. The hydrogen atom. The periodic system. Motion and position of nuclei in molecules. Atoms and molecules in electric fields. Van der Waals attraction forces. The chemical bond. Forces in the solid state. Magnetic properties of matter. Molecular vibrations. Electronic spectra. Nuclear chemistry State of matter in stars. Index.

Note In this work fundamental atomic phenomena and their grosser manifestations, such as spectra, chemical bonds, and magnetism, are explained in the concepts and terms of quantum mechanics. Thus it is both an exposition of modern atomic physics and an introduction to the applications of quantum mechanics. The presentation has been kept as simple as possible so that the book will be useful to chemists, engineers, and others who need non-specialist's knowledge of quantum mechanics. Within each chapter the exposition is developed under short sub-topics, an arrangement that facilitates comprehension and makes the book easier to use as reference aid or as "refresher.

ROSSI, BRUNO

High-energy particles New York Prentice-Hall Inc., 1952 569 p illus. 24 cm. (Prentice-Hall physics series Donald H. Menzel editor) $12.50. 253

Contents Introduction. Theory of electromagnetic interactions. Experimental methods. Elementary particles. Cascade showers. Experimental results on the electromagnetic interactions of high-energy particles in cosmic rays and from artificial sources. Nuclear interactions of high-energy particles from artificial sources. Nuclear interactions of cosmic rays. Appendices. Bibliography Index.

Note. Although most of the text of this book is written in narrative style, it is essentially reference book of the accumulated knowledge on the elementary particles of physics and on their behavior at high energies. Basic properties, phenomena, experimental methods, and useful formulas are included. Many data are assembled in tables or represented in graphs. The book is addressed to graduate students and research workers in nuclear physics, cosmic radiation, and related fields.

ROSSI BRUNO B AND HANS H. STAUB

Ionization chambers and counters experimental techniques New York McGraw Hill Book Company Inc 1949 243 p illus. 24 cm. (National nuclear energy series. Manhattan Project technical sections. Division V—vol. 2) $3.25 254

Contents Behavior of free electrons and ions in gases. Operation of ionization chambers with constant ionization. Operation of ionization chambers with variable ionization. Gas multiplication. Beta-ray Gamma ray and X-ray detectors. Alpha particle detectors. Detectors for neutron recoils Detectors of (,α) and (,p) reactions. Fission detectors Appendix Index

Note Based on work done under the Manhattan District Project in connection with the development of the atomic bomb, this book presents—as do the others in the series—a selection of material which has potential nonmilitary uses and is of general scientific interest. The first four chapters deal with ionization phenomena and the general principles upon which detectors and counters are based. The remainder is devoted to descriptions of specific types of counters which were developed mainly at the Los Alamos Laboratory The volume is of interest to research chemists and physicists working with radio-active substances.

SACKS JACOB

The atom at work. New York The Ronald Press Company 1951 327 p illus. 24 cm. $4.00 255

Contents: On the nature of matter. Natural radioactivity; the story of radium. Matter, energy, and Einstein. Exploring the nucleus. Artificial radioactivity. Machines for modern alchemy. The neutron and the chain-reacting pile. How to trace the tracers. Isotopes in the chemical laboratory. Isotopes in the biology laboratory. Radioactive phosphorus, the ideal isotope. What radiation does to living beings. Radioactive isotopes in hospital and clinic. Isotopes in the world of plants. Isotopes go into business. Atomic warfare, past and future. Useful power as the ultimate goal. Index.

Note: A satisfactory popular account of progress in the understanding and application of atomic energy and artificial radioactivity. In the first three or four chapters the historical and scientific backgrounds are skillfully outlined, and the reader is provided with thumb-nail sketches of the contributions of Roentgen, Madame Curie, Bohr, Rutherford and many others. He is then introduced to atomic piles, radioactive isotopes, the atomic bomb and other potential radioactive weapons, and finally to atomic power. The book is for mature readers who want facts rather than sensation. The author is associated with the Brookhaven National Laboratory.

THORNDIKE, ALAN M

Mesons a summary of experimental facts New York McGraw Hill Book Company, Inc. 1952 242 p. illus 24 cm. (International series in pure and applied physics, G P Harnwell consulting editor) $5.50 256

Contents: Evidence for the existence of mesons. Properties of cosmic-ray mesons. New types of mesons. Artificially produced mesons. Decay of mesons. Interaction of mesons with matter. Production of mesons in cosmic radiation. Occurrence of mesons in cosmic radiation. Theory. List of symbols in equations. Name index. Subject index.

Note: The available knowledge on the existence and properties of mesons is presented in this book and this knowledge is directly related to the experiments from which it has been derived. Experimental techniques are at least outlined, but in most instances the reader is referred to the original publications for detailed descriptions. However, results are fully described and are integrated with the body of experimental knowledge. No attempt is made to present meson theory. Substantial lists of literature references are included in the chapters. The book is intended as an introduction to the subject for graduate college students majoring in nuclear physics, and the style of presentation is largely descriptive.

UNITED STATES. ATOMIC ENERGY COMMISSION

Control of radiation hazards in the atomic energy program. Washington D C. Government Printing Office, 1950. 230 p illus. 23 cm. Paper $0.55 257

Contents (abridged): Part one, Control of radiation hazards in the atomic energy program. Radiation safety—the problem, the program, and the record. Radiation safety in production operations. Safe handling of radioisotopes. Control of radiation in research and development. Environmental safeguards. Control of hazards at weapons tests. The AEC program for radiation control. Detection instruments for radiation protection. The costs of radiation protection. Part two, Highlights of progress in 1950. Appendices.

Note: Continuing the pattern of previous midyear reports to the United States Congress, this eighth semiannual report of the Atomic Energy Commission contains, aside from a summary of the major developments during the first half of 1950, a review in some detail of a major phase of the national atomic energy program, namely the control of radiation hazards. This information was published not only to inform the public generally but also to make available information useful in civil defense activities.

UNITED STATES NATIONAL BUREAU OF STANDARDS NUCLEAR DATA GROUP

Nuclear data. A collection of experimental values of half lives, radiation energies relative isotopic abundances nuclear moments, and cross sections compiled by National Bureau of Standards Nuclear Data Group Katharine Way [and others] (January, 1950) with assistance from Information Division, Brookhaven National Laboratory Chemistry Division University of California Radiation Laboratory Nuclear Chemistry Group, Massachusetts Institute of Technology Nuclear Data Committee Oak Ridge National Laboratory Washington D C. Government Printing Office, 1950. 309 p. and Supplements 1–3 illus, 29 cm. (United States. National Bureau of Standards. Circular 499) Paper $4.25 including supplemental service. 258

Contents: Explanation of tables: General. Neutron cross sections for natural elements. β and stable nuclei. β or active nuclei. Abbreviations. Indices to tables: Alphabetical index to elements. Atomic number index to elements. Index for chemical radioactive families. Tables. List of other collections of nuclear data. References.

Note: This set of tables is a large-scale beginning of a periodic attempt to enumerate and describe the known members of the nuclear population now numbering more than 1200 and still growing. In it are collected from various listed sources the pertinent information needed by research workers in the field of nuclear physics. To make the present story useful as a generator of new investigations and to question the validity of existing reports, similar information from different sources, even though in conflict, is presented where available without attempt to select "best values." Question marks placed after specific values and followed by a reference indicate doubt on the part of the experimenters as to the validity of the data. All values are documented by references. The arrangement of the tables is by elements according to their atomic numbers. The three supplements recording additional values were issued at 6-month intervals after the original data book. Text and tables are reproduced from typewritten copy.

YAGODA, HERMAN

Radioactive measurements with nuclear emulsions. New York John Wiley & Sons Inc., 1949 356 p illus 22 cm. $7 00 259

Contents: Photographic detection of nuclear particles. Comparison of scintillation and photographic methods. Laboratory manipulations. Alpha-particle patterns on nuclear emulsions. Quantitative aspects of the alpha-particle pattern. Radiochemical studies with nuclear emulsions. Alpha-particle patterns of uranium and thorium minerals. Alpha tracers in crystallography and metallurgy. Biological applications of alpha-particle tracers. Principles of beta-particle autoradiography. Applications of beta-ray patterns. Applications in nuclear physics. Bibliography. Appendices: Range-energy relations in Ilford nuclear research emulsions. Atomic constants and conversion factors. Author index. Subject index.

Note. A monograph on the use of photographic emulsions in the *detection, analysis, and measurement of radioactive radiation.* It is written on the research level and is intended for the information of biologists and physicists. Though the historical development is covered, the greater part is devoted to techniques, which are described in adequate detail for practical laboratory use. The book is based on an extensive literature survey. Keyed references to sources are incorporated in the text.

SOUND

BERANEK, LEO LEROY

Acoustic measurements. Prepared under the auspices of the Office of Naval Research Navy Department, Washington, D C New York John Wiley & Sons Inc., 1949 914 p. illus. 22 cm. $7 00 260

Contents: Introduction and terminology. The medium. Disturbance of plane sound waves by obstacles and by finite baffles. Primary techniques for the measurement of sound pressure and particle velocity and for the absolute calibration of microphones. Microphones and ears. Measurement of frequency. Measurement of acoustic impedance. The audiometer. Sound sources for test purposes. Characteristics of random noise; the response of recorders to random noise and complex waves. Indicating and integrating instruments for the measurements of complex waves. Analyses of sound waves. Basic tests for communication systems; the rating of microphones, amplifiers, and loudspeakers. Tests for laboratory and studio microphones. Tests for loudspeakers. Testing of communication sys-

tem components. Articulation test methods. Measurement of the acoustic properties of rooms, studios, and auditoriums. Measurement of acoustical materials. The sound level meter. Author index. Subject index.

Note: A comprehensive reference book written on the graduate-professional level. It is designed as an aid "to five main groups of research workers; the acoustic physicist making fundamental laboratory measurements, the communications engineer measuring and evaluating the performance of audio communications systems, the psychologist performing measurements involving the human hearing mechanism, the otologist studying hearing defects and, finally the industrialist applying acoustic measuring techniques in manufacturing processes.

CARLIN BENSON

Ultrasonics New York McGraw Hill Book Company Inc., 1949 270 p illus. 24 cm. $5 50 261

Contents: Ultrasonic waves. Ultrasonic waves: further theory. Crystals for ultrasonic use. Crystal holders for ultrasonic use. Resonance and reflection. Continuous-wave ultrasonic systems. Pulsed ultrasonic systems. Ultrasonic agitation. Magnetostriction. Practical considerations in the application of ultrasonics. Index.

Note: A survey of the basic phenomena of radiation in the ultrasonic range and of some of the applications. The author has done extensive experimentation in the field himself, and the book incorporates results of his own work as well as the published results of others. It is especially useful for its descriptions of fundamental apparatus such as crystal holders and basic circuits. The book is suitable as an introduction for such readers as scientists seeking information outside the field of their own specialties. Also it can be read by laymen who have an acquaintance with basic electronic terminology

OLSON HARRY FERDINAND

Musical engineering an engineering treatment of the interrelated subjects of speech, music musical instruments acoustics, sound reproduction and hearing. New York Mc Graw Hill Book Company Inc. 1952 369 p illus 24 cm. $7 00 262

Contents. Sound waves. Musical terminology Musical scales Resonators and radiators. Musical instruments. Characteristics of musical instruments. Properties of music. Theater, studio, and room acoustics. Sound reproducing systems Index.

Note: A synthesis of psychological, physical, and technical information that bears on music, its reproduction and hearing. The synthetic approach makes the book potentially useful to wide variety of readers including musicians interested in the technical and psychological aspects of their art, architects and engineers concerned with acoustics, and amateurs and professionals interested in sound reproduction The chapter on musical instruments contains descriptions of not only the better known instruments but also of such devices as music boxes and electrical carillons. Discussions of microphones, loudspeakers, telephones, disc phonographs, and hearing aids are included in the chapter on sound reproducing systems. The author is Director of the Acoustical Laboratory of RCA Laboratories.

THERMODYNAMICS AND HEAT

BERGMANN PETER GABRIEL

Basic theories of physics heat and quanta. New York Prentice-Hall, Inc. 1951 300 p. illus. 22 cm. (Prentice-Hall physics series Donald H Menzel, editor) $7.35 263

Contents. Part I, Heat. The kinetic hypothesis Statistics in physics. Stationary ensembles. Thermodynamics, the first law Thermodynamics, the second law Thermodynamics, statistical mechanics, and heat-death Part II, Quanta Summary of classical statistical mechanics. Early quantum theories. Atomic spectra. Probability waves. Quantization in wave mechanics. Approximation methods. The abstract theory Summary and outlook. Further reading. Index.

Note. A textbook for graduate students in theoretical physics. The purpose of this and the companion work described below is to introduce students to "the fundamental ideas on which they can build up the detailed technical knowledge required of the modern practicing physicist. This book deals with the invasion of theoretical physics by the atom, Part I being devoted to the classical theory of heat from statistical point of view Part II being an introduction to quantum mechanics based on historical lines.

CAMPBELL CHARLES H.

Modern pyrometry New York Chemical Publishing Company 1951 150 p. illus. 23 cm. $4.00 264

Contents: Types and uses of thermocouples, lead wires, and protection tubes. Temperature indicators, recorders, and controllers. Other methods of temperature measurement and control. Applications, care and maintenance of pyrometers. References. Appendix. Index.

Note A brief but useful survey of currently used methods and instruments for the measurement of high temperatures. It is based on lecture prepared for delivery before meeting of the American Society for Metals. Instruments used in the measuring and recording of temperatures in the metallurgical industries are emphasized. The book is designed for beginners in the metallurgical industries and other persons who need practical introduction.

LONDON, FRITZ

Superfluids. Vol. I Macroscopic theory of superconductivity New York John Wiley & Sons Inc., 1950 161 p illus. 24 cm. (Structure of matter series Maria Goeppert Mayer advisory editor) $5 75 265

Contents. Some properties of superconductors and their thermodynamical correlation. The electrodynamics of the pure superconducting state. The intermediate state. The phase transition into the superconducting state reconsidered. Program for the molecular theory of superconductivity Name index. Subject index

Note. The first volume of detailed presentation of an electrodynamics of superconductivity developed by the author and his brother in 1934 The main postulate of the theory is new relation between magnetic field and electric current which in superconductors replaces Ohm's law The work is of interest to physicists, especially those doing research in the low temperature field and those who specialize in quantum mechanics.

SEARS FRANCIS WESTON

An introduction to thermodynamics the kinetic theory of gases and statistical mechanics. Cambridge Addison Wesley Press, Inc., 1950 348 p illus. 23 cm. (Addison Wesley physics series Francis Weston Sears, consulting editor) $6 50 266

Contents. Thermodynamic systems. Equations of state. Work. The first law of thermodynamics. Some consequences of the first law Changes of phase. The second law of thermodynamics. Entropy. Combined first and second laws. Some engineering applications of thermodynamics. Kinetic theory of an ideal gas. The distribution of molecular velocities. Transport phenomena. The Maxwell-Boltzmann statistics. Applications of statistical theory Quantum statistics. Low temperature physics.

Note A college textbook originally written for use in course given by the author to students of electrical engineering at the Massachusetts Institute of Technology The treatment assumes fair degree of maturity in physical and mathematical thinking. The discussions are clear compact, and are amply supplemented by worked examples and diagrams. In addition to its intended use, the book should be of interest to persons with scientific education who desire short discussions of such topics as quantum statistics, superconductivity and magnetic cooling.

SHENKER HENRY AND OTHERS

Reference tables for thermocouples, by Henry Shenker John L Lauritzen Jr., and Robert J Corruccini. Washington, D C. Government Printing Office 1951 71 p. 26 cm. (United States. National Bureau of Standards. Circular 508) Paper $0.35 267

Contents: Introduction. Part I, Celsius (centigrade) tables: Platinum versus platinum-10-percent rhodium thermocouples. Platinum

versus platinum-13-percent rhodium thermocouples. Chromel-alumel thermocouples. Copper-constantan thermocouples. Chromel-constantan thermocouples. Part II, Fahrenheit tables: Platinum versus platinum-10 percent rhodium thermocouples. Platinum versus platinum-13-percent rhodium thermocouples. Chromel-alumel thermocouples. Copper-constantan thermocouples. Chromel-constantan thermocouples.

Note: A compendium of reference tables for all the common commercial thermocouples. The tables are expanded from earlier similar tables published by the National Bureau of Standards and incorporate recent changes in electrical units and temperature scale. Electromotive force is expressed in absolute units and temperatures are expressed on the International Temperature Scale of 1948. References are given for the sources on which the tables are based. Revised tables for iron-constantan thermocouples are to appear in separate publication.

SYMPOSIUM ON LOW TEMPERATURE PHYSICS

Low-temperature physics. Proceedings of the NBS Semicentennial Symposium on Low-Temperature Physics held at the NBS on March 27 28 and 29 1951 Washington, D C. Government Printing Office, 1952 291 p. illus. 24 cm. (United States. National Bureau of Standards. Circular 519) $1 75 268

Contents: Theory of the superconducting state, by H. Fröhlich. Superconductivity and lattice vibrations, by J. Bardeen. On the nature of the superconducting transition, by L. Tisza. Field theoretic description of interactions in superconductor by M. Dresden. Determinantal eigenfunctions for the theory of superconductivity by W Band. Superconductivity of isotopes of mercury and tin, by C. A. Reynolds and others. Recent work at the National Bureau of Standards on the isotope effect, by E. Maxwell. Superconductivity of the isotopes, by J. M. Lock and others. Superconductivity at the Clarendon Laboratory by K. Mendelssohn. Heat transfer in superconducting alloys, by J. K. Hulm. Experiments on the magnetic transition from the superconducting state to the normal state, by M. P Garfunkel and B. Serin. New experiments on the superconductivity of metal-layers condensed at low temperatures, by R. Hilsch. Kinetics of the superconducting phase transition, by T. E. Faber. Superconducting properties of indium-thallium alloys, by J. W Stout and L. Guttman. Investigations of superconductivity in lead compounds, gold alloys, and molybdenum carbide, by R. P Hudson and K. Lark-Horovitz. Superconductivity in MgTl and LiBi, by L. Guttman and J W Stout. New superconducting compounds, by B. T Matthias and J. K. Hulm. Occurrence of superconductivity below 1°K, by B. B. Goodman. Penetration of magnetic field into thin superconducting films, by J. M. Lock. Magnetic properties of hollow superconducting lead spheres, by J Babiskin. Studies on oscillating superconducting spheres, by R. H. Fry and others. Eddy currents and supercurrents in rotating metal spheres at liquid helium temperatures, by P R. Akers and others. Atomic heat of indium at liquid-helium temperatures, by J. R. Clement and E. H. Quinnell. Specific heat of niobium at various temperatures, by A. Brown and others. High-frequency resistance of tin, lead, and indium, by C. J. Gorterkamper and J P Hagen. Detection of microwave signals by NbN superconductors in the transition region, by J. V Lebacqz and M. G. Bodmer. Properties of liquid He^3-He^4 mixtures, by J G. Daunt and C. V Heer. Phase diagram of dilute solutions of He^3 in He^4 below the lambda point, by H. S. Sommers, Jr. A Bose-Einstein model of liquid helium applied to solutions of He^3 in He^4 by W Good. Solidification of He^3 by D. W Osborne and others. Liquid helium research in the Royal Society Mond Laboratory by K. R. Atkins and others. Propagation of second sound below 1°K, by D. V Osborne. Pressure dependence of second-sound velocity in liquid helium II, by R. D. Maurer and M. A. Herlin. The thermal Rayleigh disk in liquid helium II, by J R. Pellam and W B. Hanson. Apparatus for measuring the pressure dependence of the viscosity of liquid helium, by H. H Kolm and M. A. Herlin. Remarks on scattering of slow neutrons by liquid helium, by L. Goldstein. Flow properties of helium II, by K. Mendelssohn. Transport rates of the helium II film over various surfaces, by J G. Dash and H. A. Boorse. Adiabatic oscillations in liquid helium, by J. E. Robinson. Helium II films, by D. G. Henshaw and L. C. Jackson. Some preliminary thermodynamic studies on helium adsorbed on titanium dioxide, by J. G. Aston and S. V R. Mastrangelo. Thermal conductivity of liquid helium I, by C. Grenier. Evaporation rate of liquid helium I, by A. Wexler. Methods of determining very low thermodynamic temperatures; measurements with potassium-chromium-alum, by D. de Klerk. Behavior of single crystals of cobalt-ammonium sulfate below 1°K, by S. Malaker. A new effect found in paramagnetic crystals below 100 millidegrees absolute: the critical-field curve bounding the antiferromagnetic state, by C. G. B. Garrett. A new experimental method for the measurement of temperature and entropy at and below 1°K, by L. D. Roberts and J W T Dabbs. Some laboratory aids to cryomagnetic research, by W E. Henry. Current sensitivity and other characteristics of metal films at low temperatures, by A. van Itterbeek. The electric conductivity of graphite at liquid helium temperatures, by L. Meyer and others. Normal conductivities at low temperatures, by K. Mendelssohn. Infrared absorption by metals at low temperatures, by K. G. Ramanathan. The de Haas-van Alphen effect, by D. Shoenberg. Approximate calculations of the surface impedance of metal in the anomalous region, by P M. Marcus. Magneto-resistance of superconducting mercury, by T G. Berlincourt and C. T Lane. Magnetic susceptibility of liquid nitric oxide and the heat of dissociation of $(NO)_2$ by A. L. Smith and H. L. Johnston. Heat capacity of solid deuterium from 1.5° to 12°K, by O. D. Gonzalez and others. Compressibility of liquid normal hydrogen from the boiling point to the critical point at pressures up to 100 atmospheres, by W E. Keller and others. Elastic constants of rock salt, by W C. Overton, Jr., and R. T Swim. Specific heat of silicon below 100°K, by P H. Keesom and N Pearlman. Optical properties of F-centers at liquid-helium temperatures, by E. Burstein and J J. Oberly

Note: A collection of 61 monographs, most of them brief. They were delivered originally as papers at one of the 1951 symposia conducted in observance of the fiftieth anniversary of the establishment of the National Bureau of Standards. Most of the papers are illustrated and include bibliographical references.

WEBER, ROBERT L.

Heat and temperature measurement. New York Prentice-Hall, Inc. 1950 422 p. 22 cm. (Prentice-Hall physics series, Donald H. Menzel editor) $6 65 269

Contents (abridged) Part I, Principles of heat and temperature measurement: Temperature scales. Expansion thermometers. Heat transfer. Thermoelectricity Radiant energy Optical and radiation pyrometry Resistance thermometry Calorimetry Phase diagrams, thermal analysis. Thermodynamics. Extreme temperatures. Special methods of temperature measurement. International temperature scale. Part II, Laboratory experiments. Appendixes: How to solve physical problems. General laboratory procedure. Symbols and quantities. Tables. Index.

Note. (658) An elementary but rather thorough description of basic techniques and equipment applicable to the measurement of temperature and heat flow. Chiefly it is laboratory manual for the use of college students who have had an introductory course in physics. The discussions of experimental procedures are full enough to make them useful as guides to scientists out of college who need directions for projects involving heat measurement. Enough thermodynamic theory is included to make the book essentially complete in itself. Each chapter includes selected bibliography The work is revision of the author's Temperature, measurement and control (Philadelphia, Blakiston, 1941)

LIGHT AND OPTICS

JENKINS, FRANCIS ARTHUR AND HARVEY E WHITE

Fundamentals of optics. Second edition. New York McGraw Hill Book Company Inc. 1950 647 p. illus. 24 cm. $7.50 270

Contents (abridged) Part I, Geometrical optics: Light rays. Plane surfaces. Thin lenses. Spherical surfaces. Thick lenses. Spherical mirrors. The effects of stops. Ray tracing. Lens aberrations. Part II, Physical optics: Interference of two beams of light. Interference involving multiple reflections. Fraunhofer diffraction by single opening. The double slit. The diffraction grating. Fresnel diffraction. The electromagnetic character of light. Absorption and scattering. Dispersion. Polarization of light. Optical activity Reflection. Magneto-optics and electro-optics. Part III, Quantum optics: Photons. Index.

Note (665) A college textbook designed for students who have completed at least an introductory course in basic physics. The first edition was entitled Fundamentals of physical optics. The change in title was made necessary by the addition in the present edition, of the 175-page treatment of physical optics. Another addition is the fifteen-page chapter on photons. Other changes are relatively minor but they include new or revised discussions of such topics as nonreflecting films, wide-angle interference, the electron microscope, and the phase-contrast microscope.

JUDD, DEANE BREWSTER

Color in business science and industry New York John Wiley & Sons, Inc., 1952 401 p illus 24 cm. $6.50 271

Contents. Part I, Basic facts. The eye. Aspects of color (basic terms) Color matching. Color deficiencies. Part II, Tools and technics: Spectrophotometry Fundamental standards in colorimetry Visual colorimeters. Reproduction of pictures in color Colorimetry by difference. Color standards. Uniform color scales. Color languages. Part III, Physics and psychophysics of colorant layers: Gloss. Opacity or hiding power. Kubelka-Munk analysis. Identification of colorants. Formulation of colorants. Appendix. References. Index.

Note. A substantial manual of color standards, color measurements, and certain other selected aspects of color that are of particular concern in commerce and industry It is addressed to persons with education in basic physics and some familiarity with color problems. Colorimetry is covered thoroughly and leading types of spectrophotometers are compared. Various published color standards are discussed specifically The treatment of colorant layers, that is such finishes as varnish or wax over wood and ceramic glazes over baked clay is an analytical study based on optical principles. There is an extensive list of references to the literature. The author is on the staff of the National Bureau of Standards and has had long career in colorimetry

JUDD DEANE BREWSTER

Colorimetry Washington, D C. Government Printing Office 1950 56 p illus. 26 cm. (United States. National Bureau of Standards Circular 478) Paper $0.30 272

Contents: Introduction Definition and nature of color. Basic principles of measurement. The standard observer, illuminants and coordinate system. Reduction of spectrophotometric data to colorimetric terms. Direct colorimetry Small-difference colorimetry: Martens photometer. Chromaticity-difference colorimeter. Photoelectric tristimulus colorimeters. Perceptibility of color differences. Material standards of color Transparent media. Opaque media. One-dimensional color scales: Color temperature. Lovibond grading of vegetable oils. Union colorimeter grading of lubricating oils. Saybolt-chromometer grading of refined petroleum. U S. color standards for rosin Color standards for paint vehicles. General methods. References.

Note. This pamphlet brings together in concise form description of the standards and methods presented in many scientific and technical publications between the years 1930 and 1950. Color is defined and the basic principles of its measurement are outlined. Reduction of photometric data is described, three methods being illustrated by examples. The various methods of direct colorimetry the most useful collections of material color standards, the most widely used one-dimensional color scales, and the best known of the specifications of color having general applicability are described. The illustrative material includes 34 figures, mostly diagrams, and 19 tables. The bibliography lists 144 references.

MAERZ ALOYS AND M. REA PAUL

A dictionary of color Second edition. New York McGraw Hill Book Company Inc., 1950 208 p illus. 30 cm $30 00 273

Contents (abridged) Introduction. Permanence of colors used. The standardization of color names. Plan of the work. Sources of names included. Names not included Common errors in color-name usage. Modifiers of color names Definitions. The three attributes of color. Color matching. Appendixes Spectral reflection curves of "Dictionary of color" inks. Table of principal color names, showing frequency of use Polyglot table of principal color names. Bibliography Color plates Brief history of color standardization. Notes on color names. Index of color names. Supplementary index of color names.

Note: A standard reference book in which common names of colors including not only such terms as "alpine green" but also such as cavalry" are identified visually with the colors that they represent or represented Obsolete terms as well as those in current use are included. Identification is by means of series of fifty six color plates each of which shows seventy two gradations of recognized standard color. Special pains were taken to collect permanent inks for the color plates. The first edition of the work appeared in 1930 In this edition it has been revised to include color terms in use to the end of the year 1949.

PRINGSHEIM, PETER

Fluorescence and phosphorescence. New York Interscience Publishers, Inc., 1949 794 p illus 24 cm. $16.50 274

Contents: Introduction General theory Experimental technique. Part I, Fluorescence of gases and vapors: Monatomic gases and vapors. Diatomic gases and vapors. Polyatomic gases and vapors. Part II, Fluorescence and phosphorescence of condensed systems: General survey Fluorescence of organic compounds. Luminescence of pure inorganic compounds. Crystal phosphors. Bibliography Author index. Reference number index. Subject index.

Note: A comprehensive technical survey of photoluminescence. It does not cover technical applications but theory experimental techniques, and physical data are fully covered. In addition to narrative text there are 140 tables of data and 219 figures, many of which are graphs relating to spectra, etc. There are more than two thousand entries in the bibliography which is international in scope and comprehensive for literature published up to May 1948. The book is intended for graduate physicists and other scientists working in the field or seeking data from it. The author is associated with the Argonne National Laboratory

VALASEK, JOSEPH

Introduction to theoretical and experimental optics. New York John Wiley & Sons Inc. 1949 454 p illus 22 cm. $6.50 275

Contents: Geometrical optics: Fundamental principles. Ideal optical systems. Computation of constants. Physical limitations of optical images. Apertures of optical systems. Photometry and image brightness. Optical instruments. Stereoscopy Physical optics: Wave propagation. Interference of light. Diffraction. Polarization and double refraction. Optical activity Refraction and dispersion. Optical constants of metallic absorbers. Radiation and spectra: Thermal radiation. Line and band spectra. X-ray spectra. Magneto- and electro-optics. Measurement of color. The scattering of light. Experimental optics Experiments. Appendix. Answers to problems. Bibliography Index.

Note. Although this book is not systematic treatise, it includes material on both geometrical and physical optics and on theory and experimental work. It is addressed primarily to advanced students of physics with an interest in optics. However it also provides for graduate laboratory technicians and engineers at work in industry concise expositions of optical concepts and techniques which are not readily found in older treatises. The author is Professor of Physics in the University of Minnesota.

SPECTROSCOPY

HERZBERG GERHARD

Molecular spectra and molecular structure. I. Spectra of diatomic molecules. With the cooperation in the first edition, of J W T Spinks Second edition. New York D Van Nostrand Company Inc. 1950 658 p illus. 24 cm. $9 75 276

Contents Introduction Résumé of the elements of atomic structure. Observed molecular spectra and their representation by empirical formulae Rotation and vibration of diatomic molecules—interpretation of infrared and raman spectra. Elementary discussion of electronic states and electronic transitions. Finer details about electronic states and electronic transitions. Building-up principles, electron configurations, and valence. Continuous and diffuse molecular spectra—dissociation and predissociation. Examples, results, and applications. Appendix: Vibrational and rotational constants for the electronic states of all known diatomic molecules (table 39) Bibliography Author index. Subject index.

Note. (240*) A treatise for advanced students of chemistry and physics and graduate research workers in these fields. It is part of three-volume series (the third volume has not yet been published) on the measurement and interpretation of energy levels in molecules. It is based on the literature and the present edition contains bibliography of more than 1800 references. The first edition was published in 1939. The text of the present edition is based on the literature published through August, 1948. The valuable appendix table, however includes data published as late as 1950.

KISLIUK, PAUL, AND CHARLES H. TOWNES
Molecular microwave spectra tables. Washington, D C. Government Printing Office, 1952 127 p. 26 cm. (United States National Bureau of Standards. Circular 518) Paper $0 65 277

Contents: Introduction. Description of tables. Molecular microwave spectra tables: Molecules listed alphabetically by chemical symbol. Lines listed in order of frequency. Casimir's function. Indexes: Molecules by chemical symbol. Molecules by name. Authors listed alphabetically including [illegible] list of the molecules with the reference numbers.

Note: This group of tables gives the frequencies, assignment of quantum numbers, and intensities of about 1800 microwave absorption lines. The best available values of other pertinent molecular data, such as rotational constants, dipole moments, quadrupole coupling constants, and rotation-vibration interaction constants, are also included. The frequencies are listed once for each molecule, and again in consecutive ascending order of frequency. References are given for all data included. For easy calculation of quadruple hyperfine structure, Casimir's function is tabulated up to J = 10 and I = 9/2. Explanations of the tables and [illegible] short discussion of microwave spectra and important formulas are given in the Introduction.

MOORE, CHARLOTTE EMMA
An ultraviolet multiplet table. Washington, D C. Government Printing Office 1950–52 2 sections. 78 115 p. 29 cm. (United States. National Bureau of Standards. Circular 488 Sections 1–2) Section 1 paper $0 45 Section 2 paper, $0.60. 278

Contents: Section 1 The spectra of hydrogen, helium, lithium, beryllium, boron, carbon, nitrogen, oxygen, fluorine, neon, sodium, magnesium, aluminum, silicon, phosphorus, sulfur chlorine, argon, potassium, calcium, scandium, titanium, and vanadium. Section 2 The spectra of chromium, manganese, iron, cobalt, nickel, copper zinc, gallium, germanium, arsenic, selenium, bromine, krypton, rubidium, strontium, yttrium, zirconium, and niobium.

Note: The first two sections of [illegible] table extending multiplets in the far ultraviolet beyond the limit of the *Revised multiplet table* by Charlotte E. Moore (*Contr* Princeton Univ Observ, no. 20) published in 1945, which because of its limited wave-length range had proved to be inadequate. The two sections contain the leading multiplets of 125 spectra of the first 41 elements of the periodic table. The form of arrangement is identical with that of the *Revised multiplet table,* except that bibliographical references are included with each spectrum instead of being grouped together at the end.

SAWYER, RALPH ALANSON
Experimental spectroscopy Second edition. New York Prentice-Hall, Inc. 1951 358 p 24 cm. $7.35 279

Contents: History of spectroscopy Light sources Spectroscopic apparatus—general principles. Prism spectroscopes and spectrographs—theory and construction. Prism spectroscopes and spectrographs—types and use. The diffraction grating—theory and production. The diffraction grating—mountings and use. The photographic process. The determination of wave length. The determination of spectral intensity Apparatus and methods of infrared spectroscopy The spectroscopy of the vacuum ultraviolet. Spectrochemical analysis. Name index. Subject index.

Note: (679) A useful manual of information about standard spectrographic techniques and apparatus. It is designed for readers with practical interest in the subject, such as research workers in college laboratories and analytical chemists in industry. Readers will need background knowledge of basic physics and physical optics. In the present edition useful and rather extensive changes have been made. These include expanded discussions of certain topics, the inclusion of information from publications since 1944 and [illegible] few additions to the literature citations.

UNITED STATES NATIONAL BUREAU OF STANDARDS COMPUTATION LABORATORY
Tables for the analysis of beta spectra. Washington, D C. Government Printing Office 1952 61 p. illus. 26 cm. (United States National Bureau of Standards. Applied mathematics series 13) Paper $0.35 280

Contents (abridged): Introduction. Beta spectra. References. Figures: Graph of [illegible] Graphs of Au[illegible] spectrum in different scales. Spectrum of Au[illegible] after elimination of the statistical factor. Determination of the maximum energy Positron spectrum of Na[illegible] Fermi-Kurie plots of allowed spectra. Fermi-Kurie plot of [illegible] forbidden spectrum. Graph of [illegible] Graph of outer screening potential. Auxiliary tables: Values of [illegible] and T for electrons of given momentum, [illegible] Values of [illegible] for electrons of given kinetic energy Table of [illegible] Illustrating the importance of the relativistic effect. Illustrating the accuracy of the Bethe-Bacher approximation. Table for the evaluation of the screening effect. Table of the Fermi function.

Note: Most of the space in this pamphlet is devoted to the table of the Fermi function. The titles of the auxiliary tables and graphs are given above. T[illegible] quote the Introduction "The primary purpose of these tables is to assist in the theoretical analysis of experimental data on β ray spectra. This analysis involves the use of the function of [illegible] complex argument.

ELECTRICITY

BOZORTH, RICHARD MILTON
Ferromagnetism. New York D Van Nostrand Company, Inc. 1951 968 p illus. 24 cm. (Bell Telephone Laboratories series) $17.50. 281

Contents (abridged) Part I, Introduction: Concepts of ferromagnetism. Factors affecting magnetic quality Part II, Magnetic properties of materials: Technical and pure iron. Iron-silicon alloys. Iron-nickel alloys. Iron-cobalt alloys. Other high permeability materials. Permanent magnets. Part III, Magnetic phenomena and theories: The magnetization curve and the domain theory Magnetic properties of crystals. Stress and magnetostriction. Temperature and the Curie point. Change of magnetization with time. Special problems in domain theory Part IV Measurements. Appendixes: Some physical properties of the elements. Values of some constants. Magnetic properties of [illegible] materials. Bibliography Name index. Subject index.

Note: A substantial treatise covering the modern knowledge of magnetic phenomena and magnetic materials, addressed to graduate physicists and engineers. The bibliography alone runs to seventy-two pages. The author is [illegible] member of the technical staff of Bell Telephone Laboratories, Inc.

FRANK NATHANIEL HERMAN
Introduction to electricity and optics. Second edition. New York McGraw Hill Book Company Inc. 1950 440 p. illus. 24 cm. $ 282

Contents: Fields of force. The electrostatic field of force. The sources of the electrostatic field. Induced charges and capacity Steady electric currents. The magnetic field of force. The magnetic field of steady currents. Induced electromotive forces and inductance. Elementary alternating-current circuits. Displacement current and electromagnetic waves. Radiation of electromagnetic waves. Electronic conduction in vacuum and in metals. Dielectrics. Magnetic properties of matter Electromagnetic waves in material bodies. Geometrical optics and simple optical instruments. Dispersion and scattering. Interference. Diffraction. Heat radiation. Appendixes. Index.

Note: (696) This college text, based on courses given at Massachusetts Institute of Technology is designed for the use of second-year students majoring in electrical engineering or physics. Emphasis is on fundamental laws and theories and methods of application in the study of currents, electric and magnetic properties of matter and optics. The general scope and content of this revision remain the same, but the material has been expanded and rewritten to provide fuller discussions of such topics as field of force, parallel a.c. circuits, interference, and diffraction.

GILBERT NORMAN EVERETT
Electricity and magnetism. Third edition. New York The Macmillan Company 1950 269 p. illus. 21 cm. $6.00 283

Contents (abridged): Electricity and the electrostatic field. Magnets and the magnetic field. Potential. Capacity. Theory of dielectrics. Atmospheric electricity. Measurement of current. Resistance and its measurement. Measurement of potential. Electrolytic conduction and batteries. Direct-current dynamo machines. Measurement of inductance and capacity. Alternating-current networks. Alternators—generators and motors. Transformers. Transmission and distribution of power. Conduction in gases. Electrons, photons, and positive ions. Thermionic electron tubes. Electrical communication. Thermoelectricity. Radioactivity and the structure of matter. Units and dimensions. Index.

Note. ([illegible]) A textbook for engineering college students who are not specializing in electrical engineering. It is more comprehensive than many of the texts planned for such students, but it is neither so full nor so difficult as textbooks intended for the use of physics majors and engineering students. In the present edition new material has been added on such topics as the betatron, chain atomic reactions, plutonium, the source of the sun's heat, and the symbolic method of treating alternating-current networks. Altogether, the changes do not add up to an extensive revision.

HARNWELL, GAYLORD PROBASCO

Principles of electricity and electromagnetism. Second edition. New York McGraw-Hill Book Company Inc., 1949 670 p illus. 24 cm. (International series in pure and applied physics, G P Harnwell, consulting editor) $7.50 284

Contents: Electrostatics. Electrostatic energy and dielectrics. Physical characteristics of dielectrics and conductors. Direct-current circuits. Nonohmic circuit elements and alternating currents. Chemical, thermal, and photoelectric effects. Thermionic vacuum tubes. Electrical conduction in gases. Electromagnetic effects of steady currents. Changing electric currents and electromagnetic reactions. Magnetic properties of matter. Electromagnetic machinery. Simple circuits containing inductance, capacitance, and resistance. Coupled circuits, filters, and lines. Vacuum tube circuits. Radiation. Mathematical appendix. Index.

Note: ([illegible]) An established textbook for use in intermediate college courses offered to students who have completed a course in basic physics. It is designed as an introduction to both experimental and theoretical electricity but there is somewhat more emphasis on the experimental and mathematical aspects than on the theoretical. Changes in the present edition reflect advances in nuclear physics and in electronics. There are new or expanded discussions of such developments as radar, wave guides, and high-energy electromagnetic ion accelerators. In addition to its use as a text, the book has some value as a reference manual on advanced experimental techniques.

PAGE, LEIGH, AND NORMAN ILSLEY ADAMS JR.

Principles of electricity: an intermediate text in electricity and magnetism. Second edition. New York D Van Nostrand Company Inc. 1949 619 p illus. 22 cm. (University physics series Leigh Page, consulting editor) $6.00 285

Contents: Fundamental laws of electrostatics. Dielectrics and conductors. Solution of electrostatic problems. Magnetostatics. Steady currents. Chemical and thermal effects. Magnetic field of a current. Motion of ions in electric and magnetic fields. Electromagnetic induction. Interaction of currents and fields. Flux measurements. Absolute standards and units. Alternating currents. Measurements with varying currents. Coupled circuits, filters and lines. Electromagnetic waves. High-frequency oscillations. Index.

Note. (704) As this text is intended for use in undergraduate second-year physics courses, the treatment presupposes a knowledge of elementary physics and calculus. More advanced mathematical concepts are explained in the text as needed. The treatment is considerably more analytical than in introductory texts. The first edition published in 1931 was reprinted many times without revision. The present edition, although unchanged in scope and general arrangement, has now been revised to include new material on such topics as the cyclotron, betatron, and wave guide. The authors are members of the faculty of Yale University.

SILSBEE, FRANCIS B

Extension and dissemination of the electrical and magnetic units by the National Bureau of Standards. Washington D C. Government Printing Office, 1952 33 p. illus. 26 cm. (United States. National Bureau of Standards. Circular 531) Paper $0.25 286

Contents: Introduction. Fundamentals. Derivation of other units. Transfer from d-c to a-c measurements. Extension of measurement ranges: The resistance scale. The scale of direct voltage. The scale of direct current. The scale of alternating current. The scale of alternating voltage. Measurement of crest and surge voltage. Dissemination of units. International relations. Bibliography.

Note. This circular gives an overall picture of the sequence of measuring processes by which a self-consistent system of electrical units is built up in the laboratories of the National Bureau of Standards. Starting with the ohm and the volt as maintained by groups of standard resistors and cells, the pamphlet describes the experimental processes by which the other electric and magnetic units, e.g., farad, henry, ampere, watt, joule, gauss, and oersted, are derived. It also describes the series of steps by which the scales of measurement of resistance and voltage are derived experimentally. Brief mention is made of the procedures for the dissemination of these standards of measurement throughout the world by the calibration of standard electrical measuring apparatus. An extensive bibliography lists papers describing the measurement procedures in greater detail and serves as a historical report of the work of the National Bureau of Standards in the field of electrical measurements during its first 50 years.

SMYTHE, WILLIAM RALPH

Static and dynamic electricity. Second edition. New York McGraw-Hill Book Company Inc. 1950 616 p illus 24 cm. (International series in pure and applied physics G P Harnwell, consulting editor) $9.00 287

Contents: Basic ideas of electrostatics. Capacitors, dielectrics, systems of conductors. General theorems. Two-dimensional potential distributions. Three-dimensional potential distributions. Electric current. Magnetic interaction of currents. Electromagnetic induction. Transient phenomena in networks. Alternating currents. Eddy currents. Magnetism. Plane electromagnetic waves. Electromagnetic radiation. Wave guides and cavity resonators. Special relativity and the motions of charged particles. Appendix. Index.

Note. (707) An outstanding graduate-level text designed for students who are preparing for careers in research in physical and industrial laboratories. In it the basic laws of electrostatics, magnetostatics, and electromagnetic theory are formulated from the underlying experimental facts. Mathematical techniques for applying these basic laws to specific problems are emphasized. Much of the exposition is in the form of specific problems worked out in the text. Several hundred additional problems for the student to work are included. The first edition was published in 1939. This edition represents a very extensive revision. Nomenclature has been revised and rationalized mks units have been adopted throughout. The treatment of electromagnetic waves has been expanded so as to reflect the increased interest in the microwave range. The chapter on wave guides and cavity resonators is new.

SYMPOSIA IN APPLIED MATHEMATICS

Proceedings. Volume II. Electromagnetic theory. New York American Mathematical Society 1950 91 p. illus. 26 cm. $3.00. 288

Contents: The new quantum electrodynamics, by H. Feshbach. A method of analytical continuation in the eigenvalue and scattering problems of quantum theory (abstract) by E. Feenberg. Electromagnetism without metric, by J. L. Synge. Discontinuity in electromagnetism, by W. H. Watson. The factorization method and its application to differential equations in theoretical physics, by L. Infeld. Nonlinear electrical networks, by R. J. Duffin. Ray theory vs. normal mode theory in wave propagation problems, by C. L. Pekeris. Systems of Wiener-Hopf integral equations and their application to some boundary value problems in electromagnetic theory.

by A. E. Heins. Orbits of charged particles in constant fields (abstract) by A. H. Taub. Reflections from bends and corners in electromagnetic wave guides (abstract), by S. O. Rice. Wave propagation in electromagnetic horns (abstract) by A. F Stevenson. Problems related to measuring the field strength of high frequency electromagnetic fields (abstract), by R. Truell. Aberration correction with electron mirrors (abstract) by E. G. Ramberg. Distribution problems in the theory of random noise (abstract) by M. Kac. Entropy and information (abstract) by N Wiener The statistical theory of message transmission (abstract), by Y W Lee. Transient response and the central limit theorem of probability (abstract) by H Wallman.

Note: Collected in this volume are papers presented at the second Symposium in Applied Mathematics, held at the Massachusetts Institute of Technology in July 1948. The papers illustrate applications of advanced mathematics to problems in electromagnetic fields, electrical networks, etc., and in many instances describe recently developed methods of attack. Where "(abstract)" is included in the title only an abstract is given in the volume; in other cases the full text is included.

SYMPOSIUM ON THE THEORY OF ELECTROMAGNETIC WAVES

The theory of electromagnetic waves. A symposium held under the auspices of the Washington Square College of Arts and Science and the Institute for Mathematics and Mechanics of New York University and the Geophysical Research Directorate of the Air Force Cambridge Research Laboratories, June 6–8 1950 New York Interscience Publishers Inc., 1951 393 p. 26 cm. $6.50 289

Contents: On the theory of electromagnetic wave diffraction by an aperture in an infinite plane conducting screen, by H. Levine and J. Schwinger. On systems of linear equations in the theory of guided waves, by W. Magnus and F Oberhettinger. Wiener-Hopf techniques and mixed boundary value problems, by S. N. Karp. Asymptotic solutions of differential equations in the theory of microwave propagation, by R. E. Langer. Criteria for discrete spectra, by K. O. Friedrichs. Extension of Weyl's integral for harmonic spherical waves to arbitrary wave shapes, by H. Poritsky. Kirchhoff's formula, its vector analogue, and other field equivalence theorems, by S. A. Schelkunoff. On the diffraction theory of Gaussian optics, by H. Bremmer. Diffraction and reflection of pulses by wedges and corners, by J B Keller and A. Blank. Vector wave functions, by R. D. Spence and C. P Wells. The W.K.B. approximation as the first term of a geometric-optical series, by H. Bremmer. Remarks concerning wave propagation in stratified media, by S. A. Schelkunoff. The theory of magnetic field triple splitting, by O. E. H. Rydbeck. An asymptotic solution of Maxwell's equations, by M. Kline. Field representations in spherically stratified regions, by N Marcuvitz. Propagation in a non-homogeneous atmosphere, by B. Friedman. Reflection of electromagnetic waves from slightly rough surfaces, by S. O. Rice. The theory of scattering of radio waves in the troposphere and ionosphere (abstract) by H. G. Booker. Properties of guided waves (abstract) by R. B. Adler. Evaluation of integrals associated with wave motion in dispersive media and the formation of transients (abstract) by M. Carrillo. Electromagnetic research in the U S. Air Force Research Program, by M. C. Gerson.

Note: A collection of original papers which reflects the current mathematical approaches to theoretical problems in electromagnetic wave research. Although predominantly theoretical, many of the papers have clear applications in the design of radio antennas and other problems which concern communications engineers.

WHITMER ROBERT MOREHOUSE

Electromagnetics. New York Prentice-Hall, Inc., 1952 270 p. 22 cm. (Prentice-Hall physics series, Donald H. Menzel, editor) $6 65 *290*

Contents: Charge, field, and potential. Relations among electrostatic quantities. Capacitors. Dielectric materials. Electrostatic problems. Direct currents. Magnetic fields. Induced emf's and inductance. Magnetic materials. Alternating currents. General field equations and the wave equations. Plane electromagnetic waves. Guided waves. The Hertzian vectors and circular waveguides. Appendix. References. Index.

Note: A textbook for upperclass college students who are majoring in either physics or electrical engineering. The author has assumed that the students will have had or be pursuing courses in general circuit theory and in vector analysis. The various topics named in the chapter titles are treated mainly from the field theory point of view. Comparisons are drawn between electrostatic and magnetic concepts and equations, and the reader is introduced to the pertinent mathematics. Terms such as "conducting material" are defined more precisely than is customary in introductory courses.

TERRESTRIAL ELECTRICITY

CARNEGIE INSTITUTION OF WASHINGTON DEPARTMENT OF TERRESTRIAL MAGNETISM

Earth-current results at Tucson Magnetic Observatory 1932–1942 by W J Rooney Washington D C. Carnegie Institution of Washington 1949 309 p. illus. 28 cm. (Carnegie Institution of Washington Publication 175 Researches of the Department of Terrestrial Magnetism. Vol. IX) 291

Contents: Details of site and apparatus. Reduction of records. Discussion of results: General considerations. The solar diurnal variation. Relation to solar activity. Seasonal changes. Comparison with magnetic records. Variations with periods longer than one day. Lunar diurnal variations. Literature cited. Tables 1–318.

Note: The greater part of this volume consists of a series of tables in which are given the hourly mean values of earth-current potentials, arranged by month, for the years indicated. Apparatus used and methods of registering the potentials are described in the introductory chapters. The data were assembled as a joint project of the United States Coast and Geodetic Survey and the Bell Telephone Company

LEDIG, P G, AND OTHERS

Magnetic results from Huancayo Observatory Peru. Department of Terrestrial Magnetism. Carnegie Institution of Washington January 1945–June 1947 Instituto Geofisico de Huancayo July–December 1947 By P G Ledig A. A. Giesecke, Jr W C. Parkinson W E. Scott, and Ella Balsam. Washington D C. Carnegie Institution of Washington 1951 127 p. illus. 28 cm. (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Vol. X–C) Paper $0 75 cloth $1 50 292

Contents: Explanatory text: Introduction. Description of instruments. Constants of the magnetographs. Absolute observations and variometer base-line values. Basic hourly values and associated means. Summary of monthly means. Summary of annual means. Magnetic disturbances and sudden commencements. Literature cited. Tables. Observatory staff from 1945 to 1947 Monthly mean and range in temperature. Eschenhagen magnetograph. Summary of adopted values of A from H scale-value determinations with Helmholtz coil Summary of Z scale-value determinations with Helmholtz coil, 1941 to 1947 Observed base-line values for the D variometer and respective adopted values. Abrupt changes in the adopted D base-line value. Observed base-line values at 15°C for the H variometer and respective adopted values. Abrupt changes in the adopted H base-line value. Observed base-line values at 15°C for the Z variometer and respective adopted values. Summary of monthly means for 1945 to 1947 Summary of annual means for 1922 to 1947 Magnetic disturbances and sudden commencements, 1945 to 1947 Hourly mean values of declination, horizontal intensity and vertical intensity 1945 to 1947

Note: (234*) This publication presents magnetic data obtained at the Huancayo Magnetic Observatory during the years 1945, 1946, and 1947 in continuation of the data presented in Parts A and B of Volume X of Carnegie Institution of Washington Publication 175, "Researches of the Department of Terrestrial Magnetism." Like its two predecessors, Part C is in tabular form with an explanatory text. The Huancayo Observatory was transferred by gift from the Carnegie Institution of Washington to the Peruvian government on July 1, 1947 hence this volume marks the conclusion of the pub-

lication program of the Carnegie Institution of Washington with respect to the Huancayo Magnetic Observatory. By agreement the volume also includes the records of data collected at the Observatory during the first six months of operation under Peruvian auspices.

PARKINSON, W C, AND OTHERS

Magnetic results from Watheroo Observatory Western Australia. Department of Terrestrial Magnetism Carnegie Institution of Washington, January 1945–June 1947 Australian Commonwealth Bureau of Geology Geophysics and Mineral Resources, July–December 1947 Compiled edited and interpreted by W C. Parkinson F W Wood W E. Scott, and Ella Balsam. Washington, D C. Carnegie Institution of Washington 1951 127 p illus. 28 cm. (Carnegie Institution of Washington Publication 175 Researches of the Department of Terrestrial Magnetism. Vol. VII–C) Paper $0 75 293

Contents: Explanatory text Introduction. Description of instruments. Constants of the magnetographs. Absolute observations and variometer base-line values. Basic hourly values and associated means. Summary of monthly means. Summary of annual means. Magnetic disturbances and sudden commencements. Literature cited. Tables: Observatory staff from 1945 to 1947 Monthly mean and range in temperatures, Eschenhagen magnetograph. Observed H scale values , and adopted values of A. Summary of daily Z scale-value determinations with Helmholtz coil, 1945–1947 Observed base-line values for the D variometer and respective adopted values. Abrupt changes in the adopted D base-line value. Observed base-line values at 20°C for the H variometer, and respective adopted values. Abrupt changes in the adopted H base-line value. Observed base-line values at 20°C for the Z variometer and respective adopted values. Abrupt changes in the adopted Z base-line value. Summary of monthly means for 1945 to 1947 Summary of annual means for 1919 to 1947 Magnetic disturbances and sudden commencements, 1945 to 1947 Hourly mean values of declination, horizontal intensity and vertical intensity 1945 to 1947

Note. (255°) This publication presents data obtained at the Watheroo Magnetic Observatory during the years 1945, 1946, and 1947 in continuation of the data presented in parts A and B of Volume VII of Carnegie Institution of Washington Publication 175. Like its two predecessors, Part C is in tabular form with an explanatory text. As the Watheroo Magnetic Observatory was transferred by gift from the Carnegie Institution of Washington to the Australian Commonwealth Government on July 1, 1947 this volume marks the conclusion of the publication program of the Carnegie Institution of Washington with respect to the Watheroo Magnetic Observatory By agreement the volume also includes the records of data collected at the Observatory during the first six months of operation under Australian auspices.

X-RAYS AND OTHER RADIATION

KOLLER, LEWIS RICHARD

Ultraviolet radiation New York John Wiley & Sons, Inc., 1952 270 p illus. 24 cm. $6.50 294

Contents: Introduction. Arcs. Incandescent sources of radiation. Solar radiation. Transmission. Reflection. Some applications and effects of ultraviolet. Detectors of ultraviolet radiation. Index.

Note. A general survey in which is incorporated wide range of scientific and technical data. It is addressed primarily to persons who have some familiarity with technical terminology such as physicists, chemists, engineers, biologists, and some laymen. In the chapter on applications such uses of ultraviolet radiation as tanning of the skin, prevention of rickets, destruction of bacteria in air and water, and the production of illumination are discussed. The descriptions of lamps and other devices for producing ultraviolet radiation are limited to types rather than to particular equipment now being manufactured. Selected short lists of literature references are included. The author is member of the staff of the General Electric Research Laboratory

WEYL CHARLES AND S REID WARREN, JR.

Radiologic physics. Second edition. With a foreword by Eugene P Pendergrass. Springfield, Ill. Charles C Thomas, 1951 491 p. illus. 24 cm. $11.25 295

Contents. Part 1 Scientific method, electromagnetism and electromagnetic devices: Discussion of scientific method. The experimental bases of electromagnetism; tentative atomic theories for correlating the observed phenomena. The quantitative analysis of electric circuits. Electrical measuring instruments. Transformers, generators, and motors; electric power distributing systems. Principles of electronics. Electronic devices. High-voltage generators for X-ray equipment. Part 2 Radiant energy and its interactions with matter: The theory of radiant energy—a historical survey X-rays and matter. Radioactivity and nuclear physics. The measurement and control of X-rays and radioactive emissions. Physical aspects of therapeutic and tracing techniques; equivalent dose for X-rays and radioactive emissions; protection. Physical aspects of fluoroscopic and roentgenographic techniques. The effects of variations of exposure factors on roentgenographic results. Fluoroscopic and roentgenographic techniques. Appendix. Mathematical tables. Name index. Subject index.

Note. (690) A standard text on general physics and on those aspects of physics hich apply particularly to X-rays and other radiation used in medical diagnosis and therapy It is used primarily as text in graduate courses offered to physicians who are preparing to specialize in radiology Although some rather advanced matters are taken up in the latter parts of the book, the authors have not assumed that their readers will have foundations in either mathematics or physics. The first edition was published in 1941 Changes and revisions made in preparing this edition include an expansion of the discussions of electronic phenomena and devices, of artificial radioactivity and of the uses of radioactive isotopes. Recent literature has been added to the chapter bibliographies.

METEOROLOGY

AMERICAN METEOROLOGICAL SOCIETY

Compendium of meteorology Prepared under the direction of the Committee on the Compendium of Meteorology H. G. Houghton chairman. Edited by Thomas F Malone. Boston, Massachusetts American Meteorological Society 1951 1334 p. Illus. 29 cm. $12 00. 296

Contents: Composition of the atmosphere: The composition of the atmospheric air by E. Glueckauf. Radiation: Solar radiant energy and its modification by the earth and its atmosphere, by S. Fritz. Long-wave radiation, by F Möller. Actinometric measurements, by A. Ångström. Meteorological optics: General meteorological optics, by H. Neuberger Polarization of skylight, by Z. Sekera. Visibility in meteorology by W E. K. Middleton. Atmospheric electricity: Universal aspects of atmospheric electricity by O. H. Gish. Ions in the atmosphere, by G. R. Wait and W D. Parkinson. Precipitation electricity by R. Gunn. The lightning discharge, by J. H. Hagenguth. Instruments and methods for the measurement of atmospheric electricity by H. Israël. Radioactivity of the atmosphere, by H. Israël. Cloud physics: On the physics of clouds and precipitation, by H. G. Houghton. Nuclei of atmospheric condensation, by C. Junge. The physics of ice clouds and mixed clouds, by F H. Ludlam. Thermodynamics of clouds, by F Möller. The formation of ice crystals, by U Nakaya. Snow and its relationship to experimental meteorology by V J. Schaefer Relation of artificial cloud-modification to the production of precipitation, by R. D. Coons and R. Gunn. The upper atmosphere: General aspects of upper atmospheric physics, by S. K. Mitra. Photochemical processes in the upper atmosphere and resultant composition, by S. Chapman. Ozone in the atmosphere, by F W P Götz. Radiative temperature changes in the ozone layer, by R. A. Craig. Temperatures and pressures in the upper atmosphere, by H. E. Newell, Jr. Water vapour in the upper air, by G. M. B. Dobson and A. W Brewer. Diffusion in the upper atmosphere, by H. Lettau. The ionosphere, by S. L. Seaton. Night sky radiations from the upper atmosphere, by E. O. Hulburt. Aurorae and magnetic storms, by L. Harang. Meteors as probes of the upper atmosphere, by F L. Whipple. Sound propagation in the atmosphere, by B. Gutenberg Cosmical meteorology: Solar energy variations as possible cause of anomalous weather changes, by R. A. Craig and H. C. Willett. The atmospheres of the other planets, by S. L. Hess and H. A. Panofsky Dynamics of the atmosphere: The perturbation equations in meteorology by B. Haurwitz. The solution of nonlinear meteorological problems by the method of characteristics, by J C. Freeman. Hydrodynamic instability by J. M. Van Mieghem. Stability properties of large-scale atmospheric disturbances, by R. Fjørtoft. The quantitative theory of cyclone development, by E. T Eady Dynamic forecasting by numerical process, by J. G. Charney Energy equations, by J E. Miller. Atmospheric turbulence and diffusion, by O. G. Sutton. Atmospheric tides and oscillations, by S. Chapman. Application of the thermodynamics of open systems to meteorology by J. M. Van Mieghem. The general circulation The physical basis for the general circulation, by V P Starr. Observational studies of general circulation patterns, by J. Namias and P F Clapp. Applications of energy principles to the general circulation, by V P Starr. Mechanics of pressure systems: Extratropical cyclones, by J. Bjerknes. The aerology of extratropical disturbances, by E. Palmén. Anticyclones, by H. Wexler. Mechanism of pressure change, by J M. Austin. Large-scale vertical velocity and divergence, by H. A. Panofsky The instability line, by J. R. Fulks. Local circulations: Local winds, by F Defant. Tornadoes and related phenomena, by E. M. Brooks. Thunderstorms, by H R. Byers. Cumulus convection and entrainment, by J. M. Austin. Observations and analysis: World weather network, by A. F Spilhaus. Models and techniques of synoptic representation, by J. C. Bellamy Meteorological analysis in the middle latitudes, by V J Oliver and M B. Oliver. Weather forecasting: The forecast problem, by H C Willett. Short-range weather forecasting, by G. E. Dunn. A procedure of short range weather forecasting, by R. C. Bundgaard. Objective weather forecasting, by R. A. Allen and E. M. Vernon. General aspects of extended range forecasting, by J Namias. Extended-range weather forecasting, by F Baur. Extended-range forecasting by weather types, by R. D. Elliott. Verification of weather forecasts, by G. W Brier and R. A. Allen. Application of statistical methods to weather forecasting, by G. P Wadsworth. Tropical meteorology: Tropical meteorology by C. E. Palmer. Equatorial meteorology by A. Grimes. Tropical cyclones, by G. E. Dunn. Aerology of tropical storms, by H. Riehl. Polar meteorology: Antarctic atmospheric circulation, by A. Court. Arctic meteorology by H. D. Dorsey Jr. Some climatological problems of the arctic and sub-arctic, by F K. Hare. Climatology: Climate—the synthesis of weather by C. S. Durst. Applied climatology by H. E. Landsberg and W C. Jacobs. Microclimatology by R. Geiger Geological and historical aspects of climatic change, by C. E. P Brooks. Climatic implications of glacier research, by R. F Flint. Tree-ring indices of rainfall, temperature, and river flow by E. Schulman. Hydrometeorology: Hydrometeorology in the United States, by R. D. Fletcher The hydrologic cycle and its relation to meteorology—river forecasting, by R. K. Linsley Marine meteorology Large-scale aspects of energy transformation over the oceans, by W C. Jacobs. Evaporation from the oceans, by H. U. Sverdrup. Forecasting ocean waves, by W H. Munk and R. S. Arthur. Ocean waves as a meteorological tool, by W H. Munk. Biological and chemical meteorology: Aerobiology, by W C. Jacobs. Physical aspects of human bioclimatology by K. J. K. Buettner. Some problems of atmospheric chemistry by H. Cauer. Atmospheric pollution Atmospheric pollution, by E. W Hewson. Clouds, fog, and aircraft icing: The classification of cloud forms, by W E. Howell. The use of clouds in forecasting, by C. F Brooks. Fog, by J. J. George. Physical and operational aspects of aircraft icing, by L. A. Rodert. Meteorological aspects of aircraft icing, by W Lewis. Meteorological instruments: Instruments and techniques for meteorological measurements, by M. Ference, Jr Aircraft meteorological instruments, by A. C. Best. Laboratory investigations: Experimental analogies to atmospheric motions, by D. Fultz. Model techniques in meteorological research, by H. Rouse. Experimental cloud formation, by Sir D. Brunt. Radiometeorology: Radar storm observation, by M. G. H. Ligda. Theory and observation of radar storm detection, by R Wexler Meteorological aspects of propagation problems, by H. G. Booker. Sferics, by R. C. Waite. Microseisms: Observations and theory of microseisms, by B. Gutenberg. Practical application of microseisms to forecasting, by J R. Macelwane. Index

Note: A comprehensive statement and survey of the current state of meteorological knowledge. The papers were written especially for it and the authors, who are recognized specialists, were drawn from several nations including the U S. A. A typical paper contains about 14,000 words and is supplemented by a long bibliography of the pertinent literature. The work is of interest to meteorologists and to physicists interested in such branches of meteorology as atmospheric electricity and the properties of the upper atmosphere.

CARTER, J H, AND OTHERS

On atmospheric pollution a group of contributions. Boston Mass. The American Meteorological Society 1951 35 p Illus. 28 cm. (American Meteorological Society Meteorological monographs. Vol. I, no 4 November 1951) Paper $4.50. 297

Contents: Some aspects of the air pollution problem: panel discussion: Enforcement principles and standards, by J. H. Carter. Meteorology applied to air pollution abatement, by C. A. Gosline. Meteorological influences and their application to control at the source, by E. W Hewson. Climatology and its part in pollution, by H. Landsberg. Diffusion of stack gases in very stable atmospheres, by M. L. Barad. The statistical theory of diffusion by turbulent eddies, by G. W Brier. Instruments for air pollution measurement, by W L. C. Hemeon. Microclimatic factors in smoke pollution from tall stacks, by P H. Lowry Ground level measurements of oil fog emitted from a hundred meter chimney by P H. Lowry and others. Gradient profiles in the lower layers of the atmosphere, by H. F Poppendiek. Air-tunnel studies of diffusion in urban areas, by H. Rouse. Analyzing winds for frequency and duration, by R. H. Sherlock. The forecasting of micrometeorological variables, by M. E. Smith.

Note: In this booklet various aspects of the problems of atmospheric pollution are discussed by meteorologists. Most of the papers

describe the results of recent, original investigations. All but one of the papers were presented at a symposium on atmospheric pollution held during the 30th meeting of the American Meteorological Society at St. Louis in January 1950.

CONRAD, VICTOR AND L W POLLAK

Methods in climatology Second edition revised and enlarged including some methods in general geophysics Cambridge, Mass. Harvard University Press 1950 459 p 24 cm. $7 50 298

Contents: (*abridged*) Part I, Methods in climatology: General remarks. Statistical analysis of climatic elements. Aids to computation. Some problems of curve fitting, and smoothing of numerical series. Harmonic analysis. Characteristics of some selected climatic elements. Spatial comparison of climatic elements. Essential elements of the climatography Part II, Computing devices, periodography Computation with mechanical and electrical devices. Periodography; hidden periodicities. Test of significance. Determination of periods with the aid of autocorrelation. Appendixes. Index.

Note. (798) A valuable presentation in which are described climatological rather than geographical methods of assembling observational data and constructing therefrom a quantitative description of a climate. It is designed to facilitate the step from qualitative to quantitative methods for college students of climatology and of related fields such as geography and agriculture. The methods described are based on mathematical and statistical analysis; hence the readers need a working knowledge of these disciplines. Part II was added in this edition, and there are other important revisions and augmentations.

CRAIG RICHARD A.

The observations and photochemistry of atmospheric ozone and their meteorological significance. Boston Mass The American Meteorological Society 1950 50 p. illus. 28 cm. (American Meteorological Society Meteorological monographs Vol. I no 2 Sept. 1950) Paper $2 50 299

Contents. Introduction. Ozone observations. The photochemistry of atmospheric ozone A discussion of the observed characteristics of atmospheric ozone. Summary and conclusions References. Appendixes Observed total amounts and vertical distributions of ozone Details of photochemical calculations.

Note A survey of the present state of knowledge of atmospheric ozone. The historical development of this knowledge and the reported results and observations are presented in a readable, well-organized form. The bibliography although not comprehensive is substantial.

DONN WILLIAM L

Meteorology with marine applications. Second edition New York McGraw Hill Book Company Inc. 1951 465 p. illus 24 cm. $6.25 300

Contents (*abridged*) Heat and temperature of the air Humidity Atmospheric equilibrium Condensation and precipitation Clouds and thunderstorms Atmospheric pressure Winds—observation and theory Primary or terrestrial wind circulation. Weather analysis and interpretation Optical features of the atmosphere. The oceans. Bibliography Appendixes: Teletype sequence code Tables of average weather summaries for principal ports and islands Index.

Note (261) A general introduction to meteorology aimed specifically at mariners and others with a practical interest in the weather at sea. It is well written and illustrated and, though semi-technical in style it is not difficult to read The most obvious change in the present edition is a complete revision of the chapter on weather coding and notation, to make it conform to the International Weather Code, which went into effect on January 1, 1949

LEOPOLD L. B AND OTHERS

On the rainfall of Hawaii a group of contributions. Boston Mass. The American Meteorological Society 1951 55 p illus. 28 cm. (American Meteorological Society Meteorological monographs. Volume I, no. 3 June, 1951) Paper $2 50 301

Contents: Foreword, by R. C. Ansiter. Introduction Hawaiian climate, its relation to human and plant geography by L. B. Leopold. Statistical investigations into the climatology of rainfall on Oahu (T.H.) by H. Landsberg. The geographic distribution of average monthly rainfall, Hawaii, by C. K. Stidd and L. B. Leopold. A study of rainfall over Oahu, by T. C. Yeh and others. On the relation between the circumpolar westerly current and rainfall over the Hawaiian Islands, by T C. Yeh and others.

Note: Original papers written as part of a meteorology research program organized to explore "the feasibility of obtaining useful, practical weather forecasts for Hawaii, particularly long range forecasts," are printed in this booklet. The research program, sponsored by The Pineapple Research Institute of Hawaii and set up under the guidance of C. G. Rossby is an illustration of meteorological research applied to a particular region and designed to delineate the factors which are important in long-range weather forecasting for the region.

NEUBERGER, HANS

Introduction to physical meteorology State College, Pa. Pennsylvania State College, 1951 271 p illus 24 cm. $3.50 302

Contents Condensation processes in the atmosphere. Visibility in meteorology Solar and terrestrial radiation. Meteorological acoustics Meteorological optics. Atmospheric electricity Appendix. General references. Index.

Note: An introduction to the physical processes of the atmosphere written for college students and others who possess a basic understanding of college physics and algebra. Only those classes of phenomena named in the chapter titles are covered, and there is no discussion of thermodynamics. On the other hand, clear statements are given of the current knowledge of such phenomena as condensation nuclei. The chapters contain reference lists to which statements in the text are keyed. There are 109 figures and approximately 70 tables. The author is Professor of Meteorology in the Pennsylvania State College.

PERRIE, D W

Cloud physics. New York John Wiley & Sons Inc. 1950 119 p. illus. 27 cm. $4.50. 303

Contents Forms and classification. Material of the clouds. Processes of cloud formation. Nuclei of condensation and sublimation. Natural precipitation. Induced precipitation. The observation of clouds. Clouds in relation to forecasting Clouds in relation to flying. Stratosphere clouds. Optical and electrical phenomena associated with clouds. Appendix. Charts of cloud characteristics. Glossary. Bibliography Indexes.

Note. A general, semi-technical survey of the varieties of clouds, the physics of cloud formation, rainfall and other precipitation, the importance to aviators of a knowledge of cloud types, etc. The descriptions and discussions of cloud phenomena are carefully related to basic meteorologic knowledge. The charts in the appendix are useful tabulations of the characteristics of the different kinds of clouds.

RIEHL HERBERT, AND OTHERS

Forecasting in middle latitudes. By Herbert Riehl and J Badner J E Hovde N E La Seur L. L. Means W C. Palmer M J Schroeder L W Snellman and others. With a foreword by Francis W Reichelderfer Boston, Mass The American Meteorological Society 1952 80 p. illus. 28 cm. (American Meteorological Society Meteorological monographs. Vol. I, no. 5 June, 1952) Paper, $3 50 304

Contents: Introduction. The upper-air prognostic chart. The surface prognosis. Field example, 1–4 November 1950 (stage XIII) Appendices Calculation and representation of the zonal wind profile. Preparation of the continuity chart. Long wave calculations. Calculation of the dynamic stability in ridges. Computation of the 24-hr 500-mb prognosis. Jet stream analysis. Computation of the

24-hr jet stream prognosis. Computation of the vorticity field aloft. Relations between changes of surface pressure and changes of vorticity aloft. Trajectory method of displacement. References.

Note. The mechanics and computations of contemporary weather forecasting for short periods such as 48 hours are illustrated in this work. The method chiefly considered is the construction of prognostic charts "on the basis of experience, empirical rules, and some kinematic and dynamic computations." The forecaster is shown first how to draw an upper air prognostic chart, then how to use this and other information in drawing a 48-hr surface prognostic chart. The booklet is based on a course sponsored by the University of Chicago and conducted at the Chicago Weather Bureau Forecast Center since 1950. It is written in the technical terminology of the field and is addressed both to advanced college students and to graduate meteorologists. A particularly valuable feature is the relation of specific steps in the prognosis to papers bearing on them in the modern literature.

TANNEHILL, IVAN RAY

Hurricanes their nature and history particularly those of the West Indies and the southern coasts of the United States. Eighth edition. Princeton Princeton University Press, 1952 308 p illus. 22 cm. $4.00. 305

Contents: Introduction—tropical cyclones. Winds of the hurricane. The storm wave. Origin of West Indian hurricanes. Hurricane tracks. Rainfall in tropical cyclones. Barometric pressures. Signs of the approaching hurricane. Unusual hurricane movements. Frequency of West Indian hurricanes. Destructive effects of hurricanes. Precautionary measures. Early history of West Indian hurricanes. Memorable hurricanes of the nineteenth century. Chronological account of hurricanes of the twentieth century. Chronological list of hurricanes, 1494 to 1900. Appendix: Observing and forecasting hurricanes. Bibliography. Index.

Note (249*) The standard work of information about the meteorology and records of hurricanes. The style is semi-technical and the book appeals both to general readers and to professional meteorologists. Much detailed information on particular hurricanes is included. The seventh edition was published in 1950. In this one the only changes are the addition of the appendix which contains both a description of the use of radar and other developed techniques in the forecasting of hurricanes and a revised account of the hurricanes of 1943–1951.

TANNEHILL, IVAN RAY

Weather around the world Second edition. Princeton Princeton University Press, 1952 212 p. illus. 20 cm. $2.50 306

Contents: Wind and waves. Clouds. Prevailing winds, barometers and the law of storms. Ocean currents, temperatures and climate. Heat and humidity. Cloudiness, rain, snow and fog. Special phenomena over the oceans. Europe. West Indies and South America. The Mediterranean and the Middle East. Africa. Asia. Australia and the Pacific Islands. North America. The weather aloft. Appendix, Weather records around the world. A, Weather records for 110 cities. B, Supplementary weather records for 73 places. C, Wind and weather for ocean crossings. Indexes.

Note: (747) A handy, readable book addressed to travellers and other laymen. It is useful also as a weather reference book in personal libraries. The first seven chapters deal with weather phenomena in general and include both unusual facts such as the height of the tallest waves and information about more routine matters such as varieties of clouds. The remainder of the book (except for the final chapter) is devoted to the weather of particular regions of the world. The first edition was published in 1943. The main change in the present edition is the addition of the final chapter on the weather and travel by air.

UNITED STATES TECHNICAL CONFERENCE ON AIR POLLUTION

Air pollution Sponsored by the Interdepartmental Committee on Air Pollution, Louis C McCabe chairman New York McGraw Hill Book Company Inc., 1952 847 p. illus. 26 cm. $12.59 307

Contents (abridged) Part I, Agriculture panel: Air pollution in relation to economics, by V W Johnson. Some impurities in the air and their effects on plants, by M. D. Thomas and others. Similarities between disease symptoms and chemically induced injury to plants, by L. M. Massey. The effects of air borne fluorides on livestock, by C. J. Largent. Some effects of fluorine fumes on vegetation, by S. W Griffin and B. R. Bayles. Fluorosis in livestock, by P. H. Phillips. Part II, Analytical methods and properties panel: The spectrum of particle size and its relation to air pollution, by H. P Munger. Physical properties of aerosols, by D. Sinclair. Chemical analysis of air pollutants, by A. J. Haagen-Smit. Method for identifying and estimating gases and spores in air pollution, by M. Shepherd. Spectrographic analysis in air pollution studies, by R. F Scribner. Part III, Equipment panel: Odor control practices, by W H. Witheridge. Viscous impingement filters, by J. W May. Spray towers, bubble towers, and packed towers using reactive and non-reactive liquids, by J. L. York. Condensation techniques for dust detection and collection, by J. L. Yellott and A. Broders. Role of activated carbon in practical control of atmospheric contamination, by A. B. Ray. Theory and basic principles of the sonic smoke flocculator, by H. W St. Clair. The place of tall stacks in air pollution control, by G. R. Hill. Design and use of smokeless hand-fired residential coal burning equipment, by J. R. Garvey. Abatement of dust from power plant stacks, by O. Craig. Part IV Health panel: Skin effects of air pollutants, by M. B. Sulzberger. Effects of prolonged exposure to air pollutants, by R. A. Kehoe. Effects of ionizing radiation in air pollution, by A. Wolman. Effect of loss of sunlight on human health, by H. F Blum. Respiratory tract allergic effects from chemical air pollution, by F W Wittich. Part V, Instrumentation panel: Atmospheric sampling by electrostatic precipitation, by E. C. Barnes. Direct photography of aerosol suspensions, by A. L. Cheney. The preparation, collection, and measurement of aerosols, by V K. LaMer. New developments in instrumentation for air pollution studies, by C. Brunelli and others. A recording visibility meter by A. L. Cheney. Part VI, Legislation panel. Problems in the drafting and administration of air pollution control legislation, by A. C. Stern. The legal aspects of the California air pollution control act, by H. W Kennedy. The St. Louis code and its operation, by R. R. Tucker. Part VII, Meteorology panel: Meteorological aspects of atmospheric pollution, by E. W Hewson. The problem of dispersion of hot gases in the atmosphere, by O. G. Sutton. The diffusion problem in hilly terrain, by J. Z. Holland. The application of meteorological control to atmospheric pollution problems, by M. E. Smith. Index.

Note. This volume contains the papers presented at a conference that was organized and sponsored by several departments of the United States National Government. However, the speakers included representatives of industrial corporations as well as governmental units. Altogether, there are 97 papers in the book and these are supplemented by references and transcripts of discussions. There is considerable repetition of thought among the various papers, and the book is far from a homogeneous monograph. However, it does contain a wide and varied array of information on most aspects of the current air pollution problem. Most of the papers are devoted to problems and methods in the United States of America. However, there are several British contributors and their papers outline current British activity and research in the field. The index fails to do justice to the contents of the book.

VAETH JOSEPH GORDON

200 miles up the conquest of the upper air New York Ronald Press Company 1951 207 p. illus. 24 cm. $4.50 308

Contents: The upper atmosphere: a frontier of scientific exploration. The atmospheric ocean. Upper air research instruments. Vehicles for upper air research. Project Skyhook: upper air research by balloon. The White Sands Proving Ground. Principles of rocket flight. The V-2: forerunner of modern high altitude rocketry. How a V-2 is fired. The high-flying Aerobee. The Viking, latest upper air research vehicle. Index of subjects. Index of names.

Note: Although there is much in this book about rockets, the main theme is not rockets but the scientific exploration of the stratosphere and ionosphere that rockets and high altitude balloons have made possible. The book is for general readers. Some excellent pictures of rockets and "skyhook" balloons are included.

CHEMISTRY

DICTIONARIES AND HANDBOOKS

THE CONDENSED CHEMICAL DICTIONARY a reference volume for all requiring quick access to essential data regarding chemicals and other substances used in manufacturing and research and to terms in general use in chemistry and the process industries. Francis M Turner, editorial director Fourth edition, completely revised and enlarged by Arthur and Elizabeth Rose. New York Reinhold Publishing Corporation, 1950 721 p. 23 cm. $12 00 309

Note: (807) The term "dictionary" falls short of an appropriate description of this reference book. Actually it is a condensed encyclopedia which is especially useful for its descriptions of commercial chemicals and trade-marked products. Both are described as to general characteristics, chemical compositions, properties, uses, forms, standard shipping containers, and shipping regulations, if any. In addition, general chemical terms, such as "distillation," are defined. By following a key-number to a source list in the front of the book the name of a U.S.A. manufacturer of a trade-marked chemical can be found. According to the publisher's statement, "5,000 new items" have been added to this issue. Most of the added entries appear to relate to new products marketed under trade-names, but new generic terms, such as "anti-biotic," and the new terms in radiochemistry also are included.

HAYNES WILLIAMS

Chemical trade names and commercial synonyms a dictionary of American usage. New York D Van Nostrand Company, Inc. 1951 279 p 24 cm. $5 50 310

Note A reference book which contains an alphabetical listing of more than 30,000 trade names and commercial synonyms for products of a chemical nature which were being offered for sale to industrial users in the United States of America in early 1950. The definitions characterize the product in chemical terminology, name one or more uses, and identify the manufacturer. A typical entry follows: "Genetron 101 (Gen. Chem.) difluorochloroethyl methane; refrigerant and aerosol propellant.

LANGE NORBERT ADOLPH compiler

Handbook of chemistry a reference volume for all requiring ready access to chemical and physical data used in laboratory work and manufacturing Compiled and edited by Norbert Adolph Lange, assisted by Gordon M. Forker Eighth edition Sandusky Ohio Handbook Publishers Inc. 1952 1998 p. illus 20 cm. $7 00 311

Note. (775*) One of the standard American reference books for chemical laboratories and the offices of chemists and physicists. It contains data—much of it tabulated—on such topics as atomic weights and numbers, physical constants of the elements and of compounds, flame temperatures, the composition of commercial metal alloys, the properties of materials of construction, indices of refraction of various substances, thermal properties, etc. The seventh edition appeared in 1949 and it was the first from which the appendix or second part entitled "Mathematical tables & formulas," which appeared in previous editions, was omitted. The matter which formerly appeared in this part is now published separately by this same publisher. In comparison to the seventh edition the present one is 78 pages longer. 16 tables have been revised and expanded, and material has been added on six topics not represented in preceding editions.

PATTERSON, AUSTIN MCDOWELL

A German English dictionary for chemists. Third edition. New York John Wiley & Sons, Inc. 1950 541 p 18 cm. $5.50 312

Note. (811) In the present edition a substantial number of terms has been added to this standard reference book, and some new meanings have been added for terms which were included in previous editions. As in earlier editions, the work is a dictionary *for chemists* rather than of chemistry. Chemical terms constitute the bulk, but numerous terms from the general language, such as "zinsfuss" and "toll" which might be encountered in reading chemical articles, are included. Also, there are many terms from sciences that border on chemistry.

HISTORY

CHYMIA ANNUAL STUDIES IN THE HISTORY OF CHEMISTRY Volume 2 Tenney L. Davis, editor-in-chief Philadelphia University of Pennsylvania Press 1949 143 p. illus. 24 cm. $4 00 313

Contents: The beginnings of laboratory instruction in chemistry in the U. S. A., by H. S. van Klooster. An Irish-American chemist, William James MacNeven, 1763–1841, by D. Reilly. Was Newton an alchemist? by R. J. Forbes. Boerhaave als historischer Chemiker Forscher, by E. Wiederkehr. Désormes et Clément découvrent et expliquent la catalyse, by P. Lemay. History of ambergris in India between about A. D. 700 and 1900, by P. K. Gode. Some personal qualities of Wilhelm Ostwald recalled by a former assistant, by Edward P. Hillpern. The experimental origin of chemical atomic and molecular theory before Boyle, by R. Hooykaas. Das chemische Laboratorium der Bayerischen Akademie der Wissenschaften in München, by W. Prandtl. Pulvis fulminans, by T. L. Davis. Some seventeenth century chemists and alchemists of Lorraine, by D. I. Duveen and A. Willemart. Sir Kenelm Digby alchemist, scholar, courtier, and man of adventure, by W. Miles. Index of names. Errata corrigenda.

—— Volume 3 Henry M Leicester, editor-in-chief Philadelphia University of Pennsylvania Press 1950 250 p. illus. 24 cm. $4.50. 314

Contents: Tenney Lombard Davis and the history of chemistry, by H. M. Leicester and H. S. Klickstein. The beginning of chemical instruction in America—a brief account of the teaching of chemistry at Harvard prior to 1800, by I. B. Cohen. Les appareils d'expérimentation de Lavoisier by M. Daumas. Ra-active substances in the nineteenth century by E. Farber. Le quemaca en los "Tiempos de chemie" de Ortiz, by C. E. Pritiss and A. O. Velarde. Early American chemical societies. I. The 1789 Chemical Society of Philadelphia. 2. The Chemical Society of Philadelphia, by W. Miles. The invention of printing and the diffusion of alchemical and chemical knowledge, by R. Hirsch. Wandlungen in der geschichtlichen Betrachtung der Alchemie, by W. Ganzenmüller. Boyle and Bayle—the sceptical chemist and the sceptical historian, by G. Sarton. Karl Friedrich Mohr, 1806–1879—"Father of volumetric analysis," by J. M. Scott. Henri Sainte-Claire Deville, 1818–1881 by R. E. Oesper and P. Lemay. Boerhaave Vorlesung über allgemeine Experimentalchemie, by H. Rheinboldt. The owl of Heinrich Khunrath—its origin and significance, by C. K. Deischer and J. L. Rabinowitz.

Note Original and hitherto unpublished papers on aspects of the history of chemistry make up these yearly volumes. The typical paper is a scholarly contribution addressed to other scholars who are interested in the history of chemistry, the history of science or the history of the development of knowledge in general. It is there-

mented with citations of the related literature and may be illustrated with a portrait, reproduction of a title page or other appropriate material.

FARBER, EDUARD

The evolution of chemistry a history of its ideas, methods, and materials. New York The Ronald Press Company 1952 349 p. illus. 24 cm. $6.00. 315

Contents (abridged) Period I, The emergence of chemistry as science: Survey of the period from the oldest records to the eighteenth century From the fourth millenium B. C. to the third century A. D. From the third century to the sixteenth. From the beginning of the sixteenth century to the third quarter of the eighteenth. Phlogiston and dephlogisticated air. Mines, pharmacies, and manufacturing plants. Period II, The development of chemical systems: Survey of the period from the late eighteenth century to the late nineteenth. Principles and elements. Galvanism and vitalism. Atoms and molecules. Foundations of organic chemistry The periodic system. The course of chemical change. Period III, Specialization and industrialization Survey of the period from the latter part of the nineteenth century to our own time. Matter and radiation. Chemical bond and physical form. Inorganic chemistry Organic chemistry Biochemistry List of periodicals cited. Index of authors. Index of subjects.

Note: The whole of chemical history is covered in this rather short book. The author has necessarily used a compressed style and has had to cover great developments in a few lines. His pages are sprinkled with names, dates, and quotation marks; consequently the book is not likely to attract many readers who are looking for an easily read narrative account. However, since the main events are all mentioned together with references to source articles and longer accounts and the book is fully indexed, it is useful for elementary reference.

LEICESTER, HENRY MARSHALL AND HERBERT S KLICKSTEIN

A source book in chemistry 1400–1900 New York McGraw Hill Book Company Inc., 1952 554 p. 24 cm. (Source books in the history of the sciences Gregory D Walcott, general editor) $7.50 316

Note: An anthology of well-selected writings that bear on the development and history of modern chemistry. Altogether, selections from 82 authors ranging in time from Biringuccio (1480–1539) to Marie Curie (1867–1934) are included. In most instances an author is represented by a single paper which may be complete in itself, but is more often an excerpt from a longer work. Great chemists, for instance Lavoisier, are usually represented by several selections. The words of each author are preceded by a short essay on his contributions to chemistry and at the end of the book there is a bibliography of biographies in both books and periodicals.

GENERAL

AMERICAN CHEMICAL SOCIETY

Searching the chemical literature a collection of the papers presented at the Symposium on Searching the Chemical Literature held by the Division of Chemical Literature of the American Chemical Society at the 117th national meeting in Detroit, April 16 to 21 1950 Also included are four revised papers from the Symposium on the Preparation of Literature and Patent Surveys held by the Division of Chemical Education at the 111th national meeting in Atlantic City April 14 to 18 1947 Washington D C. American Chemical Society 1951 184 p illus. 24 cm. (American Chemical Society Advances in chemistry series edited by the staff of Industrial and engineering chemistry No. four) Paper $2.00 317

Contents: Introduction, by T E R Singer The use of chemical abstracts, by E. J. Crane. Influence of nomenclatural evolution upon comprehensive literature searches, by E. H. Huntress. Indexes, happy and unhappy hunting grounds, by J. F Smith. United States and British index entries, by T E R. Singer. Relation of an abstract to its original, by G. M. Dyson. Searching the German chemical literature, by E. F Spitzer. Searching less familiar periodicals, by M. G. Mellon and R. T Power. Identification of less common forms of abbreviations of chemical journal titles, by T. G. Lebow. Theses and dissertations, by K. R. Marr Searching medicinal chemical literature, by C. R. Addinall and F G. Bacher. Exploring United States chemical patent literature, by J Fleischer. Searching United States government documents, by M. T. Ball and C. R. Flagg. Chemical trade-marks, by H. Bennett. Exploring foreign chemical patent literature, by J Fleischer. Searching the older chemical literature, by G. M. Dyson. House organs of chemical interest, by L. F Lederman. Searching for unpublished data, by M. Alexander. Methods and sources in chemical market research, by J R. Skeen. Chemical trade literature and its usefulness, by L. V R. Cheyney FIAT review of German science, by M. W Miller. Preparation of literature and patent surveys, by M. P Doss and G. A. Moncrieff. Library techniques in searching, by D. F Brown. Techniques employed in making literature searches for a patent department, by T. Hoffman. Continuous collection and classification of data as an aid in preparing surveys, by J. C. Lane and J Metcalf. Index.

Note: Current problems and methods in chemical literature searching are the main topics in this collection of original papers. Various librarians, authors, and editors tell how they approach specific problems in this field. Literature references are included, and in some instances they are unexpectedly extensive.

BABOR, JOSEPH ALBERT, AND ALEXANDER LEHRMAN

General college chemistry Third edition New York Thomas Y Crowell Company 1951 800 p. illus. 24 cm. $5.50 318

Contents (abridged) The gaseous state. The atomic-molecular hypothesis. Energy changes in chemical reactions. Chemical equilibrium. Atomic structure, electron distribution, and valence. Hydrogen. Oxygen. Water and hydrogen peroxide. Water supply and health. The solid state. Solutions. Properties of solutions. Solutions of electrolytes. Ionization. The halogens. Oxidation reduction. The sulfur family Compounds of nitrogen. Other elements of the nitrogen family Silicon. Colloid chemistry Metals and metallurgy Iron, cobalt, nickel, and the platinum metals. The alkali metals. The alkaline earth metals. Copper silver and gold. Boron and aluminum. The electrochemical cell. Tin and lead. Nuclear chemistry Appendices. Index.

Note (319) A standard introductory textbook which is specifically designed for students interested in chemistry or related sciences and who have completed a high school course in chemistry The second edition appeared in 1940. This edition represents a substantial revision and a moderate expansion. Many of the chapter titles are the same but the contents have been revised because new advances rendered the old text out-of-date. As would be expected, the discussion of radioactivity has been rewritten. Many equations are now written in ionic form and many new illustrations have been substituted for old ones. The same authors have written *Introductory college chemistry* second edition, New York: Thomas Y Crowell Co., 1950, 817 p. $4.75, for use by students who have had no previous introduction to chemistry

BENSON SIDNEY WILLIAM

Chemical calculations an introduction to the use of mathematics in chemistry New York John Wiley & Sons, Inc., 1952 214 p. 23 cm. $2 95 319

Contents: Measurement. Methods of measuring quantities of matter. Chemical formulas. Chemical reactions. Energy and chemical changes. The properties of gases. The concept of combining power—valence Measurement of solutions. The physical properties of solutions. Chemical equilibrium. Electrical properties of ionic solutions. Simple equilibria in ionic solutions The ionization of water—hydrolysis. Additional equilibria in ionic solutions. Oxidation and reduction Predicting redox reactions. Rates of chemical reactions. Appendices. Index.

Note: A more comprehensive book than the typical introduction to this field. Basic methods of calculation and related chemical concepts and terminology are explained. Numerous examples in which

equations are fully stated and are then solved step-by-step are included. The book is suitable not only for first-year college students, but also for those occasional readers who want to study the subject by themselves. The author is Professor of Chemistry at the University of Southern California.

BRINKLEY STUART ROBERT

Principles of general chemistry Fourth edition. New York The Macmillan Company 1951 703 p illus 24 cm. $5 50. 320

Contents (abridged) Substances and changes they undergo. Typical reactions. Equations and calculations. Atomic structure. Chemical equilibrium. Solutions The colloidal state. Completed ionic reactions. Hydrolysis. The hydroacids. The oxides and hydroxides of the metals. Oxidation-reduction. Nitrogen. Sulfur. The phosphorus family The elements of group IV The production of metals from ores. The transition elements. Salts. Compounds of chromium and manganese. Electric cells. The nucleus of the atom. Liquid and gaseous fuels Derivatives of the hydrocarbons. Appendix. Index.

Note (323) An outstanding introductory college textbook. It is particularly suited to students who have studied the subject in high school and intend to pursue it beyond the first college course. No major changes have been made in comparison to the preceding edition. However throughout the book there are rewritten paragraphs, new exercises, and revised lists of supplementary reading. New developments have caused such changes as the following: "Fluorine has few uses of importance (third edition) to "Fluorine and its compounds are becoming increasingly important (fourth edition)

BRISCOE HERMAN THOMPSON

General chemistry for colleges. Fourth edition. Boston Houghton Mifflin Company 1949 773 p Illus. 25 cm. $5 00 321

Contents (abridged) Matter and energy Kinds of substances and their chemical changes Structures of atoms and molecules. Oxidation and combustion. The gas laws and the kinetic molecular theory Hydrogen. Molecules and molecular weights. Atomic weights and combining capacity Solutions X-ray spectra, atomic numbers, and the structures of crystals Radioactivity The structure of matter. The oxides and other simple compounds of carbon. The atmosphere. The halogens Oxidation and reduction The alkali metals. Solutions of electrolytes. Chemical equilibrium Nitrogen and ammonia The sulfur family Silicon and related elements. Colloidal dispersions. Organic chemistry—the hydrocarbons. Carbohydrates and proteins—food and nutrition Energy in chemical change. The metals. Appendix Index.

Note (324) A widely used introductory textbook. It contains more material than some texts written at the same level and, although applications are mentioned and shown in illustrations, the main emphasis is on fundamental matters The author's style is easy to read and the publisher has given the book an attractive format. The third edition was published in 1943. The more prominent changes in the text of this edition relate to nuclear chemistry atomic energy and radioactivity However numerous changes have been made in the treatment of other topics. The type of the book has been reset and there are now two columns of print to a page.

CARNEY THOMAS PATRICK

Laboratory fractional distillation New York The Macmillan Company 1949 259 p illus 24 cm. $6 50 322

Contents Theory Mathematical treatment. Column characteristics. Theoretical plates and reflux ratio required for given separation. Separation to be expected Selection of proper columns. Bubble plate columns. Unpacked columns Packed columns. Miscellaneous packing. Rotary distillation columns Effect of variables on column characteristics. Operation of the column Vacuum fractionation. Construction of columns. Testing the column. Accessory equipment. Special columns Vapor-liquid equilibrium determinations. Azeotropic and extractive distillation Micro and semimicro fractionation Molecular distillation General bibliography Index.

Note Graduate chemists, laboratory technicians, and advanced students will find this volume a valuable and practical guide to the methods and techniques of fractional distillation Fundamental principles are discussed, but the construction and operation of laboratory distillation apparatus and especially the packing and construction of columns is emphasized. Information is provided regarding ease of operation, costs, comparative efficiency etc., of various types of apparatus. Line drawings and diagrams are used freely and a 13-page classified bibliography is included.

DEMING, HORACE GROVE

General chemistry an elementary survey emphasizing industrial applications of fundamental principles. Sixth edition. New York John Wiley & Sons Inc. 1952 656 p. illus. 24 cm. $5 75 323

Contents (abridged) The beginnings of chemistry Mixtures and substances. Atoms and molecules. Energy The properties of gases. Liquids and solids. Solutions. Electrons and valence. Acids. Neutralization and hydrolysis. The colloidal state of matter. Chemical equilibrium. Oxidation and reduction. Nuclear chemistry The hydrocarbons. Cellulose products, plastics. Elastomers, dyestuffs, medicinals. Industries based on sulfur and salt. The ceramic industries. Iron and steel. Electrochemistry The transition metals. Index.

Note. (327) A long established—the first edition was published in 1923—introductory textbook for use in college courses. One of its chief characteristics is the purposeful relating of the theoretical material to practical applications, a feature intended to stimulate the interest of engineering students. Many changes in both text and illustrations were made in preparing the present edition. Most of the new material relates, as might be expected, to developments pertaining to atomic structure and to new industrial processes and products.

DYER, WALTER SHERMAN, AND MANFRED E MUELLER

A practical survey of chemistry Revised. New York Henry Holt and Company 1950. 564 p. illus. 22 cm. $4.30 324

Contents (abridged) Nature of chemistry The background of chemistry The language of chemistry The atmosphere. Hydrogen. Water. Classification of the elements. Modern atomic theory Sand, ceramics, cement. Fertilizers, nitrogen, phosphorus, explosives. Metals. Carbon and its oxides Fuels. The hydrocarbons. Giant molecules. Fats, soaps, protective coatings. Carbohydrates, fats, proteins, digestion. Vitamins, hormones, drugs, antibiotics. Nuclear chemistry Research—mother of progress. Index.

Note. An unpretentious but useful elementary work. Selected general principles and applications of chemistry are covered descriptively in a style that encourages reading. The book is used chiefly as a text in "cultural" courses in colleges. It has some appeal also for general readers who are not in college. Many revisions and additions were made in the preparation of the present edition to bring the book up to date on such topics as the antibiotics and nuclear chemistry

FELSING WILLIAM AUGUST AND GEORGE W WATT

General chemistry Third edition. New York McGraw Hill Book Company, Inc. 1951 558 p illus 24 cm. $5.50. 325

Contents (abridged) Forms of matter. Weight relationships. The structure of atoms Properties of gases Relative weights of molecules. Solutions Acids, bases, and salts; nomenclature. Ionization. Ionic equilibria. Classification of the elements. Colloids Electrolysis. Industrial electrochemical processes. Battery cells. Metals and alloys. Heavy metals. Some binary compounds of nonmetallic elements. Commercial production of acids and bases. Nuclear chemistry Organic chemistry Appendix. Answers to problems. Index.

Note. (328) An introduction to the fundamentals of chemistry for first-year college students. The chief differences between this and the previous edition are a greater emphasis on quantitative methods and a rearrangement in the order of subject presentation. Thus, atomic structure is now discussed in the fourth instead of the fourteenth chapter and nuclear chemistry is deferred until the final chapters. The subject of chemical equilibria is treated in greater detail, and the number and variety of review problems have been increased. Answers to numerical problems are included.

HATCHER WILLIAM HOOKER

An introduction to chemical science. Second edition. New York John Wiley & Sons, Inc., 1949 449 p illus. 22 cm. $4.50 326

Contents (abridged) Part 1 Inorganic chemistry: The chemist's stock in trade. The three states of matter The atmosphere. Carbon and life Molecular and atomic weights. What is a chemical reac-

tion? Acids, bases, salts. Colloidal solutions. The periodic classification of the elements. Part 2, Organic chemistry: Pictures from the paraffins. Organic nitrogen. The carbohydrates. Fats and oils—soap—paint. Explosives—dyes—pharmaceuticals. Part 3, Food chemistry. Part 4, Industrial chemistry: Raw materials and their sources. Catalysis in industry. Ceramics. Petroleum. Chemistry in the home. Books for supplementary study. Index.

Note: (334a) An elementary college text designed for non-specialist courses and liberal arts students. The treatment is largely historical with emphasis on the practical applications of chemistry to modern life. In this revision the general format and scope of the original edition have been maintained, but some sections have been rewritten and new material included on properties of matter, atomic weights, electrolysis, metals and alloys, and the vitamins. Each chapter again concludes with summary and review questions.

HOLMES, HARRY NICHOLLS

General chemistry Fifth edition. New York The Macmillan Company, 1949 708 p. illus. 22 cm. $5.50 327

Contents (abridged) The composition of pure substances. The atomic theory. Symbols, formulas, and equations. Gases. Liquids and solids. Valence. Water and hydrogen peroxide. Carbon and its oxides. Solutions. The simple halogen acids. Ions and electrolysis. The modern theory of acids and bases. Equilibrium. Sulfuric acid and the oxides of sulfur. The periodic system. Structure of the atom. Nuclear chemistry. The atmosphere. Nitrogen and ammonia. Colloid chemistry. Compounds of the metals. Preparation of the metals. Electrochemistry. The aliphatic hydrocarbons. Rubber. The aromatic hydrocarbons. The carbohydrates. Cellulose and its esters. Dyeing. Plastics. Food and nutrition—chemotherapy. Radiation chemistry. Appendix. Index.

Note. (437) A widely used introductory textbook. Although it is designed for students who will take additional courses in chemistry about as much space is given to descriptive chemistry as to basic principles. The fourth edition was published in 1941. A considerable range of new material has been added in this edition in order to bring the work abreast of the many advances in chemical knowledge and the applications of chemistry in the past decade. The author is member of the faculty of Oberlin College.

HOLMES, HARRY NICHOLLS

Introductory college chemistry Fifth edition. New York The Macmillan Company 1951 594 p. illus. 22 cm. $5.50. 328

Contents (abridged) The field of chemistry. Matter and energy. Atoms and molecules. The composition of pure substances. Hydrogen. Oxygen. Gases. Liquids and solids. Electrovalence and covalence. Water and hydrogen peroxide. Solutions. Chlorine, bromine, iodine, and fluorine group viiB. The alkali metals, group iA. Ionic. Ions and electrolysis. Equilibrium. Structure of the atom. Radioactivity. Nuclear chemistry. Atomic fission. Sulfur and hydrogen sulfide. The atmosphere. Nitrogen and ammonia. Nitrogen fixation. The phosphorus group, B. Carbon and silicon, ivB. Compounds of the alkali metals, iA. Compounds of copper, silver, and gold, iB. Compounds of zinc, cadmium, and mercury iiB. Compounds of aluminum and boron, iiiB. Compounds of tin and lead, ivB. Compounds of chromium and manganese, viA and viiA. Compounds of iron, cobalt, and nickel, viiiA. The platinum group. Properties and uses of the metals. Alloys. Steel. Electrochemistry. Colloid chemistry. The aliphatic hydrocarbons. Rubber. The aromatic hydrocarbons. The carbohydrates. Cellulose and its esters. Plastics. Nutrition. Chemotherapy. Appendix. Index.

Note: (317) An introductory textbook which has enjoyed wide use in American colleges since the publication of the first edition in 1921. As is common in such books, the basic topics in organic and inorganic chemistry are covered in descriptive fashion with enough reference to applications to hold the interest of beginning students. The fourth edition was published in 1946. A fair amount of material on such topics as atomic energy and titanium, synthetic fibers, plastics, and the hydrogen bomb has been added in this edition. A more important change is rewriting of the sections on atomic structure so as to place more emphasis on this knowledge.

HOPKINS B SMITH AND JOHN C BAILAR, JR.

General chemistry for colleges. Fourth edition. Boston D C Heath and Company 1951 694 p. illus. (part col d) 24 cm. $6.00 329

Contents (abridged) Fundamental concepts and laws. Atomic structure; valence. The periodic system. Gas laws, kinetic theory. Water. Solutions. Colloid chemistry. Gas volumes; molecular and atomic weights. Chlorine. Chemical equations. Hydrogen halides. The oxy-compounds. Electrochemistry. Acids and bases. Nitrogen and the atmosphere. Carbon and its inorganic compounds. The metallic elements. The chemistry of the nucleus. Appendix. Index.

Note (318) A standard introductory textbook, written by two members of the faculty of the University of Illinois. Basic principles are well covered, and there is also good deal of space given to descriptions of industrial chemistry and to technical applications of chemical principles. There are 71 tables of reference data, generous number of illustrations, and selected reading lists. The chapter on the chemistry of the nucleus was added in this edition. New problems and references have been revised, and many paragraphs and larger parts have been rewritten.

LAUBENGAYER, ALBERT WASHINGTON

General chemistry New York Rinehart & Company, Inc. 1949 528 p illus. 24 cm. $5 00. 330

Contents (abridged) The laws of chemical change and the atomic theory. Substances and formulas. Chemical reactions and equations. Energy and chemical change. The gaseous state. The liquid state. The solid state. Reaction rates and chemical equilibrium. Atomic structure and the classification of the elements. Chemical bonding. Electrolytic dissociation and ionic equilibrium. Ionic reactions. Electrolysis. The halogens. The sulfur family. Nitrogen. Carbon and its inorganic compounds. Organic chemistry. Silicon and its compounds. The metals. Nuclear structure and radioactivity. Colloidal systems. Appendix. Index.

Note: An introductory textbook designed for first-year college students who require sound knowledge of the fundamentals of chemistry in preparation for further work in the field or for work in such fields as physics, engineering, or in the biological sciences. Throughout the work the exposition is closely related to the modern knowledge of the atom and other physical principles on which modern chemistry is based. Chemical bonding is explained in terms of electronic structure. The author is Professor of Chemistry at Cornell University.

MARTELL, ARTHUR EARL, AND MELVIN CALVIN

Chemistry of the metal chelate compounds. New York Prentice-Hall Inc., 1952 613 p. illus. 24 cm. (Prentice-Hall chemistry series, Wendell M. Latimer editor) $13 50 331

Contents: Introduction. Methods of determining the presence of chelates. Stability constants. Influence of the structure of the chelating agent. Effect of metal ion. Bond type. Structure of chelate compounds. Catalytic effects of chelate compounds. Separation of metal ions. Uses of chelating agents. Appendices: Chelate stability constants. Optical activity and related properties. Glossary of terms. Thermodynamic constants for reactions of metal with chelating agents. Author index. Subject index.

Note The theoretical chemistry of the metal chelate compounds, their properties, and the uses of chelating agents are all covered in this work, which is both comprehensive monograph and a reference book of useful data. The discussions of such topics as the influence of the structure of the chelating agent are supplemented by many tables of organized data including 45 page table of chelate stability constants. Hundreds of literature references are included as footnotes. The book is of interest to graduate chemists in several branches of chemistry including analytical chemistry, biochemistry, water treatment, and dyestuffs. A basic work in the theoretical study of chelate chemistry.

PAULING LINUS

College chemistry an introductory textbook of general chemistry Illustrations by Roger Hayward. San Francisco W H. Freeman and Company, 1950 705 p. illus. 25 cm. (A series of chemistry texts, Linus Pauling, editor) $5 00. 332

Contents (abridged) The nature and properties of matter. Elements, elementary substances, and compounds. The chemical elements and the periodic law. Ions, ionic valence, and electrolysis. Covalence and electronic structure. Oxidation-reduction reactions. The halogens. The laws of electrolysis; electro-chemical processes.

The properties of solutions. Chemical equilibrium and the rate of chemical reaction. Acids and bases. Solubility product and precipitation. Complex ions. Organic chemistry. Biochemistry. The chemistry of silicon. Energy and chemical change. Nuclear chemistry. Appendices. Index.

Note: (248) A less mathematical and "easier" introduction than the author's *General chemistry*. It is somewhat better suited to the needs of students who are not planning to major in chemistry than is the earlier work. The emphasis is on basic phenomena and theory but numerous applications are mentioned. There are fuller discussions of some subjects, for example chemical equilibrium, than are commonly found in introductory texts. Most of the chapters whose titles have been omitted in the above table of contents are devoted to groups of metals or other related substances.

SCHLESINGER, HERMANN IRVING

General chemistry Fourth edition, completely revised and rewritten. New York Longmans Green and Co., 1950 811 p illus. 21 cm. $5 75 333

Contents (abridged) Some fundamental concepts of chemistry. The kinetic molecular theory. Critical phenomena and the liquefaction of gases. Atomic theory and atomic weights. Introduction to chemical equilibrium. Heats of formation of oxides. Atomic structure. The behavior of ions and ionic compounds. The law of chemical equilibrium. The alkali and the alkaline earth groups. The halogens. Nitrogen and some of its compounds. Organic chemistry and its contribution to chemistry as a whole. Silicon and some of its compounds. The colloidal condition. The copper group. The zinc group. Radioactivity and atomic fission. Appendices. Index.

Note. (250a) One of the more successful introductory texts in general chemistry. In contrast to some books of the kind, it presents a systematic and fairly solid introduction with some material on relatively advanced topics in chemistry. It has some reference value, especially in such features as the 31-page table of physical properties of the inorganic compounds. In comparison with the previous edition, this one has been reorganized and the type has been reset. Discussions of a considerable number of new topics have been added.

TIMM JOHN ARREND

General chemistry Second edition. New York McGraw Hill Book Company Inc., 1950 764 p illus 24 cm. $5 50 334

Contents (abridged) Matter Atoms and molecules Changes in matter Reactions of oxygen Valence The properties of gases. The kinetic-molecular theory Liquids. Solids. Solutions. Determination of molecular and atomic weights. The halogens. Atomic structure. The nuclei of atoms. Reaction velocity and chemical equilibria. Ionization of acids. Sulfur and the sulfides. Precipitation. The atmosphere. Nitrogen and ammonia. Oxidation-reduction reactions. Phosphorus. Carbon. Colloids. The metals. Electrolysis. Alkali and alkaline-earth metals Copper silver and gold Zinc, cadmium, and mercury Aluminum and the other metals of group IIIb. Germanium, tin, and lead, the metals of group IVb. Iron, cobalt, nickel, and the other metals of group VIII Chromium, manganese, and other transition metals The aliphatic hydrocarbons. The aromatic hydrocarbons. The chemistry of life Index

Note (251a) An introductory text in which historical information and descriptive material on applications are combined with basic knowledge to form a readable work suitable for first year college students and also for general readers in search of factual information. There are over 200 illustrations, not counting the numerous structural diagrams The first edition was published in 1944 In this edition the level of treatment has been raised somewhat and many additions of information have been made.

INORGANIC CHEMISTRY

AUDRIETH LUDWIG FREDERICK, AND BETTY ACKERSON OGG

The chemistry of hydrazine. New York John Wiley & Sons, Inc., 1951 244 p 22 cm. $5.00. 335

Contents Hydrazine as a hydronitrogen and as an ammono compound. Formation and preparation of hydrazine. Preparation of concentrated and anhydrous hydrazine. Properties of anhydrous hydrazine. Properties of aqueous solutions of hydrazine. Oxidation of hydrazine; catalytic decomposition. Quantitative determination and qualitative identification of hydrazine. Hydrazine salts. Coordination compounds of hydrazine. Anhydrous hydrazine as a solvent. The hydrazine system of compounds. Uses of hydrazine and its compounds. Index.

Note: A monograph in which the knowledge of hydrazine, N_2H_4, published down to about 1949 has been organized and summarized. References are given to the literature, including the patents. Most of the book is written from the viewpoint of theoretical and research chemists, but the chapter on uses is slanted for industrial chemists. The book was originally prepared as an Office of Naval Research report, and revisions and additions were made for this edition.

BOOTH, HAROLD SIMMONS AND DONALD RAY MARTIN

Boron trifluoride and its derivatives. New York John Wiley & Sons, 1949 315 p illus. 22 cm. $7.50 336

Contents. History and preparation of boron trifluoride. Physical properties. Chemical properties of boron trifluoride. The coordinating power of boron trifluoride. Fluoboric acids and their salts. Boron trifluoride and its derivatives as catalysts. Analyses of boron trifluoride and its derivatives. Practical handling of boron trifluoride. References. Author index. Subject index. Formula index.

Note: Boron trifluoride has been known for more than a century but it is only in the last decade and a half that its usefulness in chemical research and in industrial chemistry has been widely recognized. This book is probably the first comprehensive treatment of the compound and its derivatives. Essentially it is a digest of the extensive periodical and patent literature. The literature itself is cited in a bibliography which runs to almost 1,000 references. The book is of potential value to applied chemists in a number of fields, such as petroleum chemistry ceramics, electroplating, and plastics, as well as to chemists engaged in fundamental research.

DIEKE GERHARD HEINRICH, AND A. B F DUNCAN

Spectroscopic properties of uranium compounds New York McGraw Hill Book Company Inc. 1949 290 p. illus. 24 cm. (National nuclear energy series Manhattan Project technical section. Division III—Volume 2) $4.25 337

Contents Part I, Spectroscopic properties of uranium compounds: Experimental procedure. X-ray analyses of the crystal structure of uranyl compounds. General features of the fluorescence and absorption spectra of uranyl compounds. Fluorescence spectra of uranyl compounds. Absorption spectra of uranyl compounds. Intensity measurements. Miscellaneous observations. Miscellaneous uranium compounds. Part II, The preparation of uranium compounds. Synthesis of uranyl compounds. Preparation of other uranium compounds. Problems in synthesis. Growth of crystals. Conclusions and suggestions. Appendixes: Tables of wavelength measurements. Special preparations and apparatus. Miscellaneous contributions to the chemistry of uranium Bibliography Index.

Note Presented in this volume are the results of a comprehensive study carried out largely at Columbia University under the auspices of the Manhattan Project. Pertinent results from the literature are included and correlated. Experimental techniques—some of them new—used in the work are described. The study not only advanced the understanding of the uranyl compounds but also produced fundamental knowledge pertinent to the understanding of the solid state.

HURD DALLAS T

An introduction to the chemistry of the hydrides New York John Wiley & Sons, Inc. 1952 231 p. illus. 24 cm. $5.50 338

Contents Introduction to the hydrides. Chemical bonding and the structure of hydrides. The ionic hydrides—general considerations. The hydrides of the alkali metals. The hydrides of the alkaline earth metals. The hydrides of beryllium and magnesium. The covalent hydrides—general considerations. The hydrides of the group III elements. The hydrides of the group IV elements. The hydrides of the group V elements. The hydrides of the group VI elements. The hydrides of the group VII elements—F Cl, Br I. Acids and bases. Complex hydrides. The hydrides of the transitional elements. The borderline hydrides. Nomenclature of the hydrides. Appendices: Deuterides. Toxicology of the hydrides. The vacuum manipulation of volatile compounds. Sources of hydrides. Extended tables of phys-

ical properties and thermodynamic data for the boron hydrides. Author index. Subject index.

Note: The author has used the term "hydride" to designate binary compounds which contain one other element and hydrogen and also to designate certain compounds which are complex derivatives of binary hydrides. Most of the book consists of compact essays on specific hydrides, organized according to the following formula: tabulated statement of chemical and physical properties, discussion of the structure, descriptions of methods of laboratory preparation, discussion of properties, statement on uses and literature references. Frequent variations from this formula are found; for instance, safety precautions in handling are described for the hazardous compounds. The book is of interest both to chemists engaged in pure research and to those concerned with applications, since industrial uses are frequently mentioned in the paragraphs on uses of the individual compounds.

KILLEFFER, DAVID HERBERT, AND ARTHUR LINZ

Molybdenum compounds their chemistry and technology With a chapter on the structural chemistry of molybdenum by Linus Pauling. New York Interscience Publishers 1952 407 p. 24 cm. $10.50 339

Contents: Introduction. Sources of molybdenum compounds. Properties of molybdenum. Oxides of molybdenum. Sulfides of molybdenum. Halides of molybdenum. Molybdenum in anions. Complex anions of molybdenum. The structural chemistry of molybdenum. Molybdenum in life processes. Analytical procedures. Molybdenum in colors. Miscellaneous applications of molybdenum compounds. Molybdenum catalysts. Subject index.

Note: Essentially this work is a critical digest of the published literature bearing on the chemistry of molybdenum and on the chemical applications of the element. Metallurgical applications are not covered. The typical chapter is a condensed discussion supplemented by tabulated data and literature references. The chapter on analytical procedures is one of the longer ones in the book and consists largely of detailed descriptions of procedures used in the laboratory of the Climax Molybdenum Company. The chapter on molybdenum catalysts, together with the bibliographies of patent and other literature that accompany it, falls only a few pages short of half of the length of the whole book. Though not a well organized treatise, the work is highly useful as a guide to the literature and to the high points of the subject.

KIMBALL ALICE H., compiler

Bibliography of research on heavy hydrogen compounds edited by Harold C. Urey *and Isidor Kirshenbaum. New York* Mc Graw Hill Book Company Inc. 1949 350 p 24 cm. (National nuclear energy series. Manhattan Project technical section. Division III—Volume 4C) $4 75 340

Note. A comprehensive bibliography of the international literature of deuterium and deuterium compounds. The main arrangement is alphabetical by authors' names, and indexes are provided to subjects and compounds. Titles of articles are given, and titles in foreign languages have been translated without, however, quotation of the original titles.

KIRSHENBAUM ISIDOR

Physical properties and analysis of heavy water Edited by Harold C Urey and George M. Murphy New York McGraw Hill Book Company, Inc., 1951 438 p illus. 24 cm. (National nuclear energy series. Division III—Volume 4A) $6.00 341

Contents: Physical properties. Equilibrium constants for exchange reactions. Isotopic analyses by the mass spectrometer. Isotopic analysis of heavy water by the mass spectrometer. Other methods of isotopic analyses of heavy water. Natural abundance of hydrogen and oxygen isotopes. Author index. Subject index.

Note: An important contribution to the literature of isotopes. It is the product of a concentrated effort, carried out at the SAM Laboratories at Columbia University to compile reliable data on the physical properties of the isotopes of hydrogen. In the course of this work, previously published data were critically evaluated and additional data were derived from new experiments. The work included the development of suitable procedures for the analysis of isotopes, and these procedures are fully described. Each chapter has appended to it a list of references. These lists include numerous project reports as well as journal articles.

KLEINBERG JACOB

Unfamiliar oxidation states and their stabilization. Lawrence University of Kansas Press, 1950 131 p. illus. 22 cm. $3.00 342

Contents (abridged): Low oxidation states of the elements of the aluminum group. Oxygen: The superoxides of the alkali and alkaline earth metals. The halogens. Copper and silver. Chromium and manganese. Iron, cobalt, and nickel. The "rare-earths." References. Index.

Note: A book of interest to advanced students majoring in chemistry and to professional chemists. In it are discussed certain oxidation states of inorganic elements which are uncommon but whose existence has nevertheless been clearly established. A good share of the book has to do with stabilization of these rare states by such means as alkaline solutions, use of solvents which possess reducing properties, and the selection of conditions which favor the desired oxidation state. The study of these states is valuable from several standpoints, such as the insight gained into atomic structure, the enabling of greater accuracy in the planning of chemical reactions, and the production of new chemical substances. Though brief, the work is based on an extensive review of the literature, and has an 8-page bibliography.

LATIMER, WENDELL MITCHELL

The oxidation states of the elements and their potentials in aqueous solutions. Second edition New York Prentice-Hall, Inc., 1952 392 p. illus. 24 cm. (Prentice-Hall chemistry series, Wendell M. Latimer editor) $10 00 343

Contents: Units, conventions, and general methods employed in the determination of oxidation-reduction potentials. Ionization potentials, electron affinities, lattice energies, and their relation to standard oxidation-reduction potentials. Hydrogen. Oxygen. The halogens. Sulfur selenium, tellurium, and polonium. Nitrogen, phosphorus, arsenic, antimony and bismuth. Carbon, silicon, germanium, tin, and lead. Gallium, indium, and thallium. Zinc, cadmium, and mercury Copper silver, and gold. Nickel, palladium and platinum. Cobalt, rhodium, and iridium. Iron, ruthenium, and osmium. Manganese, technetium, and rhenium. Chromium, molybdenum, and tungsten Vanadium, niobium, and tantalum. Titanium, zirconium and hafnium. Boron, aluminum, scandium, and yttrium. Lanthanum and rare earth elements—the lanthanide series. The actinide elements. Beryllium, magnesium, calcium, strontium, barium, and radium. Lithium, sodium, potassium, rubidium, cesium, and francium. Appendices: Summary of oxidation-reduction potentials. The activity of strong electrolytes. The estimation of entropy values. Study questions. Author index. Subject index.

Note A reference book of thermodynamic data pertaining to the elements and their chief inorganic compounds. For each element the following information is given the number of valence electrons, the oxidation states, heats of formation, free energies of formation, entropies, and "potential diagram." If the element has more than one oxidation state. Some of the data are taken from the literature and references are given to the sources. Other data are based on the author's own calculations. In the present edition more information has been included on reaction mechanisms and there is a new chapter on uranium, neptunium, plutonium and americium. In other parts numerous changes have been made in values and constants. References to the literature published since 1938 have been added.

LATIMER, WENDELL MITCHELL, AND JOEL H. HILDEBRAND

Reference book of inorganic chemistry Third edition. New York The Macmillan Company 1951 625 p 22 cm. $4.50 344

Contents (abridged) Hydrogen. Inert gases. Oxygen. Alkali metals. Boron, aluminum. Copper silver and gold. Gallium, indium, and thallium. The halogens. Nitrogen, phosphorus, arsenic, antimony and bismuth. Carbon. Silicon. Sulfur selenium, tellurium, and polonium. Iron, cobalt and nickel. Platinum and palladium metals. The actinide elements. Nuclear reactions. Glossary Appendices. Index.

Note: (341) A compendium of reference data on such points as electronic structure, physical and chemical properties, methods of preparation, uses, and important compounds of the elements. The arrangement is by element and family of elements. Although numerous tables are included, most of the information is presented in narrative style, for instance: "Amorphous silicon is prepared by the high temperature reduction of silicon halides by alkali metals, or of the dioxide by magnesium: $SiCl_4 + 4\ Na \rightarrow Si + 4\ NaCl$." The book was originally prepared as a supplement to an introductory college text of which the current edition is: J. H. Hildebrand and R. E. Powell, *Principles of chemistry*, sixth edition, New York, The Macmillan Company 1952 444 p., $4.50. The two works are available as separate books and also bound together. However the *Reference book* may be used quite independently of the *Principles*. In comparison to the second edition, published in 1940, the work is 43 pages longer, contains one new chapter and a fair number of other revisions.

MOELLER, THERALD

Inorganic chemistry an advanced text book. New York John Wiley & Sons Inc., 1952 966 p illus 24 cm. $10 00 345

Contents (abridged) Part one, Principles: Atomic nuclei and properties related thereto. The extranuclear structures of the atom. Characteristics dependent upon the extranuclear structures. I, general—II, valency and the chemical bond. Complex ions and coordination compounds. Oxidation-reduction—oxidation potentials. Acids and bases. Non-aqueous solvents. Part two, The chemical elements. The inert gas elements. Hydrogen. The halogens. The oxygen family. The nitrogen family. The carbon family. The boron family. The alkali and coinage metals. The alkaline earth and zinc family elements. The transition elements. The inner transition elements. Appendixes: Characteristics of the naturally occurring isotopes. Members of the disintegration series. Author index. Subject index.

Note. In spite of the current interest in inorganic chemistry the subject is poorly supplied with modern textbooks, and advanced textbooks in the field are very uncommon. This work, developed on the basis of a course offered for a number of years at the University of Illinois, is a well-organized presentation of the scientific bases of modern inorganic chemistry together with a description at an advanced level of the characteristics and properties of the inorganic compounds. A typical statement from the latter part reads "nitrogen trichloride is an endothermic compound, whereas the trichloride is endothermic, the molar heats of formation being -26 ± 2 kcal. and 55.4 kcal., respectively." The text is well documented with literature references in both parts. It is potentially of interest to graduate chemists as well as to students.

SEABORG, GLENN THEODORE, AND OTHERS, editors

The transuranium elements research papers edited by Glenn T Seaborg Joseph J Katz, and Winston M. Manning. New York McGraw Hill Book Company Inc., 1949 2 v illus. 24 cm. (National nuclear energy series. Manhattan Project technical section Division IV—Plutonium Project record—Vol. 14B) $15 00 $23 75 346

Note A collection of original research papers bearing on plutonium and the other transuranium elements. The papers range in date from 1940 to as late as 1948, but most of them were written in 1943–1946 in connection with government sponsored research on the atomic bomb and atomic energy. Literature references are included and there are some diagrams of apparatus setups. The two volumes form a unit and are not sold separately.

SIMONS JOSEPH H. editor

Fluorine chemistry Volume I. New York Academic Press, Inc., 1950 615 p. illus. 24 cm. $13.50 347

Contents: Nonvolatile inorganic fluorides, by H. J. Emeléus. Volatile inorganic fluorides, by A. B. Burg. The chemistry of the fluoro acids of fourth, fifth, and sixth group elements, by Willy Lange. The halogen fluorides, by H. S. Booth and J T Pinkston, Jr. Boron trifluoride, by H. S. Booth and D. R. Martin. Hydrogen fluoride, by J H. Simons. Hydrogen fluoride catalysis, by J. H. Simons. Preparation of fluorine, by G. H Cady. Physical properties of fluorine, G. H. Cady and L. L. Burger. The theoretical aspects of fluorine chemistry by G. Glockler. The action of elementary fluorine upon organic compounds, by L. A. Bigelow. Fluorocarbons and their production, by J. H. Simons. Fluorocarbons—their properties and wartime development, by T J Brice. Fluorocarbon derivatives, by W H. Pearlson. Aliphatic chlorofluoro compounds, by J D. Park. Fluorine compounds in glass technology and ceramics, by W A. Weyl. Author index. Subject index.

Note: The first volume published of a comprehensive survey of fluorine chemistry. It is composed of monographs written by prominent chemists who have made contributions to the subject, and the editor himself has been one of the leaders in the development of the field. The book is addressed to graduate and professional chemists. Each chapter is a compact review of the literature and knowledge of a particular aspect of the subject and concludes with a comprehensive list of the pertinent literature. A second volume containing seven additional monographs is scheduled for publication.

ANALYTICAL CHEMISTRY

AHRENS, LOUIS HERMAN

Spectrochemical analysis. Arranged particularly for the D C. arc analysis of minerals, rocks and soils and applicable also to ceramic materials refractories slag biological ash and powders in general. Foreword by George R. Harrison. Cambridge Addison Wesley Press, Inc., 1950 269 p illus. 23 cm. $10 00. 348

Contents (abridged) Part I, General principles: The origin and interpretation of spectra. Some physical features of the D. C. arc discharge. Power for the arc source. Qualitative analysis. Selective volatilization. General principles of quantitative analysis. Effect of change of composition on line intensity. The photographic measurement of radiant energy and the construction of a working curve. The emission of band spectra from the arc. Part II, The elements. Bibliography. Author index. General index. Wavelength tables.

Note. The author of this practical treatment has not assumed that his readers will have had any previous experience with spectrochemical analysis, but he has assumed familiarity with basic physical concepts and terminology and with basic chemistry. The first part of the book is devoted to the general aspects of spectrochemical analysis. In the second part, semi-quantitative and quantitative analytical methods applicable to specific elements are described in detail. Numerous special points based largely on the author's experience are included in the descriptions of procedures. There are copious references to the related literature. The book is of particular interest to workers in geochemistry but it has application to analytical work in many other fields.

AMERICAN CHEMICAL SOCIETY COMMITTEE ON ANALYTICAL REAGENTS

Reagent chemicals—specifications 1950. Washington, D C. American Chemical Society 1951 401 p 24 cm. $5 00 349

Contents: Foreword. Preface. Definitions, procedures, and standards. Specifications. Index.

Note. A reference book of specifications for reagents to be used in precise analytical work. For each reagent requirements of purity are stated and standard tests for each requirement are described.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on flame photometry Presented at the fifty fourth annual meeting, American Society for Testing Materials, Atlantic City N J June 19 1951 Philadelphia American Society for Testing Materials, 1952 120 p. illus. 23 cm. (Special technical publication no 116) Paper $2.00 350

Contents: Introduction, by R. O. Clark and L. R. Pritchard. A review of flame photometry, by V M. Maloche. A stable internal standard flame photometer for sodium, potassium, lithium and calcium analyses in biological fluids and a study of line interference, by C. L. Fox, Jr., and others. Use of the Beckman and Perkin-

Flame flame photometry for the determination of alkalies in Portland cement, by J. J. Diamond and L. Bean. Application of flame photometry for the analysis of alkalies in silicates, waters and metals, by J L. Gilliland. The determination of lithium oxide in Portland cement by flame photometer by W J. McCoy and G. G. Christiansen. Control of interferences caused by acids and salts in the flame photometric determination of sodium and potassium, by P T Gilbert and others. The effect of organic solvents on the flame photometric emission of certain elements, by G. W Curtis and others. Determination of tetraethyllead in gasoline by flame photometry by P T Gilbert, jr. Determination of calcium in lubricating oil by flame spectrophotometer by M. L. Moberg and others. A modified recording flame photometer, by W H. King and William Priestley jr. Flame photometer in the analysis of water and water-formed deposits, by R. K. Scott and others. General discussion.

Note: Recent developments in the field of flame photometric analyses form the basic theme for the papers in this symposium. Each paper is the work of an expert engaged in active research, and in most cases is the report of an original contribution to the subject. Applications of the technique in the analyses of industrially useful substances are emphasized. Bibliographies and discussions are included.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on rapid methods for the identification of metals. Presented at the fifty second annual meeting, American Society for Testing Materials, Atlantic City N J., June 28, 1949 Philadelphia, Pa. American Society for Testing Materials, 1950 77 p. illus. 23 cm. (Special technical publication no 98) Paper $1 75 351

Contents: Development, present state, and outlook of spot test analyses, by F Feigl. Electro spot testing and electrography by H. W Hermance and H. V Wadlow Instruments for rapid metal identification, by R. R. Webster. Separating alloys by relative spot tests, by H. Kirtchik. Rapid methods for the identification of copper-base alloys, by R. F Mercer. Rapid identification of metal finishes, by A. Lewis and D. R. Baum. Examination of plated and protective coatings by electrographic analyses, by M. Galatine and R. E. G. Ashley A field test kit and procedure for use in the rapid identification of some nickel alloys and stainless steels, by H. R. Lee. Rapid tests for identifying alloy steels, by R. C. Kirkham. General discussion.

Note: A collection of short but valuable original papers on recent developments in rapid methods for the identification or analysis of metals. The various procedures are described explicitly for the information of professional metallurgists and analytical chemists. The papers are supplemented by discussions and literature references.

BERL WALTER GEORGE, editor

Physical methods in chemical analysis. New York, Academic Press Inc., 1950–51 2 vols. illus. 24 cm. Vol. I, $13.50 Vol. II, $13.50 352

Contents (abridged) Vol. I: Absorption phenomena of X-rays and γ-rays, by G. L. Clark X-ray diffraction methods as applied to powders and metals, by W L. Davidson. X-ray diffraction as applied to fibers, by J. A. Howsmon Electron diffraction, by L. O. Brockway Spectrophotometry and colorimetry by W R. Brode, Emission spectrography by J Sherman. Infrared spectroscopy by H. H. Nielsen and R. A. Oetjen. Raman spectra, by J. H. Hibben. Polariscopic and polarimetric examination of materials by transmitted light, by C. D. West. Refractive index measurement, by L. W Tilton and J. K. Taylor. Electron microscopy by R. D. Heidenreich. Mass spectrometry, by H. W Washburn. Author index. Subject index. Vol. II: Metallurgical polarographic analysis—polarometric titrations, by J Heyrovský Conductometric analyses, by H. T S. Britton Potentiometric analyses, by H. A. Laitinen. Electrography and electro-spot testing, by H. W Hermance and H. V Wadlow Magnetic methods of analysis, by A. E. Kaufmann. The determination of the area of the surfaces of solids, by G. Jura. Surface tension measurements, by M. Dole Vacuum techniques and analyses, by R. B. Dayton. Gas analysis by methods depending on thermal conductivity by E R. Weaver The measurement of radioactivity for tracer applications, by A. Langer. Statistical analysis, by J. Sherman. Chromatographic analysis, by W G. Berl. Author index. Subject index.

Note: A treatise covering methods of chemical analysis that are of special value in analyses of complex substances. Each of the papers is essentially condensed monograph on the subject named in its title. In most of the papers the underlying theory is outlined briefly but the emphasis is always on instrument, procedures, and applications. References to pertinent literature are cited in all cases, but enough information is given in the paper itself to guide chemists in practical laboratory use of the method.

BOLTZ DAVID F editor

Selected topics in modern instrumental analysis. New York Prentice-Hall, Inc., 1952 477 p. illus. 24 cm. (Prentice-Hall chemistry series Wendell M. Latimer, editor) $8 00 353

Contents: Electrometric pH measurements, by G. A. Perley Polarographic analysis, by C. L. Rulfs. Fluorometric analysis, by C. E. White. Spectrophotometric analysis, by D. F Boltz. Spectrochemical analysis, by J. R. Churchill. Electrometric and coulometric methods of analysis, by D. F Boltz. Analytical applications of x-ray diffraction, by E. J Bicek. Mass spectrometry by C. E. Berry and H. F Wiley Raman spectroscopy by D. E. Long. Radiochemical analysis, by B. F Rider. Appendices. Index.

Note: The ever-increasing use of instruments in the analysis of organic and inorganic materials has given rise to college courses in this phase of analytical chemistry This text is designed for chemistry students taking such courses at the senior and graduate level. Each chapter has been prepared by specialist in the field, and each type of instrument is discussed as to its fundamental principles, methods of construction and operation, and applications in chemical research. Brief bibliographies, review questions, and laboratory exercises are included.

BURK ROBERT EMMETT, AND OLIVER GRUMMITT, editors

Recent advances in analytical chemistry New York Interscience Publishers, Inc. 1949 209 p illus. 24 cm. (Frontiers in chemistry Published under the auspices of Western Reserve University Vol. VII) $4.50 354

Contents. Voltammetry (polarography) and amperometric titrations, by I. M. Kolthoff. Inorganic analysis with organic reagents, by J H. Yoe. Some recent colorimetric and gravimetric organic reagents, by J. H. Yoe. Application of infrared spectroscopy in analysis, by G. Barnes. Electron microscopy and microanalysis—new methods in chemistry by J. Hillier. Fractionation, analysis, and purification of hydrocarbons, by F D. Rossini. Applications of the mass spectrometer by J. A. Hipple. Subject index.

Note: A collection of lectures originally delivered at Western Reserve University The series has as its purpose the summing up of recent developments in specific areas of analytical chemistry The lectures are addressed to advanced students of chemistry and to graduate chemists. The style of presentation is technical and references are made to the literature.

BURKE, OLIVER WALLIS, JR. AND OTHERS, editors

Light hydrocarbon analysis analytical *methods compiled and tested for the Office* of Rubber Reserve, Reconstruction Finance Corporation by the Butadiene Committee on Specifications and Methods of Analyses. Edited by *O W Burke, jr C E. Starr jr* and F D Tuemmler New York Reinhold Publishing Corporation, 1951 639 p illus. 26 cm. $15.00 355

Contents: History and function of the Committee on Butadiene Specifications and Methods of Analyses. Butadiene production program. Butadiene specifications and applicable test methods. Schemes of analysis. Sampling and handling of light hydrocarbons. Analytical methods. Preparation of samples of known composition for test program. Evaluation of accuracy and precision of methods. Index of appendix tables. Subject index.

Note: An important contribution to the literature of analytical chemistry The heart of the volume is collection of analytical methods that were compiled and critically evaluated by the committee named in the title for use in connection with the synthetic rubber program of the United States government during World War

II. In addition, there are full discussions of related topics such as safety precautions and methods of evaluating the results of analytical tests. Each of the analytical methods included is fully described with information on the required apparatus, reagents, and the detailed procedure. The work is of interest to graduate chemists engaged in analytical work in the petroleum and gas industries and in other industries using petroleum gases as raw material.

Cassidy, Harold Gomes
Adsorption and chromatography New York Interscience Publishers Inc., 1951 360 p illus. 24 cm. (Technique of organic chemistry, Arnold Weissberger editor Vol. v) $7 00 356

Contents: Definitions—molecular aspects of adsorption. Measurement of adsorption. Treatment of data. Relations between relative adsorbability and properties of phases. Relations between relative extent of adsorption and properties of adsorptive. Summary of relations. Graded eluents and adsorbents. On the nature of separation processes. Batchwise adsorption and decolorization. Lists of adsorbents. Chromatography (Tswett-column analysis, chromatographic adsorption analysis, differential countercurrent adsorption analysis) Ion exchange methods. Partition chromatography On the use of adsorption. Author index. Subject index. Cumulative indexes, volumes I–V

Note: A compact survey written on the graduate level. It is part of a series which is designed to provide a comprehensive discussion of the various techniques applicable to the study of organic compounds. There is some emphasis on basic principles; nevertheless much specific information is included on techniques, the properties of adsorbents, etc. In most sections the discussion is essentially a concise digest of the literature, and the footnote references taken together constitute an extensive bibliography of the subject. Names of the authors of the cited papers are collected in the author index, a feature that makes the book useful as a guide to the literature. The author is Associate Professor of Chemistry in Yale University

Curtman Louis Jacob
Introduction to semimicro qualitative chemical analysis. Revised edition. New York The Macmillan Company 1950 391 p illus (part col d) 21 cm. $3 75 357

Contents (abridged) Introduction. Part I, Theory Part II, The metal ions and the anions Part III, Calculations. Part IV Laboratory work. Part V The anions and the complete analysis of mixtures. Appendix. Checking in. Checking out. Assignment schedule. Suggested lecture topics. Recording notes. Desk equipment. Reagent solutions in student's rack. Side shelf solutions and reagents. Reagents. Preparation of test, known and unknown solutions. The Brasthot H₂S generator Table—solubilities and solubility products. Table of inorganic compounds. Table of logarithms. Index.

Note (881) A college laboratory textbook and manual. In the procedures described, the quantities of samples, reagents, and the sizes of apparatus are reduced to a scale of one-tenth to one-twenty-fifth of those employed in standard macro methods. Another feature is the emphasis on inorganic rather than organic reagents. In this edition important changes have been made in the laboratory procedures. The author is Emeritus Professor of Chemistry in the City College of New York

Cutting Theodore Abijah
Manual of spectroscopy Brooklyn, N Y Chemical Publishing Company Inc. 1949 220 p illus. 22 cm. $6 50 358

Contents History and theory of spectroscopy Light sources. Spectroscopes. Spectroscopic analysis. The spectroscope in metallurgy Characteristic lines of the elements. Wave-length table-chart. Appendix. Index.

Note The main purpose of this short book is to make spectroscopic techniques available to professional workers, such as chemists and assayers, who are now analyzing ores, alloys, and other inorganic materials by slower and less precise methods. The discussions of light sources, spectroscopes, and general techniques occupy approximately the first half of the book. The remainder is given over chiefly to tabulation of the characteristic lines of the elements, together with other information useful in work with minerals. The book should be especially useful to persons concerned with the analyses of ores and minerals, and its concise descriptions of instruments and techniques should be useful to anyone who is curious about the use of spectroscopy in chemical analysis

Diehl, Harvey, and G Frederick Smith
Quantitative analysis elementary principles and practice. New York John Wiley & Sons Inc., 1952 539 p. illus. 24 cm. $5 00 359

Contents (abridged) The general operations of quantitative analysis. The calculations in gravimetric analysis. Mass action and the solubility-product principle. Volumetric analysis. Theory of neutralization reactions. The practice of neutralization reactions. The theory of oxidation-reduction reactions. The practice of oxidation-reduction titrations. Volumetric reactions involving the formation of insoluble or non-dissociated compounds. Colorimetry Methods of effecting separations. Electrodeposition. The analysis of brass. The analysis of limestone. The determination of pH colorimetric and potentiometric methods. Errors; accuracy and precision; confidence limits. Appendix. Glossary Index.

Note: A modern textbook in which quantitative analysis is presented for students with serious interests in analytical chemistry Although theory is not entirely omitted, the emphasis is on techniques. Some instrumental techniques are covered, and the reagents mentioned include recently developed ones such as versene. The treatment does not assume a previous introduction to analytical chemistry in a course in qualitative analysis.

Fister, Harold John
Manual of standardized procedures for spectrophotometric chemistry With a foreword by Margaret A. Baker New York Standard Scientific Supply Corporation, 1950 loose-leaf, unpaged illus. 30 cm. $30.00 360

Note. A laboratory reference book that provides specific details and directions for tests and analyses with the spectrophotometer in clinical laboratories. For such substances as albumen, directions are given for several different procedures. Information provided on each procedure includes literature references, general principles, apparatus and reagents needed, a step-by-step description of the technique, and a calibration curve for use with the Coleman spectrophotometer

Foulk Charles William and others
Quantitative chemical analysis an introduction to the science and practice of chemical measurement. [By] Charles W Foulk, Harvey V Moyer [and] William M. Mac Nevin. New York McGraw Hill Book Company Inc., 1952 484 p. illus. 24 cm. $5 00 361

Contents. Introduction. The chemical balance and its use. Common operations of quantitative analysis. Apparatus for gravimetric analysis. The operations of gravimetric analysis. Calculations in gravimetric analysis. The solubility of analytical precipitates Analytical precipitates. Volumetric apparatus and its calibration. Volumetric solutions and their standardization. Calculations in volumetric analysis. Hydrogen ion concentration of aqueous solutions of acids, bases, and salts Oxidation-reduction reactions in volumetric analysis. Precipitation reactions and complex formation in volumetric analysis. Errors and statistical methods in chemical analysis. Oxidation-reduction potentials. The potentiometric measurement of pH values. Electrometric titrations. Electrolytic analysis. Colorimetric analysis. Exercises. Appendixes. Name index Subject index.

Note. An introductory work for use in college courses. The underlying theory is presented in the first part of the book, and the laboratory exercises are described separately in the latter part. As the table of contents shows, most of the space is given to gravimetric and volumetric methods of analysis, but there is some discussion of instrumental methods. The authors are members of the faculty of Ohio State University

Friedel Robert Augustine, and Milton Orchin
Ultraviolet spectra of aromatic compounds. New York John Wiley & Sons Inc. 1951 52 p illus 27 cm. $10.00 362

Contents Purpose and scope of the collection. Spectrometric nomenclature and the absorption law for solutions. Instruments and experimental procedure. Theoretical aspects of ultra violet absorption spectra. The use of ultraviolet spectra in qualitative analysis. Quantitative analyses. Use of the catalogue. Acknowledgment. Collection of spectra. Name index of spectra. Formula index of spectra.

Note A collection of the ultraviolet spectra of 179 polynuclear aromatic compounds together with some expert discussion of the use of such spectra in chemical analysis. According to the authors, about half of the included spectra have been taken from the published literature and the other half are original determinations by the authors and other workers in Bureau of Mines laboratories. Graduate chemists interested in the use of ultraviolet absorption spectra in organic analysis will use the book as reference tool and as an introduction to ultraviolet spectroscopy

GRIFFIN CARROLL WARDLAW, AND MARY ALYS PLUNKETT

Inorganic semimicro qualitative analysis. New York The Blakiston Company, 1951 299 p. illus 23 cm. $4 75 363

Contents: Part I, Theory Atomic structure, valence and types of compounds. Solutions of electrolytes. Chemical equilibrium. Hydrolysis. Heterogeneous equilibrium. Complex ions and amphoterism. Oxidation and reduction—reactions—theory Part II, Analysis Laboratory techniques. Preparation of sample. The silver group. The copper-arsenic group. The aluminum-iron group. The alkaline earth group. The soluble group. The anions. Appendix. Index. The common logarithms of the natural numbers.

Note: A textbook and laboratory manual for college undergraduates who have completed year of general inorganic chemistry The discussion of theory in Part is sufficiently inclusive to form good foundation for more advanced theoretical studies. In Part II the procedures for the various analyses are presented in convenient form which includes schematic diagrams of the reactions. The authors are members of the Department of Chemistry of Vassar College.

HAMILTON LEICESTER F , AND STEPHEN G SIMPSON

Quantitative chemical analysis. Tenth edition. Formerly Talbot s *Quantitative chemical analysis* New York The Macmillan Company 1952 529 p. illus. 21 cm. $4 50 364

Contents. Part I, Introduction General considerations. General directions. Common analytical operations. The analytical balance. The precision of analytical measurements Review of some basic principles. Part II, Volumetric analysis. General directions for volumetric work. Neutralization methods. Acidimetry and alkalimetry. Oxidation-reduction (redox) processes. Oxidation-reduction (redox) titrations. Permanganate process. Dichromate and ceric processes. Iodimetry (iodometry) Precipitation methods ("precipitimetry") Complex formation methods ("complexometry") Part III, Gravimetric analysis; General principles of gravimetric analysis. Analyses of soluble salts. Analysis of an ore. Analyses of nonferrous alloy Part IV Instrumental methods: Potentiometric methods. Conductometric methods. Amperometric methods. Optical methods. Gas-volumetric methods Part Miscellaneous determinations. Appendix. Index.

Note: (315*) A standard introductory text and laboratory manual which has been used in successive editions for fifty five years. It is organized so that the student can acquire full understanding of the chemical theory involved as he learns the details of quantitative analytical techniques The present edition represents considerable revision in which the space given to theory has been increased along with other changes The authors are members of the faculty of Massachusetts Institute of Technology

HEISIG GLADSTONE BERING

The theory and practice of semimicro qualitative analysis. Second edition Illustrated. Philadelphia W B Saunders Company 1950 356 p illus 22 cm. $4 00. 365

Contents (abridged) Part I, Theoretical. Part II, Experimental: The cations. The anions. Appendix. Reference books. Equilibrium constants. Oxidation-reduction potentials Reagents Equipment. Logarithm tables. Index

Note: (894) An introductory text and laboratory manual for use in college courses. The laboratory procedures require the use of 0.1 mg. samples and solution volumes ranging from two drops to 1.5 ml. The first edition appeared in 1943. In the present edition there have been some changes in both the theoretical and the experimental parts. The author is Associate Professor in Organic Chemistry in the University of Minnesota.

KELSEY, ERWIN BURR, AND HAROLD G DIETRICH

Fundamentals of semimicro qualitative analysis. Revised edition. New York The Macmillan Company 1951 328 p. illus. 22 cm. $4.25 366

Contents (abridged) Section one, Fundamental theory Section two, Analytical procedure. Part I, The systematic cation analysis. Part II, The analysis for the non metal ions. Part III, The analysis of solids. Appendix. Index.

Note: (900) An introductory text and laboratory manual for college courses. The procedures employ original samples of the order of 0.5 ml. (about ten drops) in which the amounts of the individual ions present average about 1 mg. It has been extensively rewritten in the present edition and the type has been reset. The authors are members of the faculty of Yale University

KIRK PAUL LELAND

Quantitative ultramicroanalysis. New York John Wiley & Sons Inc., 1950 310 p. illus. 23 cm. $5.50 367

Contents: Introduction. Volumetric apparatus and technique. Colorimetry: apparatus and technique. General apparatus and technique. Microgram turbimetry Metallic constituents: titrimetric methods. Non metallic constituents: titrimetric methods. Volumetric gas methods. Spectrophotometric methods. Physical methods. Index.

Note. Standard methods require samples of about one milligram in size. In this new book more refined technique is described, in which quantities as small as one microgram may be used. Apparatus and practical laboratory procedures are both discussed in full detail. There are more than 100 illustrations, most of which pertain to apparatus. The book is intended for graduate students and advanced researchers who are familiar with standard methods.

KOLTHOFF IZAAK MAURITS AND E B SANDELL

Textbook of quantitative inorganic analysis. Third edition. New York The Macmillan Company 1952 759 p. illus. 24 cm. $6.50 368

Contents (abridged) Stoichiometry Gravimetric analysis: Theoretical part, practical part, gravimetric determinations. Volumetric analysis. Theoretical part, practical part, volumetric determinations. Physical and physicochemical methods of analysis. Analyses of complex materials Appendix Index.

Note: (904) A successful college textbook and laboratory guide. The expositions of theory and the descriptions of apparatus and laboratory procedures are fuller and somewhat more advanced than in some introductory texts in this field. Literature references are included. The second edition appeared in 1943. Fairly extensive revisions were made in preparing this edition.

MELLON MELVIN GUY editor

Analytical absorption spectroscopy, absorptimetry and colorimetry New York John Wiley & Sons Inc., 1950 617 p. illus. 23 cm. $9 00 369

Contents: Chemistry: Preparation of systems for absorptiometric measurement, by M. L. Moss. Physics: General principles of absorptiometric measurements, by M. G. Mellon. Color comparimeters, by W. B. Fortune. Filter photometers, by R. H. Muller Spectrophotometers—ultraviolet and visible regions, by K. S. Gibson. Photographic methods, by K. R. Hobday Applications of ultra-violet and visual spectrophotometric data, by R. L. Bowman. Spectrophotometers—infrared region, by L. J Brady Measurement and specification of color by D. B. Judd. Index.

Note The principles and techniques of absorption spectroscopy as an analytical tool are presented in this important contribution to the literature of analytical chemistry Each chapter is in effect short monograph by specialist, and is accompanied by bibliography of

the pertinent literature. Although available instruments are described, more attention is paid to their operating principles and the techniques of their use. The book is intended for professional chemists. It is of some interest to physicists as well.

MÜLLER, OTTO HEINRICH

The polarographic method of analysis. Second edition Easton Penn. Chemical Education Publishing Co., 1951 209 p. illus. 21 cm. (Contributions to chemical education. No. 2) $3 50 370

Contents: Introduction and review of electro-analytical methods. Apparatus. Fundamentals of quantitative analysis. Fundamentals of qualitative analysis. Polarometry. Recent developments. Applications. Suggestions for practical polarography. Appendix. General polarographic references. List of experiments. Index.

Note: A short but reliable introduction to an important instrumental technique in chemical analysis. The technique is compared with other methods based on electric current. Typical apparatus is described and applications and limitations are discussed. Embodied in the text are directions for twenty-four laboratory experiments. The first edition appeared in 1941 and consisted of reprints of a series of five articles that had appeared in the *Journal of chemical education.* The work has been extensively revised in this edition.

NACHTRIEB NORMAN HARRY

Principles and practice of spectrochemical analysis. New York McGraw Hill Book Company Inc. 1950 324 p illus. 23 cm. $5 00 371

Contents (abridged) Part I, The principles of spectrochemical analysis. The role of spectroscopy in analytical chemistry. Prism spectrographs and the refraction of light. The diffraction of light by slits and gratings. The photographic process. The evaluation of photometric data. Direct-reading spectrometers. The origin of spectra. Part II, The practice of spectrochemical analysis: The excitation of spectra. The quantitative analysis of metals. Qualitative analysis. The analysis of refractory materials. The analysis of solutions and soluble salts. Chemical separations in spectrochemical analysis. Index.

Note A practical and rather thorough text for advanced college students and professional chemists who are just beginning to use spectrochemical analysis. The emphasis is on principles, but standard apparatus and its elements are adequately described. The basic physical principles and the chief instruments are discussed in the first part. The second part serves to introduce the reader to practical use of the techniques of spectrochemical analysis. Auxiliary techniques, such as precipitation of impurities, extraction by solvents, fire assay and electrolytic concentration, which are useful in association with spectrochemical methods, are briefly outlined in the final chapter. The scope of the work is limited to emission spectroscopy in the ultraviolet and visual ranges.

OELKE WILLIAM C

Semimicro qualitative analysis. Boston D C. Heath and Company 1950 377 p. illus. 22 cm. $4 00 372

Contents (abridged) Part I, General theory. The solubility of solids. Acids, bases, and salts. Polybasic acids and bases and hydrolysis. Oxidation and reduction. Complex compounds. Part II, Laboratory and applied theory. Semimicro technique. Anion analysis. Cation analysis. Systematic analysis. Appendixes. Reference and tabular section. Data section. Index.

Note An introductory textbook designed for study by students who have completed a college course in general chemistry. It contains both material for classroom instruction and directions for laboratory work. The author is Chairman of the Department of Chemistry of Grinnell College.

PATTERSON ANDREW JR., AND HENRY C THOMAS

A textbook of quantitative analysis. New York Henry Holt and Company 1952 500 p illus. 22 cm. $4.25 373

Contents: The principles of analytical chemistry—stoichiometry. Volumetric methods—titrations with permanganate. Volumetric determinations of acids and bases. Precipitation and complex-forming titrations. Oxidation-reduction reactions and oxidimetric determinations. Procedures used in gravimetric analysis. Preparation and properties of precipitates. Chemical analysis. Some physical methods of chemical analysis. Index.

Note. A substantial introductory text in which the necessity for learning to think in terms of moles and equivalents, understanding the bases of quantitative analytical techniques, and learning the techniques of careful measurement are stressed. Directions for a limited number of laboratory exercises in quantitative determinations are interspersed throughout the book. However much less space is given to such exercises than in some introductory texts in the subject. The authors are both associate professors of chemistry in Yale University

RANDALL, HARRISON MCALLISTER, AND OTHERS

Infrared determination of organic structures by H. M Randall, R. G Fowler, Nelson Fuson and J R. Dangl. New York D Van Nostrand Company Inc. 1949 239 p. illus 29 cm. $12 75 374

Contents: The application of infrared spectroscopy to chemical analysis. Interpretation of specific structure groups and methods for recognition of these groups. A catalogue of empirical structural assignment for the double-bond region. A structural assignment catalogue for theoretically analyzed molecules. Application of the infrared method in practice. Instruments and experimental techniques. Spectra of various compounds. Index.

Note: Important contributions to the applications of infrared spectroscopy in chemical analysis and to the spectra of specific compounds are presented in this work. The tables of empirical structural assignments in the third chapter also are new. Spectrographs are included for 313 compounds, most of which are complex hydrocarbons.

RIEMAN, WILLIAM III, AND OTHERS

Quantitative analysis a theoretical approach. Third edition. By William Rieman, III Jacob D Neuss and Barnet Naiman. New York McGraw-Hill Book Company, Inc. 1951 523 p illus. 24 cm. (International chemical series, Louis P Hammett, consulting editor) $5.50 375

Contents (abridged) Common apparatus and operations. Fundamentals of volumetric analysis. Potentiometric measurements. Estimation of salts, acids, and bases. Acidimetry and alkalimetry. Theory of oxidation. Determination of iron in an ore. Iodimetry. Gravimetric determination of aluminum. Coprecipitation. Determination of chloride. Determination of sulfur. Determination of manganese. Photometric methods. Determination of phosphorus. Organic reagents—determination of nickel and aluminum. Analysis of brass or bronze—electroanalysis. Ion exchange—determination of arsenic. Appendix. References. Reagents and chemicals. *Name index.* Subject index.

Note (917) An established textbook for use in introductory college courses. An important feature is the interrelating of theory and laboratory analytical procedures. Other special features are the chapter on coprecipitation, the use of redox potentials, and the treatment of ionic constants as functions of ionic strength. The chapter on ion exchange has been newly added in this edition, the descriptions of certain techniques are considerably more detailed; the chapter on colorimetric methods has been enlarged, and there are minor changes in other parts of the text. The list of references has been revised.

SANDELL ERNEST BIRGER

Colorimetric determination of traces of metals. Second edition revised and enlarged. New York Interscience Publishers, Inc. 1950 673 p. illus. 23 cm. (Chemical analysis a series of monographs on analytical chemistry and its applications editors Beverly L. Clarke and I. M. Kolthoff Vol. III) $9 75 376

Contents: General part, Colorimetric trace analysis: Trace analysis. Methods for the separation and isolation of traces of substances.

Colorimetry and spectrophotometry in trace analysis. General colorimetric reagents. Special part. Procedures for the determination of traces of metals: Aluminum. Antimony. Arsenic. Barium. Beryllium. Bismuth. Cadmium. Calcium. Cerium. Chromium. Cobalt. Columbium and tantalum. Copper. Gallium. Germanium. Gold. Indium. Iridium. Iron. Lead. Lithium. Magnesium. Manganese. Mercury. Molybdenum. Nickel. Osmium. Palladium. Platinum. Potassium. The rare earth elements. Rhenium. Rhodium. Ruthenium. Scandium. Silver. Sodium. Thallium. Tin. Titanium. Tungsten. Uranium. Vanadium. Zinc. Zirconium. Appendix. Author index. Subject index.

Note: (935) This volume presents a collection of modern methods for the colorimetric determination of traces of elements, especially of metals. Described under the names of the elements there are limited number of methods which in the author's experience have proved best for dealing with traces of the respective elements. The book is addressed to graduate chemists. The second edition is one-third again as large as the original edition. Many new procedures are described.

Siggia Sidney

Quantitative organic analysis via functional groups. New York John Wiley & Sons, Inc. 1949 152 p. illus. 22 cm. $3.50 377

Contents: Hydroxyl groups. Carbonyl groups. Carboxylic acids, salts, esters, amides. Alkoxyl and alkimide groups. Unsaturation. Active hydrogen compounds and compounds which react with Grignard reagent. Acetylenic hydrogen. Acetal, ketal-type compounds, and vinyl alkyl ethers. Amino groups. Hydrazines. Diazonium salts. Titanous chloride reduction (—N=N—, —NO₂, —NHOH—). Mercapto groups. Dialkyl sulfides. Alkyl disulfides. Sulfonic acids and salts. Peroxides. Isocyanates and isothiocyanates. Vinyl ethers. Oxirane oxygen (epoxide compounds). Water in organic compounds. Miscellaneous procedures. Quantitative separation of components in mixture. Some instrumental methods applicable to quantitative analyses. Weighing of volatile or corrosive liquids. Index.

Note: Analytical methods described in this manual are based upon the use of functional groups on the molecule for the determination of unknown organic compounds in contrast to the more usual method of analysis for the elements present in the unknown. One or more methods are described for determination of each of the common functional groups or linkages, such as carbon-to-carbon unsaturation. Each method is fully described with complete laboratory procedures. The descriptions of the procedures are followed by several chapters in which allied techniques such as instrumental methods are discussed. The book is intended for advanced students and analytical chemists already at work in laboratories and industry.

Snell, Foster Dee, and Cornelia T Snell

Colorimetric methods of analysis including some *turbidimetric and* nephelometric methods. Volume II, Inorganic. Third edition. New York D Van Nostrand Company Inc. 1949 950 p illus. 24 cm. $12.50 378

Note: (935a, 314*) The standard reference manual of this subject. In this volume there are 66 chapters ranging from lead to cerium, each chapter being devoted to a single element or substance or (in few instances) group of substances. The chapters are compendiums of concise, specific descriptions of analytical procedures applicable to various kinds of samples. For example, the chapter on copper includes the analyses by colorimetric methods for this element of such products as soil, water, animal organs, milk, plant tissue, glass, fruit spray residues, and lubricating oil. References to the international literature are furnished in the form of footnotes. The preceding edition of this volume was published in 1937. As might be expected in view of the rapid development of the field, this edition represents a very extensive revision in which a majority of the procedures described are not to be found in the 1937 edition.

Steyermark Al

Quantitative organic microanalysis. Philadelphia The Blakiston Company 1951 389 p. illus. 23 cm. $7.00 379

Contents (abridged): Weighing on the microchemical balance. Preparation of samples for analysis. The determination of metals by the ashing technic. Determination of nitrogen by the micro-Dumas method. The microdetermination of carbon and hydrogen. Standard substances. Microdetermination of nitrogen by the Kjeldahl method. Determination of sulfur. Determination of halogens. Determination of phosphorus. Determination of arsenic. Determination of oxygen. Determination of the neutralization equivalent (determination of basic hydrogen, carboxyl groups). Determination of alkoxyl groups (methoxyl and ethoxyl). Determination of acetyl groups. Determinations carried out on the Van Slyke manometric apparatus. Manometric carbon determination. Manometric determination of primary amino nitrogen in aliphatic α-amino acids. Determination of molecular weight. Determination of some physical constants. Calculations. Author index. Subject index.

Note: The author of this work is Head of the Microchemical Department of Hoffmann-La Roche, Inc., Nutley New Jersey. The order in which the chapters are presented is the same order in which microchemical techniques and procedures have been taught over a period of eight years to new members of his department. The publication is accordingly for the beginning microanalyst who is a graduate in chemistry. It is also of interest to experienced microanalysts. The methods and equipment are described in detail; in some cases alternative methods are also given. The bibliographical citations at the ends of the chapters are extensive.

Walton, Harold Frederic

Principles & methods of chemical analysis. New York Prentice-Hall Inc. 1952 435 p. illus. 22 cm. $8 65 380

Contents. Introduction. The physical properties of precipitates. Impurities in precipitates. The drying and ignition of precipitates. Electrolytic methods of analysis. Organic precipitants. Complex ions in analytical chemistry. Ion exchange methods in analytical chemistry. Separation by vaporization and extraction. Volumetric analysis—introduction. Oxidation-reduction potentials. Methods of potentiometric titration. Acid base titrations. Acid base indicators. Oxidation-reduction titrations. Volumetric oxidation-reduction methods in organic chemistry. Oxidation reduction indicators. Precipitation titrations. Complex-forming titrations. Conductometric titrations. Appendixes: Bibliography of selected texts. Selected methods for determination of the elements. Tables of data. Answers to problems. Index.

Note: An advanced survey in which the emphasis is on basic matters. However there are also many details and special points derived from experience which will be helpful to analytical chemists. The book is valuable also for the discussion of special problems in analysis, for example, the titration of fluorides. Instrumental methods of analysis are not covered, but much of the material presented is basic to the intelligent use of analytical instruments. Abundant literature references are supplied as footnotes and in the second appendix. The latter feature makes the book a useful reference tool for graduate chemists.

Willard Hobart Hurd and others

Instrumental methods of analysis. By Hobart H. Willard Lynne L. Merritt, Jr., and John A. Dean. Second edition. New York D Van Nostrand Company Inc., 1951 344 p illus. 29 cm. $5.50 381

Contents. Visual colorimeters. Fundamental laws of colorimetry. Photoelectric colorimeters and fluorescence meters. Turbidimeters and nephelometers. Spectrophotometry and flame photometry. Spectrography. X ray diffraction methods. Radioactivity. The refractometer and interferometer. Polarimetry. Thermal conductivity and other methods for the analysis of gases. Mass spectrometry. The centrifuge. Determination of the pH of a solution. Potentiometric titration methods. Conductance methods. Electroanalysis. Polarography. Amperometric titration methods. Miscellaneous methods. Chromatographic analyses. Appendix. Index.

Note: (319*) An introductory textbook designed primarily for use in college courses offered to advanced undergraduate students. Each class of instrument is described as to purpose, method of operation, advantages and disadvantages in practical chemical analyses. However the book is not a handbook on all commercially available instruments. The first edition appeared in 1948. About 100 pages have been added in the present edition. Chapters carried over have been revised and extended and the chapters on polarimetry, miscellaneous methods, and chromatographic analysis have been added.

ORGANIC CHEMISTRY

Advances in carbohydrate chemistry Volume 6 Edited by Claude S Hudson and Sidney M. Cantor New York Academic Press Inc. 1951 442 p 24 cm. $8 50 382

Contents: Obituary of Walter Norman Haworth, by E. L. Hirst. The methyl ethers of D-galactose, by D. J. Bell. The synthesis of oligosaccharides, by W. L. Evans and others. The formation of furan compounds from hexoses, by F. H. Newth. Cuprammonium glycoside complexes, by R. E. Reeves. The chemistry of ribose, by R. W. Jeanloz and H. G. Fletcher. The 2-(aldo-polyhydroxyalkyl) benzimidazoles, by N. K. Richtmyer. Trends in the development of granular adsorbents for sugar refining, by E. P. Barrett. Aconitic acid, by-product in the manufacture of sugar, by R. E. Miller and S. M. Cantor. Friedel-Crafts and Grignard processes in the carbohydrate series, by W. A. Bonner. The nitromethane and 2-nitroethanol syntheses, by J. C. Sowden. Errata. Cumulative subject index for volumes 1–5. Author index for volume 6. Subject index for volume 6.

Note. (323*) As in the previous volumes of this series, each of the papers is a compact, critical digest of the current knowledge of an area under active investigation or of current interest for some other reason. In some instances recent advances in knowledge not published elsewhere are included in a paper. The series is addressed to graduate chemists. Each paper is supplemented by an extensive bibliography in the form of footnotes.

ADVANCES IN PROTEIN CHEMISTRY Volume VII. Edited by M. L. Anson, Kenneth Bailey and John T. Edsall. New York Academic Press, Inc., 1952 411 p illus. 23 cm. $8.50 383

Contents: The arrangement of amino acids in proteins, by F. Sanger. The structure of collagen fibrils, by R. S. Bear. Muscle contraction and fibrous muscle proteins, by H. H. Weber and H. Portzehl. The proteins of the mammalian epidermis, by K. M. Rudall. Infrared analysis of the structure of amino acids, polypeptides and proteins, by G. B. B. M. Sutherland. Ultraviolet absorption spectra of proteins and amino acids, by G. H. Beaven and E. R. Holiday. Author index. Subject index.

Note. (315*) The latest volume in a well-known series in biochemistry.

ALEXANDER, ELLIOT RITCHIE

Principles of ionic organic reactions. New York John Wiley & Sons, Inc., 1950 520 p. illus. 23 cm. $5.50 384

Contents (abridged): Factors influencing distribution and mobility of electrons. Carbonium ions. Displacement reactions. Elimination reactions. Carbanions. Addition reactions of carbon-carbon double bonds. Carbanion addition to carbonyl groups. Carbanion displacement reactions. Formation and cleavage of ethers. Esterification and hydrolysis. Substitution on the benzene nucleus. Diazonium reactions and the Wolff-Kishner reduction. Miscellaneous reactions involving the migration of a double bond. Author index. Subject index.

Note: This book is concerned with the mechanisms—interpreted in terms of electron configurations—of common organic reactions. Similarities between organic reactions rather than differences are stressed, with the purpose of aiding the experimental organic chemist in understanding and predicting reactions. The work is designed for advanced undergraduates majoring in organic chemistry and for graduate chemists engaged in experimental work. Related literature is cited in footnotes throughout the book.

ALFREY TURNER, JR. AND OTHERS

Copolymerization. By Turner Alfrey Jr John J Bohrer and H. Mark. New York Interscience Publishers Inc. 1952 395 p illus. 24 cm. (High polymers, a series of monographs on the chemistry physics and technology of high polymeric substances. Editorial board H. Mark and others. v 8) $6.80 385

Contents: Introduction. Kinetics of copolymerization. Monomer structure and reactivity with free radicals. Detailed discussion of monomer reactivities in terms of resonance and polarity. Effect of temperature and environment on copolymerization reactivity ratios. The polymerization of tri- and multicomponent systems. Detailed structure of copolymer chains. Drift of copolymer composition with increasing conversion. Copolymerization involving divinyl monomers. Copolymerization behavior of 1,3-dienes. Rates and molecular weights in copolymerization. Copolymerization by ionic mechanisms. Influence of copolymerization on physical properties of polymeric systems. Author index. Subject index.

Note: A monographic survey of the development and present state of the knowledge of copolymerization, a complex chemical process that is basic to the synthetic rubber and plastics industries. The emphasis is on the scientific foundations, and applications are mentioned only incidentally. The book is addressed to graduate chemists. Bibliographies that include both journal and patent citations are appended to the chapters.

ALLEN CHARLES FRANCIS HITCHCOCK

Six membered heterocyclic nitrogen compounds with four condensed rings. In collaboration with D M. Burness Jean V Crawford F W Spangler Eleanor R. Webster and C. V Wilson. New York Interscience Publishers Inc., 1951 345 p. illus. 24 cm. (The chemistry of heterocyclic compounds a series of monographs, Arnold Weissberger consulting editor) $10 00 386

Contents: Azanaphthacenes. Azabenz[a]anthracenes. Azabenzo[c]phenanthrenes. Azachrysenes. Azatriphenylenes. Azabenzanthrenes. Azapyrenes. Azabenzanthrenes—addendum. Index.

Note: The second volume published of a series which is planned to cover comprehensively the chemistry of heterocyclic compounds. Each of the chapters is a compact summary of the available information of the sub-group named in its title. The individual compounds which have been reported are described and the available information on structure and properties is given. Methods of synthesis and reactions are often indicated. The text is carefully keyed to a comprehensive bibliography that includes patents. Every compound mentioned is brought out in the very detailed index.

BAMBAS LOUIS L.

Five-membered heterocyclic compounds with nitrogen and sulfur or nitrogen sulfur and oxygen (except thiazole) New York Interscience Publishers, Inc., 1952 403 p. 24 cm. (The chemistry of heterocyclic compounds, a series of monographs Arnold Weissberger consulting editor) $14 00. 387

Contents. Part I, Thiadiazoles, their derivatives and selenium analogs: Derivatives of the 1,2,3-thiadiazoles and their selenium analogs. Derivatives of the 1,2,4-thiadiazoles and their selenium analogs. Derivatives of the 1,3,4-thiadiazoles and their selenium analogs. Derivatives of the 2,1,3-thiadiazoles and their selenium analogs. Part II, Five-membered rings containing nitrogen, sulfur, selenium, or oxygen atoms in addition to one sulfur and one nitrogen. Part III, Isothiazoles, their derivatives and selenium analogs: 2,1-benzisothiazoles. 1,2-benzisothiazoles, their homologs and selenium analogs. 1,2-benzisothiazolones, their homologs and derivatives. Index.

Note. Essentially an organized presentation of information previously published in the periodical literature. The text is very condensed, but all statements are keyed to the source articles. Structural diagrams are given for all compounds and most reactions are also diagramed. There are 71 tables of data on groups of compounds. Literature references are given in footnotes. No index to the authors of cited papers has been included; however, the subject index is fully detailed. The book is of interest to graduate chemists.

BROOKS BENJAMIN TALBOTT

The chemistry of the nonbenzenoid hydrocarbons. Second edition revised and enlarged. New York Reinhold Publishing Corporation 1950 615 p illus. 24 cm. $12.00 388

Contents (abridged): Natural occurrence of the paraffins. Physical properties. Methods of synthesis of paraffins and cycloparaffins. Oxidation of paraffins and cycloparaffins. Reactions of paraffins and cycloparaffins with chemical reagents. Olefinic hydrocarbons: methods of preparation. Isomerization. Polymerization of unsaturated hydrocarbons. Alkylation of unsaturated hydrocarbons. Oxidation of unsaturated hydrocarbons. Other chemical reactions of olefins. The dienes, trienes, and polyenes. Acetylenes. The cycloparaffins. Author index. Subject index.

Note. A concise survey of the hydrocarbons that do not contain the benzene ring structure. When the first edition (published in 1922) was prepared, most organic chemists were interested in the chemistry of the benzene ring and most organic chemical literature was devoted to benzene compounds. The book was planned chiefly

to call attention to the chemistry of the other hydrocarbons, especially those found in petroleum. Since 1933 much more has been published on the nonbenzenoid hydrocarbons, but this book still holds its place as a well-organized and useful monograph. Much material, including new chapters on acetylenic compounds, the dienes, trienes, polyenes, and thermal decomposition of paraffins, has been added in this edition. In effect the entire work has been rewritten.

BURK ROBERT EMMETT, AND OLIVER GRUMMITT editors

High molecular weight organic compounds. New York Interscience Publishers Inc., 1949 330 p illus. 24 cm. (Frontiers in chemistry Published under the auspices of Western Reserve University Vol. VI) $6.00 389

Contents. Polymerization in suspension and emulsion, by W P Hohenstein and H. Mark. Osmometry and viscosity of polymer solutions, by W J Badgley and H. Mark. The nature of elastomers, by H. L. Fisher Aspects of the structure and reactions of proteins, by J. T Edsall. Condensation polymerization and constitution of condensation polymers, by P J Flory Physical and chemical structure of plant materials, by T S. Carswell. Subject index.

Note: A collection of short monographs which were originally presented as lectures under the auspices of Western Reserve University Most of the authors emphasize recent developments but also include enough of older events to give a fair picture of the current state of knowledge pertaining to the specific topic of the lecture. Gaps in the knowledge also are indicated. The level of presentation assumes an advanced knowledge of chemical terminology and concepts, hence the volume is intended for chemical graduates rather than beginners in organic chemistry Long bibliographies are included.

CONANT JAMES BRYANT, AND ALBERT HAROLD BLATT

The chemistry of organic compounds a year's course in organic chemistry Fourth edition. New York The Macmillan Company 1952 655 p. illus. 24 cm. $5 90. 390

Contents (abridged) The alcohols. Alkyl halides and ethers. Saturated or paraffin hydrocarbons. Gasoline and rubber Aldehydes and ketones. Organic acids. Derivatives of ammonia. Polyhydric alcohols—fats and oils. Dibasic acids—condensation polymerization. Optical isomerism. The carbohydrates. Unsaturated alcohols, acids, and carbonyl compounds. The amino acids and proteins. Benzene and the alkylbenzenes. Aryl halides, sulfonic acids, and phenols. Aromatic nitro compounds, amines, diazonium salts, and azo dyes. Diamines, polyhydroxyl compounds, and aminophenols. Aromatic acids. Naphthalene anthracene, and phenanthrene. Alicyclic compounds. Natural products containing alicyclic rings. Heterocyclic compounds. Natural and synthetic drugs Index.

Note: (339*) A standard textbook for use in introductory college courses in organic chemistry It is shorter than some texts of the kind but the material has been selected and treated so that the student is offered an adequate basic account of the organic reactions and compounds. The authors have not attempted to describe large numbers of reactions and compounds.

CONANT JAMES BRYANT AND ALBERT HAROLD BLATT

Fundamentals of organic chemistry a brief course for students concerned with biology medicine agriculture, and industry New York The Macmillan Company 1950 413 p. illus. 22 cm. $4.25 391

Contents: The alcohols Alkyl halides and ethers Saturated or paraffin hydrocarbons Unsaturated hydrocarbons. Gasoline and rubber. Aldehydes and ketones. Organic acids Polyhydric alcohols—fats and oils. Industrial and laboratory syntheses. Derivatives of ammonia—amides and amines. Acids containing two or more functional groups. Stereoisomerism The carbohydrates The amino acids and proteins. Biochemical processes. Benzene and alkylbenzenes. Aryl halides, sulfonic acids, and phenols Aromatic nitro compounds, amines, diazonium salts, and azo dyes Aromatic alcohols, aldehydes, ketones, and acids. Polynuclear aromatic compounds. Alicyclic compounds and related natural products. Heterocyclic compounds. Natural and synthetic drugs. Index.

Note. The purpose of this introductory textbook is adequately indicated in the subtitle. The book is based to some extent upon the authors' well known *Chemistry of organic compounds*, but the material has been selected to suit the needs of nonspecialists in chemistry and the treatment of many subjects is more descriptive in style.

COPENHAVER, JOHN WILLIAM, AND MAURICE H. BIGELOW

Acetylene and carbon monoxide chemistry New York Reinhold Publishing Corporation 1949 357 p illus 24 cm. $11.00 392

Contents: Synthesis and reactions of acetylene at atmospheric pressure. Vinylation. Ethinylation. Reactions of products derived from the ethinylation reaction. Cyclopolyolefins. The chemistry of carbon monoxide-carbonylation and related processes. Synthesis and reactions of acetylene homologs. Explosive decompositions of acetylene—techniques and equipment for handling acetylene under pressure. General bibliography of German acetylene chemistry Index.

Note: Prior to and during World War II, extensive research in acetylene chemistry especially in the reactions of acetylene under pressure, were made by the I. G. Farbenindustrie in Germany The work was in charge of Dr Julius W Reppe. After the defeat of Germany the Allies made an attempt to induce Dr Reppe to write out a full account of his work. Although this effort was unsuccessful, the present book is based largely on the documents of Dr. Reppe and his associates. Information gathered by the Field Information Agency Technical (F.I.A.T.) and the British Intelligence Objective Sub-Committee (B.I.O.S.) also is included. The book is of interest to organic chemists generally but has special interest for chemists working in the field of polymers and for chemical engineers concerned with designing of plants in which potentially explosive reactions must be handled safely

DESHA LUCIUS JUNIUS

Organic chemistry the chemistry of the compounds of carbon. Second edition. New York McGraw Hill Book Company Inc., 1952 595 p. illus. 24 cm. (International chemical series, L. P Hammett, consulting editor) $6 50 393

Contents (abridged) The chemistry of molecules. Carbon chains, homology Unsaturation. Aromatic hydrocarbons. Organic hydroxides. Ethers Carbonyl compounds Carboxylic acids. Amines. Sulfur and organometallic compounds. Polyfunctional aliphatic compounds. Polyhydric alcohols and their derivatives. Stereoisomerism. Carbohydrates. Polybasic acids and their derivatives. Substituted acids. Amino acids and proteins. Polyfunctional aromatic compounds. Color and constitution. Heterocyclic compounds. Organic chemistry and life. Appendix The identification of organic compounds Index.

Note (946) An introductory presentation for college students who are not planning to major in organic chemistry General principles and the general characteristics of classes of compounds are emphasized. Theories and basic concepts are introduced gradually and in relation to discussions of the compounds which best illustrate them. The first edition appeared in 1936 This edition represents a very extensive revision in which little material has been carried over. The author is Professor of Chemistry in Washington and Lee University

DREISBACH, ROBERT RICKERT

Pressure-volume-temperature relationships of organic compounds. Third edition. Sandusky Ohio Handbook Publishers, Inc., 1952 303 p. 22 cm. $10.00 394

Contents (abridged) Table of symbols. Cox chart families and their infinite points. How to use the tables Tables of vapor pressure-temperature relationships. How to determine the Cox chart family to which a compound belongs. Compounds classified according to their Cox chart families.

Note A reference volume for the use of professional chemists. The heart of it is a series of tables from which the boiling points at various pressures for a wide range of organic compounds can be read directly The values given, although less accurate than those which can be determined in careful measurements with precision apparatus, are more accurate than can be determined in the average industrial or college laboratory Some of the values in the tables have been derived from the precise measurements made in recent years by the American Petroleum Institute project of the National Bureau of Standards but the greater part of them have been deter-

mined from large-scale Cox charts constructed by the author and his co-workers at the Dow Chemical Company The tables are supplemented by discussion and instructions on using them to determine number of values in addition to boiling points. The earlier editions of the book were privately printed by the Dow Chemical Company

ELDERFIELD, ROBERT COOLEY editor

Heterocyclic compounds. New York John Wiley & Sons, Inc., 1950–51–52 4 vol. illus. 24 cm. Vol. I, $15 00 Vol. II, $15 00, Vol. III $12.00 Vol. IV $17 00 395

Contents: Vol. Ethylene and trimethylene oxides, by S. Winstein and R. B. Henderson. Ethylenimine, by J. S. Fruton. Derivatives of azete, by S. A. Ballard and D. S. Melstrom. Furan, by R. C. Elderfield and T N Dodd, jr The chemistry of thiophene, by F F Blicke. The chemistry of pyrrole and its derivatives, by A. H. Corwin. Monocyclic pyrans, pyrones, thiopyrans, and thiopyrones, by J. Fried. The chemistry of the pyridines, by H. S. Mosher. Piperidines and partially hydrogenated pyridines, by H. S. Mosher. Index. Vol. II. Benzofuran and its derivatives, by R. C. Elderfield and V B. Meyer Isobenzofuran, phthalan, and phthalide, by R. C. Elderfield. Dibenzofuran (diphenylene oxide) by W E. Parham. Thianaphthene, by D K. Fukushima. Dibenzothiophene, by D. K. Fukushima. Coumarins, by S. Wawzonek. Isocoumarins, by S. Wawzonek. Chromones, flavones, and isoflavones, by S. Wawzonek. Chromenols, chromenes, and benzopyrylium salts the anthocyanins, by S. Wawzonek. Chromanones, flavanones, chromanols, and flavanols: catechin, brazilin, and hematoxylin, by S. Wawzonek. Chromans, by S. Wawzonek. Xanthones, xanthenes, xanthydrols, and xanthylium salts, by S Wawzonek. Fluorans, fluoresceins, and rhodamines, by S. Wawzonek. Thiochromans and related compounds, by D. S. Tarbell. Index. Vol. III. The chemistry of indoles, by P L. Julian and others. Isoindole, by R. C. Elderfield and T N Dodd, jr The chemistry of carbazole, by W Freudenberg. Pyrindine, quinindine, and related compounds, by R. C. Elderfield and E. T Losin. Bicyclic systems with nitrogen atom common to both rings, by H. R. Ing Index. Vol IV The chemistry of quinoline, by R. C. Elderfield. Isoquinoline, by W J Gensler The acridines, by A. Albert. Phenanthridine, by L. P Walls. Benzoquinolines, by L. P Walls. Index.

Note. A valuable addition to chemical literature. Its purpose is to make available detailed monographic treatments of heterocyclic compounds of current interest which have not already been treated fully in other books. Each of the chapters is written by specialist who has worked with the group of compounds which he discusses. The treatment is on professional level, for full attention is given to such aspects as nomenclature, structure, reaction, and derivatives. Literature citations are given as footnotes.

ENGLISH JAMES JR., AND HAROLD G CASSIDY

Principles of organic chemistry an introductory text in organic chemistry New York McGraw Hill Book Company Inc. 1949 512 p illus. 23 cm. (International chemical series Louis P Hammett, consulting editor) $6 00 396

Content (abridged) Hydrocarbons. Alcohols and phenols. Halogen compounds. Ethers. Carbonyl compounds—aldehydes and ketones. Carboxylic acids. Amines and diazonium compounds. Sulfur compounds. Carbonic acids. Substituted acids. Color and chemical constitution. Stereoisomerism. Carbohydrates—the sugars. Macromolecules—polysaccharides, proteins, and plastics Topics in biochemistry Review exercises. Index

Note. A relatively brief textbook in which much of the descriptive detail which is characteristic of texts in this field is lacking. The authors—faculty members of Yale University—have presented fundamental material such as essential to basic understanding of organic chemistry and have described selected number of typical reactions. The book is intended for the instruction of college students who will specialize in related fields such as medicine and engineering.

FERGUSON LLOYD N

Electron structures of organic molecules. New York Prentice-Hall Inc. 1952 335 p illus. 24 cm. $8.65 397

Contents: Introduction. Types of chemical bonds. The polar nature of covalent bonds. Covalent bond distances and bond angles. Intramolecular forces. Induction and electric dipole moments. Magnetic susceptibility Resonance and its applications to organic chemistry Absorption spectroscopy Aromatic substitution. Molecular and electron structures by physical methods. Author index. Subject index.

Note A survey of the current knowledge and hypotheses pertaining to electron distributions of organic molecules and to their significance in the properties of compounds, in reactions between compounds, and in physical characteristics such as are revealed by absorption spectroscopy Experimental methods by means of which the information was obtained are described also. The presentation is not so compact as to require the average reader to go to the source articles. However, the text is well documented with literature references. The book is suitable for upperclass college students who are majoring in organic chemistry and for graduate chemists who wish to be brought up to date on this important phase of organic chemistry

FIESER, LOUIS FREDERICK, AND MARY FIESER

Organic chemistry Second edition. Boston D C. Heath and Company 1950 1125 p. illus. 24 cm. $8 00 398

Contents The nature of organic compounds. Saturated hydrocarbons (alkanes) Ethylenic hydrocarbons (alkenes) Acetylenic hydrocarbons (alkines) Petroleum. Alcohols. Halogen compounds. Carboxylic acids. Aldehydes and ketones. Amines. Stereochemistry Ring formation. Rubber. Reaction mechanisms. Carbohydrates. Fats and waxes. Proteins. Microbiological processes. Role of carbohydrates in biological processes. Metabolism of fats. Metabolism of proteins and amino acids. Structure of benzene. Aromatic hydrocarbons. Aromatic substitutions. Nitro compounds. Sulfonic acids. Aromatic amines. Phenols. Aromatic halogen compounds. Aromatic carboxylic acids. Aromatic aldehydes and ketones. Quinones. Naphthalene. Polynuclear hydrocarbons. Heterocyclic compounds. Dyes. Synthetic fibers. Synthetic plastics and resins. Steroids. Isoprenoid compounds. Accessory dietary factors. Advances in chemotherapy Index. Appendix (tables)

Note (931) This book is both an introductory textbook of comprehensive scope and general survey of applications of organic chemistry in biological and medical sciences and in technology The "essay" chapters, such as the one on rubber are full enough to serve as introductory survey for graduate chemists who are not specialists in the subject of the chapter but need quick view of the fundamentals together with literature references. In the present revision two chapters have been added and many parts have been rewritten The amount of material included has been increased substantially more than the 24-page gain in length would indicate.

FLETT LAWRENCE H., AND WILLIAM HOWLETT GARDNER

Maleic anhydride derivatives reactions of the double bond. New York John Wiley & Sons, Inc., 1952 269 p. illus. 23 cm. $6.50 399

Contents: Hydrocarbons. Halogens and their compounds. Hydrogen. Metallic compounds. Compounds containing nitrogen. Compounds containing oxygen. Sulfur compounds. Energy and catalysts. Index.

Note: A reference book of reactions and laboratory procedures in which maleic anhydride or one of its simple, unsaturated derivatives is employed One hundred and sixteen reactions are described. For most of them the reaction is diagrammed, laboratory procedure is described, and there is literature reference. In addition, in many instances, uses of the end product are discussed. The book is of interest to organic chemists.

FUSON REYNOLD CLAYTON

Advanced organic chemistry New York John Wiley & Sons, Inc., 1950 669 p. illus. 23 cm. $8.50 400

Contents (abridged) Cleavage of carbon-carbon bonds. Carbon-carbon multiple bonds. Hydroxy compounds. Organometallic compounds in synthesis. Carbon monoxide in synthesis. Oxidation. Active methylene compounds. Nitro, nitroso, and oxime compounds. Amines and amine compounds. Azo and diazo compounds. Organic sulfur compounds. Polymerization. Author index. Subject index

Note. A textbook for students who are majoring in organic chemistry Its main theme is expressed in the first sentence: "The study of organic chemistry can be greatly facilitated if it is recognized

that the very large number of reactions of organic molecules actually involves relatively few fundamentally different transformations. The fundamental behavior patterns of organic compounds and groups and analogies and contrasts among them are constantly pointed out. The organic reactions with which the practicing organic chemist must be familiar are described compactly and clearly and in most instances are diagrammed. Bibliographical footnotes indicate the important related literature. Young chemists in industry as well as advanced students of chemistry will find the book useful.

HARTOUGH HOWARD D

Thiophene and its derivatives. With special chapters by *H. P Hochgesang and F F* Blicke. New York Interscience Publishers, Inc., 1952 533 p 24 cm. (The chemistry of heterocyclic compounds a series of monographs Arnold Weissberger consulting editor) $16.50 401

Contents: General discussion. Biological and pharmacological activity of thiophene and its derivatives, by F F Blicke. Synthesis and physical properties of thiophene and its homologs. Molecular structure and spectroscopy of thiophene and its derivatives, by F P Hochgesang. Factors affecting substitution reactions in the thiophene nucleus. Alkylation, polymerization, hydrogenation and miscellaneous reactions of thiophene. Halothiophenes and halоalkylthiophenes. The nitro- and aminothiophenes. Thiophene compounds containing nitrogen in the side chain. Hydroxythiophenes, thienylalkanols, alkoxythiophenes, and thienylalkyl ethers. Aldo and keto derivatives of thiophene. Carboxy derivatives of thiophene. Sulfur derivatives of thiophene. Metal and miscellaneous metalloid derivatives of thiophene. Synthesis and properties of di- and polythienyls and arylthiophenes. Selenophene, tellurophene, trimethylenethiophenes, tellurophene, and tetrahydroselenophene. Appendix. Index.

Note: A monographic treatment of an important group of organic compounds. The writing is very compact, consequently much more information is included than the number of pages might indicate. There are 108 tables scattered throughout the chapters. The treatment is on a professional level. The literature published down to October 1, 1949 has been covered and is cited in footnotes. The compounds covered have a wide range of developed and potential applications, and the book is an essential addition to active collections on organic chemistry

KOSOLAPOFF GENNADY MICHAEL

Organophosphorus compounds. New York John Wiley & Sons, Inc., 1950 376 p 23 cm. $8.50. 402

Contents: Introduction. Phosphines and related compounds. Halophosphines. Halophosphoranes, halides and phosphoryl halides. Quaternary phosphonium compounds. Tertiary phosphine oxides, sulfides, and selenides. Phosphinous, phosphonous, and phosphonic acids, their sulfur analogs and esters. Phosphites and thiophosphites. Phosphates, halophosphates, and thio analogs. Compounds with phosphorus to nitrogen bonds. Quasi-phosphonium compounds. Derivatives of anhydro acids. Appendix. Index.

Note: A comprehensive summary of the current knowledge of an important group of organic compounds. Particular attention is paid to the properties, methods of preparation, chief reactions, and uses, especially uses in the chemical laboratory. Literature references are given generously. The work is essentially a reference book.

LOWY ALEXANDER, AND BENJAMIN HARROW

An introduction to organic chemistry Seventh edition. Revised by Benjamin Harrow and Percy M. Apfelbaum. New York John Wiley & Sons Inc., 1951 480 p illus. 22 cm. $5.50 403

Contents (abridged): Saturated hydrocarbons. Unsaturated hydrocarbons. Alcohols. Ethers. Aldehydes and ketones. Carboxylic acids. Fats and oils, waxes, and some lipids. Amines. Nucleoproteins, pyrimidines, and purines. Cyclic compounds. Alicyclic compounds. Aromatic hydrocarbons. Aromatic amines. Aromatic acids and their derivatives. Heterocyclic compounds. Synthetic polymers. Plastics and rubbers. Dyes. Terpenes and related substances. Alkaloids. Plant and animal pigments. Enzymes, vitamins, hormones. Nomenclature of organic compounds. Appendix. Index.

Note: (337*) A long-established text (the first edition appeared in 1924) intended principally for college students who are preparing for careers in medicine, dentistry, pharmacy, or the biological sciences. A simpler treatment is given than in introductory texts written for students planning to major in organic chemistry. There is, however, no special emphasis on those aspects of organic chemistry which are of special interest in biochemistry. Changes in this edition are not extensive. However recent developments in such fields as the chemistry of aliphatic compounds have been incorporated. The book is about 25 pages longer.

NOLLER CARL ROBERT

Textbook of organic chemistry Philadelphia W B Saunders Company 1951 643 p illus. 24 cm. $5 75 404

Contents (abridged): Natural gas, petroleum and derived products. Esters of inorganic acids. Alkyl halides. Grignard reagents. Mechanism of organic reactions. Syntheses of alkanes and alkenes. Alkynes (acetylenes). Ethers. Waxes, fats, and oils. Aldehydes and ketones. Aliphatic nitrogen compounds. Aliphatic sulfur compounds. Proteins, amino acids, and peptides. Stereoisomerism. Benzene and its homologs. Coal products. Halogen derivatives of aromatic hydrocarbons. Aromatic nitro compounds. Aromatic sulfonic acids and their derivatives. *Aromatic amines. Diazonium salts. Phenols,* aminophenols, and quinones. Condensed nuclear hydrocarbons and their derivatives. Heterocyclic compounds. Alkaloids. Dyes and dyeing. Dienes, rubber and synthetic rubbers. Chlorinated and fluorinated aliphatic hydrocarbons. Unsaturated alcohols. Unsaturated acids. Polycarboxylic acids. Keto acids. Alicyclic compounds. Organic peroxides. Autoxidation and antioxidants. Organometallic compounds. Silicon compounds. Appendixes. Index.

Note: A textbook for introductory college courses offered to students who have completed a course in general chemistry at the college level. Understanding of reaction mechanisms is emphasized. However, the presentation is descriptive rather than mathematical. The author is Professor of Chemistry in Stanford University

ORGANIC REACTIONS Volume v Roger Adams, editor-in-chief New York John Wiley & Sons Inc. 1949 446 p illus. 24 cm. $7.50 405

Contents: The synthesis of acetylenes, by T. L. Jacobs. Cyanoethylation, by H. A. Bruson. The Diels-Alder reaction: quinones and other cyclenones, by L. W Butz and A. W Rytina. Preparation of aromatic fluorine compounds from diazonium fluoborates: the Schiemann reaction, by A. Roe. The Friedel and Crafts reaction with aliphatic dibasic acid anhydrides, by E. Berliner. The Gattermann-Koch reaction, by N N. Crounse. The Leuckart reaction, by M. L. Moore. Selenium dioxide oxidation, by N. Rabjohn. The Hoesch synthesis, by P. E. Spoerri and A. S. DuBois. The Darzens glycidic ester condensation, by M. S. Newman and B. J. Magerlein. Index.

—— Volume vi. Roger Adams, editor-in-chief New York John Wiley & Sons, Inc., 1951 517 p. illus 24 cm. $8 00 406

Contents: The Stobbe condensation, by W S. Johnson and G. H. Daub. The preparation of 3,4-dihydroisoquinolines and related compounds by the Bischler-Napieralski reaction, by W M. Whaley and T R. Govindachari. The Pictet-Spengler synthesis of tetrahydroisoquinolines and related compounds, by W M. Whaley and T R. Govindachari. The synthesis of isoquinolines by the Pomeranz-Fritsch reaction, by W J. Gensler. The Oppenauer oxidation, by C. Djerassi. The synthesis of phosphonic and phosphinic acids by G. M Kosolapoff. The halogen-metal interconversion reaction with organolithium compounds, by R. G Jones and H. Gilman. The preparation of thiazoles, by R. H. Wiley and others. The preparation of thiophenes and tetrahydrothiophenes, by D. E. Wolf and K. Folkers. Reduction by lithium aluminum hydride, by W G. Brown. Index.

Note: (345-6*) These additional volumes in this series contain the monographs listed in the above tables of contents. The series has as its purpose the publication of monographs on the useful reactions in organic chemistry. In contrast to *Organic syntheses,* the emphasis is on the reaction rather than on the product. Each of the monographs is a comprehensive survey of the reaction named in its title, covering not only its nature and basic principles, but also its uses and limitations, procedures, conditions, and yields. In many instances an extensive table of data on the properties of derivatives is included. Usually the bibliographies are extensive.

ORGANIC SYNTHESES an annual publication of satisfactory methods for the preparation of

organic chemicals. Cliff S. Hamilton, editor in-chief Volume 29 New York John Wiley & Sons Inc., 1949 119 p illus. 24 cm. $3 00 407

Contents: 1-acetylcyclohexene. Acrylic acid. m-aminobenzaldehyde dimethylacetal. 5-amino-2,3-dihydro-1,4-phthalazinedione. β-benzoylacrylic acid. α-bromoheptaldehyde. *tert.*-butylamine and *tert.*-butylamine hydrochloride. Catalyst, Raney nickel. 4-chlorobutyl benzoate. 2-chloromethylthiophene. γ-chloropropyl acetate. 2,6-dichlorophenol. α,α-diphenylacetone. Ethyl β-anilinocrotonate. Ethyl 2-pyridylacetate. 1-ethynylcyclohexanol. Homophthalic acid and anhydride. β-(2-hydroxyethylmercapto) propionitrile. Indazole. Isoprene cyclic sulfone. Methacrylamide. m-methoxybenzaldehyde. 1-methylaminoanthraquinone. 1-methylamino-4-bromoanthraquinone. 2-methyl-4-hydroxyquinoline. m-nitrobenzaldehyde dimethylacetal. p-nitrobenzonitrile. 5-nitro-2,3-dihydro-1,4-phthalazinedione. Oleyl alcohol. α-phenylcinnamonitrile. Protocatechuic acid. 2-thiophenealdehyde. 1,2,5-trihydroxypentane. Trimethylene oxide. Subject index.

—— Arthur C. Cope, editor in-chief Volume 30. New York John Wiley & Sons, Inc., 1950 115 p illus. 24 cm. $3 00 408

Contents. 9-acetylanthracene. 3-aminopyridine. p-aminotetraphenylmethane. DL-aspartic acid. Benzoylcholine iodide and chloride. n-butylacetylene. β-carbethoxy- γ,γ-diphenylvinylacetic acid. Chloroacetonitrile. *trans*-2-chlorocyclopentanol. 4,4′-dichlorodibutyl ether. Diethyl *cis*-Δ4-tetrahydrophthalate and diethyl *cis*-hexahydrophthalate. 1,4-diiodobutane. Ethanedithiol. Ethylenimine. 5-ethyl-2-methylpyridine. Ethyl phenylcyanoacetate. Fumaronitrile. Glutaric acid. Hexahydro-1,3,5-tripropionyl-s-triazine. 2-iodothiophene. 2-mercaptobenzimidazole. Methanesulfonyl chloride. N-methyl-2,3-dimethoxybenzylamine. 1-methyl-3-ethyloxindole. Methyl β-thiodipropionate. 1-naphthaldehyde. o-nitroacetophenone. Phenylacetylene. *trans*-1-phenyl-1,3-butadiene. α-phenyl-α-carbethoxyglutaronitrile. α-phenylglutaric anhydride. Phenylmaleic acid. 2,3-pyrazinedicarboxylic acid. 1,2,3,4-tetrahydrocarbazole. *cis*-Δ4-tetrahydrophthalic anhydride. Tetraphenylarsonium chloride hydrochloride. o-tolualdehyde. Vanillic acid. Vinyl laurate and other vinyl esters. Index.

—— R. S Schreiber, editor in-chief Volume 31 New York John Wiley & Sons, Inc., 1951 122 p. illus 24 cm. $3.50 409

Contents. α-acetyl-δ-chloro-γ-valerolactone. δ-acetyl-n-valeric acid. p-aminobenzaldehyde. Arylureas. Benzofurazan oxide. N-bromoacetamide. o-chlorophenylcyanamide. o-chlorophenylthiourea. Coumalic acid. Cyclohexylidenecyanoacetic acid and 1-cyclohexeneacetonitrile. 4,4′-dibromobiphenyl. 1,6-diiodohexane. Diisopropyl methylphosphonate. 2,3-dimethoxycinnamic acid. β-dimethylaminoethyl chloride hydrochloride. β,β-dimethylglutaric acid. 3,5-dimethylpyrazole. 2,6-dinitroaniline. N,N′-diphenylbenzamidine. α,β-diphenylcinnamonitrile. Ethyl α-acetyl-β-(2,3-dimethoxyphenyl)-propionate. Ethyl pyruvate. Hexamethylene diisocyanate. Iodocyclohexane. Lauron. O-methylcaprolactim. Methyl cyclopropyl ketone. 9-nitroanthracene. 1-(p-nitrophenyl)-1,3-butadiene. Pentaerythrityl tetrabromide. phenylallylsuccinic acid. Phenyldichlorophosphine. Quinacetophenone monomethyl ether. Syringic aldehyde. dl-4,4′,6,6′-tetrachlorodiphenic acid. 2,2,6,6-tetramethylolcyclohexanol. Tetraphenylethylene. Thiolacetic acid. 2-thiophenecarboxaldehyde. Triethyl phosphite. Index to volumes 30 and 31.

—— Richard T Arnold editor-in-chief Volume 32 New York John Wiley & Sons, Inc., 1952 119 p illus 24 cm. $3.50 410

Contents: Abietic acid. Acrolein acetal. Alloxan monohydrate. 2-aminobenzophenone. ε-aminocaproic acid. 1,1′-azo-bis-1-cyclohexanenitrile. β-bromoethylphthalimide. *tert*-butyl hypochlorite. 1-chloro-2,6-dinitrobenzene. p-chlorophenyl salicylate. β-chlorovinyl isoamyl ketone. Cyanogen iodide. 3-cyano-6-methyl-2(1)-pyridone. 1,2-cyclohexanedione dioxime. Cyclohexene sulfide. Cyclopentadiene and 3-chlorocyclopentene. 2,4-diamino-6-hydroxypyrimidine. 2,2-dichloroethanol. 1,1′-dicyano-1,1′-bicyclohexyl. 1,2-di-1-(1-cyano)-cyclohexylhydrazine. Diethyl Δ2-cyclopentenylmalonate. Diethyl ethylidenemalonate. Dimethyl acetylenedicarboxylate. 4,6-dimethylcoumalin. 1,5-dimethyl-2-pyrrolidone. *asym*-dimethylurea. α,α′-diphenylsuccinonitrile. 2-ethylhexanonitrile. Ethyl orthocarbonate. 1,1′-ethynylene-bis-cyclohexanol. Flavone. Isodehydracetic acid and ethyl isodehydracetate. β-ketoisooctaldehyde dimethyl acetal. Methyl p-acetylbenzoate. Methylglyoxal-ω-phenylhydrazone. Methyl γ-methyl-γ-nitrovalerate. Naphthalene-1,5-disulfonyl chloride. Neophyl chloride. Phenylacetamide. Sodium nitromalonaldehyde monohydrate. β-tetralone. Thiobenzoic acid. 10-undecynoic acid. Index to volumes 30-32.

Note: An internationally-known series which has been published since 1921. For each substance practical laboratory methods are given, the apparatus is described and, if necessary illustrated; notes are given on special points; and other published methods for synthesis of the same compound are mentioned and references are made to their original publication. Before acceptance for publication, each synthesis is carried out in at least two laboratories with which the submitter is not associated.

PERCIVAL, EDMUND GEORGE VINCENT

Structural carbohydrate chemistry New York Prentice-Hall Inc. 1950 246 p illus. 22 cm. $8 00 411

Contents. The general properties, configurations and interrelationships of the monosaccharides. The sugars as ring forms. Characteristic reactions of sugars involving hydroxyl groups. Sugar anhydrides and amino sugars. Oligosaccharides. Polysaccharides. Further studies on cellulose, starch, glycogen and xylan. The uronic acids and the polyuronides. Natural glycosides. Other important natural products. Some less familiar polysaccharides. Author index. Subject index.

Note. A compact presentation of the chemistry of the sugars and the related compounds. As the title indicates, the emphasis is on structure or configuration. However, information is included also on methods of preparation and on reactions. The book is liberally illustrated with structural diagrams. Pertinent literature is cited in footnotes.

REMICK ARTHUR EDWARD

Electronic interpretations of organic chemistry Second edition. New York John Wiley & Sons, Inc., 1949 600 p illus. 24 cm. $6.50. 412

Contents. Pre-electronic theories of chemical affinity. Early applications of the electron theory to problems of organic reactivity. Applications of the Lewis theory to problems of molecular structure. The generalized concept of oxidation-reduction. Outline of the electronic theory of the English school. Some contributions from the field of chemical physics. Some contributions from the field of kinetics. The role of the solvent. Some contributions from the field of stereochemistry. Electron-sharing reactions. Electron pairing reactions. Some contributions from the field of electrochemistry. Appendices: List of basic principles. Table of symbols. Index.

Note: (970) A valuable summary of fundamental chemical knowledge which can be applied toward understanding the reactions and other phenomena of organic chemistry. The author has gathered together the developments in theoretical and physical chemistry which he believes are or can be useful to workers in preparative organic chemistry. These theories and principles are explained and evaluated, and the experimental evidence which supports them is described. Footnote references are given to original publications. Although used chiefly as text in courses offered to advanced students in organic chemistry, the work is potentially useful to graduate chemists as well. It has been extensively revised in this edition.

SHIRLEY DAVID ALLEN

Preparation of organic intermediates. New York John Wiley & Sons, Inc. 1951. 328 p. illus. 23 cm. $6.50 413

Note: A reference book in which specific directions are given for the preparation of more than 500 compounds useful in the synthesis of other compounds. The write-up of each procedure resembles in organization and content the write-ups in *Organic syntheses*, and in fact the book is intended to complement *Organic syntheses*. According to the author the following criteria have been followed in selecting compounds for inclusion: (1) The compound either is not available commercially or if available is relatively expensive; (2) directions for preparation of the compound had not been included in *Organic syntheses* through Volume 28; and (3) the compound is one whose structure is simple and contains reactive functional groups which make it useful as an intermediate, or its preparation involves a generally useful type of organic reaction and the directions may be applied to the preparation of related compounds.

WATERS, WILLIAM ALEXANDER

Physical aspects of organic chemistry Fourth edition (completely rewritten) New York D Van Nostrand Company Inc., 1950. 537 p illus. 22 cm. $8.00. 414

Contents: Chemical affinity Valency bonds. The study of molecular structure. Electrical dipoles. Chemical reactivity Unsaturation. Free radicals and their reactions. Radical-catalyzed reactions. Ionization and ionic reactions. Acidity General polarity Substitution reactions of organic halogen compounds. Ester hydrolysis and esterification. Isostropic change. Molecular rearrangement. Reactions of conjugated systems. Aromatic compounds. Index of authors. Subject index.

Note. The present edition of this well known book on the mechanisms of organic reactions, published eight years after the third edition, contains numerous revisions in order to incorporate such advances as the concept of resonance. However the book has not been completely rewritten in the new terminology In the words of the author "Since the essential purpose is the interpretation of experimental facts we shall make use of whichever conceptual model appears to be the most helpful in attaining clarity in the discussion of each group of experimental data. The book is of interest to advanced students of organic chemistry and to teachers of the subject.

WERTHEIM, EDGAR

Textbook of organic chemistry Third edition. Philadelphia The Blakiston Company 1951 958 p. illus. (part col'd) 23 cm. $5.00 415

Contents (abridged) Part I, Aliphatic compounds: The methane series of hydrocarbons. Unsaturated hydrocarbons. Halogen derivatives. Alcohols. Ethers. Aldehydes and ketones. Monocarboxylic acids, salts, thio acids. Acid derivatives. Substituted acids. Dicarboxylic acids Urea, thiourea, guanidine, uric acid. Amines. Compounds of phosphorus, arsenic, sulfur ilicon, and metals. Isomerism optical activity Carbohydrates. Part II, Aromatic compounds: Aromatic hydrocarbons. Sulfonic acids. Nitro compounds. Aromatic amines. Diazo compounds and derivatives. Aromatic alcohols, phenols. Aromatic acids. Aromatic aldehydes, ketones, and quinones. Grignard and Friedel-Crafts reactions. Naphthalene, anthracene, and related compounds. Alicyclic compounds. Terpenes. Heterocyclic compounds. Alkaloids. Dyes. Proteins. Glycosides, enzymes, hormones, vitamins, antibiotics. Identification of organic compounds. Some electronic reaction mechanisms. Appendix. Index.

Note. (978) An established introductory text, used in full length introductory courses. Although the standard range of subject matter is covered, the exposition is less catalogue of compounds and properties than are some textbooks. In general the author's method has been to put physical properties such as boiling points in tables rather than in the discussions of groups of compounds. A very generous use of structural diagrams in representing reactions and relations between compounds further simplifies the presentation. The second edition appeared in 1945. Fairly substantial changes were made in preparing the third edition. The author is Professor of Organic Chemistry in the University of Arkansas.

WHELAND GEORGE WILLARD

Advanced organic chemistry Second edition. New York John Wiley & Sons, Inc., 1949 799 p. illus. 24 cm. $8.50 416

Contents. Some fundamental concepts. Addition compounds. Modern concepts of acids and bases. Structural isomerism Tautomerism. The configurations of carbon compounds. The stereochemistry of carbon. The configuration and the stereochemistry of elements other than carbon. Strain theory and steric hindrance. The theory of resonance. Electrostatic effects in organic chemistry Molecular rearrangements: the 1 2 shifts—further types. Tautomerism. Free radicals. Author index Subject index.

Note Advanced topics not covered in first-year courses in organic chemistry are discussed in this textbook for second-year undergraduate courses. The exposition is built upon modern structural theory The discussions of such phenomena as electrostatic effects, free radicals, strain theory and steric hindrance can be read separately with profit by persons who have the requisite knowledge of elementary organic chemistry The author has taken pains to state full structural formulas and to give clear definitions of advanced technical terms. There are numerous references to the related literature. The first edition of the book was not regularly published but was produced in mimeographed format for use at the University of Chicago.

WHITMORE FRANK CLIFFORD

Organic chemistry With assistance of a committee of colleagues. Second edition. New York D Van Nostrand Company Inc. 1951 1005 p. illus. 24 cm. $12.00 417

Contents (abridged) Aliphatic compounds. Alicyclic compounds. Aromatic compounds. Heterocyclic compounds. Organophosphorus and organometallic compounds. Index.

Note: (960) A standard American college textbook of the semireference type. Practically all of the important organic reactions are described briefly and all of the compounds mentioned in the text are brought out in the 139 page index. Footnotes and literature references throughout the work serve to guide the reader to fuller treatment of the specific reactions that are of interest. The first edition, published in 1937 was reprinted ten times. The present edition, prepared from manuscript left incomplete upon the author's death in 1947 contains number of useful revisions, among which are completely new index, fuller literature references, and numerous revisions in the treatment of the aliphatic compounds.

POLYMERS AND POLYMERIZATION

BOUNDY, RAY H., AND OTHERS

Styrene its polymers copolymers and derivatives. Edited by Ray H. Boundy Raymond F Boyer and Sylvia M. Stoesser editorial assistant. New York Reinhold Publishing Corporation 1952 1304 p. illus 23 cm. (American Chemical Society monograph series No 115) $20.00 418

Contents Introduction, by A. J. Warner. History by R. H. Boundy and S. M. Stoesser. Manufacture of styrene monomer by J. E. Mitchell. Physical properties of styrene monomer, by D. R. Stull. The chemistry of styrene monomer, by G. H. Coleman. Analysis of styrene monomer by E. N Luce. Handling styrene monomer by L. E. Lloyd. The polymerization of styrene, by L. C. Rubens and R. F Boyer. Summary of uses for styrene monomer by J. W Everson. Molecular weight and solubility of polystyrene, by R. F Boyer and R. Simha. The general physical properties of polystyrene, by J. L. Williams and K. J. Clearman. Optical and electrical properties of polystyrene, by L. A. Matheson and J. L. Saunderson. Rheological properties of polystyrene, by R. S. Spencer. The degradation of polystyrene, by H. H. G. Jellinek. Chemical alteration of styrene polymers, by G. D. Jones. α-methylstyrene, by J. L. Amos and others. Ethylvinylbenzene and divinylbenzene mixture and its copolymers, by J. L. Amos and others. Halostyrenes and other vinyl aromatic compounds, by J. L. Amos and J. W Everson. Styrene resins, by G. A. Grove. A survey of styrene and polystyrene in Germany, by W C. Goggin. Copolymerization, by R. Simha and L. A. Wall. A survey of patent literature on styrene copolymers, by W J LeFevre. Fabrication of polystyrene, by W C. Goggin. Author index. Subject index.

Note A comprehensive work in which the very extensive literature of the subject together with unpublished information in possession of the editors and authors is expertly digested and organized. The literature including patents appears to have been fully covered through 1950 and there are some references to 1951 publications. A full scale presentation of the scientific knowledge can be expected in this series; this book contains also much explicit information on the fabrication of polystyrene and other plastic materials based on the styrene. It is fundamental book in both the literature of polymerization and that of the plastic materials.

D ALELIO GAETANO FRANCIS

Fundamental principles of polymerization rubbers, plastics, and fibers. New York John Wiley & Sons, Inc., 1952 517 p. illus. 24 cm. $10 00 419

Contents: Polymers—rubbers, plastics, and fibers Polymerization reactions and functionality The existence of macromolecules. The non-homogeneity of polymers and their properties. Polyreactions. Polymerization processes. Molecular weight determinations. Kinetics of polymerizations. Reaction loci in polymerization systems Copolymer compositions and stability of polymers. Author index. Subject index.

Note. A very wide range of information is presented in this book and so many papers are cited that the author index runs to ten columns. Nevertheless, the author has been very selective in choosing the material and has not attempted comprehensive monograph. The book presents—as the title indicates—the basic knowledge of polymerization and in addition covers historically the development of important theories, etc. It is addressed to such readers as graduate chemists and chemical engineers. The author is Manager of Research for the Koppers Company Inc.

MARK, HERMANN FRANZ, AND A. V TOBOLSKY

Physical chemistry of high polymeric systems. Second completely revised and augmented edition New York Interscience Publishers Inc. New York 1950 506 p illus. 24 cm. (High polymers. A series of monographs on the chemistry, physics and technology of high polymeric substances. Editorial board H. Mark C. S Marvel, H. W Melville, G S Whitby Vol. II) $6.50 420

Contents Geometry of molecules as revealed by diffraction methods. Behavior of molecules in electric and magnetic fields. Molecular spectra. Primary and secondary valences. Crystal structure and crystal forces. Crystal structure and crystal symmetry Liquids, mesophases and the amorphous crystalline character of polymers. Thermodynamics of solutions. Kinematics of liquids and solutions—viscosity—diffusion—and ultracentrifugation. Mechanical behavior of high polymers. Step reaction polymerization. Chain reaction polymerization. Degradation of high polymers. Author index. Subject index.

Note (937a) A revision of a well known work on the physical chemistry of macromolecules. As in the first edition, the book is concerned with the molecular structure and properties of high polymers as a group, rather than of individual compounds. Also, emphasis is placed on the results obtained from experimental methods rather than on the methods themselves. This edition has been revised and enlarged to include developments since 1940 particularly those relating to the thermodynamic and kinematic behavior of polymer solutions and the kinetics of polymer formation. New chapters have also been added on molecular spectra and step reaction polymerization.

PHYSICAL CHEMISTRY

ADVANCES IN CATALYSIS AND RELATED SUBJECTS Volume IV Edited by W G Frankenburg E K. Rideal and V I. Komarewsky Editorial board P H. Emmett and H. S Taylor New York Academic Press Inc., 1952 457 p illus 24 cm. $9.50 421

Contents Chemical concepts of catalytic cracking, by R. C. Hansford Decomposition of hydrogen peroxide by catalysts in homogeneous aqueous solution, by J. H. Baxendale Structure and sintering properties of cracking catalysts and related materials, by H. E. Ries, Jr Acid base catalysis and molecular structure, by R. P Bell. Theory of physical adsorption, by T L. Hill. The role of surface heterogeneity in adsorption, by G D Halsey Twenty-five years of synthesis of gasoline by catalytic conversion of carbon monoxide and hydrogen, by H. Pichler. The free radical mechanism in the reactions of hydrogen peroxide, by J. Weiss. The specific reactions of iron in some hemoproteins, by P George. Author index. Subject index.

Note: (167) A volume of original monographic surveys in which the emphasis is on recent developments The level of treatment is the same as in previous volumes in the series In other words, the writing is addressed primarily to graduate chemists interested in keeping abreast of developments in the field of catalysis.

AMIS, EDWARD STEPHEN

Kinetics of chemical change in solution. New York The Macmillan Company 1949 332 p illus. 22 cm. $5 25 422

Contents Introduction. The Debye-Hückel theory Liquid dielectrics and polar moments. The Brønsted-Christiansen-Scatchard equation. The temperature coefficient of reaction rates; energy of activation The temperature coefficient of reaction rates; the Arrhenius frequency factor Semiempirical calculation of activation energies; the theory of absolute reaction rates. Reactions between ions and dipolar molecules and between dipolar molecules and dipolar molecules. Reaction rates and the solvent Photochemistry; chain reactions. Homogeneous catalysis. Adsorption, heterogeneous catalysis, and heterogeneous reactions. Index.

Note: A concise yet thorough presentation of the fundamental principles of rate processes in solution, and such related topics as the activity coefficients of ions, polar moments in solution, and dielectric constants of liquids. The book is written for advanced chemistry students, and the mathematical calculations involved in the development of kinetic and rate equations require a sound knowledge of differential and integral calculus. Emphasis is placed on the theoretical aspects of the subject, but practical applications of solution processes are briefly discussed.

ANNUAL REVIEW OF PHYSICAL CHEMISTRY Volume 3 G K. Rollefson editor R. E Powell, associate editor Stanford Calif Annual Reviews Inc., 1952 416 p 23 cm. $6 00 423

Contents. Quantum theory theory of molecular structure and valence, by C. A. Coulson. Radioactivity and nuclear theory by M. G. Mayer Isotopes, by J Bigeleisen. Radiation chemistry by A. O. Allen. Polymeric electrolytes, by P Doty and G. Ehrlich. Ion exchange, by W C. Bauman and others. Thermochemistry and the thermodynamic properties of substances, by R. F Newton. Bond energies and bond distances, by G. Glockler. Heterogeneous equilibria and phase diagrams, by C. J Christensen and E. Rosner. Photochemistry by G K. Rollefson. Photosynthesis, by M. Calvin and others. Spectroscopy by N S. Bayliss. Polarography and electrode processes, by C. Tanford and S. Wawzonek. Solutions of nonelectrolytes, by G. Scatchard. Solutions of electrolytes, by T F Young and A. C. Jones. Reaction kinetics, by R. E. Powell. Theory of ionic crystals, semiconductors, and dielectrics, by F E. Williams. Experimental crystallography by W H. Zachariasen. Experimental molecular structure, by L. O. Brockway Indexes.

Note Papers authored and titled as above are contained in the third volume of a series which serves both as a summary of recent developments and a guide to the recent literature. The papers are concisely written and are keyed to bibliographies which run in some instances to several hundred references. A detailed subject index covers all of the papers and an author index lists the names of authors of the cited literature.

COHEN KARL

The theory of isotope separation as applied to the large-scale production of U^{235} Edited by G M Murphy New York McGraw Hill Book Company, Inc. 1951 165 p illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division III—Vol. 1B) $2 50 424

Contents. Ideal cascades. Square cascades. Equilibrium time of square cascade. Determination of cascade constants. The central problem Centrifuges Other separation methods. Appendixes: Roots of a transcendental equation. Equilibrium time of square cascades for $N-1$ The holdup function. Rayleigh distillation. Properties of concurrent two phase elements Index.

Note: This volume is based on reports of the Substitute Alloy Materials Laboratories (SAM) which were operated by Columbia University from 1940 to 1945 as part of the development program on the atomic bomb The treatment is theoretical and much of it is expressed in mathematical equations. The discussions of the various methods of isotope separation, such as centrifuging, electrolysis, chemical exchange, thermal diffusion, and distillation, are concerned with general principles rather than technical details. List of declassified reports are included in the chapters.

HARKINS WILLIAM DRAPER

The physical chemistry of surface films. With a foreword by Peter Debye. New York Reinhold Publishing Corporation 1952 413 p illus 24 cm. $10 00 425

Contents. The nature and energetics of surfaces. Films on liquids. Films on solids. Properties of soap solutions. Mechanism of emulsion polymerization. The role of the electric double layer in the behavior of lyophobic colloids, by E. J. W Verwey Index.

Note Even though a considerable part of the contents of this work was published previously the book represents a major addition to chemical literature. The author made many original contributions to the knowledge of surface films and emulsion technology and all of his work is covered in it. Chapters one, two, and three have been reprinted with modifications from various volumes of Dr Jerome Alexander' Colloid chemistry. Chapters four and five are original but contain many quotations from articles by Dr Harkins that were published elsewhere. Chapter six, by Dr Verwey is another reprint with minor changes, from Alexander's Colloid chemistry. Although the basis of each chapter except the sixth was original research carried out by Dr Harkins and his associates, the

pertinent work of others is also described, and each of the chapters is accompanied by a substantial list of references. The bibliography of Harkins' own publications is arranged chronologically from 1907 to 1950.

HARNED HERBERT SPENCER, AND BENTON B OWEN

Physical chemistry of electrolytic solutions. Second edition revised and enlarged. New York Reinhold Publishing Corporation 1950 645 p. illus. 23 cm. (American Chemical Society Monograph series) $14.00. 426

Contents (abridged) General thermodynamic introduction. Theory of thermodynamic properties of aqueous solutions. The theory of irreversible processes in electrolytic solutions. Numerical computations of physical constants, characteristic slopes, and mathematical functions. Coulomb forces and ion association; weak electrolytes; frequency and field effects. The calculation of activity and osmotic coefficients from freezing points, boiling points, and vapor pressures. Hydrochloric acid. Polyvalent electrolytes. Mixtures of strong electrolytes. The ionization and thermodynamic properties of weak electrolytes. Appendices. Author index. Subject index.

Notes (1049) An authoritative treatise in which are combined full discussions of theory experimental methods, and the behavior and properties of electrolytic solutions. In the present edition there appear to be no changes other than correction of misprints in the body of the work or in the first appendix. However new knowledge gained since 1941 is covered in the second appendix, which is arranged so that appropriate parts can be related to the material on the same topic in the main part of the book. Also references have been made from superseded tables in the main part to their successors in the appendix.

HILDEBRAND JOEL HENRY AND ROBERT L SCOTT

The solubility of nonelectrolytes. Third edition. New York Reinhold Publishing Corporation, 1950 488 p. illus. 23 cm. (American Chemical Society monograph series William A. Hamor editor) $12.50. 427

Contents (abridged) The ideal solution. Nonideal solutions—general. Intermolecular forces. The liquid state. The entropy of athermal mixing. The heat of mixing. Polarity Hydrogen bonding. Specific interactions "solvation" and "association" Vapor pressures of binary liquid solutions. Solubility of gases in liquids. Solubility of liquids in liquids. Solubility of solids in liquids. Solid solutions. Metallic solutions. High polymer solutions. Surface phenomena. Evaluation of solubility parameters. Appendixes: Selected values of solubility parameters. Papers by the authors and co-workers. Solutions of nonelectrolytes—1949. Author index. Subject index. Formula index.

Notes (1050) A comprehensive presentation of the development and present state of knowledge pertaining to the solubility of nonelectrolytes. In a sense it is a companion work to Harned and Owen's *The physical chemistry of electrolytic solutions* (see author index) published in the same series. Following the general pattern of the series the literature of the subject has been surveyed and is fully cited. The treatment is on a graduate and professional level. Compared to the previous edition there are six new chapters including those on solid solutions and high polymer solutions, and there has been much reworking of the chapters carried over.

LAIDLER, KEITH JAMES

Chemical kinetics. New York McGraw Hill Book Company Inc., 1950 408 p illus. 23 cm. $6.50 428

Contents: The measurement of reaction rates. Experimental methods. The mechanisms of elementary processes. Elementary gas-phase reactions. Reactions in solution. Reactions on surfaces and in the solid state. Complex reactions. Some complex inorganic reactions. Some complex organic reactions. Catalysis. Oxidation. Polymerization. Potential-energy surfaces. Bibliography. Name index. Subject index.

Notes An introduction to the present knowledge of the rates of chemical reactions. It has the advantage over older books of containing recently published knowledge. In fact, references are made to literature published as recently as 1950. It is designed for use in college courses, particularly advanced courses offered to students who are majoring in chemistry. It should find some use also as refresher or guide for graduate chemists who desire a compact summary of the current knowledge. The book contains not only bibliography but numerous footnote references to the literature.

MACDOUGALL FRANK HENRY

Physical chemistry Third edition. New York The Macmillan Company 1952 750 p. illus. 22 cm. $6.00 429

Contents (abridged) Atomic theory Energy and the first law of thermodynamics. The gaseous state. The liquid state. The solid state. The structure of atoms. Physical properties and molecular constitution. The second law of thermodynamics. Solutions. Thermochemistry Heterogeneous equilibrium and applications of the phase rule. Chemical kinetics. Electrical conductance. Equilibria involving ions. Electromotive force. Electrolysis, polarization and overvoltage. Photochemistry The colloidal state. Indexes.

Note A standard textbook widely used in introductory college courses in physical chemistry The treatment is comparatively rigorous, and the book is designed for use by students who are preparing for careers in chemistry The previous edition appeared in 1943. In this edition the greater part of the text is unchanged, but two of the chapters have been extensively rewritten and minor changes have been made in some other parts.

MARYOTT, ARTHUR A., AND EDGAR R. SMITH

Table of dielectric constants of pure liquids. Washington, D C. Government Printing Office, 1951 44 p 26 cm (United States. National Bureau of Standards. Circular 514) Paper $0.30 430

Contents Introduction. Description of table. Table of dielectric constants Standard liquids. Inorganic liquids. Organic liquids. Bibliography

Note This circular contains the "static" dielectric constants of more than 800 substances in the liquid state, the tables being divided into three sections: standard liquids, inorganic liquids, and organic liquids. Reference sources are given for the liquids in the inorganic and organic groups, and probable accuracy of the data is indicated. The tables are reproduced from typewritten copy The work is part of a program for critical compilation of the data of physics and chemistry sponsored by the National Bureau of Standards in cooperation with the Committee on Tables of Constants and Numerical Data of the National Research Council and the Commission on Tables of Constants of the International Union of Chemistry

MOORE, WALTER JOHN

Physical chemistry New York Prentice-Hall, Inc. 1950 592 p. illus. 24 cm. (Prentice-Hall chemistry series Wendell M. Latimer editor) $8 05 431

Contents The description of physicochemical systems. The first law of thermodynamics. The second law of thermodynamics. Thermodynamics and chemical equilibrium. Changes of state. Solutions and phase equilibria. The kinetic theory. The structure of the atom Nuclear chemistry and physics. Particles and waves. The structure of molecules. Chemical statistics. Crystals. Liquids. Electrochemistry Surface chemistry Chemical kinetics. Index.

Note A text for introductory courses offered to college students who have completed basic courses in both physics and chemistry The treatment is rigorous, but the author has taken pains to make things clear. Parts of the book, for instance the chapter on surface chemistry are written so that they can be comprehended without the aid of an instructor. The lists of references intended as guides for further reading include both books and articles. The author is Associate Professor of Chemistry at the Catholic University of America.

PAUL MARTIN AMBROSE

Principles of chemical thermodynamics. New York McGraw-Hill Book Company Inc., 1951 740 p. 24 cm. (International chemical series, Louis P Hammett, consulting editor) $8.00 432

Contents. Temperature. The first law of thermodynamics. Thermal behavior of simple systems. Thermochemistry. The second law of thermodynamics. Thermodynamic behavior of simple systems. Thermodynamic behavior of solutions and heterogeneous mixtures. Chemical equilibrium. Thermodynamics of galvanic cells. Statistical molecular theory of thermodynamics. Appendix. Answers to problems. Index.

Note. This substantial textbook is designed for the use of advanced undergraduate and graduate college students who are specializing in chemistry and have completed an introductory course in physical chemistry. Due attention is given to the theoretical bases of chemical thermodynamics, and the derivations of commonly used equations are always shown. The ninety-page discussion of the statistical molecular theory of thermodynamics is a special feature. Mathematical techniques more advanced than those of elementary calculus are explained in the text when they are introduced and in a special appendix.

PRUTTON, CARL FREDERIC, AND SAMUEL H. MARON

Fundamental principles of physical chemistry. Revised edition. New York: The Macmillan Company, 1951. 803 p. illus. 22 cm. $6.00 433

Contents (abridged). Elementary principles of thermodynamics and their application to gases. Liquids. The solid state. Solutions. Colligative properties of solutions of nonelectrolytes. Solutions of electrolytes. Surface phenomena and colloids. Thermochemistry. Entropy and the third law of thermodynamics. The free energy. Homogeneous chemical equilibrium. Heterogeneous equilibrium. Electrolytic transference and conductance. Ionic equilibria. The electromotive force of cells. Electrolysis and polarization. Kinetics of homogeneous reactions. Kinetics of heterogeneous gas reactions. Physical properties and the structure of molecules. Photochemistry. Index.

Note. (1014b) A somewhat more advanced presentation is given than is customary in introductory texts in the subject. Thermodynamic principles are introduced in the second chapter and are used throughout the book. Although designed for a full-year course offered to students majoring in chemistry and chemical engineering, the authors suggest its use also for such students as physicists and biologists who will taken only an introductory course. Completion of college courses in physics, basic chemistry and calculus are prerequisite. In the present edition the chapter on photochemistry is a new addition and there is a fair number of other changes. The first-named author is an officer of the Mathieson Chemical Corporation and the second a member of the faculty of Case Institute of Technology.

QUILL, LAURENCE LARKIN, editor

The chemistry and metallurgy of miscellaneous materials: thermodynamics. New York: McGraw-Hill Book Company, Inc., 1950. 329 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division IV—Plutonium project record. Volume 19B) $4.50 434

Contents. Paper 1. Investigations in the liquid-solid equilibria of the two-component systems composed of the bromides and iodides of strontium and barium, by E. D. Eastman and others. Temperature-composition diagrams of metal—metal halide systems, by E. D. Eastman and others. The thermodynamic and physical properties of the elements, by L. Brewer. Thermodynamic and physical properties of nitrides, carbides, sulfides, silicides, and phosphides, by L. Brewer and others. The thermodynamic properties of common gases, by L. Brewer. The thermodynamic properties of the halides, by L. Brewer and others. The fusion and vaporization data of the halides, by L. Brewer. The thermodynamic properties of molybdenum and tungsten halides and the use of these metals as refractories, by L. Brewer and others. The heats of formation of CeS, Ce_3S_4, and Ce_2S_3 at 25° C, by M. W. Evans. The heat of reaction of the cerous-ceric couple in 0.5 molal perchloric acid at 25° C, by R. J. Fontana.

Note. The papers which form the basis of this volume were prepared during the course of research conducted to develop methods for producing plutonium. The book brings together a great quantity of data regarding the thermodynamic and physical properties of gases and compounds used in high temperature reactions, and is designed for the use of physicists and chemists engaged in this field of research. Each paper includes a brief summary and list of references. No index is provided.

RICCI, JOHN ETTORE

Hydrogen ion concentration: new concepts in a systematic treatment. Princeton, New Jersey: Princeton University Press, 1952. 460 p. illus. 24 cm. $10.00 435

Contents. Definitions and fundamental relations. The theorem of isohydric solutions. Special values and limits of the ionization fractions for acids and bases. Limits of ionization fractions and the iso-electric point for salts and ampholytes. Application of the exact equations for the determination of the constants. Interpretation of ionization constants. Some direct applications of the general equations as relations of the concentrations. Calculation of the numerical value of *H* from the general equations. Feasibility (sharpness) of titration; exact case of strong acid and strong base (pure). Problems involving one ionization constant. Two weak acids and strong base. Titration (with strong base or strong acid) in mixtures involving any number of independent ionization constants. Titration with weak acid or weak base. Problems involving two interdependent ionization constants (dibasic acid, its salts with strong and weak bases; ampholytes). Some complex cases. Tribasic acids; salts with strong and weak bases. Saturation with respect to acids and bases. Pure saturated aqueous solution of a salt. Saturation with salts of monobasic acid. Saturation with salts of dibasic acid. Saturation with ampholytes and their salts. Index.

Note. In the words of the author of this original study: "The quantitative relations determining the hydrogen ion concentration of aqueous solutions constitute a purely mathematical problem subject to exact and systematic treatment and capable of simple and uniform presentation. In the book exact mathematical definitions which are independent of the various theories of the mechanism of ionization are stated, then on the basis of these definitions formulas are derived for calculations pertaining to hydrogen ion concentrations in aqueous solutions of various degrees of complexity." The book is an important contribution to theoretical chemistry.

RICCI, JOHN ETTORE

The phase rule and heterogeneous equilibrium. New York: D. Van Nostrand Company, Inc., 1951. 505 p. illus. 24 cm. $12.00. 436

Contents (abridged). One-component systems. Binary systems with complete miscibility in all states. Complete immiscibility in the solid state. Polymorphism of the components and pseudobinary behavior. Binary compounds. Systems with two liquid phases. Condensed binary diagrams and their determination. Ternary systems. Transitions involving pure solid phases. Freezing point equilibria involving two or three liquid phases. Reciprocal ternary systems. Quaternary systems (additive type). Quaternary system of water and reciprocal salt pair. Aqueous quinary systems. General references. Index of systems cited. Name index. Subject index.

Note. A thorough and rather original introduction to the applications of the phase rule, first stated by Gibbs in 1874, and now recognized as one of the basic laws of chemical reactions. It is written on the graduate level. Though specific data for a variety of systems are given, the work is not intended as a reference book of data on equilibria in specific systems. Papers from which examples are drawn are cited in footnotes throughout the work, in addition to the selected list of books at the end.

ROSSINI, FREDERICK DOMINIC

Chemical thermodynamics. New York: John Wiley & Sons, Inc., 1950. 514 p. illus. 21 cm. $6.50 437

Contents (abridged). Definition of terms. Fundamental constants and conversion factors. Energy and the first law of thermodynamics. Equivalence of mass and energy. Entropy and the second law of thermodynamics. Entropy and thermodynamic engines. Heat capacity of substances. Relations among the thermodynamic properties and functions. Heats and energies of reactions and processes. Thermodynamic functions from statistical calculations. Entropy and the third law of thermodynamics. Equilibrium between different phases of one pure substance. Fugacity—standard states. The ideal solution. The dilute real solution. Electromotive force and free energy. Equilibrium between different phases of two or more components. Special applications of thermodynamics. Thermodynamic calculations. Appendix. Author index. Subject index.

Note. A fairly comprehensive presentation of modern chemical thermodynamics. Pertinent concepts of atomic physics such as energy levels and nuclear spin are introduced early in the book and precede the discussion of the third law. The primary use of the book is as

text in college courses, but it has some usefulness as a survey for graduate chemists. Literature references accompany the chapters, and in addition there is a concluding chapter on the periodical and book literature in which data required for calculations of chemical thermodynamics can be found.

ROSSINI, FREDERICK DOMINIC, AND OTHERS

Selected values of chemical thermodynamic properties by Frederick D Rossini, Donald D Wagman William H. Evans Samuel Levine, and Irving Jaffe. Washington D C. Government Printing Office, 1952 1268 p. illus. 27 cm. (United States. National Bureau of Standards. Circular 500) $7.25 438

Contents: Introduction. Tables of selected values of properties of Series I: Heat of formation at 25° C; Free energy of formation at 25° C; Entropy at 25° C; Heat capacity at 25° C; Logarithm of the equilibrium constant of formation at 25° C; Heat of formation at 0° K. Tables of selected values of properties of Series II: Heat, temperature, and entropy of transition, fusion, and vaporization (including values of pressure). Specific references for the tables of properties of Series I. Specific references for the tables of properties of Series II. General list of references. Index.

Note: A much expanded set of tables compiled for chemists and engineers by the National Bureau of Standards from 1940 to 1950. They take the place of the tables appearing in *The thermochemistry of the chemical substances* by F R. Bichowsky and F D. Rossini, New York, 1936, and many were previously available in looseleaf form. The volume contains values of the heat and free energy of formation, entropy heat capacity and heats and temperatures of transition, fusion, and vaporization for all inorganic compounds (containing not more than two carbon atoms) where such data are available. Separate tables give references to the original literature from which the values were derived. Additional material in looseleaf form to supplement the data in this circular and to give thermodynamic properties as a function of temperature are being prepared under the direction of Donald D Wagman, and are available to laboratories upon request.

SEIDELL, ATHERTON AND WILLIAM F LINKE

Solubilities of inorganic and organic compounds, a compilation of solubility data from the periodical literature. By Atherton Seidell and *William F Linke*, with sections by *Alfred* W Francis and Roger G Bates. Supplement to the third edition containing data published during the years 1939–1949 inclusive. New York D Van Nostrand Company 1952 1254 p. illus. 24 cm. $12.50 439

Note. (1031) The third edition of this standard reference book for chemical libraries and laboratories was published in two volumes in 1940 and 1941 The arrangement of the supplement is similar to that of the main volumes. There are two main subdivisions and under each the compounds are arranged in alphabetical order Under each compound there is (1) a short description of the published work bearing on its solubility and (2) a tabulation of the available solubility data in various solvents. In addition there is a long section of data on ternary systems separating in two liquid layers and a monographic chapter "Recent contributions to the theory of electrolyte solubility" by Roger G. Bates. An author index arranged so as to serve also as a bibliography of cited papers, an organic compound index, and an inorganic and metal-organic cross-reference index are included.

STANDING COMMITTEE ON COMBUSTION SYMPOSIA

Third symposium on combustion and flame and explosion phenomena. Published under the auspices of the Standing Committee on Combustion Symposia, Bernard Lewis chairman. Baltimore The Williams & Wilkins Company 1949 748 p illus. 26 cm. $13.50. 440

Contents (abridged) Part I, Flame stabilization and quenching: The stability of open flames, by K. Wohl and others. Flame stabilization and propagation in high velocity gas streams, by G. C. Williams and others. Theory of ignition, quenching, and stabilization of flames of nonturbulent gas mixtures, by G. von Elbe and B. Lewis. The mechanism of flash back of aerated flames, by J. S. Forsyth and J. E. Garside. The structure and stability of diffusion flames, by D. A. Scholefield and J. E. Garside. Part II, Flame propagation in explosive gas mixtures: Theory of propagation of flames—general equations—approximate solutions—numerical integrations, by J. O. Hirschfelder and others. The role of free atoms and radicals in burner flames, by C. Tanford. Interaction of flame propagation and flow disturbances, by G. H. Markstein. Factors affecting flame propagation through dust clouds, by H. M. Cassel and others. Influence of molecular structure of hydrocarbons on rate of flame propagation, by T W Reynolds and M. Gerstein. Burning velocities in ethylene-air mixtures, by J. W Linnett and M. F Hoare. Development of combustion wave in flowing gas, by R. J Dery. Electrical properties of flames, by H. F Calcote. Part III, Flames of fuel jets: Mixing and combustion in turbulent gas jets, by W. R. Hawthorne and others. Diffusion flames, by K. Wohl and others. Part IV Ignition of gas mixtures: The ignition of gas mixtures by impulsive pressures, by W C. F Shepherd. The ignition of gaseous explosive media by hot wires, by H. P Stout and E. Jones. Ignition of gas mixtures by electric sparks, by H. Morris. Part V Kinetics and mechanism of combustion reactions. Processes in the vapor phase oxidation of ether by G. H. N Chamberlain and A. D. Walsh. Some aspects of the combustion of methane at low pressures, by A. J Everett and G. J. Minkoff. Reactions of adiabatically compressed hydrocarbon-air mixtures, by W. Jost. The mechanism of some elementary reactions occurring in flames, by V F Orlling and K. J. Laidler. The determination of radical concentrations and reactivities in chemical reactions, by H. W Melville. The oxidation of *sulphur dioxide in combustion processes*, by G. Whittingham. Kinetic aspects of the combustion of solid fuels, by J. R. Arthur and others. Mechanism of carbon combustion, by R. Mertens and L. Hellinckx. A study of recombination reactions of active particles produced by an electric discharge in water vapor by J. F Byrne. The reaction between hydrazine and hydrogen peroxide in the liquid phase, by A. S. Gordon. Part VI, Flame spectroscopy and radiation: Radiation studies on closed combustion chamber, by G. A. Hornbeck. Spectroscopic studies of low-pressure flames, by A. G. Gaydon and H. G. Wolfhard. Part VII, Burning and detonation of explosives. The spontaneous ignition of nitrocellulose, by E. K. Rideal and A. J. B. Robertson. The thermal initiation of explosion in liquid explosives, by A. J. B. Robertson. Hot spots and the initiation of explosion, by F P Bowden and A. Yoffe. The use of ammonium nitrate as a solid fuel to provide gas for propulsive purposes, by J. Taylor and G. P Sillitto. The properties of gases at high pressures which can be deduced from explosion experiments, by H. Jones. Part VIII, Thermodynamics of flame gases and thermochemistry: The energy of dissociation of OH, by E. Kline. The vapor pressure and heat of sublimation of carbon, by F Goldfinger. Part IX, Experimental techniques: Measurement of velocity and pressure of the gases in rocket flames by spectrographic methods, by F P. Bundy and H. M. Strong. The use of thermocouples in streaming exhaust gas, by E. F Fleck and others. An interferometric method of gas analysis, by H. L. Olsen. The automatic sampling of gases at high temperatures and pressures, by W R. Wykoff and others. Part X, Combustion in engines and rocket flame problems in the design of combustion chambers for liquid propellant rocket motors, by B. N. Abramson. The spontaneous combustion of fuels injected into a hot gas stream, by B. P Mullins. Factors affecting combustion stability by R. D. Park. Photographs at 300,000 frames per second of combustion and detonation in reciprocating engine, by T Male. Part XI, Gas burners and furnaces: The problem of gas temperature measurement above 1300° C., by R. Mayorcas and others. Energy transfer from flame gases to solids, by J. E. Eltham.

Note: Altogether there are 100 papers in this work, more than one-third of which were contributed by residents of countries other than the U. S. A. The typical paper is approximately 10 pages long and is devoted to the results of recent research or to descriptions of newly developed research techniques. It is addressed to graduate scientists or technologists and is supplemented by short lists of literature references. The book has no index. The proceedings of the two earlier symposia in the series were published in periodicals and did not appear as books

TAYLOR, HUGH S., AND SAMUEL GLASSTONE editors

A treatise on physical chemistry a co-operative effort by a group of physical chemists. Third edition—in five volumes. Volume two States of matter New York D Van Nostrand Company Inc. 1952 701 p illus. 24 cm. $12.00 441

Contents. The kinetic theory of ideal gases, by K. F. Herzfeld. The thermodynamics and statistical mechanics of real gases, by J. A. Beattie and W. H. Stockmayer. The liquid state, by G. E. Kimball. X-ray analysis of the solid state, by J. G. White. The colloidal state and surface chemistry, by J. W. Williams and others. Index.

Note. (1021) The second volume published of this third edition (the second edition was issued in two volumes in 1931) of a work which is planned as a comprehensive presentation of physical chemistry. As the table of contents indicates, the organization is that of a collection of signed monographs. Each monograph is specially written for the work and generally speaking is an up-to-date summary of its particular topic. The work is addressed primarily to graduate students of chemistry and professional chemists.

THON, N., editor

Tables of chemical kinetics: homogeneous reactions. Sponsored by the National Bureau of Standards, the Committee on Tables of Constants of the National Research Council, and Princeton University. Editorial office, Frick Chemical Laboratory, Princeton University. N. Thon, editor, D. G. Kelemen and G. Parravano, assistants. G. S. Forbes, M. Szwarc, and H. A. Taylor, corresponding expert collaborators. Issued September 28, 1951. Washington, D. C.: Government Printing Office, 1951. 731 p. 29 cm. (United States. National Bureau of Standards. Circular 510) Paper $4.00 442

Contents: Subject index. Alphabetical index. Code abbreviations for periodicals. Introduction. Tables.

Note. These tables represent a critically evaluated compilation of the available factual numerical data on rates and rate constants of homogeneous chemical reactions. Stressing the importance of experimentally ascertained facts, the editors have generally excluded data contingent on interpretations. Reaction equations are written in the simplest possible way on the basis of the observed overall chemical change. Each table is designated by a six-digit number, the first two of which refer to the type of reaction, the third to the phase of the homogeneous reaction, gaseous (1), liquid (2), or solid (3). The second three-digit group of the table number refers to the types of substances involved. Supplements to the work are planned.

WETMORE, F. E. W., AND D. J. LEROY

Principles of phase equilibria. New York: McGraw-Hill Book Company, Inc., 1951. 200 p. illus. 24 cm. (International chemical series, Louis P. Hammett, consulting editor) $4.50 443

Contents: Chemical equilibrium. One-component systems. Two-component systems. Two-component systems; types of equilibria involving only one phase of variable composition. Two-component systems; types of equilibria involving more than one phase of variable composition. Three-component systems. Three-component systems at fixed temperature and pressure. Three-component systems, solid diagrams and their plane projections. Four-component systems. Appendixes: The thermodynamic derivation of the phase rule. Free energy-composition curves for two-component systems. Index.

Note. A textbook planned for upperclass undergraduate and graduate students. Though considerable previous education in chemistry and physics is assumed, the book is introductory to the subject. The exposition is expressed in (to use the authors' words) "terms of laboratory criteria and from a fundamental point of view without recourse to formal thermodynamics." However, the thermodynamic approach is illustrated in the appendixes.

COLLOID CHEMISTRY

ALEXANDER, JEROME, editor

Colloid chemistry, theoretical and applied. Volume VII, Theory and methods, biology and medicine, technological applications. New York: Reinhold Publishing Corporation, 1950. 736 p. illus. 23 cm. $18.00. 444

Contents (abridged). Part I: Theory and methods: The intermediate-compound nucleus in nuclear reactions, by W. D. Harkins. Scattering by inhomogeneous materials, by P. Debye and A. M. Bueche. The effective depth of the surface zone of a liquid, by J. W. McBain and J. C. Henniker. Fermenergetics in the colloidal particle, by L. J. E. Hofer. The importance of colloids for catalysts and trace elements, by A. Krause. Paper chromatography of amino acids, by R. J. Block and H. A. Sober. Part II: Biology and medicine: Surface chemistry and biology, by A. E. Alexander. Some aspects of the interaction of drugs and enzymes, by F. Bernheim. Genes and biochemical reactions, by D. M. Bonner. Antibiotic colloidal electrolytes, by E. A. Hauser. The tubercle bacillus, by L. Grigoraki. Dental caries, by L. S. Fosdick. Part III: Technological applications: Basic agglomeration of carbon black aerosols, by C. A. Stokes. Organophilic clays, by E. A. Hauser. Colloid aspects of oil-well treatment, by P. H. Cardwell. Asphalt, by R. N. Traxler. The relation between chemical structure and performance of detergents, by D. S. P. Roebuck. The reclaiming of elastomers, by D. S. le Beau. Cellophane, by C. M. Reeser. Some physicochemical aspects of margarine manufacture, by H. W. Vahlteich. Photosensitive glass, by D. Stookey. Author index. Subject index.

Note. (1032a, 387*) Altogether there are forty-three papers in this latest addition to a well known series. As in the previous volumes, the papers have been written by outstanding specialists and are addressed to readers with technical education and experience. The current knowledge of the specific topic mentioned in the paper's title is compactly and authoritatively surveyed. Each paper is accompanied by a substantial bibliography and some of them are accompanied by special comments by the editor.

BURK, ROBERT EMMETT, AND OLIVER GRUMMITT, editors

Frontiers in colloid chemistry. New York: Interscience Publishers, Inc., 1950. 157 p. illus. 24 cm. (Frontiers in chemistry. Published under the auspices of Western Reserve University. Vol. VIII) $4.00 445

Contents: The role of adsorption in colloid science, by H. S. Taylor. Frontiers in chromatographic adsorption analysis, by H. H. Strain. Ion exchange, with special reference to synthetic resins, by R. J. Myers. Sedimentation, by V. R. Damerell. Colloidal electrolytes, wetting agents, and detergents, by J. W. McBain. Organization of crystals and micelles of soap—solubilization and detergency, by J. W. McBain. Subject index.

Note. The concluding volume in this series. Like the others, it contains short monographic papers, originally delivered as lectures on chemical topics of current importance. Recent developments are emphasized, but most of the authors have sketched in enough of the background to give an adequate picture of the current status. The lectures were addressed to graduate students and graduate chemists and the style, as might be expected, is technical. Literature references are included.

MCBAIN, JAMES W.

Colloid science. New York: Reinhold Publishing Corporation, 1950. 450 p. illus. 24 cm. $8.00 446

Contents: Emulsions and foams. Sorption. The effective depth of surfaces. The preparation of colloidal sols. Optical properties and study of colloids. Brownian movement. Ultrafiltration. The lyotropic series of ions. Viscosity, thixotropy and plasticity and dilatancy. Jellies and gels. Coagulation, protective action, and sensitization. Electrical and electrokinetic phenomena. Diffusion. Osmotic pressure and membrane equilibrium. Ultracentrifuges and centrifuges. Soaps and other colloidal electrolytes. Solutions of proteins. Nonaqueous systems of colloids. X-ray and other methods of studying colloids and high polymers. Cellulose and its derivatives. Other natural polysaccharides. Natural and synthetic rubber. The proteins: silk, wool, keratin, collagen, and the globular proteins. Artificial polymers. Resins and plastics. Clay. Aerosols. Author index. Chemical and compound index. Subject index.

Note. A well-organized and interesting presentation of basic knowledge of colloid phenomena together with some discussion of its applications. Though general and introductory, the book contains enough substance to make it useful to any trained chemist in search of an introduction to the field. Each chapter is accompanied by long lists of references to which statements in the text are keyed. In addition, there are briefer lists of more general works on the subject of each chapter. The author index includes the names of authors of literature cited in the references.

MARSHALL, CHARLES EDMUND

The colloid chemistry of the silicate minerals. New York Academic Press, Inc. 1949 195 p. illus. 24 cm. (Agronomy, a series of monographs. Vol. 1) $5.80 447

Contents: Historical outline. Introduction to silicate structures. Silicates based on three-dimensional framework. The colloidal properties of the zeolites. The structures of silicates with planar frameworks. The structural interpretation of chemical analyses of the clay minerals. The sizes and shapes of clay particles. The optical properties of clay aggregates and suspensions. Adsorption by the clays and its consequences. Clay acids and their titration curves. Basic exchange reactions of the clays. Electrokinetic properties of the clays. The mechanical properties of clay suspensions, gels and pastes. The properties of clay aggregates and films. Author index. Subject index.

Note: A monographic survey of what is known at the present time about the colloid chemistry of clays and other minerals containing a major proportion of silicon. It is of interest in the ceramic industry and other industries which use clays, as well as in agriculture. The presentation stresses the basic knowledge and experimental results. The chapters are accompanied by extensive reference lists. The author is Professor of Soils in the University of Missouri, and is well known for his contributions to the knowledge of the clays.

WEISER, HARRY BOYER

A textbook of colloid chemistry Second edition. New York John Wiley & Sons, Inc. 1949 444 p. illus. 24 cm $6.00 448

Contents (abridged) Part I, Adsorption. Surface tension and adsorption. General characteristics of adsorption of gas or vapor. Mechanism of the adsorption of gas or vapor. Adsorption of liquid by solid wetting. Adsorption from solution of non-electrolytes and weak electrolytes. Adsorption from solution of strong electrolytes. Adsorption of liquid by liquid. Part II, Sols: Formation of sols I. Purification of sols. The optical properties of sols. The kinetic properties of sols. Electrokinetic and electrochemical properties of sols. The stability of hydrophobic sols. Part III, Gels. Part IV Emulsions and foams. Part V, Aerosols and solid sols. Part VI, Applications of colloid chemical principles to contact catalysis and dyeing. Index of authors. Index of subjects.

Note. (1949) An introductory textbook, which is also a convenient survey and reference manual for working chemists who are not specialists in colloid chemistry. Not only are the main concepts and phenomena explained clearly but a considerable body of the pertinent literature is digested. The index of authors cited contains approximately 800 names. The organization and general content of this edition are essentially the same as the first edition (1939) but numerous revisions have been made throughout the text and in the bibliographies.

RADIOCHEMISTRY

CALVIN, MELVIN *AND OTHERS*

Isotopic carbon, techniques in its measurement and chemical manipulation by Melvin Calvin, Charles Heidelberger James C. Reid, Bert M. Tolbert, and Peter F Yankwich. New York John Wiley & Sons, Inc., 1949 376 p illus. 24 cm. $6.75 449

Contents. Production and properties of isotopic carbon. Measurement of carbon 11. Characteristics of carbon tracer radiations. Instruments for radioactivity measurement. Detectors for radioactivity measurements. Sample preparation. Vacuum techniques in organic chemistry. Synthesis of carbon-labeled compounds. Criteria of purity. Degradation procedures. Biosynthetic methods. Appendixes. Bibliography. Author index. Subject index.

Note: A reference book and laboratory manual for the use of scientists and technicians who are using isotopic carbon (C^{13} or C^{14}) in laboratory procedures. As indicated by the chapter titles, matters that apply generally to the manipulation of isotopic carbon—and to a certain extent, other radioactive isotopes—are first considered, then in the sixth chapter procedures for the actual syntheses of labeled compounds are given. This chapter is ninety pages long, and it summarizes all of the syntheses which have been reported in the literature up to April, 1948. The appendixes furnish information on dilution methods, efficiencies of counters, radioactivity assay on induction ionizer for a closed system, and other topics. There are numerous bibliographical footnotes and an extensive bibliography

CORYELL, CHARLES DUBOIS, AND NATHAN SUGARMAN, editors

Radiochemical studies The fission products. New York McGraw Hill Book Company Inc., 1951 2086 p. illus. 24 cm. 1 volume in 3 (National nuclear energy series. Manhattan Project technical section. Division IV—Plutonium project record, Vol. 9) $27 75 449a

Contents (abridged) Part I, Counting techniques (papers 1 to 11) Part II, Chemical studies at tracer levels (papers 12 to 23) Part III, Remote-control techniques (papers 24 to 33) Part IV Studies of the fission process (papers 34 to 52) Part V Radioactivity of the fission products (papers 53 to 199) Part VI, Radiochemistry of the fission-product elements (papers 200 to 310) Part VII, Special studies of gaseous fission products (papers 311 to 317) Part VIII, Radiochemical studies of other activities (papers 318 to 336). Appendixes. Index.

Note: The 336 papers comprising these three volumes were prepared from 1942 to 1946 during the search for methods for producing plutonium. Each paper is complete in itself but together they provide a detailed account of the nuclear properties of fission products, and of the techniques employed in their production. Many of the papers have been corrected and rewritten, and an effort has been made to correlate their contents through the use of cross references, but always the original data have been retained. Brief summaries and lists of references are included with each paper.

FRIEDLANDER, GERHART, AND JOSEPH WILLIAM KENNEDY

Introduction to radiochemistry New York John Wiley & Sons Inc., 1949 412 p illus. 22 cm. $5.50 450

Contents: Naturally occurring radioactive substances. Atomic nuclei. Nuclear reactions. Sources of bombarding particles. Quantitative treatment of radioactive processes. Types of radioactive decay. Interaction of radiations with matter. Instruments for radiation detection and measurement. Statistical considerations in radioactivity measurements. Techniques for measurement and study of radiations. Identification, concentration, and isolation of radioactive species. Chemistry of low concentrations and the study of new elements. Tracers in chemical applications. Appendix. Index.

Note. A general, introductory textbook. The authors have assumed that their readers will be familiar with basic physics and chemistry and therefore have devoted the book to the phenomena of radioactivity and their significance to chemistry. Comparatively little space is given to applications, but there are some incidental references and one entire chapter on these aspects. Applications are covered more thoroughly in Wahl, A. C., *Radioactivity applied to chemistry* (see below). The main feature of the appendix is a table of "*Radioactive and stable isotopes of the elements,*" which is almost 100 pages long and combines data from several sources.

UNITED STATES ATOMIC ENERGY COMMISSION

Isotopes. A three-year summary of distribution. With extensive bibliography Washington, D C. Government Printing Office, 1949 201 p illus. 23 cm. Paper $1.00 451

Contents: Growth of isotope distribution. Production. Isotope labeled compounds. Increased isotope utilization. Domestic utilization. Foreign utilization. Training in radioisotope techniques. Future of program. Appendixes: Statistical information on growth of program; Chronological outline of development of isotopes distribution program. List of using institutions and departments. Tables on isotope distribution. Graphic illustrations of isotope distribution. Outlines of procedure for obtaining radioisotopes. List of isotopes available and information on isotope-labeled compounds. Bibliography: List of papers on isotope utilization. Medicine. Animal physiology. Bacteriology. Animal husbandry. Plant physiology. Physics. Chemistry. Industrial research. General. Author index for bibliography

Note: An official account of the first three years of the distribution of radioactive elements for use in peacetime research. During this period, August 2, 1946–June 30, 1949 a total of over 7000 shipments of radioactive isotopes, for use as tools of basic science,

agriculture, medicine, and industry was made to approved investigators in the United States and abroad. More than half of this report is devoted to a classified bibliography of papers written as the result of investigations made possible through use of isotopes from Atomic Energy Commission facilities. The bibliography and the report itself are supplemented by the later publication, *Isotopes: a five-year summary of distribution with bibliography.* Washington, D. C. Government Printing Office, 1951. 451 p., paper $1.00.

WAHL, ARTHUR CHARLES, AND NORMAN A. BONNER, editors

Radioactivity applied to chemistry. New York: John Wiley & Sons, Inc. 1951. 604 p. 24 cm. $7.50 452

Contents (abridged): Part I. Introduction. Isotopic exchange reactions, by O. E. Myers and R. J. Prestwood. Radioactivity applied to chemical kinetics, by C. E. Crompton. Radioactivity applied to structural chemistry, by V. J. Linnenbom. Radioactivity applied to self-diffusion studies, by J. H. Wang. Radioactivity applied to analytical chemistry, by V. J. Linnenbom. Behavior of carrier-free tracers, by N. A. Bonner and M. Kahn. Radioactivity applied to the discovery and investigation of the newer elements, by C. S. Garner. Chemical phenomena accompanying nuclear reactions (hot-atom chemistry), by J. W. Barnes and others. Emanation methods, by A. C. Wahl. Radioactivity applied to surface determinations, by J. H. Wang. Part II. Tables. Appendixes. Bibliography. Index.

Note. A comprehensive survey written on the professional level. It is based on literature searches that were designed to cover all of the published literature pertinent to the subject published in American journals through 1949 and in foreign journals to various dates in 1949. The published information has been summarized in essay form in the signed chapters in Part I, and presented in tabular form in eighteen tables in Part II. Source publications are cited in both parts.

WILLIAMS, RUSSELL R.

Principles of nuclear chemistry. New York: D. Van Nostrand Company, Inc., 1950. 307 p. illus. 22 cm. $4.75 453

Contents: The atomic nucleus. Physical and chemical manifestations of nuclear mass. Devices for preparation and detection of unstable nuclides. Nuclear decay reactions. Nuclear bombardment reactions. Chemical operations with unstable nuclides. Chemical consequences of nuclear reactions. Chemical and biological effects of nuclear radiations. Applied nuclear chemistry. Appendixes. Index.

Note: A brief text for advanced chemistry students, who are interested in the application of nuclear phenomena to the study of chemical problems and processes. Of necessity much of the material is concerned with the fundamentals of nuclear physics, but throughout the book the chemists' point of view is maintained. Emphasis is also placed on the principles of radiochemistry techniques rather than on specific laboratory practices.

CRYSTALLOGRAPHY AND PIEZOELECTRICITY

BUCKLEY, HAROLD EUGENE

Crystal growth. New York: John Wiley & Sons, Inc. 1951. 571 p. illus. 22 cm. $9.00. 454

Contents: Solution and solubility; solubility and supersolubility. The artificial preparation of crystals. The Curie theory of crystal growth. The so-called velocities of growth. The diffusion theories. Recent theories of crystal growth. Ideal and real crystals. Miscellaneous types of crystallization. Dissolution phenomena. Crystal habit modification by impurities. Relationship of substances during crystallization. Peculiarities of crystal growth. Appendix: Habit modification in crystals as a result of the presence of impurities. Name index. Subject index.

Note: A substantial survey of the current knowledge of the phenomena of crystal formation and of the techniques of growing large crystals in the laboratory. Due attention is paid to the historical development of the field. Reference numbers in the text are keyed to extensive literature citations at the end of each chapter and the names of the authors of the quoted articles are brought out in the name index. There are 24 plates made principally from photographs of crystals and 140 figures based chiefly on line drawings.

EITEL, WILHELM

Thermochemical methods in silicate investigation. New Brunswick, New Jersey: Rutgers University Press, 1952. 132 p. illus. 24 cm. $4.75 455

Contents: Introduction. Heats of formation and reaction. Calorimeters for the determination of heats of reaction. Thermochemical principles for the problem of reaction affinities. Experimental methods for determining reaction affinities. Examples for the calculation of free energy changes and affinities. The possibility of anomalies at low temperatures, statistical meaning of entropy. Appendixes. Index to compounds. Subject index.

Note. Thermochemical concepts combined with the techniques of modern calorimetry constitute a powerful tool in investigations of structure-energy relationships and the determination of crystal structure. This book supplements the rather scanty literature on the subject. It is based largely on work of the Kaiser Wilhelm Institute for Silicate Research, with which the author was associated for many years, but the contributions of American workers in the field are included also. Literature references and valuable notes are included at various points in the text. The book is of interest to research workers in such fields as crystallography, petrology and ceramics.

MASON, WARREN PERRY

Piezoelectric crystals and their application to ultrasonics. New York: D. Van Nostrand Company, Inc., 1950. 508 p. illus. 24 cm. (The Bell Telephone Laboratories series) $10.00 456

Contents: Crystal systems, classes and symmetries. Elastic, piezoelectric, and dielectric relations in crystals. Properties of crystals determinable from small sizes. Resonance measurement of the properties of large-size crystals. Properties and uses of quartz crystals. Properties and uses of rochelle salt. Properties and uses of ammonium dihydrogen phosphate (ADP) and potassium dihydrogen phosphate (KDP). Properties and uses of ethylene diamine tartrate (EDT) and dipotassium tartrate (DKT) crystals. Measurements of the properties of a number of piezoelectric crystals. Theory of ferroelectric crystals. Electrostrictive effect in rochelle salt and barium titanate. Properties of gases and methods for measuring them by crystal transducers. Measurement of the properties of liquids. Properties of solids and their measurement by ultrasonic waves. Appendix. Index.

Note. A technical work addressed to such readers as graduate physicists and communications engineers engaged in research and design. It is one of several fundamental modern works on piezoelectricity, all of which complement one another. Although there is some discussion of quartz crystals, there is much more on such crystals as EDT, DKT and the others named in the table of contents. The properties of these crystals are fully described from the theoretical standpoint. The last three chapters discuss the investigation of certain properties of gases, liquids, and solids by means of ultrasonic radiation generated by piezoelectric crystals.

NATIONAL RESEARCH COUNCIL. DIVISION OF PHYSICAL SCIENCES. COMMITTEE ON SOLIDS

Imperfections in nearly perfect crystals. Symposium held at Pocono Manor, October 12–14, 1950. Editorial committee: W. Shockley, J. H. Hollomon, R. Maurer and F. Seitz. New York: John Wiley & Sons, Inc. 1952. 490 p. illus. 24 cm. $7.50 457

Contents: I. On the nature of imperfections in nearly perfect crystals. Imperfections in nearly perfect crystals—a synthesis, by F. Seitz. On the geometry of dislocations, by W. T. Read, Jr., and W. Shockley. II. The role of imperfections in deformation. Imperfections from transformation and deformation, by C. S. Barrett. Experimental information on slip lines, by W. T. Read, Jr. X-ray diffraction studies of cold work in metals, by B. E. Warren and B. L. Averbach. Mechanical strength and creep in metals, by N. F. Mott. The influence of dislocations and impurities on the damping and the elastic constants of metal single crystals, by J. S. Koehler. III. Diffusion and related phenomena: Relaxation effects in ionic crystals, by R. G. Breckenridge. Studies of alkali halides by photoelectric methods, by L. Apker and E. Taft. Diffusion in alloys and the Kirkendall effect, by J. Bardeen and C. Herring.

Theory of diffusion, by C. Zener IV On the properties and effects of external and internal surfaces of crystals: Surface and interfacial tensions of single-phase solids, by J. C. Fisher and C. G. Dunn. Dislocation models of grain boundaries, by W. T. Read, Jr. and W. Shockley. Interphase interfaces, by C. S. Smith. Substructures in crystals, by A. Guinier. The properties and effects of grain boundaries, by B. Chalmers. Movement and diffusion phenomena in grain boundaries, by R. Smoluchowski. Author index. Subject index.

Note: A valuable addition to the literature of the physics of solids. It contains both the final papers whose titles are given above and excerpts from the discussions at the symposium. The first paper is an authoritative survey of the current status of the knowledge of imperfections in crystals. The other papers, for the most part, describe results of recent investigations. In addition to being fundamental work for specialists in crystallography the book is of interest to physicists working in the fields of semiconductors and the physics of metals and to metallurgists conducting fundamental research.

NATIONAL RESEARCH COUNCIL. DIVISION OF PHYSICAL SCIENCES. COMMITTEE ON SOLIDS

Phase transformations in solids. Symposium held at Cornell University August 23–26, 1948 Editorial committee R. Smoluchowski, J E Mayer and W A. Weyl. New York John Wiley & Sons Inc., 1951 660 p. 22 cm. $9.50 458

Contents: On the general theory of phase transitions, by L. Tisza. A general method for imperfect crystals and phase transitions, by J. E. Mayer. Crystallization as a cooperative phenomenon, by J. G. Kirkwood. Fundamental aspects of diffusion in solids, by F Seitz. Nucleation theory, by R. Smoluchowski. Crystallographic aspects of phase transformations, by M. J Buerger. The solid liquid transition in argon, by O. K. Rice. Transitions in silver halides, by M. L. Huggins. Phase transformations in one-component silicate systems, by F C. Kracek. Phase transformations in polycomponent silicate systems, by J F Schairer. Transitions in glass, by W A. Weyl. Phase transitions in ferroelectrics, by B. Matthias. Transformations in pure metals, by C. S. Barrett. Order-disorder transitions in metal alloys, by S. Siegel. Precipitation from solid solutions of metals, by A. H. Geisler. The eutectoid reaction, by R. F Mehl and A. Dubé. The martensite transformation, by M. Cohen.

Note: The phenomena of phase transformations in solids is of interest in a variety of fields, some of which, such as photography and metallurgy are not obviously related. The papers are addressed primarily to scientists working in laboratories and industry. They are accompanied by lists of related literature and by transcripts of discussions. Although the book is a valuable contribution to knowledge, no index has been provided.

UNITED STATES. NATIONAL BUREAU OF STANDARDS. NATIONAL APPLIED MATHEMATICS LABORATORIES

Tables for conversion of X ray diffraction angles to interplanar spacing. Issued September 20 1950 Washington, D C. Government Printing Office, 1950 159 p 27 cm. (United States. National Bureau of Standards. Applied mathematics series 10) $1.75 459

Contents: Introduction. Tables of spacing values [$\theta = 0°(0.01°)90°$]: Molybdenum $K\alpha_1$ radiation, $\lambda = 0.70926$A. Copper $K\alpha_1$ radiation, $\lambda = 1.54050$A. Nickel $K\alpha_1$ radiation, $\lambda = 1.65783$A. Cobalt $K\alpha_1$ radiation, $\lambda = 1.78890$A. Iron $K\alpha_1$ radiation, $\lambda = 1.93597$A. Chromium $K\alpha_1$ radiation, $\lambda = 2.28962$A. Tables of spacing values [$2\theta = 0°(0.02°)180°$]: Copper $K\alpha_1$ radiation, $\lambda = 1.54050$A. Iron $K\alpha_1$ radiation, $\lambda = 1.93597$A.

Note: These tables give spacing values d in angstrom units corresponding to the angles θ which are usually measured when diffraction patterns are used for chemical identification and crystal structure determination. The angles are related to interplanar spacings by the formula $d = \frac{\lambda}{2\sin\theta}$ where λ is the wavelength of incident X radiation and θ is half the angle between the incident and diffracted rays. The wavelengths used in the calculations are those adopted at the International Conference sponsored by the British Institute of Physics in London, July 1946.

WAHLSTROM ERNEST EUGENE

Optical crystallography Second edition New York John Wiley & Sons, Inc., 1951 247 p illus. 24 cm. $4.50 460

Contents: Crystallography. Physical properties. Elementary optics. Optics of isotropic substances. The polarizing microscope. Measurement of index of refraction. The uniaxial indicatrix. Polarization of light. Uniaxial crystals in plane-polarized light. Uniaxial crystals in convergent polarized light. Optical accessories. Sign determination in uniaxial crystals. Biaxial crystals—the biaxial indicatrix. Biaxial crystals in convergent polarized light. Determination of optic sign in biaxial crystals. Dispersion in biaxial crystals. Microscopic examination of nonopaque substances. Appendixes. Index.

Note: (1059) The techniques and principles of optical crystallography are rapidly finding application in fields other than those of mineralogy and petrology. This volume is intended to serve as an introduction to the subject for workers in these other fields who are concerned with the identification of solids. Like its predecessor, this edition deals primarily with basic principles and theories. Most of the chapters have been rewritten and expanded and numerous three-dimensional drawings have been added. The section on the universal stage method has been enlarged, and the selective bibliography has been revised and brought up to date.

WYCKOFF RALPH WALTER GRAYSTONE

Crystal structures. Volume II. New York Interscience Publishers, Inc., 1951 [585] p. illus. 25 cm. $10.00 461

Contents: Compounds of the type $R_x(MX_4)_y$. Compounds of the type $R_x(MX_n)_y$. The crystal structures of hydrates and ammoniates. The structures of aliphatic compounds.

Note: (191*) A standard reference work of data on crystal structures. It is published in loose-leaf form so that additional and revised pages may be inserted as new data become available. In addition to Volume II, noted above, which extends the work to new groups of compounds, there was published in 1951 the first supplement to Volume I, consisting of pages to be inserted in that volume.

GEOLOGY

GENERAL

BRANSON EDWIN BAYER, AND W A. TARR

Introduction to geology Third edition. Revised by Carl C. Branson and W D Keller New York McGraw Hill Book Company Inc. 1952 492 p illus. 24 cm. $5.50 462

Contents (abridged) Part I, Physical geology: The organization of matter (of the earth) Volcanism and igneous rocks. Weathering of igneous rocks. Running water Ground water The oceans. Sedimentary rocks. Metamorphic rocks. Snow and ice. The wind. Structures and diastrophism. Earthquakes. Part II, Historical geology: Origin of the earth. The Paleozoic—Mississippian, Pennsylvanian, and Permian periods. The Mesozoic era. Lower Mesozoic—Triassic period. Middle Mesozoic—Jurassic period. Upper Mesozoic—Cretaceous period. The Cenozoic era. The Pleistocene or glacial epoch. Index.

Note: (1074) A standard textbook for college courses offered to students who are not majoring in geology but need the subject for cultural background. It is simply written and fully illustrated. The second edition was published in 1941 In the present edition changes have been made in both the text and illustrations. The chapters have been rearranged somewhat and accounts of certain new developments of fairly broad interest, such as the birth of the volcano Paricutin, have been added. Because little technical terminology is used it has some utility as survey and general reference work for lay readers.

DUNBAR, CARL OWEN

Historical geology New York John Wiley & Sons Inc., 1949 567 p illus. 24 cm. $6.25 463

Contents Prologue. Records in stone. The scale of time. Fossils, living record of the dead. The constant change of living things. Before the Cambrian Origin of the earth. The Cryptozoic eon—pre-Cambrian history of the earth. The Paleozoic world: The Cambrian period. The Ordovician period. The Silurian period. The Devonian period. The Mississippian period. The Pennsylvanian period. The Permian period, crisis in earth history. The Mesozoic world. The Triassic period. The Jurassic period. Cretaceous time and the end of an era. The modern world unfolds: Physical history of the Cenozoic era. Ice sculptures the final scene. Mammals inherit the earth. The coming of man. Epilogue. Appendices. Index.

Note (1088) This work is revision of *Textbook of geology Part II, Historical geology* fourth edition, by the author and the late Charles Schuchert. Written for use in beginning course in historical geology it offers survey of the physical and biological changes on the earth from the earliest records to the time of prehistoric man, with emphasis on the North American continent. The text has been reworded in parts and recent advances in the field have been included. New publications have been added to the bibliographies. The book is profusely illustrated with photographs, maps, and diagrams, many of which are new

EMMONS WILLIAM HARVEY AND OTHERS

Geology principles and processes. By William H. Emmons George A. Thiel, Clinton R. Stauffer and Ira S Allison Third edition New York McGraw Hill Book Company Inc., 1949 502 p. illus. 24 cm. $5 50 464

Contents: Introduction Materials that constitute the earth. The atmosphere. Wind as an agent of gradation Ground water Gradation by mass movement of surface materials Gradational work of streams. Gradational work of snow and ice Lakes and swamps or marshes. The ocean The origin and nature of sediments Sedimentary rocks. Volcanism Igneous rocks. Diastrophism. Earthquakes. The origin and structure of mountains. Metamorphism Probable conditions within the earth Mineral deposits Appendices. Index.

Note. (1077) A brief and simple introduction designed for use in one-semester college courses. It is limited largely to landscape features and to geological processes that are easily observed and comprehended. In this edition number of illustrations, many of them aerial photographs, have been added. Also, there has been some changes in the text, but the revision has not been extensive.

ENGELN OSCAR DIEDRICH VON, AND KENNETH E. CASTER

Geology New York McGraw Hill Book Company Inc., 1952 730 p. illus. (part col d) 24 cm. $7 00 465

Contents (abridged) Introduction to geology: Materials of the earth. History of early geologic ideas. The natural history of igneous rocks: Origin and composition of magma. Phenomena of intrusion. Phenomena of extrusion. Volcanic cones and associated phenomena. Igneous rock classes and varieties. Structure, process, forms: sedimentation. Underground water. Diastrophism. Structural geology. Metamorphism. Mountains and plateaus. Sculpture of the land in humid regions. Sculpture and modeling of the land in arid regions. Geology of the shores and floor of the oceans. Nature and functions of glaciers. Geologic history: Cenozoic era. Mesozoic era. Paleozoic era. Cryptozoic eon. Index.

Note: An introductory college text suitable for use by both students who will take only an introductory course and those who plan to pursue the subject further. It provides view of the basic content of the main branches of geology including paleontology. Also there is brief presentation of current theories of cosmology. The book is written in clear style and is adequately supplied with literature references and illustrations.

FENTON CARROLL LANE, AND MILDRED ADAMS FENTON

Giants of geology New York Doubleday & Company Inc. 1952 333 p. illus. 22 cm. $3 50 466

Contents Floods and exhalations. Graybeards succeed dusty Magi and ancient volcanoes. Geology by decree. Three skeptical Scots. Neptune versus Vulcan. Like goes with like. Knight of the "principle." The Cambrian conflict. Agassiz of the ice age. New science in new world. Ex-convict professor. Geologist at large. Immigrant surveyor That nation might grow Fossils or fancies? Hugh Miller of the "Old Red." A great and good man. Railroads and new surveys. Canyon's conqueror Earth blisters and changing land. Law, Lath and Her Majesty's Survey Glaciers to galaxies. Sources and references. Index.

Note The lives and personalities of major contributors to the development of geological knowledge lend interest to what is essentially popular account of the growth of geology The book is addressed to general readers and is good example of scientific writing for this group. The narrative is supplemented by portraits and other illustrations of considerable interest. There are no bibliographical references in the text but the list of "sources and references" at the end of the book is arranged in the same order as the chapters. The first edition was entitled *The story of the great geologists.*

GARRELS ROBERT MINARD

A textbook of geology New York Harper & Brothers 1951 511 p. illus 24 cm. (Harper's geoscience series Carey Croneis editor) $5 00 467

Contents (abridged) The general setting. Surface features of the earth. The problem of the history of the earth. Earth history from study of running water. Work of the waves. The work of the wind The work of ice. The sedimentary rocks. Igneous rocks. Metamorphic rocks Evidence of earth movement. The interior of the earth. Mechanics of earth movement. The origin of the earth. Fossilization. A survey of geologic history The mechanism of evolution The interpretation of geologic environments—reconstruction of typical area. The origin of man. Appendixes: The use of graphs. Field identification of common igneous rocks and minerals. Classification of plants and animals. Index.

Note: In this introductory college textbook the approach to the subject is analytical rather than descriptive. Such geological processes as wind erosion are studied first from the viewpoint of the physical principles and second with regard to the geological effects. Some mathematics is used but it is relatively simple. The illustrations are numerous and of excellent quality. The author is a member of the faculty of Northwestern University

GILLISPIE, CHARLES COULSTON

Genesis and geology a study in the relations of scientific thought, natural theology and social opinion in Great Britain, 1790–1850 Cambridge Harvard University Press 1951 315 p. 22 cm. (Harvard historical studies published under the direction of the Department of History Vol. LVIII) $4.50 468

Contents: Through nature up to nature's God. Neptune and the flood. From diluvianism to paleontology. Catastrophist geology. The uniformity of nature. The vestiges of creation. How useful is thy dwelling place. The place of providence in nature. Bibliographical essay. Notes. Index.

Note: A study of an interesting chapter in the development of geology in particular and of scientific thought in general. It is largely limited to the efforts of scientists themselves to reconcile theology with science. The author states "... having decided that the issues discussed arose from a quasi-theological frame of mind within science, I have written from that point of view and have excluded the purely clerical opponents of science as a whole." The author shows that the geologists of the time were true forebears of Darwin and that they prepared the stage for the controversy over *Origin of species.* The "Bibliographical essay" is a running account of sources, manuscript works, popular scientific works, scientific societies, and periodicals.

GILLULY JAMES AND OTHERS

Principles of geology By James Gilluly, Aaron C. Waters and A. O Woodford. Illustrations by Robert R. Compton. San Francisco California W. H. Freeman & Company 1951 631 p. illus 24 cm. $5 75 469

Contents: Introduction. The earth's broad pattern. Gravity, isostasy strength. Minerals. Rocks. Climates, weathering, and soils. Erosion. Geologic maps, fossils, and time. Movements of the earth's crust. Records of earth movement. Downslope movements of soil and rock. Stream erosion and deposition. Glaciers and glaciation. Ground water. Deserts. The oceans. Igneous activity. Earthquakes and the earth's interior. Mountains. Mineral resources. Appendixes. Index.

Note: A general introductory textbook in which the emphasis is placed on geological processes rather than on rock classification, etc. Basic terms and concepts such as isostasy are explained with care. Also the authors liven the accounts from time to time by including such material as the controversy over the origin of basalt. The text reads easily and the book is excellently illustrated.

HOLMES, CHAUNCEY D

Introduction to college geology New York The Macmillan Company 1949 429 p. illus. 22 cm. $4.50 470

Contents: Earth records its own history. The planet earth. Minerals of the earth. Common igneous rocks and minerals. Sedimentary rocks and minerals. Archeozoic era. Proterozoic era. Paleozoic lands and seas. Some Paleozoic rocks and historic events. Paleozoic life Cambrian—Silurian. Paleozoic life Devonian—Permian. Background events of Mesozoic environment. Mesozoic life: reptiles—earth's other animals and plants during the reptilian reign. Survey of Cenozoic history. Cenozoic mammals. The ice age. The geologic history of man. Rivers and landscapes. Water beneath the land. Winds. Petroleum. Supplements. How to identify the common minerals. Rock identification. Index.

Note: A short, well-illustrated work in which the traditional division of the subject into physical geology and historical geology is avoided. The style is very readable, hence the book is suitable for general readers as well as college students.

LIBBY WILLARD FRANK

Radiocarbon dating Chicago The University of Chicago Press 1952 124 p. illus. 23 cm. (The University of Chicago Committee on Publications in the Physical Sciences Walter Bartky Warren C. Johnson, Joseph E. Mayer Cyril S Smith, William H. Zachariasen) $3.50 471

Contents: Principles. World-wide distribution of radiocarbon. Half-life of radiocarbon. Preparation of the sample for measurement. Measurement of the sample. Radiocarbon dates. The significance of the dates for archeology and geology by Frederick Johnson. Appendixes: Special equipment and chemicals for the C^{14} sample preparation apparatus. Special materials for screen-wall counter. Indexes: Index of subjects. Index of names. Index of samples.

Note: The principles and techniques of estimating the ages of organic materials, especially artifacts of archeological interest, by measuring their radioactive carbon content are described in this book. Radiocarbon dating was developed by the author and his associates and this is the pioneer book about it. Methods of preparing samples and of measuring the weak radiation are described explicitly. Included is a complete tabulation of dates assigned to a variety of archeological samples by use of the radiocarbon technique up to the fall of 1951.

MASON, BRIAN

Principles of geochemistry New York John Wiley & Sons, Inc. 1952 276 p. illus. 24 cm. $5 00 472

Contents: Introduction. The earth in relation to the universe. The structure and composition of the earth. Some thermodynamics and crystal chemistry. Magmatism and igneous rocks. Sedimentation and sedimentary rocks. The hydrosphere. The atmosphere. The biosphere. Metamorphism and metamorphic rocks. The geochemical cycle. Index.

Note: The author states that in this work "The aim has been to summarize the significant facts and ideas concerning the chemistry of the earth and to synthesize these data into a coherent account of the physical and chemical evolution of the earth." The chapter titles fail to indicate the chemical emphasis. For example, the chapter on the hydrosphere is organized under the following sub-heads: The composition of sea water. The composition of terrestrial waters. The balance of dissolved matter in sea water. The history and evolution of the ocean, and it contains 6 tables of chemical data. The level of treatment is introductory to this field, but readers need a background in basic chemistry, physics, and geology. The author is a member of the faculty of the Department of Geology of Indiana University

MOORE, RAYMOND CECIL

Introduction to historical geology New York McGraw Hill Book Company Inc. 1949 582 p. illus 23 cm. $6.50 473

Contents: Materials and methods of historical geology. Evolution of life. The beginning of the earth. The Pre-Cambrian period. The Cambrian period. The Ordovician period. The Silurian period. The Devonian period. The Mississippian period. The Pennsylvanian period. The Permian period. Nature and evolution of Paleozoic life. The Triassic period. The Jurassic period. The Cretaceous period. Nature and evolution of Mesozoic life. The Tertiary period. The Quaternary period. Nature and evolution of Cenozoic life. The geologic record of man. Appendix. Index.

Note: An introductory text for college students enrolled in courses in historical geology and for lay readers who wish to inform themselves about the past history of the world in which they live. It is written in simple language and principles rather than details are emphasized. The treatment is more elementary and more graphic than in the author's *Historical geology* New York, 1933. The total number of illustrations, including maps, sections, diagrams, photographs of typical rock exposures, topographic features, characteristic fossils, and photographs of restorations, amounts to 344, each with descriptive comments. Most of the illustrations are original. There is a detailed index.

PEARL, RICHARD MAXWELL

Guide to geologic literature. New York McGraw Hill Book Company Inc., 1951 239 p. 24 cm. $4.50 474

Contents: Part I, Introduction: The problem of geologic literature. Conducting the search. Part II, Library facilities: Arrangement of the library. Library catalogues. Indexing. Library services. Part III, Kinds of geologic literature: Index guides and bibliographies. Ab-

stracts. Periodicals. United States government documents. Organization bulletins. State bulletins. County and city bulletins. Bulletins of other countries. Books. Newspapers. Theses. Unpublished manuscripts. Maps. Index.

Note: A reference manual which contains descriptions of the standard and useful geologic literature and advice on searching it for published information. Under each of the headings given above the utility of a specific class of literature is discussed briefly and the chief publications are named and briefly described. The scope has not been restricted to strictly geological books and journals, but journals that include information of interest to geologists along with information on other topics have also been included. Publications of only historical interest are described along with those of value in current geological work.

REICHE PARRY

A survey of weathering processes and products. Revised edition. Albuquerque The University of New Mexico Press 1950 95 p. illus. 23 cm. (University of New Mexico publications in geology Stuart A. Northrop editor No 3) Paper $1 00 475

Contents Introduction. Physical processes. Chemical processes and reagents. The results of chemical weathering. Soil-forming processes and soils. The factors of relief and time. Appendix. Bibliography

Note. Essentially this work is a concise review of the current knowledge of the weathering of rock by chemical processes. Physical processes are outlined in the first chapter but are given comparatively little space. The treatment of the chemical processes assumes a knowledge of basic chemistry on the part of the reader. Although compact, the presentation is not so condensed that every reader will have to resort to the literature. A bibliography of 83 citations is included. The book is suitable for upperclass undergraduate college students who are majoring in geology and for college graduates doing work in geology or in related fields such as the physics or chemistry of soils, where a general knowledge of weathering processes is useful.

SIEGRIST MARIE AND ELEANOR TATGE

Bibliography and index of geology exclusive of North America. Volume 13 1948 New York The Geological Society of America, 1949 386 p 26 cm. $3 25 476

—— Volume 14 1949 By Marie Siegrist. New York The Geological Society of America, 1950. 375 p 26 cm. $3 00 477

—— Volume 15 By Marie Siegrist and Marcia Lakeman New York The Geological Society of America, 1951 429 p. 26 cm. $3 00 478

Note. (402) A standard annual guide to the geological literature of the world exclusive of the literature on the geology of North America, which is covered by United States Geological Survey's *Bibliography of North America*, described below. The arrangement is by author with a detailed subject index. Most of the entries are accompanied by a short annotation which indicates the scope or content of the article.

THOM EMMA MERTINS AND OTHERS

Bibliography of North American geology 1946–1949, by Emma Mertins Thom, Marjorie Hooker, and Ruth Reece Dunaven Washington D C. Government Printing Office, 1949–1952 4 vols. 23 cm. (United States. Geological Survey Bulletin 958 968 (o p.) 977 985) Paper $1 50 $0.55 $1 00 479

Note: (401*) Four more supplements to the *Bibliography of North American geology* the basic volumes of which, covering the years 1785–1945 were published as numbers 746, 747 823, 937 938, 949 and 952 of the same bulletin series. Paleontology petrology and mineralogy as well as geology are covered for the years indicated, and publications dealing with Panama, the Hawaiian Islands, and Guam, as well as with continental North America and its adjacent islands, are included.

GEOLOGY OF VARIOUS REGIONS

BUCHER, WALTER H

Geologic structure and orogenic history of Venezuela. Text to accompany the author's geologic tectonic map of Venezuela. New York The Geological Society of America, 1952 113 p illus. 26 cm. (Geological Society of America. Memoir 49) $1.50 480

Contents: Preface. Acknowledgments. Maracaibo basin. Venezuelan Andes. Falcon region. Western Caribbean mountains. Paraguana and Goajira peninsulas and the islands north of the Venezuelan coast. Eastern Caribbean mountains, including the northern and central range of Trinidad. Eastern Venezuelan basin and southern Trinidad. El Baul Swell, Apure basin, and the western part of the east Venezuelan basin. Guayana shield. References. Index.

Note A concise description of the structural geology of Venezuela, designed to be used with a map prepared by the author and drawn on the scale of 1 1,000,000. The bibliography lists the pertinent literature in English and Spanish.

EARDLEY ARMAND JOHN

Structural geology of North America. New York Harper & Brothers, 1951 624 p illus. (part col d) 22 cm (Harper's geoscience series Carey Croneis editor) $12.50 481

Contents (abridged) Structural terminology and classification. Stable interior of the continent. Paleozoic Cordilleran geosyncline. Appalachian Mountains systems. Eastern Triassic basins. Atlantic coastal plain. Ouachita, Marathon, and Coahuila systems. Wichita and ancestral Rockies systems and the Texas foreland. The late Paleozoic zones of faulting and cryptovolcanic structures. Mesozoic systems along the Pacific. Canadian and Montana Rockies. Idaho batholith. Central Rockies. Colorado and New Mexico Rockies. Rockies of northeastern Mexico. Coast ranges of the Pacific. Baja California and Sonora systems. Pacific submarine system. Arctic. Antillean-Caribbean region. Bibliography Index.

Note A compact but fairly detailed treatment of the structural evolution and present landscape features of the North American continent. The arrangement is by region, but even small areas are discussed if they are of special interest to the structural geologist. A series of 16 colored maps portrays the tectonic evolution of the continent from the Cambrian period to the late Cretaceous. The work is an outstanding contribution to geological literature. In the whole book there are 341 figures containing reproductions of about 750 maps and diagrams.

MATTHES FRANÇOIS EMILE

The incomparable valley a geologic interpretation of the Yosemite. Edited by Fritiof Fryxell. Berkeley University of California Press 1950 160 p. illus. 25 cm. $3 75 482

Contents. The Sierra Nevada. The Yosemite region and its high Sierra. Yosemite valley. The Yosemite through the ages. The sculpturing of the walls. The domes. The marks of time. The waterfalls. The little ice age of historic times.

Note. A fascinating exposition of the geology of the Yosemite valley. Though definitely written for non-geologists, even geologists who are about to spend their first vacation in the Yosemite valley will find it good reading. The lucid but compact text is supplemented by 50 reproductions of remarkable photographs. The author was long recognized as an authority on Sierra Nevada and Yosemite valley geography. This book was assembled after his death from his *Geologic history of the Yosemite valley* (1930) other professional publications, and unpublished notes made in preparation for this book.

MATTHES FRANÇOIS EMILE

Sequoia National Park, a geological album. Edited by Fritiof Fryxell. Berkeley University of California Press, 1950 136 p. illus. 25 cm. $3 75 483

Contents: The great Sierra block. Erosional features due to successive uplifts. Evidences of glacial action. Glacial canyons, cirques, and lake basins. Avalanche sculpture. Effects of frost action at high altitudes. Rock forms composed of massive granite. Effects of prolonged chemical weathering. Metamorphic rocks and their folded structure. Features due to solution in marble. Features due to volcanic action. Glossary

Note: In this interesting and unusual book the contents of three "Sequoia albums," originally prepared by the author for the use of the U. S. National Park Service, have been combined and the text edited so as to make it consistent and available to laymen. Most of the space is occupied by good reproductions of 114 excellent photographs, each of which depicts an interesting geologic feature. The text consists largely of short legends which accompany the illustrations and describe the geologic aspects. The region covered is outstanding for its scenery which has been produced by a wide range of geomorphic processes.

NEWELL, NORMAN DENNIS

Geology of the Lake Titicaca region Peru and Bolivia. New York The Geological Society of America, 1949 111 p. illus. 26 cm. (The Geological Society of America. Memoir 36) $5 00 484

Contents: Abstract. Introduction. Geography. Geologic structure. Stratigraphic summary Devonian rocks. Permian rocks. Jurassic rocks. Cretaceous rocks. Tertiary rocks. Glaciation of the Titicaca region. Igneous intrusive rocks. Geologic history Petroleum geology Works to which reference is made. Index.

Note: The region described in this monograph has complex geology which is distinct from adjoining Andean areas to the south and northwest. It contains the world's highest oil field. The book is based on previously published studies and on field study made by the author during twelve months spread over the years 1943 to 1948. The illustrations include photographs of thirty-six views of landscape features having geologic interest. The book is supplemented by two geological maps and two diagrams of the structural sections of the Lago Titicaca and Pirin areas.

RICHARDS, HORACE GARDINER

Geology of the coastal plain of North Carolina. Philadelphia The American Philosophical Society 1950 83 p illus. 30 cm. (Transactions American Philosophical Society New series—vol. 40 part 1) Paper $1.50 485

Contents: Introduction. Stratigraphy of the North Carolina coastal plain. Lower Cretaceous. Upper Cretaceous. Eocene. Oligocene. Miocene Pliocene Early Pleistocene. Late Pleistocene. Recent formations. "Carolina bays" Structure of North Carolina coastal plain. Economic geology Correlation of North Carolina coastal plain formations. Historical geology Bibliography Index.

Note. A comprehensive study based both on field work and study of the literature. The bibliography covers the literature published since 1912 and also some papers published before 1912 which were omitted from the bibliography in volume III of the North Carolina *Geological and economic survey* 1912. Most of the 16 figures are reproductions of photographs of landscape features or of fossil specimens.

STARK JOHN THOMAS AND OTHERS

Geology and origin of South Park, Colorado. By J T Stark, J H. Johnson C. H. Behre, jr W E. Powers, A. L. Howland Don B Gould, and others. New York The Geological Society of America, 1949 188 p illus. 26 cm. (Geological Society of America. Memoir 33) $3 75 486

Contents: Abstract. Introduction Physiographic features Pre-Cambrian rocks. Paleozoic and later sedimentary rocks. Tertiary sediments. Pleistocene sediments Post-pre-Cambrian igneous rocks. Structural geology Geologic history of South Park Appendix—representative sections Bibliography Index

Note. A physiographic, stratigraphic and tectonic study of South Park, "an extensive, strikingly flat basin in central Colorado, framed by strongly contrasting, rugged mountains, among the highest in the United States. It is based primarily on field work, however, considerable body of pertinent literature is listed in the bibliography. The work is an outstanding example of cooperative study of a small complex area.

WEAVER, CHARLES EDWIN

Geology of the Coast ranges immediately north of the San Francisco Bay region, California. New York The Geological Society of America, 1949 242 p. illus. 26 cm. (The Geological Society of America. Memoir 35) $6.50 487

Contents: Abstract. Introduction. Geography Stratigraphy Igneous rocks. Structure. Geologic history Economic geology Literature. Index.

Note: The geography systematic geology structure and economic deposits of an area of approximately 2,215,000 square miles in the Coast ranges of central California are described in this professional study The structure of the region is complex. Although it contains no producing oil wells several wells have been drilled and the log of one well drilled to 3 130 feet is included. The book has been written for use by professional geologists.

MINERALOGY AND PETROLOGY

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Problems of clay and laterite genesis. Symposium at annual meeting of The American Institute of Mining and Metallurgical Engineers, St. Louis, Missouri, February 19–22 1951 Sponsored by the Karl Eilers Memorial Fund. New York American Institute of Mining and Metallurgical Engineers, 1952 244 p. illus. 23 cm. $6.00 488

Contents: The genetic significance of mineralogy by A. F. Frederickson. Origin of the Arkansas bauxite deposits, by Mackenzie Gordon, jr and J. L. Tracey jr Examples of bauxite deposits illustrating variations in origin, by E. C. Harder. Investigations on cold precipitated hydrated ferric oxide and its origin in clays, by R. C. Mackenzie. Studies in the system alumina-silica-water by R. Roy and E. F Osborn. Mineralogy and origin of the Mercer fireclay of north-central Pennsylvania, by R. C. Bolger and J H. Weitz. The structure of hydrous aluminum oxides and hydroxides, by W O. Milligan and J. L. McAtee. Genesis of clay minerals, by E. A. Hauser Prospecting for useful clays in relation with their conditions of genesis, by G. Millot. Observations on the origin of Missouri high alumina clays, by W D Keller. New clay mineral evidence concerning the diagenesis of some Missouri fireclays, by J. F Burst. Interrelationships of structure and genesis in the kaolinite group, by T F Bates. The genesis and morphology of the alumina-rich laterite clays, by G D Sherman. Occurrence and exploitation of Georgia's kaolin deposits, by T L Kesler. Kaomont Bay clay deposit, by E. A Hauser Recent advances in clay mineral technology by R. E. Grim. Discussion. Name index. Subject index.

Note A collection of technical papers written by geologists, mineralogists, chemists, and specialists in soil science. The symposium (and the book) was designed to bring together the contributions and ideas of scientists from various fields. The papers were addressed to graduate scientists and engineers with theoretical or practical interests in clay minerals. Literature references are included.

BASTIN EDSON SUNDERLAND

Interpretation of ore textures. New York The Geological Society of America, 1950. 101 p. illus. 26 cm. (The Geological Society of America. Memoir 45) $1 75 489

Contents: Introduction. Textures of magmatic ores. Common textures indicative of deposition in open spaces. Principles of colloidal deposition. Colloidal ore textures Replacement textures Microscopic inclusions Paragenesis or order of deposition. Textures of sedimentary ore deposits. Ore textures formed by dynamometamorphism. References cited Explanation of plates. Index

Note The textures of ores when viewed under the microscope are correlated in this book with the genesis or methods of formation of ores. Only aspects such as would concern an ore analyst or practic

ing mineralogist are treated. In other words, there is little discussion of the physical chemistry principles underlying ore deposition. The author has included information from the literature and from his own work. The 18 plates show photographs or microphotographs of approximately 100 prepared ore specimens.

DANA, EDWARD SALISBURY

Minerals and how to study them revised by Cornelius S Hurlbut, jr Third edition. New York John Wiley & Sons Inc., 1949 323 p. illus. (part col'd) 22 cm. $4.25 490

Contents: Minerals and mineralogy. Some preliminary hints on how to study minerals. Crystals and crystal habits. Physical properties of minerals. Chemical properties of minerals. Use of the blowpipe. Description of the mineral species. On the determination of minerals. Appendices. Index.

Note: The first edition of this manual was published in 1895 and second edition, which embodied no major revisions, in 1906. Both were designed to acquaint the beginner in mineralogy with the basic methods of examining, identifying, and classifying the more common minerals. The present edition has the same purpose, but the work has been extensively revised, especially in those chapters devoted to descriptions of the various species of minerals. Here are given modern data on the habitat, physical properties, composition, and occurrence of each mineral, and the method of classification has been altered to conform with the new more commonly accepted chemical classification. Many new photographs of minerals, in their natural state and of their cross-sections, have been added.

DANA, JAMES DWIGHT

Dana's manual of mineralogy Sixteenth edition. Revised by Cornelius S. Hurlbut, jr New York John Wiley & Sons Inc., 1952 530 p illus. 24 cm. $6.00 491

Contents. Mineralogy Crystallography Physical mineralogy Chemical mineralogy Descriptive mineralogy Occurrence and association of minerals. Mineral uses. Determinative mineralogy Subject index. Mineral index.

Note. (1134) The first edition of this work was published in 1848; hence in its various editions it has spanned more than century. In it are covered both the general techniques of mineral identification and concise, systematic descriptions of individual minerals. The mineral descriptions cover the following points. chemical composition, crystallography, physical properties, tests, special diagnostic features, uses, and the origin of the name. The book is used both as an introductory text and as reference book in libraries and in the field. It has been substantially revised in this edition. The changes include adoption of modern crystallographic nomenclature, rewriting of the chapter on chemical mineralogy new introductory chapter, and descriptions of minerals not listed in previous editions.

FAIRBAIRN HAROLD WILLIAMS

Structural petrology of deformed rocks with supplementary chapters on statistical analysis by Felix Chayes. Cambridge, Mass. Addison Wesley Press Inc. 1949 Second edition. 344 p. illus. 24 cm. $12 50 492

Contents (abridged) Part I, Petrofabric and experimental facts Orientation patterns of minerals Orientation of composite elements. Relation of folds to grain orientation Experimental deformation. Reversible flow and rupture Irreversible flow and recrystallization. Part II, Interpretation and application Development of quartz orientation. Development of orientation in minerals other than quartz. Rotation and relative movement. Recrystallization in tectonites. Folds and folding Hypotheses of rock flowage. Tectonic transport. Remarks on foliation and lineation Part III, Methods and analytic procedure Field and hand specimen procedure. Microscope and X-ray procedure. Presentation of data. Statistical analysis of two-dimensional fabric diagrams. Statistical analyses of three-dimensional fabric diagrams. Bibliography Index.

Note. (1155b) A reference book for specialists in petrology and graduate students preparing to enter this field. It deals with the fundamental processes of the formation of rocks and certain geological structures. Its primary purpose is to enable the petrologist to analyze rocks and to study geological formations on the basis of crystal structures, behavior of rocks under pressure and related processes. Much new material has been added in this edition, including the two chapters on statistical methods applied to the analysis of petrofabrics.

FAIRBAIRN, HAROLD WILLIAMS, AND OTHERS

A cooperative investigation of precision and accuracy in chemical, spectrochemical and modal analysis of silicate rocks, by H. W Fairbairn and others an investigation by staff members of Department of Geology Massachusetts Institute of Technology, Cambridge, Mass (in collaboration with Office of Naval Research Washington, D C.) Geophysical Laboratory Carnegie Institution of Washington, Washington D C. Geochemistry and Petrology Branch, U S Geological Survey Washington D C. Washington, D C. Government Printing Office, 1951 71 p illus. 23 cm. (Contributions to geochemistry 1950–51 United States. Geological Survey Bulletin 980) Paper $0.35 493

Contents: Preparation and distribution of the samples, by H. W Fairbairn. Results of chemical analysis of samples of granite and diabase, by W G. Schlecht and R. E. Stevens. Spectrochemical analysis of major constituent elements in minerals and rocks, by W H. Dennen and others. Spectrochemical analyses of some of the rarer elements in the granite and diabase samples, by L. H. Ahrens. Modal analysis of the test rocks, by Felix Chayes. Summary of results, by H. W Fairbairn.

Note: The first part of this progress report is introductory to the bulletin as whole; the second, third, fourth, and fifth parts deal with particular aspects of analysis, and the sixth part summarizes. The authors express the hope that similar studies will follow in the future because the accuracy and precision of analytical methods used by petrologists, geochemists, and mineralogists are relative rather than absolute.

KRAUS EDWARD HENRY AND OTHERS

Mineralogy, an introduction to the study of minerals and crystals. By Edward Henry Kraus, Walter Fred Hunt and Lewis Stephen Ramsdell. Fourth edition. New York Mc Graw Hill Book Company Inc., 1951 664 p. illus 24 cm. $8 00 494

Contents: Introduction. Crystallography Cubic system. Hexagonal system. Tetragonal system. Orthorhombic system. Monoclinic system. Triclinic system. Compound crystals. Physical properties. Optical mineralogy Crystal structure and X-ray analysis. Chemical properties. Formation and occurrence of minerals. Qualitative blowpipe methods. Descriptive mineralogy Gemstones Classification of minerals according to elements. Glossary Tabular classification of the 32 classes of symmetry Tables for the determination of minerals. Selected bibliography Index.

Note. (1143) A college textbook that contains enough material to make it useful also as an elementary reference book in library and personal collections. The general aspects of the subject are discussed in the first fifteen chapters which account for approximately 240 pages of the book's length. The sixteenth chapter which contains concise descriptions of representative minerals is 164 pages long. The determinative tables of minerals are arranged so that they may be used by both amateurs and professionals. Both the text and the illustrations have been revised and extended in this edition. The bibliography is new feature.

KRUMBEIN WILLIAM CHRISTIAN AND LAURENCE LOUIS SLOSS

Stratigraphy and sedimentation. San Francisco W H. Freeman and Company, 1951 497 p. illus. 25 cm. $5.00 495

Contents: Introduction. The stratigraphic column. Stratigraphic procedures. Properties of sedimentary rocks. Classification and description of sedimentary rocks. Sedimentary processes. Sedimentary environments. Stratigraphic paleontology Sedimentary facies. Principles of correlation. Tectonic framework of sedimentation. Sedimentary tectonics. Stratigraphic maps. Paleogeography Bibliography. Index.

Note: A substantial treatment, in the form of an upperclass college textbook, of two related fields of geology that do not get full-scale treatment in general texts. The order and relation of strata and the study of sedimentary rocks are important in applied geology such as petroleum geology as well as in numerous areas of historical geology. Current techniques such as the logging of samples from oil wells as they are drilled are discussed, but most of the book is devoted to the fundamental knowledge. The text is supplemented by a long bibliography that should be useful to graduate geologists. There is a generous number of illustrations, and the format of the book is outstanding.

PALACHE CHARLES AND OTHERS

The system of mineralogy of James Dwight Dana and Edward Salisbury Dana, Yale University 1837–1892 Seventh edition entirely rewritten and greatly enlarged by Charles Palache, the late Harry Berman and Clifford Frondel. Volume II. New York John Wiley & Sons, Inc., 1951 1124 p illus. 24 cm $15.00 496

Contents (abridged): Halides. Carbonates. Nitrates. Iodates. Borates. Sulfates. Selenates and tellurates. Chromates. Phosphates, arsenates, and vanadates. Antimonates. Vanadium oxysalts. Molybdates and tungstates. Organic compounds. Index.

Note: (1137) In the present edition this classical reference work is being completely reorganized and rewritten. The classification is a new one based on crystal chemistry. Data from X-ray investigations are being included for the first time. Other new features include a new elastic series of classification numbers for species, revision of specific gravities, and annotated literature references. The mineral groups named above are covered in volume II. A third volume is in preparation.

PETTIJOHN, FRANCIS JOHN

Sedimentary rocks. New York Harper & Brothers, 1949 526 p. illus. 24 cm. (Harper's geoscience series, Carey Croneis, editor) $7.50. 497

Contents: Introduction. Textures. Composition. Structures. Color. Classification. Conglomerates and breccias. Sandstones. Shales and argillites. Limestones and dolomites. Nonclastic sediments. Weathering. Transportation. Deposition. Lithification and diagenesis. Author index. Subject index.

Note: A relatively comprehensive treatment, even though it was intended by the author as an elementary work. The processes of sedimentation are covered with relative brevity but their products *are covered thoroughly and much data—particularly on chemical composition*—are included which has not been published previously in book form. Emphasis is on common gravels and rocks rather than on rocks that are rarely encountered. There are 131 figures and 39 plates. Many of the latter are reproductions of microphotographs. There are many footnote references to the modern literature but no formal bibliography.

TURNER, FRANCIS JOHN AND JEAN VERHOOGEN

Igneous and metamorphic petrology New York McGraw Hill Book Company Inc. 1951 602 p. illus. 24 cm. $9.00 498

Contents (abridged) Principles of chemical equilibrium applied to rocks. Characteristics and classification of igneous rocks. Variation in associated igneous rocks. Crystallization of igneous minerals from silicate melts. Crystallization of basaltic and granitic magmas in the light of experimental data. The oceanic olivine-basalt trachyte volcanic association. Volcanic associations of orogenic regions. Basic and ultrabasic plutonic associations. The granite granodiorite plutonic association. Pegmatites, lamprophyres, nepheline syenites. Environment, origin, and evolution of magmas. Principles governing chemical adjustment of solid rocks to metamorphic conditions. Correlation of mineral assemblages with specific conditions of metamorphism. Characteristics of individual metamorphic facies. Special features of fabrics of deformed rocks. Metamorphism in relation to magmas and to orogeny. Index.

Note: An advanced treatise of interest to graduate students preparing for work in petrology and to graduates already at work in the field. In it the modern knowledge of igneous and metamorphic petrology is presented from the physicochemical standpoint. The phase rule and other principles of chemical equilibria applicable to the formation of rocks at high temperatures and under moderate temperatures are summarized in the second chapter. In the remainder of the book groups of rocks are discussed from the viewpoint of their genesis, the genetic processes being viewed against the background of the second chapter as multi-component chemical systems. There is no systematic bibliography but selected literature is cited in footnotes.

TWENHOFEL WILLIAM HENRY

Principles of sedimentation. Second edition. New York McGraw Hill Book Company Inc., 1950 674 p illus. 23 cm. $7.50 499

Contents (abridged) The environmental factors. Classification *and consideration of environments.* Origin of inorganic sediments. Interrelations of organisms and sediments. Transportation and deposition of sediments. Classification of sediments, sedimentary rocks, and minerals of sediments. The clastic sediments. Sediments of chemical deposition. The carbonate sediments. Siliceous, ferruginous and manganese sediments. The carbonaceous sediments. Evaporites. Phosphatic sediments. Structural features of sedimentary origin. Textures and colors of sediments. Index.

Note: (1165) A college textbook which also has a fair amount of reference value. It provides an introductory survey of the current knowledge of both the principles of sedimentation and the soils and rocks produced by sedimentation processes. The treatment assumes that the reader will have had some previous work in geology. Throughout the book there are frequent lists of pertinent literature for the benefit of the student or practicing geologist who wishes to read further on a particular topic. Substantial additions, both in text and illustrative matter have been made in the present edition.

WAHLSTROM ERNEST EUGENE

Introduction to theoretical igneous petrology New York John Wiley & Sons, Inc., 1950 365 p 22 cm. $6.50 500

Contents: Introduction. Heterogeneous equilibrium and the phase rule. Equilibrium in silicate systems. Igneous minerals. The crust and the interior of the earth. Magmas—source and nature. The ascent and emplacement of magmas. Crystallization of magmas. Igneous differentiation. Assimilation and syntexis. Granitization. Late magmatic and postmagmatic processes. Origin of rock types. Classification of igneous rocks. Appendix: Physical-chemical concepts useful to petrologists. Index.

Note A short treatment written mainly for students of geology who do not plan to specialize in this branch of geology but nevertheless desire some knowledge of it. A fair acquaintance with basic geological terms and concepts has been assumed, and the reader needs also to be familiar with the concepts and terms of basic physics, chemistry and mathematics. Phase diagrams and other devices of physical chemistry are used freely. The emphasis is on the physicochemical processes that produced igneous rocks rather than on descriptions of the rocks themselves.

WINCHELL, ALEXANDER NEWTON

Elements of optical mineralogy: an introduction to microscopic petrography Part II—Descriptions of minerals with special reference to their optical and microscopic characters. Fourth edition. By Alexander N Winchell with collaboration of Horace Winchell. New York John Wiley & Sons Inc. 1951 551 p. illus. 24 cm. $12.50 501

Contents (abridged) Introduction. Halides. Sulfides. Oxides. Carbonates, etc. Other mineral carbon compounds. Borates. Sulfates, etc. Phosphates, etc. Silicates. Index.

Note: (1181) A standard book for the use of all who are concerned with the identification of minerals. Essentially it is a descriptive catalogue of those minerals which can be identified by optical means. In general for each mineral listed, information is given on the following points: composition, crystalline structure, physical characteristics, optical properties, occurrence, and special characteristics that may be used to distinguish it from other closely related minerals. The descriptions are accompanied by citations of the pertinent literature. There is much new material in this edition, including new literature citations, new data derived from X-ray studies of minerals, and some significant changes in classification.

DYNAMIC AND STRUCTURAL GEOLOGY

GEOLOGICAL SOCIETY OF AMERICA

Sedimentary facies in geologic history (Conference at meeting of The Geological Society of America held in New York New York, November 11 1948) Chester R. Longwell, chairman New York Geological Society of America, 1950 171 p illus. 26 cm. (Its Memoir 39) $1 75 502

Contents. Principal addresses: Meaning of facies, by R. C. Moore. Facies changes in the Colorado plateau, by E. D. McKee. Sedimentary facies and geologic structures in the Basin and Range province, by S. W. Muller. Sedimentary facies and associated diastrophism in the Upper Cretaceous of central and eastern Utah, by E. M. Spieker. Oligocene faunas, facies, and formations, by H. E. Wood, 2nd. Integrated facies analysis, by L. L. Sloss, W. C. Krumbein, and E. C. Dapples. Discussion.

Note. A series of papers written for a symposium organized similarly to the Society's symposium on the origin of granite have been collected in this volume, together with transcripts of the discussion at the meeting. Various current views on the classification of sedimentary rocks and the interpretation of their history are presented. The papers are supplemented by lists of references, but the book contains no index.

GOLDMAN MARCUS ISAAC

Deformation, metamorphism, and mineralization in gypsum-anhydrite cap rock, Sulphur Salt Dome, Louisiana. New York The Geological Society of America 1952 169 p illus. 26 cm. (Geological Society of America. Memoir 50) $3 00 503

Contents: Abstract. Introduction. Gypsification. Stress effects in the cap rock. Recrystallization of anhydrite cap rock. Pressure solution between individual grains. Genetic relations of recrystallization and pressure solution. Rim gypsification. Regenerated anhydrite. Mineralization and rarer minerals. References cited Index

Note: A detailed study based on the examination of a single, complete two-inch diamond-drill core from the Union Sulphur Company's well no. 194 in the Sulphur Salt Dome, Louisiana. The core represents a complete section through the cap rock. The author's findings and conclusions are compared with the conclusions of others on the origin of cap rocks of the kind studied. The discussion is supplemented by 64 plates containing reproductions of photographs of polished sections and other forms of this core.

GUTENBERG BENO editor

Internal constitution of the earth. Second edition. New York Dover Publications Inc., 1951 439 p illus 24 cm. $6.00 504

Contents: Introduction, by B. Gutenberg. The origin of the solar system, by H. Jeffreys. Relevant facts and inferences from field geology by R. A. Daly Elastic properties of materials of the earth's crust, by L. H. Adams. The chemical and petrological nature of the earth's crust, by H. S Washington and L. H Adams. Observed temperatures in the earth's crust, by C. E Van Orstrand. The cooling of the earth and the temperature in its interior by B. Gutenberg. Forces in the earth, by B. Gutenberg Hypotheses on the development of the earth, by B. Gutenberg. Evidence on the interior of the earth derived from seismic sources, by J B. Macelwane. Evidence from deep-focus earthquakes, by B. Gutenberg and C. F Richter. Structure of the crust—continents and oceans, by B Gutenberg and C. F Richter Density gravity pressure and ellipticity in the interior of the earth, by W D Lambert and F W Darling. The elastic constants in the interior of the earth, by B Gutenberg. Strain characteristics of the earth's interior by H. Benioff and B. Gutenberg. Summary by B. Gutenberg. Appendix. Author index. Subject index.

Note: A basic work on geophysics which was published originally as vol. 7 of the National Research Council's *Physics of the earth*, Washington, D. C., 1939. In preparing this edition—the manuscript of which was apparently completed in 1949—all but two of the chapters have been expanded or extensively rewritten.

KAY, MARSHALL

North American geosynclines. New York The Geological Society of America, 1951 143 p. illus. 26 cm. (The Geological Society of America. Memoir 48) $2 00 505

Contents. Abstract. Introduction. Hedreocraton and miogeosynclines. Geosynclines within the hedreocraton. Paleogeography of the continental borders. Stratigraphy of the continental borders. Interpretation of the stratigraphy of eugeosynclinal belts. Parageosynclines. Geosynclines and sedimentation. Growth of continents. Summary and conclusions. Classification and definitions. References cited. Index.

Note: This comprehensive monograph of the geosynclines of the North American continent is a technical study designed for use by professional geologists. There are 20 illustrations in the text and 18 folded plates, most of which are maps. There is also a comprehensive bibliography

KING PHILIP BURKE

The tectonics of middle North America, middle North America east of the Cordilleran system. Princeton Princeton University Press 1951 203 p illus. 27 cm. $3 75 506

Contents (abridged) Reference maps. Central stable region. Laurentian shield. Interior lowlands. Paleozoic structures southeast and south of the central stable region; Newfoundland. Northern Appalachians. Central and southern Appalachians. Structures west of the Mississippi River The coastal plains. Sources of figures. Index.

Note. A synthesis of the currently valid information on the structural geology of the region named in the title. It is presented in the technical terminology and is intended for such readers as college students of geology and professional geologists. It supersedes the author' *Outline of the structural geology of the United States*, published in 1932. Most of the material is descriptive, and the text is supplemented by original diagrams and extensive bibliographies. The author has been associated with the United States Geological Survey for many years.

MILLER, WILLIAM JOHN

An introduction to historical geology with special reference to North America. Sixth edition. New York D Van Nostrand Company Inc. 1952 555 p illus. 23 cm. $5 50 507

Contents Introduction. Geologic time. Fossils. Organic evolution. Rock formations. Relations of continents and ocean basins. Origin and pre-geologic history of the earth The earth's interior. The Archeozoic era. The Proterozoic era. The Cambrian period. The Ordovician period. The Silurian period. The Devonian period. The Mississippian period. The Pennsylvanian period. The Permian period. Paleozoic life. The Triassic period. The Jurassic period. The Cretaceous period. Mesozoic life. The Cenozoic era (excluding Pleistocene glaciation) Pleistocene glaciation. Cenozoic life. Appendix. Index.

Note: (1084) A widely used college textbook. It is designed for use in first courses in the subject offered to students who have had an introductory course in general geology. The fifth edition was published in 1941. In preparing this edition substantial changes were made in both the text and illustrations. There are now 404 figures including a generous number of reproductions of photographs.

MILLER, WILLIAM JOHN

An introduction to physical geology with special reference to North America. Fifth edition. New York D Van Nostrand Company Inc., 1949 482 p illus. 24 cm. $5.00 508

Contents: Introduction. Materials of the earth's crust—minerals—rocks. Instability of the earth's crust—diastrophism. Structure of the earth's crust. Volcanoes. Rock weathering. The work of streams. Glaciers and their work. The work of the wind. The sea and its work. Subsurface water and its work. Mountains, plateaus, and plains. Lakes. Economic geology. Appendices: Some common and useful minerals. Selected references on physical geology. Index.

Note (1085) In its fifth edition, this standard work remains one of the most readable of college textbooks in geology. There has been some rearrangement of material and considerable amount of revision. Most statistics have been brought up to date, and various classified tables have been expanded or corrected.

MONNETT, VICTOR E. AND HOWARD E. BROWN

The principles of physical geology New York Ginn and Company 1950 450 p. illus. 24 cm. $4.50 509

Contents: Geology its meaning and methods. The earth, its materials and processes. Weathering. Transportation of weathered material as result of gra dation. The work of running water. Ground water. Lakes and swamps. The atmosphere. Glaciers and their work. The ocean. Deformation of the rocks. Mountains. Volcanism. Development of landscapes. Minerals. Rocks. The earth's mineral wealth. Geology the servant and ally of man. Appendix: Basic facts about the earth. Important rock-forming minerals. Common rocks. Topographic maps (introduction and key). Index.

Note: An elementary work addressed primarily to college students. However, it is written and illustrated in manner that makes it available to any literate person who is interested in landscape features and the processes that produced them. The style is lucid, and even when dealing with theoretical topics, the authors usually express themselves in concrete terms that are readily comprehensible by the average educated reader. Most of the illustrations are reproductions of excellent photographs. A special point is made of the value of large-scale topographic maps in the study of landscape features.

NEVIN CHARLES MERRICK

Principles of structural geology Fourth edition. New York John Wiley & Sons Inc., 1949 410 p. illus. 24 cm. $6.00 510

Contents: Stress and strain relations. Physical properties of rocks. Flexures. Faults. Joints. Cleavage. Structures associated with igneous intrusion. Structures in unconsolidated sediments. Reflection of rock structure in the topography. Some facts, inferences, and hypotheses regarding the earth. Continents and ocean basins. Mountain systems. Laboratory exercises. Index.

Note. (1143) A standard college textbook which is noted for its concise but lucid discussions of the deformations of the earth that form the subject matter of dynamic and structural geology. Because it is brief and because the language is semi-technical, the book is also suitable for general readers who are more than superficially interested in the subject. The most prominent change in the present edition is the addition of the section of laboratory exercises near the end of the book, but the whole work has been revised and the type has been reset.

RAMBERG HANS

The origin of metamorphic and metasomatic rocks a treatise on recrystallization and replacement in the earth s crust. Chicago The University of Chicago Press, 1952 317 p. illus. 24 cm. $10 00 511

Contents: Definitions. Natural boundary between metamorphism and magmatism. Thermodynamics of metamorphic processes. Equilibrium diagrams of metamorphic minerals. Chemical kinetics of metamorphism. The kinetics of deformation of rocks and minerals. Stress-minimum minerals. Brief survey on structural properties of metamorphic rocks. The mineral facies of metamorphic rocks. Metasomatism. The mechanisms of metasomatic transfer of matter through rocks. Metamorphic differentiation. The principles of metamorphic differentiation and the question of nodule formation during metamorphism. Contact metamorphism. Metasomatism in practically unmetamorphosed and low-grade sediments. Metamorphism in regionally metamorphosed complexes. Temperature in regional metamorphism. Appendix: Chemical bonds in crystals—a clue to predicting relative stability of minerals and cation distribution among them. References. Author index. Subject index.

Note An important addition to petrologic literature in which the petrogenesis of the metamorphic and metasomatic rocks is studied from the viewpoint of thermodynamics and crystal chemistry. It represents the great advances in the understanding of metamorphism which have been made in recent years, advances in which the author himself has taken considerable part. The first third is devoted to discussions of the physico-chemical processes, the remainder to specific series of petrogenetic events and to discussions of the genesis of specific varieties of rocks. Readers need fairly substantial knowledge of basic thermodynamics, physical chemistry, and petrology. The work is of interest to graduate students of petrology and graduate specialists in this field. The author is Associate Professor of Petrology in the University of Chicago.

TRASK, PARKER DAVIES editor

Applied sedimentation. Prepared under direction of Committee on Symposium on Sedimentation, Division of Geology and Geography National Research Council Washington, D C. New York John Wiley & Sons, Inc. 1950 707 p illus. 24 cm. $6 75 512

Contents (abridged) Part I, Basic principles of sedimentation: Dynamics of sedimentation, by P D Trask. Origin of soils, by Hans Jenny. Geophysical problems in applied sedimentation, by R. F Beers. Principles of soil mechanics as viewed by geologist, by C. A. Kaye. Sedimentation and ground water, by F C. Foley. Part II, Engineering problems involving strength of sediments: Foundation problems of sedimentary rocks, by S. S. Philbrick. Earth dams, by T A. Middlebrooks. Geologic aspects of soft ground tunneling, by Karl Terzaghi. Sedimentary geology of the alluvial valley of the lower Mississippi River and its influence on foundation problems, by W J. Turnbull and others. Part III, Applications of processes of sedimentation: Relation of landslides to sedimentary features, by D J. Varnes. Permafrost, by R. F Black. Geology in shore-control problems, by M. A. Mason. Stream-channel control, by S. C. Happ. Sedimentation in reservoirs, by A. S. Fry. Problems of irrigation canals, by A. R. Golzé. Effects of soil conservation, by C. B. Brown. Part IV Applications involving nature of constituents: Influence of sedimentation on concrete aggregate, by Roger Rhoades. Application of studies of the composition of clays in the field of ceramics, by R. E. Grim. Foundry sands, by H. Ries. Part Economic mineral deposits: The field of economic geology of sedimentary mineral deposits, by V E. McKelvey. Sedimentary iron deposits, by S. A. Tyler. Geochemical prospecting for ores, by H. E. Hawkes. Part VI, Petroleum geology problems: Subsurface techniques, by D. A. Busch. Porosity permeability and capillary properties of petroleum reservoirs, by C. D. Russell and P A. Dickey. Carbonate porosity and permeability by W C. Imbt. Part VII, Military applications: Sedimentary materials in military geology by F C. Whitmore, Jr. Applications of sedimentation to naval problems, by R. D. Russell. Author index. Subject index.

Note: Mainly survey of the aspects of sedimentation, sedimentary rocks, and other sedimentary deposits which are of practical concern to engineers. The typical chapter is essentially an outline of high spots, coupled with good list of references for those who wish to read further. An unusual feature is the inclusion in most chapters of few paragraphs on research which is still needed.

VOLCANOLOGY AND SEISMOLOGY

GUTENBERG BENO AND C. F RICHTER

Seismicity of the earth and associated phenomena. Princeton Princeton University Press 1949 273 p. illus. 28 cm. $10 00 513

Contents (abridged) Materials used. Methods used. Classification of shocks. Maps. Frequency and energy of earthquakes. Structure of the earth. The circum-Pacific belt. The Alpide belt. Non-Alpide Asia—eastern zone. Oceanic seismic belts. Rift zones. Seismicity compared to stable masses. Minor seismic areas. Minor seismicity. Stable masses. Tsunamis (seismic sea waves). Mechanism. Summary. References. Tables. Index.

Note A scientific study and compilation of data pertaining to the geography and geological character of the areas of the earth where seismic activity occurs and to the relative seismicity of these areas. The tables which are detailed presentations of observations of earthquake shocks occupy 149 of the book's pages. They are preceded by short narrative discussions of such topics as the methods used in the study, the frequency and energy of earthquakes, and of the geography and geology of active regions. The work supersedes two papers by the same authors that appeared in 1941 and 1945 in the publications of the Geological Society of America.

LEET LEWIS DON

Earth waves. Cambridge, Mass. Harvard University Press and New York John Wiley & Sons Inc. 1950 122 p 22 cm. $3.00. 514

Contents. The measurement of earth waves. Observed types of earth waves. Translation of earth waves. Microseisms. Index.

Note. Although earthquake waves are discussed along with other types of waves, this is not primarily book on earthquake phenomena. Instead it deals broadly with the subject of waves that are transmitted through the earth. Thus it has bearing on geology

geophysical prospecting, meteorology (for storms generate earth waves) and even the engineering of buildings. The book is intended not for lay readers but for persons who have a fair knowledge of physics and college mathematics. For them it is an introductory work.

NEUMANN, FRANK
Principles underlying the interpretation of seismograms. Washington D C. Government Printing Office, 1951 41 p illus 25 cm. (United States Coast and Geodetic Survey Special publication no 254) Paper, $1 00 515

Contents: Introduction. Seismic waves and earth structure. Nature of seismic waves. Effect of earth structure on seismic waves. Elementary wave types. Dependent wave types. Response of seismographs to seismic waves: Operating characteristics of seismographs. Motion of direct-recording seismograph pendulum under the influence of steady state vibrations. Motion of galvanometric recording systems under the influence of steady state vibrations. Travel-time tables and charts. Travel-time tables and charts for long epicentral distances. Travel-times for short epicentral distances. Interpretation of seismograms: Artificial and seismic phenomena common to all types of pendulum seismographs. Characteristics of various phases on the seismogram. Identification of phases and determination of epicentral distance and origin time. Interpretation of seismograms when distance and time of origin are known. Computation of ground amplitude. Direction of ground vibration. Miscellaneous: Operational problems affecting the interpretation of seismograms. Earthquake intensity and earthquake magnitude. Determination of instrumental magnitude. Seismological bulletins. Nomenclature used in instrumental reports. Examples of seismogram interpretation.

Note: A handbook for amateur seismologists, seismograph station personnel, etc. Instruments and records for short-period waves in earthquake vibrations are discussed as well as those for intermediate-period waves.

PERRET, FRANK ALVORD
Volcanological observations Washington D C. Carnegie Institution of Washington, 1950 162 p illus 29 cm. (Carnegie Institution of Washington Publication 549) Paper $5 00 Cloth, $5 50 516

Contents: The greater solid constructions. The volcanic liquid. The gaseous element. Electric and atmospheric phenomena. Volcanic vegetation. Volcanic instruments. Gravitational and volcano-seismic phenomena. Experimentation—field and laboratory. Diagnosis and prediction. Index.

Note. A well-written summary of a lifetime of observations of volcanic activity most of which were made in the field during volcanic eruptions. The author describes selected events as he saw them and draws conclusions. The book is written in a style that makes it available to mature lay readers, and its content is substantial enough to attract professional volcanologists. The 117 illustrations include reproductions of many excellent photographs.

PALEONTOLOGY

AMSDEN THOMAS WILLIAM
Stratigraphy and paleontology of the Brownsport formation (Silurian) of western Tennessee. New Haven Yale University Press 1949 138 p illus. 27 cm. (Peabody Museum of Natural History Yale University Bulletin 5) $5.00 517

Contents: Introduction. Summary of previous investigations. Stratigraphy: General discussion—underlying Dixon formation—overlying Decatur formation—Brownsport formation. Stratigraphic and geographic distribution of the fauna. Correlation. Catalogue of localities and of fossil collections. Description of genera and species. Bibliography. Index.

Note. The Brownsport formation is noted as a source of Silurian fossils; hence this work has considerable paleontological interest. It is based largely on field work and represents a detailed study of both stratigraphy and paleontology. The descriptions of genera and species of fossils are presented in the traditional style and include literature references, morphological descriptions, and precise information on distribution. The illustrations include several stratigraphic maps and thirty-four plates of reproductions of fossils.

AXELROD DANIEL I.
Studies in late Tertiary paleobotany Washington D C Carnegie Institution of Washington 1950 323 p illus. 25 cm. (Contributions to paleontology Publication 590) Paper $3.25 518

Contents: Classification of the Madro-Tertiary flora. A Pliocene florule from Napa, California. Further studies of the Mount Eden flora, southern California. The Anaverde flora of southern California. The Pico Gorge flora of southern California. Evolution of desert vegetation in western North America. Appendix: Systematic revision of fossil plants. Index.

Note. A collection of technical studies titled as given above. The final and longest paper is a critical summary of the present knowledge of the evolution of the contemporary desert vegetation of western North America. In this paper the author distinguishes floras and concludes that "present day desert plants have apparently been derived from species represented in the major Tertiary flora which occupied the regions now deserts.

BASSLER, RAY SMITH
Faunal lists and descriptions of Paleozoic corals New York The Geological Society of America, 1950 315 p illus. 25 cm. (The Geological Society of America. Memoir 44) $3.50 519

Contents: Part I, Lists of Paleozoic coral faunas. Introduction. Ordovician of Europe and Asia. Ordovician of North America. Table of Ordovician stages. Silurian of Europe. Silurian of Asia and Australia. Silurian of North America. Devonian faunas of Europe. Devonian of Asia, Australia, and Africa. Devonian of North America and South America. Lower Carboniferous of Great Britain and Ireland. Lower Carboniferous of Europe. Lower Carboniferous of Asia, Africa, and Australia. Mississippian of North and South America. Upper Carboniferous of Europe. Upper Carboniferous of Asia and Africa. Pennsylvanian of North America. Upper Carboniferous or lower Permian of Europe and Asia. Permian of Europe, Asia, and Australia. Permian of North America. Part II, Descriptions of Ordovician tetracorals. Introduction. Family Favistellidae. Family Columnariidae. Family Tetradiidae. Explanation of plates.

Note. The first part of this book on Paleozoic corals presents faunal lists of the Paleozoic corals of the world arranged in stratigraphic order. Each citation includes the present accepted generic and specific term, author and the date, followed by the type, other localities and geologic formations, followed by similar data concerning synonyms (if any) and additional data where available. The second part describes the genera and species of Tetracoralla of the Ordovician. These early corals, which have received relatively little attention by students, exhibit the evolutionary trends of the corals in general. Illustrations of most of the species are given in the plates.

CAMP CHARLES LEWIS, AND OTHERS
Bibliography of fossil vertebrates, 1939–1943 By C. L. Camp S. P Welles, and Morton Green. New York The Geological Society of America, 1949 371 p. 26 cm. (The Geological Society of America. Memoir 37) $4.50 520

Contents: Preface. List of serials and abbreviations. Supplementary list of serials. Author catalogue. Subject index. Systematic index. Synopsis of classification.

Note (1262 1263) The third in a series of bibliographies of the world literature. In addition to writings on fossils, published materials on artifacts and other remains of man also are listed. Locations in certain libraries in the United States of America are indicated for the serial publications.

CHANEY RALPH WORKS
A revision of fossil Sequoia and Taxodium in western North America based on the recent discovery of Metasequoia. Philadelphia The

American Philosophical Society, 1951 172–262 p. illus. 30 cm. (Transactions, American Philosophical Society New series—vol. 40 part 3) Paper $1.50 521

Contents (abridged): Introduction. Generic characters used for distinguishing fossil specimens of Sequoia, Metasequoia, and Taxodium. History of the study of Sequoia and Taxodium from the Cretaceous and Tertiary of the northern hemisphere. The recognizable fossil species of Metasequoia, Sequoia, and Taxodium in western North America. References.

Note: A monograph in which are presented both a revised classification based on original studies of specimens in museums, and a history of the classification and related studies of these genera. The bibliography is comprehensive. There are 12 plates, all but one of which contain reproductions of photographs of a number of specimens.

CUSHMAN, JOSEPH AUGUSTINE

Paleocene Foraminifera of the Gulf Coastal region of the United States and adjacent areas. Descriptions and illustrations of smaller Foraminifera from the Gulf Coastal region, Cuba, Central America, Haiti, and Trinidad. Washington Government Printing Office, 1951 75 p. illus. 29 cm. (United States. Geological Survey Professional paper 232) Paper $1 75 522

Contents: Introduction. List of localities. Systematic descriptions. Rhizamminidae. Ammodiscidae. Lituolidae. Textulariidae. Verneuilinidae. Valvulinidae. Miliolidae. Ophthalmidiidae. Trochamminidae. Placopsilinidae. Lagenidae. Polymorphinidae. Nonionidae. Heterohelicidae. Buliminidae. Ellipsoidinidae. Rotaliidae. Amphisteginidae. Cassidulinidae. Chilostomellidae. Globigerinidae. Globorotaliidae. Anomalinidae. Index. Plates.

Note: Describes and illustrates the Foraminifera from the Paleocene of the Gulf Coastal Plain, including parts of Texas, Arkansas, Mississippi, Alabama, and Tennessee, and related areas of Trinidad, Cuba, Haiti, and Central America. About 210 species and varieties are recorded and nearly all are illustrated on the 24 photographic plates. Many of the species are considered excellent index fossils for study of the Paleocene.

GEOLOGICAL SOCIETY OF AMERICA

1940 E. W Scripps cruise to the Gulf of California Part I, Geology of islands and neighboring land areas by Charles A. Anderson. Part II, Megascopic paleontology and marine stratigraphy by J Wyatt Durham. Part III Submarine topography of the Gulf of California, by Francis P Shepard. Part IV Report on the Pleistocene and Pliocene Foraminifera, by M L. Natland. Part V Sedimentation and oceanography—survey of field observations by Roger Revelle. New York The Geological Society of America, 1950 362 p illus. 26 cm. (The Geological Society of America. Memoir 43) $6.50 523

Note: This memoir contains five scientific reports on the results of a cruise sponsored by the Geological Society of America and the Scripps Institution of Oceanography in the fall of 1940 in the schooner *E. W. Scripps*. The object of the cruise was to investigate the recent geologic history, the bottom topography and sediments, and the nature of the marine environment of the Gulf of California.

LAMOTTE ROBERT SMITH

Catalogue of the Cenozoic plants of North America through 1950 New York The Geological Society of America, 1952 381 p 26 cm. (The Geological Society of America. Memoir 51) $5 50 524

Contents: Introduction. Bibliography. Catalogued papers. Palynology. Bacteria. Marine and fresh water algae. Diatomaceae. Catalogue. Biologic classification of genera. Index of families and higher categories.

Note. The main part of this work is a carefully compiled catalogue of fossil plants of the Cenozoic period which have been identified in North America and reported in the published literature. The catalogue is arranged alphabetically by botanical name. In general for each plant the information given includes the name of the scientist who discovered the plant, the year it was reported, citation of the paper in which it was reported, citations of additional papers that deal with genus from a paleobotanical viewpoint, the formation, locality and age. Preceding the catalogue of plants is a bibliography of papers on paleobotany classified under the headings noted above.

MILLER, ARTHUR K., AND WALTER YOUNGQUIST

American Permian nautiloids. New York The Geological Society of America, 1949 218 p. illus. 26 cm. (The Geological Society of America. Memoir 41) $3.60. 525

Contents: Abstract. Introduction and acknowledgments. Previous work. Occurrence. Classification of Permian nautiloids. Systematic paleontology. Addendum. Bibliography. Explanation of plates. Index.

Note: A systematic catalogue of a group of fossils that had not been comprehensively described before the appearance of this work. It is based on a study of the specimens in the United States National Museum, in other museums, and in the possession of geologists associated with universities and oil companies. The descriptive material includes literature references, morphological data, documents of occurrences, and identification of a museum (or other) source of specimens. There are 57 plates each bearing reproduction of one to ten or more photographs of specimens.

MOORE, RAYMOND CECIL AND OTHERS

Invertebrate fossils. By Raymond C. Moore, Cecil G Lalicker and Alfred G Fischer New York McGraw Hill Book Company Inc. 1952 766 p. illus. 24 cm. $12 00 526

Contents: The nature of fossils. Foraminifera and radiolaria. Sponges and spongelike fossils. Coelenterates. Bryozoans. Brachiopods. Mollusks. Gastropods. Cephalopods. Pelecypods. Annelids and other worms. Arthropods. Trilobites. Ostracodes and other crustaceans. Chelicerates, myriapods, and insects. Echinoderms. Primitive attached echinoderms. Crinoids. Echinozoids. Starfishes. Echinoids. Graptolites and pterobranchs. Conodonts. Index.

Note: Although this book is frankly a college text for use in first courses in paleontology it has a number of features which make it useful outside of formal classes. Its inclusive scope is indicated by the chapter titles. In general the following points are covered for each of the main zoological groups: anatomy and physiology, geologic importance, geologic history, zoological classification, functions and development of shells, modes of life, reproduction, and ontogeny. Also, there are adequately detailed descriptions of the main subgroups. The expository matter is supplemented by glossaries and abundant illustrations and literature references. The index is full. The authors are members of the faculty of the University of Kansas.

OLSON, EVERETT CLAIRE

Diplocaulus a study in growth and variation. Chicago Chicago Natural History Museum 1951 154 p illus. 24 cm. (Fieldiana Geology Vol. 11 no. 2) Paper $1 75 527

Contents: Introduction. Problems and methods. Review of Diplocaulus. Species and genera. Growth and variation. References.

Note: A study by quantitative methods of *Diplocaulus*, Permian amphibian. Forty seven skulls and partial skulls were measured and the results are represented in tables and graphs. Various statistical methods used in analyzing the data are illustrated. The chief purpose of the study was to determine whether quantitative methods are of much applicability in paleontology. The author is Associate Professor of Vertebrate Paleontology in the University of Chicago.

PETRUNKEVITCH ALEXANDER

A study of the structure, classification and relationships of the Palaeozoic Arachnida

based on the collections of the British Museum. New Haven, Connecticut Connecticut Academy of Arts and Sciences 1949 246 p. illus. 24 cm. (Transactions of the Connecticut Academy of Arts and Sciences. Volume 37 pages 69–315 January 1949) $7 70 528

Contents (abridged) Introduction. Relationships and evolutionary trends. Photography Classification—Class Arachnida—subclass Latigastra—subclass Stethostomata—subclass Soluta—subclass Caulogastra. General conclusions. Summary References. Plates. Index to orders, families and genera. List of species.

Note An exceptionally detailed study carried out with the object of clarifying classification and related aspects of the Palaeozoic Arachnida, in the light of the current knowledge of the developmental and internal anatomy of recent and extant examples of this order. In a long introduction the author has discussed such aspects of the problem as the segmentation of the abdomen, the organs of respiration, the circulatory system, and the sense organs. The heart of the book consists of detailed critical discussions of specific genera. In these discussions the author points out numerous errors of previous writers and states his own conclusions. Specimens examined by him are identified by number. There are 13 plates, most of which contain more than one drawing or photograph.

PHLEGER FRED B AND FRANCES L. PARKER

Ecology of Foraminifera, northwest Gulf of Mexico Part I, Foraminifera distribution, by Fred B Phleger Part II, Foraminifera species, by Fred B Phleger and Frances L. Parker New York The Geological Society of America, 1951 152 p illus 26 cm. (The Geological Society of America. Memoir 46) $2 75 529

Contents Part I Abstract. Introduction. Method of study Temperature and salinity distribution. Foraminifera populations in plankton samples. Distribution of Foraminifera in bottom samples. Distribution of Foraminifera in the cores Summary of conclusions. References Index Part II Abstract Introduction. Benthonic fauna. Planktonic fauna. References. Explanation of plates. Index.

Note A report of a scientific expedition planned "to obtain more exact information on distribution and relationship of Foraminifera species, genera and faunas to environments and to discover criteria that can be used for determining the paleoecology of similar faunas in sediments of the past to collect core samples of bottom sediment in the same region and determine the paleoecologic record by the use of criteria gained from existing associations, and to test and perfect new methods and add data. The first paper is a detailed study of the methods and results. The second paper provides taxonomic descriptions of the species discussed in the first paper

RASETTI FRANCO

Middle Cambrian stratigraphy and faunas of the Canadian Rocky Mountains (with 34 plates) Washington D C The Smithsonian Institution 1951 277 p illus 24 cm. (Smithsonian miscellaneous collections Vol. 116 no 5 Publication 4046) Paper $2 50 530

Contents: Part I, Stratigraphy Introduction. Summary of previous work. Method of work Description of localities and sections. Terminology Bow Lake. Hector Creek Slate Mountains. Mount Niblock. Mount Whyte—Plain of Six Glaciers Ross Lake Mount Bosworth Mount Victoria. Cathedral Mountain. Popes Peak Eiffel Peak. Mount Temple. Pinnacle Mountain Mount Schaffer Mount Odaray Park Mountain Mount Field Kicking Horse Mine. Mount Field Burgess Quarry Mount Stephen Cambrian formations. Lower Cambrian St. Piran sandstone. Middle Cambrian Mount Whyte formation. Cathedral formation. Stephen formation. Eldon. General statement. Fauna of the *Bonnia-Olenellus* zone Lower Middle Cambrian boundary Fauna of the *Wenkchemnia-Stephenaspis* zone. Fauna of the Plagiura-Kochaspis zone Fauna of the *Albertella* zone. Fauna of the *Glossopleura* zone. Fauna of the *Bathyuriscus-Elrathina* zone. Order of succession of the faunules. Species not discussed in this paper. Geographic and vertical distribution of trilobites. Environment of deposition. Index of localities. Part II, Paleontology: General statement. Terminology Classification of Cambrian trilobites. Descriptions of genera and species of trilobites: Order Agnostida. Order Redlichiida. Order Opisthoparida. References. Explanation of plates. Plates. Index.

Note: The area covered in this study is famous for the great development, high fossil content, and splendid exposures of the entire Cambrian system. The publication is based upon the findings and results of field work in the region covering four months in 1947 and 1948. The work is divided into two parts of equal size, one covering the stratigraphy the other the paleontology of the area. The trilobite fossils described and illustrated were selected from approximately 4000 collected by the writer and from others preserved in the United States National Museum collections. These fossils give a clear idea of the succession of trilobite faunas that followed the *Olenellus* fauna and preceded the *Albertella* fauna.

ROSS, REUBEN JAMES, JR.

Stratigraphy of the Garden City formation in northeastern Utah and its trilobite faunas. New Haven Yale University Press 1951 161 p illus. 27 cm. (Peabody Museum of Natural History Yale University Bulletin 6) $5.00. 531

Contents (abridged) Introduction Scope of the study Extent of the formations. Stratigraphy: Formation boundaries Lithology of the Garden City formation. Lithology of the Swan Peak formation. Faunal summary Systematic paleontology Opisthoparian trilobites. Proparian trilobites. Notes on evolutionary trends of Garden City Proparia. Ontogeny of *Pseudocybele* Kobayashi. Works to which reference is made. Index.

Note. A report, addressed to graduate geologists and paleontologists, of a study (made in the field and in the Peabody Museum of Natural History) of the formation named in the book's title, and of the associated Swan Peak formation. A fully detailed description is given of the stratigraphy of both formations. However most of the space in the volume is devoted to systematic descriptions of the trilobites found in the Garden City formation. About this fauna the author states: "The word 'prolific' hardly does justice to the trilobite fauna of the Garden City formation. In this report 87 species are described and illustrated. Of the 87 species, only 11 have been given specific designation; 49 are new species. At least 41 genera are represented, of which 14 were previously known. There are 36 plates, many of which contain reproductions of more than 10 photographs each.

STOYANOW ALEXANDER

Lower Cretaceous stratigraphy in southeastern Arizona. New York The Geological Society of America, 1949 169 p 26 cm. (The Geological Society of America. Memoir 38) $2 50 532

Contents. Abstract Introduction and acknowledgments. General part Paleontological part—Pelecypoda—Ammonoidea. References. Explanation of plates. Index.

Note A detailed professional study of the stratigraphy and paleontology of an area in southeastern Arizona which is especially rich in ammonite and lamellibranch faunas Twenty-one new species of ammonites and twenty-two of lamellibranchs are described. The work is based on field study and also on a study of several museum and private collections. There are 38 plates, the majority of which contain reproductions of photographs of specimens. One plate is an original geological map of the area.

STUMM EDWIN CHARLES

Revision of the families and genera of the Devonian tetracorals. New York The Geological Society of America, 1949 92 p. illus. 26 cm. (The Geological Society of America. Memoir 40) $2.00 533

Contents Abstract. Introduction. Classification. Description of families and genera. Bibliography Explanation of plates. Index.

Note In this work a new classification, in which the Devonian tetracorals are divided into sixteen families, is presented. Three of the families and five of the subfamilies have not been described before. Also given are new descriptions of the genotype species of all known Devonian genera. The descriptions of the genotype species are supplemented by illustrations and a comprehensive bibliography

BIOLOGY

GENERAL

ALLEE, WARDER CLYDE, AND KARL P SCHMIDT

Ecological animal geography Second edition An authorized edition rewritten and revised, based on *Tiergeographie auf oekologischer Grundlage* by the late Richard Hesse. New York John Wiley & Sons Inc., 1951 715 p illus. 24 cm. $9.50 534

Contents (abridged) Part 1 The ecological foundations of zoogeography: The conditions of existence for animals. Barriers to distribution and means of dispersal. The effect of geographic isolation. The influence of extent of range. Biotopes and biocoenoses. Part 2, The distribution of marine animals: The chemistry of the sea and its influence on animal life. The biotic divisions of the ocean. Geographic divisions of the animal communities of the sea. Part 3, The distribution of animals in inland waters, phases of limnology The environmental factors in inland waters. Communities in running waters. Communities in other inland waters. Part 4 The distribution of land animals: Ecological factors of the land and their effect on animals. Forest communities. Animal life of swamps and of shores. Alpine animals. Island communities. Subterranean animal life. The effect of man on the distribution of other animals. Index.

Note One of the more important studies of animal distribution and of the influence of environment and animals upon each other The first edition of the book was largely a translation of Hesse *Tiergeographie auf oekologischer Grundlage*, 1924. The present revision, although still based on the German work, has been so extensively rewritten and enlarged as to rank almost as a new work. Specifically new material has been added on such topics as aerial transportation in distribution, bioluminescence, coral reefs and islands, Hawaiian fauna, and winglessness in beetles. The data concerning the number of species in various regions have also been revised, and the chapter bibliographies have been brought up to date.

BATES MARSTON

The nature of natural history New York Charles Scribner's Sons, 1950 309 p. 24 cm. $3 50 535

Contents The science of natural history The naming of organisms. The catalogue of nature. The history of organisms. Reproduction. The development of the individual. The environment. Biotic communities. Partnership and cooperation. Parasitism. The behavior of individuals The behavior of populations Biological geography Adaptations The mechanism of evolution. Natural history and human economy The natural history of naturalists. Tactics, strategy and the goal. Appendix The literature of natural history Index

Note. In this book by an eminent biologist the essence of a variety of topics in natural history is rendered in non-technical terms for the general reader. In his discussion of such topics as bird migration, the author does not attempt to cover the subject or even present an outline Instead, he states some of the more interesting facts, then leaves it to the reader to pursue the subject further if he wishes. The appendix is a generalized discussion of the literature of natural history with particular mention of only a few titles, and the list of references is a selected list of books designed for the guidance of readers who wish to pursue reading in the field.

BONNER, JOHN TYLER

Morphogenesis, an essay on development. Princeton New Jersey Princeton University Press, 1952 296 p illus. 23 cm. $5 00 536

Contents: Introduction. Size and pattern. Physics and chemistry in development. Patterns of growth Patterns of morphogenetic movements. Polarity and symmetry Patterns of differentiation. An analysis of development. Bibliography Index.

Note: This study by a member of the faculty of the Department of Biology at Princeton University is primarily an analytical survey of the current state of the knowledge of morphogenesis. The author divides morphogenesis into constructive processes, particularly growth, morphogenetic movements and differentiation, and limiting processes, such as food supply He draws an analogy between growth and crystal formation but carefully points out that we do not know whether the processes that operate in the growth of crystals also operate in living organisms. The work is substantial enough to be of interest to professional biologists, but the style is not too technical for scientists who are not biologists nor for mature lay readers.

CAMERON GLADYS

Tissue culture technique. Second edition, revised and enlarged. New York Academic Press, Inc., 1950 191 p. illus. 24 cm. $4.20 537

Contents: Introduction to tissue culture. Basic considerations of space and equipment. Details of equipment. Sterilizing procedures. Physiological solutions. Plasma and serum. Preparation of tissue extracts. Artificial media. Preparation of tissues. Choice of methods for culturing. Cultures on coverslips. Cultures in flasks. Cultures in roller tubes. What one sees in tissue cultures. Some experimental procedures. Micromanipulation of tissue cultures, by Robert Chambers. Histological techniques. Photomicrography of tissue cultures, by C. G. Grand. Appendices: List of precautions to insure good growth. Conversion tables. Sources of supply for special tissue culture materials. Bibliography Supplementary references. Index.

Note: ([illegible]) A basic manual of tissue culture technique issued for the guidance of those concerned with that branch of biological experimentation. Details are presented in sufficient fullness to be helpful both to the beginner and to the more experienced technician. In the revision every chapter has been revised and almost entirely rewritten.

DICE, LEE R.

Natural communities. Ann Arbor University of Michigan Press, 1952 547 p. illus. 26 cm. $5.50 538

Contents (abridged) Some important kinds of communities. Methods for describing and measuring communities. Effects on communities of fluctuations in the physical conditions of their habitats. Food relations within communities. Fluctuations in populations. Fluctuations in community composition. Relations of organisms to their ecosystems. Home ranges and territories. Effects of social behavior on the community Ecologic relations between species. Community equilibrium. Effects of communities on their physical habitats. Ecological succession. Local and geographic variation within communities. Relations between communities. Classification of associations and microassociations. Larger units of community classification. Evolution of communities. Philosophy of communities. Literature cited. Index.

Note: A substantial introductory survey of the current knowledge of the ecologic principles of plant and animal communities under natural conditions. It is introductory in the sense that no previous acquaintance with ecology on the part of the reader has been presumed. However the reader does need an understanding of the general principles of biology Along with the discussion of principles the author mentions a great variety of facts culled from the literature and gives references from the text to the source articles.

FESSENDEN G R.

Preservation of agricultural specimens in plastics. Washington D C. Government Printing Office, 1949 78 p. illus. 23 cm. (United States. Department of Agriculture. Miscellaneous publication no 679) Paper $0.35 539

Contents: Introduction. Part 1 Preservation of natural color in plant specimens mounted in plastic plates: Equipment and supplies. Types of preserving fluids and their principal characteristics. Col-

lection, storage, and preliminary preparation of specimens. Processing the specimen for natural color preservation. Preserving and laying out the specimen. Dehydration and preparation for mounting. Mounting between plastic sheets. Care of finished mounts. Part 2 Embedment of biological specimens in plastic blocks: Equipment and supplies. Properties of methyl and ethyl methacrylates. Preparation of plastic. Selection of specimens. Preparing specimens for embedment. Casting supporting bases for specimens. Embedment of specimens. Finishing the castings. Care of finished mounts. Literature cited. Patents. Selected bibliography

Note: Equipment and supplies required for two different methods of preserving agricultural specimens in plastics and the techniques involved are described in this pamphlet. Photographic illustrations show steps in the processes and some samples of results.

GERARD, RALPH WALDO

Unresting cells. New York Harper and Brothers 1949 439 p illus 22 cm. $4 00 540

Contents: Out of the nowhere—prologue. Odyssey of an amoeba—simple cell life. Cell substances—protoplasmic chemistry. Architecture in miniature—protoplasmic structure. Master craftsmen—enzymes. Molecular traffic—metabolism. Fuel for the lamp of life—energy. Action and its consequences—irritability and behavior. Through the microscope—cell structure. Reproduction among molecules—specific synthesis. Oaks from acorns—growth, reproduction, and aging. From the general to the particular—differentiation, embryogeny. Inherited molecules—heredity and genes. Organism—epilogue. Index.

Note: A brilliantly written account for lay readers and nonspecialists of the basic life processes. Genes, molecules, enzymes, etc., are discussed rather than the habits and behavior of complex animals. Experimental methods used in gaining such knowledge in biology are described. The latter feature, together with the overall character of the book, makes it a good introduction for laymen to the methods of modern science. The book was first published in 1940, but publishing difficulties associated with World War II eventually caused it to go out of print. This edition appropriately called a reissue by the publisher has the original text except that errors have been corrected.

GOLDMAN EDWARD ALPHONSO

Biological investigations in Mexico (with 71 plates) Washington D C. The Smithsonian Institution, 1951 476 p illus. 24 cm. (Smithsonian miscellaneous collections. Vol. 115 (whole volume) Publication 4017) Paper $4.50 541

Contents: Introduction. Itinerary of Nelson and Goldman in Mexico and Guatemala, 1892 1906 Localities visited by Nelson and Goldman in Mexico and Guatemala, 1892–1906 Mexico: Aguascalientes. Baja California. Campeche. Chiapas. Chihuahua. Coahuila. Colima. Distrito Federal. Durango. Guanajuato. Guerrero. Hidalgo. Jalisco. México. Michoacán. Morelos. Nayarit. Nuevo León. Oaxaca. Puebla. Querétaro. Quintana Roo. San Luis Potosí. Sinaloa. Sonora. Tabasco. Tamaulipas. Tlaxcala. Veracruz. Yucatán. Zacatecas. Guatemala. Physiography: General features. The tableland or great interior plateau. Mountain ranges. Plains. Drainage. Climate. Biotic relations: Geographic distribution of species. Life zones: Lower tropical zone. Upper tropical zone. Lower austral zone. Upper austral zone. Transition zone. Canadian zone. Hudsonian zone. Arctic Alpine zone. Biotic provinces. Literature cited. Index.

Note: This volume describes a series of expeditions into Mexico between 1892 and 1906 by Edward W Nelson and Edward A. Goldman. At the time of the death of the author in 1946 the work was not entirely completed; subsequently the manuscript was reviewed, edited, and prepared for publication by his immediate supervisor Hartley H. T. Jackson, Chief of the Section of Biological Surveys, United States Fish and Wildlife Service. The outline of their itinerary during their time in Mexico is followed by a description of each of the towns visited, giving its altitude, the dates of their visit, and notes about physiography and vegetation. The remainder of the volume lists the species of plants, mammals, and birds found in each of the ten major life zones and subzones of Mexico, with identification provided of the localities where the species were found.

HARVEY, EDMUND NEWTON

Bioluminescence. New York Academic Press Inc., 1952 649 p. illus. 24 cm. $13 00 542

Contents: Bacteria. Fungi. Protozoa and Porifera. Cnidaria. Ctenophora. Miscellaneous small groups. Annelida. Mollusca except Cephalopoda. Cephalopoda. Crustacea. Arachnoidea and Myriapoda. Insecta except Coleoptera. Coleoptera. Echinodermata. Tunicata or Urochordata. Pisces. Addenda. Bibliography Index.

Note A monograph on the production of light by living organisms, written by one of the world's outstanding authorities on the subject. The arrangement of the book puts the emphasis on the organisms that have been studied, and information on the chemistry of bioluminescence is scattered throughout the book. Passages that contain more than incidental reference to chemical processes are indexed under "Biochemistry" in the subject index. The book is of interest first to biologists studying bioluminescence and second to chemists. Among chemists the interest is not limited to those workers investigating the production of light by chemical means but includes chemists concerned with enzymology, pharmacology etc. The comprehensive bibliography runs to 76 closely printed pages.

JAEGER, EDMUND CARROLL

A source-book of biological names and terms. Second edition. Illustrations by Merle Gish and the author Springfield Ill. Charles C Thomas 1950 287 p illus. 25 cm. $5.50. 543

Contents: How words are built. Types of names considered. Transliteration. Abbreviations. To the student. Biological names and terms.

Note: (1313b) An alphabetical guide for biologists to the origin, meaning, and use of the component parts of scientific names and terms. For each of over 12,000 word elements are shown Greek, Latin, or other origin, concise meaning, and example of use in scientific nomenclature. Prefixes and suffixes are included. More than 1500 new word elements have been added in this edition.

PALMER, EPHRAIM LAURENCE

Fieldbook of natural history New York McGraw Hill Book Company Inc., 1949 664 p. illus 23 cm. $8 00 544

Contents: The sky at night. The solar system: The sun. Planets. The earth The moon. The mineral kingdom Rocks. Minerals. The plant kingdom Thallophytes: Algae. Fungi. Bryophytes: Liverworts. Mosses. Pteridophytes: Ferns. Fern allies. Spermatophytes: Gymnosperms. Angiosperms: Monocotyledons. Dicotyledons. The animal kingdom Invertebrates: General invertebrates. Mollusca. Arthropods: Arachnids. Insects. Chordates, including vertebrates: Fishes. Amphibians. Reptiles. Birds. Mammals.

Note. This book presents a large amount of encyclopedic information about animate and inanimate nature. The first 39 pages of the volume are devoted to astronomy and geology. The remainder of the volume covers the vegetable kingdom and the animal kingdom. The arrangement of the biological material is by phyla and classes, a detailed index giving page references both to scientific and to common names in one alphabet. The illustrative material appears mostly in original line drawings occupying the upper third of each page. The remaining two-thirds of these pages present text in three columns containing detailed descriptions of the species and data on their range, relationships, life history, economic importance, etc. A feature is the inclusion of garden flowers, vegetables, and domesticated animals along with wild-life forms. Of larger size than the ordinary fieldbook, the work should be useful wherever a one-volume natural-history reference book is needed.

PARKER RAYMOND CRANDALL

Methods of tissue culture. With a chapter by Joseph F Morgan. Second edition revised, with 113 illustrations. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1950 294 p. illus. 24 cm. $7.50 545

Contents: Introduction. The laboratory. Special equipment. Cleaning and sterilization procedures. Diluting fluids, pH determinations and osmotic pressure. Preparation of plasma and serum. Preparation of tissue extracts. Development of synthetic media (by Joseph F Morgan) Coverslip cultures. Flask techniques for plasma cultures. Flask techniques for fluid cultures. Roller-tube techniques. Flask techniques for tissue fragments in suspension. Watch-glass cultures for embryological studies. Growth measurements and their interpretation. Histological procedures. Photomicrography and microcinematography. References. Index.

Note: (1940) The first edition of this work described techniques in use in the laboratory of Dr. Alexis Carrel at the Rockefeller Institute for Medical Research. In this edition the scope has been expanded to include techniques generally in use in biological research laboratories. Accordingly, many important revisions and additions have been made throughout the book. Techniques are described explicitly; furthermore, references are included in the text to citations of source articles. There are now 73 figures. The book is intended for graduate biologists, pathologists, etc., in need of practical guide to the field.

SINNOTT, EDMUND WARE

Cell and psyche, the biology of purpose. Chapel Hill The University of North Carolina Press, 1950 121 p. 21 cm. $2 00 546

Contents: Introduction. Organization, the distinctive character of all life. Biological organization and psychological activity Some implications for philosophy Suggested readings. Index.

Note: In this short book an internationally famous botanist presents the view that body and mind are two aspects of the same biological phenomenon. In other words, the evolution of living organisms and the development of man' mental qualities and even the individual traits of persons are all manifestations of basic quality of protoplasm which has as its purpose the survival of living organisms. Although essentially philosophical view the argument is solidly based on biological science. The contents of the book were first delivered as John Calvin McNair Lectures at the University of North Carolina.

SURVEY OF BIOLOGICAL PROGRESS Volume I. George S. Avery jr editor-in-chief New York Academic Press Inc. 1949 396 p. illus. 24 cm. $7.50 547

Contents: Teaching biology today by H. B. Creighton. The genes and gene action, by B. Glass. Tracer methods in biological research, by M. D. Kamen. Nutrition and reproduction, by K. E. Mason. Growth and development, by D. P Costello. Virus tumors, by L. M. Black. Hormones and the differentiation of sex, by R. K. Burns. Growth hormones and tissue growth in plants, by P R. White. Newer methods in the rapid development of disease-resistant vegetables, by W A. Frazier Influence of environmental factors on the vitamin content of food plants, by K. C. Hamner. Ecological studies on populations, by G. E. Hutchinson and E. S. Deevey jr. Author index. Subject index.

—— Volume II. George S Avery jr., editor-in-chief New York Academic Press Inc. 1952 333 p. illus. 24 cm. $7.00 548

Contents: Effects of radiations on biological systems, by A. H. Sparrow and F A. Forssberg. Progress in human genetics, by H. Kalmus. Biological oceanography by G. A. Riley Morphogenesis in plants, by E. Bunning. The control of plant growth by the use of special chemicals, with particular emphasis on plant hormones, by L. G. Nickell. Histochemistry by F Moog. The fine structure of protoplasm, by L. H. Bretschneider. Physiology of reproduction in plants, by A. W Naylor. Author index. Subject index.

Note: The first two issues of new series that follows pattern which is rather thoroughly established in several fields of science. Each of the papers is in effect monograph of the current knowledge of its special subject. It is based on an extensive survey of the pertinent literature, and careful citations are made from the text to the bibliography The main purpose of the series is to enable specialists to keep informed about the progress in areas in biological research other than their own.

TEXTBOOKS

BAITSELL, GEORGE ALFRED

Human biology Second edition. New York McGraw Hill Book Company, Inc., 1950 730 p. illus. 24 cm. (McGraw Hill publications in the zoological sciences, E. J Boell, consulting editor) $6.50 549

Contents (abridged): The world of life. Protoplasmic activities. Organization of the human body Biology of nutrition. Biology of respiration. Biology of secretion. Biology of excretion. Biology of the vascular system. Biology of the skeletal system. Biology of the muscular system. Biology of the nervous system. Biology of growth and reproduction. Biology of inheritance. Human heredity The web of life. Biology of disease. Appendix. Index.

Note: (1939) A successful textbook for introductory college courses in biology Man rather than lower organisms is used as the chief example of life so as to take advantage of the greater interest in man on the part of beginning students. However many other organisms are discussed at appropriate points. The book includes as an appendix useful cyclopedic arrangement of information in which historical information on biological developments and personalities is included along with discussions of such topics as enzymes. Substantial revisions and additions have been made in this edition.

DE LAUBENFELS MAX WALKER

Life science. Fourth edition containing 1024 illustrations, 748 drawings by the author 276 photographs. New York Prentice-Hall Inc. 1949 407 p. illus. 29 cm. $5 95 550

Contents (abridged): I, General biology: History Biophysics. Biochemistry Cytology Embryology Histology II, Human biology: Anatomy Physiology Psychology Hygiene. Immunology Dietetics. III, Plant biology: Botany Phytophysiology Taxonomy Agriculture. Bacteriology IV Animal biology: Zoology Oceanography Parasitology Entomology Zoogeography Social biology: Ecology Genetics. Eugenics. Paleontology Anthropology Philosophy Index.

Note: Among the outstanding features of this introductory college text are the large compass, the exceptionally high number and excellence of the illustrations, and the author' easily read style. The expositions of such topics as heredity vs. environment are so well put that laymen read the book with pleasure and profit without the aid of an instructor. Annotated reading lists are included.

ETKIN WILLIAM

College biology Line drawings by Gottfried W Goldenberg. New York Thomas Y Crowell Company 1950. 806 p illus. 24 cm. $6 00 551

Contents: Part one The mechanisms of our bodies: Objectives of biological study The processes of living. The chemical machinery of the body Part two, Behavior: Movement. Sensitivity The nervous system. Hormones. Behavior patterns. Part three, The individual and the species: Reproduction. Development and growth. Mendel and the laws of heredity Gene action and development. Part four, Plant activities and the interdependence of organisms: The basic importance of green plant cells. The physiology of higher plants. The role of bacteria and fungi in nature. The organic community Parasitism and disease. Part five, The evolution of plants: The thallophytes. Vegetative evolution of higher plants. Evolution of reproduction in higher plants. Part six, The evolution of animals: Evolution of the arthropods. Echinoderm in invertebrate evolution. Vertebrate ancestry. The evolution of mammals and man. The mechanics and control of evolution. Appendix: Basic concepts from chemistry and physics. Bibliography Reports on experiments illustrated in figures. Glossary-index.

Note: A relatively new textbook for introductory courses. The content and presentation follow recommendations of the Committee on Basic Concepts in Biology of the Carnegie Foundation for the Advancement of Teaching, of which committee the author was member The style is concise but lucid. Basic principles including physiologic and biochemical principles are emphasized, and selected experiments which resulted in advances in biological knowledge are described. Some of the figures are accompanied by detailed legends which provide information for laboratory experiments. These enabled the author to dispense with much purely descriptive material. All of the illustrations are of excellent quality

GARDINER, MARY SUMMERFIELD

The principles of general biology New York The Macmillan Company 1952 657 p. illus. 26 cm. $5 75 552

Contents (abridged): Section one, The organization of the natural world The development of modern biology Matter and energy Atomic combinations and chemical reactions. Protoplasm and the cell. Section two, The organization of biological systems: The classification of biological systems and the divisions of biological science. Systems below the level of tissue organization. The vascular plants. The tube-within-a tube plan of metazoan organization. The arthropods. The Chordata. Integrating themes of the vertebrate body Section three, The operation of biological systems: Nutrition—the utilization of food. The dietary requirements of heterotrophs. Metabolism and its regulation. Growth and regeneration—fission, budding and parthenogenesis. Gametic reproduction. The inheritance of the

individual. Section four The evolution of biological systems: The doctrine of organic evolution. Index.

Note: The title and the content of this textbook for introductory college courses indicate the author's purpose of presenting a well-rounded picture with emphasis on principles. There are long discussions of such aspects as nutrition, whereas the discussions of classification are much shorter than in some introductory texts. There is an adequate number of illustrations, but not a lavish display such as is found in some contemporary textbooks in this field. The author is Professor of Biology in Bryn Mawr College.

HARDIN GARRETT

Biology its human implications. Second edition. Illustrations by Evan L. Gillespie. San Francisco California W H. Freeman and Company 1952 720 p. illus. 24 cm. (A series of biology texts editors George W Beadle and others) $5 00 553

Contents (abridged) Part one, Introduction to the science of biology Part two, The structure of man Skeletal and muscular systems of man. The breathing system. Digestion and nutrition. The circulatory system. The endocrine organs. Disease; antibodies, blood transfusions. Nervous impulses, consciousness, and reflex action. The organism as a whole. The senses. Human reproduction. Part three, Heredity The particulate nature of inheritance. Genetic aspects of some human problems. Sex and genes. Interactions of heredity and environment. Part four Evolution and the living world: The theory of evolution. Names and sizes of organisms. The conquest of the land by plants. Some aspects of reproduction and evolution in plants. Some invertebrate animals, and evolution to the land. Part five, The web of life. What is life? The transformations of matter in nature. Energy and population problems. Man—evolution in the future. Bibliography Index.

Note In this textbook for introductory college courses the emphasis is on general principles and on their significance for man. A considerable number of topics not ordinarily discussed in introductory texts—for instance, the logic of blood tests in cases of disputed paternity—are discussed On the other hand little space is given to systematics. The book is well illustrated and adequately indexed. The author is a member of the faculty of Santa Barbara College of the University of California.

MARSLAND DOUGLAS

Principles of modern biology A complete reconstruction and modernization of Charles R. Plunkett's *Elements of modern biology* revised edition New York Henry Holt and Company 1951 757 p illus. 25 cm. $6.25 554

Contents (abridged) Part I, The cell Protoplasm, the cell, and the organism. Cell division in relation to reproduction The chemical and physical structure of protoplasm Enzymes—speed and order in cell chemistry Osmosis—material exchanges between the cell and the environment Cells and their nutrition Responsiveness in single cells. Part II, Multicellular plants: Reproduction in multicellular plants. Nutrition of multicellular plants. Part III, Multicellular animals, especially man Embryonic development—origin of organs and tissues. The digestive system in man and other multicellular animals. The circulatory system. Absorption, metabolism and the diet. Respiration. Excretion Reproduction in multicellular animals. The endocrine glands. Responses of higher animals. Part IV Heredity and evolution Natural selection—the origin of species The consequences of evolution. Ecology and evolution. Appendixes Classification of organisms Glossary Index

Note. (445*) A standard textbook for introductory college courses. The biology is emphasized but the view given of the living world is sufficiently broad to meet the needs of the intended readers. In this edition a considerable number of illustrations are revised or newly added, there is a new chapter on ecology and evolution, and new discussions of such topics as virology and antibiotics.

MAVOR, JAMES WATT

General biology Fourth edition New York The Macmillan Company 1952 875 p illus. 24 cm. $5 75 555

Contents (abridged) Part I, The nature of life The scientific method and its application to biology The general characteristics of living things. The classification of plants and animals. The cell. Protoplasm. Part II, Plant life: The thallus plants. Bacteria. Liverworts and mosses. The ferns and their relatives. The alternation of generations and its significance. Seed plants. Plant physiology The economic importance of plants. Part III, Invertebrates: Unicellular animals. Saclike animals with ectoderm and endoderm. Flatworms. The round worms. The segmented worms. The arthropods. Part IV Vertebrate anatomy and physiology based on the frog and man: External features, skeleton, joints, muscles, and body cavity The digestive system. The respiratory and excretory systems. The circulatory system. The nervous system. The sense organs. The endocrines. Reproduction. Part V Development and heredity Part VI, The organic world and its evolution: The history of life on the earth. The history of the theory of evolution. The evidences for organic evolution. The mechanism of organic evolution. Early man. Appendix: A synoptic table of the plant and animal kingdoms. Reference and background material in chemistry Glossary Index.

Note: (484) An established textbook for use in full-length introductory college courses. The treatment places emphasis on the scientific method and stresses phenomena and facts which can easily be verified in the college laboratory or from common experience. In the present edition there has been some reorganization, some revisions and some addition of material that did not appear in the third edition. Also a considerable number of new illustrations have been added.

MILNE, LORUS JOHNSON, AND MARGERY J MILNE

The biotic world and man. New York Prentice-Hall Inc. 1952 588 p. illus. 26 cm. (Prentice-Hall biological science series, Henry Burr Steinbach editor) $9.00. 556

Contents Approach to biology The variety of life. The basic materials of life. Energy relations of life. Water relations of life. The form of life single cells and smaller—multicellular plants—multicellular non-chordates—chordates. Chemical coordination. Faster coordination and behavior. Carriers of heredity Development of the individual. The abundance of life. The hazards of life. The history of life. The value of life. Looking toward the future. Index.

Note A college textbook for first courses in biology The authors emphasize a grasp of the main features of biological processes rather than the memorizing of the details of classification. Much more space is devoted to functions than to form. The book is written in a clear factual style that holds the reader's interest, and it is very well illustrated.

MOMENT GAIRDNER B

General biology for colleges. Second edition. New York Appleton-Century-Crofts, Inc., 1950 680 p illus. 25 cm. (The Century biological series Dwight E. Minnich, *editor*) $5 50 557

Contents (abridged) Foundations of biology Classification of the living world. Universal characteristics of living things. Survey of plant types and ways of life. Plant life—conduction, support, and absorption—metabolism—reproduction—behavior and growth. Relationships of plants and animals. Animal types. Animal life—nutrition—respiration—excretion—nervous coordination—sense organs—hormonal coordination. Reproduction. Development. Heredity. Evolution—the origin of species History of life on this planet. Classification of the plant and animal kingdoms. Glossary Index.

Note (1333) An introductory textbook of inclusive scope. Particular attention is given to the experimental evidence upon which the facts and principles of modern biology rest. Throughout the book human biology is related to the biology of other forms of life. It is generously illustrated. The previous edition was published in 1942 In preparing this edition the author added many new illustrations, a considerable amount of new text, and revised the reading lists.

STANFORD ERNEST ELWOOD

Man *and the living world.* Second edition. New York The Macmillan Company, 1951 863 p illus. 22 cm. $5.50 558

Contents (abridged) Unit one, Science and living things. Unit two, The green plant—manufacturer of foodstuffs and of raw materials for industry Unit three, The human body—its structures and functions. Unit four The maintenance and health of the body—foods, nutrition, poisons, and disease. Unit five, *Microorganisms* and their relation to human life. Unit six, A survey of the animal

kingdom. Unit seven, A survey of the plant kingdom. Unit eight, Evolution and heredity. Unit nine, Domestication and breeding of plants and animals. Unit ten, The biological resources of the United States and their utilization. The soil. Forest resources of the United States. Conservation of wild life. Index.

Note. (1942) A textbook designed for use in introductory courses in biology. It offers the beginning student a view of not only the nature of biology but also of the applications of biological sciences in many fields such as nutrition, public health, zoological and botanical systematics, the study of heredity, breeding of domestic animals, and conservation of natural resources. Both the text and the illustrations are designed to hold the attention of the beginning student. The first edition was published in 1940. The general plan and considerable part of the contents of the book remain unaltered in this edition. However, information has been added on a number of topics such as the effects of radiation on heredity in human beings. Also historical and economic data have been brought down to date. There are now 437 figures.

STAUFFER, ANDREW editor

Introductory biology Authors Nelly J Bosma, E. C. Colin, R. Clark Gilmore, S W Howe, W Henry Leigh, P Meglitsch, H. C. Nelson, J F Schuett, Andrew Stauffer and J P Wessel. New York D Van Nostrand Company Inc., 1949 722 p. illus. 24 cm. $5.50 559

Contents: Introducing living organisms. How organisms secure food. How organisms transport materials within their bodies. How organisms utilize food and excrete wastes. How organisms coordinate their activities. How organisms reproduce. How organisms inherit. How species originate. How organisms live with each other. How man may live healthfully. Bibliography. Glossary. Index.

Note: A textbook organized so as to emphasize the fundamental unity of life and the similarities among the physiologic processes of living things. There is secondary emphasis on man, not only upon his life processes but also upon his influence on nature in such aspects as the destruction of wild life. The book is well suited for use in "cultural" courses whose purpose is to inform students about biology and to indicate its scope rather than to prepare them for further specialization in the field.

WELLHOUSE WALTER HOUSLEY AND GEORGE O HENDRICKSON

College biology Fourth edition. Ames Iowa State College Press 1951 371 p. illus. 23 cm. $4 00 560

Contents (abridged) Part I, Protoplasm, its form and activities as shown in simple organisms. Part II, Structure and activities of complex animals. Part III, How organisms are classified. Part IV Structure and activities of chordate animals. Part Development of modern animals. Part VI, Behavior and heredity. Part VII, The struggle for existence and adaptations. Index.

Note: (1943) A successful college textbook of the "cultural" type, designed to give students who are not majoring in biological sciences a general fundamental understanding of biology. No attempt is made to cover the whole animal kingdom. The third edition appeared in 1944. In preparing that edition several chapters on higher plants of the first edition were omitted and the chapter on the grasshopper was added. Other revisions were made in both the text and illustrations.

WINCHESTER ALBERT MCCOMBS

Biology and its relation to mankind. New York D Van Nostrand Company Inc. 1949 777 p illus. 23 cm. $5 75 561

Contents (abridged) Part I, Foundations of biology: The fundamental unit of life—the cell. The nature of protoplasm. Vital life processes. The classification of living things—taxonomy. Part II, The plant kingdom. Part III, The higher plant body. Part IV The animal kingdom. Part The higher animal body: The skeletal system. The muscular system. The nervous system. The respiratory system. The digestive system. The circulatory system. The excretory system. The reproductive system. The endocrine glands, regulators of the body. Part VI, Some important divisions of biology: Microbiology—the study of microscopic organisms. Entomology—the study of insects. The orders of insects. The bridge of heredity. The principles of heredity. Ontogeny of the chordates. Biological evolution—the concept of descent with change. Life of the past. Human life of the past. The founders of biology. Glossary. Index.

Note: A textbook designed for use in introductory courses in colleges. Life processes are stressed rather than taxonomic aspects. A wealth of material on various phases of the subject is presented to stimulate the interest of the beginning student. Illustrations, many of them from photographs by the author, add to the attractiveness of the volume.

WOODRUFF LORANDE LOSS, AND GEORGE ALFRED BAITSELL

Foundations of biology Seventh edition. New York The Macmillan Company 1951 719 p illus. 22 cm. $5.50 562

Contents (abridged) The scope of biology. Cellular organization of life. The physical basis of life. Metabolism of organisms. The plant body. The animal body. Nutrition. Respiration. Secretion. Excretion. Circulation. Nervous system. Reproduction and cell division. Reproduction and germ cell formation. Reproduction and fertilization. Animal development. Reproduction in plants. Genetics. Origin of species. Organic adaptation. Biology and human welfare. Origin of life. Survey of the plant kingdom. Survey of the animal kingdom. The human background. History of biology. Bibliography. Glossary. Synoptic classification of the plant kingdom. Synoptic classification of the animal kingdom. Index.

Note: (1945) An introductory textbook that has been widely used in American college courses since the publication of the first edition in 1922. Although shorter than many books of the kind, it is general treatment and the style is not so compact that it is difficult to read. Professor Baitsell is responsible for the seventh edition. The number of chapters has been increased by six, and there has been some rearrangement of chapter order and material within the chapters carried over from the previous edition. Also there has been some revision of the illustrative matter.

YOUNG CLARENCE WHITFORD AND G LEDYARD STEBBINS

The human organism and the world of life. Revised edition With the editorial assistance of Richard M Eakin and E R. Hall. Illustrations by *Louise Bush* New York Harper & Brothers, 1951 897 p. illus. 24 cm. $6 00. 563

Contents (abridged) Part one, The human organism: Protoplasm and the cell. The architecture of the body. The nervous system. The circulatory system. The chemical control of bodily activities. The growth of the scientific tradition. The development of endocrinology. Respiration. Digestion and absorption of food. The balance of materials in the body. Reproduction. The principles of heredity. The sense organs. Motivation and emotion. The evolution of the mind. Emotional adjustment. The struggle against disease. Part two, The world of life: Metabolism in the plant kingdom and in the world of life. The simpler forms of plant life. Maintenance, growth, and reproduction in the higher plants. Adaptations of organisms. Communities of organisms. The fact of evolution. Human evolution. Appendix: The branches of biological science. Suggested reading. Index.

Note. (1946) An introductory survey which was originally developed as a result of experimentation in the teaching of biology to freshman students at Colgate University. It gives the student an appreciation of the scope and potentialities of the biological sciences and makes him aware of his own biological nature and his relationships to the organic world. It is particularly suitable for use in the "cultural" type of course offered to students who will take no more courses in biology. The first edition appeared in 1938. Significant changes in this edition include newly added chapters on scientific method, on hunger and diet, and on communities of plant and animal life. Changes have been made throughout the book in the text, illustrations, and reading lists.

CYTOLOGY

BROOKHAVEN NATIONAL LABORATORY BIOLOGY DEPARTMENT

The chemistry and physiology of the nucleus. Proceedings of the symposium held August, 1951 by the Biology Department,

Brookhaven National Laboratory New York Academic Press Inc., 1952 402 p. illus 24 cm. (Experimental cell research. Supplement 2 1952) $7 00 564

Contents: Problems in nuclear chemistry and biology by K. G. Stern. Interrelations between nucleus and cytoplasm—problems at the biological level, by J Schultz. The role of the nucleus in protein synthesis, by F Haurowitz and C. F Crampton. Nucleoproteins of the nucleus, by A. W Pollister. Quantitative optical techniques in the study of nuclear chemistry by M. J Moses. The lampbrush chromosomes of *Triturus viridescens*, by J. G. Gall. The enzymes of isolated nuclei, by A. L. Dounce. Histochemical demonstration of nuclear enzymes, by A. B. Novikoff. Evidence for the polynucleotide nature of cytodesoxyribose, by F Bickley. Organization and function of the inorganic constituents of nuclei, by D. F Poulson and V T Bowen. Studies on the metabolism of the nucleic acids, by A. Bendich. Specificity in the composition of nucleic acids, by G. R. Wyatt. Chemical action of X-rays on nucleic acids and related substances in aqueous systems, by G. Scholes and J Weiss. Relationships between ionizing radiation chromosome breakage and certain other nuclear disturbances, by A. H. Sparrow and others. Chromosome metabolism as shown by autoradiographs, by S. R. Pelc and Alma Howard. Effects of purines and other chemotherapeutic agents on nuclear structure and function, by J J Biesele and others. The effect of colchicine on the microscopic and submicroscopic structure of the mitotic spindle, by S. Inoué. Current status of the bacterial nucleus, by E. D. DeLamater and others. The origin of bacteriophage nitrogen, carbon, and phosphorus, by F W Putnam. The fate of the infecting virus particle, by L. M. Kozloff. The biological nature of the bacterial transforming factors, by R. D. Hotchkiss. Author index.

Note. A collection of the papers together with transcripts from the discussions of them at the symposium named in the book's title. The various papers summarize progress in currently active areas of investigation pertinent to the nucleus of living cells. They are addressed to professional biologists and other trained scientists. Although accompanied by extensive literature references, some of these contain information not previously published as well as that which has already appeared in the professional literature.

International review of cytology Volume 1. Prepared under the auspices of the International Society for Cell Biology Edited by G H. Bourne and J F Danielli. New York Academic Press Inc. 1952 368 p. illus. 24 cm. $7.80 565

Contents: Some historical features in cell biology by Arthur Hughes. Nuclear reproduction, by C. Leonard Huskins. Enzymic capacities and their relation to cell nutrition in animals, by George W Kidder The application of freezing and drying techniques in cytology by L. G. E. Bell. Enzymatic processes in cell membrane penetration, by Th Rosenberg and W Wilbrandt. Bacterial cytology by K. A Bisset. Protoplast surface enzymes and absorption of sugar by R. Brown. Reproduction of bacteriophage, by A. D Hershey. The folding and unfolding of protein molecules as a basis of osmotic work, by R. J Goldacre. Nucleo-cytoplasmic relations in amphibian development, by G. Fankhauser. Structural aspects in mitosis, by M. M. Swann. Factors which control the staining of tissue sections with acid and basic dyes, by Marcus Singer. The behavior of spermatozoa in the neighborhood of eggs, by Lord Rothschild. The cytology of mammalian epidermis and sebaceous glands, by William Montagna. The electron microscopic investigation of tissue sections, by L. H. Bretschneider. The histochemistry of esterases, by G. Gomori. Author index. Subject index.

Note The first volume of an annual that will provide for cytology periodical collections of short monographs similar to those that have been published for some time in numerous other scientific fields. As indicated by the titles above, each monograph is devoted to a specific area, generally one in which there is much current interest, or in which there have been important new advances. The typical monograph is a critical and rather concise digest of the related literature and is supplemented by a substantial list of references. It is addressed to graduate scientists including not only biologists but workers in other fields who are for one reason or another in need of a compact survey of a cytological subject. In the present volume, seven of the contributors are British, five are American, one is Dutch, one Danish, and one Swiss.

Symposium on cytology By William L. Doyle, Hans Ris Franz Schrader and C. Leonard Huskins. East Lansing, Mich. Michigan State College Press, 1951 69 p. 23 cm. $1.50 566

Contents: Quantitative aspects of the histochemistry of phosphatases, by W L. Doyle. Recent work on the chemistry of chromosomes, by H. Ris. A critique of recent hypotheses of mitosis, by F Schrader. Science, cytology and society by C. L. Huskins.

Note. A collection of original papers originally presented at a symposium held at Michigan State College in 1950 and directed at bringing to the attention of biologists in other fields some of the major problems, concepts, and directions in the field of cytology. Each paper has its own bibliography

MARINE AND FRESHWATER BIOLOGY

Lagler Karl F

Freshwater fishery biology Dubuque, Iowa Wm. C. Brown Company 1952 360 p. illus. 24 cm. $5 75 567

Content (abridged) Natural history and ecology Freshwater fishes of North America, north of Mexico. The literature of fish and fisheries. Fish anatomy Fish embryology Food habits. Age and growth. Fish populations. Yield analyses. Fish pathology Fish culture. Fishery surveys of lakes, ponds, and impoundments. Improvement of lakes, ponds, and impoundments. Stream surveys. Stream improvement. Creation of new fishing waters. Freshwater commercial fisheries. Freshwater recreational fisheries. Appendices. Index.

Note. A documented text and reference book for fishermen, students, teachers, and professional workers. It covers all phases of the subject and is well arranged and well illustrated. Bibliographical references are given at the ends of the chapters. Noteworthy is the separate chapter on the literature of fish and fisheries.

MacGinitie, George Eber, and Nettie MacGinitie

Natural history of marine animals. New York McGraw Hill Book Company Inc., 1949 473 p illus. 23 cm. $6.50 568

Contents Introduction. Foods Plankton. Detritus. Other animals. Debris. Seaweed. Comparison between the fauna of land and of ocean Groupings of animals Animal relationships T their physical environment. T each other Sense organs. Luminescence. Marine animal habitats. Growth rates. Burrowing. Variation and succession. Geological records left by animal activities. Protozoa. Porifera. Coelenterata. Ctenophora. Platyhelminthes. Turbellaria. Trematoda. Cestoda Nemertea. Nematoda Chaetognatha. Phoronida. Bryozoa. Brachiopoda Sipunculoidea. Echiuroidea. Annelida. Echinodermata: Asteroidea. Echinoidea. Ophiuroidea. Holothuroidea. Crinoidea. Arthropoda Crustacea. Arachnida. Mollusca: Pelecypoda. Gastropoda. Amphineura. Scaphopoda. Cephalopoda. Protochordata: Enteropneusta. Tunicata. Cephalochordata. Vertebrata: Cyclostomata. Pisces. Mammalia. The relation of higher vertebrates to shore conditions. Phyla of animals General habitats of phyla and classes. Books dealing with marine animals. Index.

Note This book on representative marine animals is designed for amateur naturalists and for teachers and beginning students of zoology The longest chapters are those dealing with the Arthropoda and the Mollusca, each about 75 pages; the chapter describing the vertebrate forms, including the true fishes, is about half as long. The species include at least one from each of the major groups of marine invertebrate animals, those chosen for description being those most frequently met with and those with the most interesting habits. Information on habits, habitats, and ecologies is included in the descriptions. The majority of the illustrations are from photographs taken by the authors along the Pacific Coast of North America.

Miner Roy Waldo

Field book of seashore life. New York G P Putnam's Sons, 1950 888 p. illus. 19 cm. $7 00 569

Contents Phylum Protozoa—the simplest animals. Porifera—sponges. Coelenterata—the polyps. Ctenophora—the comb jellies. Platyhelminthes—the flatworms. Nemertea—the ribbon worms. Nemathelminthes—roundworms, threadworms. Trochelminthes—wheel animalcules. Annulata—segmented or ringed worms. Arthropoda—crustaceans, arachnids, myriapods, and insects. Mollusca—snails, bivalves, chi-

tons, octopuses, and squid. Chaetognaths—arrow worms. Echinoderms—sea-stars, brittle-stars, sea-urchins, sea-lilies, and sea-cucumbers. Procoptyle—moss animals and lamp shells. Chordata—the protochordates and vertebrates. Selected references. Index.

Note. A field manual for use by amateur and professional naturalists in the rapid identification of the invertebrate animals found in the shallow oceanic waters of the Atlantic coast of North America from Labrador to the Cape Hatteras region of North Carolina. Concise semi-technical descriptions of the various animals are supplemented by 131 plates in black and white and nine plates in color. Most of the plates contain plurality of drawings.

WELCH PAUL SMITH

Limnology Second edition. New York McGraw Hill Book Company, Inc., 1952 538 p. illus. 24 cm. (McGraw Hill publications in the zoological sciences, E J Boell consulting editor) $8.50 570

Contents: Part I, Preliminary considerations: Introduction. Inland waters. Lakes, their origin and diversity. Part II, Nature of inland-water environments. Physical conditions and related phenomena. Chemical conditions and related phenomena. Part III, Biological relations: Influence of physical conditions. Influence of chemical conditions. Organisms in inland waters. Plankton. Bacteria, other fungi, and the nonplankton algae. Larger aquatic plants and their limnological significance. Nekton. Benthos. Biological productivity. Part IV Some special types of lentic environments: Ponds. Bog lakes. Part Lotic environments: Running waters in general. Bibliography. Index.

Note: (1351) An advanced college text on inland water life first published in 1935 and now extensively revised and enlarged. The level of treatment presumes completion of basic introductory courses in biology physics, and chemistry on the part of the reader. A brief history of the subject and analyses of physical and chemical influences are preliminary to the discussion of the biological aspects. Methods and practices for field and laboratory work are not covered. The extensive bibliography is classified and includes monographs and periodical literature through 1951 in English and other languages. There are 34 tables and 50 explanatory diagrams. The book is of interest not only to students of limnology but also to specialists in related fields such as ecology.

MICROSCOPY

BENNETT ALVA HERSCHEL, AND OTHERS

Phase microscopy principles and applications. By Alva H. Bennett, Harold Osterberg, Helen Jupnik and Oscar W Richards. New York John Wiley & Sons, Inc. 1951 320 p. illus. 23 cm. $8.50 571

Contents: Introduction to phase microscopy. An elementary theory of phase microscopy. Instrumentation. The technics of phase microscopy. Phase microscopy in biology and medicine. Industrial applications of phase microscopy. Appendix: The diffraction theory of phase microscopy with Köhler illumination. Bibliography. Author index. Subject index.

Note. Phase microscopy is a relatively new technique that is especially valuable in viewing transparent and semitransparent material. When used in connection with biological research, it eliminates the need of laborious preparation staining of tissues and facilitates the examination of living material. Many articles have been written on the subject, but this appears to be the first book. It is technical, rather than a popular treatise, and is designed primarily for research workers who make extensive use of microscopy. Theory, mathematical calculations, and techniques are all covered. There is a comprehensive bibliography. The authors are associated with the research laboratory of the American Optical Company.

GRAY PETER

Handbook of basic microtechnique. New York The Blakiston Company 1952 141 p. illus. 24 cm. $3 00 572

Contents (abridged) Part 1, Materials and processes of slide-making: Materials and equipment. Fixatives and fixatives. Stains and staining. Dehydrating and clearing. Mounts and mountants. Making wholemounts. Making smears. Making sections. Cleaning, labeling, and storing slides. Part 2, Specific examples of slide-making. Index.

Note: Explicit information on the preparation of biological material and the making of slides for microscopical examination is presented in this compact handbook. Materials, such as fixatives, and techniques, such as sectioning, are described in the first part. In the second part the making of fifteen slides of various complexities is described in detail. These descriptions contain some fine points that could not be incorporated in the more generalized material in the first section. There are fifty-seven figures. The book is suited to the needs of beginners and also to those of experienced laboratory workers who make biological slides only occasionally.

JONES, RUTH MCCLUNG, editor

McClung's handbook of microscopical technique for workers in animal and plant tissues By thirty five authors. Edited by Ruth McClung Jones Third edition, revised and enlarged. With one hundred and fifty-seven illustrations. New York Paul B Hoeber Inc. (Medical Book Department of Harper & Brothers), 1950 790 p illus. 24 cm. $12.50 573

Contents: Part I, General procedures and information: Basic methods for preparing microscopical slides, by R. M. Jones and C. E. McClung. Fixation and fixatives, by E. Allen and C. E. McClung. Stains and staining, by H. J. Conn. Part II, Special procedures with limited application: Methods of cytology by C. E. McClung and others. Methods of embryology by R. M. Jones. Methods of histology by R. Isaacs and others. Methods of protozoology by D H Wenrich and W F Diller. Part III, Special procedures with general application: Methods for study of fresh material, by M. H Knisely and others. Methods applicable to the study of both fresh and fixed materials, by H. S. Bennett and others. Methods for fixed materials, by D. A. Haller and others. Index.

Note. (1940s) A standard and widely used manual of fundamental principles, practical techniques, formulas, and literature references. In comparison to the preceding edition this one has been extensively revised so as to cover recent developments such as phase microscopy polarization microscopy new methods for embedding of specimens in plastics, and new formulas. Many of the sections are the work of new contributors. The number of illustrations has been substantially increased.

WYCKOFF RALPH WALTER GRAYSTONE

Electron microscopy technique and applications. With 202 illustrations New York Interscience Publishers Inc. 1949 248 p 24 cm. $5.00 574

Contents: Introduction. Electron microscopes. Adjustment of the electron microscope. Preparations for electron microscopy. Metal shadowing and the visualization of very small objects. The use of surface replicas. The electron microscopy of particle suspensions. The electron microscopy of viruses. The photography of macromolecules. The structure of macromolecular solids. Index to text. Index to micrographs.

Note. The purpose of this volume is to provide laboratory technicians and students with brief descriptions of some of the successful applications made of the electron microscope, and to indicate its possibilities and limitations. Introductory chapters deal with the instruction, operation and adjustment of such microscopes, but the main emphasis is on fields of application, especially in the biological and medical sciences. Each chapter includes an extensive bibliography and many excellent electron micrographs prepared by the author.

EVOLUTION

BLUM HAROLD FRANCIS

Time's arrow and evolution. Princeton, New Jersey Princeton University Press, 1951 222 p. illus. 24 cm. $4.00 575

Contents: Perspectives. The chronology of evolution. The energetics and kinetics of chemical reaction. The origin and early evolution of the earth. Later history of the earth. The fitness of the environment. The energetics and kinetics of living systems. Structure and its reproduction. Stability and variability. The origin of life. Irreversibility and direction in evolution. Some implications. Bibliography. Index.

Note. That the second law of thermodynamics ("Time's arrow") has determined the origin of life and the direction of evolution of living organisms is the central theme of this book. The work is mainly an examination of the evidence from various fields of science that appears to support the basic idea rather than the statement of definite hypothesis. It is addressed primarily to scientists or at least to persons who are moderately familiar with the terminology and concepts of physical and organic chemistry. The style is lucid and the ideas advanced are well supported by references to the pertinent literature. In addition to its obvious interest to students of evolution, there are numerous ideas of value to biochemists as well.

CLAUSEN, JENS

Stages in the evolution of plant species. Ithaca, New York Cornell University Press 1951 206 p illus. 24 cm. $3 75 576

Contents Introduction. The evolution of our concepts of speciation. The local population as the basic evolutionary unit. The evolution of ecological races. The genetic systems of ecological races and morphological subspecies. The evolution of interspecific barriers. The evolution of groups of species. The physiologic genetic species concept and the dynamics of the evolution of species and genera. Bibliography Index

Note A book based on a long series of experiments conducted at the Royal Agricultural College in Copenhagen, Denmark, and at the Carnegie Institution in Washington by the author and his colleagues. The results, which illustrate the complexity of the evolutionary process, are not presented statistically but are stated incidentally in connection with conclusions drawn about the mechanisms and direction of evolution among plants. The material was prepared and presented as the Messenger Lectures at Cornell University in the fall of 1950. The style is semi-technical but is well within the grasp of any educated person who is moderately familiar with botanical and genetical terminology. On the other hand, there is enough substance and original thought to make the book of interest to graduate scientists working in fields where the evolution of plants is of interest.

CLEMENTS FREDERIC EDWARD AND OTHERS

Adaptation and origin in the plant world the role of environment in evolution. By Frederic E Clements, Emmett V Martin, and Frances L. Long Photographs and drawings by Edith S Clements. Waltham, Mass. The Chronica Botanica Company 1950 332 p illus 4 cm $6 00 577

Contents I, Coastal laboratory and experimental gardens. Installation. Factor functions and form. Behavior II, Alpine laboratory and transplant gardens. Installation. Factors and control. Functions. Ecographs. Controlled experiments. Experimental morphogeny. Phylogeny. Summary and conclusions. Appendix. Index

Note In this book a series of experiments that extended over forty years and was designed to shed light on whether adaptation to environmental conditions is an evolutionary process or merely a selecting-out of strains already present in the genetic constitution are described. In the course of the experiments plants were subjected to widely various environmental conditions. The methods of investigation are described in detail and results are tabulated. The series of experiments was not completed, hence the book is not a final report. Nevertheless it contains material of primary interest to research workers in plant genetics and ecology

DODSON EDWARD OTTWAY

A textbook of evolution Philadelphia W B Saunders Company 1952 419 p illus. 24 cm. $5 00 578

Contents (abridged) Part I, A definition of evolution. Evolution by natural selection—Darwin's conception. Evidences of evolution, I—biogeography. Evidences of evolution II—taxonomy, comparative anatomy and comparative physiology. Evidences of evolution, III—paleontology and genetics. The history of evolutionary thought. The two main problems of evolution. Part II Phylogeny (evolution above the specific level) The origin of life and the differentiation of the plant and animal kingdoms. The main lines of evolution among land plants. The main lines of animal evolution. The history of the primates. Part III The origin of variations ("descent with modification") Gene mutation. Chromosomal mutations. Part IV The origin of species or the origin of discontinuity. Natural selection. Continuous vs. discontinuous variation. Isolating mechanisms and species formation. Polyploidy. Distribution of species. Index.

Note: The background and present status of evolutionary theory are well presented in this book. The author shows that evidence from several areas of scientific research is being fused in a modern synthesis to which such men as Dobzhansky, Goldschmidt, R. A. Fisher, Mayr, and E. B. Babcock have made substantial contributions. The chapter on the primates includes the new light shed on the evolution of man by the discovery of the pithecanthropus skulls. Although designed as an introduction to the subject for college students, the book is suitable for reading by anyone interested in a survey of the contemporary situation in this field. The author is a member of the faculty of the University of Notre Dame.

GREGORY, WILLIAM KING

Evolution emerging a survey of changing patterns from primeval life to man A collaborative work of the American Museum of Natural History and Columbia University New York The Macmillan Company, 1951. 2 vol. illus. 26 cm. $20 00 579

Contents (abridged) Volume I, Text. Part one, Time and evolution. Introduction, the cosmic climate. The first living things. The world of molluscs. Externally articulated animals (arthropods). Part two, Emergence of the vertebrates: Coelomate food-sifters of diverse types (brachiopods, polyzoa, echinoderms). The prochordates and the problem of the origin of the vertebrates. The vertebrates come forth (shell-skinned ancestors of the vertebrates and some of their branches). Early experiments among streamlined predators (placoderms). Advanced predators of the shark tribe. The branching tribes of bony fishes. Part three, Air-breathing fishes: The air-breathers struggle for life. The air-breathers come up on land. From lowland marsh to forest and desert. Back to the waters and down to the sea. The reign of the archosaurians (thecodonts, crocodilians and dinosaurs). Bat-winged reptiles (pterosaurs) and the feather-winged frame of birds. Part four The rise and branching of the mammals: From stalking reptiles to running mammals a critical stage in evolution. The dark ages of mammalian history (mesozoic mammals). Branching evolution in egg laying and marsupial mammals. Rise of the placental mammals (the outer form and inner frame of insectivores, tree-shrews, bats, edentates, rodents). Archaic and modernized carnivores, including seals (Pinnipedia). Outer form and inner frame among the hoofed mammals (Ungulata). Fish-like by convergence (Cetacea). Part five, The devious paths to man: Origin, rise and deployment of the primates. Man's debt to the past. Part six, Evolution emerging, retrospect and prospect. Law and chance. Bibliography. Index of authors. General index. Volume II, Illustrations.

Note The publication of this monumental work culminates plans formulated by three successive generations of Columbia zoology professors for a textbook covering the evolution of vertebrate animals from earliest times to the present. The first volume contains the text without illustrations but with references to the illustrations. The second volume contains 1013 pages of illustrations arranged under the same chapter titles as the text volume. In both volumes the details and evidences of vertebrate evolution are presented in logical order with attention centered especially upon the emergence of new skeletal patterns. The study of the skeleton is emphasized because of the opportunity it presents to combine and integrate the knowledge of both fossil and still existing animals. The bibliography which is classified to correspond to the chapter arrangement, covers 144 two-columned pages. Both students of comparative anatomy and general readers who are concerned in any manner with the subject will find the work of great interest and importance.

PATTERSON J T AND W S STONE

Evolution in the genus Drosophila. New York The Macmillan Company 1952 610 p. illus 22 cm. $8.50 580

Contents Introduction. The problem. The genus Drosophila. Geographical distribution and speciation. Chromosome evolution in the genus Drosophila. Salivary gland chromosomes. Gene variation, selection, and genic balance. Isolating mechanisms. The incompatibility reaction and other isolating mechanisms. Hybrids and hybrid sterility. Evolution in the virilis species group. Comparisons and conclusions. References. Index.

Note By serving as experimental material the fruitflies of the genus Drosophila have contributed much to the development of our present knowledge of genetics. In this book the mass of accumulated knowledge about this genus is reinterpreted from the standpoint of evidences of evolution. Although the authors state that they have omitted certain contributions, the treatment borders on the encyclopedic. The style is compact and the text is supplemented by many

than 100 tables. The bibliography runs to 38 pages. The work is major addition to the scientific literature of evolution.

SHULL AARON FRANKLIN

Evolution. Second edition. New York Mc Graw-Hill Book Company, Inc. 1951 322 p. illus. 24 cm. (McGraw Hill publications in the zoological sciences E. J Boell, consulting editor) $5.50 581

Contents: The evolution concept over the centuries. Order in diversity among living things. Likeness implying kinship. Geographic distribution and the time and place of origin of species. Fossils explained by evolution. Origin of man. Mechanism of permanence and change. Primary variation. Genetic variation in wild populations. Recombination. Guidance of evolution. Isolation. Geographic races and speciation. Societies of beasts and men. Origin of life. Index.

Note: (1348) A simple, straightforward introduction. The role of the genes in evolution is stressed, but adequate attention is also given to other aspects. The book is designed and widely used as text for college courses, but it is equally suitable for first book for interested lay readers. The first edition was pioneer presentation from the genetic standpoint. In the present edition, published 15 years later, the chapters bearing on the genetic aspects has been largely rewritten. One of the principal changes is an account of polyploidy There are 141 figures and good index, but there is no bibliography

SIMPSON GEORGE GAYLORD

The meaning of evolution, a study of the history of life and of its significance for man. New Haven Yale University Press 1950 364 p. illus. 21 cm. (The Terry lectures) $4.00 582

Contents: Part I, The course of evolution. Geologic time. The beginnings of life Major outlines of the fossil record. The history of the vertebrates. Records and reductions of reptiles. Outlines of the history of mammals. The history of the primates. Rates of evolution. First conclusions from the record. Part II, The interpretation of evolution: The problem of problems. Oriented evolution: orthogenesis and trends. The opportunism of evolution. Racial life and death. Forces of evolution and their integration. The concept of progress in evolution. Historical retrospect: the evolution of evolution. Part III, Evolution, humanity and ethics: Man place in nature. The search for an ethic. The ethics of knowledge and of responsibility The future of man and of life. Epilogue and summary Index.

Note: Educated lay readers with more than superficial interests in evolution constitute the natural audience for this well-written, authentic book. Originally prepared and delivered at Yale University November, 1948, as the twenty-fifth series of Terry lectures, the material has been expanded and augmented without loss of the easy-to-read informal style of scientific lectures addressed to laymen. The evidence in support of evolution and the meaning of the evolutionary process to man are presented in synthesis that employs evidence from pertinent branches of science and an interpretation that points out the ethical and cultural values. The author is Chairman of the Department of Geology and Paleontology in the American Museum of Natural History and Professor of Vertebrate Paleontology at Columbia University

STEBBINS, GEORGE LEDYARD, JR.

Variation and evolution in plants. New York Columbia University Press, 1950 643 p. illus. 24 cm. (Columbia biological series. Number XVI. General editor L. C. Dunn) $8.00 583

Contents. Description and analysis of variation patterns. Examples of variation patterns within species and genera. The basis of individual variation. Natural selection and variation in populations. Genetic systems as factors in evolution. Isolation and the origin of species Hybridization and its effects Polyploidy—Occurrence and nature of polyploid types—Geographic distribution and significance of polyploidy Apomixis in relation to variation and evolution. Structural hybridity and the genetic system. Evolutionary trends—The karyotype—External morphology Fossils, modern distribution patterns and rates of evolution. Works cited Index.

Note An important contribution to the literature of evolution. It represents synthesis of knowledge from many fields, particularly paleobotany genetics, cytology and, of course, systematic botany Plant variation and evolution is shown to be complex process based on the accumulation of many small changes and taking place at three distinguishable levels which the author terms, variation, microevolution and macroevolution. The work is essentially masterly interpretation of the published literature including the author's own numerous papers. The list of works cited runs to 40 pages. The presentation is technical and is suited to advanced students and graduate scientists interested in such fields as evolution, genetics, and botany

GENETICS

ADVANCES IN GENETICS Volume III. Edited by M. Demerec. New York Academic Press, Inc. 1950 267 p. illus. 23 cm $6.80 584

Contents: Observations on the cytology of bacteria, by R. Delaporte. Biochemical genetics of Neurospora, by N. H. Horowitz. The phenomenon of position effect, by E. B. Lewis. The theory of genetical recombination, by A. R. G. Owen. Corn breeding, by F D Richey Parthenogenesis in animals, by E. Suomalainen. Author index. Subject index.

—— Volume IV Edited by M. Demerec. New York Academic Press Inc., 1951. 343 p. illus. 23 cm. $7.50. 585

Contents: Physiological genetics of the mouse, by S. Gluecksohn-Waelsch. Developmental action of lethal factors in Drosophila, by E. Hadorn. Localization and function of heterochromatin in *Drosophila melanogaster* by A. Hannah. The genetics of Coffea, by C. A. Krug and A. Carvalho. The chromosomes of the vertebrates, by R. Matthey Genic analysis and linkage relationship of characters in rice, by S. Nagao. Procedures and methods of cotton breeding with special reference to American cultivated species, by T R. Richmond. Possible significance of duplication in evolution, by S. G. Stephens. Cytogenetics of orthopteroid insects, by M. J. D. White. Author index. Subject index.

Note: (494) Two additional volumes in series which contains original monographs on selected genetic topics which are currently of interest to professional workers in the field. In most instances the author of the monograph has himself made valuable contributions to the subject of which he writes. However the papers always include the pertinent findings of other authors and are always accompanied by an extensive bibliography The papers are addressed not only to scientists who are actively engaged in research in genetics but also to workers in related fields such as plant breeding who desire to keep abreast of new developments. *Not all of the contributors are American;* witness volume IV in which Switzerland, Brazil, and Japan are represented as well as the U. S. A.

ANDERSON EDGAR

Introgressive hybridization. New York John Wiley & Sons, Inc., 1949 109 p illus. 22 cm. (Biological research series advisory board Paul A. Weiss and others) $3 50. 586

Contents Introgression in Iris: typical example. The ecological basis of introgression. The genetic basis of introgression. Introgression in fossil populations Introgression and evolution. Special techniques for the study of introgression. Epilogue. Bibliography Index.

Note: The term "introgressive hybridization" designates the repeated backcrossing of hybrids to one or both parents. This book is about the study of such hybridization in the field under natural conditions, that is, introgressive hybridization outside the laboratory and the breeding plot. It deals particularly with how the effects of hybridization can best be measured in natural populations and what is the nature of the forces at work in such populations. All relevant literature dealing with the problem (which has been given intensive study chiefly since 1939) is summarized. at the same time, good deal of the material is original

CLEVELAND LEMUEL ROSCOE

The whole life cycle of chromosomes and their coiling systems Philadelphia The American Philosophical Society 1949 100 p. illus. 30 cm. (Transactions American Philosophical Society New series—vol. 39 part 1) Paper $1.50 587

Contents: Introduction. The genus *Holomastigotoides*. Species of *Holomastigotoides* in *Prorhinotermes*. *Holomastigotoides* ...

cies several. Holomastigotoides diversa species several. Centrioles and achromatic figure. Relation of chromosomes to nucleoli. Relation of chromosomes to nuclear membrane. Single chromatids. Double chromatids. Discussion. Summary. References. Explanation of plates. Index.

Note: A thorough study of the complete life cycle of chromosomes. It is based largely on original studies made by the author but a critical digest of the pertinent literature is also incorporated. In the work the author clears up the details of a number of stages that have been heretofore treated only in general terms. Among his conclusions are "all chromosomes have minor and major coils; some have super coils; and some have supers in meiosis but not in mitosis. "The minor coils are the only ones that exist throughout the life cycle of the chromosome; major and supers (when present) disappear and reappear during each chromosomal generation. "Chromosomes are of two types, those with single and those with double chromatids. "Interphase and resting stages are not always synonymous. "There is no longer any question regarding the existence of terminal centromeres. There are 93 illustrations reproduced on 35 plates. All of the illustrations are reproductions of original drawings.

DOBZHANSKY THEODOSIUS

Genetics and the origin of species Third edition revised. New York Columbia University Press, 1951 364 p illus. 24 cm. (Columbia biological series. Number XI. Edited at Columbia University) $5 00 588

Contents: Organic diversity Heredity and mutation. *Mutation in populations.* Selection. Adaptive polymorphism. Race formation. Isolating mechanisms. Hybrid sterility Species as natural units. Patterns of evolution. Literature Index.

Note (1343) One of the chief books in the modern literature of evolution in which knowledge from various branches of biological science is synthesized. It is devoted particularly to the origins of variations in plants and animals and perpetuation of them by heredity The author emphasizes that "Mendelian populations" are the natural evolutionary units. *The second edition appeared in 1941* The book has been rewritten and reorganized in the present edition. *Although many pages shorter the scope is essentially the same.* The revised bibliography which now runs to 33 pages, is a valuable feature.

DUNN LESLIE CLARENCE, editor

Genetics in the 20th century essays on the progress of genetics during its first 50 years. Edited for the Genetics Society of America by L. C Dunn. New York The Macmillan Company 1951 634 p. illus. 22 cm. $5 00 589

Contents The impact of genetics upon science, by R. B. Goldschmidt. Gregor Mendel's life and heritage, by H Iltis. The knowledge of heredity before 1900, by C. Zirkle The beginnings of Mendelism in America, by W E. Castle. The development of the gene theory by H. J Muller The relation of genes and chromosomes, by A H Sturtevant The progress and prospect of biometrical genetics, by K. Mather Some chemical aspects of the cell nucleus, by A. E. Mirsky Cytochemical measurements in the study of the gene, by T Caspersson and J Schultz Genetics and immunology by M. R Irwin Chemical genetics, by G W Beadle. Remarks on cell heredity by B. Ephrussi. Genetic studies in bacteria, by J. Lederberg The role of the genes in cytoplasmic inheritance, by T M. Sonneborn Mendel and the determinants, by C. D Darlington. Evolution of cytogenetic mechanisms in animals, by M J. D White. Old and new pathways in human genetics, by L. H. Snyder Genetics of the human race, by L. S. Penrose Genetics and disease resistance, by *J W Gowen. Genetics* and the cancer problem, by C. C. Little. Genetics and plant breeding, by A Müntzing. Genetics and animal breeding, by J. L. Lush. Genetics and plant pathology by J C. Walker Hybrid corn its genetic basis and its significance in human affairs, by P C. Mangelsdorf Mendelian populations and their evolution, by T Dobzhansky Genetics, evolution, and human destiny by J Huxley Index.

Note A collection of original papers written for and presented at the Golden Jubilee of Genetics at Ohio State University in September 1950 Though the historical development of genetics is in the background of most of the papers, many of them deal with the current state of knowledge of a particular area within genetics. The book is addressed to advanced students of genetics and professional geneticists. Many of the papers are accompanied by substantial reference lists.

GOLDSCHMIDT, RICHARD BENEDICT

Understanding heredity an introduction to genetics New York John Wiley & Sons, Inc., 1952 228 p illus. 22 cm. $3 75 590

Contents. Hereditary and non-hereditary traits. The sex cells and fertilization. Elementary Mendelism. More on elementary Mendelism. Chromosomes and Mendelism. Linkage. Mutation. Sex chromosomes and sex-linked inheritance. Collaboration of genes. Summation or multiple factors. Multiple alleles. A glimpse of more technical facts and problems of genetics. Problems. Books for further study Glossary Index.

Note. Though an introduction, this book is not a popularization. In it the chief known facts pertaining to genetics are presented concisely but in sufficient detail so that a thorough reader will gain a clear understanding of the basic genetic mechanisms. The book is suitable for use either as a college textbook or as an introduction for serious general readers. Problems for students to solve are suggested in the back of the book.

GOLDSCHMIDT, RICHARD BENEDICT, AND OTHERS

The podoptera effect in Drosophila melanogaster By Richard B Goldschmidt, Aloha Hannah, and Leonie Kellen Piternick. Berkeley University of California Press, 1951 293 p illus. 26 cm. (University of California publications in zoölogy editors H. Kirby and others) Paper $2 25 591

Contents (abridged) Part I, Occurrence, material, morphology Part II, Penetrance and expressivity Part III, Genetic analyses. Part IV Dominance, paradominance, relation of podoptera to dominant mutants. Part V Specific features of podoptera H. Part VI, Discussion. Bibliography

Note: A detailed study of a group of homoeotic mutants in *Drosophila melanogaster* which have the effect of transforming the wings into leg-like structures. The authors identified five podoptera lines which they designate as tetraltera, podoptera G, podoptera H, podoptera K, and podoptera M. They show that podoptera types are practically ubiquitous in Drosophila and that the character is difficult to analyze genetically However they succeeded in carrying through many *statistical studies* on the genetics and the results are described and tabulated in this work which is of interest to biologists specializing in genetics.

GOWEN JOHN WHITTEMORE editor

Heterosis A record of researches directed toward explaining and utilizing the vigor of hybrids Ames Ia. Iowa State College Press 1952 552 p illus. 24 cm. $6 75 592

Contents: Early ideas on inbreeding and crossbreeding, by C. Zirkle. Beginnings of the heterosis concept, by G. H. Shull. Development of the heterosis concept, by H. K. Hayes. Preferential segregation in maize, by M. M. Rhoades. Inbreeding and crossbreeding in seed development, by R A. Brink *Physiology of gene action in hybrids,* by W G. Whaley Hybrid nutritional requirements, by W J Robbins. *Origin of corn belt maize and its genetic significance,* by E. Anderson and W L. Brown. Heterosis in population genetics, by A. A. Buzzati-Traverso *Fixing transgressive vigor in Nicotiana rustica,* by H. H. Smith. Hybridization in the evolution of maize, by P C. Mangelsdorf *Biochemical models of heterosis in Neurospora,* by S Emerson. Nature and origin of heterosis, by T Dobzhansky Plasmagenes and chromogenes in heterosis, by D F Jones. Specificity of gene effects, by M. R. Irwin. Genetics and cytology of saccharomyces, by C C. Lindegren. Genetic implications of mutations in *Salmonella typhimurium* by H. H. Plough. Dominance and overdominance, by J. F Crow Gene recombination and heterosis, by L. Powers Gene interaction in heterosis, by A. J. Mangelsdorf. Inbred lines for heterosis tests? by G. E. Dickerson. *Specific and general combining ability,* by C. R. Henderson. Rotational crossbreeding and heterosis, by L. M. Winters Genetic selection for specific combining ability by E. L. Pinnell and others. Monoploids in maize, by S. S Chase. Early testing and recurrent selection, by G F Sprague, *Heterosis in* a new population, by E. J. Wellhausen Recurrent selection and overdominance, by F H. Hull. Hybrid vigor in *Drosophila,* by J. W Gowen. Estimation of average dominance of genes, by R. E. Comstock and H. F Robinson. Bibliography Index.

Note: Original papers first presented in June, 1950 at Iowa State College are collected in this volume. The speakers and audience were drawn largely from scientists engaged in research on genetics, plant breeding, etc., and the papers are addressed to graduate scientists with similar interests. Bibliographical references for all the papers are collected in single bibliography

LERNER, I. MICHAEL

Population genetics and animal improvement as illustrated by the inheritance of egg production. New York. Cambridge University Press, 1950 342 p. illus. 22 cm. $5.50 593

Contents: Introduction. Historical: The genetic improvement in egg production. Early selection experiments. The partitioning of egg production records. The polygenic approach. The production index and its components. The University of California flock. The fundamental postulates of applied population genetics. Genetic relationship. Heritability The principles of selection. Expected genetic gains. Mating systems. The bases of selection. Interrelations between traits. Selection indexes. Miscellaneous: Disease resistance. The family structure of flocks under selection. The maintenance of unculled populations. Short-cuts in measurement. Special mating techniques. The outlook. Glossary of symbols and definitions. Bibliography and author index. Subject index.

Note: This is an important treatise in the field of applied population genetics based largely upon experimental work in poultry at the University of California. As the heart of the subject is of statistical nature, the reader or student of the book will need collegiate knowledge of genetics, including working facility in biometry and simple variance analysis, in order fully to follow the presentation. However the work is not entirely mathematical, and many parts of it will be intelligible to biologists and breeders without special training in mathematical genetics. The book is especially intended for research workers, teachers, and advanced students of genetics in relation to breeding.

NATIONAL RESEARCH COUNCIL. COMMITTEE ON COMMON PROBLEMS OF GENETICS PALEONTOLOGY, AND SYSTEMATICS

Genetics, paleontology and evolution. Edited by Glenn L. Jepson, Ernst Mayr and George Gaylord Simpson. Princeton, N J Princeton University Press, 1949 474 p. 24 cm. $6.00. 594

Contents: I, *Geological time: Time in earth history* by *Adolph Knopf.* II, *Viewpoints on evolution: Gene and character* by Curt Stern. Gene homologies and the mutants of *Drosophila hydei*, by W P Spencer. The evidence afforded by fossil vertebrates on the nature of evolution, by D. M. S. Watson. Comparative anatomy and the evolution of vertebrates, by D. D. Davis. Some aspects of plant morphology and evolution, by Theodor Just. III, Evolutionary trends: Time series and trends in animal evolution, by A. S. Romer. On the evolution of the Dipnoi, by T. S. Westoll. Evolutionary rates and trends in rhinoceroses, by H. E. Wood, II. Evolutionary trends in the angiosperms, by R. W. Chaney IV Evolutionary rates: Rates of evolution in animals, by G. G. Simpson. Rates of evolution in plants, by G. L. Stebbins, Jr. Rates of evolution in taeniodonts, by Bryan Patterson. Speciation: Speciation and systematics, by Ernst Mayr. The significance of ecological isolation, by David Lack. Early stages in allopatric speciation, by E. B. Ford. Patterns of evolution in the genus *Rana*, by J A. Moore. Increased variability in populations following natural hybridization, by William Hovanitz. Evidence for the genetic submergence of *Pinus remorata*, by H. L. Mason. VI, Adaptation Adaptation and selection, by Sewall Wright. Progressive adaptations as seen in the fossil record, by E. H. Colbert. VII, Human evolution Human evolution, past and future, by J. B. S. Haldane. VIII, Summation: Reintegration of the Symposium on Genetics, Paleontology and Evolution, by H. J. Muller. Glossary Index.

Note: This work represents planned effort to synthesize thought from the fields of genetics and paleontology that has bearing on evolution and to resolve certain differences of terminology. The style of the papers is technical and the volume is intended chiefly for graduate scientists working in the three fields named in the title.

SINNOTT EDMUND WARE, AND OTHERS

Principles of genetics. Fourth edition. By Edmund W Sinnott, L. C. Dunn and Th. Dobzhansky New York McGraw Hill Book Company Inc., 1950 505 p illus. 24 cm. (McGraw Hill publications in the botanical sciences, Edmund W Sinnott, consulting editor) $6.00. 595

Contents: Genetics, the science of heredity and variation. Mendel's principle of segregation. Mendel's principle of independent assortment. Alleles. The expression and interaction of genes. The multiple-factor hypothesis. The physical basis of inheritance. Genes and chromosomes. Linkage and linkage maps. Chromosome aberrations and cytological maps of chromosomes. Mutation. Genes in populations. Genetics of race formation. Genetics of species formation. The determination of sex. Genetics and development. The cytoplasm in heredity and development. Gene action and the nature of the gene. Appendix. Index.

Note: (1378) The first edition of this work was published in 1925, and it has held place more than time as standard text for college courses. Though introductory it provides fairly detailed presentation of genetic mechanisms and their effects on heredity and variation. The three chapters on "Genes in populations, "Genetics of race formation, and "Genetics of species formation are new in this edition. Other important changes include rewritten presentation of chromosome mechanisms. The translation into English made by the Royal Horticultural Society of London of Mendel' *Experiments in plant hybridization* is quoted in full in the appendix.

SRB ADRIAN M., AND RAY D OWEN

General genetics. Illustrated by Evan L. Gillespie. San Francisco California W H. Freeman and Company 1952 561 p. illus. (part col'd) 24 cm. (A series of biology texts editors George W Beadle and others) $5.50. 596

Contents (abridged) Inherent patterns in living things. Units of inheritance. Two or more pairs of alleles. The impact of environment. Sex chromosomes and sex linkage. The vehicles of inheritance. Life cycles. Linkage, crossing over and chromosome mapping. Chromosomal aberrations and position effects. Mutations. Extranuclear inheritance. Genetic aspects of sexuality and sex determination. Quantitative inheritance. Inbreeding and selection. Genes and cellular biochemistry Genes and development. Heredity in populations. Genetics and evolution. Breeding better plants. Genetic aspects of animal productivity Genetics and the welfare of the human individual. Index.

Note: An introductory textbook for use in college courses. It is written in clear explicit style and the verbal exposition is supplemented by excellent illustrations. The scientific aspects of the subject are well presented. The authors have included much information on the applications of the knowledge of genetics to plant and animal breeding. An unusually wide selection of problems is included and the lists of references include short annotations.

BIOLOGICAL PHYSICS

FINK, ROBERT MORGAN, editor

Biological studies with polonium, radium, and plutonium. New York McGraw-Hill Book Company Inc., 1950 411 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division VI —Volume 3) $5.50 597

Contents: Part I, Distribution and excretion of polonium: Introduction, by H. E. Silberstein. General methods used in polonium distribution and excretion experiments, by A. T. Gorham and others. Polonium distribution and excretion experiments with animals, by H. E. Silberstein and others. Studies of polonium metabolism in human subjects, by H. E. Silberstein and others. Part II, Distribution and excretion of radium. Historical background, by H. E. Silberstein. General methods used in radium distribution and excretion experiments, by H. E. Silberstein. Radium distribution and excretion studies with rats, by H. E. Silberstein. Part III, Toxicity of polonium, plutonium, and radium in rats: Pilot studies on the intravenous lethal dosage of polonium, plutonium, and radium in rats, by G. A. Boyd and others. Simultaneous studies on the intravenous lethal dosage of polonium, plutonium, and radium in rats, by G. A. Boyd and others. Appendix. Index.

Note. The papers in this volume are summarized reports of experimental research carried out by the Biological Chemistry Section of the Manhattan Project at the University of Rochester. Experimental methods and procedures are described specifically. Results are presented in tables and graphs and are discussed in the text. Some references to related literature are included.

KAMEN MARTIN DAVID

Radioactive tracers in biology an introduction to tracer methodology Second edition revised and enlarged. New York Academic Press Inc. 1951 429 p illus. 24 cm. (Organic and biological chemistry a series of monographs edited by Louis F Fieser and Mary Fieser) $7 50. 598

Contents. Atomic nuclei, radioactivity and the production of radioactive isotopes. Radiation characteristics of tracer atoms. Procedures for radioactive assay Radiation hazards. Survey of tracer methodology—biochemical aspects—physiological and medical aspects. Radioactive hydrogen (tritium, H^3) Short-lived radioactive carbon (C^{11}) Long-lived radioactive carbon (C^{14}) Radioactive phosphorus (P^{32}) Radioactive sulfur (S^{35}) Alkali metal and alkaline earth tracers. Tracer isotopes of halogens Various radioactive isotopes of importance in biology Appendix: General bibliography Radioactivity units and standards. Some typical working rules for radiochemistry laboratory Radioactive nuclides of interest in biological tracer research. National Bureau of Standards radium E beta standards and their application to analysis of P^{32} and I^{131} Author index. Subject index.

Note: (507*) A well-documented work addressed primarily to graduate biologists who are engaged in biological research. In it the fundamental facts of radioactivity are presented; their applications to research problems in biology are evaluated; and the preparation, properties, and methods of using the more important radioactive isotopes are reviewed at length. The first edition appeared in 1947 Much material has been added in the present edition and parts of the first edition that have been carried over have been substantially revised. However the work remains an introductory survey rather than a comprehensive presentation of pertinent information. In addition to the bibliography of books included in the appendix, there are hundreds of footnote references to related literature.

NATIONAL RESEARCH COUNCIL. COMMITTEE ON NUCLEAR SCIENCE. SUBCOMMITTEE ON RADIOBIOLOGY

Symposium on radiobiology the basic aspects of radiation effects on living systems Oberlin College June 14–18 1950. Edited by James J Nickson. Editorial committee P Morrison and others. Sponsored by the National Research Council of the National Academy of Sciences. New York John Wiley & Sons Inc., 1952 465 p illus. 24 cm. $7 50 599

Contents: Radiation in living matter—the physical processes, by P Morrison. Secondary electrons—average energy loss per ionization, by U Fano. Beams of high-energy particles, by R. R. Wilson. Neutrons and their special effects—recoil effects, by A. K. Solomon. General statements about chemical reactions induced by ionizing radiation, by R. Livingston. Chemical reactions in the gas phase connected with ionization, by M. Wallenstein and others. On the primary processes in radiation chemistry and biology, by R. L. Platzman. Elementary chemical processes in radiobiological reactions, by M. Burton. Influence of details of electronic binding on penetration phenomena, and the penetration of energetic charged particles through liquid water, by R. L. Platzman. Some aspects of the biochemical effects of ionizing radiations, by W M. Dale. Ionizing radiations and cellular metabolism, by G. Hevesy. The effect of ionizing radiations on some systems of biological importance, by E. S. Guzman Barron. Some factors influencing cell radiosensitivity by acting at the level of the primary biochemical action, by R. Latarjet. On the localization of radiation effects in molecules of biological importance, by M. D. Kamen. Recent evidence on the mechanism of chromosome aberration production by ionizing radiations, by N. H. Giles, Jr. Physical and chemical factors modifying the sensitivity of cells to high-energy and ultraviolet radiation, by A. Hollaender. Gene mutations caused by radiation, by H. J. Muller. Speculations on cellular actions of radiations, by R. E. Zirkle. The dependence of some biological effects of radiation on the rate of energy loss, by C. A. Tobias. The influence of quantity and quality of radiation on the biologic effect, by T. C. Evans. Some physiological factors related to the effects of radiation in mammals, by H. B. Jones. Mammalian radiation genetics, by W L. Russell. Analysis of mammalian radiation injury and lethality by A. M. Brues and G. A. Sacher.

Note: A collection of original papers which are accompanied by literature references and also transcripts from the discussions at the meeting mentioned in the title. The object of the symposium and of the volume was to present the current state of knowledge in radiobiology and to indicate hypotheses that require further research. The papers are addressed to advanced research workers in physics, chemistry and biology who are concerned with radioactive aspects and also to other graduate scientists interested only in keeping informed about progress in the field.

RASHEVSKY, NICOLAS

Mathematical biology of social behavior Chicago The University of Chicago Press, 1951 256 p illus. 25 cm. (The University of Chicago Committee on Publications in Biology and Medicine, Emmet B Bay and others) $5 00 600

Contents: Part I, Brain mechanism and behavior: The central nervous system. Conflicting stimuli. Applications of the foregoing to psychometric methods. Learning. Satisfaction and hedonistic behavior Part II, Social hierarchies: Peck-order. Distribution of wealth. A general theory of social distributions. Distribution of conservative quantities, due to chance. Formation of social classes. Part III, Imitative behavior Behavior of a social group, in which individuals imitate one another. A different approach to the foregoing problem. Some possible generalizations and approximations. Part IV Motivational behavior: Altruistic and egoistic societies. Another case of altruistic and egoistic societies. Other types of motivational interactions. Possible relation between imitative and motivational behavior. Some examples based on motivational behavior Part Learned behavior Some aspects of learning of social behavior The learning curve of a social group. Acceptance on faith versus rational thinking. Interaction of imitation and learning. Freedom. Part VI, Miscellaneous problems: Heredity effects in social changes. Some general considerations on social dynamics. A simplified mathematical model of socioeconomic dynamics. General conclusions. Index.

Note. (508*) The author in this work develops further the postulates presented in his *Mathematical biophysics*, 1948, rev. ed., and *Mathematical theory of human relations*, 1948. Part contains a brief outline of the mathematical biophysics of the central nervous system, especially for the benefit of readers unfamiliar with the subject. In Part II is developed a mathematical approach to the problem of social hierarchies. The developments of Parts III, IV are based directly on the mathematical biophysics outlined in Part I, the behavior of an individual in a social group and the behavior of the group as a whole being interpreted in terms of neurobiophysical mechanisms, and the growth of cultures being interpreted in terms of phenomena which take place in the nervous system of the individual. This leads to suggestions as to how biological measurements, made on large groups of individuals, may lead to the prediction of some social phenomena. The developments are presented largely in mathematical formulas and equations. Bibliographical references are given at the ends of the chapters.

SCHWEITZER, GEORGE KEENE AND IRA B WHITNEY

Radioactive tracer techniques. New York D Van Nostrand Company Inc. 1949 241 p illus. 22 cm. $3.50 601

Contents (abridged) Working in a radiolaboratory Basic experiments. The Lauritsen electroscope. The Geiger-Mueller counter Characteristics of beta particles. Measurement of radioactive liquids. Determination of low energy beta particles. The separation of radioelements. The chemical behavior of micro-quantities. Chemical experiments: Solubility determinations. Exchange reactions. Quantitative analysis with radioindicator Analyses by isotopic dilution. Transference number Distribution ratios. The chemical effects of radiation. Physical experiments: Half-thickness of gamma rays. Long half-life measurements. Short half-life measurements. Friction studies. The concentration of radioisotopes by recoil. Separation of nuclear isomers by recoil. Biological experiments: Plant radioautographs. Excretion and deposition studies. Deposition of iodine in the

thyroid. Body fluid volume and absorption. Special preparations. Appendices. Index.

Note: A laboratory manual for use in introductory laboratory courses offered to advanced students of biology chemistry and other fields where radioactive isotopes are used in research. The fundamentals are presented in the first four chapters, and the next four chapters describe 28 different experiments planned so that they require only the most readily available radioactive materials. The appendices contain useful general information for radio laboratories, including a list of supplies of apparatus, etc. Bibliographical references appear at the ends of the chapters and at the ends of the experiment descriptions.

SIRI WILLIAM E AND OTHERS

Isotopic tracers and nuclear radiations, with applications to biology and medicine. By William E Siri. With contributions by Ellsworth C. Dougherty [and others] New York McGraw Hill Book Company Inc., 1949 653 p Illus. 23 cm. $15.00 602

Contents (abridged) Part I, Isotopes and nuclear radiations: Properties of nuclei. Gamma rays. Beta particles. Protons, deuterons, and alpha particles. Neutrons. Part II, Methods and instruments: Indirect methods for measuring deuterium, by J. R. Robertson. Mass spectrographs. Geiger Muller counters. Proportional counters. Ionization chambers. Standardization of radioactive samples, by C. A. Tobias. The radioautograph, by P P Weymouth. Internal dosimetry. The preparation of thin films of radioactive elements by electrolysis, by R. W Dunn. The treatment of biological tissues for recovery of radioactive elements, by R. W Dunn. The safe handling of radioactive materials. The electrostatic generator. The cyclotron. The betatron. The synchrotron. Part III, Biological and medical applications of isotopes: General critique of the biological application of isotopes, by E. C. Dougherty. Elements constituting major mineral metabolites, by E. C. Dougherty. Trace elements known to be essential in animals and plants, by E. C. Dougherty. Elements not known to be essential to life, by E. C. Dougherty. Isotopes in therapy and diagnosis, by E. C. Dougherty. Bibliography. Index.

Note: A technical reference book of comprehensive scope intended for the scientist using isotopic tracers and nuclear radiations in medical and biological research. Much of the data is presented in tables with accompanying text and figures. Underlying physical principles, practical methods of applications, with descriptions of processes and instruments, are covered compactly. The 90-page bibliography was compiled by E. C. Dougherty. The Seaborg and Perlman table of isotopes covers pages 187–210 at the end of Part

UBER, FRED MUNEY, editor

Biophysical research methods. New York Interscience Publishers Inc., 1950. 667 p. 24 cm. $9 50 603

Contents: Avoid fruitless experiments, by F M. Uber. Osmotic pressure measurements, by D. R. Briggs. Centrifugation, by E. G. Pickels. Viscosity measurements, by L. V Heilbrunn. Temperature determinations, by L. R. Presty and J. D. Hardy. Calorimetric measurements, by Max Kleiber. Quick-freezing and the freezing-drying process, by E. W Flosdorf. Dielectric measurements, by H. J. Curtis. Electrophoresis, by D. R. Briggs. Ultrasonic vibrations, by E. G. Gregg, Jr. When to use special microscopes, by O. W Richards. Electron microscopy by James Hillier. Action spectra, and absorption spectra, by H. F Blum. X ray and X irradiation, by J W Cowan. Electrons, neutrons, and alpha particles, by L. G. Gray. Stable isotopes as tracers, by F M. Uber. Radioactive tracers, by A. F Voigt. Subject index

Note A full-scale presentation of physical laboratory methods which are applicable to research in biology medicine, and agriculture. The authors of the various chapters have assumed that their readers will be familiar with standard laboratory methods and instruments. These papers are addressed to such readers as graduate students of the sciences, laboratory assistants, and experienced research workers who need guidance in the use of recently developed methods. Literature references accompany all of the chapters, and some of the chapters are supplemented by lists of sources of supply

BOTANY

GENERAL

Anderson Edgar

Plants man and life. Boston Little Brown and Company 1952 245 p illus. 20 cm. $4 00 604

Contents Man and his transported landscapes. The history of weeds—a detective story The greater paradox. The clue from the root tips. The clue from diversity or science and the bureaucrats. How to measure an avocado. Budgets vs. scholarship. Uneconomic botany Dump heaps and the origin of agriculture. A roster of our most important crop plants and their probable origins. Sunflowers—the one native American crop. Adventures in chaos. Suggested reading. Index.

Note A well-written popular book about botany and the work of professional botanists. There is some emphasis on matters which would classify as economic botany however one of the outstanding chapters describes statistical method of studying plant variations. Any mature reader interested in plants will find the book to be rewarding reading. Furthermore, it can be studied as an example of the interpretation of science for lay readers. The author is Assistant Director of the Missouri Botanical Garden.

Clements Frederic Edward

Dynamics of vegetation selections from the writings of Frederic E Clements Compiled and edited by B W Allred and Edith S. Clements. New York The H. W Wilson Company 1949 296 p illus. 23 cm. $3 75 605

Contents Plant succession and human problems. Competition in plant societies. Plant indicators Nature and structure of the climax The relict method in dynamic ecology Climaxes, succession and conservation. Climatic cycles and human populations in the Great Plains. Ecology in the public service. Glossary Index.

Note A compilation of previously published writings by botanist who made life-long study of ecology first at the universities of Nebraska and Minnesota, later and until his death at the Carnegie Institution of Washington. The illustrations are from photographs and are reproduced on 70 plates, two to plate.

Finan John J

Maize in the great herbals. With a foreword by Edgar Anderson. Waltham Mass. The Chronica Botanica Company 1950 191 p illus. 26 cm. $3.00 606

Contents (abridged) Maize in post-conquest Hispanic America Descriptions of maize by Spanish chroniclers. Use of maize by the natives of the New World. Maize in the great herbals of Europe Discussions of maize in the herbals—The German herbalists—Herbalists in the Low Countries—The Italian herbalists—The Spanish herbalists—The herbalists in Switzerland—The English herbalists. Appendices The woodcuts of the great herbals. Passages from original texts quoted and translated. Bibliography

Note A scholarly study of the history of the introduction of maize into Europe. It is based on detailed study of descriptions and illustrations in herbals. The author shows that two general types of maize are represented in these works, one of which may have been brought to Europe from Asia, the other of which was undoubtedly brought to Europe from America by Columbus and other Hispanic explorers. The book is thoroughly documented, also it contains reproductions of about 25 illustrations of the maize plant that originally appeared in the herbals.

Gray Asa

Gray's manual of botany Eighth (centennial) edition—illustrated. A handbook of the flowering plants and ferns of the central and northeastern United States and adjacent Canada. Largely rewritten and expanded by Merritt Lyndon Fernald with assistance of specialists in some groups. New York American Book Company 1950 1632 p. illus. 23 cm. $9 50 607

Contents Preface. Synopsis of the orders and families of vascular plants. Artificial analytical key to the families. Explanations of abbreviated names of authors. Other abbreviations and signs. Summary of the families. Descriptive flora. Glossary Index to Latin names of families, genera and species Index to English, French-Canadian and colloquial names.

Note. Forty-two years have passed since the publication of the seventh edition of this classical reference book. Since the period was one of the most active in botanical research on the part of both professional botanists and amateurs, the changes in this edition are many In the seventh edition 4,[illegible] species, varieties, and some forms were described the comparative number for this edition is 8,000. The number of illustrations has been increased to 1,806. In addition, important changes have been made in grouping, nomenclature, and illustrations. The book remains the standard systematic description of the flora found in the regions named in the subtitle.

Johansen Donald Alexander

Plant embryology embryogeny of the Spermatophyta. Waltham Mass. The Chronica Botanica Company 1950 305 p. illus. 27 cm. (A new series of plant science books, edited by Frans Verdoorn. Volume XXIV) Paper $6 00 608

Contents Introduction. Cycadophyta. Ginkgophyta. Coniferophyta: Pinaceae. Araucariaceae. Sciadopityaceae. Taxodiaceae. Cupressaceae. Saxegothaeaceae. Podocarpaceae. Pherosphaeraceae. Cephalotaxaceae. Taxaceae. Ephedrophyta: Ephedraceae. Gnetaceae. Welwitschiaceae. Anthophyta General considerations. Types and variations. Special and comparative embryology Apomictic embryogeny Adventitious embryogeny Polyembryony Glossary Index to phyla, orders, and families. Index to genera and species. Recapitulatory tables.

Note. A systematic discussion and summary of knowledge in the field of the embryology of gymnospermous and angiospermous plants. It is limited to consideration of embryogenesis, embryotectonics, embryonomy and embryonomy with occasional reference to such topics as megagametogeny and fertilization. References to the literature in English, French, German, and Italian are found at the ends of the sections. The original manuscript was completed in 1944; additions were subsequently made to bring the literature up to the end of 1944.

Kelley Arthur Pierson

Mycotrophy in plants lectures on the biology of mycorrhizae and related structures. Waltham, Mass. The Chronica Botanica Company 1950 223 p illus. 23 cm. (A new series of plant science books edited by Frans Verdoorn. Volume XXII) $5.00 609

Contents The rise of mycotrophic study The occurrence of mycorrhizae. The fungal endophytes. Fossil mycorrhizae. Distribution of mycotrophic plants. Mycotrophic plants and their environ-

ment. Mycothalli and mycorrhizomes. Mycodomatia. Structure of mycorrhizas. Obligate symbiosis. Theories of mycotrophy. Mycotrophic phagocytosis. Bibliography. Subject index. Index of plant names.

Note: A survey of the current knowledge of mycotrophy. The author believes that the mycorrhizas represent type of fungus symbiosis and that they are essential to the existence of many host plants. However, he also presents the conflicting views held by other authorities. Although organized as lectures under the subheadings noted above, the book is essentially digest of the published literature down to 1947

LAWRENCE, GEORGE HILL MATHEWSON

Taxonomy of vascular plants. New York The Macmillan Company 1951. 823 p. illus. 22 cm $7 95 610

Contents: Part I, Principles and practices of plant taxonomy: Introduction. Taxonomy and its significance. History of classification. Principles of taxonomy. Phylogenetic considerations. Current systems of classification. The geography of vascular plants. Biosystematics and cytogenetics. Plant nomenclature. Plant identification. Field and herbarium techniques. Monographs and revisions. Floristics. Literature of taxonomic botany. Part II, Selected families of vascular plants: *Pteridophyta. Embryophyta Siphonogama—Gymnospermae—Angiospermae.* Appendixes: Suggested syllabus for elementary course. Illustrated glossary of botanical terms. Index.

Note: A basic textbook for college students who are majoring in systematic botany. Its organization and scope render it suitable also for use as reference book in personal and public libraries. The first part runs to page 311 and includes the theoretical and general material as well as useful guide to the professional literature. The second part runs from page 313 to 713 and consists of taxonomic descriptions with illustrations and literature references for considerable range of plant families. An extensive glossary with illustrations occupies pages 737 to 774. The author is Professor of Botany at the Bailey Hortorium of Cornell University

SASS JOHN EUGENE

Botanical microtechnique. Second edition. Ames The Iowa State College Press 1951. 228 p. illus. 23 cm. $3.50 611

Contents: Part I, General principles and methods: Introduction. Collecting and subdividing plant materials. Killing, fixing, and storing plant tissues. Dehydration for embedding. Infiltration and embedding in paraffin wax. Microtome sectioning of material in paraffin. Staining paraffin sections. The celloidin method. Sectioning unembedded tissues. The preparation of whole mounts and smears. Criteria of successful processing. Part II, Specific methods: Introduction. Vegetative organs of vascular plants. Thallophyta and Bryophyta. Reproductive structures of vascular plants. Microscope construction, use, and care. Photomicrography. Index.

Note. An introductory manual designed primarily for use in instruction rather than for reference. Nevertheless the descriptions of techniques are specific and few selected formulas are included. The author is Professor of Botany in Iowa State College.

TEXTBOOKS

FULLER, HARRY JAMES

The plant world a text in college botany Revised edition New York Henry Holt and Company 1951 769 p. illus. 22 cm. $5.25 612

Contents (abridged): Part 1 The structure, physiology and reproduction of flowering plants: The nature of plant science. Seed structure and germination. The gross structure and activities of seed plants. The microscopic structure of plants. The physiology of plant cells. The structure and physiology of roots. The structure of stems. The properties and uses of wood. The structure and economic importance of leaves. Metabolism. Growth and irritability. The structure and functions of flowers. Fruit development and structure. Part 2 The plant kingdom: The classification of plants: Algae—bacteria (Schizomycophyta)—Myxomycophyta (slime fungi)—Bryophyta—Psilopsida—Lycopsida—Sphenopsida—Pteropsida—Gymnospermae—Angiospermae. Part 3 The distribution of plants in time and space: Plant evolution. The relations of plants to their environments. Appendix. Glossary. Index.

Note: A clearly written and well-illustrated work which is intended for use in short introductory courses. About twice as much space is given to anatomy and physiology as to taxonomy. The first edition appeared in 1941. In this edition the descriptions of the various plant phyla have been somewhat enlarged. Also substantial number of illustrations have been added, and in the appendix there are new short discussions of the growing of plants in nutrient solutions and the production of seedless fruits by the treatment of flowers with hormones and other chemicals.

FULLER, HARRY JAMES, AND OSWALD TIPPO

College botany New York Henry Holt and Company 1951 993 p illus. 24 cm. $6 75 613

Contents (abridged): Part I, The nature of plants and plant study. Part II, The structure, physiology and reproduction of flowering plants: Seed structure and germination. The microscopic structure of plants, cells and tissues. The physiology of plant cells. Soils and the relations of roots to soils. The internal structure of stems. The properties and uses of wood—economic importance of stems. The structure and economic importance of leaves. Metabolism. Growth and irritability. The structure and functions of flowers. Fruit development and structure. Variation and heredity in plants—plant breeding. Part III, The plant kingdom: Plant names and classification. Thallophyta. Plant diseases. Bryophyta. Tracheophyta. Part IV, The distribution of plants in time and space. Part Plants and man. Glossary. Index.

Note: A textbook for use in full-length introductory courses in colleges. In it the authors have striven to meet the needs of both students who are studying the subject for cultural reasons and those who plan to pursue the subject further than an introductory course—hence the inclusion of material on such topics as the uses of wood as well as on such topics as plant physiology. There is fair number of illustrations. Lists of additional readings are included, and the 26 page glossary is useful feature.

HILL JOHN BENJAMIN AND OTHERS

Botany a textbook for colleges. By J Ben Hill the late Lee O Overholts and Henry W Popp Second edition. New York McGraw Hill Book Company Inc., 1950 710 p. illus. 24 cm. (McGraw Hill publications in the botanical sciences, Edmund W Sinnott, consulting editor) $6 00 614

Contents (abridged): Part I, Structure and physiology of seed plants: Coloration in plants. Plant cells. Leaves. Metabolism—food synthesis. Roots. Absorption of water and inorganic salts. Stems. Growth and movement. Flowers. Fruits, seeds and seedlings. Part II, The plant groups: Plant classification and nomenclature. Thallophyta. Bryophyta. Tracheophyta or vascular plants. Families of angiosperms. Glossary. Index.

Note (1420) An introductory textbook for full-length college courses. No single aspect of the subject is emphasized; instead, the student is given broad view of the field and, also, considerable detailed information. In this edition material has been added on selected developments that have occurred since 1936 including antibiotics, hormones, and the uses of radioisotopes in botanical research. Several chapters have been rewritten, and many of the 335 figures have been improved.

HYLANDER, CLARENCE JOHN AND ORAN B STANLEY

College botany a basic course in plant science. New York The Macmillan Company 1949 638 p. illus. 24 cm. $5.50 615

Contents (abridged): Part one, The plant organism. The plant cell. Leaves. Synthesis of food. Roots. Absorption of inorganic materials. Conduction of substances. Water loss from plants. Plant responses. Reproduction by vegetative propagation. Seeds and seed production. Part two, The plant world. The classification of plants. Schizophytes—the most primitive plants. Chlorophytes—the green algae. Mycophytes—plants without chlorophyll. Bryophytes—amphibians of the plant world. Spermatophytes—plants with seeds. Gymnosperms—cone-bearing plants and their relatives. Angiosperms. Plant communities and plant succession. Heredity as factor in plant evolution. Environment as factor in plant evolution. Plant life through the ages. Appendix. Check list of common and scientific names of plants described in the text. Index.

Note. A well-balanced introductory text. A little over one third of the space is used for discussion of classification and descriptions of main plant groups. The remainder is devoted to discussions of general aspects as indicated by the chapter titles. There are 433

illustrations, all of good quality. The second-named author is Associate Professor of Botany at Colgate University and the first-named was formerly Chairman of the Botany Department in the same university.

ROBBINS, WILFRED WILLIAM, AND T ELLIOT WEIER

Botany an introduction to plant science. New York John Wiley & Sons Inc. 1950 480 p. illus. 25 cm. $6.00 616

Contents. Introduction. The plant world. Classification and naming of plants. The plant body of seed plants. The plant cell. The stem. The roots. The leaf. The flower. The fruit, seed, and seedlings. Inheritance. The plant as a living mechanism. The groups of plants. The flowering plants. The algae. The fungi. The viruses. The bryophytes. The vascular plants. Evolution. Index.

Note. A college textbook which is shorter and more lavishly illustrated than some textbooks written at this level. It is suited to the needs of students whose main interest in the subject is cultural. Its simplicity also suits it to the needs of some lay readers who wish to study the subject without the benefit of an instructor. The authors are members of the faculty of the College of Agriculture of the University of California.

WILSON CARL L

Botany With line drawings by Hannah T Croasdale. New York The Dryden Press 1952 483 p illus 26 cm. $6.50 617

Contents. The science of botany. Plants, their nature and use. The plant plan and its modifications. The cell as the basis of plant life. The matter and mechanics of cells. Photosynthesis and the leaf. Respiration and digestion. The structure and growth of stems. Plants and water. The root and the soil. Natural cycles and plant life. Growth and movement. Vegetative reproduction. The flower and seed production. The fruit, the seed, and seed germination. Plants in their environment. How plants inherit. The mechanisms of evolution. The names and kinds of plants. The algae. The bacteria. Bacteria and man. The fungi. The liverworts and the mosses. The ferns. Early land plants and their evolution. The club mosses and the horsetails. The gymnosperms. The angiosperms. Glossary. Index.

Note. An introductory textbook written at the college level and designed primarily for students who do not plan to major in botany. A general but fairly comprehensive view of the field is given with the emphasis on basic knowledge and functions rather than classification. The illustrations are of excellent quality and are numerous. The printing is in red and black. The author is Professor of Botany in Dartmouth College.

BOTANY OF VARIOUS REGIONS

ABRAMS LEROY

Illustrated flora of the Pacific states Washington Oregon and California. In four volumes Volume III Geraniaceae to Scrophulariaceae, geraniums to figworts. Stanford Calif Stanford University Press 1951 866 p. illus 28 cm. $17 50 618

Contents (abridged). Choripetalae (continued). Sympetalae. Appendix. Index of genera and families.

Note. (1434) The third volume published of a monumental reference book designed for the use of professional botanists and others who are interested in the native plants of the Pacific states of the United States of America. It is intended to include descriptions of every species of fern, flower, tree, and shrub known to grow wild in these states. The organization is systematic and the plant descriptions are couched in the scientific terminology of botany. However the author has given not only the scientific names but also English and Indian and Spanish-Californian names. The illustrations are clearly reproduced in black-and-white line drawings.

BILLINGTON CECIL

Ferns of Michigan Bloomfield Hills Mich. Cranbrook Institute of Science 1952 240 p illus. 24 cm. (Cranbrook Institute of Science. Bulletin no 32) $5 00 619

Contents: Introduction. Pictorial glossary. Systematic check-list. The ferns of Michigan. Hybrids. Michigan's fern flora as compared with that of North America. Glossary. Fern literature. Index.

Note. Essentially a systematic description of ninety species of ferns indigenous to the state of Michigan. Particular attention is given to identification and distribution and each description is accompanied by line drawings and distribution maps. The book is written primarily for amateur botanists and gardeners, and includes material on the collection and cultivation of ferns in the home garden. However, the detailed tabulations of species names and distribution are also of value to the professional botanist.

BILLINGTON CECIL

Shrubs of Michigan. Second edition. Bloomfield Hills, Mich. Cranbrook Institute of Science, 1949 329 p illus. 24 cm. (Cranbrook Institute of Science. Bulletin no. 20) $4.50. 620

Contents: Introduction. Ecology. Distribution. Rare or infrequent species. Plant names and their authors. Plant names and their origin. The form and structure of shrubs. Keys to the genera of Michigan shrubs. Shrubs of Michigan. Glossary. Bibliography. Index.

Note. Although intended primarily for amateur use and limited to the shrubs that have been found in the state of Michigan, this work is of more than local interest. Many of the shrubs described are found also in many other states of the United States and in Canada. Drawings of the leaf, fruit and (sometimes) the flower are included for most of the plants described. The descriptions include the botanical name, the local popular name, information on the growth of flowering and of ripening of the fruit in addition to descriptions in botanical terminology of the plant itself. The first edition was published in 1943. A number of new descriptions have been added in this edition and many descriptions carried over from the previous edition have been revised or augmented.

CLOKEY IRA WADDELL

Flora of the Charleston Mountains, Clark county Nevada. Berkeley and Los Angeles University of California Press 1951 274 p. illus. 27 cm. (University of California publications in botany editors H. L. Mason and others Vol. 24) $3 75 621

Contents: Introduction. History of botanical exploration. The Charleston Mountains. Vegetational and floristic considerations. Vascular plants of the Charleston Mountains: Pteridophyta, Spermatophyta. Index.

Note. A detailed professional study of the flora of an isolated mountain range in the northern part of the Mojave Desert. In the middle and higher elevations the region contains a flora which has been botanically isolated for many thousands of years. The author made field studies and extensive collections in the years 1935–1942. He was aware of the significance of the ecological aspects but most of the present book is devoted to systematic descriptions of the collected plants. A map of the region studied is included.

GENTRY HOWARD SCOTT

Land plants collected by the Velero III, Allan Hancock Pacific expeditions 1937–1941 Los Angeles California The University of Southern California, 1949 245 p illus. 24 cm. (Allan Hancock Pacific expeditions. Vol. 13 number 2) $3.25 622

Contents. General introduction. Channel islands. Cedros and San Benito islands. Revilla Gigedo islands. Tres Marias islands. California Gulf region. Jalisco and Oaxaca. Costa Rica. Plates. Index.

Note. The Allan Hancock Pacific expeditions 1933–1941 were primarily concerned with marine biology. Nevertheless, some incidental land plant collections were made and are described in this volume. The book contains both generalized descriptions of the flora of particular islands and other land areas and short descriptions of species. It has both ecological and taxonomic interest.

HOWELL JOHN THOMAS

Marin flora. Manual of the flowering plants and ferns of Marin county California. Photo-

graphs by Charles T Townsend. Berkeley Calif University of California Press, 1949 322 p illus. 22 cm. $4.50 623

Contents (abridged) Introduction: Location and physiographic features. Geologic structure and rocks. Soils. Climate and weather. Life zones and plant associations. Effect of fire. Numerical analysis of the flora. Geographic distribution of plants in Marin county. Marin county flora and flora of Coast Ranges. Endemic plants. Naturalized plants. Early botanical explorers. Later botanical explorers. Key to the groups and families. Enumeration of the flora. Principal references. Glossary of technical terms. Index: scientific and common names in the enumeration of the flora. Map of Marin county California. Place names on map of Marin county. Mt. Tamalpais and vicinity. Place names on map of Mount Tamalpais and vicinity

Note: Marin county is the county occupying the peninsula immediately to the north of the Golden Gate. It covers 529 square miles, yet it is estimated its flora represents approximately 21% of the flora of the entire state of California. This volume is complete guide to the flora of the county published for amateur and professional botanist alike. Following the introductory pages, the plants of the county are named in systematic order and after the name are recorded the localities in Marin county where found, with occasional other descriptive and taxonomic notes. Keys are provided for the identification of families, tribes, genera, and species, with an extensive glossary for those unfamiliar with the language of botany. The book is based upon field work by the author in Marin county over ten-year period. Totals of 1313 species and 144 named varieties and forms are recognized. The 15 photographic plates show landscapes and plants, especially trees, of the county.

JOHNSTON, IVAN MURRAY

The botany of San Jose Island (Gulf of Panama) With seventeen plates and two text figures. Jamaica Plain Mass. The Arnold Arboretum of Harvard University 1949 306 p. illus. 25 cm. (Sargentia. A continuation of the Contributions from the Arnold Arboretum of Harvard University No. 8) Paper $6.00 624

Contents: Physical features and history of the island. General characteristics of the flora. Types of natural vegetation. Grassland. Thicket. North forest. South forest. Marine forest. Deciduous forest and other vegetation on thin soil. Streamside forest. Coastal-swamp forest. Beach vegetation. Growth on clearings. Immigrant weeds. Economic plants. Natural history of forest vegetation. The forest floor. Strata in the forest canopy. Tree trunks. Vines and their role in the forest. Epiphytes. Ant plants. Display of flowers. Characteristics of tropical foliage. Fall and renewal of leaves. Fruits and seeds in beach drift. Identification. Key to the trees and shrubs. Key to the vines. Key to the orchids. Catalogue of flowering plants. New botanical names. Index.

Note A treatise that provides detailed descriptions and discussion of the vegetation and flora of San Jose, an island 3 miles long about 50 miles off the Pacific end of the Panama Canal. The study was initiated in 1944 because of the location on the island of tropical testing ground for the Chemical Warfare Service of the United States Army. The data are presented with minimum of botanical phraseology so that Army personnel working in the forests of the island and other visitors from the United States may find the report as intelligible as the professional botanist. Technical matter interesting only to botanists is included, but appears in segregated paragraphs, so that the general reader may skip it. The catalogue of flowering plants, which comprises about three-fourths of the text, contains descriptions of 631 species known to grow without cultivation on the island. Included in the account of each species are the author's observations regarding its behavior and distribution on the island, together with some descriptive details useful in identifying the plant.

JONES GEORGE NEVILLE

Flora of Illinois. Second edition. Notre Dame The University of Notre Dame Press, 1950 368 p. 24 cm. (The American midland naturalist. Monograph no 5 Edited by John D Mizelle) $4.25 625

Contents: Flora and vegetation. Description of the area. Vegetational divisions. Systematic treatment. Key to the sections. Key to the families. Keys to the genera and species. Bibliography. Taxonomic monographs and revisions. Author index. Glossary. Index of plant names.

Note: A manual based on material in the herbarium of the University of Illinois and in other herbaria in the state. It covers all native and naturalized species of vascular plants recorded by the writer as growing spontaneously in Illinois. Approximately twenty-two hundred species are described. The descriptions are in technical terminology and the arrangement is conventional. Numerous keys are included to facilitate identification. The bibliography includes the taxonomic monographs that are useful in the study of Illinois plants. Since the flora of Illinois is similar to the flora of considerable adjacent area, the work is of some interest to botanists making studies outside of that state.

KEARNEY, THOMAS HENRY, AND OTHERS

Arizona flora. By Thomas H. Kearney Robert H. Peebles, and collaborators. Berkeley and Los Angeles University of California Press 1951 1032 p illus. (part col d) 24 cm. $7.50 626

Contents: Introduction. Botanical exploration. Part one, The physical background and vegetation of Arizona. Topography. Geology and soils. Climate. Vegetation in relation to physical conditions. Life forms. Part two, The flora of Arizona: Plan of the book. Geographic elements of the flora. Taxonomic composition of the flora. Key to the phyla. Pteridophyta—ferns and fern allies. Spermatophyta—flowering plants. Plates. Literature consulted. Glossary. Index.

Note: A work designed as reference book to be used in identifying "the approximately 3,370 species of flowering plants, ferns and fern allies known to be growing (or to have grown) without cultivation in the state of Arizona." A diverse flora ranging from arctic-alpine to subtropical is covered, reflecting the great ranges of altitude, rainfall, and soils found within the state of Arizona. Keys to families, genera and species are special feature of the book. Geographical range is indicated for not only the state but also adjoining states. The illustrations consist of the frontispiece in color and 45 black-and-white reproductions of photographs.

MCMINN HOWARD EARNEST

An illustrated manual of California shrubs. Berkeley Calif University of California Press 1951 663 p. illus. 24 cm. $6.50 627

Contents: Introduction. Key to the genera. Key to the families. Descriptive account of the shrubs: 1, Gymnosperms, or cone-bearing shrubs and their allies. 2 Angiosperms, or true-flowering shrubs. Addenda. Glossary of botanical terms. Index to names of species. Nomenclatorial changes. Bibliography. Index.

Note A systematic and descriptive account of the shrubs of California, written on the basis of twenty years of study of them in their native habitats. About 800 species are included, and the number of separate illustrations runs to 775. The work is of more than local interest, for most of the plants described are found in other regions also. The above is the second printing of the title, which was copyright by the author in 1939 and first published in that year by J. W Stacey Inc.

SHREVE, FORREST

Vegetation of the Sonoran desert. Washington, D C. Carnegie Institution of Washington 1951 192 p. illus. (part col d) 25 cm. (Carnegie Institution of Washington. Publication 591 Vegetation and flora of the Sonoran desert, by Forrest Shreve and Ira L. Wiggins. Vol. 1) Paper $3.25 628

Contents: Introduction. Physical features: Geography. Drainage systems. Mountain ranges. Climate. Soils. Perennial vegetation: General characteristics of deserts. The North American desert and its parts. Vegetational features of the Sonoran desert. Vegetational subdivisions of the Sonoran desert. Ephemeral herbaceous vegetation. Winter ephemerals. Summer ephemerals. Ecological features of characteristic species. Literature. Plates. Index.

Note: A monograph written on the basis of 40 years of study and field investigation of the subject by the late author. The final chapter describes the distribution, habitats, and ecological characteristics of 24 of the commonest plants of the Sonoran desert; 24 full-page distribution maps illustrate this chapter.

[illegible], all of good quality. The second-named author is Associate Professor of Botany at Cornell University and the first-named was formerly Chairman of the Botany Department in the same university.

Robbins Wilfred William and T Elliot Weier

Botany an introduction to plant science. New York John Wiley & Sons, Inc., 1950. 480 p. illus. 25 cm. $6.00. 616

Contents: Introduction. The plant world. Classification and naming of plants. The plant body of seed plants. The plant cell. The stem. The roots. The leaf. The flower. The fruit, seed, and seedlings. Inheritance. The plant as a living mechanism. The groups of plants. The flowering plants. The algae. The fungi. The [illegible]. The bryophytes. The vascular plants. Evolution. Index.

Note: A college textbook which is simpler and more briefly [illegible] than most textbooks written at this level. It is suited to the needs of students whose main interest in the subject is cultural. Its simplicity also suits it to the needs of some lay readers who wish to study the subject without the benefit of an instructor. The authors are members of the faculty of the College of Agriculture of the University of California.

Wilson Carl L.

Botany With line drawings by Hannah T Croasdale. New York. The Dryden Press, 1952 483 p illus. 26 cm. $6.50. 617

Contents. The science of botany. Plants, their nature and use. The plant plan and its modifications. The cell as the basis of plant life. The matter and mechanics of cells. Photosynthesis and the leaf. Respiration and digestion. The structure and growth of stems. Plants and water. The root and the soil. Mineral uptake and plant life. Growth and movement. Vegetative reproduction. The flower and seed production. The fruit, the seed, and seed germination. Plants in their environment. How plants inherit. The mechanisms of evolution. The names and kinds of plants. The algae. The bacteria. Bacteria and man. The fungi. The liverworts and the mosses. The ferns. Early seed plants and their evolution. The club mosses and the horsetails. The gymnosperms. The angiosperms. Glossary. Index.

Note: An introductory textbook written at the college level and designed primarily for students who do not plan to major in botany. A general but fairly comprehensive view of the field is given with the emphasis on basic knowledge and functions rather than classification. The illustrations are of excellent quality and are numerous. The printing is in red and black. The author is Professor of Botany in Dartmouth College.

BOTANY OF VARIOUS REGIONS

Abrams Leroy

Illustrated flora of the Pacific states Washington Oregon and California. In four volumes. Volume III Geraniaceae to Scrophulariaceae, geraniums to figworts. Stanford, Calif Stanford University Press, 1951 866 p. illus 25 cm. $1 .50 618

Contents: [illegible] Geraniaceae [illegible] Scrophulariaceae. Appendix. Index of common and [illegible].

Note: ([illegible] The third volume published of [illegible] monumental reference book designed for the use of professional botanists and others who are interested in the native plants of the Pacific states of the United States of America. It is intended to include descriptions of every species of [illegible] flower, tree, and shrub known to grow wild in these states. The organization is systematic and the plant descriptions are couched in the scientific terminology of botany. However, the author has given not only the scientific names but also English and Indian and Spanish-Californian names. The illustrations are clearly reproduced in black-and-white line drawings.

Billington Cecil

Ferns of Michigan. Bloomfield Hills, Mich. Cranbrook Institute of Science, 1952 240 p. illus. 24 cm. (Cranbrook Institute of Science. Bulletin no. 32) $5.00 619

Contents: Introduction. Pictorial glossary. Systematic check-list. The ferns of Michigan. Hybrids. Michigan's fern flora as compared with that of North America. Glossary. Fern literature. Index.

Note: Essentially [illegible] systematic description of various species of ferns indigenous to the state of Michigan. Particular attention is given to identification and distribution and each description is accompanied by line drawings and distribution maps. The book is written primarily for amateur botanists and gardeners, and includes material on the collection and cultivation of ferns in the home garden. However, the detailed tabulations of species names and distribution are also of value to the professional botanist.

Billington Cecil

Shrubs of Michigan. Second edition. Bloomfield Hills, Mich. Cranbrook Institute of Science, 1949 329 p. illus. 24 cm. (Cranbrook Institute of Science. Bulletin no. 20) $4.50. 620

Contents: Introduction. Ecology. Distribution. Rare or infrequent species. Plant names and their authors. Plant names and their origin. The form and structure of shrubs. Keys to the genera of Michigan shrubs. Shrubs of Michigan. Glossary. Bibliography. Index.

Note: Although intended primarily for amateur use and limited to the shrubs that have been found in the state of Michigan, this work is of more than local interest. Many of the shrubs described are found also in many other states of the United States and in Canada. Drawings of the [illegible], fruit and (sometimes) the flower are included for most of the plants described. The descriptions include the botanical names, the local popular names, information on the growth of flowering and of ripening of the fruit in addition to descriptions in botanical terminology of the plant itself. The first edition was published in 1943. A number of new descriptions have been added in this edition and many descriptions carried over from the previous edition have been revised or augmented.

Clokey Ira Waddell

Flora of the Charleston Mountains, Clark county Nevada. Berkeley and Los Angeles University of California Press, 1951. 274 p. illus. 27 cm. (University of California publications in botany editors, H. L. Mason and others. Vol. 24) $3.75 621

Contents: Introduction. History of botanical exploration. The Charleston Mountains. Vegetational and [illegible] considerations. Vascular plants of the Charleston Mountains: Pteridophyta. Spermatophyta. Index.

Note: A detailed professional study of the flora of an isolated mountain range in the northern part of the Mojave Desert. In the [illegible] and higher elevations the region contains [illegible] flora which has been botanically isolated for many thousands of years. The author made field studies and numerous collections in the years 1935–1947. He was aware of the significance of the ecological aspects but most of the present book is devoted to systematic descriptions of the collected plants. A map of the region studied is included.

Gentry Howard Scott

Land plants collected by the Velero III, Allan Hancock Pacific expeditions 1937–1941. Los Angeles, California The University of Southern California, 1949 245 p. illus. 24 cm. (Allan Hancock Pacific expeditions. Vol 13 number 2) $3.25 622

Contents: General introduction. Channel Islands. Cedros and San Benito islands. Revilla Gigedo islands. Tres Marias islands. Gulf of California region. Islands and Ocean. Costa Rica. Panama. Index.

Note: The Allan Hancock Pacific expeditions 1937–1941 were primarily concerned with marine biology. Nevertheless, some important land plant collections were made and are described in this volume. The book contains both generalized descriptions of the [illegible] of particular islands and other land areas and short descriptions of species. It has both scientific and taxonomic interest.

Howell, John Thomas

Marin flora. Manual of the flowering plants and ferns of Marin county California. P...

tive statement, the common and scientific names, area of distribution, and country of origin.

CHRISTENSEN, CLYDE MARTIN

The molds and man an introduction to the fungi. Minneapolis University of Minnesota Press, 1951 244 p. illus. 22 cm. $4.00. 635

Contents: What fungi do and how they grow. The reproduction and dissemination of fungi. Fungus partnerships with other plants. Fungus partnerships with animals. Fungus parasites of plants. Rusts, smuts, and heart rot. Fungi that destroy commercial products. Fungus parasites of microorganisms and insects. Fungus parasites of fish, land animals, and man. Fungi exploited industrially. Appendix: Summary of the classification of the fungi. Index.

Note. Not a textbook in the usual sense but a general account of the fungi and of their relations to man, written as an introduction to the subject both for college students and for laymen who wish "to learn about the how and why and when and where of fungi." The book is clearly written, scientific terms are used when necessary, and all sorts of arresting, unusual, and little-known aspects of fungi are covered. Brief lists for additional reading are given at the ends of the chapters.

COKER, WILLIAM CHAMBERS, AND ALMA HOLLAND BEERS

The stipitate Hydnums of the eastern United States. Chapel Hill The University of North Carolina Press, 1951 211 p. illus. 26 cm. $5 00. 636

Contents: Introduction. Key to the genera treated. Key to the species of fleshy stipitate Hydnums of the eastern United States. Genus Mycorrhaphium. Genus Steccherinum. Genus Auriscalpium. Genus Hericium. Genus Hydnum. Genus Phellodon. Genus Bankera. Genus Sarcodon. Genus Hydnellum. Genus Pseudohydnum. Literature list. Index.

Note: A systematic description of a family of fungi of which many members grow on rotting wood or on the soil in established forests. It is based on studies made by the senior author over a considerable period of time and represents a reworking of articles by him that were published from 1913 to 1948. The species descriptions are organized along traditional lines with literature references, technical descriptions of morphology, references to illustrations, and information on habitat. The documentation of habitat usually includes a specific statement on site preference such as "Under conifers, often under hemlock mixed with rhododendron." There are 60 plates of which 53 bear reproductions of photographs of specimens, most of which were fresh when photographed.

CORRELL DONOVAN STEWART

Native orchids of North America north of Mexico by Donald Stewart Correll, with illustrations by Blanche Ames Ames and Gordon Winston Dillon cultural notes contributed by Edgar Theodore Wherry and John Vertrees Watkins foreword by Charles Schweinfurth. Waltham, Mass. The Chronica Botanica Company 1950 399 p. illus. 27 cm. (*A new series of plant science books, edited by Frans Verdoorn*. Volume XXVI) $7.50 637

Contents: Introduction. Distribution of our native orchids. General characteristics of orchids. Cultural notes on extra-tropical orchids. Explanation of the text. Use of keys. Orchidaceae: Cypripedium. Orchis. Habenaria. Listera. Epipactis. Cephalanthera. Triphora. Isotria. Pogonia. Cleistes. Vanilla. Arethusa. Calopogon. Prescottia. Cranichis. Ponthieva. Spiranthes. Centrogenium. Goodyera. Erythrodes. Zeuxine. Tropidia. Phyrosthelia [illegible] Malaxis. Liparis. Tipularia. Calypso. Epidendrum. Bulbophyllum. Polystachya. Galeandra. Aplectrum. Hexalectris. Corallorhiza. Bletia. Eulophia. Cyrtopodium. Maxillaria. Ionopsis. Brassia. Oncidium. Macradenia. Campylocentrum. Harrisella. Polyrrhiza. Glossary. Selected bibliography. Index of scientific names. Index of common names.

Note: A systematic treatise in which are assembled for the first time accounts of all recorded North American orchids north of Mexico. Described and discussed are 190 species divided into 46 genera. A key to the genera and keys to the species are furnished. Typical information given for each species includes scientific name or names, etymology of name, common names, botanical description, discussion of distinctive features, range, geographical distribution, preferred locations, and cultural notes. The cultural notes are for the benefit of collectors interested in growing wild orchids in their own gardens. Careful and detailed line drawings are included for most species.

DAWSON ELMER YALE

Marine red algae of Pacific Mexico. Part I, *Bangiales* to *Corallinaceae* Subf *Corallinoideae*. Los Angeles, Calif The University of Southern California Press 1952 239 p illus. 23 cm. (Allan Hancock Pacific expeditions. Vol. 17 no 1) $3 00 638

Note: This is the first part of a systematic study of the marine red algae of the Mexican Pacific. There are keys to genera and species. Most species are illustrated. There are diagnoses and distributional records for the Pacific of Mexico. The volume has 33 plates.

FASSETT, NORMAN CARTER

Grasses of Wisconsin the taxonomy, ecology and distribution of the Gramineae growing in the state without cultivation. With an essay "The vegetation of Wisconsin" by John T Curtis. Madison Wis. The University of Wisconsin Press, 1951 173 p. illus. 22 cm. $3.00 639

Contents: Introduction. Limitations of range maps. To identify grass. Structure of grasses. Key to subfamilies and tribes. Characteristics and distribution of the Gramineae of Wisconsin: Festuceae. Hordeae. Aveneae. Agrostideae. Chlorideae. Phalarideae. Oryzeae. Paniceae. Andropogoneae. Tripsaceae. The geological setting. The vegetation of Wisconsin, by John T. Curtis. Figures. Glossary. Index.

Note: The grasses covered in this study include some that are natives of Wisconsin and others that have been introduced either intentionally or unintentionally into the state. The different grasses are listed and described in systematic order. Small county maps of the state, six to a page, show distribution of 176 species of grass. Following the text is a section of 39 pages containing 154 line-drawing figures, many of them in magnified size, to assist in identification.

FISCHER GEORGE WILLIAM

The smut fungi a guide to the literature, with bibliography New York The Ronald Press Company, 1951 387 p 24 cm. $8.50 640

Contents (abridged): Part I, Subject matter guide to the literature. Part II, Bibliography. Index.

Note. In this book the first part is arranged by genera and species and under each species references are given to published literature bearing on the following aspects: control, culture on artificial media, cytology, heterothallism and sex, hybridization and genetics, life history, parasitism, longevity of spores, miscellaneous records, spore germination, and varietal resistance and susceptibility. Of course, headings are omitted in instances where the author found no pertinent literature. Furthermore, species were omitted if no literature bearing on their biology was found. The number of entries under individual species vary from one to one hundred and more. The second part of the book is a bibliography of 1353 citations of the international literature. This part is arranged alphabetically by author but is keyed by numbers to the first part. The whole constitutes a very useful literature index and guide for plant pathologists and other scientists interested in the biology of the smut fungi.

FOSTER, JACKSON WALTER

Chemical activities of fungi. New York Academic Press, Inc., 1949 648 p. illus. 24 cm. $9.50. 641

Contents: Introduction, history perspective. The methodology of mold metabolism. Chemical nature of the mold mycelium. General considerations of mold metabolism. Natural variations. Mutations, physiological genetics, and biochemical syntheses. Trace element nutrition of fungi. Lactic acid formation by fungi. Alcoholic fermenta-

tion by molds. Oxalic acid metabolism. Fumaric and other C_4-dicarboxylic acids. Citric acid. Itaconic acid. Kojic acid. Gluconic and other sugar acids. Carbohydrates produced by fungi. Nitrogen metabolism of fungi. Other transformations by fungi. Microbiological aspects of penicillin. Author index. Subject index.

Note. The title of this book is well chosen. It deals not only with the biochemical processes of molds as these proceed under natural *conditions but also with the manipulation and regulation* of these processes in such ways that optimum amounts of desired chemical substances are produced under laboratory or factory conditions. Essentially the book is critical review of published literature. A considerable degree of chemical maturity is assumed. The chapters are supplemented by long lists of pertinent literature. The author is Professor of Bacteriology in the University of Texas and has himself made notable contributions to the knowledge of the field.

GOTTSCHO, SAMUEL H.

Wildflowers how to know and enjoy them. Pictures and text by Samuel H. Gottscho New York Dodd Mead & Company, 1951 192 p illus. (part col d) 17 cm. $2 75 642

Contents: Introducing the book. The pursuit of hobby The enjoyment of wildflowers. With the seasons. Wildflower lists. Of things botanical. Flower names and families. *Flower colors. Blue flower section. Yellow flower section. White flower section. Pink flower section.* The travels of seeds. Wildflower conservation. Wildflowers in the home. Books. Coloring guide. Photography Index.

Note: Illustrated by photographs, 122 in black and white, 98 in color, this pocket-sized volume is an excellent guide to the commoner wildflowers of the United States of America east of the Mississippi River and north of the Carolinas. The book is organized so that flowers of the same color are described and pictured in the same section in the approximate order of their month of bloom. The descriptions, ranging from 5 to 15 lines each, include common name, scientific name, family name, locality where commonly found, size of flowers and plants, range, and season of bloom, together with special details if any. *Symbols* indicate rare wildflowers, the picking of which is restricted. The photographic illustrations, most of them one-fourth page in size, are successfully reproduced from pictures taken by the author.

GRAVES, ARTHUR HARMOUNT

Illustrated guide to trees and shrubs, this *is a guide to the woody plants of the* north eastern United States—native, naturalized and commonly cultivated exotic kinds including both summer and winter characters. 45 plates and 116 text figures. Wallingford, Conn. Published by the author 1952 240 p. illus. 24 cm $4 00 643

Contents: Preface. List of plates. Introduction. How to use the keys. General key Distinguishing characters of species. Short cuts to naming. Some helpful references. Glossary Index.

Note A reference book for amateur naturalists and amateur and professional gardeners, designed to aid such readers in the identification of trees and shrubs. The descriptions of specific plants are preceded by keys for determining family and genus. The species descriptions are brief and are limited to only the most important features, common and scientific names, habitat, and distribution. Many of the illustrations are reproductions of well-executed line drawings of leaves, terminal buds, and fruits

GUNDERSEN ALFRED AND OTHERS

Families of dicotyledons. By Alfred Gundersen, with introductory chapters by C. A. Arnold and others Drawings by Maud H. Purdy Waltham, Mass. The Chronica Botanica Company 1950 237 p. illus. 23 cm. (A new series of plant science books edited by Frans Verdoorn. Volume xxv) $4 75 644

Contents: Part 1 Introduction Fossil dicotyledons, by C. A. Arnold. Wood anatomy by O Tippo Carpels and ovules, by T Just. Embryology by H. F Copeland. Cytotaxonomy by J. H. Taylor. Plant geography, by W H. Camp. Part 2, Characters of dicotyledons: Stem. Leaf Inflorescence. Flowers and insects. Floral anatomy Perianth. Stamens and nectaries. Pollen. Placentation. Ovule and seed. Part 3, Historical notes: Seventeenth century Eighteenth century Nineteenth century Systems since 1900. Orders compared. Part 4, Systematic arrangement Beginning of the system. Sequence of groups. Nomenclature. Scope of orders and families. Magnoliiflorae Magnoliales. Ranales. Piperales. Chlaenaceae Cactales. Cistales. Salicales. Papaverales Sarraceniales. Aristolochiales. Tamaricales. Thea group Theales. Ebenales. Ericales. Rosiflorae: Rosales. Hamamelidales. Thymelaeales. Myrtales. Ulmus group Proteales. Santalales. Urticales. Balanopsidales. Fagales. Leitneriales. Casuarinales. Malva group Malvales. Euphorbiales. Geranium group Rutales. Juglandales. Sapindales. Celastrales. Geraniales. Dianthiflorae: Caryophyllales. Polygonales. Primulales. Plantaginales. Jasminiflorae: Loganiales. Polemoniales Boraginales. Campanales. Rubiflorae: Umbellales. Rubiales. Asterales. Incertae sedis. Concluding remarks. Literature cited. Index of plant names

Note: A systematic reclassification of the dicotyledons written on the basis of more than 20 years study of the group. 140 families are grouped into 43 orders as an arrangement which the author recognizes as tentative and subject to future improvement. Comparisons with other classifications are touched upon, yet in large part the systems of Engler and Bentham and Hooker have been followed. The accounts of the separate families, each including brief descriptions and citations from recent literature, occupy more than half the volume. The illustrative drawings, mostly prepared from living plants, show the details of seeds, buds, and flowers of typical species in the various orders.

HITCHCOCK ALBERT SPEAR

Manual of the grasses of the United States. Second edition. Revised by Agnes Chase. Washington D C Government Printing Office, 1950 1051 p illus. 24 cm. (United States. Department of Agriculture. Miscellaneous publication no. 200) $3.00 645

Contents: Introduction: Uses of grasses. Distribution of grasses. Morphology of grasses. Classification of grasses. Nomenclature. Common names. Scope of the manual. Gramineae (Poaceae) the grass family Descriptions of the subfamilies and keys to the tribes: Festucoideae. Panicoideae. Descriptions of the tribes and keys to the genera: Bambuseae Festuceae. Hordeae. Aveneae. Agrostideae. Zoysieae. Chlorideae. Phalarideae. Oryzeae. Zizanieae. Melinideae. Paniceae. Andropogoneae. Tripsaceae. Descriptions of genera and species: Bambuseae. Festuceae. Hordeae. Aveneae. Agrostideae. Zoysieae. Chlorideae. Phalarideae. Oryzeae. Zizanieae. Melinideae. *Paniceae. Andropogoneae. Tripsaceae. Synonymy* Unidentified names. Persons for whom grasses have been named. Glossary Appendix. Place of publication and type species of new genera described. Addenda. Index.

Note: A comprehensive, systematic catalogue based mainly on the very extensive collection in the United States National Herbarium. Botanical descriptions of the grasses are supplemented in most instances by drawings of good quality. In contrast to the 159 genera and 1100 species described in the first edition (1935) 169 genera and 1398 species are described. There are now 1200 illustrations.

HITCHCOCK C LEO

A revision of the North American species of Lathyrus. Seattle University of Washington Press 1952 104 p. illus. 25 cm. (University of Washington. Publications in biology Vol. 15) $2.50 646

Contents: Introduction. Description of species. Index to collections seen. Representative collections examined. Index to personal names. Illustrations.

Note. A new systematic description based on extensive field and herbarium studies and incorporating recently developed data on chromosome number and on crossing among species. The information on interbreeding has been derived largely from cultural experiments conducted by the author. The author's studies and observations have led him to believe that "many of the species interbreed rather freely producing hybrid populations of great variability This characteristic is taken into account in the species descriptions.

LEONARD EMERY C

The Acanthaceae of Colombia, I. Washington D C. Government Printing Office 1951 117 p. illus. 24 cm. (Smithsonian Institution.

United States National Museum. Contributions from the United States National Herbarium. Vol. 31 part 1) Paper $0.50 647

Contents: Introduction. Systematic treatment: Subfamily Nelsonioideae. Subfamily Mendoncioideae. Subfamily Thunbergioideae. Subfamily Acanthoideae: Series Contortae. Tribe Trichantherae. Tribe Hygrophileae. Tribe Petalideae. Tribe Ruellieae. Tribe Barlerieae. Index.

Note: This is the first part of a work to be completed in three parts describing and discussing in systematic fashion the known Colombian species of the family Acanthaceae. It is a reference work for botanists, so that they may identify their collections of acanthaceous plants or use the keys for detecting further undescribed species.

LILLY, VIRGIL GREENE AND HORACE L BARNETT

Physiology of the fungi. New York. McGraw Hill Book Company, Inc. 1951 464 p. illus 23 cm. (McGraw Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) $7.50. 648

Contents: Introduction. Culture media. Growth. Enzymes and enzyme action. Essential metallic elements. The essential nonmetallic elements other than carbon. Carbon sources and carbon utilization. Hydrogen ion concentration. Vitamins and growth factors. Fungi as test organisms. Metabolic antagonists. The action of fungicides. Metabolic products. Factors influencing sporulation of fungi. Spore discharge and dissemination. Spore germination. The physiology of parasitism and resistance. Physiological variation and inheritance of physiological characters. Suggested laboratory exercises. Index.

Note: An advanced textbook for the student already acquainted with the structure of fungi. It comprises a systematic discussion of the life processes of fungi. Summaries and bibliographical references are given at the ends of the chapters, and a series of 13 suggested laboratory exercises is outlined in 20 pages at the end of the book. The work had its origin in the lectures and laboratory exercises used by the authors in a course offered to graduate students at the University of West Virginia. Aside from a basic knowledge of fungus morphology the student is also supposed to have a knowledge of organic chemistry. The book is of some value as a reference work to persons actively engaged in physiological research on fungi.

MCVAUGH, ROGERS AND JOSEPH H. PYRON

Ferns of Georgia. Sponsored by the Garden Club of Georgia, Inc. Athens The University of Georgia Press 1951 195 p. illus. 24 cm. $5.00 649

Contents: Introduction. Life history of ferns. Classification of ferns. How plants get their names. Arrangement of genera and species. How to use the manual. Key to the genera of ferns and fern allies. Keys to the species. Descriptions and illustrations. Explanation of special terms. Index.

Note: A semi-technical manual suitable for use by amateur botanists in the study and identification of ferns and by professional botanists interested in the geographical distribution of fern species in southern United States of America. It is based on a three-year field study and on the examination of herbarium collections. Each fern is described in a one-page essay which covers the Latin name and the common name (when one exists) description, habitat, range, and general remarks. Opposite the essay there is in each instance a drawing of fronds or of the whole plant together, with a map showing the portions of Georgia in which the fern may be found.

MOLDENKE, HAROLD NORMAN

American wild flowers. New York D Van Nostrand Company Inc. 1949 453 p illus. (part col d) 22 cm. (The new illustrated naturalist. Editorial advisory board William Beebe and others) $6 95 650

Note: This work on wild flowers by the Curator and Administrator of the Herbarium of the New York Botanical Garden is not essentially a guidebook to the wild flowers, although it may have use as such. It is, rather, a running account, popularly written and abundantly illustrated with photographs in color and in gravure, of the showiest and most interesting plants of the entire United States and Canada—"those most likely to attract the attention of the traveler." A poll of naturalists resident in every state and province assisted the author in determining which species to include, and in all 2050 species, varieties, and named forms are treated. The species are discussed within their respective families, which are divided into 50 natural groups, with some account given of their relationships. Within each family group the various species of a single genus are described in adjoining paragraphs. The general geographical range is indicated for the majority of species, as well as a statement of the type of habitat in which it may be found. Descriptions are of necessity limited to a few words by which the species may be distinguished. A glossary and selected bibliography are included.

MUENSCHER, WALTER CONRAD

Poisonous plants of the United States. New York The Macmillan Company 1949 266 p. illus. 21 cm. (The rural science series, edited by L. H. Bailey) $4.00 651

Contents: Part I, Nature and classification of poisonous plants: The classification of poisonous plants. Plants poisonous or injurious under special conditions. Part II, Poisonous plants arranged according to family. Literature references. Index.

Note: A brief but useful manual of up-to-date information. Although the main part is arranged by botanical family it is addressed to amateur botanists, farmers, and anyone else interested in scientific or practical information on the subject. The plant descriptions include not only information needed for identification, but also information on geographic distribution, poisonous principles, symptoms, and in some cases simple remedies. As an aid for identification there are numerous line drawings.

PEATTIE, DONALD CULROSS

A natural history of trees of eastern and central North America. Illustrated by Paul Landacre. Boston, Mass. Houghton Mifflin Company 1950 606 p. illus. 23 cm. $5.00 652

Contents: Notes on nomenclature and distribution. The trees: The pines (*Pinus*) The larches (*Larix*) The hemlocks (*Tsuga*) The spruces (*Picea*) The firs (*Abies*) The arbor vitae (*Thuja*). The false cypresses (*Chamaecyparis*) The junipers (*Juniperus*) The poplars (*Populus*) The willows (*Salix*) The walnuts (*Juglans*). The hickories (*Carya*) The hornbeams (*Carpinus*) The hop hornbeams (*Ostrya*). The birches (*Betula*) The beeches (*Fagus*). The chestnuts (*Castanea*) The oaks (*Quercus*). The elms (*Ulmus*) The hackberries (*Celtis*) The mulberries (*Morus*) The tuliptrees (*Liriodendron*) The magnolias (*Magnolia*) The pawpaws (*Asimina*). The sassafrasses (*Sassafras*) The witch hazels (*Hamamelis*) The sweet gums (*Liquidambar*) The sycamores (*Platanus*) The apples (*Malus*) The serviceberries (*Sorbus*) The shadblows (*Amelanchier*) The hawthorns (*Crataegus*) The plums and cherries (*Prunus*) The redbuds (*Cercis*) The coffeetrees (*Gymnocladus*) The sweet locusts (*Gleditsia*) The yellowwoods (*Cladrastis*) The locusts (*Robinia*) The prickly ashes (*Zanthoxylum*) The hoptrees (*Ptelea*) The sumacs (*Rhus*) The hollies (*Ilex*) The maples (*Acer*) The horse chestnuts (*Aesculus*) The lindens (*Tilia*) The Hercules'-clubs (*Aralia*) The tupelos (*Nyssa*) The cornels (*Cornus*) The viburnums (*Viburnum*) The rhododendrons (*Rhododendron*) The mountain laurels (*Kalmia*) The sourwoods (*Oxydendrum*) The ebonies (*Diospyros*) The silverbells (*Halesia*). The sweetleaves (*Symplocos*) The fringetrees (*Chionanthus*) The ashes (*Fraxinus*) Keys to species and genera. Glossary Index of scientific names. Index of English names.

Note: The first of a projected series of four volumes on the trees of America north of Mexico. Included are 187 species divided into 41 genera. For each species are given: common name, scientific name, other names, range, description of leaves, flowers, fruit, seeds, bark, wood, and a brief essay telling something of the use and the lore of the species and of its place in American history especially in pioneer times. To assist in identification illustrations are given in black and white of the mature leaves and flower or fruit of each species, together with 19 full-page drawings showing the general aspect of 19 of the genera. A book for reading and reference rather than a field book. Subsequent volumes are to describe the western and southern sylvae and the cultivated trees of exotic origins.

PRESCOTT GERALD WEBBER

Algae of the western Great Lakes area, exclusive of desmids and diatoms. Bloomfield

Hills, Mich. Cranbrook Institute of Science, 1951 946 p illus. 24 cm. $10.50 653

Contents (abridged) Geographical features and algal distribution. Relationships of phytoplankton to lake productivity Morphological characters illustrated. Systematic account: Division Chlorophyta. Division Chrysophyta. Division Euglenophyta. Division Chloromonadophyta. Division Pyrrhophyta. Division Cyanophyta. Division Rhodophyta. Analytical key to the genera. Glossary Bibliography Plates. Index.

Note. A systematic description of algae collected from lakes and marshes of Wisconsin and Michigan, a region noted for its abundance of algal flora. The work is comprehensive, in that it describes all of the species reported in the publications of earlier workers as well as species collected by the author. It is a substantial contribution to the literature of both phycology and limnology

RAPER, KENNETH BRYAN, AND CHARLES THOM

A manual of the Penicillia. With the technical assistance and illustrations by Dorothy I. Fennel. Baltimore The Williams & Wilkins Company 1949 875 p illus (part col'd) 24 cm. $12.00 654

Contents: Part I, General discussion Historical. Generic diagnosis and synonymy Observation and description of Penicillia. Cultivation and preservation of Penicillia. Penicillium. Part II, The manual proper: Use of the manual. Monoverticillata. Asymmetrica—divaricata—velutina—lanata—funiculosa—fasciculata. Biverticillata-symmetrica. Polyverticillata. Gliocladium, Paecilomyces, and Scopulariopsis. Part III, Reference material Topical bibliography General bibliography Species index. Accepted species and varieties. Index.

Note. A new systematic study in which is incorporated the useful material from many unpublished surveys and groupings made in industrial laboratories and elsewhere as a result of the interest in this genus occasioned by the discovery of the antibiotic penicillin. It supersedes Thom's *The Penicillia* published in 1930 but in contrast is designed for quick reference. The systematic descriptions which account for approximately 600 of the book's pages are arranged in the traditional manner but they consist largely of information that is useful in identification and laboratory culture. According to the authors, about 4,000 strains were examined in the course of the book's preparation. Strains upon which particular descriptions are based are identified There are 172 figures most of which consist of several illustrations. There are ten color plates. The topical bibliography consists of literature references arranged according to field of interest or application, for example, cheese. The general bibliography is arranged by author and includes both the systematic literature and that bearing on pharmacological and industrial applications.

REHDER, ALFRED

Bibliography of cultivated trees and shrubs hardy in the cooler temperate regions of the northern hemisphere. Jamaica Plain Mass. The Arnold Arboretum of Harvard University 1949 825 p 30 cm. $20.00 655

Contents Introduction Explanation of abbreviations of serials and titles. Systematic enumeration of cultivated trees and shrubs. Additions and emendations. Index.

Note (1441) A monumental reference work of value to botanists and horticulturists. It provides literature references to the sources of the botanical names, valid names and synonyms, of the cultivated trees and shrubs of the north temperate zone. It is a complement to the author's *Manual of cultivated trees and shrubs hardy in North America exclusive of the subtropical and warmer regions*, second edition, New York, 1940. All tree and shrub names in the *Manual* are to be found also in the *Bibliography* with full synonymy and with additional genera, species, and varieties introduced or described to the end of 1947 The index provides an alphabetical reference to the plants included. In both the systematic enumeration and the index the names are in Latin, following the international rules of botanical nomenclature. The work is not a bibliography of books and periodicals on trees and shrubs; but is rather a bibliography of original sources for the names of each tree and shrub.

SEAVER, FRED JAY

The North American cup-fungi (Inoperculates) Illustrated. New York Published by the author, 1951 428 p. illus. (part col'd) 24 cm. $7.50 656

Contents: Introductory Taxonomic treatment. Explanation of plates. Host index. Index to illustrations. Index to recognized genera. Index to genera and species.

Note. (1317) This work complements the author's *The North American cup-fungi (Operculates)* supplemented edition, New York, 1942. It is a systematic description addressed to professional botanists but the author disavows finality in these words: "There are many controversial questions and the writer makes no pretense that this is the last word in the treatment of species, genera or families but merely a summary of the available facts as they appear at the present time. Nevertheless, the work is a major contribution to the description of this plant group. There are 150 plates of good quality

SHAN, REN HWA, AND LINCOLN CONSTANCE

The genus Sanicula (Umbelliferae) in the Old World and the New Berkeley Calif University of California Press, 1951 78 p. illus. 26 cm. (University of California publications in botany Vol. 25 no 1 Editors H. L. Mason and others) Paper $1 00 657

Contents (abridged) Introduction. Taxonomic history Taxonomic criteria. Natural divisions of the genus. Geographical distribution. Taxonomic treatment: Key to the sections and species Populations of putatively hybrid origin. Species and names excluded from the genus Sanicula. Literature cited.

Note. The nucleus of this study was a doctoral dissertation by Dr. Ren Hwa Shan entitled, "The Old World species of Sanicula (Umbelliferae) After Dr. Shan had returned to Shanghai in April, 1949 Lincoln Constance who had worked closely with him expanded the paper to include American species of the genus and made other extensive emendations. The resulting monograph arranges the species in natural groups on the basis of morphological similarity and geographical community Ideographs show the shapes of the 37 recognized species. Botanical drawings in addition show habit, umbellet, and fruit of 8 of these species. Sketch maps show geographic distribution of the 37 species. For each of the species are given bibliographical references, description, type locality distribution, general comment as to relationships and habits, and list of representative specimens.

SMITH ALEXANDER HANCHETT

Puffballs and their allies in Michigan. Ann Arbor University of Michigan Press, 1951 131 p illus. 24 cm. $3.00 658

Contents The fructification. Edibility Key to orders of Gasteromycetes. Hymenogastrales, Gautieriales. Tremellogastrales. Hysterangiales. Phallales. Lycoperdales. Sclerodermatales. Nidulariales. Podaxales. Literature cited. Index.

Note A systematic description of an interesting group of fungi. Although limited to those species that are found naturally within the state of Michigan, the book is of wider interest because the species described are found in many other parts of the world as well. The author states that the book is intended for general use. However, the morphological descriptions are cast in technical terms and he has included no glossary The verbal descriptions are supplemented by a series of plates made from photographs of collected specimens.

SMITH GILBERT MORGAN

The fresh-water algae of the United States. Second edition New York McGraw Hill Book Company, Inc., 1950 719 p. illus. 24 cm. (McGraw Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) $10 00 659

Contents Nature, evolution, and classification of the algae. The distribution and occurrence of fresh-water algae Collection, preservation, and methods of studying the fresh-water algae. Chlorophyta. Euglenophyta. Chrysophyta. Phaeophyta. Pyrrophyta. Cyanophyta. Rhodophyta Groups of uncertain systematic position. Key to the fresh-water algae of the United States. Bibliography Index.

Note (1500) A standard comprehensive description, useful both to specialists and to advanced students. The three preliminary chapters occupy only 38 pages. The greater part of the remainder

is devoted to the systematic descriptions. Groups are described down to species of genera. Instead of descriptions of species, literature references are given to descriptions published elsewhere. There are 539 figures most of which contain more than one drawing.

SMITH, GILBERT MORGAN, AND OTHERS

Manual of phycology an introduction to the algae and their biology Edited by Gilbert M. Smith With 48 plates and figures in the text. Waltham, Mass. The Chronica Botanica Company 1951 375 p illus. 26 cm. (A new series of plant science books edited by Frans Verdoorn. Volume XXVII) $7.50 660

Contents: History of phycology by G. W Prescott. The classification of algae, by G. M. Smith. Chlorophyta, by M. O. P. Iyengar Euglenophyta, by T. L. Jahn. Chrysophyta, by F. E. Fritsch. Pyrrophyta, by H. W Graham. Phaeophyta, by G. F Papenfuss. Cyanophyta, by Francis Drouet. Rhodophyta, by K. M. Drew Fossil algae, by J. H. Johnson. Cytology of algae, by H. C. Bold. Sexuality of algae, by G. M. Smith. The pigments of algae by H. H. Strain. Physiology and biochemistry of algae, by L. R. Blinks. Ecology of fresh water algae, by L. H. Tiffany Ecology of marine algae, by Jean Feldmann. Plankton algae and their biological significance, by B. H. Ketchum. Appendices: Methods for the cultivation of algae Microtechnique. Index.

Note: A volume of separate, signed chapters, each complete from brief introduction to bibliography covering all aspects of algology except economic phycology to cover which subject another volume is projected in the same series. Each author covering major group of algae discusses structure, reproduction, and classification of his group, whereas separate chapters are devoted to ecological, physiological, and other general problems. The work is companion volume to F Verdoorn, editor, *Manual of bryology* The Hague, 1932, and to F Verdoorn, editor *Manual of pteridology* The Hague, 1938.

THARP BENJAMIN CARROLL

Texas range grasses. With drawings by Clare Y Whaley Austin Tex. University of Texas Press 1952 125 p illus. 26 cm. $4 00 661

Contents: Introduction. The longleaf pine region. The coastal prairie region. The Rio Grande plain region. The mesquite-chaparral region. The coastal subhumid dunes region. The oak-hickory-mesquite region of the Llano uplift. The oak-juniper region of the Edwards plateau and the Lampasas Cut plain. The mesquite forest and oak savanna region. The live oak-mesquite savanna region. The foot-hill-Mesa-Valley region of trans-Pecos Texas. The sandy south plains region. The high plains region. The mesquite savanna region. The western cross timbers region. The eastern cross timbers region. The oak-hickory forest region. The pine-oak forest region. The blackland prairie region. Summary notes on Texas range grasses and their relatives beyond Texas borders. Appendices: The chemical composition of grasses from three Texas regions. Texas range and forage grasses, comprehensive analytic key; distribution and relative abundance of the more important species. Bibliography.

Note: A survey of the distribution and relative abundance of the 160 species of grasses which are important as grazing plants in Texas. Following the geographic introductory sections, the 18 vegetational regions of the state are described and the distribution of their grasses analyzed. The work is written in non-technical fashion, and 23 species are illustrated in full-page drawings for purposes of identification. The publication was prepared as basis for further research and study in the program of Texas grassland improvement launched by the Grass Research Project of the Plant Research Institute.

TIFFANY LEWIS HANFORD, AND MAX EDWIN BRITTON

The algae of Illinois. Chicago The University of Chicago Press 1952 107 p illus. 25 cm. (The University of Chicago. Committee on Publications in Biology and Medicine, by Emmet B Bay and others) $10.00 662

Contents (abridged) Introduction. Brief synopsis of the algal classes. Phylum Chlorophyta. Phylum Chrysophyta. Phylum Pyrrophyta. Phylum Euglenophyta. Phylum Myxophyta. Phylum Rhodophyta. Doubtful species. Glossary Bibliography Index.

Note: Descriptions, keys, and illustrations of the algae of Illinois, state noted for its diverse algal flora, are supplied in this work, which supplements M. E. Britton, *A catalog of Illinois algae*, Evanston, Illinois, 1944. Species descriptions are written in botanical terminology and are very detailed. The 108 plates contain 1186 reproductions of original drawings.

TRELEASE, WILLIAM, AND TRUMAN G YUNCKER

The Piperaceae of northern South America. Urbana University of Illinois Press 1950 838 p. illus. 24 cm. $10.00 663

Contents: Volume Introduction Key to the genera. Genus Piper —Ottonia—Sarcorhachis—Trianaeopiper. Plates. Volume Genus Pothomorphe—Peperomia. Bibliography Index of collections cited. Index of names. Plates.

Note A systematic description of one of the large dicotyledonous plant families. Although limited to species known to occur in the Guianas, Venezuela, Colombia, and Ecuador only it contains descriptions of many species not reported hitherto. The work was based on comprehensive examination of specimens in the larger herbaria of the world. A symbol that indicates the location in herbarium of the specimen examined is included in the species description. The work includes 674 plates, all of which are reproductions of photographs of specimens.

WAKSMAN SELMAN ABRAHAM

The actinomycetes their nature occurrence activities, and importance. Waltham Mass. The Chronica Botanica Company 1950 230 p illus. 24 cm. (Annales cryptogamici et phytopathologici incorporating Annales bryologici edited by Frans Verdoorn. Vol. 9) $5.50 664

Contents. Introductory Terminology phylogeny and taxonomy Identification and descriptions of important types. Morphology and life cycle. Variations and mutations. Metabolism of actinomycetes—growth and nutrition production of odors and pigments. Production of enzymes and of growth-promoting substances Antagonistic properties of actinomycetes and production of antibiotics. Distribution of actinomycetes in nature. Decomposition of plant and animal residues. Actinomycetes as causative agents of plant diseases. Actinomycetes as causative agents of human and animal diseases. Summary Appendix Media used for the study of actinomycetes. Bibliography General index. Index of organisms.

Note A complete summary of present knowledge of an interesting and important group of microorganisms. The author who is internationally famous for his work with soil organisms, writes on the basis of more than one-third of century experience with the actinomycetes. In preparing the present work, he drew both upon the work of other investigators and upon work done in his own laboratories. References to the bibliographical sources occur on nearly every page. The book will have interest and reference value to all persons who are professionally concerned with the actinomycetes. It will also be of use to persons desiring an introduction to the subject.

WICKERHAM LYNFERD JOSEPH

Taxonomy of yeasts. Washington, D C. Government Printing Office, 1951 56 p illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 1029) Paper $0 40 665

Contents: Introduction. Part 1 Techniques of classification. Isolation and maintenance. Morphology: Sporulation. Cellular morphology Physiology: Carbon assimilation tests. Nitrate assimilation tests. Vitamin deficiency test. Fermentation tests. Growth. Ability to liquefy gelatin. Ability to grow at 37° C. Production of starch. Production of esters. Variation. Part 2 A classification of the genus *Hansenula* History of the genus. Keys to the species Descriptions of the species. Discussion. Phylogenetic relationships. Summary Literature cited. Plates 1–4.

Note: A method of classification leading to the defining of each genus of ascosporogenous yeasts so that it will contain only single group of related species is presented in this pamphlet. A similar definition, covering the same range of characteristics except the ability to form ascospores, is used to define the corresponding nonsporogenous genus if such genus exists. Through accumulating changes

in the current classifications, this procedure clarifies relationships between certain sporogenous genera and their previously unestablished genetic counterparts among the asporogenous yeasts.

PLANT CHEMISTRY AND PHYSIOLOGY

ANNUAL REVIEW OF PLANT PHYSIOLOGY Volume 3 Daniel I. Arnon, editor Leonard Machlis, associate editor Stanford Calif Annual Reviews Inc., 1952 369 p 23 cm. $6 00 666

Contents: Factors affecting availability of inorganic nutrients in soils with special reference to micro-nutrient metals, by G. W Leeper. Glycolytic enzymes in higher plants, by P K. Stumpf. Metabolism of phosphorylated compounds in plants, by H. Albaum. Studies of the physiology pharmacology, and biochemistry of the auxins, by J. Bonner and R. S. Bandurski. Agricultural application of growth regulators and their physiological basis, by J van Overbeek. Transport of organic compounds, by W H. Arisz. Leaf proteins, by S. Wildman and A. Jagendorf. Physiological aspects of low temperature preservation of plant products, by M. A. Joslyn and H. C. Diehl. Physiology of virus diseases, by F C. Bawden and N. W Pirie. Mechanisms of ion absorption by roots, by R. Overstreet and L. Jacobson. Physiological bases for assessing the nutritional requirements of plants, by A. Ulrich. Photosynthesis, by E. Rabinowitch. Physiology of flowering, by A. Lang. Carboxylating enzymes in plants, by B Vennesland and R. E. Conn. Tree physiology by B. Huber. Indexes.

Note. This is the third volume in a useful series in which attention is paid both to scientific advances and to developments in applications of the scientific knowledge. The sections or chapters are essentially literature surveys as is customary in this type of publication. They are written concisely but are not unpleasantly terse. Statements in the narrative text are keyed to the extensive bibliographies. The names of authors of all the cited publications are included in the author index, and a detailed subject index covers the contents of the entire volume.

BARTHOLOMEW ELBERT THOMAS, AND WALTON B SINCLAIR

The lemon fruit its composition, physiology, and products. Berkeley and Los Angeles University of California Press 1951 163 p. illus 24 cm. $4 50 667

Contents (abridged) General information. Composition and physiology Products and their uses. Literature cited. Author index. Subject index

Note Essentially this work is a compact summary of information which has been gathered from the technical literature. Botanical and biochemical aspects are covered in the first two parts. The third part, which is only 8 pages long, contains information on the commercial importance and uses of the whole fruit and its components. Horticultural aspects are not covered. The book is useful as a reference volume and a guide to the technical literature. There is a 13-page bibliography

BONNER JAMES

Plant biochemistry New York Academic Press Inc., 1950 537 p illus. 23 cm. $7.50. 668

Contents (abridged) Part I, Carbohydrates and carbohydrate metabolism: Transformation of the sugars. Starch. Inulin and the water-soluble polysaccharides. Part II, The cell wall and cell wall metabolism: Cellulose. Noncellulosic polysaccharides. The pectic substances. The gums, mucilages, and gel-forming substances. Lignin. Part III, Plant acids and plant respiration The organic acids of plants. Plant respiration. Part IV Metabolism of nitrogenous compounds: Synthesis and metabolism of amino acids. The plant proteins. The plant proteolytic enzymes. Nitrogen metabolism of seedlings. Nitrogen metabolism of leaves Purines and pyrimidines. Alkaloids. Nitrification and nitrogen fixation Part Secondary plant products: Lipids and lipid metabolism. Essential oils. The carotenoids. Rubber. The anthocyanins and anthoxanthins. Part VI, Certain aspects of plant growth: The plant growth substances. Photosynthesis. Author index. Subject index.

Note: An inclusive introductory text. Since it is intended for study by upperclass and graduate students in organic chemistry knowledge of fundamental organic chemistry has been assumed. Most of the chapters are short and are intended only to introduce the reader to the topic under discussion. On the other hand, a reference list of source material is appended to each chapter. Because of this feature readers outside of colleges who have the necessary education in chemistry can use the book as a guide to the recent literature of specific topics.

BONNER, JAMES AND ARTHUR W GALSTON

Principles of plant physiology Illustrations by Evan L. Gillespie. San Francisco W H. Freeman and Company 1952 499 p. illus. 24 cm. (A series of biology texts George W Beadle, Ralph Emerson, Douglas M Whitaker editors) $5 50 669

Contents: Plants and plant physiology Part I, Nutrition Photosynthesis. Mineral nutrition. Permeability and the absorption of nutrients. Water economy The soil as a medium for plant growth. Translocation—the redistribution of nutrients. Part II, Metabolism: Enzymes—the machinery of metabolism. Carbohydrates—their nature, functions, and interrelations. Respiration and the mechanism of biological oxidations. Nitrogen—its metabolism and economy in plant and nature. Lipids—their role in structure and function. Highways and byways in plant metabolism. Part III, Growth and development. The dynamics of growth and development. The integration of growth. Auxin and the control of growth. The physiology of reproduction. Dormancy and arrested development. The problem of differentiation. Plant and environment. Index.

Note. A well-written introduction. The authors' style is simple and easy to read, and they have included numerous descriptions of experiments and results from experimental investigations that will increase the reader's interest. The illustrations have been well thought out and are clearly reproduced. The authors have assumed that students using the book will have had introductory courses in general chemistry and botany

CRAFTS, ALDEN SPRINGER, AND OTHERS

Water in the physiology of plants, by A. S. Crafts, H. B Currier and C R. Stocking. Waltham, Mass. The Chronica Botanica Company 1949 240 p. illus. 26 cm. (A new series of plant science books, edited by Frans Verdoorn Volume XXI) $6 00 670

Contents: Introduction. Structure of water. Properties of solutions. Osmosis and osmotic pressure. The mechanism of osmosis. Water as a plant component Intracellular distribution of water. The osmotic quantities of plant cells. Active cell water relations. Uptake and movement of water in plants. Water loss and water retention. Bibliography Author index. Subject index.

Note. A reference book on plant and water relations intended for the use of botanists and plant physiologists. The chapters are essentially reviews of the published literature of the subject, from early times to the present. Full bibliographical details are given in the 18-page bibliography As the authors have made the material into a connected discourse, with summaries at the ends of the chapters, the work may also be used as a textbook for advanced courses. The most recent developments in the field are outlined in a 3-page supplement to the preface.

CURTIS, OTIS FREEMAN AND DANIEL G CLARK

An introduction to plant physiology New York McGraw Hill Book Company Inc., 1950 752 p illus. 23 cm. (McGraw Hill publications in the botanical sciences, Edmund W Sinnott, consulting editor) $7.50. 671

Contents (abridged) Foods and photosynthesis. Diffusion and osmosis. Surface phenomena; colloids, absorption, and imbibition. Water absorption. Transpiration: rates, measurements, and factors. Frost resistance and death by freezing Injury at high temperatures. Permeability accumulation and antagonism. Mineral nutrition. Nitrogen relations. Translocation of solutes. Enzymes and digestion. Respiration and fermentation Viability dormancy and rest in seeds and other plant parts. The role of organic accessory substances in plant growth. Conditions influencing flowering and fruiting as contrasted with vegetative growth. Growth. Appendixes. Author index. Subject index.

Note: The authors in preparing this textbook for college students taking a first course in plant physiology assumed that readers will have had introductory courses in chemistry and either botany or biology. There is minimum emphasis on the biochemical aspects of plant physiology. Other aspects of plant physiology, such as photosynthesis and water relations, are developed in detail. Each chapter closes with about two pages of bibliographical citations. The book incidentally stresses effective training in scientific methods.

FRANCK, JAMES, AND WALTER E. LOOMIS, editors

Photosynthesis in plants. A monograph of the American Society of Plant Physiologists. Ames Iowa Iowa State College Press, 1949 500 p. illus. 24 cm. $7.50 672

Contents: Photosynthesis—an introduction, by W E. Loomis. Photosynthesis under field conditions, by M. D. Thomas and G. R. Hill. Products of photosynthesis, by J. H. C. Smith. Diffusion through multiperforate septa, by J. Verduin. The chloroplasts: their structure, composition, and development, by S. Granick. Functions and properties of the chloroplast, by H. H. Strain. The photochemistry of chlorophyll, by R. Livingston. Chlorophyll studies, by F Rothemund. Processes accompanying chlorophyll formation, by J. H. C. Smith. The quantum requirement of photosynthesis, by R. Emerson and M. S. Nishimura. Quantum efficiency of photosynthesis in Chlorella, by W. E. Moore and B. M. Duggar. Quantum efficiencies for photosynthesis and photoreduction in green plants, by F F Rieke. A calorimetric determination of the quantum yield in photosynthesis, by W Arnold. The photochemical liberation of oxygen from water by isolated chloroplasts, by A. S. Holt and C. S. French. Chlorophyll fluorescence as an energy flowmeter for photosynthesis, by E. Katz. The relation of the fluorescence of chlorophyll to photosynthesis, by J. Franck. The pattern of photosynthesis in Chlorella, by J. Myers. Some remarks on tracer researches in photosynthesis, by M. D. Kamen. C[14] in photosynthesis, by A. A. Benson and others. Kinetics of photochemical intermediates in photosynthesis, by A. H. Brown and others. Investigation of the chemical properties of intermediates in photosynthesis, by E. W Fager. The comparative biochemistry of photosynthesis, by C. B. Van Niel. Index.

Note: Original papers prepared especially for this volume and a series of papers prepared for a symposium held at Chicago and sponsored by a section of the American Society of Plant Physiologists have been collected in this volume. The result is an authoritative survey of current knowledge, problems, and research techniques. The intended audience consists of scientists working in the field or in related areas. References to pertinent literature accompany each paper.

KRAMER, PAUL JACKSON

Plant and soil water relationships. New York McGraw Hill Book Company, Inc. 1949 347 p. illus. 23 cm. (McGraw Hill publications in the botanical sciences, Edmund W Sinnott, consulting editor) $6 50 673

Contents: Historical introduction. Soil moisture relations. Factors affecting the supply of soil moisture. Measurement and control of soil moisture. Structure and growth of roots. Factors affecting the development of root systems. Root and stem pressures and exudation phenomena. Processes concerned in water absorption. Factors affecting the absorption of water. The absorption of solutes. Absorption deficits and their effects on plants. Bibliography. Author index. Subject index.

Note: A textbook intended for teachers, investigators, and students in all fields of plant science who are interested in the principles governing plant and soil water relations. Following a review of the early development of plant physiology the author proceeds to present the fundamental facts of the subject in relatively simple terms for the benefit of those working in the various basic and applied plant sciences rather than for specialists in plant-water relations. The author writes on the basis of a number of years of research on the absorption of water by plants. The bibliography extends to 14 pages.

MEYER, BERNARD SANDLER, AND DONALD B ANDERSON

Plant physiology Second edition. New York D Van Nostrand Company Inc. 1952 784 p. illus. 24 cm. $8 50 674

Contents: The field of plant physiology. Properties of solutions. Colloidal systems. Plant cells. Diffusion. Osmosis and osmotic pressure. Imbibition. The water relations of plant cells. The loss of water from plants. The stomatal mechanism. Factors affecting transpiration. The translocation of water. Soils and soil-water relations. Absorption of water. The internal water relations of plants. Enzymes. The chlorophylls and the carotenoids. Photosynthesis. Factors affecting photosynthesis. Carbohydrate metabolism. Respiration. The mechanism of respiration. Fat metabolism. Absorption of mineral salts. Utilization of mineral salts. Nitrogen metabolism. Translocation of solutes. Plant hormones. Vegetative growth. Environmental factors affecting vegetative growth. Reproductive growth. Environmental factors influencing reproductive growth. Growth correlations. Germination and dormancy. Growth periodicity. Plant movements. Author index. Subject index.

Note: (1939) A thoroughly revised edition of a standard college textbook. Prerequisite courses in general botany and general chemistry on the part of the student have been assumed. Like the original edition, the revision emphasizes experimental results and the interpretation of plant processes in terms of physicochemical principles. Most of the presentation is based directly on data selected from the original literature of the subject. In the new edition the chapters on various aspects of water relations have been somewhat abridged, with corresponding expansion of the chapters on metabolic processes and growth. A new chapter on enzymes replaces the former chapter on digestion. The extensive bibliographies of books and periodical articles printed at the conclusion of each chapter have been brought up to date.

RABINOWITCH EUGENE I.

Photosynthesis and related processes. Volume II, Part I Spectroscopy and fluorescence of photosynthetic pigments kinetics of photosynthesis. New York Interscience Publishers Inc., 1951 603–1208 p. 24 cm. $15 00 675

Contents: Part Three, Spectroscopy and fluorescence of photosynthetic pigments: Absorption spectra of pigments in vitro. Light absorption by pigments in the living cell. Fluorescence of pigments in vitro. Fluorescence of pigments in vivo. Part four Kinetics of photosynthesis: Methods of kinetic measurements. External and internal factors in photosynthesis. Concentration factors. The light factor: I, Intensity; II, Maximum quantum yield of photosynthesis; III, Photosynthesis and light quality; role of accessory pigments. Index.

Note: (154*) Advances in the knowledge of photosynthesis since 1945 due partly to the use of radioactive carbon as a tracer in studying photosynthetic processes, have been so substantial that volume II of this work is both a continuation and a supplement to the first volume. The work remains a comprehensive, critical digest of the published literature. It is addressed to workers in the field and to chemists and physicists about to begin research in it or for some other reason in need of a technical review of its current state.

SKOOG FOLKE editor

Plant growth substances. Madison, Wis. University of Wisconsin Press, 1951 476 p. illus. 24 cm. $6 00 676

Contents: Plant growth substances: The history and nature of plant growth hormones, by A. J. Haagen-Smit. The synthetic auxins: relation between structure and activity by K. V Thimann. Growth and structure of the primary wall, by T Kerr. Mechanisms of cell elongation, by H. Burström. Control of evolution and life processes in plants, by A. F Blakeslee. Twenty years of plant hormone research, by F W Went. Plant hormones in practice, by P W Zimmerman. Growth substances in plant metabolism: The study of growth substances in plant metabolism, by R. H. Burris. Changes in metabolism during growth and its inhibition, by K. V Thimann and others. Stimulation of respiration in relation to growth, by G. S. Avery Jr. Respiratory changes in relation to toxicity by F G. Smith. Tissue responses to growth substances: Electrical polarity and auxins, by A. R. Schrank. Translocation of growth regulating substances and their effect on tissue composition, by J. W Mitchell. Histological responses to growth-regulating substances, by J. M. Beal. Comparative effects of growth substances on stem anatomy by B. R. Strackmeyer. Formative effects of hormone-like growth regulators, by P W Zimmerman. Practical applications of growth regulators: Vegetation control on nonagricultural land, by K. C. Barrons. Differential responses in crop plants, by R. S. Dunham. Growth substances in relation to the production of tree fruits, by F E. Gardner. Use of growth substances in tropical agriculture, by J van Overbeek. Growth substances in vegetative development. The role of growth substances in vegetative development as exemplified in the

sue cultures, by P. R. White. Factors influencing the growth of plant embryos, by N. K. Ziebur. Growth substances and the formation of buds in plant tissues, by F. Skoog and C. Tsui. The development of stems and leaves, by F. W. Went. Growth substances in reproductive development: Chemical regulation of sexual processes in fungi, by J. R. Raper. The sexual substances of algae, by G. M. Smith. Growth regulating substances in relation to reproduction of some horticultural plants, by A. E. Murneek. The induction of flowering with plant extract, by R. H. Roberts. Fruit development as influenced by growth hormones, by F. G. Gustafson. The growth hormone mechanism in fruit development, by R. M. Muir. Growth substances in fruit setting, by S. H. Wittwer. Growth substances in pathological growth: Experimental induction and inhibition of overgrowths in plants, by R. S. de Ropp. In vitro experiments on tissues of pathological origin, by A. C. Hildebrandt. The interaction between causative agents in diseased growth, by A. J. Riker and J. E. Thomas. Deformities caused by insects, by T. C. Allen. Comparative studies of metabolism in insect galls and normal tissues, by E. H. Newcomb. Vitamins and amino acids as growth factors: Growth factors in bacterial nutrition, by E. E. Snell. Genetic aspects of growth responses in fungi, by E. L. Tatum. Vitamin and amino acid requirements for the growth of higher plants, by W. J. Robbins.

Note: The papers published in this volume were presented in general meetings and round table discussions at the University of Wisconsin, September 5–7, 1949. They cover all aspects of the physiology, biochemistry, chemistry, and agricultural uses of plant growth substances. Bibliographical references are printed at the end of each paper.

TRUOG, EMIL, editor

Mineral nutrition of plants. Madison, The University of Wisconsin Press, 1951. 469 p. illus. 24 cm. $6.00 677

Contents: Mineral nutrition of plants: World food possibilities and fertility status of our soils, by C. E. Kellogg and A. C. Orvedal. Physico-chemical and biological factors affecting nutrient availability in soils: Soil as a medium for plant growth, by E. Truog. The activities of cations held by soil colloids and the chemical environment of plant roots, by C. E. Marshall. The availability of soil anions, by R. Overstreet and L. A. Dean. Contact phenomena between adsorbents and their significance in plant nutrition, by H. Jenny. The effect of soil physical properties on nutrient availability, by J. B. Page and G. B. Bodman. Role of soil microorganisms in nutrient availability, by A. G. Norman. Mechanism of entry and translocation of mineral nutrients in plants: The nature of the process of inorganic solute accumulation in roots, by T. C. Broyer. The mechanism of ion absorption, by H. Burström. The translocation of minerals in plants, by O. Biddulph. Some field problems in plant nutrition: Control of nitrogen effects on McIntosh apple trees in New York, by D. Boynton. Production of vegetable crops for the canning industry, by J. B. Hester. Role of minerals in plant nutrition: Growth and function as criteria in determining the essential nature of inorganic nutrients, by D. I. Arnon. Mineral nutrition in relation to the ontogeny of plants, by W. F. Loehwing. Correlations between protein-carbohydrate metabolism and mineral deficiencies in plants, by R. A. Steinberg. Modifying influences of various environmental factors upon mineral nutrition: Light as a modifying influence on the mineral nutrition of plants, by R. B. Withrow. Soil moisture and the mineral nutrition of plants, by C. H. Wadleigh and L. A. Richards. Environmental influences on the growth of sugar cane, by H. F. Clements.

Note. This volume is composed of original papers which were presented at a symposium sponsored by the University of Wisconsin as one of the events in celebration of its centennial. In general the papers are addressed to graduate scientists who are concerned with research in connection with horticulture, plant biochemistry, and plant physiology and they are written in technical terminology. Most of them are accompanied by references to the literature. There is no volume index.

ZOOLOGY

GENERAL

ALLEE, WARDER CLYDE, AND OTHERS

Principles of animal ecology By W C. Allee, Alfred E. Emerson, Orlando Park, Thomas Park, Karl P Schmidt. Philadelphia W B Saunders Company 1949 837 p. illus. 26 cm. $14.00 678

Contents (abridged) Section I, The history of ecology Section II, Analysis of the environment The general environment. Heat. Light. Gravity pressure, and sound. Currents of air and of water. The substratum. Physicochemical and chemical phases. Water. The atmospheric gases. Dissolved salts as limiting factors. Combinations of environmental factors. Ecological relations of soil. Biotic factors in relation to individuals. Section III, Populations General properties of populations. Biological backgrounds for population studies. Certain demographic backgrounds for population studies. The growth form of populations. Population factors and selected population problems. Animal aggregations. The organization of insect societies. Section IV, The community: Community organization—stratification—metabolism—periodism. Community succession and development. Biome and biome-type in world distribution. Section Ecology and evolution Ecology and genetic variation. Ecology and isolation. Adaptation. Natural selection. Evolution of interspecies integration and the ecosystem. Bibliography and author index. Subject index.

Note: A presentation in the form of college textbook of the principles of ecology with emphasis on the animal factors. Throughout the work the authors give samplings of the evidence on which the principles of ecology are based, and frequent references are made to the bibliography of the subject, which covers more than 50 double-columned pages at the end of the book. The work may be used in university courses as textbook and by professional zoologists and other scientists as summary of the present status of animal ecology

DEVOE, ALAN

This fascinating animal world. New York McGraw Hill Book Company Inc. 1951 303 p. illus. 21 cm. $3 75 679

Contents: The nature of this book. Animals in general. Mammals. Birds. Insects. Snakes. Fish. Animal variety The adventure of animals. Index.

Note: A well-written book of miscellaneous information about animals. It provides authentic answers for such questions as "Can porcupines throw their quills?" "Can fish drown?" and "Is there such thing as white elephant?" However, it is not mere miscellany Its contents are such that practically everyone who reads it through will gain more profound understanding of animals and of life processes such as evolution and reproduction. The book is intended for popular reading and reference; hence, there are no references to related literature.

DRIVER, ERNEST CHARLES

Name that animal a guide to the identification of the common land and fresh-water animals of the United States, with special reference to the area east of the Rockies. With drawings by Olive Driver Second edition Northampton, Mass. The author 1950. 558 p. illus. 23 cm. $6.50 680

Contents: Introduction Protozoa. Moss-like and jelly-like animals. Rotifers and gastrotrichs. Worm-like and leech-like animals. Mollusks. Arthropods. Fishes Salamanders. Frogs and toads. Lizards. Snakes. Turtles. Birds. Mammals. Eggs. Tracks.

Note: (1940) This work is classified and illustrated guide for the identification of land and fresh-water animals of eastern North America. It is designed to serve the needs of those who are not specialists in zoology and yet wish an introduction to the principal genera and species of the various orders of animals. The second edition is revised and enlarged from the first edition. Additions have been made to the keys and to the lists of references, as well as to the text.

FARRIS, EDMOND JOHN, editor

The care and breeding of laboratory animals. New York John Wiley & Sons, Inc., 1950 515 p. illus. 23 cm $8.50 681

Contents: The monkey by G. van Wagenen. The rat as an experimental animal, by E. J. Farris. The care of experimental mice, by L. C. Strong. The guinea pig, by H. L. Ibsen. Breeding and care of the Syrian hamster, by E. M. Poiley The rabbit, by P. B. Sawin. The dog, by L. F Whitney The domestic cat, by A. R. Dawson. Ferrets, by T H. Hammersla. The opossum, by E. J Farris. The domestic fowl, by F B. Hutt. Reptiles, by C. M. Pope. Amphibia, by R. C. Hutchinson. Fishes as laboratory animals, by M. Gordon. Drosophila, by W P Spencer. The control of laboratory pests and parasites of laboratory animals, by W E. Dove. Index.

Note: In this valuable book each author discusses an animal with which he has worked; consequently the text abounds in details that would not be found in book written solely from the literature. In most chapters the following points are covered: cages, equipment, record keeping, handling, reproduction, diet, disease, shipping regulations and procedure. References to the literature accompany each chapter The book was written primarily for professionally trained personnel associated with university and other experimental laboratories. Although the commercial raising of laboratory animals for sale is not covered, it does contain valuable information for persons engaged in this business.

HIGMAN HARRY WENTWORTH AND EARL J LARRISON

Union Bay the life of a city marsh. Illustrated by Edmund J Sawyer Seattle University of Washington Press, 1951 315 p. illus. 21 cm. $4.00 682

Contents: The marsh in Union Bay How the tule wrens acquired summer quarters. The marsh is hotel. The tail slapper A wren's worm. The bill of fare. Shells on Union Bay The white pigeon. The track near the marsh. Introducing mudskipping new Arrowhead, squaw's loom, and other things. The humpbacked shrubland that goes to sea. Among the guests registered. A firm nest. How new water witch came to the marsh. Teeters, sords, and bobs. How the green heron wandered. Marsh symphony Quintet. Pipkins and dowitchers. Sky sweepers. Wild fowl and man. Who killed Cock Robin? Fog is persistent. The spoilers lose control.

Note: A book of essays about the wildlife in marsh located in well populated district in the city of Seattle, Washington. The main theme is the interrelation between the wildlife and the adjacent settlement of man, but this idea is not overemphasized. The book is essentially collection of sensitive writing about marsh life as observed by these two authors, and it is addressed to lay readers rather than to specialists.

LEY WILLY

Dragons in amber further adventures of a romantic naturalist. New York The Viking Press 1951 328 p illus. 21 cm. $3 75 683

Contents: Part one, Records in stone: The tears of the Heliades. The secret of the blue earth. Footprints in red sandstone. The dragon from the Lias epsilon. The mammal from the permafrost. Part two, The last of their kind: The story of the snake. Stronghold of the pandas. A bird known as takahe. Green fossil. The forest of the dinosaurs—sequoias. The forest of the dinosaurs—cycads. Part three, Wanderers across the planet: The story of the fish Anguilla. The re-

turn of native. Wanderers across the planet. The islands of adventive fauna. Index.

Note. An interesting book in which there are several fascinating accounts of zoological discovery and research and also some stories about fossils. It is designed for the general reader. The various chapters are more or less independent accounts and are written in the vein of *The kingfish the dodo, and the unicorn* by the same author. Drawings are by the author's wife, Olga Ley. Two chapters originally appeared in condensed form in *Natural history magazine.*

PETERSON, ROGER TORY

Wildlife in color Sponsored by the National Wildlife Federation. Boston Houghton Mifflin Company, 1951 191 p illus. (col'd) 20 cm. $3 00 684

Contents: Wildlife in color Near home—the towns and farms. The deciduous woodlands. The North Woods country (the coniferous forest). Water the blood of the earth. The swamps and fresh marshes. The coast and the sea. The South. Grass country (the prairies and the plains) The desert. The West. The Far North and the Arctic. Index.

Note A novelty among books on nature. It contains 453 illustrations in full color all of which are reproductions of paintings made for the National Wildlife Federation from 1939 to 1951 by noted wildlife artists. They were first reproduced and sold in the form of stamps to further conservation of wildlife. In this book the reproductions are in the same size as the stamps, some being as large as 2 in. by 2½ in. and others being 2 in. by 1¼ in. Wild flowers as well as animals are illustrated. The text is written for popular reading and is built upon the theme of conserving wildlife.

TEXTBOOKS

HEGNER, ROBERT WILLIAM, AND KARL A. STILES

College zoology Sixth edition. New York The Macmillan Company 1951 911 p. illus. (part col d) 24 cm. $6.50 685

Contents (abridged) Protoplasm and cellular organization. Phylum Protozoa. Relations of Protozoa to man. Introduction to the Metazoa. Phylum Porifera Phylum Coelenterata. Phylum Ctenophora. Phylum Platyhelminthes. The roundworms. Phylum Annelida. Phylum Arthropoda. Phylum Mollusca. Phylum Echinodermata. Phylum Chordata. A representative vertebrate—the frog Subphylum Vertebrata. Nutritive processes and transportation in animals. Skeletal structures and movement. Coordination and behavior Reproduction and development. Heredity Ecology and geographical distribution. The origin and history of animal life History of zoology Glossary Index.

Note (1541) A long-established college textbook organized on the pedagogical principle of studying first the simpler animals, then proceeding gradually to the complex. The main arrangement is by phylogenetic groups, and general principles are in the main deduced from study of the groups. Although in this edition the book has been extensively revised, the main plan of organization has been retained About 100 new illustrations have been added, and the glossary has been considerably expanded Professor Stiles—who is responsible for the sixth edition—is a member of the faculty of Michigan State College.

STORER, TRACY IRWIN

General zoology Second edition. New York McGraw Hill Book Company 1951 832 p. illus. 24 cm. (McGraw Hill publications in the zoological sciences, E. J Boell, consulting editor) $6.50. 686

Contents (abridged) Part I, General animal biology: The frog as representative animal. Protoplasm, cells, and tissues. Organs and organ systems. Reproduction and development. Heredity and genetics. Animal ecology Organic evolution. History of zoology Classification and nomenclature. Part II, The animal kingdom. Glossary Index.

Note. (1546) A general introductory text for colleges and universities. The first part—which accounts for approximately one-third of the book's length—contains chapters on the general aspects of animal biology including organ systems and evolution. The second part is traditional arrangement of descriptive material arranged by phyla and classes. The illustrations are numerous and are well executed. A detailed index makes the book useful for elementary reference. A fair number of additions and revisions have been made in the present edition. These include the adding of recent books to the lists of references.

WEIMER, BERNAL ROBINSON

Man and the animal world. New York John Wiley & Sons, Inc. 1951 569 p. illus. (part col d) 23 cm. $5.00 687

Contents (abridged) Biology and the scientific method. Life and living things. Metabolism. Foods and their uses. The blood and circulatory system. Adjustment to environment. Growth and reproduction. The mechanism of heredity Human heredity and eugenics. The scientific naming of animals—taxonomy Protozoa, sponges, and coelenterates. Flatworms, roundworms, and segmented worms. Arthropoda. Mollusks and echinoderms. Chordates. Animals and their environment—ecology Life, its nature and origin. The theory of evolution. The course of evolution. Index and glossary

Note: An elementary textbook of zoology on the college level. Features of the presentation include: approach to the animal kingdom through man as the living animal best known to the student; inclusion of practical aspects of zoology, such as the ways in which animal organisms influence human health, emphasis on the scientific method, and careful adaptation of illustrations to textual material. The author is Professor of Biology in Bethany College.

INVERTEBRATES (EXCEPT INSECTS)

BAER, JEAN GEORGES

Ecology of animal parasites. Urbana, Ill. The University of Illinois Press, 1951. 224 p. illus. 28 cm. $5 00. 688

Contents: Introduction. Part I, Animal associations, definitions. Part II, Adaptations to parasitism Protozoa. Mollusca. Turbellaria. Annelida. Gordiacea. Arthropoda: Crustacea: Copepoda. Cirripedia. Isopoda. Amphipoda. Summary of parasitic adaptations among crustaceans. Acarina. Insecta. Nematoda. Pentastomida. Acanthocephala. Trematoda: Monogenea. Digenea. Cestodaria. Cestoda. Part III, Host-parasite relationships: Host specificity The action of parasites upon their hosts. Part IV, Physiology of parasites: Physiology of parasitic protozoa: Blood parasites. Intestinal symbionts and parasites. Physiology of parasitic helminths: Somatic helminths. Intestinal helminths. Conclusions. In vitro cultures of parasitic helminths. Part Origin of parasitism. Index.

Note: A study of animal parasitism adapted from the material presented in two courses in parasitology given in the Graduate College of the University of Illinois by visiting professor from the University of Neuchâtel. How parasitism had its beginning and what are its present forms are among the matters discussed. The zoological and ecological rather than the medical and veterinary aspects of the subject are emphasized. Adaptations to parasitism are examined from both the morphological and the biological angles, with stress laid on the latter. The illustrative drawings, which number more than 150, are the work of Katherine Hill Paul. Bibliographical references appear at the ends of the chapters. This is an advanced work of interest to ecologists in general and of particular interest to invertebrate zoologists and helminthologists.

BAKER EDWARD WILLIAM, AND G W WHARTON

An introduction to acarology New York The Macmillan Company 1952 465 p. illus. (part col d) 22 cm. $10 00 689

Contents. Introduction. The suborder Onychopalpida Wharton, 1947 The suborder Mesostigmata G. Canestrini, 1891. The suborder Ixodides Leach, 1815. The suborder Trombidiformes Reuter 1909. Hydrachnellae Latreille, 1802. The suborder Sarcoptiformes Reuter, 1909 Oribatei Dugès, 1833. Index.

Note An elementary yet very comprehensive book on mites. The introduction covers the general structure, development, and ecology of mites. The families then are taken up one by one, with suitable keys to assist in identification. For each family the following information is given if known. diagnosis, list of genera and their type species, discussion including the biology the economic, or medical importance with emphasis on the species involved, and series of references to pertinent literature. Line drawings are included. The work is intended not only as guide to the professional

entomologist but also for the information of those in related fields, including agricultural entomology, ecology and medical parasitology

Brown Frank Arthur, jr. editor
Selected invertebrate types. New York John Wiley & Sons, Inc. 1950. 597 p. illus. 24 cm $6 00. 690

Contents (abridged) Phyla: Protozoa. Mesozoa. Porifera. Coelenterata. Ctenophora. Platyhelminthes. Rhynchocoela. Acanthocephala. Aschelminthes. Entoprocta. Ectoprocta. Phoronidea. Annelida. Echiuroidea. Sipunculoidea. Mollusca. Brachiopoda. Onychophora. Arthropoda. Linguatula. Tardigrada. Chaetognatha. Echinodermata. Enteropneusta. Chordata. Bibliography. Index.

Note: The authors of this work are W. Bohmuth, F. A. Brown, Jr., J. B. Buck, W. D. Burbanck, C. G. Goodchild, L. H. Hyman, M. L. Keister, L. H. Kleinholz, J. H. Lochhead, M. E. Pierce, W. M. Reid, M. D. Rogick, and T. H. Waterman, all members and former members of the staff of the Department of Invertebrate Zoology, the Marine Biological Laboratory, Woods Hole, Massachusetts. In the book more than one hundred species of animals commonly used in laboratory instruction and experimentation are described in detail with particular attention to such points as external structure, general organization, feeding and digestion, nervous system and sense organs, muscular system, and reproductive system. The book is suitable for use as a laboratory manual in undergraduate courses and also as a guide for instructors and research workers to species particularly adapted to laboratory use.

Gertsch, Willis John
American spiders. New York D Van Nostrand Company Inc. 1949 285 p. illus. (part col d) 22 cm. (The new illustrated naturalist, *Editorial advisory board* William Beebe and others) $7.50 691

Contents: Introducing spiders. The place of spiders in nature. The life of the spider. Silk spinning and handiwork. Courtship and mating. The evolution of spiders. The tarantulas. The cribellate spiders. The aerial web spinners. The hunting spiders. Economic and medical importance. The North American spider fauna. Glossary. Bibliography. Index.

Note: A general, readable account of the spiders of the United States and Canada written for the general reader. The selected bibliography of 16 items is a guide to further reading on the same subject. The book contains 64 plates reproduced from photographs, half of them in color.

Hartman, Olga
Goniadidae, Glyceridae and Nephtyidae. Los Angeles, California The University of Southern California Press 1950 181 p illus. 23 cm. (Allan Hancock Pacific expeditions. Vol. 15 no 1) $3.50 692

Note: A systematic report based mainly on collections in the Allan Hancock Foundation at the University of Southern California but also on collections in other museums. It contains descriptions of several newly recorded species and sub-species. The species descriptions include literature references, a record of the site of collections, morphological descriptions, and records of distribution. There are 19 plates of original drawings.

Holthuis Lipke B
A general revision of the *Palaemonidae* (Crustacea, Decapoda, Natantia) of the Americas. I, The subfamilies *Euryrhynchinae* and *Pontoniinae* II, The subfamily *Palaemoninae*. Los Angeles, Calif The University of Southern California Press 1951–52 2 v illus. 24 cm. (Allan Hancock Foundation publications. Occasional paper Nos. 11 12) $6.00 each. 693

Note: This monograph of the Palaemonidae from the Americas contains a complete list of all known species; there are keys to all genera and species, and there are full synonymies with distributional records for each species. In most cases, a description and figures accompany each species. The author has divided the family *Palaemonidae* into four subfamilies, based on degree of fusion of the rami of the upper antennular flagellum, and on mandibular and other characteristics. Three of the subfamilies are represented in America. There are numerous notes on color in life, stages of development, size variations, including abnormal figures, stages of reproductive development, and many comments on affinities with nearly related species. The two volumes contain 63 and 55 plates, respectively

Hyman, Libbie Henrietta
The invertebrates. Volume II Platyhelminthes and Rhynchocoela The acoelomate Bilateria. Volume III Acanthocephala, Aschelminthes, and Entoprocta The pseudocoelomate Bilaterea. New York McGraw Hill Book Company Inc. 1951 2 v illus. 24 cm. (McGraw Hill publications in the zoological sciences E. J Boell *consulting editor*) $9 00 694

Contents: Vol. II: Introduction of the Bilateria. The acoelomate Bilateria—phylum Platyhelminthes. The acoelomate Bilateria—phylum Rhynchocoela. Index. Vol. III The pseudocoelomate bilateria—phylum Acanthocephala. The pseudocoelomate Bilateria—phylum Aschelminthes. The pseudocoelomate Bilateria—phylum Entoprocta. Index.

Note: (1577) Two additional volumes of a comprehensive monographic treatise on the morphology embryology physiology etc., of the invertebrates. Essentially the work is a critical digest of the literature, but original material based on the author's investigations is also included. Comprehensive literature references are provided for each section. The large number of original drawings is a notable feature. A third and concluding volume is scheduled for early publication.

Kesling Robert Vernon
The morphology of ostracod molt stages. Urbana The University of Illinois Press, 1951 324 p illus. 26 cm. (Illinois biological monographs Harley Jones Van Cleave and others, editorial committee. Vol. XXI, no. 1–3) Paper $3.50 695

Contents. Taxonomy. General description. Detailed description. Biology. Immature stages. Variations in size of instars. Variation in shape of instars. Relation of appendages and internal organs to the shape of the valves in instars. Height-length ratio as a valid character for determination of species. Bibliography. Plates. Index.

Note: A detailed study of *Cypridopsis vidua* carried out in order to "give a full description of a typical living ostracod, some pertinent biological information and a comparison of the valves of the various instars. Chapters 2 and 3 contain a general and anatomical description, chapter 4 describes the egg, embryology, development, molting, swimming, rate of reproduction, life span, etc. The remaining chapters are chiefly descriptions of the molt stages or instars. There are 34 figures in the text and in addition 94 plates containing reproductions of 419 photographs of stained sections.

Lwoff André, editor
Biochemistry and physiology of protozoa. Volume I. New York Academic Press, Inc. 1951 434 p 24 cm. $8.80 696

Contents: Introduction to biochemistry of protozoa, by A. Lwoff. The phytoflagellates, by S. H. Hutner and L. Provasoli. The nutrition of parasitic flagellates (Trypanosomidae, Trichomonadinae) by M. Lwoff. Metabolism of Trypanosomidae and Bodonidae, by T. von Brand. Nutrition of parasitic amebae, by M. Lwoff. Biochemistry of plasmodium and the influence of antimalarials, by R. W. McKee. The biochemistry of ciliates in pure culture, by G. W. Kidder and V. C. Dewey. Author index. Subject index.

Note. The biochemistry of protozoa is of considerable scientific interest. This work is an attempt to bring together, in the form of a two-volume collection of original papers, the present knowledge of the subject, even though in some areas the information is still meager. The papers, written by recognized authorities, are addressed

to other professional workers in biochemistry. Each is accompanied by a substantial bibliography

MORRIS, PERCY A.
A field guide to the shells of our Atlantic and Gulf coasts. Revised and enlarged edition. Illustrated with photographs. Boston Houghton Mifflin Company 1951 236 p illus (part col d) 19 cm. (The Peterson field guide series) $3 75 697

Contents (abridged) The pelecypods. Gastropods. Glossary of descriptive terms. Index. $3.75.
Note: (571) A standard handbook for amateur naturalists and collectors. It contains descriptions in non-technical language of marine shells that can be collected along the Atlantic and Gulf coasts of the United States. All of the larger and more common forms are described. From 7 to 15 lines of description are given for each species. The book is illustrated with reproductions of photographs of 218 species and subspecies of pelecypods and 276 species and subspecies of gastropods. In this second edition the number of species described has been increased by 112 and the common or popular names of the species wherever established have been added.

OSBURN RAYMOND CARROLL
Bryozoa of the Pacific Coast of America. Part 1 Cheilostomata Anasca. Part 2 Cheilostomata Ascophora. Los Angeles, California The University of Southern California, 1950 1952 611 p. illus 24 cm. (Allan Hancock Pacific expeditions. Vol. 14 number 1–2) $5 00 698

Note: A report based chiefly on specimens of Bryozoa that were collected during ten cruises of the Velero III during the years 1931–1942. Except for some concise preliminary matter which includes short glossary of zoological terms that have special application in the Bryozoa, the work is cast in the form of systematic catalogue. The species descriptions cover literature references, morphology and in many cases discussions of conflicts between the authors' observations and the records of others. Also, information on range is usually included. The two volumes contain together 64 plates of original drawings based on Pacific Coast specimens.

RICKETTS EDWARD FLANDERS, AND JACK CALVIN
Between Pacific tides. An account of the habits and habitats of some five hundred of the common conspicuous seashore invertebrates of the Pacific Coast between Sitka Alaska, and northern Mexico Third edition. Revised by Joel W Hedgpeth. Foreword by John Steinbeck. Line drawings by Ritchie Lovejoy Stanford, Calif Stanford University Press 1952 502 p illus (part col d) 24 cm. $6 00 699

Contents: About this book and Ed Ricketts, by J Calvin and J. W Hedgpeth. Introduction. Protected outer coast Rocky shores. Sandy beaches. Open coast Rocky shores. Sandy beaches. Bay and estuary: Rocky shores. Sand flats. Eelgrass Mud flats. Addendum: The Tomales Bay tidal flats. Wharf pilings: Exposed piles. Protected piles. Plankton Marine plankton of the Pacific Coast. Intertidal zonation and related matters Newcomers to the Pacific Coast. Appendix: Annotated systematic index and bibliography. Selected list of non-specific books and accounts. General index.
Note: (572*) An outstanding book designed for amateur naturalists and laymen here curiosity is aroused by the life forms inhabiting the tidal waters of the north temperate Pacific Coast. It is written in an engaging style but is somewhat more advanced than the usual popularization of biological knowledge. The information about each creature is written in narrative style—not tabulated—and usually covers habitat, appearance, reproductive cycle, and collecting techniques. The edition of 1948 was "admittedly an interim printing, since large amount of wartime research was not yet accessible. In the 1952 edition the new editor taking account of information published since the original edition of 1939 has made corrections and changes to bring the book up to date. The text remains essentially as the original authors left it, though new paragraphs have been added here and there, and some old ones have been rewritten. Some of the photographs and drawings have been replaced and some new illustrations added.

SNODGRASS ROBERT EVANS
A textbook of arthropod anatomy Ithaca, New York Comstock Publishing Associates (a division of Cornell University Press) 1952 363 p illus. 24 cm. $6.00 700

Contents: Introduction. The Trilobita. Limulus. The Eurypterida. The Pycnogonida. The Arachnida. The Crustacea. The Chilopoda. The Diplopoda. The Pauropoda. The Symphyla. The Hexapoda. References. Indexes.
Note Although labelled textbook, this survey of the comparative anatomy of the arthropods merits reading by anyone interested in the subject whether he be student or graduate. The author has made real contribution in bringing the scattered facts together and integrating them. The style is technical, but not cryptic. Unsolved problems are mentioned frequently in such sentences as "Inasmuch as no other arachnid has head structure comparable with the capitulum of the Acarina, it becomes somewhat of problem to understand how the acarine capitulum has been evolved from ordinary arachnid parts. There are 88 figures, each of which contains from five to ten reproductions of drawings of good quality. The list of references runs to twelve pages.

TATTERSALL WALTER MEDLEY
A review of the Mysidacea of the United States National Museum. Washington, D C. Government Printing Office, 1951 292 p. illus. 24 cm. (Smithsonian Institution. United States National Museum. Bulletin 201) Paper $1 00 701

Contents Introduction. Systematic distribution. Geographical distribution. History of American Mysidacea. Systematic discussion. Class Crustacea. Subclass Malacostraca. Division Peracarida. Order Mysidacea. Suborder Lophogastrida. Family Lophogastridae. Family Eucopiidae Dana. Suborder Mysida: Family Petalophthalmidae Czerniavsky. Family Mysidae. Subfamily Boreomysinae. Subfamily Siriellinae. Subfamily Gastrosaccinae. Subfamily Mysinae: Tribe Erythropini. Tribe Leptomysini. Tribe Mysini. Tribe Heteromysini. Species not represented in the collections of the United States National Museum. New genera, species, and varieties described herein. Literature cited. Index.
Note. A systematic description of 120 species of mysids, 19 of which are new and the majority of which are of American origin. The species are mostly from the collection of the United States National Museum. The work forms an introduction to the mysidacean fauna of the American continents. Under each species references to the literature are given, and the 20 page bibliography lists all known dealing with American species.

WARDLE, ROBERT ARNOLD, AND JAMES ARCHIE MCLEOD
The zoology of tapeworms. Minneapolis, Minn. Published for the University of Manitoba by the University of Minnesota Press, 1952 780 p illus. 24 cm. $12 50 702

Contents (abridged) Part I, General features: Life cycle. Biology Origin and evolution. History and classification. Part II, Tapeworm classification. References. Index.
Note: A large and detailed work by two University of Manitoba scientists who from the extensive literature of the subject and from their own observations present the general history, biology and taxonomy of the tapeworms of the world. All of the known families and genera and the majority of the known species are described in systematic order. Identification keys and numerous illustrations are provided. The viewpoint is zoological and medical aspects are not covered. The bibliography runs to 104 pages.

INVERTEBRATES INSECTS

BARBER, HERBERT SPENCER

North American fireflies of the genus Photuris. With preface and notes by Frank A. McDermott. Washington D C. The Smithsonian Institution 1951 58 p. illus. 24 cm. (Smithsonian miscellaneous collections. Vol. 117 number 1 Publication 4051) Paper $0.50 703

Contents: Introduction. Observations on adult behavior Nomenclature. Species of *Photuris*. Species here distinguished. *Photuris* male genitalia. Table of species of *Photuris*. Addendum (by F A. McDermott) Notes on some general characters of North American *Photuris*. Results of the examination of Barber's specimens. Literature cited.

Note: A study of *Photuris* fireflies with special attention to the taxonomy of the genus. It was based upon field studies, many of them made in and around Washington, D. C. Described are 19 species and varieties, of which 11 are new. Flashing conduct is considered as [illegible] means of species differentiation. A diagram is included to illustrate the flash intervals of the males of the different species of *Photuris*. Prepared for publication after the death of the author by [illegible] friend and collaborator the work was published on the Thomas Lincoln Casey Fund.

BATES, MARSTON

The natural history of mosquitoes. New York The Macmillan Company 1949 379 p. illus. 21 cm. $5.00. 704

Contents: Introduction. The environment of the adult. Survival and dispersal. The sexual behavior of mosquitoes. Food habits of the adult. Egg development and oviposition. Mosquito eggs. The larval environment. The physiology and behavior of larvae. The biological environment of the larva. The classification of larval habitats. The pupal stage. Mosquitoes in relation to other organisms. Mosquitoes as vectors of viruses. Mosquitoes as vectors of plasmodia. The species problem. The classification of mosquitoes. The distribution of mosquitoes. Techniques in mosquito study. The strategy of mosquito research. Appendix: Systematic list of mosquito species. Bibliography. Index.

Note: A comprehensive scientific account of mosquitoes viewed as living animals. All phases of this insect and its ecology are discussed except identification and control. The author is associated with the International Health Division of the Rockefeller Foundation. The book is of interest to biologists and also to public health workers. The bibliography is more or less limited to literature published since 1939; nevertheless it runs to 46 pages.

BERNER, LEWIS

The mayflies of Florida. Gainesville University of Florida Press 1950 267 p. illus. 26 cm. (University of Florida studies. Biological science series. Vol. IV, no. 4) $5.50. 705

Contents. Introduction. Historical review. The order Ephemeroptera. Primitive and specialized characters. Families of mayflies. Wing venation of mayflies. Taxonomic characters. A comparison of Florida mayflies with the northern fauna. Zoogeography. Climatic divisions of Florida. Habitats of Florida mayflies. Key to Florida mayflies. Species of Florida mayflies. Annotated list of mayflies. References. Index.

Note. A comprehensive study of the Ephemeroptera occurring in Florida. It was based on extensive field studies during the course of which 80,000 specimens were collected and examined and some new species were discovered. The greater part of the volume is taken up with systematic descriptions arranged by genera and species. However the descriptions are exceptionally full and often include accounts of personal observations as well as conventional information on taxonomy, distribution, ecology, habits, life history etc. There are 24 plates based on original drawings.

BLACKWELDER RICHARD ELIOT

The generic names of the beetle family Staphylinidae, with an essay on genotypy Washington, D C. Government Printing Office, 1952 483 p 23 cm. (Smithsonian Institution. United States National Museum. Bulletin 200) Paper $1.50 706

Contents: Introduction. The names of genera—Classification of names—Names not accepted into our formal nomenclature. Names accepted into nomenclature. Names herein not accorded separate status. The principle of genotypy. Genotype determination—Methods of fixation of genotypes—Fixation under the plenary powers. Automatic fixation. Original designation. Subsequent designation. Method and arrangement: List of generic names. Appendix of doubtful genera. Systematic list of changes. List of new names proposed herein. Bibliography. A recent paper by Bernhauer. Special comment on Tottenham's second paper. Generic names of Staphylinidae. Appendix of names of doubtful status. Systematic key to changes in application of names. List of new names proposed herein. Bibliography.

Note: An alphabetic listing of the generic names of [illegible] large, heterogeneous, widespread, and complex family of beetles. The list is preceded by an essay on the problems surrounding the use of generic names. Matters covered in the essay include synonymy, homonymy, emendation, errors in spelling, misapplication, zoologically validation, date, author, and priority. The list itself, which presents the facts of the establishment and subsequent use of all the names applied to genera and subgenera of Staphylinidae, extends over 378 pages. The work concludes with [illegible] 48-page bibliography.

CLARK AUSTIN HOBART AND LEILA F CLARK

The butterflies of Virginia (with 31 plates) Washington D C. The Smithsonian Institution 1951 239 p illus. (part col'd) 24 cm. (Smithsonian Institution. Smithsonian miscellaneous collections. Vol. 116 no 7) Paper $2.25 707

Contents: Introduction. Distribution of butterflies in Virginia. Keys to the butterflies of Virginia. Annotated list of butterflies of Virginia: Family Satyridae. Family Apaturidae. Family Nymphalidae. *Family Argynnidae. Family Danaidae. Family Libytheidae.* Family Riodinidae. Family Lycaenidae. Family Pieridae. Family Papilionidae. Family Hesperiidae. Erroneous records. Bibliography. Plates. Index.

Note: A monograph describing in systematic fashion the distribution of 134 known butterfly species of Virginia. The work is based upon an intensive study by the authors over nearly two decades, during which period they devoted nearly all their spare time to the study utilizing weekends and their annual vacations in visiting all the 100 counties in the state. Records were made personally in more than 800 localities, and these records were supplemented by information supplied by other collectors. Each species listed in the annotated list is illustrated among the plates. The notes for most of the species cover range, variation, occurrence, and seasons.

DEMEREC MILISLAV editor

Biology of Drosophila. New York John Wiley & Sons, Inc., 1950 632 p illus. 22 cm. $12.00. 708

Contents. Normal spermatogenesis in Drosophila, by K. W Cooper. The early embryology of Drosophila melanogaster, by B. P Sonnenblick. Histogenesis, organogenesis, and differentiation in the embryo of Drosophila melanogaster, by D F Poulson. The postembryonic development of Drosophila, by D Bodenstein. External morphology of the adult, by G F Ferris. The internal anatomy and histology of the imago of Drosophila melanogaster, by A. Miller. Collection and laboratory culture, by W P Spencer. Index of names. Subject index.

Note: The purpose of this volume is to provide biologists with detailed and comprehensive description of the normal anatomy, histology and development of an insect widely used in biological research. Photographs, diagrams, and anatomical drawings are used extensively to illustrate the various stages in organic development, and each chapter contains [illegible] two- to three-page bibliography. The book represents the cooperative efforts and original research of seven specialists in this field of biological investigation.

ESSIG EDWARD OLIVER AND FRIEDA ABERNATHY

The aphid genus Periphyllus a systematic, biological & ecological study Berkeley and

to other professional workers in biochemistry. Each is accompanied by a substantial bibliography.

MORRIS, PERCY A.

A field guide to the shells of our Atlantic and Gulf coasts. Revised and enlarged edition. Illustrated with photographs. Boston Houghton Mifflin Company 1951 236 p. illus. (part col'd) 19 cm. (The Peterson field guide series) $3.75 697

Contents (abridged): The pelecypods. Gastropods. Glossary of descriptive terms. Index. $3.75.

Note. (571) A standard handbook for amateur naturalists and collectors. It contains descriptions in non-technical language of marine shells that can be collected along the Atlantic and Gulf coasts of the United States. All of the larger and more common forms are described. From 7 to 15 lines of description are given for each species. The book is illustrated with reproductions of photographs of 218 species and subspecies of pelecypods and 270 species and subspecies of gastropods. In this second edition the number of species described has been increased by 112 and the common or popular names of the species wherever established have been added.

OSBURN, RAYMOND CARROLL

Bryozoa of the Pacific Coast of America. Part 1 Cheilostomata Anasca. Part 2 Cheilostomata Ascophora. Los Angeles California The University of Southern California, 1950 1952 611 p. illus. 24 cm. (Allan Hancock Pacific expeditions. Vol. 14, number 1–2) $5.00 698

Note: A report based chiefly on specimens of Bryozoa that were collected during ten cruises of the Velero III during the years 1931–1949. Except for some concise preliminary matter, which includes a short glossary of zoological terms that have special application to the Bryozoa, the work is cast in the form of a systematic catalogue. The species descriptions cover literature references, morphology and in many cases discussions of conflicts between the author's observations and the records of others. Also, information on range is usually included. The two volumes contain together 64 plates of original drawings based on Pacific Coast specimens.

RICKETTS, EDWARD FLANDERS, AND JACK CALVIN

Between Pacific tides. An account of the habits and habitats of some five hundred of the common, conspicuous seashore invertebrates of the Pacific Coast between Sitka, Alaska, and northern Mexico. Third edition. Revised by Joel W. Hedgpeth. Foreword by John Steinbeck. Line drawings by Ritchie Lovejoy. Stanford Calif. Stanford University Press 1952 502 p. illus. (part col'd) 24 cm. $6.00 699

Contents: About this book and Ed Ricketts, by J. Calvin and J. W. Hedgpeth. Introduction. Protected outer coast: Rocky shores. Sandy beaches. Open coast: Rocky shores. Sandy beaches. Bay and estuary: Rocky shores. Sand flats. Eelgrass. Mud flats. Addendum: The Tomales Bay tidal flats. Wharf pilings: Exposed piles. Protected piles. Plankton: Marine plankton of the Pacific Coast. Intertidal zonation and related matters. Newcomers to the Pacific Coast. Appendix: Annotated systematic index and bibliography. Selected list of non-specific books and accounts. General index.

Note. (572*) An outstanding book designed for amateur naturalists and laymen whose curiosity is aroused by the life forms inhabiting the tidal waters of the north temperate Pacific Coast. It is written in an engaging style but is somewhat more advanced than the usual popularization of biological knowledge. The information about each creature is written in narrative style—not tabulated—and usually covers habitat, appearance, reproductive cycle, and collecting techniques. The edition of 1948 was "admittedly an interim printing, since a large amount of wartime research was not yet accessible." In the 1952 edition, the new editor, taking account of information published since the original edition of 1939, has made corrections and changes to bring the book up to date. The text remains essentially as the original authors left it, though new paragraphs have been added here and there, and some old ones have been rewritten. Some of the photographs and drawings have been replaced and some new illustrations added.

SNODGRASS, ROBERT EVANS

A textbook of arthropod anatomy. Ithaca, New York. Comstock Publishing Associates (a division of Cornell University Press) 1952 363 p. illus. 24 cm. $6.00 700

Contents: Introduction. The Trilobita. Limulus. The Eurypterida. The Pycnogonida. The Arachnida. The Crustacea. The Chilopoda. The Diplopoda. The Pauropoda. The Symphyla. The Hexapoda. References. Indexes.

Note: Although labelled a textbook, this survey of the comparative anatomy of the arthropods merits reading by anyone interested in the subject whether he be a student or graduate. The author has made a real contribution in bringing the scattered facts together and integrating them. The style is technical, but not cryptic. Unsolved problems are mentioned frequently in such sentences as "Inasmuch as no other arachnid has a head structure comparable with the capitulum of the Acarina, it becomes somewhat of a problem to understand how the acarine capitulum has been evolved from ordinary arachnid parts." There are 88 figures, each of which contains from five to ten reproductions of drawings of good quality. The list of references runs to twelve pages.

TATTERSALL, WALTER MEDLEY

A review of the Mysidacea of the United States National Museum. Washington D. C. Government Printing Office 1951 292 p. illus. 24 cm. (Smithsonian Institution. United States National Museum. Bulletin 201) Paper $1.00 701

Contents: Introduction. Systematic distribution. Geographical distribution. History of American Mysidacea. Systematic description. Class Crustacea. Subclass Malacostraca. Division Peracarida. Order Mysidacea. Suborder Lophogastrida: Family Lophogastridae. Family Eucopiidae Dana. Suborder Mysida: Family Petalophthalmidae Czerniavsky. Family Mysidae: Subfamily Boreomysinae. Subfamily Siriellinae. Subfamily Gastrosaccinae. Subfamily Mysinae: Tribe Erythropini. Tribe Leptomysini. Tribe Mysini. Tribe Heteromysini. Species not represented in the collections of the United States National Museum. New genera, species, and varieties described herein. Literature cited. Index.

Note: A systematic description of 120 species of mysids, 19 of which are new and the majority of which are of American origin. The species are mostly from the collection of the United States National Museum. The work forms an introduction to the mysidacean fauna of the American continent. Under each species references to the literature are given, and the 20-page bibliography lists all known dealing with American species.

WARDLE, ROBERT ARNOLD, AND JAMES ARCHIE MCLEOD

The zoology of tapeworms. Minneapolis, Minn. Published for the University of Manitoba by the University of Minnesota Press, 1952 780 p. illus. 24 cm. $12.50 702

Contents (abridged): Part 1, General features: Life cycle. Biology. Origin and evolution. History and classification. Part 2, Tapeworm classification. References. Index.

Note: A large and detailed work by two University of Manitoba scientists who from the extensive literature of the subject and from their own observations present the general history, biology and taxonomy of the tapeworms of the world. All of the known families and genera and the majority of the known species are described in systematic order; identification keys and numerous illustrations are provided. The viewpoint is zoological and medical aspects are not covered. The bibliography runs to 104 pages.

butterflies and as medium of identification of the species. Every species of importance is illustrated, color being used where important for identification. Information included in the descriptions includes descriptions of chief characteristics, notes on habits and habitats, condensed description of the mature larva, number of annual broods, method of hibernation, average dates of appearance of spring adults, geographic range within the area, and type locality range, and brief characterization of each valid subspecies found within the area. Roger Tory Peterson states of the volume: "The special sections on life zones and their indicator plants, on ecology on the larva and [illegible] of nomenclature, and the discussions of subspecies and geographic variation will be as enlightening to the serious bird student or mammalogist as to the insect collector for they will throw light on their specialties," and adds, "This guide [illegible] is key book in the *Field guide* series, for many of the general discussions will not be repeated elsewhere in the series."

MAYNARD ELLIOTT ALLEN

A monograph of the Collembola or spring tail insects of New York State. Ithaca, N Y Comstock Publishing Company Inc., associated with Cornell University Press 1951 339 p. illus. (part col'd) 24 cm. $7.50. 715

Contents: Part I, Introduction: New York State collection records. Phylogeny of the Collembola. Morphology of the Collembola: external structure. Morphology of the Collembola: internal structure. Life cycle. Habitat. Abundance. Food. Geographical distribution. Economic importance. Collection and preservation of Collembola. Reasons for taxonomic investigation of Collembola. Nomenclature and synonymy. Literature pertaining to the Collembola. Types of new species. Part II, Systematic account: Order Collembola. Key to the suborders of Collembola. Suborder Arthropleona. Key to the superfamilies of Arthropleona. Superfamily Poduroidea. Key to the families of Poduroidea. Family Poduridae. Key to the subfamilies of Poduridae. Family Onychiuridae. Key to the New York genera of Onychiuridae. Superfamily Entomobryoidea. Family Isotomidae. Family Entomobryidae. Key to the New York subfamilies of Entomobryidae. Suborder Symphypleona. Family Sminthuridae. Key to the subfamilies of Sminthuridae. Glossary. Bibliography of the Collembola of the world. Index.

Note: A general and systematic account of the 200 species and varieties of Collembola found in New York State. In the systematic part are detailed descriptions of the various suborders, superfamilies, families, subfamilies, tribes, genera, subgenera, and species, with numerous keys to the New York species. The typical descriptions of the species include bibliographical references, length, color, head, thorax, abdomen, clothing, discussion, and distribution. Distribution is indicated by towns in New York State where found and the dates of collecting and is also indicated for other states of the U. S. A. and for foreign countries where recorded or known. Five of the plates reproduce water-color drawings of springtails in full color. The author indicates his belief that this group of primitive wingless insects is responsible for some of the unsual hidden loss of crops in the United States. The book is [illegible] necessary tool for all persons interested in the study of Collembola.

MICHENER, CHARLES DUNCAN AND MARY H. MICHENER

American social insects a book about bees, ants wasps and termites. New York D Van Nostrand Company Inc., 1951 267 p illus. (part col d) 22 cm. (The new illustrated nat uralist, Editorial advisory board William Beebe and others) $6.00 716

Contents (abridged): Part one, The nature of social insects: What are social insects? Sensations and behavior. Learning and behavior. What determines caste? How insects became social. Subsocial insects. Part two, The hornets and other wasps. Part three, The bees. Part four, The ants. Part five, The termites. Part six, Societies and their parasites. Unexpected guests. Societies of insects and men. Appendix: Insect structure and classification. Bibliography. Glossary. Index.

Note: A popular account of the social insects and their behavior, written by entomologists as an introduction for the reader without previous knowledge of the subject. While all the major species of bees, ants, wasps, and termites found in the United States are named and described, and some of the foreign representatives also are mentioned, the book is more [illegible] readable description of the lives of these insects than [illegible] guidebook for the identification of species. Especially noteworthy are the illustrations from photographs, 30 of them in color and over 75 in black and white.

PETERSON, ALVAH

Larvae of insects. An introduction to nearc tic species. Part II Coleoptera, Diptera, Neuroptera, Siphonaptera, Mecoptera, Trichoptera. Columbus O The author 1951 416 p. illus. 28 cm. $7.00 717

Contents: Introduction. Methods. Larvae of Coleoptera, discussion. Key to families of Coleoptera. Family names of Coleoptera. Descriptions of larvae of common families of Coleoptera. List of some common, important or unusual species of Coleoptera. Larvae of Coleoptera with explanations. Selected bibliography for larvae of Coleoptera. Larvae of Diptera, discussion. Key to families of Diptera. Family names of Diptera. Descriptions of larvae of common families of Diptera. List of some common, important and unusual species of Diptera. Larvae of Diptera with explanations. Selected bibliography for larvae of Diptera. Larvae of Neuroptera, discussion. Keys to families of Neuroptera. Larvae of Neuroptera with explanations. Larvae of Siphonaptera, discussion. Larvae of Siphonaptera with explanations. Larvae of Mecoptera, discussion. Larvae of Mecoptera with explanations. Larvae of Trichoptera, discussion. Key to families of Trichoptera. Larvae of Trichoptera with explanations. Selected bibliography of larvae of Mecoptera, Neuroptera, Siphonaptera and Trichoptera. Glossary for Part II. Food, host or habitat index for Coleoptera. Food, host or habitat index for Diptera. General index for Part II.

Note (1951) This volume is the second of [illegible] two-part work dealing with insect larvae. It contains drawings, keys, and text descriptive of the larval stages of the Coleoptera and Diptera presented in the same complete fashion as the Lepidoptera and Hymenoptera are treated in Part I; and in briefer fashion presents the larvae of the Neuroptera, Siphonaptera, Mecoptera, and Trichoptera. Especial attention is given to larvae of economic importance. Detailed illustrations in enlargement cover 104 pages, with explanations on facing pages. The total number of pages devoted to the Coleoptera is 118, to Diptera, 131, to the other four orders, 24.

RICHARDS ALBERT GLENN

The integument of arthropods the chemi cal components and their properties the anat omy and development, and the permeability Minneapolis Minn. University of Minnesota Press 1951 411 p illus. 24 cm. $6.00 718

Contents. Introduction. Section I, The chemical components, their combinations, their properties: Glucosamine, N-acetylglucosamine, chitobiose, and chitin. Chitin derivatives and metabolic sources. The detection and estimation of chitin. The distribution of chitin in the animal and plant kingdoms. The decomposition of chitin and cuticle in nature. Proteins. Polyphenols and enzymes. Mixed polymers. Pigments. Lipids. Inorganic constituents and calcification. The percentages of cuticular components. Unknown chemical components. The physical properties of cuticle and cuticular components. Section II, The microanatomy and development of the integument: The general structure. Historical and taxonomic résumé. The epicuticle, or non-chitinous cuticle. The procuticle, or chitinous cuticle. Differentiations of the procuticle. Physical colors. The epidermis. The oenocytes, blood cells, and basement membrane. Molting. Muscle attachments, tendons, and apophyses. Wings, gills, epidermal glands, etc. The tracheal system. Sculpturing, setation, and miscellaneous structures. Section III, The permeability of the cuticle: General remarks on the permeability of the cuticle. The penetration of water and gases. The penetration of electrolytes, nonelectrolytes, and insecticides. Bibliographical index of authors. Subject index.

Note: A comprehensive, well organized, and completely documented account of the arthropod integument, which will be of chief interest to entomologists, zoologists, and chemists. It is [illegible] synthesis of the literature of the subject for the use of other scientific workers. The author, an entomologist, gives the other classes of arthropods less attention than the insects, but points out that more work has been done with the integument of insects than with that of other arthropods. The bibliography runs to 77 pages.

SNYDER, THOMAS ELLIOTT

Catalog of the termites (Isoptera) of the world. Washington D C. The Smithsonian Institution, 1949 490 p. 23 cm. (Smithsonian miscellaneous collections. Vol. 112 (whole volume) Publication 3953) Paper $3.00 719

Contents. Introduction. List of the families, subfamilies, genera, and subgenera. Catalog of the termites (Isoptera) of the world: Living termites: Family Mastotermitidae. Family Kalotermitidae. Family Hodotermitidae. Family Rhinotermitidae. Family Termitidae. Not identified as to species. Not classified. Not termites, or of doubtful position. Fossil termites: Family Urakotermitidae. Family Mastotermitidae. Family Kalotermitidae. Family Hodotermitidae. Family Rhinotermitidae. Family Termitidae. Of uncertain or doubtful position. Fossils not termites. Descriptions of new genera. Index to species. Bibliography on the taxonomy of the termites of the world: On living termites. On fossil termites.

Note: A complete catalogue, systematically arranged, of all known species of termites, divided into 133 living genera, 13 fossil genera no longer living, and 17 fossil genera still living. Excepting for new genera, descriptions are not given of the species, genera, and families, but references indicate where in the literature of the subject such descriptions appear. For each species are given the geographical area where found and, when possible, the present location of type specimens.

TRAUB, ROBERT

Siphonaptera from Central America and Mexico, a morphological study of the Aedeagus with descriptions of new genera and species. Chicago Chicago Natural History Museum, 1950 231 p. 21 cm. (Fieldiana Zoology memoirs. Vol. 1) Paper $4 00 720

Contents (abridged) Part I, Descriptions of new genera and species. Part II, The comparative morphology of the Aedeagus of Siphonaptera from Mexico and Central America. Part III, References. Host index. Index. List of abbreviations.

Note: Although twenty-five new species and sub-species and 3 new genera are described in this work, the author has not attempted comprehensive description of the fleas of Central America and Mexico. He points out that such monograph could not be prepared because of the many lacunae in the knowledge of the fleas of this region. His main interest was in the possible taxonomic value of the Aedeagus. Part two is therefore the more important section of the book. There are 34 plates, each of which contains several drawings pertaining to comparative morphology of the fleas of this geographical area.

URQUHART, FREDERICK ALBERT

Introducing the insect. With drawings by E. B S. Logier New York Henry Holt and Company 1949 287 p. illus. (part col d) 24 cm. $5.00 721

Contents. On making an insect collection. Anatomy and life history. Classification and identification. Bristletails and springtails. Grasshoppers, crickets and earwigs. Cockroaches, praying mantids and stick insects. Stoneflies and mayflies. Termites. Booklice, biting lice and sucking lice. Thrips and bugs. Dragonflies and damselflies. Net-winged insects. Scorpionflies and caddisflies. Butterflies and moths. Beetles. Ants, bees and wasps. Flies and fleas. Galls. In conclusion. General reference books. Index.

Note. An elementary book which is equally well adapted for the layman interested in the study of insects as hobby and for students taking an introductory course in entomology. Following three introductory chapters, the important orders and families are described in popular manner but in systematic order with suitable keys and illustrations. The author is Director and Curator of Entomology at the Royal Ontario Museum of Zoology

WEST LUTHER SHIRLEY

The housefly its natural history medical importance, and control. Ithaca, New York Comstock Publishing Company Inc. associated with Cornell University Press 1951 584 p illus. 24 cm. $7 50 722

Contents. Flies and man introductory and historical. External morphology Internal morphology physiology behavior Life history of the fly. Taxonomy and nomenclature. Geographical distribution. Food requirements. Temperature and humidity Miscellaneous ecological factors. Parasites, predators, symbionts, and commensals. Flies and human disease. Public health relations. Myiasis. Are flies beneficial? The fly as an experimental animal. Field, museum, and laboratory techniques. Emergency control. Planned control. Newer insecticides: uses and dangers. Bibliography. Index.

Note. A monograph in which all phases of the subject—morphology physiology behavior life history taxonomy distribution, ecology relation to disease, usefulness in the laboratory and in nature, techniques in the field, museum, and laboratory control measures, and bibliography are covered. It is the first comprehensive treatment of the housefly in book form since 1914. It is substantial enough to be valuable to such professional workers as entomologists and public health specialists, but the style is not too technical for interested laymen and others not accustomed to scientific terminology The bibliography extends over 55 pages.

WHARTON, GEORGE WILLARD

A manual of the chiggers, the biology classification, distribution and importance to man of the larvae of the family Trombiculidae (Acarina) Aided by H. S Fuller Washington Entomological Society 1952 185 p. illus. 26 cm. (Entomological Society of Washington. Memoirs. No 4) 723

Contents: Introduction. Public health. Behavior. Life cycles. Anatomy Classification. The distribution of Trombiculids. Appendix. Literature cited. Index.

Note: Although the chapter on classification is longer (66 pages) than any other this book is reference manual of the whole subject rather than systematic description of the Trombiculidae. The available knowledge on life cycles, physiology and ecology is summarized. Also the public health aspects are adequately outlined. The bibliography is comprehensive.

VERTEBRATES (EXCEPT BIRDS AND MAMMALS)

CARR ARCHIE

Handbook of turtles the turtles of the United States Canada, and Baja California. Ithaca, N Y Comstock Publishing Associates a division of Cornell University Press, 1952 542 p. illus. 24 cm. (Handbooks of American natural history Albert Hazen Wright, advisory editor) $7.50. 724

Contents: Part I, Introduction. Turtle functions and capacities Respiration. Circulation. Excretion. Digestion. Reproduction. Senses, behavior and intelligence. Size, growth, and age. Turtle adaptations. Turtles and man. Economic uses. Methods of collecting turtles. The inscrutable turtle. Terminology of turtle structures. Revised terminology. Parts of the bony shell. Epidermal laminae. The bones of the skull. Shell abnormalities and their meaning. Part II, Accounts of species. Key to the families. Suborder Thecophora. Family Chelydridae, the snapping turtles. Family Kinosternidae, the musk and mud turtles. Family Emydidae, fresh-water and marsh turtles. Family Testudinidae, the land tortoises. Family Cheloniidae, the sea turtles. Family Trionychidae, the soft-shelled turtles. Suborder Athecae, the leatherback marine turtles. Family Dermochelidae. Bibliography References for states and provinces. Index.

Note. An illustrated handbook describing 79 species and subspecies of turtles native to North America north of the Rio Grande. The major species are illustrated with photographic plates and distribution maps and are described under the following heads: range, distinguishing features, physical dimensions, habitat, habits, breeding, feeding, and economic importance. The bibliography extends to 69 pages and is followed by an index by states and provinces.

CONANT ROGER

The reptiles of Ohio. Second edition (with revisionary addenda) Notre Dame, Indiana University of Notre Dame Press 1951 284 p. illus. 24 cm. $3.50. 725

Contents (abridged) Introduction. Collections examined. Systematic list of the reptiles of Ohio. Doubtful records and possible additions. Use of scientific names. Physiography and geography of Ohio. Presentation of each species. Key to the reptiles of Ohio. Discussion of species. Glossary Bibliography First aid in case of snake bite. Suggestions for collecting. Instructions for preserving reptiles. Revisionary addenda. Supplementary references. Distribution maps. Index.

Note: (1444a) A systematic description of the species of snakes, lizards, turtles, and other reptiles found in the state of Ohio. It is used for reference by both amateur and professional zoologists. The major part of the present edition is unchanged from the first, published in 1938. However, considerable number of new descriptions have been added in the 45-page "Revisionary addenda. Also list of supplementary references and some new maps have been added.

SHIMADA, BELL M

An annotated bibliography on the biology of Pacific tunas. Washington D C. Government Printing Office, 1951. 58 p. 26 cm. (United States. Fish and Wildlife Service. Fishery bulletin 58. From Fishery bulletin of the Fish and Wildlife service volume 52) Paper $0.30 726

Contents: Introduction. Annotated bibliography Abbreviations used. Index by subjects.

Note: This bibliography covers chiefly the literature on the black skipjacks or little tunnies (*Euthynnus alletteratus, E. lineatus,* and *E. yaito*) the oceanic or common skipjack (*Katsuwonus pelamis*) the albacore (*Thunnus germo*), the bluefin or black tunas (*Thunnus maccoyii, T orientalis,* and *T. thynnus*) the big-eyed tunas (*Parathunnus mebachi* and *P sibi*) the yellowfin tunas (*Neothunnus macropterus*) and the frigate mackerels of the genus *Auxis* inhabiting the Pacific Ocean, including the waters contiguous to the Indo-Australian Archipelago. The bibliography is arranged alphabetically by author. Date, title, publication data, and brief annotation are indicated for each item. Japanese references are included.

SMITH HOBART MUIR, AND EDWARD H. TAYLOR

An annotated checklist and key to the reptiles of Mexico exclusive of the snakes. Washington D C. Government Printing Office, 1950. 253 p. 24 cm. (Smithsonian Institution. United States National Museum. Bulletin 199) Paper $0 75 727

Contents: Introduction. Itinerary and gazetteer of localities for the Walter Rathbone Bacon expedition, 1938–1941. Class Reptilia: Subclass Anapsida: Order Testudinata. Subclass Lepidosauria: Order Squamata. Subclass Archosauria: Order Loricata. Species inquirendae. State lists. Index.

Note (807" 808") This volume constitutes the last of series of checklists and keys to the herpetological fauna of Mexico. The work involved number of expeditions to Mexico, beginning in 1932 and the handling of more than 90,000 herpetological specimens. The various subclasses, orders, suborders, families, genera, and species are listed and keyed in systematic order; for the species, names, bibliographical citations, types, type locality and range in Mexico are given

STEBBINS, ROBERT CYRIL

Amphibians of western North America. Berkeley Calif University of California Press, 1951 539 p illus. (part col'd) 24 cm. $7.50 728

Contents: Introduction. Class Amphibia. Salamanders: Order Urodela. Family Salamandridae. Family Ambystomidae. Family Plethodontidae. Frogs and toads Order Anura: Family Ascaphidae. Family Pelobatidae. Family Leptodactylidae. Family Bufonidae. Family Hylidae. Family Ranidae. Family Microhylidae. Eggs and larvae. Habitats Distribution maps. Glossary Bibliography Index.

Note A wide range of information on the external form, coloration, habits, and distribution of the species of salamanders, frogs, and toads inhabiting the eleven western states of the United States, Alaska, and the three western provinces of Canada is contained in this work. It is based on comprehensive coverage of the pertinent literature, unpublished data, and the author's personal observations. The species of salamander numbering 33, and the species of frogs and toads, numbering 29 are described in systematic order. The following information about species is generally given range, type locality description, habitat, behavior food, reproduction, and remarks. All species and some subspecies are shown in illustrations. To facilitate comparison the animals of each group are similarly posed in the drawings, the salamanders shown in dorsal and ventral views, the frogs and toads in three-quarter view Illustrations are also given of eggs, larvae, and typical habitats. A series of 44 sketch maps indicates locations of reported specimens of various species. The book is useful both to zoologists and to amateur naturalists who are interested in the fauna of the region covered.

WRIGHT, ALBERT HAZEN AND ANNA ALLEN WRIGHT

Handbook of frogs and toads of the United States and Canada. Third edition. Ithaca, N Y Comstock Publishing Company Inc., 1949 640 p. illus. 24 cm. (Handbooks of American natural history Albert Hazen Wright, advisory editor) $6.50 729

Contents. General account Common names. Present classification. Scientific name. Specific evaluation of our North American forms. Range. Habitat. Size. General appearance. Color. Structure. Voice. Vocal sacs. Color of throat. Enlarged tympana (males). Breeding sizes. Summary of secondary sexual characters. Ovulation. Eggs. Synopsis of eggs of United States frogs. Tadpoles. Synopsis of United States tadpoles. Development and transformation. Journal notes. Authorities' corner Keys: Families: Ascaphidae. Scaphiopodidae. Bufonidae. Hylidae. Leptodactylidae. Ranidae. Brevicipitidae. Accounts of species. Ribbed toads, Ascaphidae. Spadefoots, Scaphiopodidae. Toads, Bufonidae. Tree frogs, Hylidae. Robber frogs, Leptodactylidae. Frogs, Ranidae. Narrow-mouth toads, Brevicipitidae. Bibliography Index.

Note: (1499) From its second to its third edition this standard handbook has been increased in size from 286 pages to 640 pages. While the new edition is organized on the same general plan as its predecessors, both the introductory general account and the specific descriptions have been greatly expanded. Including the keys, the general account now occupies 103 pages, with additions both in text and illustrations. One hundred species and subspecies are now included and the descriptions run to 480 pages in contrast to 190 pages in the second edition. The number of plates was increased from 88 in the second edition to 126 in the third. In addition, the third edition includes 37 maps of distribution of species which were not present in earlier editions. The work is now complete manual of American frogs and toads. It is written so that it may be used by amateur naturalists and teachers, as well as by professional zoologists. The illustrations are exceptionally good.

VERTEBRATES BIRDS

ALLEN ELSA GUERDRUM

The history of American ornithology before Audubon. Philadelphia The American Philosophical Society 1951 387–591 p. illus. 30 cm. (Transactions, American Philosophical Society New series—vol. 41 part 3) Paper $2 00 730

Contents: Ancient bird lore. Aristotle's studies of birds and the Middle Ages Continental bird lore and the encyclopedists. Early bird lore in England. Early bird lore in the western world Early Colonial bird observation in America. The mid-seventeenth and early eighteenth centuries. Mark Catesby founder of American ornithology American ornithology under European compilers. Bird observation resumed in America. Early ornithological observation around Hudson Bay and other boreal regions. Bird lists of the latter eighteenth century Bartram, Abbot, and Vieillot. Alexander Wilson, father of American ornithology Bibliography Index.

Note: A scholarly work based largely on study of source materials in American universal libraries and museums. It is thoroughly documented. The 14-page bibliography includes citations of not only the pertinent literature on ornithology but also biographical and historical writings. The 13 illustrations include portraits of scientists and reproductions of ornithological drawings, manuscripts, etc. The author is Research Associate in Ornithology in Cornell University

BAKER, ROLLIN HAROLD

The avifauna of Micronesia, its origin evolution, and distribution. Lawrence, Kan. University of Kansas, 1951 359 p. illus. 23

cm. (University of Kansas publications Museum of Natural History Vol. 3 no 1) 731

Contents (abridged) Description of Micronesia. Gazetteer of the islands of Micronesia. Ornithological exploration in Micronesia. Check-list of the birds of Micronesia. Discussion of the avifauna: Oceanic birds. Migratory shore birds. Land and fresh-water birds. Conservation of the avifauna of Micronesia. The future of ornithological research in Micronesia. Methods and acknowledgments. Accounts of the kinds of birds in Micronesia. Summary and conclusions. Bibliography

Note A scientific report addressed to professional ornithologists on the birds found in the Mariana, Palau, Caroline, and Marshall Islands, including 204 kinds belonging to 91 genera in 37 families. The first 61 pages give general description of the islands and discussion of the avifauna with particular attention to its origin and its distribution. The following 240 pages describe the birds, species by species and family by family. The information on each species covers generally the scientific name, common name, bibliographical citations, geographic range, characters, measurements, weights, remarks. The bibliography at the end of the work runs to 16 pages. The illustrations consist of maps and tables rather than pictures.

BENT, ARTHUR CLEVELAND

Life histories of North American wagtails, shrikes, vireos and their allies. Order Passeriformes. Washington, D C. Government Printing Office, 1950 411 p illus. 24 cm. (Smithsonian Institution. United States National Museum. Bulletin 197) Paper $1.50 732

Contents. Introduction. Order Passeriformes: Family Prunellidae. Family Motacillidae. Family Bombycillidae. Family Ptilogonatidae. Family Laniidae. Family Sturnidae. Family Vireonidae. Literature cited. Index.

Note. The eighteenth in series of bulletins of the U. S. National Museum on the life histories of North American birds. A life history is given for each species, including habits, range, courtship, nesting, eggs, young, plumages, food, behavior voice, field marks, enemies. The manuscript was completed in 1943 and only material of great importance was added at later date. The bibliography covers 18 pages, and 72 photographic illustrations are reproduced on the 48 plates.

DAVIS JOHN

Distribution and variation of the brown towhees. Berkeley University of California Press 1951 119 p illus. 26 cm. (University of California publications in zoölogy editors A. H. Miller and others. Vol. 52 no 1) Paper $1.25 733

Contents (abridged) Introduction Molts and plumages. Nongeographic variation. Methods. Survey of the brown towhees. Degree of variability Environmental correlation. Species limits. The historical background Phylogeny Summary and conclusions. Nomenclature of recognizable forms. Literature cited.

Note. A professional study of bird group which because of its division into morphologically differentiated groups and its geographical distribution offers particular advantages for study of the subject. The work is primarily study of variation and secondarily taxonomic description It was based on study of 3277 specimens. Much information is included on geographic distribution as well as on body measurements and racial characters.

EISENMANN, EUGENE

Annotated list of birds of Barro Colorado Island, Panama Canal Zone. Washington D C The Smithsonian Institution 1952 62 p. 25 cm. (Smithsonian miscellaneous collections. Vol. 117 number 5 Publication 4058) Paper $0 45 734

Contents: Introduction. Location and administration. Ecological conditions. Ornithological work relating to Barro Colorado Island. The annotated list Order Tinamiformes. Order Colymbiformes. Order Pelecaniformes. Order Ciconiiformes. Order Falconiformes. Order Galliformes. Order Gruiformes. Order Charadriiformes. Order Columbiformes. Order Psittaciformes. Order Cuculiformes. Order Strigiformes. Order Caprimulgiformes. Order Apodiformes. Order Trogoniformes. Order Coraciiformes. Order Piciformes. Order Passeriformes. References.

Note: A systematic listing with brief annotations of the 306 species of birds found on Barro Colorado Island in Gatun Lake in the Panama Canal, administered by the Smithsonian Institution since 1946 as the Canal Zone Biological Area. The birds listed are grouped by families under 16 orders; for each species are given scientific name, English name, and annotation, the annotation varying in content from line or two about status when seen on the island to longer paragraph containing comments on locations and dates observed, notes, breeding habits, and names of observers. The work is published as the record of the ornithological population of humid tropical forest island.

FRIEDMANN HERBERT

The birds of North and Middle America a descriptive catalog of the higher groups, genera, species and subspecies of birds known to occur in North America, from the Arctic lands to the Isthmus of Panama, the West Indies and other islands of the Caribbean Sea, and the Galápagos Archipelago. Part XI Family Cathartidae—the American vultures Family Accipitridae—the hawks, eagles kites, harriers and Old World vultures. Family Pandionidae—the ospreys. Family Falconidae—the falcons and caracaras Washington D C. Government Printing Office, 1950 793 p illus. 24 cm. (Smithsonian Institution. United States National Museum. Bulletin 50 Part II) Paper, $4.00. 735

Contents: Order Falconiformes diurnal birds of prey: Key to the suborders of Falconiformes. Suborder Cathartae: American vultures: Family Cathartidae, American vultures Suborder Falcones: true birds of prey: Key to the families of Falcones. Family Accipitridae, hawks, eagles, kites, harriers, and Old World vultures. Family Pandionidae, ospreys. Family Falconidae, true falcons, laughing falcons, pygmy falcons, forest falcons, and caracaras. Index.

Note: (631) This is the eleventh part of series of bulletins describing the birds of Middle and North America, of which the first was published in 1901. The first eight parts were the work of the late Robert Ridgway. The ninth and tenth parts were written by Herbert Friedmann largely from manuscript notes left by Ridgway. In this eleventh part the author again has made extensive use of Ridgway's notes, but he has deleted some accounts of genera no longer considered valid and has brought the whole account into line with current taxonomic opinion. Like the other parts, this eleventh part contains keys to the different suborders, families, genera, species, and subspecies which it includes and for each species in systematic order gives description of adults and young, including color and size, followed by notation of range and complete synonymy from the literature.

GRISCOM, LUDLOW

The birds of Concord. Cambridge Harvard University Press 1949 340 p. illus. 21 cm. (New England bird studies. II) $5 00 736

Contents (abridged) Introduction Description of the area Methods of treatment. Part I, Population trends: Basic factors, geology climate, vegetation, civilization and its disturbances. Birds as citizens. General summary; some fluctuations in animals, fluctuations in birds. Population declines and increases bird population densities, cycles and periodicity general principles of population trends. Lists of birds which have increased or declined. Part II, Birds of the Concord region General features; migration routes, seasonal bird life, statistical summary Systematic list. Bibliography Index.

Note. Records relating to the bird population of the Concord region of Massachusetts have been kept by naturalists and ornithologists since the middle of the nineteenth century These data, together with information compiled by the author over period of 13 years, form the basis for this elaborate investigation of avifauna in specific and limited area. Half the book consists of tabulation of the birds seen in the Concord area, with an indication of the increase

or decrease in each species during the past century The other half discusses the factors causing the fluctuations in bird population. The work is a study of potential interest to amateur and professional ornithologists and ecologists.

HEADSTROM RICHARD

Birds' nests, a field guide. An identification manual to the nests of birds of the United States east of the one hundredth meridian. New York Ives Washburn, Inc., 1949 128 p. illus. 19 cm. $2 75 737

Contents: Index of birds. Introduction. How to use this book. Nests on or in the ground: In fields or pastures. In woods. In marshes. On or near seashore and lake beaches. In burrows in the ground. On rocks or rock ledges. Nests above the ground Hanging or semihanging. Covered on outside with lichens and saddled on branch. Felted nests of cottony materials. Containing a layer of mud. Made chiefly of bark, fibers, twigs, and rootlets. Made chiefly of grasses, rootlets, leaves, and straw Containing twigs or sticks. In holes in trees or stumps, in birdhouses or similar places. In or on buildings.

——— Birds nests of the West, a field guide. An identification manual to the nests of birds of the United States west of the one hundredth meridian. New York Ives Washburn Inc., 1951 177 p. illus. 19 cm. $3.00. 738

Contents: Nests on or in the ground: In fields, pastures, or prairies. In woods and wooded hillsides. In marshes, bogs, wet meadows, and swamps. On or near seashore and lake beaches. In burrows in the ground. On rocks or rocky ledges. In caves. In deserts. On alpine summits. Nests above the ground. Hanging or semihanging. Covered on outside with lichens and saddled on branch. Felted nests of cottony materials. Containing a layer of mud. Made chiefly of bark, fibers, twigs, and rootlets. Made chiefly of grasses, mosses, rootlets, leaves, and straw Containing twigs or sticks. In holes in trees or stumps, in birdhouses or similar places. In or on buildings. Index.

Note: The purpose of these manuals is indicated in the subtitles. The nest descriptions include statements on the materials of which the nest is usually made and of the range of the bird in the United States. Each volume contains an insert of reproductions of excellent photographs of birds' nests in their natural sites.

PETTINGILL OLIN SEWALL JR.

A guide to bird finding east of the Mississippi. With illustrations by George Miksch Sutton New York Oxford University Press, 1951 659 p illus. 19 cm. $6.00 739

Note: An unusual addition to ornithological literature. It is a guide to opportunities for observing birds, or more specifically a guide to localities known to be frequented by particular species. The main arrangement is by state with the material under states arranged by locality Under each locality there is an interesting narrative description of the birds that can usually be observed. The index contains both the names of places and the names of birds. The work was based largely on an extensive correspondence with amateur and professional ornithologists throughout the United States.

POUGH RICHARD HOOPER

Audubon water bird guide water game and large land birds. Eastern and central North America from southern Texas to central Greenland. Color illustrations by Don Eckelberry line drawings by Earl L. Poole. Sponsored by National Audubon Society Garden City N Y Doubleday & Company Inc., 1951 352 p. 19 cm. $3 50 740

Note A field guide of interest to both amateur and professional ornithologists The number of species described is [illegible]. The descriptions cover such points as identifying characteristics, habits, song or cry, nest, and range. There are [illegible] excellent color illustrations printed on 48 plates and more than 100 drawings rendered in black and white. The author is a member of the staff of the American Museum of Natural History

RICHDALE LANCELOT ERIC

Sexual behavior in penguins. Lawrence Kansas University of Kansas Press 1951 316 p. illus. 24 cm. $5 00. 741

Contents: Scope of the study An analysis of types of behavior Pair formation. Sex differences, measurements, and weights. Sexual behavior in winter The pre-egg stage. Unemployed birds. Incubation. Chick stage. The moult Appendices. Literature cited. Index of subjects. Index of species. Index of bands.

Note. An unusual work based primarily upon "ten seasons of intensive field work." The birds studied were banded by the author so as to make possible a continuous study of the behavior of individuals over the period of study. The observations made are presented in detail with individual birds identified. Although the primary source is the author's own observations, pertinent information in the published literature also is presented. The book is of interest to amateur and professional ornithologists and to specialists in animal psychology

ROMANOFF ALEXIS LAWRENCE AND ANASTASIA J ROMANOFF

The avian egg. New York John Wiley & Sons Inc., 1949 918 p. illus. 24 cm. $16 00. 742

Contents: Part I, Morphogenetic expression: Mode of laying. External characteristics. Structure Formation. Anomalies. Part II, Biophysicochemical constitution: Chemical composition. Physicochemical properties. Biological properties. Part III, Bio-economic importance Food value. Preservation Industrial uses. Bibliography Index.

Note An encyclopedic presentation of the accumulated knowledge of the bird egg in general and the chicken egg in particular. It does not deal with the egg as an element in reproduction, but rather with the biological process of egg production, the physical and chemical properties of eggs, and the food and industrial uses of eggs. Although essentially a reference book, the work is easy to read and contains much information of interest to the non-scientific reader as well as to the scientist. The authors claim to have reviewed more than 15,000 publications in the course of the book's preparation. Those from which information was abstracted are cited in the text and in the bibliography here references are given to approximately 3,000 books, patents, and articles. There are 424 figures.

SAUNDERS ARETAS ANDREWS

A guide to bird songs descriptions and diagrams of the songs and singing habits of land birds and selected species of shore birds Revised edition Garden City New York Doubleday and Company Inc. 1951 307 p. illus. 19 cm. $3 00 743

Contents How to identify bird songs. Key to bird songs. Descriptions of bird songs. New material. Index.

Note. A field manual designed to aid in the identification of birds by means of their songs. The songs are diagrammed, not in conventional musical notation, but in what the author designates as musical shorthand They are also rendered in combinations of consonants and vowels, for example: "coilee coilee coilee" for the gathering call of the bob white. The first edition was published in 1935. In this edition descriptions are given of many songs that were not represented in the first edition. The added material runs to about fifty pages.

SUTTON GEORGE MIKSCH

Mexican birds. First impressions based upon an ornithological expedition to Tamaulipas, Nuevo León, and Coahuila. With an appendix briefly describing all Mexican birds. Illustrated with water-color and pen-and-ink drawings by the author Norman, Okla. University of Oklahoma Press 1951 282 p. illus. (part col'd) 25 cm. $10 00. 744

Note: The main part of this book consists of 12 autobiographical chapters of impressions of Mexican birds written by an ornithologist on his first trip to Mexico. The chapters are presented as connected story with dates and places named and species identified. The concluding third of the book describes 68 families of birds found in Mexico, with notes on each of the principal species. The illustrations include water-color drawings of 16 species in color and pen-and-ink drawings of 60 more species. The volume is not intended as handbook of Mexican birds; it rather serves as an informal introduction to the subject for bird students visiting Mexico for the first time.

WALKINSHAW, LAWRENCE H.

The sandhill cranes. Bloomfield Hills, Mich. Cranbrook Institute of Science 1949 202 p illus. 24 cm. (Cranbrook Institute of Science. Bulletin no 29) $3.50 745

Contents: Introduction. Molts and plumages. Voice. Crane behavior. Food and feeding habits. Pairing and territory. Nesting. The young. The crane from fall to spring. History of North American crane populations. Literature cited. Appendixes: Key to the cranes of the world. Sandhill crane distribution records (with bibliography) Index.

Note: In this book an amateur ornithologist of exceptional devotion has recorded the results of observations covering fifteen years and 70,000 miles of travel in North America and Cuba. The life cycle and habits of the sandhill crane (*Grus canadensis*) were minutely observed. The author's own observations were then supplemented by reports in the published literature to produce an exceptionally detailed study of species that is gradually disappearing. There are 33 photographs—most of which show birds in their natural habitat, 31 tables of data, and an extensive bibliography

WETMORE, ALEXANDER

A revised classification for the birds of the world. Washington, D C. The Smithsonian Institution, 1951 22 p 24 cm. (Smithsonian miscellaneous collections. Vol. 117 number 4 Publication 4057) Paper $0 15 746

Note: (1648) A work which is primarily of interest to professional ornithologists. The first half of this new revision is devoted to discussion of the newer knowledge which has made advisable certain changes in and additions to the various groupings of families, superfamilies, suborders, and orders of the class Aves. The second half presents the new classification in systematic arrangement, including English names alongside the scientific names. The list includes fossil groups as well as living groups of birds. The new edition reflects particularly the results of increased knowledge of the birds of Australia and New Zealand on the one hand and of fossil forms on the other.

ZAHL, PAUL ARTHUR

Flamingo hunt. Illustrated by Fritz Kredel. Indianapolis Ind. The Bobbs-Merrill Company Inc., 1952 270 p illus. 21 cm. $3 50 747

Contents. First adventure. Second adventure. Third adventure.

Note. The account of an ornithologist's adventures in attempting to solve the mysteries of the flamingo colonies of Andros Island of the Bahamas, about which almost no published information has been available. A first hand narrative of interest not only to scientists but to laymen as well.

VERTEBRATES MAMMALS (EXCEPT MAN)

BAILEY PERCIVAL AND OTHERS

The isocortex of the chimpanzee. By Percival Bailey Gerhardt von Bonin and Warren S McCulloch. Urbana The University of Illinois Press, 1950 440 p. illus (part col d) 28 cm. $8.50 748

Contents: Introduction. Materials and methods. General considerations. Fissural pattern. Cytoarchitecture. Survey by serial sections. The brain map. Physiological neuronography. Motor responses to electrical stimulation. Suppression. Relations with deeper structures. Interrelations of cortical areas. Correlation with Macaca mulatta. Epilogue. Bibliography. Plates.

Note: A monographic report of techniques and results of an extensive series of experiments carried on in the Laboratory of Neurophysiology at Yale University and continued in the laboratory of the Illinois Neuropsychiatric Institute at the University of Illinois. Mapping of the main functional areas in the isocortex of the chimpanzee was the chief object of the experiments. Although the experiments were not carried to their conclusion, the results reported are of substantial interest to other researchers in neuroanatomy

FARRIS, EDMOND JOHN, AND JOHN Q GRIFFITH JR. editors

The rat in laboratory investigation, by a staff of twenty nine contributors. 179 illustrations. Second edition Philadelphia J B Lippincott Company, 1949 542 p illus. (part col d) 23 cm. $15 00 749

Contents: Breeding of the rat, by Edmond J. Farris. General methods, by John Q. Griffith, Jr assisted by W A. Jeffers. Gross anatomy by E. C. Greene. Experimental methods and rat embryos, by J. S. Nicholas. Dietary requirements of the rat, by R. H. McCoy. The teeth, by I. Schour and M. Massler. The digestive system, by T E. Machella and J. Q. Griffith, Jr. Metabolism, by C. J. Carr and J C. Krantz, Jr. The central nervous system, by W A. Jeffers and J. Q Griffith, Jr assisted by E. Roberts. Technics for the investigation of behavioral phenomena in the rat, by O. L. Kramer. The circulatory system, by J. Q. Griffith, Jr., and W A. Jeffers, assisted by E. Roberts. The use of the rat in the biologic assay of hormones, by D. J. Ingle. Dosage of drugs for rats, by H. O. O. Balch, assisted by D. R. Mathieson. Hematology of the rat—methods and standards, by A. J. Cravkoff and others. Radiologic considerations, by E. P Pendergrass and others. Surgery of the rat, by D. J. Ingle and others. Histologic methods adapted for rat tissues, by W H. F Addison. The nervous system, by R. M. Strong. The eye of the albino rat, by W E. Fry. Protozoan parasites of the rat, by D. H. Wenrich. Metazoan parasites of the rat, by H. L. Ratcliffe. Spontaneous diseases of laboratory rats, by H. L. Ratcliffe. Bibliography. Index.

Note: (1705) A comprehensive handbook and guide for those who use the albino rat for laboratory research purposes. Most of the information presented is based upon experience in maintaining rat colonies over quarter of century at the Wistar Institute of Anatomy and Biology Philadelphia. In preparing the new edition the authors reviewed the entire text in the light of current knowledge and techniques and made the necessary revisions and additions. The appearance of many new reports involving the action and dosage of drugs for rats necessitated the complete rewriting and considerable expansion (from 14 to 103 pages) of the chapter on pharmacology. New material has also been incorporated in the chapters on the digestive system and the nervous system.

GOLDMAN EDWARD ALPHONSO

Raccoons of North and Middle America. With foreword, appendix, and revision of bibliography by Hartley H. T Jackson Washington D C. Government Printing Office, 1950 153 p. illus. 23 cm. (United States. Department of the Interior Fish and Wildlife Service. North American fauna 60) Paper $0 45 750

Contents: Introduction. History. Habits: Food and general activities. Senses and instincts. Breeding. Hibernation. Economic status. General characters: Pelage and molt. Variation. Geographic variation. Individual variation. Explanations: Measurements. Coloration. Specimens examined. Use of key to species and subspecies. Genus *Procyon* Storr. Key to subgenera. List of North American species and subspecies, with type localities. Subgenus *Procyon* Storr: Key to species and subspecies of the subgenus *Procyon*. Subgenus *Euprocyon* Gray. Appendix. Bibliography. Index.

Note. A systematic description of the species and subspecies of the raccoons of North America, including Panama and the West Indies. Following the general and introductory material, the species are taken up one by one and information is furnished on names, original bibliographical citation, type locality type, distribution, general characters, color cranial characters, measurements, remarks, and specimens examined. Twenty plates show photographs of skulls of typical specimens. The manuscript was completed for publication in 1941; additions have been made in the appendix to

cover two new subspecies and in the bibliography to include papers published from 1941 to 1949

GREGORY WILLIAM KING, editor

The Henry Cushier Raven memorial volume. The anatomy of the gorilla. The studies of Henry Cushier Raven and contributions by William B Atkinson Herbert Elftman John Eric Hill, Adolph H. Schultz, William L. Straus, jr and S. L. Washburn Arranged and edited by William King Gregory A collaborative work of the American Museum of Natural History and Columbia University New York Columbia University Press, 1950 259 p. illus. 32 cm. $15.00 751

Contents (abridged) Part I, Henry Cushier Raven (1889–1944) by W K. Gregory Scientific papers of Henry Cushier Raven. Part II, Regional anatomy of the gorilla, by H. C. Raven, with additions by J. E. Hill. Part III, Thoracic viscera of the gorilla, by S. L. Washburn. The abdominal viscera of the gorilla, by H. Elftman and W B. Atkinson. Female reproductive system of the gorilla, by W B. Atkinson and H. Elftman. Part IV The microscopic anatomy of the skin of the gorilla, by W L. Straus, jr. Part Morphological observations on gorillas, by A. H. Schultz. Index.

Note: Considerably more than half of the space in this volume is devoted to reproductions of original drawings, made under Henry Cushier Raven's direction, of his own dissections of the gorilla. The drawings are remarkably clear and are reproduced in large size. The chapters and parts of the work supplied by other contributors supplement Raven work, which was left unfinished at his death, and are in themselves notable contributions based largely on original studies. The work is major contribution that greatly extends the knowledge of the anatomy of the gorilla.

HALL EUGENE RAYMOND

American weasels. Lawrence, Kan. University of Kansas, 1951 466 p illus. (part col d) 23 cm. (University of Kansas publications. Museum of Natural History Vol. 4) 752

Contents: Introduction. Paleontological history Skeleton and dentition. Disparity in number of males and females. Materials, acknowledgements and methods. Variation: Variation with age. Secondary sexual variation. Individual variation. Seasonal variation. Variation in color and molt. Variation of taxonomic worth. Distribution and speciation. History of classification: Chronological list (annotated) of specific and subspecific names. Check list of American species and subspecies of the genus Mustela. Artificial key to American species of the genus Mustela. Diagnosis of the genus. Explanation of systematic treatment. Systematic accounts of species and subspecies Mustela erminea Mustela rixosa. Mustela frenata. Mustela africana. Explanation of cranial measurements. Table of cranial measurements. Literature cited. Plates. Index.

Note: A general and systematic treatise on the weasels of North America, with some coverage of those of South America. The first 80 pages include the general description of the weasels and their variation and distribution The next 325 pages contain the systematic accounts of the species (including type, range, characters for ready recognition, character of the species, geographic variation, behavior enemies, food, reproduction) and of the subspecies (type, range, characters for ready recognition, size, color, skull, sex differences, remarks, specimens examined) The remainder of the book includes the tables of cranial measurements of specimens and the 39 plates each containing photographic views of 9 or 10 skulls. The work is based upon more than 25 years of study of the weasel and visits to 184 zoological collections in the United States, Canada, and Europe.

HARTMAN CARL GOTTFRIED

Possums. Austin Tex. University of Texas Press, 1952 174 p illus. 29 cm. $6 00 753

Contents: Introduction. Europeans meet the opossum. The counter down under. The pe and the ups of creativity The opossum gets name. What manner of beast is this? The opossum at home. And thereby hangs possum. Chucken thief Playing possum Opossum embryology in pictures Birth of the opossum. Journey to the pouch fancy Journey to the pouch: fact. Birth of the kangaroo. The brood pouch in nature. The pouch young. Opossum and bear. A butterfly painter starts legend. Four centuries of opossum pictures. Possum hunting. Possum capers and red garters. Possum and taters. Appendix: Possum rhymes and folklore. Bibliography Index.

Note: A large volume rich talk, in text and pictures, the lore and science of the opossum (*Didelphis virginiana* Kerr) The author has made study of the subject for over 40 years and has written this book largely on the basis of his observations and experiments. The scientific information combined with the author's humorous style makes the book interesting reading both for zoologists and for nature-lovers in general. The chapters on the development of the embryo and birth of the young and migration to the pouch are noteworthy

HAYES, CATHY

The ape in our house. New York Harper & Brothers, 1951 247 p. illus. 22 cm. $3.50 754

Contents (abridged) Part 1 The first eighteen months: W adopt baby Vegetate phase. Grandma visits the creature. Under spreading pecan tree. Guess what Viki did today! Teaching an ape to talk. Enter the stick. Viki's second Christmas. The very strange case of the imaginary pulltoy. Viki and the child. Part 2, The second eighteen months: Viki and the caged ape. Apes is apes and cats is cats. The lapse. A cup of good cheer. W don't need talking apes. Part 3, In answer to your questions— Capsuation. Pithecomorphism and publican milkshakes. What funny place for toe! Actions and words. The nature of the beast. It's only the beginning. Author's note—books you might enjoy

Note: An account of the first three years in the development and growth of Viki, female chimpanzee adopted at birth by young scientist and his wife and raised in their home in Orange Park, Florida, in much the same manner as human baby would be raised in similar environment. The results are of interest to the lay reader as well as to the zoologist and psychologist.

LINSDALE JEAN MYRON, AND LLOYD P TEVIS JR.

The dusky footed wood rat a record of observations made on the Hastings Natural History Reservation. Berkeley Calif University of California Press, 1951 664 p. illus. 24 cm. $7.50 755

Contents: Introduction. Habitat. Houses. Animal associates. Behavior. Food. Reproduction. Morphology Population. Conclusions. Literature cited. Index.

Note. A detailed scientific study of *Neotoma fuscipes*, the dusky-footed wood rat, cinnamon-colored nocturnal pack rat native to parts of Oregon, California, and Baja California. It is based upon original observations made at the Frances Simes Hastings Natural History Reservation in the northern Santa Lucia Mountains of Monterey county California, over ten-year period. The photographic illustrations depict the rat and his habitat. Other illustrations include tables and graphs presenting statistics of individual specimens studied.

SIMPSON GEORGE GAYLORD

Horses the story of the horse family in the modern world and through sixty million years of history New York Oxford University Press 1951 247 p. illus. 23 cm. $6.50 756

Contents (abridged) Introduction. Part one, Living horses: What is horse? A look at Equus. Horses and history Ancient breeds. Some European breeds in America. American breeds and their forerunners. Part two, The lineage of the horse: Time-scale of horse history Forerunners of the horses. The little Kohippus. Other Eocene horses. Early three-toed horses. Later three-toed horses. The horse's relatives. False horses. Part three, Horses and evolution. How horses changed. Patterns of evolution. Explanations of evolution. Appendixes: Where to see fossil horses. Where to read more about horses. Index.

Note: In this book for lay readers the main emphasis is on the evolution of the horse, but information on many other topics is also included. Examples of the supplementary topics are discussion of the inheritance of color and description of the work of Edward Muybridge in photographing the gaits of horses. There are about 80 illustrations reproduced on 32 plates, directory of museum collections of fossil horses, and selected, annotated bibliography Though popular treatment, the book merits reading by anyone with mature interests in the subject. The author is Chairman of the Department of Geology and Paleontology of the American Museum of Natural History

COMPARATIVE ANATOMY AND EMBRYOLOGY

ADAMS, LEVERETT ALLEN, AND SAMUEL EDDY

Comparative anatomy, an introduction to the vertebrates. New York John Wiley & Sons Inc., 1949 520 p. illus. 24 cm. $5.50 757

Contents (abridged) Part one, A review of the vertebrates: Classification. Superclass Pisces or fish-like vertebrates. Superclass Tetrapoda. Embryology Part two, Comparative anatomy of the vertebrates: Integumental system. Axial skeleton. Appendicular skeleton. Muscular system. Circulatory system. Respiratory system. Urogenital system. Nervous system. Sense organs. Endocrine glands. Bibliography Glossary Index.

Note. (1448) A successor to Adams' *Introduction to the vertebrates*, second edition. It is designed for use in college courses and four-fifths of the space is devoted to the comparative anatomy of various organ systems. Some chapters have been shortened but others have been considerably expanded, hence the number of pages has been increased by about forty There are now 364 figures.

BARTH LESTER GEORGE

Embryology New York The Dryden Press 1949 330 p. illus. 24 cm. $5.50 758

Contents: Embryology—problems and scope. Ovulation—its control by hormones and light. The unfertilized egg and its organization for development. Fertilization—the nature of the stimulus for development. The early gastrula with its presumptive values. Gastrulation in relation to the organizer The neurula and the property of self-differentiation. The embryo—differentiation within fields. Development of the frog egg. Interrelationships of developing structures. The nervous system. The circulatory system. The digestive tract. The somites, nephrotome, and lateral mesoderm. The development of the chick embryo. Regeneration. Growth and reduplication. Hormones and the growth of the mammalian embryo. Mammalian development. Sex differentiation. Suggested readings. Index.

Note: In this introduction for use in college courses the customary description of successive stages in the development of embryos is not emphasized. Instead the processes of differentiation are described more generally and functional view rather than detailed catalogue is presented. Another difference from older texts is the incorporation of good deal of experimental zoology For instance, there are many such statements as "more direct evidence comes from experiments in which parts of the primitive streak embryo are cultured on the chorioallantoic membrane Human embryology is outlined in twenty-one pages. There are 184 figures. The selected bibliography is partly annotated.

HUETTNER, ALFRED FRANCIS

Fundamentals of comparative embryology of the vertebrates. Revised edition. New York The Macmillan Company 1949 309 p illus. 26 cm. $5 50 759

Contents (abridged) History and theories of development. Protoplasm and the cell. Development of sex. Chromosomes in development. Gametes, fertilization and parthenogenesis. The embryology of amphioxus. The embryology of the frog. The embryology of the chick. The embryology of the mammal. Index.

Note (1750) An introductory textbook for college courses. It offers descriptive rather than functional exposition. Seven chapters are devoted to the embryology of the chick, apparently because this animal is so easily studied in the laboratory Four chapters on mammalian embryology lead up to detailed description of human development. The illustrations are exceptionally clear and are reproduced in large scale. In this edition chapter has been added on the embryology of the pig, and there are other changes.

INTERNATIONAL UNION OF BIOLOGICAL SCIENCES

Genetic neurology problems of the development, growth, and regeneration of the nervous system and of its functions Conference sponsored by the International Union of Biological Sciences subsidized by UNESCO Paul Weiss, editor Chicago The University of Chicago Press 1950 239 p illus 24 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $5.00. 760

Contents: An introduction to genetic neurology by P Weiss. The colloidal organization of the nerve fiber, by F O. Schmitt. Motion pictures of neurons and neuroglia in tissue culture, by W H. Lewis. Adjustments of peripheral nerve fibers, by C. C. Speidel. Nerve regeneration, by J. Boeke. The determination of the characteristics of nerve fibers, by J Z. Young. Regeneration phenomena in human peripheral nerves, by S. Sunderland. Some aspects of neuroembryology by V Hamburger and R. Levi-Montalcini. Studies on the development of Mauthner's cell, by A. Stefanelli. Differentiation and growth of nerve fibers, by J. Piatt. Neuropathology and the constitutional diversity of neurons, by D. Bodian. Spectroscopic studies on nerve cells in development, growth, and function, by H. Hydén. The cytological, biochemical, and physiological differentiation of the neuroblast, by L. B. Flexner. Some aspects of neural growth, regeneration, and function, by R. W Gerard. Spinal cord regeneration, by D. Hooker. Some comments on regeneration in the central nervous system, by A. Stefanelli. Neural growth and the development of behavior by D Hooker. Reflexes of mammalian embryos and fetuses, by W F Windle. Genetic neurology and the behavior problem, by D. H. Barron Neuronal specificity by R. W Sperry

Note: Customarily volume based upon conference consists of papers which were written in advance and delivered at the conference. In contrast this volume consists of papers written after the conference by scientists he attended it and exchanged views with one another. The subject is the embryology and development of the nervous system, not its "genetics" in the sense of biological inheritance. Most of the papers are condensed summaries of particular aspect of the problem and are accompanied by literature lists. Some of them, however, are very brief statements of the state of affairs in some special area and lack bibliographies. The style is technical and the book is of interest to advanced students and professional workers in such fields as embryology histology and neurology

LILLIE, FRANK RATTRAY

Lillie's Development of the chick an introduction to embryology Revised by Howard L. Hamilton. Advisory editor B H. Willier Third edition. New York Henry Holt and Company 1952 624 p illus. 22 cm. $7.50. 761

Contents (abridged) Introduction. Part I, The early development to the end of the third day: The egg. The development prior to laying. Outline of development, orientation, chronology From laying to the formation of the first somite. *Head fold to twelve somites.* From twelve to thirty-six somites. Part II, The fourth day to hatching—organogeny development of the organs: The external form of the embryo and the embryonic membranes. The nervous system. Organs of special sense. The alimentary tract and its appendages. The body cavities, mesenteries, and septum transversum. The later development of the vascular system. The urogenital system. The skeleton. Appendix. Index.

Note. An introductory but exceptionally detailed description of embryological development. Its original purpose (and still the primary one) was to serve as textbook for college students taking first courses in embryology Gradually (the first edition appeared in 1908) it has taken on the stature of classic. In the present extensively revised edition much material has been added including some information not published elsewhere. The chapter on the development of the integument has been added and several other chapters have been thoroughly rewritten. There are now 283 figures, 14 plates and 32-page bibliography

McEWEN ROBERT STANLEY

Vertebrate embryology Third edition. New York Henry Holt and Company 1949 699 p illus. 22 cm. $5 75 762

Contents (abridged) Part I, The germ cells and early development of amphibians. Part II, The development of the frog. Part III, The Teleosts and Gymnophiona. Part IV The development of the chick The adult reproductive organs, and the development of the egg previous to gastrulation. Gastrulation and development through the first day of incubation. Development during the second day of incubation. Development during the third day of incubation. Development during the fourth day of incubation. Development during the fifth and subsequent days. Part The development of the mammals

The early development of the notochord and its embryonic appendages. Development of the pig to the ten millimeter stage. The later development of the pig. The skeleton, teeth, hair, hoofs and horns. Index.

Note: (1764) A standard textbook for introductory college courses in vertebrate embryology. The third edition is changed from the second edition (1931) in the following respects: the subject matter and the bibliographies have been brought up to date; certain passages have been clarified and simplified; the sections dealing with the Amphibia and the chick have been revised to incorporate experimental material along with descriptive facts; the embryology of the pig has been added; and the general discussion of the cell has been shortened.

QUIRING DANIEL PAUL

Functional anatomy of the vertebrates. New York McGraw Hill Book Company, Inc. 1950 624 p. illus. 24 cm. (McGraw Hill publications in the zoological sciences, E. J Boell, consulting editor) $6.00 763

Contents: Form and structure. Classification. The integument. The skeleton. The musculature. The nervous system. The sense organs. The digestive system. The respiratory system. The circulatory system. The excretory and reproductive systems. The endocrine glands. Anthropology Functional anatomy Appendix. Glossary Index.

Note: A compact introductory presentation in which—as the title indicates—the main emphasis is on function. In most chapters considerably more space is given to the anatomy of man and the complex animals than to simpler forms. The high proportion of reference data is unusual in an introductory text. Included is a long table titled "Body and organ weights of 3,581 vertebrates" that gives comparative weights of organs for many animals and was apparently based on field studies made by George W Crile and Grace McBride Crile. The author is Head of the Anatomy Department of the Cleveland Clinic Foundation.

ROMER, ALFRED SHERWOOD

The vertebrate body Philadelphia W B Saunders Company, 1949 643 p. illus. 24 cm. $6.00 764

Contents: Introduction. The vertebrate pedigree. Who's who among the vertebrates. Cells. The early development of vertebrates. The skin. The skeleton. The skull. Muscular system. Mouth, pharynx, respiratory organs. Digestive system. Excretory and reproductive systems. Circulatory system. Body cavities. Sense organs. The nervous system. *Appendices: A synoptic classification of vertebrates. Scientific terminology* References. Index.

Note: A textbook for use in introductory courses in comparative anatomy offered to premedical and other students with more than cultural interests in the subject. The presentation is truly comparative without special emphasis on man. There are 343 figures, sixteen-page glossary and a selected annotated bibliography

TAYLOR, WILLIAM T AND RICHARD J WEBER

Functional mammalian anatomy (with special reference to the cat) Illustrated by Thomas Courtney Lee. New York D Van Nostrand Company Inc., 1951 575 p. illus. 24 cm. $7.25 765

Contents: Introduction. The mammalian integument. The skeletal system. The muscular system. The nervous system. Special sense organs. Blood circulatory system. The lymphatic system. The respiratory system. The digestive system. The urinary system. The reproductive system. The endocrine system. Manual for the regional dissection of the cat. Appendix. Index.

Note: In this introductory text the anatomical descriptions include some description of function. For instance, in the chapter on the blood circulatory system in addition to the expected anatomical matter there is material on such points as the nervous regulation of the heart rate. The purpose of this dynamic or functional approach is to encourage the student to correlate form and function and thus avoid thinking of anatomy as a mere catalogue of body parts. The book is both a classroom text and laboratory manual. It includes, as noted in the table of contents, a manual for dissection. Another unusual feature is a detailed treatment of the nervous system. The authors are members of the faculty of Georgetown University.

WALTER, HERBERT EUGENE, AND LEONARD P SAYLES

Biology of the vertebrates, a comparative study of man and his animal allies. Third edition. New York The Macmillan Company, 1949 875 p illus. 24 cm. $6.50 766

Contents: Part one, The background: Chordate characters. Kinds of vertebrates (classification) The distribution of animals in space (chorology and ecology) The distribution of animals in time (paleontology) Man in the making (anthropology) Units of structure (cytology). Division of labor in tissues (histology) The development of the individual (embryology) Biological discords (pathology). Part two, The mechanism of metabolism and reproduction: A jack of all trades (the integument) Intake apparatus (digestive system) Internal transportation (circulatory system) The release of energy (respiratory system). Outgo apparatus (excretory system) The preservation of species (reproductive system) Involuntary regulation (glands of internal secretion). Part three, The mechanism of motion and locomotion The skeleton. Production of motion and locomotion (muscles) The dominating factor (nervous system) Ports of entry (sense organs) Bibliography Index.

Note: (1433) *A standard introduction to comparative anatomy* and physiology It is characterized by a clear sometimes humorous style and by apt comparisons. In this edition, prepared by Professor Sayles, five chapters have been rewritten and minor changes made in other chapters. A considerable number of the illustrations are new or have been redrawn.

WEICHERT CHARLES KIPP

Anatomy of the chordates. New York Mc Graw Hill Book Company, Inc., 1951 921 p. illus. 24 cm. (McGraw Hill publications in the zoological sciences E. J Boell, consulting editor) $8 00 767

Contents: Part I, Review of phylum Chordata: Introduction. Classification and natural history. Development of the individual. Part II, Organ systems of vertebrates: Integumentary system. Digestive system. Respiratory system and related structures. Excretory system. Reproductive system. Endocrine system. Skeletal system. Muscular system. Circulatory system. Nervous system. Receptor organs. Part III, Representative animals: The marine lamprey. The spiny dogfish. The mud puppy The cat. Summary: Characteristics and advances. Index.

Note: Most of this introductory textbook is devoted to comparative discussions of the various organ systems of vertebrates. In these discussions the main emphasis is on function, but developmental and structural differences are noted also. The third part of the work presents in considerable detail the anatomy of four animals that are widely used for dissection and study in introductory laboratory courses in biology. The book contains about 800 illustrations of excellent quality and an exceptionally detailed index.

WIEMAN, HARRY LEWIS

An introduction to vertebrate embryology Second edition New York McGraw-Hill Book Company Inc., 1949 412 p illus. 24 cm. (McGraw Hill publications in the zoological sciences, A. Franklin Shull, consulting editor) $5.00. 768

Contents. Development. The cellular basis of development. The early development of the frog. An outline of the early development *of the chick. The nervous system and the sense organs of the chick.* The alimentary canal of the chick and its outgrowths. The circulatory system of the chick. The urogenital system of the chick. Intrauterine development of mammals. The early embryo and embryonic membranes of the pig and man. Outline of organogenesis in the human embryo. The origin of muscle, connective tissue, skeleton, and integument. Human growth and development. Appendix. Index.

Note: (1763) A textbook *for introductory courses, written from* the standpoint of comparative embryology. A considerable part of the space is devoted to the embryology of the frog and the chick; but as the chapter titles indicate, human embryology is also considered. The first edition appeared in 1930. Although the number of pages in the present edition is essentially the same, important changes have been made. These include a fuller discussion of the embryology of the frog, new material on the human embryo, and the transfer of some of the hypothetical material to the appendix. The illustrations are clearly drawn and about forty of them are new in this edition.

MAN

ASHLEY MONTAGUE MONTAGUE FRANCIS

An introduction to physical anthropology A revised second edition. Springfield, Illinois Charles C Thomas 1951 555 p. illus. 24 cm. $8 75 769

Contents: Introduction. The primates as a zoological group. The origin and evolution of the primates. The origin and evolution of man. The criteria and mechanism of ethnic differentiation. The divisions and ethnic groups of man. The significance of innate differences or the relation between body mind, and culture. Heredity and the influence of the environment upon man. Appendix A practical synopsis of methods of measurement in physical anthropology *Bibliography* Index.

Note. (655*) An excellent inclusive introduction addressed both to general readers and to those with some professional interest in the field such as students of medicine or sociology It illustrates the scope of physical anthropology and outlines the background knowledge, but is mainly descriptive from the standpoint of physical anthropology of the various groups and divisions of man. The appendix contains an informative and rather full outline of accepted methods of making anthropological measurements of man. The first edition was published in 1945. This edition shows revisions in many sections of the text, although no major changes have been made. Additions and revisions have been made in the illustrative matter and there are now 110 figures. Literature published since 1945 has been added to the bibliographies.

BATES MARSTON

Where winter never comes a study of man and nature in the tropics. New York Charles Scribner's Sons 1952 310 p. illus. 22 cm. $3 50 770

Contents: The point of view The element of history The varieties of tropical man. The varieties of tropical culture. The incidence of civilization. On tropical climates. Clothes make the man. The white man burden. Tropical diseases Food and drink. Tropical nature. The rain forest. Tropical seas. The resources of the tropics. The varieties of tropical government. The planetary neighborhood. Notes and documentation. A note on the illustrations. *References. Index.*

Note: A very readable book by naturalist who has had much experience with living in the tropics and has observed at first hand the white man's adaptation (and lack of it) to the tropical climate and living conditions. One thesis is that the white man's difficulties derive mainly to his unwillingness to go far enough in adjusting his living habits, particularly in suitable clothing. Much of the content of the book consists of discussions of tropical foods, tropical diseases, tropical resources, etc., and the net result is picture of the tropics as region of vast potentialities once civilized man has learned to adapt himself to it.

BOYD WILLIAM CLOUSER

Genetics and the races of man an introduction to modern physical anthropology With illustrations. Boston Mass. Little, Brown and Company 1950 453 p. illus. 21 cm. $6 00 771

Contents Possible approaches to study of man. Genetics. Heredity and environment. Gene equilibrium without evolution. Factors modifying gene frequencies (evolution) The influence of geography on racial distribution. The concept of race. Blood groups. Use of blood groups in human classification. Other human genetic. Incompletely analyzed genetic characteristics. Man's past. Man's future. Appendixes: Statistical methods. Mathematical treatments of problems. Index.

Note In this book modern physical anthropology the scientific basis of genetics upon which it rests, and the way in which genetic knowledge can be applied to the study of mankind are summarized and explained. It is intended as an introduction for the general reader and as summary for the specialist. The technical survey of statistical and mathematical aspects in the appendix runs to 21 pages.

COON, CARLETON STEVENS AND OTHERS

Races a study of the problems of race formation in man By Carleton S Coon Stanley M Garn and Joseph B Birdsell. Springfield, Illinois Charles C Thomas 1950. 153 p. illus. 22 cm. (American lecture series. Publication number 77 A monograph in American lectures in physical anthropology Edited by T D Stewart and others) $3.50 772

Contents (abridged) The study of races. Race and the issue. Adaptive changes in the whole body Surface variations: adaptations to extremes of light and heat under different degrees of humidity—adaptations to dry cold—adaptations to cool, damp climates. Race and evolutionary status. Race and the invisible world. The races of the world. Bibliography Index.

Note: The main viewpoint in this short but valuable survey is illustrated in the following quotation "Changes in the genetic make-up of human beings have been taking place for hundreds of millenia, through the processes of mutation and selection without the intent or even the knowledge of man himself. A reason for this is that human beings, like other organisms, live in specific physical environments which are not all alike. The authors show that little is known about the genetic relationships between races and other human groups, but they give good account of environmental influences upon race development via mutations. In the final chapter race is defined as A population composed of individuals who normally interbreed, possess common genetic pool, and look alike within broad limits." The racial groups currently recognized by scientific workers in the field are briefly described from the standpoint of physical anthropology There is a bibliography of 91 citations.

DUBLIN, LOUIS ISRAEL

The facts of life from birth to death. In collaboration with Mortimer Spiegelman. New York The Macmillan Company 1951 461 p. illus. 22 cm. $4 95 773

Contents: Who we are—the population. The pattern of reproduction. The pattern of marriage. The average American family Marital dissolution by divorce, separation, and death. The sick and their care. Mortality—in general. The conquest of tuberculosis. The mystery of cancer. The control of diabetes. A diminishing burden—pneumonia and influenza. An increasing burden—the circulatory diseases. The problem of the rheumatic diseases. The hazards of infancy and childhood. Our old people. The accident toll. Suicide and homicide. The labor force and the hazards of occupation. Human impairments. Mental health. Other diseases of public interest. Our body build. The public health and its administration. How long we live. The effects of war. Selected references. Index.

Note: A reference book of answers and statistical data on such questions as "What is the most popular age for brides?" and "What are the grades of mental deficiency?" It is cast in readable form and is addressed not only to people with serious interests in the data but also to those who like to browse for curious information. The senior author is Statistician for the Metropolitan Life Insurance Company and an internationally known authority on the vital statistics of living and dying. The bibliography does not list all of the sources used but is primarily selected one for those readers who wish to pursue further information on specific topics.

DUBLIN LOUIS ISRAEL, AND OTHERS

Length of life, a study of the life table. By Louis I. Dublin, Alfred J Lotka, and Mortimer Spiegelman. Revised edition. New York The Ronald Press Company, 1949 379 p. illus. 24 cm. $7 00 774

Contents: The life span and the life table. The life table as record of progress to the end of the nineteenth century. The gain in longevity in the United States in recent years. Geographic variations in longevity. Biological aspects of the life tables. The inheritance of longevity. Biological factors influencing longevity and mortality. The contribution of medical and sanitary science to health and longevity. Forecasts of mortality and longevity. Longevity and mortality in relation to physical condition. Longevity and mortality in relation to occupation. Application of the life table to population problems. Application of the life table to economic problems. Life tables based on the experience of life insurance companies. *Life table construction. Appendix. Life tables. List of* sources to life tables. Name index. Subject index.

Note: (1763a) A standard work written by statisticians associated with the Metropolitan Life Insurance Company. Although based on life expectancy tables such as are used by insurance companies, it covers more than the purely quantitative aspects of the subject. Biological and social circumstances which affect the duration of human lives also are discussed; hence the work is of interest not only in the life insurance field but in medicine, public health, and sociology as well. The chapter on biological factors influencing longevity and mortality and that on forecasts of mortality and longevity have been added in this edition. Changes have been made in other parts of the book where advances in knowledge required them. Literature references have been revised. The book now contains 94 tables of data on mortality rates, life expectancies, etc.

KROGMAN WILTON MARION

A handbook of the measurement and interpretation of height and weight in the growing child. Editorial board Melville J Herskovits and others. Evanston, Ill. Child Development Publications (of the Society for Research in Child Development Inc.) Fayerweather Hall East, Northwestern University 1950 68 p. 23 cm. (Monographs of the Society for Research in Child Development. Serial no 48) $1.50 775

Contents: Foreword. Introduction. Height, weight, and height-weight-age tables. References.

Note: Height and weight are widely accepted as measures of physical growth. This manual for teachers, pediatricians, and others concerned with child development analyzes such measurements, and discusses the extent to which they may be interpreted as indications of growth progress. Methods of securing accurate measurements and the interpretive statements are supplemented by height-weight-age tables and graphs. An extensive bibliography is included.

LAUGHLIN WILLIAM S editor

Papers on the physical anthropology of the American Indian. Delivered at the fourth Viking Fund Summer Seminar in Physical Anthropology held at the Viking Fund, September 1949 Edited by William S Laughlin. The seminar planned by S L. Washburn. New York The Viking Fund, Inc. 1951 202 p. illus. 23 cm. Paper 776

Contents: The problem of the early peopling of the Americas as viewed from Asia, by J. B. Birdsell. The sequence of Indian physical types in South America, by M. T. Newman. The Alaska gateway viewed from the Aleutian Islands, by W. S. Laughlin. The blood groups and types, by W. C. Boyd. The dentition of the American Indian, by A. A. Dahlberg. Some genetic variations in American Indians, by J. N. Spuhler

Note: A collection of original papers addressed primarily to graduate students working in physical anthropology and related fields. "The papers presented in this volume reflect in a measure the changing emphasis that is taking place in physical anthropological studies. This is noticeable in the greater emphasis placed on the processes of change, the sequence of types, validity of criteria currently employed and the development of new methods.

MACGOWAN, KENNETH

Early man in the New World. With drawings by Campbell Grant. New York The Macmillan Company 1950 260 p. illus. 22 cm. $5 00. 777

Contents: This sudden New World. The road of early man. The dead hand of the ages. The great ice age. Early man in the Old World. What the bones have to say. The artifacts of early man. Early man and the great extinctions. Pygmies, australoids, and mongoloids—before Indians? Did the Indian invent or borrow his culture? The Indian in agriculture. Puzzles, problems, and half-answers. References in the text. References as to illustrations. Index.

Note: A readable summation of present-day knowledge concerning the origin of man in America. Besides presenting the various facts and theories regarding the first appearance of man in the New World, the book offers the interested layman good account of the techniques and methods of the professional archeologist. An extensive bibliography is included.

MORTON, DUDLEY JOY

Human locomotion and body form a study *of gravity and man, by Dudley J Morton,* with the collaboration of Dudley Dean Fuller Baltimore The Williams & Wilkins Company 1952 285 p. illus. 24 cm. $5 00. 778

Contents (abridged) Part One, Underlying principles of adaptation Organic interaction with gravity Gravity designing factor. Specialization of the human foot. Gravity and organic change. Mechanics of foot balance. Weight distribution in locomotion. The foot in walking. Gravity and muscle action. Structural factors. Physiological economy—Canadian Army foot survey. Postural and locomotor habits. *Part Two, Analysis of the walking stride:* Foot contact and synchronized actions. Weight division during foot contact. The leverage interval. Horizontal components of force. Metabolism and locomotion. Histological and chemical aspects. Metabolic economy in muscle function. Human mentality and bipedism. Bibliographical references. Index.

Note: Anatomical, metabolic, postural, and mechanical considerations are coordinated in this comprehensive study. Some attention has been given also to the evolutionary aspects. The first named author is medical graduate and an authority on anatomy; his collaborator is an associate professor in the Department of Mechanical Engineering of Columbia University

SCHEINFELD AMRAM

The new You and heredity With special editing in the medical genetics sections by Dr Morton D Schweitzer and additional aid by others herein mentioned. Illustrated by the author Philadelphia J B Lippincott Company 1950 616 p illus. 22 cm. $6.00. 779

Contents (abridged) The science of genetics. The eternal germ plasm. What we don't inherit. The perilous road to birth. "Boy or girl?" Coloring—eyes. Hair color. Skin color. What will your child look like? "Twins, quads" and "quints." The "black" genes. The poor males. Sick minds. Slow minds. The blood types. How long will you live? "Black genes" roll-call. The battle of the "IQs." Genius. Behavior. Sex life (sex and sexual behavior). Race. Ancestry. Eugenics and the "unfit." Suggestions for further reading. Index.

Note: (1760a) The modern knowledge pertaining to human heredity is, in this book, described and explained for the non-specialist. The book is outstanding for its inclusiveness and for the author's unique style whereby he manages to convey scientific information in a way that makes it vital to every reader. The book is packed with facts; and, without "crying alarm," these facts are directly related to the reader's own life and person and to those of his *fellow men.* The first edition was published in 1939. In this edition there is so much newly added material that the book is essentially a new work as indicated by the title.

SELLARDS, ELIAS HOWARD

Early man in America, a study in prehistory A publication of the Texas Memorial Museum. Illustrations by Hal Story Austin University of Texas Press 1952 211 p illus. 24 cm. $4 50 780

Contents (abridged) Geologic time divisions. Conditions of occurrence and preservation of early man records. Hunters of the plains. The elephant hunters. The bison hunters. Folsom man. Plainview man. The Cordilleran mountain belt. The Atlantic and Gulf coastal plains. Some South American localities. Markings on stone and bone. Origin of American cultures. Large mammals of the late pleistocene. Time of extinction of large mammals. Age determinations of certain culture complexes. List of localities and index to literature. General considerations. Bibliography Index.

Note. Although written in narrative style, this book is primarily reference book on the sites (and the artifacts found at each) where important evidence has been found on man's existence in North America in prehistoric times. Sites of discoveries are specifically described and particular attention is given to the relative positions of projectile points, scrapers, animal bones, and other artifacts found in each. Dates of artifacts as established by the radiocarbon method are given in many instances. The list of localities and index to literature occupy about half of the volume.

SHUTTLEWORTH FRANK KAYLEY

The adolescent period a pictorial atlas. Evanston, Ill. Child Development Publications, 1951 69 p illus. 24 cm. (Society for Research in Child Development, Inc. Monographs. Vol. xiv no 2) Paper 781

Contents: Physical growth and sexual maturation of girls. Stages of sexual maturation among girls. Sexual maturation of boys. Individual differences in the sexual maturity of boys. Stages of sexual maturation among boys. Types of obesity Variations in body builds at age fifteen. Sheldon's somatotypes. Effects of partial starvation on somatotypes. Androgyny References.

Note A monograph that consists largely of photographs with descriptive legends and brief explanatory texts. The monograph is designed and the photographs selected "to illustrate the processes of physical growth, sexual maturation, and differences in body builds among normal adolescents. The work is companion volume to the author's *The adolescent period, graphic atlas* published as vol. XIV no. 1 in the same series (see index)

STERN, CURT

Principles of human genetics Illustrations by Aloha M Hannah. San Francisco W H. Freeman and Company 1949 617 p illus. 24 cm. (A series of biology texts editors George W Beadle and others) $6.25 782

Contents. Introduction. The biological basis of man's inheritance. Genic action. The formation of germ cells with 14 chromosomes—meiosis. Probability Simple single factor inheritance. Lethal and sublethal genes. Problems of genetic advisers. Genetic ratios. The Hardy-Weinberg law Multiple alleles. Medicolegal applications of genetics. *Sex-linkage. Linkage and crossing over. Irregularities in* the expression of genes. Prenatal interactions. Multifactor inheritance. Consanguinity Sex determination. The sex ratio. The occurrence of mutations. The production and significance of mutations. Heredity and environment. Selection and eugenics. Genetic aspects of race. Genetic aspects of race mixture. The origin of human diversity Index.

Note. This book is designed primarily for use in college courses. A course in general genetics is not prerequisite, but the level of discussion implies at least previous course in general biology The authoritative discussions on such topics of general interest as the genetic aspects of race make the book useful in general library collections. Selected lists of references accompany the chapters. The author is member of the faculty of the University of California.

STOLZ, HERBERT ROWELL AND LOIS MEEK STOLZ

Somatic development of adolescent boys a study of the growth of boys during the second decade of life. New York The Macmillan Company 1951 557 p. illus. 24 cm. $9.00. 783

Contents: The study of human development. The California adolescent study Description of the study of somatic development of boys. The period of pubertal growth in height. Growth in height during adolescence. Growth in stem length and leg length during adolescence. Growth in body width during adolescence. Timing relations among phenomena of skeletal growth during adolescence. Skeletal age in relation to height growth. Changes in thickness of subcutaneous tissue during adolescence. Growth in thigh circumference during adolescence. Changes in weight during adolescence. Growth in strength during adolescence. The development of pubic hair and external genitalia during adolescence. Increase in adipose tissue during early adolescence. The rhythm of growth during adolescence. General summary and conclusions. Relation of somatic changes to other developmental phenomena during adolescence—the case of Ben. Appendices (abridged): Subcutaneous tissue index. Muscle strength index. Index.

Note: As part of the California Adolescent Study frequent and detailed measurements were made of the body changes of 112 boys and 121 girls over approximately seven years. The data on the boys are presented and interpreted in this book. A considerable part of the presentation is made in tables—of which there are more than 100—and graphs, of which there are nearly as many However the data are also discussed fully Perhaps the most noteworthy feature is the inclusion of many photographs which portray stages in male adolescent development. The final chapter is page study of one boy in which somatic development is correlated with changes in personality and social behavior. The book is of interest to graduate psychologists, pediatricians and other scientists with professional interests in the subject.

TALLMADGE, GUY KASTEN

Basic biology of man. New York Random House, 1952 244 p. illus. 21 cm. $3.00. 784

Contents The cell. Tissues. Basic structure and organization. The common integument. The locomotor apparatus. The digestive system. The reproductive system. The circulatory system. The respiratory system. The urinary system. Index of subjects. Index of names.

Note: An introduction designed for general reading rather than textbook use. The author has presented factual outline of the main biological processes, and has avoided emphasis on spectacular aspects. There are only few illustrations and these are the plainest kind of drawing. The book is suitable for mature lay readers who desire reliable rather than "fascinating" account.

WATSON ERNEST H., AND GEORGE H LOWREY

Growth and development of children. Chicago The Year Book Publishers, Inc. 1951 260 p. illus. 23 cm. $5 75 785

Contents: Introduction. Heredity and environmental factors. Fetal growth and development. Normal physical measurements. The premature child. Behavioral development. Organ development. Osseous development. Role of the endocrine glands in normal growth and development. Energy metabolism. Nutrition in normal growth. An outline of abnormal growth. Index.

Note. An inclusive, up-to-date survey of the essential current knowledge of growth during childhood. It is suitable for use as textbook and also as reference work for physicians, public health workers, social workers, etc. Selected bibliographies are included. The authors are associated with the Department of Pediatrics of the Medical School of the University of Michigan.

WECHSLER, DAVID

The range of human capacities. Second edition. Baltimore The Williams & Wilkins Company 1952 190 p. illus. 23 cm. $4.00 786

Contents: Introduction. The problem. The measurement of human capacities. The distribution of traits and ability The range of human capacities. Natural constants and the limits of human variability Range in productive operations. Length of life and the chances of survival. Exceptions. The effect and the burden of age. Genius and deficiency The meaning of differences. Appendices: The measurement of mental ability Tables of means, standard deviations and range ratios. Distribution of total range ratios. References. Index.

Note: The thesis of this work is that human variability with respect to any measurable trait or ability is extremely limited when compared to that of other phenomena in nature and that the differences which separate human beings from one another with respect to any trait or ability are far smaller than is ordinarily supposed. The author suggests that the reader in considering the data which support the thesis, lay aside any previous opinion he may have held in the matter, since the conclusions have important bearings on a number of social questions. The bibliography of 174 references indicates the sources from which the presented facts are drawn. The book was first published in 1931 and has been out of print for some years. In preparing this edition the author added two chapters and substantially revised some of the material carried over from the first edition.

WEIDENREICH, FRANZ

The shorter anthropological papers of Franz Weidenreich published in the period 1939–1948 A memorial volume compiled by S. L. Washburn and Davida Wolffson. New York The Viking Fund, Inc., 1949 267 p. illus, 23 cm. Paper 787

Contents: The trend of human evolution. The human brain in the light of its phylogenetic development. Generic, specific and subspecific characters in human evolution. The brachycephalization of recent mankind. The external tubercle of the human tuber calcanei. Some problems dealing with ancient man. The "Neanderthal man" and the ancestor of "Homo sapiens." Facts and speculations concerning the origin of Homo sapiens. Some particulars of skull and brain of early hominids and their bearing on the problem of the relationship between man and anthropoids. The duration of life of fossil man in China and the pathological lesions found in his skeleton. On the earliest representatives of modern mankind recovered on the soil of east Asia. The Keilor skull—a Wadjak type from southeast Australia. The paleolithic child from the Teshik-Tash cave in southern Uzbekistan (central Asia) Franz Weidenreich, 1873–1948, by W. K. Gregory Bibliography

Note: Dr. Weidenreich was noted for his work in the fields of human evolution and anthropology These papers, reprinted from various scientific journals and representative of his primary interests, are but a small part of his writings. A biographical sketch and complete bibliography of Weidenreich's publications from 1899 to 1949 are included.

YEARBOOK OF PHYSICAL ANTHROPOLOGY 1950, Volume 6 Edited by *Gabriel W Lasker* and J Lawrence Angel. New York Wenner Gren Foundation for Anthropological Research, Inc., 1951 314 p. illus. 27 cm. 788

Contents: Some old hypotheses tested and some new theories d... ...theories in physical anthropology during 1950, by G. W Lasker The scope of physical anthropology: what is to be taught, by B. A. Kaplan. The evolutionary significance of the Australopithecines, by J. T Robinson. Age of puberty in the tropics, by R. W B. Ellis. The blood groups of the people of Egypt, by I. A. Donegani and others. The blood groups of the Icelanders, by I. A. Donegani and others. Taste deficiency for phenylthiourea in African Negroes and Chinese, by N A. Barnicot. Ethnology of schistosomiasis in Uganda, by R. Elsdon-Dew The incidence of *sickle cell trait in Negroes from the Sea Island area of South Carolina*, by P K. Switzer. Limitations of the "normal" body weight as a criterion of normality by J Brožek and A. Keys. Evaluation of leanness-fatness in man—a survey of methods, by J. Brožek and A. Keys. The physical distinctions of man, by A. H. Schultz. Man's relation to the apes, by W C. Osman Hill. Man and other mammals from Toalian sites in south-western Celebes, by D. A. Hooijer. The racial origin of the extinct Tasmanians, by J. B. Birdsell. The MNS blood groups of Australian aborigines and New Guinea natives, by R. Sanger. A bibliography and historical review of physical anthropology in Canada, 1848–1949 by R. E. Popham. Cranial injuries in prehistoric man with particular reference to the Neanderthals, by C. B. Courville. On the prediction of human stature from the long bones, by A. Telkkä. Taxonomy and human evolution, by S. Zuckerman. A comparison of the teeth of people—Indo-European racial stock with the Mongoloid racial *stock*, by R. K. Tratman.

Note: A typical issue of this annual. It supplements the *American journal of physical anthropology* by reviewing the literature of the whole field and by reprinting pertinent articles which were first published in periodicals other than the *American journal of physical anthropology* The first article is a compact summary of the world literature published during the year It is accompanied by a comprehensive bibliography

HUMAN ANATOMY

GENERAL

ANSON, BARRY JOSEPH

An atlas of human anatomy Philadelphia W B Saunders Company 1950 518 p. illus. (part col d) 28 cm. $11 50 789

Contents (abridged) The head. The neck. Upper extremity The back and thorax. Abdomen. The pelvis and perineum. Lower extremity Index.

Note. A new atlas of gross human anatomy in which most of the illustrations are original and were made directly from new dissections. The exceptions are certain illustrations previously published with articles by the author in professional journals. Also there are a few plates of generalized drawings based on statistical study of laboratory specimens. Generally speaking, however the book can be described as wholly new work based on direct study rather than on previous publications. The quality of the drawings and their reproduction is excellent. The book is suitable both for use as text in first year courses in medical colleges and as an office reference book for graduate physicians and surgeons.

CATES HARRY ARTHUR

Primary anatomy Second edition. Baltimore The Williams & Wilkins Company 1951 344 p. illus. 26 cm. $6 00 790

Contents: The beginning of life. Skeletal system. Articular system. Muscular system Digestive system. Respiratory system. Urinary system. Generative or reproductive system. Circulatory system. Nervous system. Eye and ear. Skin and endocrine glands.

Note. (473) A textbook of human anatomy for readers such as student nurses, physiotherapists, and occupational therapists whose interests in the subject are professional but not medical. With such an audience in mind the author has chosen the functional approach rather than the topographical, and he has written longer and more detailed chapters on the skeletal, muscular nervous, and circulatory systems than on other systems The style is less technical than in most introductory books on anatomy Extensive revisions are apparent in the second edition, although the chapter titles are the same. About one-quarter of the 403 illustrations are new or have been re-drawn.

DICKINSON ROBERT LATOU

Human sex anatomy a topographical hand atlas. Second edition. Baltimore The Williams & Wilkins Company 1949 145 p. illus. 31 cm. (National Committee on Maternal Health, Inc. Medical aspects of human fertility) $10.00 791

Contents (abridged) Text and commentary: Purpose and methods. The bony pelvis. Uterus, ovaries and tubes. The vagina. The vulva and breast. Male genital anatomy The anatomy of coitus. The anatomy of the control of conception. Conclusions and program. Bibliography The atlas proper. Index.

Note. A very detailed work containing 175 figures, some of which contain more than ten drawings and few of which contain only one. The drawings are original but some are based on illustrative matter which has appeared elsewhere. Most of these are sketches rather than fully developed anatomical studies The drawings are preceded by text in which they are described and discussed with references to an extensive bibliography This text accounts for the pagination given above the illustrations are printed on unnumbered pages of which there are approximately 200 The presentation is slanted toward the general practitioner of medicine whose practice includes sex education and advice to married couples. However it is the fullest treatment of the subject available and therefore is potentially of value to any medical school graduate in need of information on the subject.

FRANCIS, CARL C

The human pelvis. With 61 illustrations including 3 in color St. Louis The C. V Mosby Company 1952 210 p. illus. (part col d) $5.00. 792

Contents. Bones of the pelvis. Ossification of the pelvic bones. Pelvic articulations. Pelvic girdle. Muscles and fasciae. Vessels of the pelvis. Pelvic nerves. Intestine within the pelvis. Urinary system within the pelvis. Female genitalia. Male genitalia. Embryology Index.

Note: A detailed description of the anatomical structure of the human pelvis, with some attention to the embryology It is based partly on the literature and partly on original studies made by the author and his colleagues at Western Reserve University Some of the text and some of the illustrations are based on original dissections. The book is the development of course in applied anatomy at the graduate level and is intended for the instruction of practicing surgeons and for medical school graduates preparing for surgery Carefully selected literature references are included.

GRANT, JOHN CHARLES BOILEAU

An atlas of anatomy By regions. Third edition. Baltimore The Williams & Wilkins Company 1951 637 p illus. (part col'd) 29 cm. $12.00. 793

Contents: The upper limb. The abdomen. The perineum and pelvis. The lower limb. The vertebrae and the vertebral column. The thorax. The head and neck. The cranial nerves and the dermatomes. Index.

Note. (475*) An outstanding work of its kind. It consists entirely of illustrations with accompanying descriptive legends. The illustrations are arranged by region and in sequence within regions. T insure accuracy the artists who prepared the drawings worked with the dissected specimens before them and built up their drawings on tracings made from photographs of the same specimens. In the present edition there are 637 figures, most of which contain more than one drawing Seventy of these are new additions and 28 are redrawings or substitutions for illustrations that appeared in the second edition. Also color has been used in more of the drawings in the present edition.

GRANT JOHN CHARLES BOILEAU

A method of anatomy *descriptive and deductive* Fifth edition. Baltimore The Williams and Wilkins Company 1952 870 p. illus. 26 cm. $7 00 794

Contents: Section I, General: Bone and cartilage. Digestive system. Section II, The upper limb: Introduction. Cutaneous nerves and veins. Flexor region of the forearm. Section III, The abdomen Anterior abdominal wall. Abdomino-pelvic cavity The three paired glands. Section IV The perineum and pelvis: Perineum. Male pelvis. Female pelvis. Section The lower limb: Introduction. Leg and dorsum of foot. Hip joint. Section VI, The thorax. Bony thorax. Pericardium and contents. Section VII, The head and neck: Front of the skull and the face. Posterior triangle of the neck. Contents of the cranium. Anterior triangle of the neck. Cervical vertebrae and the prevertebral region. Pharynx. Larynx. Section VIII, Miscellaneous Autonomic nervous system. Bones of the skull. Index.

Note (476) A successful textbook for first-year students in medical colleges. It is less voluminous than some basic texts and this brevity has been achieved partly by the use of small diagrammatic figures instead of plate type drawings and partly by compact and ably written text. The understanding of regions is stressed. The fourth edition was published in 1948. In preparing this edition the author corrected minor errors and added material in several sections. 60 illustrations were redrawn or improved in some way and 78 illustrations were added.

THOREK, PHILIP

Anatomy in surgery 720 illustrations 211 in color drawn by Carl T Linden Philadelphia J B Lippincott Company, 1951 970 p illus. 26 cm. $22 50. 795

Contents (abridged) Section one, The head. Section two, The neck. Section three, The thorax. Section four The abdomen. Section five, The pelvis. Section six, Male perineum and external genitalia. Section seven, Female perineum and external genitalia. Section eight, The superior extremity Section nine, The inferior extremity Section ten, Vertebral column, vertebral (spinal) canal, spinal cord. Index.

Note: In this textbook for students in medical colleges anatomy is presented from the surgeon's viewpoint. The material is organized in 49 chapters arranged by regions of the body as indicated by the section titles. The exposition is conducted in clear, direct style and the illustrations are of high quality The author is member of the faculty of the College of Medicine of the University of Illinois.

SPECIAL REGIONS AND ORGANS

BAST THEODORE HIERONYMUS, AND BARRY J ANSON

The temporal bone and the ear Springfield, Illinois Charles C Thomas 1949 478 p. illus. 24 cm. $12.00 796

Contents: The temporal bone and the ear. The otic labyrinth. The perilotic labyrinth. The otic capsule. Histological variations and pathological processes. Bone dystrophies. The origin and development of the middle ear and related air spaces. The auditory ossicles. A historical survey of the structure and function of the internal ear. Index of authors. Index of subjects.

Note. A substantial monograph on the morphology and embryological development of the temporal bone and the ear. It is based mainly on direct studies of more than 130 series of sections. It is illustrated with remarkable series of microphotographs, drawings of reconstructions, and drawings from projection tracings of actual sections. Thirty of the illustrations are reproduced in color. The final chapter is an outline of outstanding studies of the inner ear from 350 B. C. to 1939 A. D., and is supplemented by selective bibliography

FRIEDMAN SYDNEY M

Visual anatomy—head and neck. Springfield, Illinois *Charles C Thomas, 1950 217* p. illus. 25 cm. $7.50 797

Contents: Anterior aspect of the neck. Lateral aspect of the neck. The suprahyoid region The submandibular region. The skull. The infratemporal region. The continuity of temporal and infratemporal regions The parotid region. The face and scalp. The skull. The orbit. The nose. The auditory apparatus. The skull. The back of the neck. The cervical viscera. Lymphatics. Index.

Note: Not conventional atlas but selective, compact treatment designed for use by upperclass students in medical colleges and graduates in need of review or as the author terms it reviewer text. It is organized so that drawing on the right hand page faces the verbal description on the left-hand page. The sequence of drawings is from the inside out, or the reverse of the traditional arrangement of anatomic atlases. The drawings are diagrammatic rather than literal renderings.

HOLLINSHEAD WILLIAM HENRY

Functional anatomy of the limbs and back a text for students of physical therapy and others interested in the locomotor apparatus. Philadelphia W B Saunders Company *1951 341 p. illus. 24 cm. $6 00 798*

Contents (abridged) Section I, The organization of the body: Anatomical terminology The tissues of the body The organs and organ systems Section II, The upper limb: The shoulder The arm. Forearm and hand. Actions of forearm muscles. The hand. Movements of the fingers Section IV The lower limb The pelvis, buttocks and hip. The thigh and knee. The leg. The foot. Index.

Note: An introductory textbook for the use of students who are preparing for careers as physical therapists, physical education instructors, etc. The author is Head of the Section on Anatomy of the Mayo Clinic.

LERCHE, WILLIAM

The esophagus and pharynx in action, a study of structure in relation to function. Springfield Illinois Charles C Thomas, 1950. 222 p. illus. 24 cm. $6.50 799

Contents: Introduction. The muscular coat of the esophagus. The mucosa and the musculature of the alimentary canal from cardia to mesopharynx, as observed in specimens in which characteristic markings pertaining to the act of regurgitation had survived. The ampulla. The phreno-esophageal elastic membrane. Rumination—merycism. The movement of regurgitated contents through the lower esophagus. The movement of regurgitated contents through the middle and upper esophagus. The cricopharyngeus muscle. Mechanism of deglutition. The cardia. The mechanism of the gastro-esophageal segment of expulsion during the act of deglutition in man. Appendix. Bibliographical index. Author index. Subject index.

Note: An original work based chiefly on the study of one hundred specimens obtained in dissecting rooms. On the basis of these studies, the author elucidates the relations of structure and function in the portion of the alimentary canal that extends from the cardia to pharynx and includes these organs. Pertinent material from published literature is also included. There are 93 illustrations of which considerable number are reproduced from photographs of specimens. The book is of interest to anatomists and wide range of medical practitioners.

NERVOUS SYSTEM

ASSOCIATION FOR RESEARCH IN NERVOUS AND MENTAL DISEASES

Patterns of organization in the central nervous system. Proceedings of the association, December 15 and 16 1950 New York. With 268 illustrations and 12 tables. Baltimore The Williams & Wilkins Company 1952 581 p. illus. 23 cm. (Association for Research in Nervous and Mental Diseases. Research publications. Vol. xxx. Editor Philip Bard) $12.00 800

Contents Central versus peripheral factors in the development of coordination, by P Weiss. The mammalian small-nerve fibers—a system for efferent nervous regulation of muscle spindle discharge, by S. W Kuffler and C. C. Hunt. On reflex actions of muscular origin, by D. P C. Lloyd. Reflex patterns in intersegmental systems, by C. G. Bernhard. An electrical hypothesis of central inhibition and facilitation, by W S. McCulloch and others. Patterns of organization of tendon reflexes suggested by knee jerk latencies, by M. Hines and G. C. Knowlton. Spinal reflex patterns in man, by J W Magladery and others. A study of cortico-spinal activation of motor neurons, by J. M. Brookhart. Brain stem influences on spinal motor activity by D. B. Lindsley Supraspinal mechanisms of facilitation and inhibition of cord reflexes, by G. M. Austin. Motor phenomena elicited in the unanesthetized animal by electrical stimulation of the cerebral cortex, by J. W Ward. Patterns of localization in precentral and "supplementary" motor areas and their relation to the concept of premotor area, by C. N. Woolsey and others. Interrelations of cerebellum and brain stem, by R. S. Snider Convulsive patterns in cerebellum and brain stem, by J. W Markham and others. Cerebro-cerebellar projections and the somatotopic localization of motor function in the cerebellum, by J. L. Hampson and others. Cerebellar projections to the cerebral cortex, by E. Henneman and others. The central representation of some forms of deep sensibility, by V B. Mountcastle and others. Interaction in the somatovisceral projection system, by V E Amassian. Topographical and functional determinants of cortical localization patterns, by T C. Ruch and others. Functional organization of central visual pathways, by H. T Chang. The cortical connections of the reticular complex of the thalamus, by J E. Rose. The ascending reticular activating system, by H. W Magoun. Thalamocortical integrating mechanisms, by H. H. Jasper and C. Ajmone-Marsan. Epileptic automatism and the centrencephalic integrating system, by W Penfield. Functional interpretation of anatomic patterns, by K. S. Lashley. List of members. Index

Note: A collection of original papers designed to present a fair sampling of recent developments in how the central nervous system works. Most of the papers are accompanied by excerpts from the discussions at the meeting and by references to the pertinent literature.

BAILEY, PERCIVAL, AND GERHARDT VON BONIN

The isocortex of man. Urbana University of Illinois Press 1951 301 p. illus. (part col d) 27 cm. Paper, $5 00, cloth, $6 00 801

Contents. Historical introduction. Growth and weight of the brain. Fissures of the brain. Cortical types. Serial sections. The brain map. Intracortical connections. Afferent and efferent connections. Functional significance. Bibliography Plates.

Note. A fresh study of the isocortex of the human brain based mainly on an unusually good specimen that was fixed within one hour of death. The findings of this particular study are correlated with the findings of other workers in the field. As a result of this study and a study of the published writings of other workers, the authors state after long and careful study of the human isocortex, the main impression that we have retained is that vast areas are so closely similar in structure as to make any attempt at sub-divisions unprofitable if not impossible. Nevertheless, in their chapter on the brain map and in subsequent chapters they discuss critically the findings and conclusions of others and state certain tentative conclusions of their own on this aspect of brain study. The bibliography is extensive but not exhaustive. There are more than 120 figures—many of which bear reproductions of more than one drawing—and fifteen plates.

BUCHANAN, ARCHIBALD RAY

Functional neuro-anatomy, including an atlas of the brain stem. Second edition thoroughly revised. With 273 illustrations, 19 in color Philadelphia Lea & Febiger, 1951. 323 p. illus. (part col d) 27 cm. $7.50 802

Contents (abridged) Development and histogenesis of the nervous system. Divisions of the nervous system. The spinal cord. The tactile, pain, and thermal pathways. The proprioceptive pathways. External and internal configurations of the brain stem. Relations within the brain stem of the general sensory pathways. The pathways concerned in the conduction of general afferent impulses from the head region to the thalamus. The special senses of taste, hearing, equilibrium, sight, and smell. The internal capsule. The cerebrum. The sensory areas of the cortex. The cyto-architecture of the parietal, temporal and occipital lobes. The motor cortex and its projections. The lower motor neurons. The cerebellum—its afferent and efferent connections. Extrapyramidal areas of the cerebral cortex and extrapyramidal fibers. The hypothalamus. The visceral efferent (autonomic) system. The basal ganglia. The rhinencephalon. The ventricles of the brain. The cerebrospinal fluid. The blood supply of the central nervous system. The interstitial tissue of the central nervous system. Bibliography Index

Note A relatively brief text, written primarily for medical college students. As the title and chapter organization indicate, the subject is presented from the standpoint of function rather than level. The first edition appeared in 1949 The major change made in this edition was the adding of a 73-page atlas of the brain stem. The author is Professor of Anatomy in the University of Colorado School of Medicine.

BUCY PAUL CLANCY editor

The precentral motor cortex. Second edition. Urbana, Illinois The University of Illinois Press, 1949 615 p illus. 28 cm. $6 00 803

Contents Foreword, by J F Fulton Introduction, by P C. Bucy Architecture of the precentral motor cortex and some adjacent areas, by G. von Bonin. The role of architectonics in deciphering the electrical activity of the cortex, by J L. O'Leary Afferent connections, by A. E Walker Efferent fibers, by P M. Levin. The pyramidal tract, by S. S. Tower On excitatory and inhibitory processes within the motor centers of the brain, by N Dusser de Barenne and R. Hodeskalu, translated by G von Bonin and W S. McCulloch. Cortico-cortical connections, by W S McCulloch Somatic functions, by M. A. Kennard Relationship to the cerebellum, by P Bailey Autonomic function, by M. A. Kennard The frontal eye fields, by W K. Smith. Electrical excitability in man, by T C. Erickson. Effects of extirpation in man, by P C. Bucy Relation to abnormal involuntary movements, by P C. Bucy Clinical symptomatology by C. D. Aring. Pathology by C. Davison. Significance of the precentral motor cortex, by M. Hines. Bibliography Index.

Note: (1783) When the first edition of this work appeared in 1944 it was widely recognized as a valuable critical evaluation of the field at that time. In the present edition the titles and authors of the monographs that constitute the chapters are the same. However, changes, some of which amount to complete rewriting of paragraphs and others as small as the change of a single reference, are scattered throughout the work. The bibliography has been revised to include literature published as late as 1948. According to the editor, this is the final edition of the book.

CONNOLLY, CORNELIUS JOSEPH

External morphology of the primate brain. Springfield, Illinois Charles C Thomas, 1950 378 p. illus. 25 cm. $10 00 804

Contents The fissural pattern of the primate brain. Encephalometry Development of the cerebral sulci. The brain of the newborn and of children. The fissural pattern of the human brain (Negroes and Whites) Brain and race. The relation of the sulci to the cortical areas. Endocranial casts and brain impressions. Some sulcal relations in the anthropoid and in the human brain. The fissural impressions on the endocranial casts of prehistoric man. On homologies and the origin of sulci. Bibliography Index.

Note: A new study based on material in the Hrdlička Collection of the United States National Museum. Particular brains in this collection are identified and described. Descriptions of individual brains are then synthesized in summary descriptions of the brain characteristics of families and other zoological groups. The author stresses the importance of the sulci in brain mapping and finally discusses the origin and the relations of these features to cortical areas. There are 337 figures and an extensive bibliography

KUNTZ, ALBERT

A text book of neuro-anatomy Fifth edition, thoroughly revised, with 331 illustrations. Philadelphia Lea & Febiger 1950 524 p. illus. 24 cm. $8 00 805

Contents. Evolution and comparative anatomy of the nervous system. Development of the nervous system. Nerve and supporting tissue. Anatomy of the central nervous system. The cerebrospinal pathway and the blood vessels of the central nervous system. Myelinization. Reflex and integrating mechanisms. The cerebrospinal nerves. Internal structure of the spinal cord. Peripheral and central conduction pathways. The medulla oblongata. The pons. The mesencephalon. Central connections of the cranial nerves connected with the medulla oblongata, the pons and the mesencephalon. The cerebellum. The diencephalon. The visual apparatus. The olfactory apparatus. The telencephalon. The autonomic nervous system. Conditioned responses. Laboratory outline. Index.

Note (485*) A long-established introductory text for medical college students. Although the treatment emphasizes the anatomical aspects, the author stresses the importance of understanding the nervous system as a dynamic organization. Particular attention is called to scientific knowledge on the architecture and functioning of the nervous system which has been derived from experiments in recent decades. Changes made in preparing this edition were not extensive, but important information derived from recent experiments has been added, some changes have been made in the illustrations, and a few recent articles have been added to the bibliographies.

KUNTZ ALBERT

Visceral innervation and its relation to personality Springfield, Ill. Charles C Thomas, 1951 152 p. illus. 23 cm. (American lecture series. Publication no. 115 A monograph in American lectures in anatomy edited by Otto F Kampmeier) $4.50 806

Contents. General plan of somatic and visceral innervation. The autonomic nerves Reflex and integrating centers and central conduction pathways concerned in visceral functions. General physiology Innervation of specific viscera. Visceral neural factors in personality Bibliography Index

Note The first five chapters, which account for 111 of the book's pages, are devoted largely to describing the nervous system and of the visceral cavities and organs, including the innervation of specific organs. Only in the final chapter does the author discuss the relations ...

between this innervation and the personality. Here the author reviews the published work, including his own, and reaches such conclusions as: "The visceral urges still remain the mainsprings of conduct, but in man the control of conduct, in a large measure, is carried out through cortical mechanisms of the intellect." There is a 5-page bibliography. The author is Professor of Anatomy in the St. Louis University School of Medicine.

LARSELL, OLOF

Anatomy of the nervous system. Introduction by A. T Rasmussen. Second edition. New York Appleton-Century-Crofts, Inc., 1951 520 p. illus 25 cm. $9.00 807

Contents: The gross anatomy of the brain and spinal cord. The meninges and choroid plexus. Development of the nervous system. Structural elements. Receptors and effectors. Functional arrangement of neurons. Peripheral nerves and ganglia. The visceral system. The internal structure of the spinal cord. The cranial nerves. Internal structure of the medulla oblongata and tegmentum. The cerebellum and the pons. The mesencephalon. The diencephalon. The cerebral hemispheres. The cerebral cortex. The rhinencephalon and the olfactory pathways. The lobes of the cerebral cortex with relevance to structural features and functional localization. Cortical efferent paths. Blood supply of the nervous system. Index.

Note: (1788) An introductory textbook addressed to medical college students. Although primarily a descriptive treatment, the interrelations between form and function are frequently pointed out. References are made directly in the text to important studies that established specific points of knowledge. The first edition was published in 1942. For this edition the work was extensively reorganized. The separate atlas that appeared at the end of the book has been abandoned, and the material formerly contained in it has been inserted at appropriate places throughout the text. Numerous other changes of pedagogical interest have been made. The final chapter on the blood supply of the nervous system is new. There are now 333 illustrations.

PENFIELD WILDER, AND THEODORE RASMUSSEN

The cerebral cortex of man a clinical study of localization of function. New York The Macmillan Company 1950 248 p illus. 24 cm. $7.00 808

Contents: Historical note and methods. Somatic motor representation of the body. Head and eye movement. Representation of autonomic systems. Vocalization and arrest of speech. Secondary sensory and motor representation. Vision. Hearing and equilibration. Memory, sensory perception, and dreams. Excision of cortical regions. General conclusion. Bibliography. Case index. General index.

Note This book is based on a long series of brain operations carried out under local anesthesia on human beings. It contains mainly the authors' observations and analyses of the results of removing areas of the cortex. The effects of direct stimulation of selected areas of the cortex during the course of operations and postoperative effects observable in patients' behavior are both reported. Also, observations on the play of epileptic discharge in the cerebral cortex are included. In their final chapters the authors draw tentative conclusions which are compared and correlated with the work of other researchers. The 121 illustrations include a number of photographs taken during brain operations.

SCHMIDT CARL FREDERIC

The cerebral circulation in health and disease. Springfield, Illinois Charles C Thomas, 1950 78 p. illus. 22 cm. (American lecture series. Publication no. 68 A monograph in American lectures in physiology edited by Robert F Pitts) $2.25 809

Contents: Introduction. Anatomical considerations. The physiology of the cerebral circulation. The relation of the cerebral circulation to cerebral functional activity. The cerebral circulation of man in health and disease. References

Note: A compact but readable synthesis of the current status of knowledge and research relating to the cerebral circulation. The author points out the contrast between physiological thought in this area up to about 1930 and current knowledge and theories. He shows that the development of new methods, particularly Kety's method for quantitative measurement of cerebral blood flow has completely changed the physiologic picture and greatly extended the valid knowledge. The author describes the modern advances and cites the source articles in which they were first published.

WHITE, JAMES CLARKE, AND OTHERS

The autonomic nervous system anatomy, physiology and surgical application by James C. White, Reginald H. Smithwick and Florindo A. Simeone. Third edition. New York The Macmillan Company 1952 569 p. illus. 24 cm. (Macmillan surgical monographs) $12 00 810

Contents: Foreword, by W. B. Cannon. Introduction. Part I The historical development of knowledge of the involuntary nervous system. Anatomy of the autonomic nervous system. General physiology. Pharmacology of the autonomic nervous system. Physiology of visceral pain. Methods of study. Part II Introduction. The sympathetic nerves in peripheral vascular disease. Extremities: bones, joints, and pain. Head, brain, meninges, and spinal cord. Heart and aorta. Hypertensive cardiovascular disease. The lung. Gastrointestinal tract. Genitourinary tract. Part III Cervical sympathectomies. Thoracic sympathectomies. Abdominal sympathectomies. Periarterial sympathectomy. Paravertebral injection of sympathetic trunk and ganglia. Peripheral sympathectomy by crushing the mixed nerves in the lower extremity. Epilogue. Bibliography. Index.

Note. (2447) Knowledge of the autonomic nervous system is still incomplete, but the available knowledge is collected in this book. The main emphasis is on topics of interest in surgery but *information is included also on physiology, pharmacology, etc.* References are given in the text to the 75-page bibliography; hence, the book can be used as a guide to the literature. The second edition was published in 1941. The book was very extensively rewritten for this edition in order to incorporate the great advances in the knowledge of the subject made during World War II. Literature published since 1941 predominates in the bibliography and most of the text has been rewritten.

HISTOLOGY

COWDRY EDMUND VINCENT

A textbook of histology functional significance of cells and intercellular substances. Fourth edition, thoroughly revised. Illustrated. Philadelphia Lea & Febiger 1950. 640 p. illus. 27 cm. $8.50 811

Contents (abridged) Science of histology. Cells as vital units. Blood, the principal integrator. White blood cells. Red cells and other formed bodies. Bone marrow. Mechanism of circulation: Blood vessels. Heart. Drainage into blood: Lymphatic system. Chemical broadcasting via the blood: Endocrine system. Intake of material and removal of waste: Upper alimentary tract. Lower alimentary tract. Liver. Oxygen intake and carbon dioxide elimination. Respiratory system. Regulation of composition of blood: Urinary system. Rapid integration. Nervous system. Organization and support. Connective system. Movement. Muscular system. Perpetuation of race: Reproductive system. Unification, protection, *adjustment:* Skin. *Microscopic determination of normality.* Bibliography. Index.

Note: (1801) A long-established standard textbook which is used primarily in medical college courses. As the section and chapter titles indicate, the correlation of function and form is stressed. Histology is not covered exhaustively but all of the basic data are included and there is also some unexpected material such as a discussion of sludged blood. The third edition was published in 1944. This edition represents a considerable expansion and some change in organization which has resulted in somewhat less emphasis on the vascular system. There are 337 figures of good quality and a 30 page bibliography

HAM ARTHUR WORTH

Histology 445 figure numbers, including 4 *plates in color Philadelphia J B Lippincott* Company 1950 756 p. illus. (part col d) 28 cm. $10.00 812

Contents (abridged) Part one, What histology is and how it is studied. Part two, Cells, intercellular substances and fluids. Part three, The four primary tissues and their subdivisions: Epithelial

tissue. Connective tissue. Cartilage. Bone. Hemopoietic tissue. Muscular tissue. Nervous tissue. Part four The histology of the systems: The circulatory system. The integumentary system (the skin and its appendages) The digestive system. The respiratory system. The urinary system. The endocrine system. The female reproductive system. The male reproductive system. The system of sensory receptors. The system of articulations. Index.

Note. A textbook for medical college students. The treatment is modern, both in the style of presentation and in the correlation of space allotted to specific groups of diseases and the current clinical interests in them. The text is written in a well-developed style that is easy to comprehend. The illustrations are of high quality. The author is Professor of Anatomy on the Faculties of Medicine and Dentistry of the University of Toronto.

JORDAN HARVEY ERNEST

A textbook of histology Ninth edition. New York Appleton-Century-Crofts, Inc. 1952 687 p. illus 24 cm. $9 00 813

Contents The protoplasm and the cell. Tissues. Connective tissue, cartilage and bone. Muscular tissue. Nervous tissue. Peripheral nerve terminations, end-organs The blood vascular system. Blood. The lymphatic system Mucous membranes and glands. The skin. The respiratory system The digestive system. The urinary system. The reproductive system. The ductless glands, endocrine glands. The nervous system The eye. The ear. List of references. Index.

Note (1952) An established textbook for introductory courses offered to pre-medical and medical students. It is used also as an office reference book by practitioners of medicine. The presentation is from functional point of view with some data from comparative anatomy included. This edition represents fair revision. Advances of recent years including results of tissue culture and electron microscopy have been incorporated. Less essential material is now set in smaller type. There ar new 609 figures. The 11-page bibliography contains few references to recent material, but it consists mainly of publications issued before 1934

MAXIMOW ALEXANDER A., AND WILLIAM BLOOM

A textbook of histology Sixth edition With 986 illustrations 257 in color on 580 figures. Philadelphia W B Saunders Company 1952 616 p. illus (part col d) 26 cm. $10 00. 814

Contents Introduction. Epithelium. Blood. The connective tissue proper Blood cell formation and destruction. Cartilage. Bone. Muscular tissue The nervous tissue. The blood vascular system. The lymphatic system The spleen Thymus. Glands. Hypophysis. Thyroid gland. Parathyroid glands. Adrenal glands and paraganglia. The pineal body The skin. The oral cavity and associated structures. The teeth Esophagus and stomach. The intestines. The liver, bile ducts and gallbladder Pancreas. The respiratory system. Urinary system Male genital system. Female genital system. The mammary gland The eye The ear. Index.

Note (1952) The sixth edition of this standard and encyclopedic textbook of histology for medical students has been considerably revised from the fifth edition of 1948, but the intent of the authors remains the same as when the first edition was published in 1930, namely to present morphological and functional description of all the cells and tissues of the human body with as full details as possible both in text and in illustration. For this edition large sections of the book were rewritten by Professors W Bloom, P P H. DeBruyn, W L Doyle and I Gersh. Important changes include new introductory chapter correlating the submicroscopic, biochemical and enzymatic constitution of cells with their structure and function as determined with the optical microscope; new descriptions of the endocrine glands and the shortening of several chapters without deletion of essential material. New illustrative material of outstanding quality including four new colored plates, seventeen photomicrographs in color and forty six other new photomicrographs, also adds to the value of the sixth edition. The bibliographical references have been revised to include many of later date than 1948.

NONIDEZ JOSÉ FERNANDEZ AND WILLIAM F WINDLE

Textbook of histology New York Mc Graw Hill Book Company Inc., 1949 456 p. illus. 24 cm. $6 75 815

Contents: Tissues and methods for their study Cells, living components of tissues. Epithelium. Blood. Bone marrow and hemopoiesis. Connective tissue. Cartilage, bone, and joints. Muscular tissue. Heart. Blood vessels and lymphatics. Lymphatic tissue and organs. Nervous tissue and the peripheral nervous system. Brain and spinal cord. Membranes of the brain and other organs. Visual and auditory organs. Integument. Mouth and pharynx. Tubular digestive organs. Liver and pancreas. Endocrine organs. Respiratory organs. Excretory organs. Male reproductory organs. Female reproductory organs. Mammary glands. Appendix. Units of measurements used in histology Bibliography Visual aids. Index.

Note This introduction to histology is briefer than most of the long-established textbooks in the field. Nevertheless, it contains material on not only the major tissues but also on the specialized tissues of various organs. The 263 illustrations include nearly 200 original and remarkable photomicrographs.

EMBRYOLOGY

HOOKER, DAVENPORT

The prenatal origin of behavior Porter lectures series 18 Lawrence, Kansas University of Kansas Press 1952 143 p illus. 22 cm. (Physiological and morphological studies on human prenatal development. Publication no. 20) $2 50. 816

Contents: Fetal activity in infrahuman vertebrates. The sequence in human fetal activity The significance of structural and functional interrelationships in prenatal activity Notes. Acknowledgments. Reference list. Index of names. Subject index.

Note: In the three lectures printed in this book the author, who is Chairman of the Department of Anatomy of the School of Medicine of the University of Pittsburgh, outlines what is known about the reflex actions and other activity of embryos and fetuses. The first two lectures are devoted chiefly to the responses elicited by definite stimuli such as stroking. In the third lecture the author has covered interrelationships among such organ systems as the circulatory system, nervous system, and endocrine glands. Some descriptions of the research methods by which the information has been obtained have been included. There is 14-page bibliography

NATIONAL RESEARCH COUNCIL. COMMITTEE ON HUMAN REPRODUCTION

Studies on testis and ovary eggs and sperm. *Proceedings of a conference sponsored* by the Committee on Human Reproduction, National Research Council, in behalf of the National Committee on Maternal Health, Inc. Edited by Earl T Engle. Springfield Illinois Charles C Thomas, 1952 237 p. illus. 24 cm. $7 75 817

Contents Spermatogenesis in testes of men with blocked or absent efferent ducts, by W O. Nelson. Cytochemistry of human spermatogenesis, by H. Klitman. The Sertoli cell, by W W Scott and K. M Lynch, jr. Semen quality in fertile marriage, by J. MacLeod. The metabolic machinery of sperm activity by D. W Bishop. The metabolic regulator in mammalian spermatozoa, by H. A. Lardy New aspects of the relationship between the metabolism and motility of human spermatozoa, by J MacLeod. The morphological basis of ovarian function, by H. C. Taylor Jr., and others. Absorbic acid, new estrogen, by R. Courrier Investigations into the transport of the ovum, by A. Westman. A cytochemical study of lipids in the oocytes of the rat and sow during the estrous cycle, by H. W Deane and W L. Barker The embryonic nature of the adult ovary by H. W Mossman. Seed-sterility at the mouse caused by radiation induced chromosome changes, by G. D. Snell. Genetically determined variations in male fertility in the house mouse, by L. C. Dunn. List of members of the Conference.

Note: A collection of original papers based chiefly on investigations made in recent years. Each paper is supplemented by excerpts from the discussion at the conference and, in most instances, by illustrations, tables, and literature references.

PHYSIOLOGY

GENERAL

ALTSCHULE, M D

Physiology in diseases of the heart and lungs. Cambridge, Mass. Harvard University Press, 1950. 368 p. 22 cm. (Harvard University monographs in medicine and public health, editorial committee A. Baird Hastings and others. Num 10) $5 50 818

Contents: Chronic cardiac decompensation. Acute pulmonary edema—cardiac asthma. Angina pectoris—myocardial infarction. Cardiac arrhythmias. Pericarditis. Congenital and acquired cardiac defects. Pulmonary fibrosis. Chronic pulmonary emphysema. Bronchial asthma. Pleural effusion. Pneumothorax. Pneumonia. Index.

Note: A critical review of published physiologic studies which have bearing on the diseases of the heart and lungs in man. It is organized in short sections and is compactly written. Each of the sections is followed by comprehensive bibliography. The book is designed for the information of upperclass undergraduate students in medical schools. However, it is used also by medical practitioners, graduate physiologists, etc., in need of synopsis and literature guide. The author is member of the faculty of Harvard Medical School.

ANNUAL REVIEW OF PHYSIOLOGY Volume 14 Victor E. Hall, editor, Jefferson M Crismon associate editor, Arthur C. Giese, associate editor Stanford University California Annual Reviews, Inc., and the American Physiological Society 1952 589 p. 23 cm. $6.00 819

Contents: Prefatory chapter (the organization of science) by R. W Gerard. Physical properties of protoplasm, by D F Waugh. Growth, by L. J. Wells. Physiology of the connective tissue, by C. Ragan. Physiological effects of heat and cold, by S. Robinson. Energy metabolism of biosynthesis at the cellular level, by S. Spiegelman and M. Sussman. Water metabolism, by J. R. Robinson and R. A. McCance. Respiratory system, by J. L. Whittenberger and J. V Maloney jr. Comparative physiology of invertebrate muscle, by C. A. G. Wiersma. Physiology of the digestive system, by C. M. Wilhelmj. Fundamentals of blood clotting, by J. E. Flynn and R. W Coon. Blood gas transport, by E. H. Wood. Peripheral circulation, by J. R. Pappenheimer. Heart, by G. Burch. Lymphatic system, by R. L. Webb. Kidney by A. C. Corcoran and others. Excitation, conduction and synaptic transmission in the nervous system, by C. McC. Brooks and M. G. F Fuortes. Somatic function of the central nervous system, by M. Hines. Visceral functions of the nervous system, by A. Kuntz. Hearing, by B. E. Gernandt. Pituitary adrenal system, by J. W Conn and S. S. Fajans. Thyroid gland, by A. Albert. Reproduction, by C. G. Hartman. Physiology of the skin, by E. M. Farber and W C. Lobitz, jr. Indexes.

Note: (700°) The current volume of this standard review contains the papers noted above. Each of the papers, except the first, is essentially [illegible] of the recent literature pertinent to the topic named in its title and is accompanied by bibliography of that literature. The papers are addressed to graduate physiologists and to scientists in related fields and are [illegible] scholarly worker in one area can keep abreast of developments in tangential areas. Since the names of the authors of cited literature are included in the author index the book can be used also as literature guide. Most of the summaries and the accompanying bibliographies are international in scope.

BARRON ELEAZAR S GUZMAN editor

Modern trends in physiology and biochemistry Woods Hole lectures dedicated to the memory of Leonor Michaelis. New York Academic Press Inc., 1952 538 p. illus. 24 cm. $8.50 820

Contents: The mechanism of enzymatic oxidation-reductions, by E. S. Guzman Barron. The identification of enzyme-substrate compounds, by B. Chance. The cytoplasm, its structure and role in metabolism, growth, and differentiation, by J. Runnström. Physiology of the cell nucleus, by D Mazia. The physiology of cell division, by L. V Heilbrunn. Molecular anatomy of the red cell plasma membrane, by A. K. Parpart and R. Ballentine. The measurement of cell permeability with particular reference to the erythrocyte, by M. H. Jacobs. The sodium and potassium balance of muscle and nerve, by H. B. Steinbach. Mechanisms and properties of bioelectric-potentials, by H. Grundfest. Chemical mechanisms of nerve activity by D. Nachmansohn. Transmission processes at nerve-muscle junctions, by S. W Kuffler. On ultrastructure and function in nerve, nonelectrical, physical aspects of excitation and conduction, as deduced primarily from polarization experiments, by J. M. Tobias. Problems in the comparative physiology of nervous systems, by C. L. Prosser. Biochemical evolution, by G. Wald. Thermodynamics and muscle, by A. Szent-Györgyi. Studies on the contractile protein system of muscle, by W F H. M. Mommaerts. On the mechanism of drug action, by O. Loewi. Some metal complexes with proteins and other large molecules, by I. M. Klotz. Some considerations of the chemical structure and biological activity of chymotrypsin, by H. Neurath. The oxidative pathways of carbohydrate metabolism, by E. S. Guzman Barron. Author index. Subject index.

Note. Lectures delivered in the Physiology Course of 1950 at the Marine Biological Laboratory Woods Hole, Massachusetts are collected in this volume. The typical lecture is concise, critical digest of the current knowledge of the topic named in its title, supplemented by an extensive bibliography. In some instances the results of recent and hitherto unpublished literature are included. The papers are addressed to graduate scientists concerned with research in biology especially the area of biology sometimes called molecular biology

BEST, CHARLES HERBERT, AND NORMAN BURKE TAYLOR

The physiological basis of medical practice a text in applied physiology Fifth edition. Baltimore The Williams & Wilkins Company 1950. 1330 p illus. (part col'd) 26 cm. $11.00 821

Contents (abridged) Section I, The blood and lymph The physiological properties, physical characters and composition of blood. The lymph and tissue fluids. Transfusion—the blood groups. The spleen—the life of the red cell—the regeneration of blood. The anemias. The mechanisms regulating the reaction of the body fluids. Section II, The circulation of the blood: The dynamics of the circulation. The arterial blood pressure. The physiology of cardiac muscle. The origin and mode of transmission of the heart beat. The architecture of the heart. Electrocardiography The output of the heart. Special features of the circulation in different regions. Section III, Respiration The physical principles governing the respiratory exchanges. The transport and delivery of oxygen to the tissues. The carriage of carbon dioxide by the blood. Anoxia. Section IV The excretion of urine: Urine formation—the structure of the kidney—theories of renal function—volume and composition of the urine. The pathological physiology of kidney disease. Section [illegible] Digestion: The salivary glands and the secretion of saliva. Gastric digestion. Digestion in the intestine. The movements of the alimentary canal. Section VI, Metabolism and nutrition General metabolism. Protein metabolism. Carbohydrate metabolism. The metabolism in starvation (fasting), obesity and undernutrition. The vitamins. Section VII, The ductless glands or endocrines. Section VIII, The nervous system The physiological properties of nerve. Reflex action. The spinal cord and brain stem (medulla, pons and mid brain) The cerebral cortex. The cerebellum. The autonomic nervous system. Section IX, The special senses: The physiology of vision. The dioptric mechanisms of the eye. The ear. The chemical senses. References. Index.

Note: (711) An almost encyclopedic treatment of physiological and biochemical principles and techniques from the standpoint of their application to clinical medicine. It is designed for students and practitioners of medicine rather than for chemists or physiologists, and its primary purpose is to encourage the correlation of clinical practice with the underlying physiological knowledge. In this edition it has again been extensively revised. The number of pages has increased by 160. The revisions are scattered throughout the work wherever advances in knowledge have made them necessary. The number of figures is now 401 of which about 100 are new

CANNON WALTER BRADFORD, AND ARTURO ROSENBLUETH

The supersensitivity of denervated structures a law of denervation. New York The Macmillan Company 1949 245 p illus. 21 cm. (Experimental biology monographs) $6 50 822

Contents: Part I, Introduction Historical development of the concept. Supersensitivity—definitions and examples. Part II, Supersensitivity to chemical agents: Smooth muscle—sympathetic stimulation—sympathetic inhibition—parasympathetic stimulation and inhibition. Melanophores. Glands. The heart. Striated muscle. Sympathetic ganglia. Spinal neurons. Coordinating centers. Part III, Supersensitivity to nerve impulses: Smooth muscle. Submaxillary gland. Adrenal medulla. Sympathetic ganglia. Striated muscle. Spinal neurons. Part IV Possibly related phenomena. The spontaneous activity of denervated structures. The crossed phrenic phenomenon. The deficiency of the discharges of the cut phrenic. Part Theories and implications. A law of denervation. Theories of sensitization—the determinism—the mechanism. Some implications of the law of denervation. References. Author index. Subject index.

Note. A monograph on the physiological phenomenon of increased sensitivity to adrenaline and certain other chemicals that is exhibited by muscles and glands which have been denervated. Both the experimental results obtained by the authors in their investigations and the results of other research workers have been incorporated. The different types of supersensitivity are described, and the clinical and pharmacological implications of vicarious chemical control are pointed out. The book is of fundamental interest in several areas of experimental biology and medicine. The list of references is twenty pages in length.

FULTON, JOHN FARQUHAR

Physiology of the nervous system. Third edition revised. New York Oxford University Press, 1949 667 p. illus. 22 cm. $10.00 823

Contents (abridged) The receptors. Dorsal spinal nerve roots and the dermatomes. The motor unit. Synapses and elementary reflexes. Central inhibition. The spinal cord—flexion reflex—extension reflexes—intersegmental reflexes—spinal man. The medulla oblongata—decerebrate rigidity The medulla oblongata and midbrain—postural reflexes. The pons and midbrain—optic reflexes. Autonomic nervous system. The hypothalamus and the autonomic nervous system. The thalamus. Cerebral cortex—architecture, intracortical connections, motor projections—the olfactory system—the occipital lobes and visual system—the temporal lobes—the parietal lobes and somatic sensation—the motor areas and pyramidal system—extrapyramidal and intracortical projections—the orbitofrontal and cingulate regions—autonomic representation in precentral motor cortex. The extrapyramidal motor system—basal ganglia and reticular formation. The cerebellum. The nervous system as whole—the conditioned reflex. Bibliography and author index Subject index

Note. (1893) A standard, well know textbook in which neurophysiology is presented from the experimental standpoint. It is designed primarily for medical students with interests in clinical medicine. The third edition is about 50 pages longer than the second edition published in 1943 There are numerous changes and the chapter on the orbitofrontal and cingulate regions of the cerebral cortex has been completely rewritten. The extensive bibliography includes both papers cited in the text and other important contributions published since 1943 and is supplementary to the bibliography in the author's *Muscular contraction* 1926.

GRAY JOHN STEPHEN

Pulmonary ventilation and its physiological regulation. Springfield, Illinois Charles C Thomas, 1950 82 p. illus 22 cm. (American lecture series. Publication no 63 A monograph in American lectures in physiology edited by Robert F Pitts) $2.50 824

Contents: The control of the respiratory cycle. Theories of the control of ventilation. The receptor system. Interrelationships between chemical stimuli. Respiratory responses to chemical stimuli. The integrated regulation of ventilation. Dissociation and unsteady states. Sensitivity and CO_2 adaptation. References.

Note. This short book is description of the complex mechanism which regulates the volume of air breathed by the lungs and survey of the current state of the knowledge of how this system functions. The various pertinent theories are critically evaluated and gaps in the basic physiological knowledge are pointed out. The book is primarily of interest to physiologists, but it has applications also in such fields as military and naval medicine. There is bibliography of 43 citations.

HAMILTON, WILLIAM FERGUSON

Textbook of human physiology With 139 illustrations. Second edition. Philadelphia F A. Davis Company 1949 625 p. illus. 24 cm. $7.00 825

Contents (abridged) The process of excitation. The organization of reflex pathways. Afferent pathways in man. The efferent pathways General functions of the central nervous system. General function of receptors. Cutaneous sensibility and pain. The sensations of taste and smell. Posture and equilibrium. Hearing. Refraction and vision. Hunger thirst, libido, and the conscious interpretation of sensation. The ventilation of the lungs. Respiratory functions of the blood. Abnormalities in respiration. The blood. The pumping action of the heart. The action currents of the heart. Arterial pressure pulses. Measurement and regulation of the circulation rate. The regulation of the mean blood pressure. Congestive failure of the circulation. Congenital heart disease. The digestive movements. Digestive absorption and secretion. The fluids of the body The functions of the kidney Metabolism. The endocrine system. Index.

Note. This book is the result of planned effort on the part of the author to produce shorter and simpler treatment of the main physiological processes than is available in the traditional comprehensive and detailed type of textbook. The typical chapter is an outline in which only the main facts are stated, but the discussion is supplemented by selected list of references to lengthier treatments. Illustrations are fewer than in the traditional large type of text and there are no colored ones. The book is well adapted to use in introductory courses where simple text is desired and to extracurricular reading by scientists in other fields than physiology who find themselves in need of survey of physiology. The author is Professor of Physiology in the School of Medicine of the University of Georgia.

HOSKINS ROY GRAHAM

Endocrinology the glands and their functions. Revised & enlarged edition. New York W W Norton & Company Inc., 1950. 402 p. illus. 22 cm. $5.50 826

Contents: Hormones—the chemical regulators. The adrenal glands. The thyroid gland. The parathyroid glands. The hypophysis or pituitary gland. The male sex glands—the testes. The female sex glands—the ovaries. The placenta as an endocrine organ. The pineal gland. The thymus gland. Endocrine aspects of reproduction. Hormone regulation of the digestive functions. Insulin and diabetes. Some general aspects of endocrinology Endocrinology of the future. The endocrine literature. Index.

Note. (1878) An authoritative, semi-technical presentation designed for such readers as psychologists, sociologists, and laymen who have some familiarity with scientific terminology. The first edition appeared in 1941. In this edition the text has been revised at various points to incorporate advances since that year and additional literature citations have been added to the reference lists and general bibliography

JONES HAROLD ELLIS

Motor performance and growth a developmental study of static dynamometric strength. Berkeley and Los Angeles University of California Press 1949 181 p. illus. 24 cm. $3 00 827

Contents: The program of measurement. Factors related to strength. Growth in strength. Strength and physiological maturity. The influence of strength on growth. Some incidental findings. Individual case studies. Implications and conclusions. Bibliography

Note: The results of a seven-year study of the development of muscular strength in adolescent boys and girls of school age are presented in this work. The number of subjects was 183 (93 boys and 90 girls) at the beginning of the study and it decreased to 139 six and one-half years later when the investigation was concluded. Measurements of body growth in the same group were made coincidentally and are co-ordinated with the development of strength. Observations were made and are analyzed on relationships among growth, strength, and personality characteristics.

LEE, DOUGLAS HARRY KEDGWIN

The physiology of tissues and organs. Springfield Illinois Charles C Thomas, 1950 159 p. illus. 23 cm. $4.00. 828

Contents (abridged): Part I, Physiology of tissues. Chemical factors in living processes. Physical factors in living processes. Cell multiplication and differentiation. Nervous tissue. Muscular tissue. Epithelial tissues. Connective tissue, cartilage and bone. Blood. Endothelial tissues and the fibroblastic reaction. Part II, Physiology of organs: Absorptive organs. Transformer organs. Storage organs. Mechanical effector organs. Chemical effector organs. Excretory organs. Organs of special sensation. Organs of reproduction. Embryo, considered as an organ. Conclusion.

Note: Essentially an outline of the physiological functions of specific tissues and tissue systems. Not only are the chapters short but the style is very concise. Nevertheless, the fundamentals of physiology are well presented. The book is suitable for use in instruction, or review for examinations and also as a means of quick reference in both personal and institutional libraries. The first edition was published in Australia and was designed for use by students in the University of Queensland. The author is now a member of the faculty of the Johns Hopkins University

MILBANK MEMORIAL FUND

The biology of mental health and disease. The twenty seventh annual conference of the Milbank Memorial Fund. With 108 contributors. Foreword by Stanley Cobb New York Paul B Hoeber Inc. Medical Books Department of Harper & Brothers, 1952 654 p illus. 24 cm. $10.00. 829

Contents: Histologic development of the cerebral cortex, by J. LeRoy Conel and E. H. Craigie. Chemical constituents of brain during development and in maturity, by J. Folch-Pi and W. M. Sperry. Cerebral circulation and metabolism, by S. S. Kety and H. G. Wolff. Blood-brain barrier, by R. D. Tschirgi and others. Brain tissue respiration and glycolysis, by K. A. C. Elliott and E. Racker. Oxidation and reduction in brain tissue, by E. G. Ball and F. Lipmann. Carbohydrate metabolism in brain tissue, by O. Meyerhof and S. Ochoa. Nitrogen metabolism in the brain, by H. R. Waelsch and D. Rittenberg. Lipid metabolism of the brain, by W. M. Sperry. Inorganic metabolism of the brain, by J. F. Manery. Electrical manifestations of action in neurons, by D. P. Lloyd and others. Role of quaternary compounds in neural activity, by J. L. Lilienthal, Jr., and W. S. McCulloch. Physiologic development of the cortex of the brain and its relationship to its morphology, chemical constitution, and enzyme systems, by L. K. Flexner and others. Patterns of localization in sensory and motor areas of the cerebral cortex, by C. N. Woolsey and others. Electrical activity and mechanisms of cerebral integration, by H. H. Jasper and M. A. B. Brazier. Functional organization of the brain in relation to mentation and behavior, by H. F. Harlow and others. Endocrine influences on personality and behavior, by R. A. Cleghorn and others. Genetics and normal mental differences, by R. R. Gates and J. V. Neel. Genetic aspects of psychoses, by F. J. Kallmann and others. Mental disorders arising from organic disease, by W. L. Bruetsch and T. Lidz. Anoxia—its effect on structure of the brain, by W. F. Windle. Anoxia—its effects on the physiology and biochemistry of the brain and on behavior, by R. A. McFarland and others. Effects of drugs on metabolism and physiologic activity of brain, by J. H. Quastel and others. Biologic implications of senescence, by T. H. Ingalls and C. K. Rennie. Mental deficiency and aberrant metabolism, by G. A. Jervis and H. B. Waelsch. Metabolic and physiologic disturbances in the psychoses, by H. Hoagland and others. Enzymatic changes in mental diseases, by A. Pope and W. M. Ashby. Histopathology of schizophrenia and other psychoses of unknown origin, by A. Wolf and others. Experimental induction of psychoneuroses by conditioned reflex with stress, by H. S. Liddell and W. H. Gantt. Experimental induction of psychoneuroses by starvation, by A. Keys and others. Experimental induction of psychoneuroses through restriction of intake of thiamine, by R. M. Wilder. Experimental induction of psychoses, by P. H. Hoch and H. C. Solomon. Effect of shock therapies on the brain, by H. E. Himwich and others. Use of carbon dioxide in dementia praecox, by W. F. Lorenz and others. Narcosis therapy in psychotic states, by H. Lehmann and L. J. Thompson. Effect of corticosteroids in experimental psychoneuroses, by H. S. Liddell and H. Selye. Results from the use of ACTH and cortisone in psychoses, by E. F. Gildea and others. A final glance at the symposium, by R. W. Gerard. Index.

Note. A notable volume in which has been collected the original papers presented at the conference named in the title. These papers represent a planned symposium on the contemporary knowledge of the biological aspects of brain function and dysfunction. The contributors were purposely drawn from all related fields of science. To quote the Foreword "The list of participants included anatomists, physiologists, geneticists, chemists, neuropathologists, neurologists, neurosurgeons, psychologists and psychiatrists. ... They came from sixteen states of the United States and three foreign countries." As printed in the book, the papers are supplemented by illustrations, literature references, and transcripts of discussion.

MOMMAERTS, W F H. M.

Muscular contraction a topic in molecular physiology New York Interscience Publishers, Inc. 1950. 191 p. illus. 24 cm. (Monographs in the physiological sciences Editorial board Maurice B Visscher and others) $5.00 830

Contents: Introduction. An outline of the metabolism of muscle. A quantitative picture of muscle metabolism. The sequence of events in muscular activity. The muscle proteins. Myosin, actin and actomyosin. Myosin and adenosinetriphosphatase. The structure of the muscle fibril—the myosin thread. Contractile threads and fibrils. Crystalline myosin. Actin—the second structure protein. Actomyosin—the myosin-actin complex. Molecular sizes and shapes of muscle proteins. Viscosity and birefringence of flow. Reaction between ATP and myosin. Problems and interpretations. Bibliography. Index.

Note. A condensed review of present-day knowledge regarding the biochemical mechanisms of muscular contraction. It is based on a survey of the literature of the subject and draws heavily on the writings of Banga, Dubuisson, Meyerhof, Szent-Györgyi, and other workers in the field. Throughout the book emphasis is on experimental methods and discoveries rather than on theory. The text is keyed to the bibliography consisting of 334 references.

PROSSER, CLIFFORD LADD editor

Comparative animal physiology By David W Bishop Frank A. Brown Jr., Theodore L. Jahn C Ladd Prosser and Verner J Wulff. Philadelphia W B Saunders Company 1950 888 p. illus. 24 cm. $13 00. 831

Contents: Introduction. Water. Inorganic ions. Protein specificity. Nutrition. Feeding and digestion. Nitrogen excretion. Respiration and metabolism. Respiratory functions of body fluids. Temperature: metabolic aspects and perception. Photoreception. Chemoreception. Phonoreception. Mechano- and equilibrium-reception. Circulation of body fluids. Muscle and electric organs. Amoeboid movement. Cilia. Trichocysts and nematocysts. Bioluminescence. Chromatophores and color change. Endocrine mechanisms. Nervous systems. Index.

Note. This book is both a textbook and a manual of reference. When used as a textbook it is suitable for upperclass undergraduate college students and first year graduate students. Its usefulness as a reference book derives from its relatively full discussions of specific topics and its lengthy bibliographies. The reference value is enhanced by numbered cross-references from statements in the text to the bibliographies. Although the material is arranged by function and organ systems, the index includes the names of animals, for example, Echinoderms. Thus the book can be used as a guide to the more facts and the literature pertinent to physiological functions in specific animals.

REYNOLDS SAMUEL ROBERT MEANS

Physiology of the uterus. Second edition revised and enlarged. New York Paul B. Hoeber Inc., 1949 611 p. illus. 26 cm. $12.50. 832

Contents (abridged) Part I, Patterns and functions of uterine motility: Morphology Tubal and uterine movements during the estrous cycle. Human tokography—nongravid uterus. Part II, Hormone control of the myometrium. Activation of the myometrium. Maintenance of gestation. Steroid hormones during pregnancy Hormones in the control of parturition. Physical factors in uterine contractility. Physiologic basis of myometrial therapy Part III, Uterine growth Growth of the nondistended uterus. Growth of the distended uterus. Factors in abnormal uterine growth. Patterns of uterine growth during pregnancy Structural changes and uterine enlargement. Myometrial forces in relation to uterine growth and parturition. Part IV, Circulation in the uterus: Vasculature of the uterus. Circulation of blood in the nonpregnant uterus. Lymphatic vessels of the uterus. Somatic vascular effects of steroid hormones. Menstruation. Uterine vascular adaptations to pregnancy The fetal circulation and its control. Part Metabolism in the uterus. Part VI, Innervation of the uterus. Part VII, Utero-somatic relationships: Effects of hysterectomy Endocrine, vascular and central nervous system relationships. Bibliography Part VIII, The onset of labor Bibliography Author index. Subject index.

Note. A well organized and critical survey of the accumulated knowledge of the physiology of the uterus. Although there is some emphasis on the human uterus, pertinent knowledge has been gathered from all fields of physiology and especially from animal experimentation. Each of the sections is essentially digest of literature with numbered references from statements in the text to the bibliography The total number of references in the bibliography is approximately 2100. The number of cited papers which describe experiments and observations on such animals as the rat, the rabbit, and the guinea pig exceeds by considerable margin the number of papers listed on human beings. The first edition appeared in 1939 For this edition the work was reorganized and much new material added. Most of the illustrations in this edition are new

RIEDMAN, SARAH REGAL

The physiology of work and play a text book in muscular activity Original illustrations by Ida Scheib. New York The Dryden Press 1950 584 p illus. 21 cm. (The Dryden Press publications in the biological sciences general editor L. V Heilbrunn) $5.50 833

Contents (abridged) Part I, The physiology of motion: Contraction in excised muscles. The structural bases of voluntary motion. Intrinsic properties of muscle. The chemical basis of motion. Chemical dynamics in muscular work. Muscles as work machines. Fatigue. Coordination of motion and of adjustments to exercise. Part II, Organic adjustments to the needs of exercise Circulatory adjustments in exercise. Cardiac response to exercise The heart as work organ. Respiration. Pulmonary ventilation. Transport of oxygen and carbon dioxide. Respiratory regulation. Part IV Adaptations to special conditions of work Work under limiting environmental conditions. Work under extremes of temperature and humidity Work under conditions of modern industry Part The adaptive capacity of the organism Bodily changes during regular adaptational adjustments. Convalescence and reconditioning. Physical fitness. Effects of mental and emotional activity Index.

Note. Although this book is intended as an introduction especially for the instruction of such students as physical education majors, it contains rather detailed treatment. Such topics as the buffer systems of the blood and blood changes during muscular activity are discussed in chemical terms. Furthermore, each chapter is supplemented by bibliography of pertinent technical literature. The book contains enough detailed technical information to make it useful for reference or reading by scientifically trained persons in need of survey of the physiology of physical activity The author is member of the faculty of Brooklyn College.

ROSENBLUETH ARTURO

The transmission of nerve impulses at neuroeffector junctions and peripheral synapses. New York Published jointly by the Technology Press of Massachusetts Institute of Technology and John Wiley and Sons, Inc., 1950 325 p illus 24 cm. $6 00 834

Contents Introduction. Part I. Transmission at autonomic neuroeffector junctions Adrenergic and cholinergic nerves. The liberation of acetylcholine by stimulation of some autonomic postganglionic fibers. The liberation of sympathin by stimulation of autonomic postganglionic fibers. The theory of two sympathins, excitatory and inhibitory The distribution of cholinergic and adrenergic nerves in the organism. The generalized effects of the chemical mediators liberated in physiological conditions. The electric responses of smooth muscle. The mode of action of the chemical mediators. Some physiological properties of smooth muscles. Theories of transmission in autonomic neuroeffector systems. Part 2, Transmission at peripheral synapses. The stages of neuromuscular and of ganglionic synaptic transmission. The liberation of acetylcholine by presynaptic nerve impulses. The action of acetylcholine on striated muscle and on ganglion cells. The action of eserine, prostigmine, and diisopropyl fluorophosphate. Curare and some decurarizing agents. Wedensky inhibition. The failure of synaptic transmission in the course of Wallerian degeneration of the presynaptic nerve. The Philippeaux-Vulpian and allied phenomena. Post-tetanic effects. The action of potassium ions. The electrical excitability of striated muscle. The electric responses of striated muscle. The electric responses of autonomic ganglia. A comparison of synaptic transmission at autonomic ganglia and at somatic neuromuscular junctions. The electrical theory of synaptic transmission. The chemical theory of synaptic transmission by acetylcholine. Alternative theories of synaptic transmission. *References.* Author index. Subject index.

Note. (1891) This well-documented publication for neurophysiologists presents in systematic form an explanation of chemical transmission at the junctions of motor nerves with striated muscles and at the synapses in autonomic ganglia. The properties are discussed of the junctions between excitable effector elements; one of the central problems considered is precisely whether the processes that take place at these junctions differ qualitatively from those that occur in the course of the propagation of nerve impulses. The bibliography runs to 720 references. The work brings up to date but does not entirely supersede *Autonomic neuro-effector systems* by Walter B. Cannon and Arturo Rosenblueth, New York, 1937

SODEMAN WILLIAM A., editor

Pathologic physiology mechanisms of disease. Philadelphia W B Saunders Company, 1950 808 p. illus. 25 cm. $11.50 835

Contents: Part I, Circulatory system: Hemodynamics—the blood vessels, by W A. Sodeman. Dynamics and circulation of heart muscle—cardiac reserve—and the cardiac cycle, by J. T Roberts. The electrocardiogram, by F D. Johnston. Cardiac output—hypertrophy and dilatation—valvular diseases—congenital defects—pericardial diseases—extracardiac factors, by E. Hull Cardiac failure and function tests, by J R. Le Duc. Part II, Respiratory system: Pulmonary ventilation and respiration—tests of respiratory function, by J. H. Seabury Protective mechanisms of the lungs—pulmonary disease, by H. L. Alexander Part III, Digestive system The esophagus, by W L. Palmer and J B. Kirsner. The stomach, by W L. Palmer and J B. Kirsner The small intestine, by L. Schiff. The large intestine, by L. Schiff. The liver by F J. Ingelfinger. The gallbladder and pancreas, by R. Elman. Part IV Blood and spleen: Disorders of the blood, by W B. Castle The spleen and reticulo-endothelial system, by C. A. Doan. Part Urinary tract: The kidney by A. C. Corcoran and I. H. Page. Part VI, Endocrine glands—water balance—nutrition Endocrine glands, by E. C. Reifenstein, Jr. Water balance, by R. L. Pullen and R. F Kampmeier Nutrition, by W A. Sodeman. Part VII, Locomotor system The joints, by R. H. Freyberg. Part VIII, Infectious diseases—allergy: Factors affecting infections, by G. T Harrell, Jr. Effects of infection, by G. T. Harrell, Jr. Recovery from infection, by G. T Harrell, Jr Alteration of the course of an infection, by G. T Harrell, Jr. Allergy by R. A. Cooke and W B. Sherman. Part IX, Physical, toxic and chemical agents: Physical and toxic agents, by W Bean. Chemical agents and disease, by J H. Foulger Index.

Note A treatise composed of chapters written specifically for this work by twenty-five authors, the majority of whom are members of the faculties of medical colleges in the United States of America. The purpose of the work is to interpret the clinical manifestations of disease in terms of dysfunction of basic physiological processes. In most of the chapters the first few pages are devoted to descriptions of the pertinent physiological processes, these are followed by compact discussions of disease. Extensive lists of references accompany most of the chapters. There are 146 figures.

WIGGERS CARL JOHN

Physiology in health and disease. Fifth edition, thoroughly revised. Illustrated with 279 engravings. Philadelphia Lea & Febiger, 1949 1242 p. illus. 24 cm. $10 00. 836

Contents (abridged) Section I, Muscular contraction and associated phenomena: Physiology of skeletal muscle Functions of cardiac and smooth muscle Bioenergetics. Bioelectric phenomena. Section II, [illegible] The physiology of the peripheral and central nervous systems Physiology of [illegible]. Physiological purposes of reflex actions and

their disturbances in disease. Control of voluntary and involuntary movements. Somatic sensibilities and their disturbances. Special sensibilities. Associative functions of the cerebral cortex. The physiological basis for psychosomatic reactions. Section III, The blood. Section IV Respiration; Respiratory movements and mechanics of lung inflation. Interchange of gases in the lungs and tissues and their transportation by the blood. Clinical disturbances of respiration. Aviation physiology. Section V Heart and circulation. Excitation of the mammalian heart and its nervous control. Electrocardiography. Hemodynamic principles. Nervous and chemical control of blood pressure. Dynamics of the heart beat. Hypertension. The pulmonary circulation. Coronary circulation. Dynamics of valvular lesions. Hemorrhage and shock. Section VI, Physiology of the alimentary tract. Section VII, Metabolism and nutrition. Digestion, absorption, and metabolism. The material and energy balances of the body. Hyperthermia and hypothermia. Vitamins in nutrition. Section VIII, Excretion and body fluids. Section IX, Endocrine organs: Humoral control of functions by hormones. Pituitary hormones and disorders. Diabetes, insulin, and other hormones. Hormones of the adrenal medulla and cortex. The thyroid gland and its hormone. Sexual functions and their hormonal control. Physiology of pregnancy, labor and lactation. Index.

Note: (1810h) A standard textbook of the medical type. Its special purpose is to correlate physiology and clinical medicine for medical students, clinicians, and investigators in both medicine and physiology. A wide range of information is presented rather concisely with citations of fuller discussions in published books and papers. There is some emphasis on physiological experiments which demonstrate normal reactions. This edition represents an extensive revision with much of the text rewritten, 60 new illustrations, and approximately 1000 new literature references.

WINSLOW, CHARLES-EDWARD AMORY AND L. P HERRINGTON

Temperature and human life. Princeton, New Jersey Princeton University Press, 1949 272 p. illus. 23 cm. $3.50 837

Contents: Production of heat in the life process. Avenues of heat loss from the body. The adaptations of the human body to varying thermal conditions. The thermal protective influence of clothing. The objectives of air conditioning. Methods of air conditioning. The influence of climate and season upon health. Glossary. References. Index.

Note. An inclusive presentation of current knowledge pertaining to the effects of temperature and related environmental conditions on life processes in human beings. Although it is based on an extensive literature survey and is written mainly from the physiological viewpoint, it is easy to read. This quality makes it a suitable book for such readers as medical practitioners, heating and ventilating engineers, and persons concerned with the design of military clothing. Biologists and physiologists in need of a reliable, well-documented survey of the subject will also find it useful.

YOUMANS, WILLIAM BARTON

Basic medical physiology Chicago The Year Book Publishers Inc. 1952 436 p. illus. 24 cm. $7.00 838

Contents (abridged) Section I, Excitation, conduction and response: Stimulation and response of muscle and nerve. Transmission of excitation at the skeletal neuromuscular junction. Transmission of neural influences to visceral effector cells. Receptors, reflex arc conduction and reflex action. Section II, Circulation. General plan of the circulatory system. Physiology of the heart. Control of caliber of arterioles. Arterial blood pressure. Cardiac output. Venous pressure and venous pulse. Blood. Section III, Respiration: Uptake and transport of respiratory gases by the blood. The control of breathing. Section IV Digestion. Motility of the digestive tract. Secretion and actions of digestive juices. Section V, Nutrition and intermediary metabolism. Section VI, The endocrine system, by J. R. Trimer. Section VII, Kidney and urinary tract. Section VIII, Nervous system and senses: The afferent systems. The motor systems. Autonomic system and hypothalamus. Physiologic optics. Neurophysiology of the eye. Audition, taste and olfaction. The cerebral cortex. Index.

Note: A comparatively short introduction written for use in premedical and medical college courses. In the words of the author "brevity has been achieved largely by assuming a knowledge of those subjects which are prerequisite for the study of human physiology by restricting discussions of controversial questions and by presenting the current state of information without giving detailed evidence and without discussing the historical background." Each of the sections includes a selected bibliography for the guidance of those readers who wish to pursue particular topics further. The author is Professor of Physiology at the University of Wisconsin.

YOUMANS, WILLIAM BARTON

Nervous and neurohumoral regulation of intestinal motility New York Interscience Publishers, Inc. 1949 129 p illus. 24 cm. (Monographs in the physiological sciences. Editorial board Maurice B Visscher and others) $4 75 839

Contents: Introduction. Recording of intestinal motility and the interpretation of records. Extrinsic innervation of the intestine and methods of denervation. Sensitization of the intestinal musculature to adrenaline by denervation. Denervated intestinal segment as an indicator for adrenaline and sympathin. Summary. References.

Note: A review with literature references of the accumulated knowledge pertaining to the regulation of the motility of the small intestine by the extrinsic nerves and also by adrenaline and related compounds. Particular attention is given to the various experiments on which this knowledge is based. The author himself has carried on experimental studies of this subject since 1933 and in this book has correlated his results with the findings of other investigators.

NUTRITION AND FOOD

ALBANESE, ANTHONY AUGUST, editor

Protein and amino acid requirements of mammals. New York Academic Press Inc., 1950. 155 p. illus. 24 cm. $4.00 840

Contents. Some species and age differences in amino acid requirements, by H. H. Mitchell. Methods of measuring the nutritive value of protein hydrolysates and amino acid mixtures—the rat repletion method, by D. V. Frost. The laboratory evaluation of amino acid mixtures and protein hydrolysates, by R. H. Silber and C. C. Porter. Dietary proteins and synthesis of tissue proteins, by B. F. Chow. The protein and amino acid requirements of man, by A. A. Albanese. Index.

Note: The five papers in this volume present the current state of the knowledge of the nutritional requirements of protein and amino acid of mammals. In addition to one which is devoted entirely to the requirements of man, there is also some information on man in the other papers. Each paper is essentially a literature digest, supplemented by a substantial list of references. The book is addressed to graduate scientists, especially biochemists, nutritionists, and practitioners of medicine who are not actively engaged in protein and amino acid research but require a current knowledge of the progress in the field.

AMERICAN MEDICAL ASSOCIATION COUNCIL ON FOODS AND NUTRITION

Handbook of nutrition. A symposium prepared under the auspices of the Council on Foods and Nutrition of the American Medical Association. Second edition. Philadelphia The Blakiston Company 1951 717 p illus. 22 cm. $4.50 841

Contents Part I, Individual nutrients: Proteins in nutrition, by H. B. Lewis. Fat in nutrition, by H. C. Eckstein. Carbohydrate metabolism, by D. Stetten, Jr. Human requirement of calcium, phosphorus and magnesium, by G. Stearns. Iron and copper, by W. J. Darby. Iodine in nutrition, by G. M. Curtis and M. B. Fertman. Fluorine and other trace elements in nutrition, by F. J. McClure. The vitamin-B complex, by C. A. Elvehjem. Vitamin C, by C. G. King. Vitamin D, by P. C. Jeans. Fat-soluble vitamins A, E, and K, by H. R. Butt. Part II, Nutritional needs: Recommended dietary allowances, by G. MacLeod and H. C. Sherman. Energy requirements of adults, by A. Keys. Feeding of healthy infants and children, by P. C. Jeans. Nutritional requirements during pregnancy and lactation, by B. S. Burke and H. C. Stuart. Nutrition problems of geriatric medicine, by E. J. Stieglitz. Nutritional needs in illness and disease, by G. V. Mann and F. J. Stare. Part III, Nutritional deficiencies: Imbalance and dietary interrelationships in nutrition, by C. A. Elvehjem and W. A. Krehl. Caloric undernutrition and starvation, with notes on protein deficiency, by A. Keys. Fluid therapy, by D. C. Darrow and E. L. Pratt. Deficiencies of the fat-soluble vitamins, by J. B. Youmans. Deficiencies of the water-soluble vitamins, by J. B. Youmans. Mineral deficiencies, by J. B. Youmans. Part IV Foods and their nutritional qualities: Adequacy of American diets, by E. F. Phipard and H. K. Stiebeling. Foods of plant origin, by L. A. Maynard and W. L. Nelson. Foods of animal origin, by P. E. Howe.

Foods for emergencies, by R. M. Wilder and T. E. Keys. Improving the quality of cheap staple foods, by G. R. Cowgill. Index.

Note: (1948) Rather than a reference book of tabulated data as the title might suggest, this work is a collection of original papers each of which presents a survey of the current knowledge of the particular aspect of nutrition named in its title. Extensive literature references are included for most of the papers. The book is designed for the information of medical practitioners and public health personnel as well as for graduate nutritionists. The index is exceptionally full. The first edition appeared in 1943. This edition represents rather extensive rewriting in order to incorporate the great advances in the knowledge of nutritional requirements made during World War II and subsequently

FANNING, ROBERT JOSEPH, compiler

Pacific Islands nutrition bibliography Compiled and annotated by Robert Joseph Fanning. Honolulu, Hawaii University of Hawaii Press 1951 70 p 22 cm. Paper $1.00. 842

Contents: Bibliography Subject index. Area index.

Note A comprehensive bibliography of publications relating to chemical composition of foods, dietary requirements, dietaries of groups, nutritional status and dental conditions of groups, studies of energy metabolism, physical standards (heights and weights), descriptions of foods, methods of preparing foods, and extent of use of foods. The annotations are short but well written. The bibliography covers all publications issued through June, 1950. The geographical scope is Caroline Islands, Hawaiian Islands, Mariana Islands, Marshall Islands and Samoan Islands.

GERARD RALPH W editor

Food for life. By Ralph W Gerard, Richard J Block, Norman Jolliffe Clive M McCay Sedgwick E Smith, and Samuel Soskin. Chicago The University of Chicago Press, 1952 306 p illus 22 cm. $4 75 843

Contents The basic questions of nutrition. The nutrient materials in food. Preparation—from mouth to cell. Processing—in organs and cells. Enzymes—the effective agents. The regulation of cell metabolism. The purpose energy and growth. The foods of animals and men. The improvement of human nutrition. Index.

Note: An authoritative discussion of nutrition and foods written for lay readers. The style is lively and the book is illustrated with graphic diagrams which are easy to comprehend. However it is not an extremely simplified presentation. Technical terms, even chemical formulas, are used rather freely Research methods and noted experiments are described. The main theme is understanding of the body's processes and requirements so that food can be chosen intelligently

KEYS ANCEL AND OTHERS

The biology of human starvation. By Ancel Keys, Josef Brožek, Austin Henschel, Olaf Mickelsen, Henry Longstreet Taylor With the assistance of Ernst Simonson Angie Sturgeon Skinner and Samuel M Wells. Minneapolis The University of Minnesota Press, 1950 2 v illus. 27 cm. $24 00 844

Contents (abridged) Volume I Background: The history of starvation. The sources of evidence and information. The Carnegie Nutrition Laboratory experiment. General features of the Minnesota experiment. Morphology: Body weight. Physical appearance and external dimensions. Morphology of the heart and blood vessels. Morphology of the endocrine glands Bones and teeth. Skin and hair. Blood morphology including bone marrow Biochemistry: Basal metabolism Total energy exchange and nitrogen balance. Vitamins and vitamin metabolism. Lipid metabolism. Mineral metabolism. Carbohydrate metabolism. Physiology: The gastrointestinal system. Respiration. Circulation and cardiac function. Fasting and the cardiovascular response to posture. The electrocardiogram. Renal function. Special senses. Neuromuscular functions and motor performance. The capacity for work. Sexual function. Volume II. Psychology: Psychological problems in starvation Behavior and complaints in natural starvation Behavior and complaints in experimental starvation and rehabilitation. Intellective functions. Personality Special problems. The edema problem. Anorexia nervosa and pituitary cachexia. Growth and development. Infectious diseases and undernutrition. Tuberculosis. Diabetes mellitus and undernutrition. Cancer and other neoplasms. Diets for rehabilitation, with special reference to the Minnesota experiment. Appendices. References. Index.

Note. A detailed technical report, based on an extended experimental investigation of starvation in which 32 young men served voluntarily as subjects. In addition to the data derived from this original investigation, related data from the published literature have been incorporated. The work is a major contribution to the scientific knowledge of the subject and is of interest to graduate workers in such fields as biochemistry medical research, and nutritional research as well as in physiology and psychology

LEONG, PANG CHONG compiler

Nutrition bibliography of Malaya. Compiled and annotated by P C. Leong. Honolulu, Hawaii University of Hawaii Press 1952 23 p 22 cm. Paper $0 65 845

Note: A bibliography of published writings of all types through June 30, 1951. The term "nutrition" has been interpreted liberally to include all literature bearing on the subject, including compilations of data on heights and weights of children.

MACY ICIE GERTRUDE, AND OTHERS

The composition of milks a compilation of the comparative composition and properties of human cow and goat milk colostrum, and transitional milk. Prepared by Icie G Macy Harriet Kelley, and Ralph Sloan for the Food and Nutrition Board, with the consultation of the Committee on Maternal and Child Feeding Icie Macy Hoobler, chairman. Washington D C Published by the National Research Council, National Academy of Sciences 1950 64 p. 24 cm. (National Research Council. Bulletin number 119 January 1950) Free. 846

Note: This work consists chiefly of five tables in which detailed data on the five milks named in the sub-titles are organized. Data are supplied not only on the main constituents, but also on trace elements such as lead, lithium, etc., where such information was available. Literature references are included.

MACY ICIE GERTRUDE

Nutrition and chemical growth in childhood. Volume III Calculated data. With a foreword by Helen A. Hunscher Springfield, Illinois Charles C Thomas, 1951 2174 p. 24 cm. $8.00 847

Contents (abridged) Introduction. Data calculated for normal children from the original data obtained by the Research Laboratory of the Children's Fund of Michigan Proximate composition and energy values of diet. Carbohydrate. Fat. Nitrogen. Phosphorus. Chlorine. Sulfur Negative minerals. Calcium. Magnesium. Sodium. Potassium. Positive minerals. Excess of positive or negative minerals. Supplement Average values calculated from the original data obtained by the Department of Home Economics, Agricultural Experiment Station, College of Agriculture, University of Illinois. Appendix Interpretation of roentgenograms. Assessment of ages of bones in the hand and wrist. Index: Subjects and authors, Volumes I, II, and III.

Note. (1951a, 720*) The concluding volume of a clinical, chemical, psychological, anthropometric, and roentgenologic study of a diet-controlled group of normal children. Each child in the group was repeatedly measured and tested over a period of six or seven years in order to record the anatomical and physiological changes due to growth. The volume at hand contains over 1300 tables of data arranged chiefly by nutrient substance. It contains also information on skeletal maturation, and additional interpretation of the roentgenograms which were published in Volume II of the work.

MILBANK MEMORIAL FUND

Nutrition in relation to health and disease. Papers presented at a round table at the 1949

annual conference of the Milbank Memorial Fund, November 16–17 1949 New York Milbank Memorial Fund, 1950 249 p. illus. (part col d) 23 cm. Paper $1.00. 848

Contents (abridged) Foreword, by H. D. Kruse and Frank G. Boudreau. A survey of nutritional status among school children and their response to nutrient therapy by John G. Brown and Harold R. Pierce. Results from the study of bone density in the appraisal of calcium status, by Pauline Berry Mack. The influence of nutrition on the course of pregnancy, by Gustavus Tisdall. The objective evidences of nutritional deficiencies in pregnancy by W T Tompkins. Changes in blood values during pregnancy and the relation of protein levels to toxemia symptoms, by Dorothy G. Wiehl. Amino acids and protein in pregnancy with and without toxemias, by Thomas Primrose. Hypertension and renal lesions as manifestations of nutritional deficiency by W R. Hartroft. Ménière's syndrome as a malnutritional disorder, by Miles Atkinson. An experiment in the control of tuberculosis among Negroes, by Jean Downes. The effect of nutrient supplements on the course of tuberculosis, by H. R. Getz.

Note. The papers in the volume are the work of medical practitioners or others with professional interests in the relationships between nutrition and health. They are addressed to persons with similar interests but they are not so technical that they cannot be understood by persons without standard education in medicine. In other words, the contents of the book are also within the grasp of public health personnel and social workers. The individual papers are supplemented by excerpts from the discussions at the conference, illustrations, and literature references. Several illustrations are reproduced in color.

MITCHELL, HAROLD HANSON AND MARJORIE EDMAN

Nutrition and climatic stress, with particular reference to man. Springfield Illinois Charles C Thomas 1951 234 p. illus. 24 cm. $6 75 849

Contents. Introduction. Diet in cold environment. Diet in hot environment. Diet at altitude. Practical considerations. Literature cited. Addendum.

Note: Essentially this work is digest of the literature bearing on such matters as the effect of diet on tolerance to cold, the effect of heat on nutrient requirements, the physiological effects of altitude, and the effect of dietary modifications on the tolerance to anoxia. The literature surveyed includes both published literature and governmental research reports. The work itself was prepared as government research report under contract between the University of Illinois and the Quartermaster Food and Container Institute for the Armed Forces as an aid in the proper rationing of Army personnel in various climates and at different altitudes. It has been published in the present form because it is potentially useful in other fields than the military *The literature has been covered up to about* October 1, 1949.

NUTRITION SYMPOSIUM SERIES

Recent advances in nutrition research, with emphasis on the newer B vitamins. Proceedings of the scientific sections of the seventh annual meeting The National Vitamin Foundation Incorporated New York City April 3 1952 New York The National Vitamin Foundation Incorporated, *1952 129* p. 25 cm. Paper $1.50. 850

Contents: The metabolic role of crystalline vitamin B_{12}, by B. F Chow Some observations on substances combining with vitamin B_{12}, by B. F Chow and R. L. Davis. Role of the vitamins in antibody production, by A. E. Axelrod. Adrenal function in pantothenic acid deficiency by W A. Krehl and others. Some studies on the role of certain of the B vitamins in hematopoiesis, by D. R. Weir and R. W Heinle. The effect of certain nutritional factors on the reactions produced by acute stress in human subjects, by E. P Ralli. The skin lesions of human pyridoxine deficiency and their relationship to seborrheic dermatitis of the sicca type, by R. W Vilter and W Schreiner. The role of B vitamins in the nutrition of the pig, by R. W Luecke. The comparative value of various antibiotics in swine rations, by H. D. Wallace and T J. Cunha.

Note: A collection of original papers in which recent important developments in selected areas of nutrition research are summarized for professional workers. Literature references are included.

SHERMAN, HENRY CLAPP

Chemistry of *food and nutrition.* Eighth edition. New York The Macmillan Company 1952 721 p. illus. 22 cm. $6 00 851

Contents (abridged) Carbohydrates. Fats and lipids. Nutritional chemistry of the proteins and their amino acids. Enzymes and digestion. The basal energy metabolism, regulation of body temperature, and specific dynamic action. Total energy metabolism and food requirement. Quantitative aspects of protein needs and values. Mineral elements in foods and nutrition. Nutritional aspects of acid-base balance. Quantitative aspects of calcium and phosphorus needs and values. Iron and copper in food and nutrition. Iodine in nutrition. Ascorbic acid (vitamin C). Thiamine (vitamin B_1). Riboflavin. Niacin (nicotinic acid) and the pellagra problem. Folic acid, vitamin B_{12}, and citrovorum factor Other water-soluble vitamins and substances of related interest. Vitamin A and its precursors. The vitamins D and prevention of rickets. The nutritional chemistry of reproduction and lactation. Some chemical aspects of growth and development. Dietary adequacy and nutritional status. Conscious chemical control of the internal environment—the problem of the best use of food. Causes and extent of variations in the nutritive values of foods. Food economics in the light of the newer chemistry of nutrition. Improvement of already-normal nutrition. Appendices. Index.

Note: (726*) A standard work since the publication of the first edition in 1911 It was designed and is widely used as college text for use in home economic courses and other courses where fairly extensive knowledge of the fundamentals of nutrition is important. It has gradually taken on also the status of reference book for lay readers, social workers, public health workers, and others who have serious interests in the facts regarding the relation of nutrition to health. The style is concise and good deal of space is given to tables, formulas, and bibliographies. The seventh edition was published in 1946. In this edition the three last chapters are new and numerous revisions have been made in the text of other chapters.

SHERMAN HENRY CLAPP AND CAROLINE SHERMAN LANFORD

Essentials of nutrition. Third edition. New York The Macmillan Company 1951 454 p. illus. 22 cm. $4.25 852

Contents (abridged) The nutritional improvement of life. The more abundant nutrients in foods. What happens to food in the body—digestion and metabolism. Energy aspects of nutrition. How to meet the energy need and have the body weight you want. How to meet the need for protein. Mineral elements and regulatory processes in nutrition. Iodine. Ascorbic acid (vitamin C) Thiamine (vitamin B_1) Riboflavin, niacin (nicotinic acid) and the *problem of pellagra* with its related ills. Other water-soluble vitamins. Vitamin A and its precursors. Rickets and the vitamin D. Other fat-soluble vitamins. Some relations of food to the teeth. Nutritional characteristics of food commodities. Food costs and values—nutritional guidance in food economics. Appendix Fatty acids. Digestive enzymes. Composition and nutritive values of foods. Recommended dietary allowances. Glossary Subject index.

Note: (1860) A relatively brief textbook designed particularly for introductory college courses taken mainly by students who have had no previous courses in chemistry and physiology Interest is lent to the subject by linking it to the student's own nutritional problems as, for example, in the chapter where the relations between food intake and body weight are discussed. There are 41 tables of reference data and selected but extensive bibliographies In this edition numerous changes have been made to bring the book in line with the 1948 revision of the National Research Council's *Recommended daily dietary allowances* and with other developments.

SHERMAN HENRY CLAPP

The nutritional improvement of life. New York Columbia University Press 1950 270 p. illus. 23 cm. $3 75 853

Contents: Introductory—nutrition as public concern and as individual adventure. Nutrition in the nineties—beginnings of permanently organized research in nutrition. First decade of the twentieth century science of nutrition. Nutrition in the decade of 1911–1920. *Advances during* 1921 1930 *and the concept of nutritional improvement.* Nutrition in the decade of 1931–1940. In the Second World

War. Principles and practice. The internal environment and the quality of life. Improved nutrition and length of life. Further human implications. Better nutritional status for more people. Appendices: The 1946 world food survey of the Food and Agriculture Organization of the United Nations. Records of actual food consumption. Selected bibliography. Index.

Note: The main theme of this book by an internationally known authority on nutrition is that the rapid advance of nutritional knowledge especially in the present century has already improved the quality of human life and promises further improvement in the years ahead. The presentation is semi-popular and the book is potentially of interest to professional workers in the fields of public health, nutrition, and child care as well as to those general readers who seek mature discussions of scientific subjects.

TOEPFER, EDWARD WILLIAM, AND OTHERS

Folic acid content of foods. Microbiological assay by standardized methods and compilation of data from the literature. By Edward W Toepfer Elizabeth Gates Zook, Martha Louise Orr and L. R. Richardson. Washington D C. Government Printing Office, 1951 116 p illus 26 cm. (United States. Department of Agriculture. Agriculture handbook no 29) Paper $0 45 854

Contents: Introduction. Part I, Laboratory analysis of foods: Analytical procedures. Standardization of growth curves. Calculation of confidence limits. Reproducibility of assays. Recovery of added folic acid. Potential enzyme activity of chicken pancreas. Completeness of extraction. Results of laboratory analysis of foods. Part II, Compiled data on folic acid content of foods. Literature cited.

Note. Recognition of folic acid as a factor required for growth, reproduction, and prevention of anemia in animals and for treatment of several types of anemia in human beings led to the laboratory work on the folic acid content of food which is described and summarized in this handbook. The study was carried on jointly by the Bureau of Human Nutrition and Home Economics in Washington and by the Texas Agricultural Experiment Station. Results are reported of the systematic application of standardized analytical procedures to a large number of foods. Two summary tables on the folic acid content of various foods are given: the first, covering 16 pages, contains the detailed results of the laboratory analysis of market-purchased, locally produced, and special foods, showing total and free folic acid in edible portions determined by microbiological assay with *Lactobacillus casei* and *Streptococcus faecalis*; the second, covering 79 pages, contains compiled data from literature and other sources. References listed in the bibliography number 131

METABOLISM

GAUNT, ROBERT, AND JAMES H. BIRNIE

Hormones and body water Springfield Illinois Charles C Thomas, 1951 57 p. illus. 22 cm. (American lecture series. Publication no. 103 A monograph in American lectures in physiology edited by Robert F Pitts) $2.25 855

Contents: Introduction. Evolutionary considerations. The posterior pituitary antidiuretic hormone. The adrenal cortex. The thyroid. The adrenal medulla. The pancreas. The gonadal hormones. Toxemias of pregnancy. The liver. The adaptational syndrome. Water intoxication. Water metabolism in the newborn. Conclusions. References.

Note: This short monograph presents a synthesis of the available information on the activities of hormones on water metabolism in the human body. The action of individual and groups of hormones are considered as are some of the evolutionary factors which developed the present functional mechanisms of the human body. The bibliography contains 138 citations. The authors are faculty members of the Department of Zoology of Syracuse University.

HARTMAN FRANK ALEXANDER AND KATHARINE A. BROWNELL

The adrenal gland. 72 illustrations. Philadelphia Lea & Febiger 1949 581 p illus. 24 cm. $12 00. 856

Contents: Anatomy. Adrenal size. Circulation and innervation. Histology. Development and involution. Chemistry of chromaffin tissue. Chemistry of cortical tissue. Methods of assay and factors in secretion of epinephrine. Anaphylactic shock and other effects in relation to the medulla. Physiological and pharmacological effects of epinephrine. Functions of interrenal tissue. Relation of the adrenal to electrolyte and water exchange. Relation of the adrenal cortex to energy metabolism. Output and functions of cortical hormones. Function and fate of cortical hormones. Dietary factors in adrenal activity. Interrelation of the adrenal with the pituitary. Adrenal hypertrophy and regeneration. Other endocrine interrelationships. Relation of the adrenal cortex to the sexual organs. Addison's disease. Other insufficiencies. Hypersecretion of chromaffin tissue. Hyperactivity of the adrenal cortex. Adrenogenital syndrome. Adrenal pathology. Pathology related to adrenal dysfunction. Bibliography. Author index. Subject index.

Note. A monograph which presents the accumulated knowledge of the adrenal gland and its homologues throughout the animal kingdom, but with the greatest emphasis on the gland in mammals. The inclusive scope is obvious from the chapter titles. The chapters are concise critical digests of the pertinent literature and are keyed to the 126 page bibliography of source articles. The senior author has made many contributions to the field and both his and the junior author's findings are incorporated. The book is important in the literature of comparative physiology as well as in the narrower field of endocrinology.

MCELROY, WILLIAM DAVID, AND BENTLEY GLASS, editors

Copper metabolism. A symposium on animal, plant and soil relationships. Sponsored by the McCollum Pratt Institute of the Johns Hopkins University Baltimore The Johns Hopkins Press 1950 443 p illus. 24 cm. $6 00 857

Contents. The formation of copper complexes, by A. H. Corwin. The copper protein, ascorbic acid oxidase, by C. R. Dawson. The nature of the copper enzymes involved in tyrosine oxidation, by M. F Mallette. Phenol oxidases and plant respiration, by J. M. Nelson. Functional aspects of copper in plants, by D. I. Arnon. The copper nutrition of green plants and fungi, by R. A. Steinberg. A bioassay reaction involving copper proteins, by J. B. Thompson. Copper metabolism in the invertebrates, by V. G. Dethier. Hemocyanin, by A. Redfield. The use of radioisotopes of copper and molybdenum in nutritional studies, by C. L. Comar. The influence of copper on the metabolism of phosphorus and molybdenum, by G. K. Davis. Problems associated with copper-deficiency in ruminants, by H. R. Marston. Copper and molybdenum in relation to diseases of cattle and sheep in New Zealand, by I. J. Cunningham. Copper metabolism in human subjects, by G. E. Cartwright. The chemical nature of the copper complexes in peat soils and plants, by J. E. Dawson and C. K. M. Nair. Trace elements and phosphate in herbage plant nutrition, by H. C. Trumble. The nutrient element content of native forages in relation to land forms and soil types in the North Carolina coastal plain, by K. C. Beeson and G. Matrone. A summary of the symposium, by B. Glass. Author index of participants. Subject index.

Note: A collection of the original papers (together with excerpts of the discussions) presented at the symposium mentioned in the book's title. The papers are supplemented by lists of references, graph tables, and other illustrative matter. Most of the authors are scientists themselves who took part in original investigations bearing on the subject of their papers. The book is of interest primarily to graduate scientists conducting research in plant and animal nutrition and scientists in industry who are concerned with the application of the results of such research in the formulation of fertilizers, animal feeds, etc.

MCELROY WILLIAM DAVID AND BENTLEY GLASS editors

Phosphorus metabolism. A symposium on the role of phosphorus in the metabolism of plants and animals. Sponsored by the McCollum Pratt Institute of the Johns Hopkins University Volume I. Baltimore The Johns Hopkins Press, 1951 762 p illus. 24 cm. $10.00 858

Contents (abridged): Metabolism of polysaccharides and disaccharides, by W Z. Hassid. The problem of the direct utilization

of disaccharides by certain microorganisms, by M. Doudoroff. The synthesis of polysaccharides without the intermediation of phosphate, by E. J. Hehre. The effect of the hyperglycemic factor and epinephrine on liver and muscle phosphorylase by E. W Sutherland. Some studies of fructose metabolism, by M. W Slein. Phosphofructokinase and aldolase, by J F Taylor The metabolism of pentose and triose phosphates, by B. L. Horecker. The primary product of glucose-6-phosphate oxidation, by F Lipmann. Pyrimidine nucleosidases, by F Schlenk. Recent investigations on the formation and utilization of active acetate, by H. A. Barker. Initial stages of pyruvate oxidation, by R. S. Schweet and others. Acetyl transfer in the enzymatic synthesis and breakdown of citric acid, by J. R. Stern. The metabolism of two-carbon compounds, by D. Novelli. Lactate and citrate biosynthesis, by S. F Carson. Oxidative phosphorylation during electron transport, by F E. Hunter Jr. Ethyl alcohol oxidation and phosphorylation in extracts of E. coli, by G. B. Pinchot and E. Racker. The regulation of the rate of oxidation in rat liver mitochondria, by V R. Potter and R. O. Recknagel. The metabolism of phosphorus-containing coenzymes, by A. Kornberg. The structure of coenzyme A, by G. D. Novelli. The structure of pyridoxal phosphate, by I. C. Gunsalus. Pyridine nucleotides and coupled phosphorylation, by N. O. Kaplan. The biochemistry of inorganic pyrophosphates and metaphosphates, by G. Schmidt. The influence of inorganic ions on phosphorylation reactions, by H. Lardy The chemistry and thermodynamics of phosphate bonds, by P Oesper. Phosphate metabolism in the activity of skeletal and cardiac muscle, by W F H. M. Mommaerts. Energy sources of bioelectricity by D Nachmansohn. Phosphate bond energy and bioluminescence, by W D. McElroy Urea formation, by S. Ratner. The synthesis of peptide bonds, by P P Cohen. Adenosine triphosphate and carbon dioxide fixation, by M. F Utter. Summary by B. Glass. Author index of participants. Subject index.

Note. The original papers in this work together constitute substantial contribution to the literature of biochemistry The symposium was organized around series of major papers in which the current knowledge of particular area of phosphorus metabolism is summarized at some length. The major papers are complemented by shorter papers in which research workers present the results of their own investigations in the area. The titles of all the main papers and of majority of the shorter papers are listed above. The papers are accompanied by lists of references. The subject index of the book is exceptionally full.

SALTER, WILLIAM THOMAS

Chemical developments in thyroidology Springfield, Illinois Charles C Thomas 1950. 87 p. illus. 22 cm. (American lecture series. Publication no 26 A monograph in American lectures in endocrinology edited by Willard O Thompson) $2.00 859

Contents: Introduction. Synthesis of the thyroid hormone. The blocking of thyroid activity Circulating thyroid hormone. Application of radio-iodine. Synopsis. Bibliography Index.

Note: A useful and authoritative summary of advances in the understanding of the thyroid hormone and of thyroid disease made in the period 1923–1948. A critical review of radioactive tracer techniques in studying thyroid physiology is included. What is known about the "metabolic circuit of the thyroid hormone" is concisely stated and points which are still obscure are indicated. There is bibliography of 119 citations of literature published 1923–1949

SELLE, W A.

Body temperature, its changes with environment, disease and therapy Springfield, Illinois Charles C Thomas 1952 112 p. illus. 22 cm. (American lecture series. Publication no 147 A monograph in American lectures in physical medicine, edited by W A. Selle) $3 50 860

Contents: Introduction. Heat production Heat dissipation. Integrated temperature control Neural mechanisms of temperature regulation. Internal disturbances of heat regulation. Environmental disturbances of heat regulation. Physical allergy References. Index.

Note: A concise summary of current knowledge. Although slanted toward the clinical aspects, most of the space is devoted to covering the physiology and the normal values However the therapy of such injuries as feasible is outlined. The book is essentially literature digest, and the bibliography lists 111 references.

SELYE, HANS, AND HELEN STONE

On the experimental morphology of the adrenal cortex. Springfield, Illinois Charles C Thomas, 1950 105 p illus. 22 cm. (American lecture series. Publication no 74 A monograph in American lectures in endocrinology edited by Willard O Thompson) $2 75 861

Contents: Introduction. Materials. Experimental. Histologic findings and discussion. Summary References.

Note: A condensed report of the findings in series of experiments on rats and dogs conducted to elucidate hormonal influences on the gross weight and histologic structure of the adrenal cortex. The effects of six hormones and combinations of these were studied. The results are discussed and are related to previously published work in the field. There are 12 plates of illustrations and bibliography

SOSKIN SAMUEL AND RACHMIEL LEVINE

Carbohydrate metabolism correlation of physiological, biochemical and clinical aspects. Revised edition. Chicago Illinois The University of Chicago Press, 1952 346 p. illus 25 cm. (The University of Chicago Committee on Publications in Biology and Medicine Lester R. Dragstedt and others) $8.50 862

Contents: Part I, The biochemistry and energetics of carbohydrate metabolism The importance of carbohydrates in nutrition. The enzymatic machinery of carbohydrate metabolism. The intermediary steps in carbohydrate metabolism. The liberation and transfer of the energy derived from carbohydrate breakdown. The use of energy for muscular contraction. Part II, Introductory physiological considerations: Nature and occurrence in the tissues of materials important to carbohydrate metabolism. Site of origin of blood sugar. The use of the diabetic organism in the study of gluconeogenesis. Part III, Critical survey of the classical criteria of diabetes Quantitative excretion of administered sugar and the dextrose-nitrogen ratio. Ketosis. The respiratory quotient. Gluconeogenesis from protein. Gluconeogenesis from fat. Utilization, dissimilation, and oxidation of carbohydrate Part IV The role of the endocrine glands in carbohydrate metabolism: Pancreas (insulin) The mode of action of insulin. The adrenal cortex. The thyroid. The anterior pituitary Permanent experimental diabetes produced without surgery Part Integration of physiological and clinical aspects: Regulation of carbohydrate metabolism. Pathological physiology and clinical applications. Comparative physiology of diabetes. Present frontiers of research in metabolism. Index.

Note: (134) The special feature of this textbook is its broad approach to the subject. The authors point out that the instruction in metabolism is usually divided among different departments of the same institution, with the result that the student secures disjointed understanding of carbohydrate metabolism. Their book is planned to correlate the material and to present comprehensive picture of carbohydrate metabolism and of selected aspects of fat and protein metabolism. It is designed for students of physiology biochemistry and medicine. The first edition was published in 1944. In this edition many significant revisions and additions are apparent. Many of these are based on the great advances in knowledge of metabolic processes which have been made possible by the use of radioactive isotopes in biological investigations. Recent literature has been added to the extensive chapter bibliographies.

WOOLLEY, DILWORTH WAYNE

A study of antimetabolites. New York John Wiley & Sons Inc. 1952 269 p. 24 cm. $5.00. 863

Contents. Introduction—discovery and development of ideas about antimetabolites. Competition between metabolically important compounds and substances related to them in chemical structure. Some general aspects of the phenomenon. Hypotheses about mechanism of action of antimetabolites. The spectrum of activity of antimetabolites. The natural occurrence of antimetabolites as participants in physiological processes and as etiological agents in disease. Selectivity of action of antimetabolites. Applications to chemotherapy Other applications to pharmacology Applications to biochemistry The design-

ing of antimetabolites. Practical suggestions for the synthesis and testing of antimetabolites. Bibliography Index of structural formulas. Subject index.

Note: The term "antimetabolites" as used in this book designates substances which are closely related in chemical structure to essential metabolic substances and have the additional property of interfering with these substances in the biochemistry of living organisms. The interest in antimetabolites derives (1) from the light that experiments with them may throw on biochemical processes, and (2) from the possibility that an understanding of them will point the way to the synthesizing of powerful pharmacologic agents. This book is survey of the current state of the field. It includes results from the author's own investigations and also those that have been reported in the literature. There is bibliography of five hundred references.

ZIMMERMANN, BERNARD

Endocrine functions of the pancreas. Springfield, Illinois Charles C Thomas, 1952 82 p. illus. 22 cm. (American lecture series. Publication no 114 A monograph in American lectures in endocrinology edited by W O Thompson) $2 50 864

Contents: History The nature of insulin. Metabolism in diabetes and the action of insulin. The regulation of internal pancreatic secretion. Special problems in lipid metabolism. The hyperglycemic factor. Conclusions. Index.

Note. A brief but useful summary of the current knowledge of the pancreas viewed as an endocrine gland, together with indications of aspects that need further investigation. An example of the latter is elucidation of the chemical mechanism by which insulin exerts its metabolic action. The book is based on selective and critical review of the literature in which the results of experimental investigations are reported. Fairly extensive bibliographical lists are included with the chapters.

SENSES AND SENSATION

GESELL ARNOLD AND OTHERS

Vision its development in infant and child. By Arnold Gesell, Frances L. Ilg and Glenna E. Bullis. Assisted by Vivienne Ilg and G N Getman. Third printing with additions. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers 1950 331 p. illus. 24 cm. $7 50 865

Contents: Introductory The eyes of today and tomorrow Orientation the background and scope of this study The evolution of the human action system The motor basis of vision. Part one, The growing action system The genesis of vision. Infancy The preschool years. The school years. Part two, Developmental optics: The visual domain. The complex of visual functions. The young eye in action. The ontogenesis of visual behavior Maldevelopment and child vision. Part three, Developmental appraisal A developmental hygiene of child vision. The conservation of child vision. Appendix Examination sequences and procedures. Ontogenetic gradients of visual behavior. Selected references Index.

Note. Reported in this volume are the results of ten-year investigation of the growth of visual functions in relation to the over-all development of infant and child from embryo and fetus through the age of 10 years. The study which was carried on for the most part at the Yale Clinic of Child Development and the New Canaan Country Day School, included clinical examination of behavior patterns, graded tests of visual skills, optometric measurements, and retinoscopic determinations of the brightness, the motion, direction, speed, and color of the retinal reflex in the eye. The purpose of the study was to indicate the nature and dynamics of the role of the development of the eye in the action system of the child. While the authors point out that their conclusions are preliminary in character, the work is an important one both for the understanding of vision and the understanding of children. Many of the illustrations are taken from the Yale Films of Child Development.

HIRSH IRA J

The measurement of hearing. New York McGraw Hill Book Company Inc. 1952 364 p illus. 24 cm. (McGraw Hill publications in psychology Clifford T Morgan editor) $6 00 866

Contents: Foreword, by Hallowell Davis. Preface. Introduction. Sensation and measurement. The auditory stimulus: sound and electricity Electroacoustic systems. Absolute threshold for pure tones. the audiogram. The intelligibility of speech. Auditory masking and fatigue. Differential sensitivity Loudness and recruitment. Binaural hearing and bone conduction. Conditioning in audiometry Clinical audiometry Appendixes. Specifications for audiometers. Speech materials for auditory tests. Glossary Bibliography Name index. Subject index.

Note. All aspects of the measurement of hearing except the anatomy and physiology of the ear are considered in this work. The main emphasis is on the psychophysical aspects of the relations between sound sensations and stimuli. In the first chapter the reader is introduced to psychophysical methods, in the third chapter to the principles and characteristics of audiometers and hearing aids, and in the final chapter to the clinical techniques of measuring hearing. The rest of the book is chiefly devoted to use of experimental techniques in studying and measuring such aspects of the problem as ability to hear speech, auditory fatigue, auditory discrimination, etc. The book was written when the author was associated with the Psycho-Acoustic Laboratory of Harvard University and it was originally published as report under the auspices of the Office of Naval Research.

ITTELSON, WILLIAM H.

The Ames demonstrations in perception a guide to their construction and use. Princeton New Jersey Princeton University Press, 1952 88 p. illus. 28 cm. Paper $4 00 867

Contents. The star point demonstration. The line demonstration. The size-brightness demonstrations. The overlay demonstration. The parallax demonstration. The togetherness and apartness demonstration. The "thereness-thatness" demonstrations. The chair demonstration. The watch-card magazine demonstration. The aniseikonic demonstration. The artificial retina demonstration. The tilting room demonstration. The distorted room demonstrations. The aniseikonic glasses demonstration. The radial motion demonstration. The tangential motion demonstration. The circular motion demonstration. The "S" motion demonstration. The rotating trapezoid demonstration. The survey demonstration. Bibliography

Note. Twenty demonstrations developed under the direction of Professor Adelbert Ames, Jr., of the Dartmouth Eye Institute and Institute for Associated Research are specifically described in this book. The descriptions include for each demonstration photograph or drawing of the apparatus; brief description of the apparatus and its operation; an outline description of typical observations and effects which can be demonstrated with the apparatus and dimensioned drawings for the guidance for those who wish to construct the apparatus. The demonstrations are not limited to the study of vision but include wide range of perceptual phenomena.

LINKSZ ARTHUR

Physiology of the eye. Foreword by Walter B Lancaster New York Grune & Stratton, 1950–52 2 v illus. 26 cm. Vol. I $7 50 Vol. II $19.00 868

Contents (abridged) Volume I, Optics: Physics of light. Geometric optics The eye as an image-forming mechanism. Index. Volume II, Vision: An analysis of sensations. Pattern and detail vision. The perception of spatial relationships. Vision and the ocular rotary reflexes. References. Author index. Subject index.

Note. The books described here are the first two volumes of projected three-volume work. The work is development of many years of teaching. The author describes it as transcript of lectures but obviously the lectures have been consolidated and revised to some extent. However, the informal style remains. Practically all points mentioned are fully documented. The author's style is lucid and he has included numerous mentions of optical illusions and other borderline matters that add interest to the exposition. There are 137 figures in volume and 248 in volume II.

OGLE KENNETH NEIL

Researches in binocular vision Philadelphia W B Saunders Company 1950. 345 p. illus. 25 cm. $7.50. 869

Contents (abridged) Part I, The organization and sensory cooperation of the two retinas: The structure of the visual pathways. The theory of corresponding retinal points. Studies of the empirical longitudinal horopter. The empirical longitudinal horopter and monocular asymmetries. Part II, The fusional processes in binocular single vision. Panum's fusional areas. Fixation disparity. The fusion from peripheral retinal stimuli. The cyclofusional eye movements. Part III, The problems in binocular vision when changes are made in the relative magnifications of the images of the two eyes: Optical means for changing the magnification of the retinal image. Spatial localization and stereoscopic vision. The distortion of the stereoscopic perception of space. The induced effect. Asymmetric convergence. A theory of the induced effect. The sensitivity of the eyes in the discrimination of differences in the relative magnifications of their images. Part IV. The experimental and theoretical bases for aniseikonia: The instruments for measuring differences in the magnifications of the images of the two eyes. The origin of magnification differences between the images of the two eyes. The stability of corresponding retinal points. Eye movements and aniseikonia. Appendices: The theory of the correction of aniseikonia. The apparent orientation of the cross of the space eikonometer. References. Index.

Note: A major contribution to the understanding of the psychophysiology of binocular vision. It is based chiefly on an extensive program of research carried out at the Dartmouth Eye Institute. Some of the information included has not been published previously. The list of references runs to 190 citations and includes both the publications of the staff of the Dartmouth Eye Institute and the pertinent publications of other workers.

UNITED STATES LIBRARY OF CONGRESS. TECHNICAL INFORMATION DIVISION

Visibility a bibliography Compiled by Jack Weiner and Morris C. Leikind. Edited by Jack R. Gibson. Washington The Library of Congress, 1952 90 p. 27 cm. Paper $0.65 870

Contents (abridged) Visual detection factors in the laboratory. Physical variables in the field. Field visibility computations, measurements and observations. Engineering applications of visibility data. Author index.

Note: An unannotated but classified list of more than 1,000 references to the international literature published from 1925 to 1950 inclusive on the subject of visibility as influenced by the various physical, psychological, and physiological factors inherent in the observer, target, background and atmosphere, and the engineering applications of visibility data.

WALLS GORDON LYNN AND RAVENNA W MATHEWS

New means of studying color blindness and normal foveal color vision, with some results and their genetical implications. A contribution from the School of Optometry and the Department of Psychology of the University of California. Berkeley Calif University of California Press 1952 172 p illus 23 cm. (University of California publications in psychology Vol. 7 no. 1) Paper $2.50 871

Contents: Introduction. Normal color vision. Big four color blindness. The excess hypothesis. Genetics of color blindness. Maxwell's spot. Receptor-type distribution. Methods: The anomaloscope. The J-light test. Neutral point determination. The RDP. Results and discussion: Color-normal subjects. Typical dichromats. Typical anomalous trichromats. Typical monochromats. Protanopia-anomality heterozygotes. Special cases—miscellaneous. Special cases—anomalous compounds. Interpretation of the RDP. Itemized summary. Bibliography.

Note: The results of an experimental exploration of the commoner kinds of color blindness using the anomaloscope, ... instrument, are reported in this work. The methods adopted are put forward as an essentially new and valuable means of studying the common types of color blindness and normal foveal color vision.

WATSON LELAND A. AND THOMAS TOLAN

Hearing tests and hearing instruments. Baltimore The Williams & Wilkins Company 1949 597 p. illus. 24 cm. $7.00 872

Contents (abridged) Part one, Background of the audiometer: Fundamentals of hearing relating to audiometers and hearing aids. Fundamentals of audiometry. Part two, Interpretations of audiometric data: Evaluating the audiogram and speech hearing tests. Audiometric studies as an aid to diagnosis. Part four Social aspects of audiometry: Social problems and aspects of deafness. The audiometer in military, industrial, and medico-legal hearing. School hearing tests and problems. Part five, Hearing aids: The prescription and fitting of hearing aids. Social and economic aspects of the hearing aid. Part six, Advanced audiometry: Advanced audiometry and research. Bibliography. Reference bibliography. Glossary of terms in audiology. List of tables. List of illustrations. Index.

Note: This book is detailed practical manual on the use of modern pitch range audiometers in the measurement of hearing and on the prescription of present-day hearing aids for the correction of defective hearing. There is some discussion of the background, physiological and physical principles, and even of the social aspects, but most of the space is devoted to matters of direct concern in the use of the audiometer and the prescription of hearing aids. The presentation is technical, and the book is designed for medical practitioners and others with professional interests in the subject.

WEVER, ERNEST GLEN

Theory of hearing. New York John Wiley & Sons Inc. 1949 484 p illus. 22 cm. (Wiley publications in psychology Herbert S. Langfeld advisory editor) $6.50 873

Contents: Part I, The classical theories: The beginnings of auditory theory. The Helmholtz resonance theory. The place theories after Helmholtz. The frequency theories. Part II, The modern developments: Modern developments of the classical theories. Auditory nerve responses. Frequency representation in the auditory nerve. The volley principle. Part III, The volley theory: Basic evidence. Further evidence on cochlear localization: the acoustic neurology. Sensitivity. Loudness and fatigue. Pitch and pitch discrimination. Auditory abnormalities. The products of tonal interaction. Temporal phenomena of auditory perception. Binaural phenomena. The volley theory in review: concluding observations. Definitions and symbols. References. Index.

Note: The author, Professor of Psychology at Princeton University shows that the two main types of hearing theory formerly advanced and thought to be in conflict—the resonance type of place theory and the simple frequency theory—may be reconciled in the volley theory. The book sets forth in as non-technical language as possible the basic principles underlying the relationship between the physics of sound and the psychology of hearing and shows how the physical sound acts upon the sensory and neural mechanisms of the body and through its actions there becomes translated into auditory impressions. The bibliographical references cover 23 pages.

ZAHL PAUL ARTHUR, editor

Blindness modern approaches to the unseen environment. Princeton New Jersey Princeton University Press 1950 576 p illus. 24 cm. $7 50 874

Contents: Part I, History and welfare: Blindness in the United States, by G. Farrell. Blindness in Great Britain, by W. M. Eagar. Blindness in Canada, by E. A. Baker. The blind in continental Europe, by R. B. Irwin. Additional factors affecting the blind, by P. S. Platt. Part II, Education and psychology: The preschool blind child, by K. E. Maxfield. Psychological foundations of special methods in teaching blind children, by B. Lowenfeld. Education of blind children in the public schools, by O. F. Meyer. Home teaching and casework with the blind, by E. E. Pinetta. Measuring the intelligence of the blind, by S. P. Hayes. Personality and social adjustment among the blind, by T. D. Cutsforth. Part III, Vocational considerations: Vocational rehabilitation of the blind, by D. H. Dabelstein. Problems of the blind in industry, by P. J. Salmon. The deaf-blind, by P. J. Salmon. The blind and the professions, by H. Lende. Laboratory work for the blind, by C. M. Witcher. Part IV The military blinded: The blinded veteran, by L. Greenwood. The Army blind in the United States, by A. R. Blackburn. Rehabilitation procedures in the Navy, Marine Corps, and the Coast Guard, by M. E. Frampton. The service war-blinded in Great Britain, by I. Fraser. Part ... Time-tested boons to the blind: Avenues of communication, by G. Farrell. The talking book, by R. B. Irwin. The cane as travel aid, by R. E. Hoover. The guide dog movement, by W. H. Ebeling. A user's view of the guide dog as travel aid, by H. Chevigny. Part VI, Exploration of new technological horizons: Devices to aid the blind, by C. G. Ritter. Reading machines as tool for blind people.

by G. F. Meyer. The Committee on Sensory Devices, by G. W. Corner. Research on guidance aids for the blind, by P. A. Zahl. Factors in the assay and use of guidance devices, by E. A. Jerome and H. Proshansky. Psychological problems in the development of instrumental aids for the blind, by K. S. Lashley. Research on reading machines for the blind, by F. S. Cooper. Electrical and magnetic production of "phosphenes" and their possible application to problems of the blind, by C. P. Haskins. Part VII, Ophthalmological factors. The causes of blindness, by J. N. Greear, Jr. Index.

Note. This work was project of the National Research Council's Committee on Sensory Devices. It contains the best available account of the mechanical and electrical devices that have been developed and that are under development for the aid of the blind. Typical of this material is the chapter on reading machines which contains descriptions of the machines that have been invented, discussions of their advantages and shortcomings, accounts of the experimental program of the Committee on Sensory Devices, general survey of the problems that must be solved in the development of fully successful machine of the type, and list of the pertinent literature. The book contains, in addition, authentic discussions of other aspects of education and rehabilitation of the blind as indicated by the chapter titles.

BIOCHEMISTRY

GENERAL

ANNUAL REVIEW OF BIOCHEMISTRY Volume 21 J Murray Luck, editor Hubert S Loring, associate editor Gordon Mackinney associate editor Stanford, Calif Annual Reviews Inc., 1952 781 p. 23 cm. $6 00 875

Contents: Proteolytic enzymes, by A. K. Balls and E. F Jansen. Nonoxidative, nonproteolytic enzymes, by K. L. Altman and A. L. Dounce. Chemistry of the carbohydrates, by R. Montgomery and F Smith. Chemistry of lipids, by H. J Deuel, Jr., and R. Alfin-Slater. The chemistry and metabolism of the steroids, by L. T Samuels and H. Reich. The chemistry of amino acids and proteins, by H. B Bull. Nucleic acids, purines, and pyrimidines, by D. O. Jordan. Fat metabolism, by A. C. Frazer. Interrelationships of lipid and carbohydrate metabolism, by K. Bloch. Metabolism of amino acids and proteins, by H. Tarver Fat-soluble vitamins, by A. R. Kemmerer Nutrition, by E. J Bigwood. Chemistry of muscle, by M. Dubuisson. The biochemistry of neoplastic tissue, by F C. Koenerack. The biochemistry of antibiotics, by T S. Work. Comparative biochemistry by M. Florkin. Carotenoids, by G. Mackinney The alkaloids, by L. J. Sargent and L. F Small. Chromatography by S. Moore and W H. Stein. Carbohydrate metabolism, by S. Ochoa and J. R. Stern. Chemistry of the nonsteroid hormones, by C. H. Li and J. L Harris. Water-soluble vitamins concerned with one- and two-carbon intermediates, by A. D. Welch and C. A. Nichol. Biological oxidations, by B. Chance and L. Smith. Indexes.

Note: (743) As in earlier volumes of this useful and long-established series, each of the sections or papers is essentially summary of recently published literature. Some of the authors have obviously selected their material critically others have aimed at comprehensiveness. The typical paper is concisely written digest in which most statements are keyed to citations of the source articles. Publications of 1951 predominate in the bibliographies. An author index includes the names of all authors of the cited papers, and detailed subject index covers the contents of the volume Owners of the set will be interested in the second 10-year index: *Annual review of biochemistry—Cumulative index, volumes 11 to 20* edited by A. C. Griffin, Stanford, Calif., Annual Reviews, Inc 1952 377 p., $4.00.

ARTZ, NEAL ELLSWORTH, AND ELIZABETH M. OSMAN

Biochemistry of glucuronic acid New York Academic Press, Inc., 1950 103 p. illus. 23 cm. $3 00 876

Contents: Introduction Analytical methods. Occurrence. Origin of glucuronic acid in the body Detoxication. Bibliography Index.

Note: A digest of the international literature that bears on the biochemistry of glucuronic acid and especially on its metabolic significance. Statements and data in the text are carefully keyed to the bibliography which lists 454 books and papers. The authors are associated with the Corn Products Refining Company

BIOCHEMICAL PREPARATIONS. Volume 1 Herbert E. Carter editor in-chief New York John Wiley & Sons Inc. 1949 76 p. 24 cm. $2.50 877

Contents: Adenosine diphosphate. Adenosine triphosphate. L-alanine and L-serine. Azobenzene-p-sulfonic acid triphydrate. p-hydroxyazobenzene-p'-sulfonic acid. β-carboxymethylamino-L-sulfonic acid dihydrate. Casein. β-3,4-dihydroxyphenyl-L-alanine. Diphosphopyridine nucleotide. The α-glucose-1-phosphates. L-glutamine. DL-glyceraldehyde 3-phosphoric acid. Lysozyme. L-lysine monohydrochloride. Lysozyme. L-tyrosine. Subject index.

—— Volume 2 Advisory board, W Mansfield Clark and others. Editorial board Eric G Ball, editor in-chief New York John Wiley & Sons Inc., 1952 109 p. 24 cm. $3 00 878

Contents: Cytochrome c. Cucurbit seed globulin. Oxytocin. Phosvitin, sodium salt. Crystalline lactate dehydrogenase. Sodium pyruvate. Phosphoryl-enolpyruvic acid. L-α-glycerophosphoric acid. Glucose-6-phosphate. C[14] uniformly labeled sucrose. Fructose-1,6-diphosphate. meso- and DL-cyclo-inositol-2. Inositol monophosphate. DL-glutamic acid monohydrate. L-aspartic acid. S-benzyl-L-cysteinylglycine. methyl carbobenzoxy-L-glutamate. N-carbobenzoxy-γ-L-glutamyl-S-benzyl-L-cysteinylglycine. Glutathione. Reduced diphosphopyridine nucleotide. Phosphorylcholine. Oleic acid and methyl oleate. Methyl ricinoleate. Subject index.

Note The first two volumes of new series in which verified methods of synthesizing chemical compounds of biochemical interest are published.

BLOCK, RICHARD JOSEPH, AND DIANA BOLLING

The amino acid composition of proteins and foods analytical methods and results. Second edition. Springfield, Ill. Charles C Thomas 1951 576 p. 25 cm. $11.50 879

Contents (abridged) The diamino acids: arginine, histidine, lysine, hydroxylysine, and citrulline. The aromatic amino acids: tyrosine, tryptophan, phenylalanine, diiodotyrosine, thyroxine and dibromotyrosine. The sulfur containing amino acids: cystine, cysteine, and methionine. The β-hydroxy amino acids serine and threonine. The "leucines" leucine, isoleucine, and valine. The dicarboxylic amino acids aspartic acid and glutamic acid. Glycine and alanine. Proline and hydroxyproline. General methods. Summary tables. Protein and amino acid consumption in the United States. Bibliography Subject index.

Note: (744*) Biochemists and research workers in the field of nutrition are the principal users of this extensive compilation of data concerning the amino acid composition of wide variety of vegetable and animal proteins and on analytical procedures used in the identification of proteins. Like the previous edition (1945) this revision is based chiefly on review of the published literature of the subject, but some data from unpublished manuscripts and from the authors' own experimental work are included. The book has been expanded to cover research of the past six years. The inclusion of new values and analytical methods, and greatly enlarged bibliography account for almost 200 additional pages.

BLOCK RICHARD JOSEPH, AND OTHERS

Paper chromatography a laboratory manual, by Richard J Block, Raymond LeStrange, and Gunter Zweig. New York Academic Press Inc. 1952 195 p. illus (part col d) 24 cm. $4 50 880

Contents Introduction. Theory General methods. Quantitative methods. Amino acids, amines and proteins Carbohydrates. Aliphatic acids and steroids. Purines, pyrimidines, and related substances. Phenols, aromatic acids, and porphyrins. Miscellaneous organic substances. Antibiotics and vitamins. Inorganic separations. Bibliography Author index. Subject index.

Note: A discussion and evaluation of some of the more important techniques developed in paper chromatography written by three biochemists of the Biochemical Laboratories of The Borden Company Yonkers, N. Y The work is practical manual in which tried and proven procedures, employing relatively simple equipment and available reagents, are summarized. However, information is provided in sufficient detail to enable the biochemist to apply the technique of paper chromatography to his particular problem without

recourse to an extensive search of the literature. The bibliography covers eight pages; the great majority of its references are dated 1949 1950, and 1951

BOREK, ERNEST

Man the chemical machine. New York Columbia University Press, 1952 219 p illus. 23 cm. $3 00. 881

Contents. The stuff of life. Enzymes—giant molecules with gigantic know-how Vitamins—the enzymes' helpers. Sugars—the fuel of our cells. Isotopes—tracers for exploring the cells. Amino acids and proteins—masonry of our cells. Blood—the highway to our cells. Cell defense. Genes—the blueprints of our cells. The brain—cells that think. A credo. Index.

Note. A short, interesting account of some of the outstanding achievements of biochemistry The title is a little misleading for, although there is some emphasis on man, the subject is the chemistry of life. No chemical formulas, no mathematics and no bibliography appear in the book. The story is definitely written for the general reader and it is told authoritatively and clearly The author is a member of the faculty of the City College of New York.

BULL HENRY BOLIVAR

Physical biochemistry Second edition. New York John Wiley & Sons, Inc. 1951 355 p. 24 cm. $5 75 882

Contents Atoms and molecules. Energetics. Reaction kinetics. Ions in solution. Electrical conductance. Electromotive force cells. Acids and bases. Oxidation-reduction. Electrokinetics. Surface activity Biopolymers Osmotic pressure and related properties. Viscosity and the flow of liquids. Diffusion. The ultracentrifuge. High polymeric structures. Index.

Note (1914) A college textbook in which those parts of physical chemistry that are of interest in biochemistry and related biological sciences are presented for advanced students of biological sciences. The discussions of such topics as the use of the gold number in diagnosis, diffusion through membranes of living cells, and elasticity of fibers directly relate the theoretical material to the work of medical doctors and biologists. The book is designed as an introduction, yet it is substantial enough to be of interest to graduate workers in the biological sciences who are in need of a survey or "refresher" on physical chemistry. Much rewriting and a fair amount of new material have gone into the present edition.

COWDRY EDMUND VINCENT

Laboratory technique in biology and medicine. Third edition. Baltimore The Williams & Wilkins Company 1952 382 p. 24 cm. $7 50 883

Note. A standard reference book of information on chemical substances, instruments, and methods such as are of interest in professional laboratory work in such fields as biology biochemistry and medicine. The information is supplied in concise paragraphs devoted to specific topics. The arrangement of topics is alphabetical with abundant cross references. Citations of pertinent literature are given under most headings. The second edition was published in 1948. The third edition represents a very extensive revision with much new material added and all of the old that is still useful retained.

FIESER, LOUIS FREDERICK AND MARY FIESER

Natural products related to phenanthrene. Third edition of the monograph previously entitled *Chemistry of natural products related to phenanthrene* by L F Fieser New York Reinhold Publishing Corporation 1949 704 p. illus. 24 cm. (American Chemical Society Monograph series No 70) $10 00 884

Contents Quinones, morphine and related alkaloids. Resin acids Sterols and bile acids. Sex hormones Adrenal cortical hormones. Steroid metabolism. Cardiac active principles Steroid saponins Steroid and terpenoid alkaloids. Stereochemistry of the steroids, by Richard B. Turner Author index. Subject index.

Note: (1949) The steroids, which comprise bile acids, heart poisons, saponins, and sex hormones, constitute one of the largest groups of substances whose structures are similar to phenanthrene. This volume provides a comprehensive survey of present-day knowledge regarding the chemistry and molecular structure of such compounds. Because of recent advances made in our knowledge of the chemistry of the phenanthrenes, the present volume is double the size of the 1937 edition. New chapters on adrenal cortical hormones and steroid metabolism have been added, while others dealing with the sterols and sex hormones have been greatly expanded. Like other volumes in the series, this monograph is based on an extensive survey of the literature of the subject.

GLICK, DAVID

Techniques of histo- and cytochemistry a manual of morphological and quantitative micromethods for inorganic, organic and enzyme constituents in biological materials. With a foreword by Robert R. Bensley New York Interscience Publishers Inc. 1949 531 p. illus. 24 cm. $9 00 885

Contents (abridged) Microscopic techniques. Chemical techniques. Microbiological techniques. Mechanical separation of cellular components. Bibliography Bibliography appendix. List of manufacturers. Index.

Note. Laboratory techniques and procedures for the freeze-drying preparation of tissues, for the detection of various inorganic and organic elements and substances in tissues by chemical and physical methods, and for the separation of cellular components by centrifuging are some of the techniques covered in this book. Techniques and procedures are described fully together with the apparatus and (in the case of chemical techniques) the reagents. The book is based on the literature and the text is cross referenced to the thirty-page bibliography Included in the appendix is a list of manufacturers of apparatus and chemicals. The book is addressed to graduate scientists and professional research workers.

GOMORI GEORGE

Microscopic histochemistry principles and practice. Chicago The University of Chicago Press 1952 273 p. illus. 21 cm. (The University of Chicago Committee on Publications in Biology and Medicine Emmet B Bay and others) $6 00 886

Contents. Part I, Histochemical methods in general: The nature of the processes of identification in histochemistry The special features of histochemical methods. The histochemical section. Controls to prove validity of techniques. Quantitation in histochemistry Part II, Systematic histochemistry: Inorganic substances: A, Metallic elements. B Nonmetallic elements. Organic substances: A, Saccharides: General principles of the histochemical demonstration of saccharides Substances other than nucleic acids. Nucleic acids. Appendix: Ascorbic acid. B, Lipids: Histochemical methods for lipids. Physical methods. Chemical methods. C, Proteins, amino acids, and products of protein metabolism: Proteins. Amino acid components of proteins. Antigens. Urea. Uric acid. D Prosthetic groups: Phenolic substances, especially polyphenols. Adrenalin. The enterochromaffin substance. Sulfhydryl (thiol) groups. E, Various unclassified organic substances. F Pigments. Enzymes: Preparation of tissues for enzymatic reactions. Histochemical reactions for enzymes 1 Oxidative enzymes Dehydrogenases. Oxidases. Peroxidases. Appendix. [illegible] 2 Hydrolytic enzymes: Methods for hydrolytic enzymes in general. Phosphatases. Alkaline phosphatases. 5-nucleotidase. Lecithinase (phospholipase) Acid phosphatase. Phosphamidase. Phosphorylase. Zymohexase (aldolase). Sulfatases Esterases Aliesterases Cholinesterases. The results of histochemical methods for esterases. β-glucuronidase. Carbonic anhydrase. Urease Appendix: Buffers for use in histochemistry Additional references. Author index. Subject index.

Note A survey and summary of current information in the field of microscopic histochemistry This field between histology and analytical chemistry or biochemistry is emerging as an independent discipline with its own theoretical background, methods, and special problems. In this volume the term "histochemistry" is used in the restricted sense to include only those methods of the identification and localization of chemical substances on a cytological scale in which the identifying chemical reaction is observed directly through the microscope in tissues of which the architecture is not greatly altered. The work is suitable for use as a textbook and as a laboratory guide. Bibliographical references are given in footnotes with additional references in an appendix.

GORTNER, ROSS AIKEN

Outlines of biochemistry Third edition ed ited by Ross Aiken Gortner jr and Willis Alway Gortner New York John Wiley & Sons, Inc., 1949 1078 p illus. 24 cm. $8.50. 887

Contents (abridged) Part I, Colloids: The colloid state of matter. Hydrogen-ion concentration. Oxidation reduction. Electrokinetic phenomena. Gels and the water relationships of the hydrophilic colloids. The Gibbs-Donnan equilibrium. Part II, Proteins: The amino acids, the primary decomposition products of proteins. Protein structure and the possibilities of protein isomerism. Reactions of proteins with acids and bases. Protein denaturation. Biological reactions of the proteins. Part III, Carbohydrates and related substances: Metabolism of carbohydrates. The pectic substances. Lignin and the tannins. Part IV The lipids and essential oils. Part Plant pigments. Part VI, Biochemical regulators Vitamins. The hormones. Enzymes. Author index. Subject index.

Note: (1939) An outline in the sense that it presents concisely wide range of information, this standard work is very useful both as an introductory survey of the current knowledge and as guide to the literature. The treatment is essentially from the standpoint of chemistry rather than that of physiological systems. Both plant and animal biochemistry are included. In this edition the chapters on protein denaturation, carbohydrate metabolism and lipid metabolism have been added, and numerous revisions have been made in other parts. In spite of the extensive revisions, considerable recent research is not included, probably because biochemistry has now grown too large to be encompassed in single volume no matter how condensed.

GREENBERG DAVID MORRIS compiler and editor

Amino acids and proteins, theory, methods, application. Springfield Ill. Charles C Thomas, 1951 950 p illus. 26 cm. $15.00. 888

Contents: Properties of amino acids, by E. E. Howe. Methods for the determination of amino acids, by H. S. Olcott. The preparation of amino acids and polypeptides, by S. Archer. The synthesis of labeled alpha amino acids, by J. C. Reid and B. M. Tolbert. Isolation of amino acids, by M. S. Dunn and L. B. Rockland. Classification, purification and isolation of proteins, by H. L. Fevold. Determination of the molecular size of proteins, by H. P. Lundgren and W. H. Ward. Amphoteric properties of amino acids and proteins, by D. M. Greenberg. Criteria of the purity of proteins, by C. H. Li. Chemical reactions of proteins, by H. Fraenkel-Conrat. Nutritional applications of the amino acids, by H. J Almquist. The chemistry of antibodies, by D H. Campbell and F Lanni. Biochemical applications of proteins and peptides, by D M. Greenberg. The metabolism of amino acids and proteins, by H. Tarver Index.

Note: A collection of original monographs on several aspects of the amino acids and proteins hich are currently of interest in research. In each paper the topic named in its title is treated compactly with extensive references to the related literature. The book is written on professional level and is aimed specifically at graduate students and professional biochemists beginning work in the field. It is product of the Biochemistry Laboratory of the University of California.

HARROW BENJAMIN

Textbook of biochemistry Fifth edition. Philadelphia W B Saunders Company 1950 609 p illus. 24 cm. $6 50 889

Contents Introduction. Carbohydrates. The lipids. Proteins. Nucleoproteins and nucleic acids. Enzymes. Foods. Vitamins. Synthesis in the plant kingdom. Digestion Detoxication. Absorption. Blood. Immunochemistry and chemotherapy Biological antagonists. Chemistry of respiration Metabolism of carbohydrates. Metabolism of the lipids. Metabolism of proteins Biological oxidations. Energy metabolism Inorganic metabolism and water. Chemistry of the tissues. Urine. Hormones. The chemistry of the nervous system. Appendix. Index.

Note: (743*) A long established text which is used primarily in introductory college courses. It is shorter than some introductory texts but by writing concisely and presenting little historical information the author has managed to present wide range of material. The fourth edition was published in 1944. Much rewriting and numerous additions scattered throughout the text are evident in this fifth edition. The changes include new chapter on biological antagonists and new material on peptidases, enzyme inhibitors, meiotic chromosomes, Vitamin B_{12}, estradiol, and muscular contraction. The bibliographies hich constitute an important part of the book have also been revised.

HAUROWITZ, FELIX

Chemistry and biology of proteins. New York Academic Press Inc. 1950 374 p. illus. 23 cm. $6.80 890

Contents. Role of proteins in biology Isolation, purification, and determination of proteins. Hydrolytic cleavage of proteins. Size and shape of protein molecules. Electrochemistry of proteins. Interaction of proteins with water Internal structure of globular proteins. Albumins, globulins, and other soluble proteins. Insoluble proteins (scleroproteins) Combination of proteins with other substances. Conjugated proteins. Proteins with enzymatic properties. Proteins with hormone activity Role of proteins in immunological reactions. Toxins (toxic proteins) The supply of amino acids for protein biosynthesis. Protein synthesis. Index.

Note: In this excellent book the author has presented proteins from the following standpoints (1) structure, (2) biological activity (3) biosynthesis in the living cell. These aspects are well integrated, but wherever knowledge is available to explain the behavior or biosynthesis of proteins on the basis of physical chemistry the author has presented it. The book is written on the graduate level. The treatment is compact but full of detail, and numbered references are made from the text to exceptionally extensive bibliographies. The author is Professor of Chemistry in Indiana University

MITCHELL, PHILIP HENRY

A textbook of biochemistry Second edition. New York McGraw Hill Book Company Inc., 1950 695 p. illus. 23 cm. $7.00. 891

Contents: An introduction to biochemical literature. Carbohydrates. Photosynthesis. Fats and related substances. Proteins and amino acids. Nucleoproteins and nucleic acids. The vitamins. Enzymes. Digestion Absorption and detoxication. Blood and lymph. Chemistry of respiration and acid base regulation. Biological oxidation. Calorimetry and energy metabolism. Carbohydrate metabolism. Metabolism of the lipids. Protein metabolism. Urine. Composition of foods; dietetics. The chemistry of animal tissues. Chemistry of the hormones. Chemotherapy Author index. Subject index.

Note (732*) The second edition of this textbook for undergraduate college students has been revised to include many significant developments since 1944. Important changes have been made in the chapters on the vitamins, enzymes, hormones, and the antibiotics. Essentially the book offers an introductory study of metabolism and food chemistry and their interrelationships as basis for the science of nutrition. A knowledge of basic organic and physical chemistry on the part of readers has been presupposed. The references given at the end of each chapter cite monographic and periodical literature through 1950 and has some helpful though brief annotations. The purpose of this bibliography is to summarize the mass of literature in the field rather than to document the text. The book has 90 figures and 33 tables.

PARPART ARTHUR KEMBLE, editor

The chemistry and physiology of growth. Princeton Princeton University Press 1949 293 p. illus. 24 cm. $4.50 892

Contents Enzymes and the synthesis of proteins, by J. H. Northrop. Molecular morphology and growth, by F O Schmitt. Plant growth hormones, by K. V Thimann. Unidentified vitamins and growth factors, by K. Folkers. The kinetics of growth of micro-organisms, by C. B. van Niel. Cellular metabolism and growth, by E. S. Guzman Barron. Differential growth, by P Weiss. Problems of organization, by J. S. Nicholas. Neoplastic abnormal growth, by C P Rhoads. The adrenal gland, regulatory factor by C. N. H. Long. Index.

Note. This book contains in revised form papers that were first presented at conference on "The Chemistry and Physiology of Growth" held in September 1946, as part of the celebration of the bi-centennial of Princeton University Each paper is in essence condensed monograph of the special topic named in its title and is supplemented by bibliography of the related literature. As whole, the book provides an interesting summary of the present state of knowledge pertaining to growth. It is addressed chiefly to persons with scientific education.

UMBREIT, WAYNE WILLIAM, AND OTHERS

Manometric techniques and tissue metabolism, by W W Umbreit, R. H. Burris, and J F Stauffer Chapters on specialized techniques by P P Cohen, G A. LePage, V R. Potter, and W C. Schneider, and contributions by J A. Bain, D E. Green, H. A. Lardy, A. L. Lehninger R. W McGilvery, and R. Wennesland. Second edition. Minneapolis, Minn. Burgess Publishing Co., 1949 227 p. illus. 29 cm. $4 00 893

Contents: The Warburg constant volume respirometer. The "direct method" for carbon dioxide. Carbon dioxide and bicarbonate. The "indirect method" of Warburg. Useful techniques in manometry. Design and calibrating flasks. The differential manometer with special reference to its use in studies of photosynthesis. Special methods employing manometric and electrometric techniques. "Thunberg techniques" for estimation of dehydrogenase activity. Methods for preparation and study of tissues. The homogenate technique. Methods for the isolation of particulate components of the cell. Chemical methods. Manometric estimation of metabolites and enzyme systems. Methods for the analysis of phosphorylated intermediates. Preparation of physiologically important intermediates and metabolites. Index.

Note: This laboratory manual for beginning graduate students in biology provides clear descriptions of various methods used in the study of tissue metabolism. The methods described are ones which the authors have found satisfactory in their own laboratories, including both manometric and other methods and approaches. The methods described require equipment such as is likely to be found in laboratory engaged in biological research, the chief of which are respirator colorimeter, and centrifuge. In the second edition the authors have corrected errors, added new techniques, and have deleted some parts of the first edition. Bibliographical references, chiefly from the periodical literature, are listed at the end of each chapter

WALKER, BURNHAM S , AND OTHERS

Biochemistry and human metabolism. By Burnham S Walker William C. Boyd, and Isaac Asimov With a foreword by John T Edsall. Baltimore The Williams & Wilkins Company 1952 812 p. illus. 24 cm. $9 00. 894

Contents: Part I, Structure: Proteins and amino acids. Protein structure. Tissue chemistry Blood and the anemias. Part II, Control Enzymes. Hormones. Part III, Growth. Nucleoproteins and growth. Cancer. Reproduction and heredity Part IV Metabolism: Food and diet. Digestion. Carbohydrates and diabetes. Lipid metabolism and ketosis. Proteins and starvation. Electrolytes and water—edema and shock. Respiration and acidosis. Heat and work. Excretion and some of its disturbances Part Pathology Vitamins and vitamin deficiency diseases. Infection. Part VI, Appendices. Abbreviations and symbols. Index.

Note The special organization and subject content of this book are due to its having been planned for the instruction of medical students rather than students of biochemistry Proteins, group of complex substances, are taken up first also more space is given to such subjects as cancer than would be given in general textbook. Most of the exposition deals with human biochemistry but there are incidental references to biochemical processes in lower forms of life. The chapters are accompanied by extensive reference lists to which statements in the text are keyed The authors are members of the faculty of the School of Medicine of Boston University

WEST, EDWARD STAUNTON, AND WILBERT R. TODD

Textbook of biochemistry New York The Macmillan Company 1951 1345 p. illus. (part col d) 24 cm. $12 00. 895

Contents (abridged) Gases and solutions. Electrolytic dissociation and the mass law Osmotic pressure. The colloidal state and membrane phenomena. Lipids. Carbohydrates. Proteins. Composition of tissues. Enzymes. Digestion of food. Detoxication in the body Chemistry of respiration, acid-base balance, and electrolyte and water balance. Energy metabolism. The vitamins. Biological oxidation and reduction. Organic phosphates in metabolism—chemical energetics. Nutritional aspects of proteins and amino acids. Nutritional aspects of the lipids and the carbohydrates. The metabolism of the inorganic elements. Urine formation and composition. The hormones. Antimetabolic agents. Index.

Note: A textbook designed for use in introductory college courses in biochemistry It is so written that it presents balanced view of the subject and at the same time the main details of such aspects as enzymes. Substantial lists of the pertinent literature are included. The authors are members of the faculty of the Medical School of the University of Oregon.

WITTCOFF HAROLD

The phosphatides. New York Reinhold Publishing Corporation 1951 564 p. 24 cm. (American Chemical Society Monograph series No. 112 William A. Hamor editor) $10.00. 896

Contents (abridged) Part I, The chemistry of the phosphatides: Nomenclature and classification of lipides. The structure of lecithin. The structure of the cephalin phosphatides. The structure of sphingomyelin. The structure of the minor phosphatides. The purification and the chemical properties of the phosphatides. The physical chemistry of the phosphatides. Phosphatide complexes. The lysophosphatides and the lecithinases. Synthesis of the phosphatides. Part II, The analytical determination of the phosphatides. Part III, Phosphatides from plant sources. Part IV Phosphatides from animal sources. Part V The biochemistry and physiology of the phosphatides: General aspects of lipide metabolism. The phosphatides as metabolic elements. The role of phosphatide hydrolysis products in metabolism. The role of the phosphatides in pathological conditions. Serological and oxidative functions of the phosphatides. Part VI, The industrial aspects of the phosphatides: The manufacture of phosphatides. The industrial uses of phosphatides. Author index. Subject index.

Note: A comprehensive survey of the literature and current knowledge of the phosphorus-bearing lipides. The published literature is covered through 1949 with some data from papers published in 1950. The book is addressed to graduate chemists, and it is of particular interest to biochemists and to industrial chemists in the food industries. The author is associated with General Mills, Inc.

WOLTERINK, LESTER F , editor

The biology of phosphorus. By G Evelyn Hutchinson, Harry G. Albaum, Harold C. Hodge, Jacob Sacks, and Henry A. Lardy East Lansing, Mich. Michigan State College Press, 1952 147 p. illus. 22 cm. Paper, $2 00. 897

Contents. The biogeochemistry of phosphorus, by G. E. Hutchinson. The role of phosphorus in the metabolism of plants The incorporation of radiophosphorus during growth, by H. G. Albaum. The dynamic role of the skeleton as shown by radioisotopes, by H. C. Hodge. The significance of the phosphorylation cycle in intermediary metabolism, by J Sacks. The role of phosphate in metabolic control mechanisms, by H. A. Lardy

Note. A collection of original papers which were first presented at symposium held at Michigan State College in April, 1951. Each paper is essentially short monograph in which the current status of specific facet of the biological role of phosphorus is described and is related to the pertinent source articles. Accounts of recent developments, for example the use of radioactive isotopes in studying the biochemistry of the skeleton, are included. The papers are addressed to such persons as graduate biologists and professional biochemists. The book is handy survey for such scientists as are in need of review of the subject and as guide to the significant literature.

HORMONES AND ENZYMES

ADVANCES IN ENZYMOLOGY AND RELATED SUBJECTS OF BIOCHEMISTRY edited by F F Nord. Volume IX. New York Interscience Publishers, Inc., 1949 760 p. illus. 24 cm. $9 95 898

Contents Some aspects of reversible step reactions, by L. Michaelis. Kinetics of biological reactions with special reference to

enzymic processes, by A. E. Stearn. Photochemistry of enzymes, proteins, and viruses, by A. D. McLaren. The nature of viruses, by M. A. Lauffer and others. The mechanism of fertilization in metazoa, by J. Runnström. Metabolism of semen, by T. Mann. Nitrogen metabolism of higher plants, by H. E. Street. Chemistry and enzymology of nucleic acids, by F. Schlenk. Pathways of acid formation in Aspergillus niger and in related molds, by T. K. Walker. Principles of enzymic histo- and cytochemistry, by D. Glick. Enzyme activity in frozen vegetable tissue, by M. A. Joslyn. Industrial biosyntheses: Part 1, Fats, by A. Hesse. Author index. Subject index. Cumulative index of volumes I–IX.

—— Edited by F. F. Nord. Volume X. New York Interscience Publishers, Inc., 1950 533 p. illus. 24 cm. $9.50 898a

Contents: Blood clotting and related processes, by T. Astrup. Tryptophanase-tryptophan reaction, by F. C. Happold. Phosphatase alkaline, by J. Roche and Nguyen-van Thoai. Synthesis of saccharides with bacterial enzymes, by W. Z. Hassid and M. Doudoroff. Some aspects of streptomycin and other *Streptomyces* antibiotics, by M. G. Brink and K. Folkers. Probleme des Citronensäurecyklus, by C. Martius and F. Lynen. Die Phytochemie des Schwefels, by T. Bersin. Chemical changes in the harvested tobacco leaf Part II, Chemical and enzymic conversions during fermentation and aging, by W. G. Frankenburg. Assimilation of hydrocarbons, by microorganisms, by C. E. ZoBell. Author index. Subject index. Cumulative index of volumes I–X.

—— Edited by F. F. Nord. Volume XI. New York Interscience Publishers, Inc., 1951 471 p. illus. 24 cm. $9.75 898b

Contents: The nature of entropy and its role in biochemical processes, by K. Ostwald. Reactions at interfaces in relation to biological problems, by J. F. Danielli and J. T. Davies. Chlorophyll fluorescence and photosynthesis, by E. C. Wassink. Thiol groups of biological importance, by E. S. Guzman Barron. Pectic enzymes, by H. Lineweaver and E. F. Jansen. Enzymic synthesis of polysaccharides—a biological type of polymerization, by E. J. Hehre. The biological transformations of starch, by S. Peat. Chemical investigations on allium, the specific principle of garlic, by A. Stoll and E. Seebeck. Some problems of pathological wilting in plants, by E. Gäumann. Author index. Subject index. Cumulative indexes.

—— Edited by F. F. Nord. Volume XII. New York Interscience Publishers, Inc., 1951 570 p. illus. 24 cm. $9.75 898c

Contents: Oxidoreduction in chloroplasts, by R. Hill. Mechanisms of fixation of carbon dioxide by heterotrophs and autotrophs, by M. F. Utter and H. G. Wood. Enzyme-substrate compounds, by B. Chance. The specificity of certain peptidases, by E. L. Smith. The enzymic hydrolysis and synthesis of acetylcholine, by D. Nachmansohn and I. B. Wilson. The present status of starch chemistry, by K. H. Meyer and G. C. Gibbons. Enzymes of starch degradation and synthesis, by P. Bernfeld. Biological methylation, by F. Challenger. Reaction of borate with substances of biological interest, by C. A. Zittle. Author index. Subject index. Cumulative indexes.

—— Edited by F. F. Nord. Volume XIII. New York Interscience Publishers, Inc., 1952 413 p. illus. 24 cm. $8.50. 898d

Contents: Localization of enzymes in cytoplasm, by H. Holter. Some aspects of the application of tracers in permeability studies, by H. H. Ussing. La biosynthèse induite des enzymes (adaptation enzymatique) by J. Monod and M. Cohn. Genetic formulation of gene structure and gene action, by G. Pontecorvo. Adenosine triphosphate and the structural proteins in relation to muscle contraction, by D. M. Needham. Hyaluronidases, by K. Meyer and M. M. Rapport. Certain aspects of intermediary metabolism of glutamine, asparagine, and glutathione, by H. Waelsch. Stoichiometric inhibition of chymotrypsin, by A. K. Balls and E. F. Jansen. The comparative biochemistry of nitrogen fixation, by P. W. Wilson. Author index. Subject index. Cumulative index of volumes I–XIII.

Note: (734–737*) These volumes continue a series begun in 1941. The authors are recognized authorities in their fields, and they have written for the information of graduate scientists working in biochemistry or related fields. Each of the chapters is mainly literature digest and is accompanied by a long list of references.

EDSALL, JOHN TILESTON, editor
Enzymes and enzyme systems their state in nature. Cambridge, Mass. Harvard University Press 1951 146 p illus. 22 cm. $3.00 899

Contents: The organized respiratory activity of isolated rat-liver mitochondria, by A. L. Lehninger. The cyclophorase system, by David E. Green. Aspects of the specificity and mode of action of some peptidases, by Emil L. Smith. The reactions of horseradish peroxidase with various hemins, by Andreas C. Maehly. The reaction of ferrocytochrome-c with peroxidases and peroxides, by Britton Chance. The state in nature of proteins and protein enzymes of blood and liver, by Edwin J. Cohn and others.

Note: The first volume of a new series entitled "Memoirs of the University Laboratory of Physical Chemistry Related to Medicine and Public Health, Harvard University." It contains papers which were first presented at a symposium held in 1949. The papers reveal several common lines of approach to thinking on fundamental problems by workers in widely separated laboratories. Each paper is illustrated and has a documenting bibliography appended. The book is of interest to graduate biochemists and other scientists concerned with enzymes.

EMMENS, CLIFFORD WALTER, editor
Hormone assay New York Academic Press, Inc., 1950 556 p. illus. 24 cm. $10.00. 899a

Contents: Statistical methods, by C. W. Emmens. Insulin, by K. L. Smith. Parathyroid hormone, by R. H. Thorp. Biological and chemical assay of adrenaline, by G. B. West. Posterior pituitary lobe hormones, by R. H. Thorp. Biological assay of the melanophore expanding hormone from the pituitary by F. W. Landgrebe and H. Waring. Gonadotrophins, by C. Hamburger. Adrenocorticotrophin, by F. S. Greenspan and others. Thyrotropic hormone, by C. W. Turner. Lactogenic hormone, by J. Meites and C. W. Turner. Mammogenic hormones, by C. W. Turner. Growth hormone, by F. S. Greenspan and others. Androgens, by R. I. Dorfman. Adrenal cortical hormones, by R. I. Dorfman. The chemical assay of steroids of the androgen and adrenocortical hormone groups, by R. K. Callow. Estrogens, by C. W. Emmens. Hormones of the corpus luteum, by C. W. Emmens. Chemical assay of estrogens and pregnanediol, by G. A. D. Haslewood. Thyroidal substances, by E. P. Reineke and C. W. Turner. The chemical assay of thyroxine and other substances with thyroidal activity by R. Pitt Rivers. Index.

Note: A full treatment addressed to biochemists and others whose professional work requires a knowledge of practical methods or of the current state of development of the field. Each of the chapters is essentially a compact monograph based on the author's own work and the published literature. In the first chapter the application of statistical methods to hormone assays is outlined; but, as the editor of the work points out, the study of many hormones has not yet reached the point where a high level of statistical treatment is possible in papers such as make up this book.

GORDON, EDGAR STILLWELL, editor
A symposium on steroid hormones. Madison The University of Wisconsin Press, 1950. 396 p. illus. 24 cm. $6.50. 900

Contents: The steroids—a historical review by G. F. Marrian. Review of research on the chemistry of the steroids, by L. F. Fieser. Biosynthesis of steroids, by K. Bloch. The metabolism of steroid hormones in humans, by K. Dobriner and S. Lieberman. Round table Growth and fattening of animals, by S. A. Asdell and others. Round table Metabolism and excretion of steroids, by H. L. Mason and others. Excretion of adrenal metabolites in man in health and disease, by E. H. Venning. The mechanism of the protein anabolic action of testosterone propionate, by C. D. Kochakian. Metabolic effects of adrenal steroids, by D. J. Ingle. Effects of adrenal steroids on blood cells and on certain aspects of protein metabolism, by A. White. Round table. The relation of structure to function of steroids, by A. L. Wilds and others. The effects of steroids on prostatic cancer, by C. B. Huggins. The relationship of steroid hormones to cancer clinical aspects, by G. H. Twombly. Round table: Lactation and reproduction in animals, by S. A. Asdell and others. Enzyme systems involved in the metabolism of androgens in the liver, by L. T. Samuels. Factors influencing endometrial growth in monkeys (*Macaca mulatta*) by F. L. Hisaw. Hormones and behavior with special reference to birds and the mechanisms of hormone action, by N. E. Collias. Steroids and pituitary hormones, by R. O. Greep and I. C. Jones. Some inherited hormonal factors influencing mammary carcinogenesis in virgin mice, by J. J. Bittner and R. A. Huseby. The metabolism of convalescence, by E. C. Reifenstein,

Jr. Genetic control of sex determination and differentiation in vertebrates, by R. R. Humphrey Steroid hormones and sex differentiation, by L. V Domm. Reconsiderations of the influence of genetic factors and steroid hormones in sex differentiation, by C. R. Moore.

Note: This book contains the major papers that were presented at symposium held at the University of Wisconsin in 1949 The papers were written by leaders in the investigation of the steroids or in their applications in animal husbandry clinical medicine, etc. Most of the papers are accompanied by extensive lists of references. The book lacks an index.

LAURENTIAN HORMONE CONFERENCE

Recent progress in hormone research. The proceedings of the Laurentian Hormone Conference, edited by Gregory Pincus. Volume VII. New York The Academic Press Inc. 1952 527 p illus. 24 cm. $9.50 900a

Contents Part I, *Pituitary hormones.* Chemistry of corticotrophin, by E. B. Astwood and others. Purification of the pituitary adrenocorticotrophic hormone, by M. L. Dedman and others. Regulation of ACTH secretion, by C. N H. Long. Aspects of pituitary-mammary gland relationships, by S. J Folley Part II, *Sex cycles.* The relationship of the nervous system to the release of gonadotrophin and the regulation of the sex cycle, by J E. Markee and others. Some physiological and medical aspects of the gonadal cycle of domestic animals, by F X. *Gassner.* Endocrinology and related phenomena of the human menstrual cycle, by O. W Smith and G. V Smith. Part III, Aspects of steroid hormone chemistry and physiology Studies on the biosynthesis of adrenal cortex hormones, by W J. Haines. Studies of the antiphlogistic and antibody suppressing functions of the pituitary adrenocortical secretions, by T F Dougherty A comparison of the histological changes induced by experimental hyperadrenalcorticalism and inanition, by B L. Baker Histamine, hormones and hypersensitivity by B. Rose. Part IV Hormones and metabolism Hormonal factors which regulate the mobilization of depot fat to the liver by L. Levin and R. K. Farber. The etiology of diabetes mellitus in man, by I. A. Mirsky Some clinical aspects of adrenal cortical and fluid metabolism, by C. W Lloyd. Author index. Subject index.

Note (756* 759*) The present volume of this valuable series contains the original papers presented at the Laurentian Hormone Conference in September 1951 The papers are devoted chiefly to the results of recent investigations, but each one of these includes also information from the pertinent literature. They are addressed to professional workers in biochemistry Bibliographies and excerpts from the discussions at the Conference are included.

PINCUS GREGORY, AND KENNETH V THIMANN editors

The hormones physiology chemistry and applications. Volume II. New York Academic Press, Inc. 1950 792 p 23 cm. $13 50 901

Contents: The physiology of ovarian hormones, by G. Pincus. Physiology of androgens, by R. I. Dorfman. Physiology of the adrenal cortex, by R. L. Noble. The chemistry and physiology of the thyroid hormone, by W T Salter The control of thyroid activity by W T Salter Physiology of the gonadotrophins, by H. M. Evans and M. E. Simpson. The hypophysis and diabetes mellitus, by L. L. Bennett and H M. Evans Hormones of the posterior pituitary by H. Waring and F W Landgrebe. Chemical control of nervous activity: A. Acetylcholine, by D. Nachmansohn B. Adrenaline and sympathin, by H. Blaschko. C. Neurohormones in lower vertebrates, by G. H. Parker Clinical endocrinology by H. Freeman Author index Subject index.

Note: (761) Volume of this notable addition to the literature of biochemistry appeared in 1948. Volume concludes the work. Each of the papers is critical monographic treatment of the specific topic named in its title Keyed references to original publications are incorporated in the text, and each chapter is accompanied by corresponding list of references to related literature The authors are themselves leaders in biochemical research, and their papers are addressed primarily to advanced students and professional workers in the same field. Chemical, physiological, and clinical aspects are all covered, hence the work is of interest not only to biochemists but also to physiologists and medical men, particularly endocrinologists and pharmacologists.

SUMNER, JAMES BATCHELLER AND KARL MYRBACK, editors

The enzymes, chemistry and mechanism of action. New York Academic Press, Inc., 1950–52 2 v in 4 parts. illus. 24 cm. Volume I, part I, $14 50 Volume I, part II $13.50. Volume II part I $14.80 Volume II, part II, $14 00 901a

Contents. Volume I, part II Introduction, by J. B. Sumner and K. Myrback. Physical chemistry and chemical kinetics of enzymes, by E. A. Moelwyn-Hughes. Enzyme specificity by B. Helferich. Enzymes in relation to genes, viruses, hormones, vitamins, and chemotherapeutic drug action, by M. G. Sevag and others. Cytochemical foundations of enzyme chemistry, by A. L. Dounce. Modern aspects of enzymatic adaptation, by S. Spiegelman. Enzyme inhibition, by L. Massart. Enzymes and immunology by J. R. Marrack. Enzymes hydrolyzing fats and esters, by R. Ammon and M. Jaarma. Acetylcholine esterase and cholinesterase, by K.-B. Augustinsson. Phosphatases, by J. Roche. Metaphosphate and its enzymatic breakdown, by B. Ingelman. Sulfatases, by C. Fromageot. Invertase, by C. Neuberg and I. Mandl. α-D-glucosidases, by A. Gottschalk. β-glucosidases, by B. Veibel. Hydrolysis of galactosides, mannosides, and thioglycosides, by S. Veibel. β-glucuronidase, by W H. Fishman. Amylases and the hydrolysis of starch and glycogen, by K. Myrback and G. Neumüller Volume I, part II: Cellulases, hemicellulases, and related enzymes, by W Pigman. Pectic enzymes, by Z. I. Kertesz. Enzymatic hydrolysis of mucopolysaccharides, by W H. Fishman. Proteolytic enzymes, by E. L. Smith. Urease, by J. B. Sumner. Arginase, by D M. Greenberg. Hydrolysis of acid amides and amino acid amides, by C A. Kittle. Allantoinase and allantoicase, by M. Laskowski. Hippuricase (histozyme) by F Leuthardt. Nucleolytic enzymes, by M. Laskowski. Enzymes as essential components of bacterial and animal toxins, by E. A. Zeller. Phosphorylase—phosphorolysis and synthesis of saccharides, by W Z. Hassid and others. Transaminases, by P P Cohen. Transmethylases, by T L. Sourkes. Enzymes and coagulation: I, Milk coagulation, by N. J Berridge. Blood coagulation, by W H. Seegers. Histidase and urocanase, by F Leuthardt. Penicillinase, by E. P Abraham. Thiaminase, by R. R. Harris. Enolase, by O. Meyerhof. Fumarase and aconitase, by S. Ochoa. Desulfhydrase, by C. Fromageot. Aspartase, by J Erkama and A. I. Virtanen. Carbonic anhydrase, by F J. W Roughton and A. M. Clark. Author index. Subject index. Volume II, part II Theory of oxidation-reduction, by L. Michaelis. Thermodynamics and mechanism of the phosphate bond, by N O. Kaplan. Transphosphorylating enzymes of fermentation, by S. P Colowick. Dephosphorylation of adenosine polyphosphates, by H. M. Kalckar. Aldolase and isomerase, by O. Meyerhof. Keto acid decarboxylases, by R. Vennesland. Amino acid decarboxylases, by O. Schales. Deaminases, by C. Fromageot. Codehydrogenases and II and apoenzymes, by F Schlenk. Succinic dehydrogenase, by F Schlenk. Hydrogenase and hydrogenlyase, by W W Umbreit. *Flavin* containing enzymes, by H. Theorell. The iron-containing enzymes, A. Cytochromes, by K.-G. Paul. The iron-containing enzymes, B Catalases and peroxidases, "Hydroperoxidases," by H. Theorell. The iron-containing enzymes, C. The enzyme-substrate compounds and mechanism of action of the hydroperoxidases, by B Chance. Copper oxidases, by C. R. Dawson and W B. Tarpley Oxidation of amino acids, by H. A. Krebs. Oxidation of amines, by E. A. Zeller Lipoxidase or unsaturated-fat oxidase, by R. T Holman and S. Bergström. Enzymes in luminescence, by E. N. Harvey Oxidation of organic sulfur by C. Fromageot. Anaerobic glycolysis, respiration, and the Pasteur effect, by F Dickens Yeast and mold fermentations, by F F Nord and S. Weiss Volume II, part Bacterial fermentation, by S. R. Elsden. Enzymes in detoxication, by F Bernheim. Urea synthesis, by H. A. Krebs. Peptide bond synthesis, by P P Cohen. Enzymatic synthesis of glutamine, by P P Cohen. Synthesis of acetylcholine—choline acetylase, by K.-B. Augustinsson. Oxidative assimilation by microorganisms, by C. E. Clifton Enzymatic mechanisms of carbon dioxide fixation, by S. Ochoa. Carbohydrate-fat conversion, by F L. Breusch. Photosynthesis in green plants, by W E. Loomis. Bacterial photosynthesis, by C. B. Van Niel. Nitrogen assimilation, by A. I. Virtanen and M. Rautanen. Tumor enzymology by J P Greenstein and A. Meister Enzyme technology by A. F Langlykke and others. Author index. Subject index.

Note. A comprehensive and valuable addition to the literature of enzymology written on the graduate and professional level. The chapters are monographic in form and have been prepared by specialists from the staffs of universities and biochemical and medical research organizations in the United States of America and other countries Numerous footnote references constitute an extensive bibliography of the subject. Indexes for each volume are included in parts two, but no index for the set as whole is provided.

TAUBER, HENRY

The chemistry and technology of enzymes. New York John Wiley & Sons, Inc., 1949 550 p. illus. 23 cm. $8.50 902

Contents (abridged) Part I, The chemistry of enzymes: Esterases. Carbohydrases. Phosphorylases and related enzymes. Nucleases, amidases, and deaminases. Proteolytic enzymes. Iron-porphyrin enzymes. Oxidases containing copper. Dehydrogenases containing codehydrogenases I and II. Flavoproteins. Decarboxylating and phosphopyridoxal enzymes. Hydrases, mutases, and other enzymes. Part II, The technology of enzymes: Yeast—production and utilization. Production of ethyl alcohol by fermentation. Mold fermentations. Bacterial fermentations. The production of antibiotics. Enzymes for medical use. The role of amylases and proteinases in bread making and the production of malt syrup. Enzymes in dairy products. Enzymes in the meat, egg, vegetable, and fruit industries. Pectin-decomposing enzymes and their use in the fruit juice, wine, and jelly industries. Enzymes in textile, paper and related industries. The use of enzymes in the manufacture of leather. Enzymes in other industries. Microbiological methods for the estimation of vitamins and amino acids. Author index. Subject index.

Note: (1940, 1941) In this comprehensive work the author has combined, in thoroughly revised form, the material found in two of his earlier works: *Enzyme chemistry* New York, 1937 and *Enzyme technology*, New York, 1941. It is written on professional level and is designed primarily for the use of physiological and biological chemists, including those employed in industry. It provides an up-to-date summary of the chemistry of practically all known enzymes, and description of their industrial production methods and present-day uses.

VITAMINS

THE ASSOCIATION OF VITAMIN CHEMISTS INC

Methods of vitamin assay Prepared and edited by The Association of Vitamin Chemists Inc. Second edition revised and supplemented. New York Interscience Publishers, Inc. 1951 301 p. illus. 24 cm. $5.50 903

Contents: Sampling for vitamin analyses. Vitamin A. Carotene. Ascorbic acid. Thiamine. Microbiological assay technics. Riboflavin. Niacin. Pantothenic acid. Vitamin B_6. Folic acid. Biotin. Vitamin B_{12}. Methods for other vitamins. Use of check samples in control of vitamin methods. Index.

Note. (162*) The new edition of this practical manual for laboratory analysis differs from the original edition in having been revised throughout and in including assays for several members of the vitamin B complex, namely pantothenic acid, pyridoxine, folic acid, biotin, vitamin B_{12}, for which methods were not described in the first edition. As in the earlier edition, the scope of the book is limited to methods which have been successfully applied by several members of the various committees of the sponsoring Association. The chapter, "Methods for other vitamins," which discussed those vitamins for which specific methods have not been outlined, has been extended to provide the analyst with basis for selecting procedures suitable to his work, and brief discussion is presented of the relative merits of the various published methods and their applicability to different types of samples. Selected bibliographical references appear at the ends of the chapters.

DEUEL HARRY JAMES JR.

The lipids their chemistry and biochemistry Volume I Chemistry New York Interscience Publishers Inc. 1951 982 p illus. 24 cm. $18.50 904

Contents: General characteristics and classification of lipids. The chemistry of fatty acids and glycerol. The chemistry of neutral fats. Waxes, higher alcohols including sterols, triterpenes, glyceryl ethers, colored fats, and hydrocarbons. Chemistry of the phospholipides and cerebrosides. Carotenoids and related compounds. Distribution, properties, and chemistry of the vitamins A. Distribution, properties, and chemistry of the provitamins D and vitamins D. Distribution, properties and chemistry of the vitamin E group. Distribution, properties, and chemistry of the vitamin K group. Author index. Plant and animal sources of lipids. Subject index.

Note: A comprehensive, well documented treatise on an abundant family of natural substances. Essentially the work is an expert digest of the published literature including the author's own papers. Extreme care has been taken with the botanical and zoological nomenclature and with the literature references. References are printed as footnotes on the pages where the related text occurs. The names of the authors of the papers cited are indexed in the 33 page author index. The second volume, which will complete the work, will be devoted to the biochemical and nutritional aspects of the lipids.

GYÖRGY PAUL, editor

Vitamin methods. New York Academic Press, Inc. 1950–51 571 p. 24 cm. $11.00. 905

Contents: Volume I Physical methods of vitamin assay by E. T. Stiller. Chemical methods of vitamin assay by P. György and S. H. Rubin. Microchemical methods, by O. A. Bessey. Microbiological methods in vitamin research, by E. E. Snell. The use of optical instruments in vitamin analyses, by Erich Hirschberg. References. Author index. Subject index. Volume II. General aspects of small animal experimentation, by N. B. Guerrant. The animal vitamin assays, by C. I. Bliss and P. György. Laboratory diagnosis of human vitamin deficiencies, by J. H. Jones. Clinical signs of malnutrition, by N. Jolliffe. Statistical methods in vitamin research, by C. I. Bliss. Supplement to volume I Physical methods of vitamin assay by E. T. Stiller. Chemical methods of vitamin assay by P. György and others. Microbiological methods in vitamin research, by L. D. Wright and others. Author index. Subject index.

Note: A work of fundamental significance to professional workers in medicine, pharmacy food industries, and other fields in which vitamins are of importance. The emphasis is on analyses and assay but wide range of related information which is of importance to research workers is also included. Each part is essentially monograph of its particular topic and is supplemented by long list of related literature.

HARRIS PHILIP LESLIE, AND WILMA KUJAWSKI editors

Annotated bibliography of Vitamin E 1940 to 1950 New York The National Vitamin Foundation, Incorporated, 1950 184 p. 27 cm. (The Research Laboratories of Distillation Products Industries, Rochester N Y Division of Eastman Kodak Company) Paper $3.00 906

Contents: Occurrence and distribution in nature. Determination. Chemistry Physiology and pathology Pharmacology Nutrition and metabolism. Medical and therapeutic use. Veterinary use. Author index.

Note: There are 1442 references in this bibliography classified under the headings given in the above contents. There are subheadings under each of the major headings, for instance under "Nutrition and metabolism" the last is subdivided as follows: "Growth and longevity Nutrition, Hepatoxicity Physiological antioxidants, Effect on metabolism, Enzymes. Some entries are not annotated but most of them are supplemented by an annotation of from one to five paragraphs in length.

JUKES THOMAS H.

B-vitamins for blood formation. Springfield, Illinois Charles C Thomas 1952 113 p 22 cm. (American lecture series. Publication no 146 A monograph in American lectures in pharmacology edited by Chauncey D Leake) $4.00 907

Contents: Introduction—the megaloblastic anemias. B vitamins in the megaloblastic anemias of pregnancy and infancy Folic acid —pteroylglutamic acid. The vitamin B_{12} group of compounds. The intrinsic factor. Antagonists of pteroylglutamic acid. The citrovorum factor Metabolic reactions involving folic acid and vitamin B_{12}. Vitamin B_{12} deficiency and anemia. Index.

Note: A brief review of the chemistry and physiology of the B-complex vitamins which are used in combating certain types of anemia. The book is concerned specifically with pteroylglutamic acid, the vitamin B_{12} group, and the intrinsic factor each of which is discussed as to its properties, physiological effect, and therapeutic value. Extensive bibliographies are included. The author is associated with the Lederle Laboratories Division of the American Cyanamid Company

VITAMINS AND HORMONES ADVANCES IN RESEARCH AND APPLICATIONS. Edited by Robert S Harris and Kenneth V Thimann. Volume IX. New York Academic Press Inc., 1951 395 p. illus. 24 cm. $8.00 908

Contents. The role of vitamin B_{12} in metabolic processes, by T H. Jukes and E. L. R. Stokstad. Functions of biotin in enzyme systems, by H. C. Lichstein. The functions of B-vitamins in the biosynthesis of purines and pyrimidines, by W Shive. Antimetabolites of nucleic acid metabolism, by L. D Wright. The effect of vitamin deficiencies on adrenocortical function, by A. F Morgan. Relationship between estrogens and enzyme activity by W H. Fishman. The synthesis and metabolism of radioactively-labeled steroids, by G. H. Twombly Effects of cortisone and ACTH, by R. G. Sprague. Urinary gastric secretory depressants (urogastrone) by M. H. Friedman. Author index. Subject index.

Note. (764*) The present volume of this well-known series in biochemistry contains the papers listed above. As in previous issues, each paper is essentially monographic survey of the current knowledge of its specific topic, supplemented by comprehensive literature references.

WILLIAMS, ROGER JOHN AND OTHERS

The biochemistry of B vitamins by Roger J Williams Robert E Eakin Ernest Beerstecher Jr., and William Shive. New York Reinhold Publishing Corporation, 1950 741 p 23 cm. (American Chemical Society monographs William A. Hamor, editor No. 110) $15 00 909

Contents (*abridged*) Section A, Characterization, distribution, assay and biogenesis of B vitamins. Distribution of B vitamins. Assay methods. Biogenesis of the B vitamins. Section B, The catalytic functions of the B vitamins. Section C, The role of the B vitamins in animal and plant organisms. Methods of assessing B vitamin requirements. Factors influencing B vitamin requirements. B vitamin deficiency states. Section D, The comparative biological activities of the B vitamins and related compounds: *p*-aminobenzoic acid. Biotin. The folic acid group. The nicotinic acid group. Pantothenic acid. The vitamin B_6 group. Riboflavin. Thiamine. Biological activities of other nutritional factors of doubtful status. Index.

Note: A substantial contribution to the literature of vitamins. Essentially it is critical digest of the published literature of the field. Statements in the text are keyed to the extensive lists of original sources which accompany each chapter As is characteristic of this series, the authors are all recognized experts, and the work is addressed to persons with scientific training and interests. It is of interest to professional workers in many fields, including biochemistry pharmacology nutrition, and medicine.

BACTERIOLOGY

GENERAL

AMERICAN PUBLIC HEALTH ASSOCIATION

Diagnostic procedures and reagents techniques for the laboratory diagnosis and control of the communicable diseases. Third edition. New York American Public Health Association Inc. 1950 589 p. illus. (part col'd) 24 cm. $6.00 910

Contents: Culture media, by Lt. Col. P. R. Cachquist. The streptococci, by G. M. Mackenzie. The pneumococcus, by K. Goodner. The meningococcus (*Neisseria meningitidis*), by S. E. Branham. The gonococcus (*Neisseria gonorrhoeae*) by C. M. Carpenter. Hemophilus pertussis, by P. Kendrick and others. The diphtheria bacillus (*Corynebacterium diphtheriae*) by M. Frobisher Jr. The tubercle bacillus (*Mycobacterium tuberculosis*) by M. M. Cummings. Salmonella and Shigella, by M. B. Coleman. Brucellosis (undulant fever) (*Brucella abortus*, *Brucella suis*, and *Brucella melitensis*) by E. E. Bowman and D. E. West. Tularemia (*Pasteurella tularensis*) by G. D. Brigham. The cholera vibrio (*Vibrio comma*, *Vibrio cholerae*) by C. V. Seastone. The laboratory diagnosis of anthrax, by W. A. Hagan. The laboratory diagnosis of glanders, by W. A. Hagan. Serodiagnosis of syphilis, by J. F. Mahoney and M. R. Zeally. Chancroid and granuloma inguinale, by E. E. Sandeman. Infectious mononucleosis, by G. A. Burst. Leptospira infection (Weil' disease) by A. B. Kaminsky. Bacterial food poisoning, by G. M. Dack. The malaria parasites of man, by A. Watson. Laboratory diagnosis of helminths and protozoa, by H. W. Brown. Trichinosis, by H. B. [illegible]. Pathogenic fungi, by N. F. Conant. Blood cultures, by C. G. Burn. Technic of RH testing, by P. Levine and M. Wigod. Antimicrobial assays—bacterial response and level determinations in body fluids, by C. R. Falk. Index.

Note: (1949) A more or less official handbook of accepted and standard procedures. Each of the monographic papers was prepared by one or more recognized specialists and was evaluated in manuscript by experts serving as referees. In the present edition fourteen of the chapters are new and those carried over from the preceding edition have been slightly or extensively revised as required. As in earlier editions, the papers are accompanied by extensive literature references and in many instances by illustrations.

ANNUAL REVIEW OF MICROBIOLOGY Volume 6 Charles E. Clifton, editor Sidney Raffel, associate editor H. Albert Barker associate editor Stanford University California Annual Reviews Inc. 1952 492 p 23 cm. $6.00. 911

Contents: Metabolism of microorganisms, by M. C. Lichstein. Nutrition of microorganisms, by J. L. Stokes. Genetics of microorganisms, by E. Kaplan. The coryneform bacteria, by H. L. Jensen. The human rickettsioses, by E. J. Bell and C. B. Philip. Classification and nomenclature of viruses, by C. H. Andrewes. Identification of virus infection in plant tissues, by J. H. Jensen. Nematodes parasitic on plants, by B. G. Chitwood and B. A. Oteifa. Soil microbiology by A. G. Lochhead. The characteristics of antibodies, by E. L. Smith and R. V. Joyce. Hemagglutination in relation to host cell-virus interaction, by F. M. Burnet. Influence of age on susceptibility to virus infections with particular reference to laboratory animals, by M. M. Sigel. Toxoplasma and toxoplasmosis, by D. Weinman. Metabolism of spirochetes, by G. M. Coleman. Recent advances in the taxonomy of yeasts, by L. J. Wickerham. Bacterial viruses, by W. H. Price. The standardization of immunological substances, by O. Maaløe and N. K. Jerne. Associations between microorganisms and higher plants (mycorrhiza) by J. L. Harley. Antibiotics, by W. M. M. Kirby. The mode of action of chemotherapeutic agents, by H. W. Jaffee. Biological activities of antibiotic antigens, by W. Sabes. Indexes.

Note. (771) The present volume of this useful series contains papers as noted above. Each of them [illegible] is essentially a digest of recent literature, but instead of aiming at comprehensiveness some of the authors have selected aspects not adequately covered in other reviews or have given prominence to sub-areas of particular current interest. The typical paper however is a concisely written resume keyed to a bibliography in which citations of 1950 and 1951 publications are predominant. The names of authors of all the cited papers are included in the author index and the detailed subject index covers the contents of the whole volume.

BRUCELLOSIS. A symposium under the joint auspices of National Institutes of Health of the Public Health Service, Federal Security Agency United States Department of Agriculture, National Research Council, September 22-23 1949 Bethesda, Maryland. Washington American Association for the Advancement of Science, 1950 271 p. illus. 24 cm. o.p. 912

Contents: Comments on the early history of human brucellosis, by A. C. Evans. Some aspects of the physiology of *Brucella* organisms, by R. H. Huyer. Variation in the genus *Brucella*, by W. Braun. The chemistry of *Brucella* organisms, by C. R. Pennell. The pathogenesis and pathology of experimental brucellosis, by A. L. Braude and D. Anderson. Immunology of brucellosis, by R. R. Elberg and R. J. Silverman. Bactericidal tests in brucellosis, by M. R. Irwin and D. T. Berman. The epidemiology of brucellosis, by C. F. Jordan. Laboratory tests in brucellosis, by M. R. McCullough. The isolation of *Brucella* from blood clots, by S. R. Damon and K. Albright. The *Brucella abortus* ring test, by M. H. Roepke. Clinical aspects of human brucellosis, by W. W. Spink. Therapy of brucellosis in man, by C. W. Eisele. Chemotherapy of experimental brucellosis in guinea pigs, by R. N. Carle and C. L. Larson. Brucellosis in cattle, by C. A. Manthei. Swine brucellosis, by L. M. Hutchings. Brucellosis in animals other than cattle or swine, by W. L. Boyd. Brucellosis in Puerto Rico, by P. Morales-Otero. Brucellosis in Canada, by R. Gwatkin and A. F. W. Peart. Brucellosis as viewed by the rural practitioner by F. M. Anderson. The control of brucellosis in animals by the use of vaccine, by J. Traum. The control of brucellosis in animals employing test and slaughter methods, by H. L. Gilman. Federal aspects of the control of brucellosis, by B. T. Simms. A summary of the present knowledge of brucellosis, by M. H. Soule.

Note. A book of original papers prepared especially for this symposium. The conference and the book both served to bring together contributions from authorities in medicine, veterinary medicine, and public health. Most of the papers are supplemented by extensive bibliographies, and the names of the authors of the cited papers have been indexed in the author index. Although not a systematic treatise, the book does contain a wide array of facts.

BUCHANAN ROBERT EARLE, AND ESTELLE DENIS BUCHANAN

Bacteriology Fifth edition. New York The Macmillan Company 1951 678 p. illus. 22 cm. $6.00 913

Contents (abridged): The beginnings of bacteriology. How microorganisms are named and classified. Bacteria, their morphology and classification. The viruses, their characteristics and classification. The yeasts, their morphology and classification. The molds, their morphology and classification. Inheritance, variability and mutations of microorganisms. Distribution of microorganisms. Sterilization. Preparation and uses of culture media. Study of growth characters in pure cultures. Methods of observation of certain physiological characters. Methods of microscopic examination. Effects of physical agencies on microorganisms. Physical effects produced by microorganisms. Effects of chemical environment upon microorganisms. Some mechanisms of chemical changes produced by microorganisms. Chemical changes of economic significance produced by microorganisms. Microorganisms in water and sewage. Microorganisms in milk. Microorganisms as symbionts and commensals in animals. Resistance to disease—immunology and serology. Disease-producing microorganisms. The pathogenic cocci. Diphtheria group. Plague group. The intestinal group or enterobacteria. Undulant fever—abortus group. The cholera-pseudomonad group. Group of plant pathogens. The

hemophilic group. Acid-fast or tuberculosis group. The tiny bacteria group. The spirochete group. The typhus-tick fever group. Viruses and bacteriophage. Fungi and yeasts pathogenic for man and animals. Pathogenic protozoa. Appendixes. Index.

Note (1947) A standard textbook for introductory college courses. Basic knowledge is emphasized but there is also much description of applications. Although pathogenic organisms are described and the diseases they produce are discussed briefly the book is not designed for pre-medical or medical students. In this edition it has been extensively rewritten and enlarged.

BURGER, MARTIN

Bacterial polysaccharides their chemical and immunological aspects Springfield, Illinois Charles C Thomas 1950 272 p. illus. 24 cm. $6 75 914

Contents. Historical and introduction. Pneumococcus polysaccharides. Enzyme studies on bacterial polysaccharides and in infections. Streptococcus polysaccharides. Neisseria polysaccharides. Vibrio polysaccharides. Anthrax polysaccharides. Eberthella typhosa polysaccharides. Polysaccharides of the mycobacteria. Dysentery bacilli polysaccharides. Genus Hemophilus polysaccharides. Polysaccharides of the Salmonella. Brucella group polysaccharides. Staphylococcus polysaccharides. Polysaccharides of the more important Klebsiella, Escherichia, Aerobacter and Proteus groups. Appendix. Author index. Subject index.

Note A monograph on the polysaccharide substances that are related to infection and immunity. Essentially it is a digest of the published literature and each of the short chapters is accompanied by an extensive bibliography. Also there are many tabular presentations of data. Techniques for isolation and identification of specific polysaccharides in the laboratory are given particular emphasis.

CLIFTON, CHARLES EGOLF

Introduction to the bacteria. New York McGraw Hill Book Company Inc. 1950 528 p. illus. 24 cm. $5 50 915

Contents: Introduction to the bacteria. The observation of bacteria. The structure of bacteria. The protozoa and algae. The true fungi. The bacteria. The viruses. Energy requirements of bacteria. Mechanisms of microbial respiration. Metabolic groups of bacteria. Growth requirements of bacteria. The multiplication of bacteria. Death of bacteria. Microbial variations. Classification of the true bacteria. Bacteriology of soil. Bacteriology of water. Bacteria in the air. The preparation and preservation of food. Industrial microbiology. Infection and resistance. The ecological sections. The Enterobacteriaceae. Microbiology of infectious disease. Index.

Note A simple, introductory presentation. Some information is included on most phases of the field, but more space is given to biochemical aspects. The author is Professor of Bacteriology in Stanford University.

DUBOS, RENÉ JULES editor

Bacterial and mycotic infections of man. Second edition. 98 illustrations. Philadelphia J B Lippincott Company 1952 886 p. illus. 26 cm. $7 50 916

Contents. A synopsis of the history of medical bacteriology by E. G. D Murray. The morphology and the physiology of bacteria, by R. J Dubos and others. Parasitism and disease, by T. Francis, Jr. Properties of bacteria which enable them to cause disease, by C. M. MacLeod and A. M. Pappenheimer Jr. Response of the host to the parasite, by T Francis, Jr. Serology and immunochemistry by H. P Treffers. Human blood groups, by P Levine. The allergic state, by M. W Chase. The diphtheria bacilli and the diphtheroids, by J H Mueller. The Pneumococcus, by C M. MacLeod. The streptococci, by H. F Swift. The Mycobacteria, by G. Middlebrook and J. Freund. The Staphylococci, by J E Blair. The anthrax bacillus, by W J Nungester. The Clostridia, by G B Reed. The enteric bacteria, by H. R. Morgan and F S. Cheever. The Salmonella, by H. R. Morgan. Bacillary dysentery and the Shigella, by F S. Cheever. Pasteurella, by K F Meyer. The Brucella, by S Elberg. Listeria and Erysipelothrix, by T H Weller and C A. Janeway. The cholera vibrios, by A T Wilson. The hemophilus group, by H. E. Alexander. The pertussis group, by W L. Bradford. The meningococci, by E. B. Schoenbach. The gonococci, by J. F Mahoney and J. D Thayer. The spirochetes, by H. Eagle. The Bartonella group, by D. Weinman. Streptobacillus moniliformis, by A. B. Sabin. The pleuropneumonia group, by A. B. Sabin. The Actinomycetes, by N F Conant and T Rosebury. Medical mycology by N. F Conant. Bacteria indigenous to man, by T Rosebury. Principles of sterilization, by B. D. Davis. Principles of chemotherapy by B. D Davis and W McDermott. Principles of epidemiology by K. F Maxcy. Applied medical bacteriology by G. G. Kalz and E. G. D Murray. Appendix. Bibliographic index. Subject index.

Note. (772) A comprehensive, well-arranged textbook of medical microbiology written for students and practitioners. Each chapter is the work of an authority in the field. Unity of presentation is achieved by the common emphasis on the host parasite relations and on the pathogenic properties of the parasites. The discussions of the various bacilli and fungi follow the same pattern and provide information on history morphology cultivation, diagnosis, treatment, and epidemiology. The first edition appeared in 1948. In the second edition the book is 100 pages longer. A new final chapter has been substituted for the former one on the cultivation and identification of pathogenic bacteria, and revisions have been made in other chapters where new knowledge was available. Also, recent literature has been added to the extensive bibliographies. The "Bibliographical index" includes the names of authors of all of the cited literature.

KELLY, FLORENE CORA, AND K. EILEEN HITE

Microbiology Introduction by G M. Dack. New York Appleton-Century-Crofts, Inc., 1949 592 p. illus. 24 cm. $5.50 917

Contents (abridged) Part 1 Introduction to the microscopic world. The protozoa. The algae. The fungi. The bacteria. The rickettsiae and viruses. Part 2 Methods for studying microorganisms: The microscope and microscopic methods. Cultivation of microorganisms. Pure culture methods and the identification of bacteria. Part 3, The physiology of bacteria: Nutrition and respiration. Protein metabolism. Activities of bacteria in nature and industry. Part 5, Antimicrobial methods: Bacteriostasis and disinfection. Surgical and medical asepsis. Chemotherapy. Part 6, Microorganisms and disease. Parasitism and pathogenicity. Resistance to infection—immunity. Part 7 Pathogenic microbiology: Staphylococci. Streptococci. Pneumococci. The spore-forming bacteria. The mycobacteria. The spiral bacteria. The genus Hemophilus. The genus Brucella. The spirochetes. The rickettsial diseases. Virus diseases. The pathogenic higher fungi. Protozoa of medical importance. Appendix. Index.

Note: An introductory textbook designed for students who have prospective professional interest in the subject. In other words, it is for students who want thorough rather than superficial knowledge. Reasonably full discussions of basic matters and techniques are included along with condensed descriptions of pathogenic organisms in which the main emphasis is on relation to disease. The reference material includes a chronological arrangement of developments in microbiology, formulas for stains, indicators, culture media, etc.

KNAYSI GEORGES

Elements of bacterial cytology Second edition. Ithaca, New York Comstock Publishing Company Inc. associated with Cornell University *Press* 1951 375 p. illus. 24 cm. $5 00 918

Contents. Form and size of the bacterial cell. Chemical composition and structural organization. Cytoplasm and cytoplasmic membrane. The nucleus. The cell wall and slime layer. Physicochemical properties of the bacterial membranes. Vegetative reproduction. Vacuoles and inclusions. The motion of bacteria. The spore of bacteria. Staining. Bacterial cultures. Cytology of the Actinomycetes. Cytology of the Spirochetes. Cytology of the Myxobacteria. Bibliography. Index.

Note. (1975) The standard treatise on the bacterial cell. In it the established knowledge is organized and expertly presented together with references to the source articles. The book is addressed to advanced undergraduate students of bacteriology and its coverage is thorough enough to make it useful also to graduate students in this field. The first edition was published in 1944. In this edition the work has been considerably enlarged and a good portion of it revised. There are 124 figures and 49 plates.

PRESCOTT SAMUEL CATE AND CECIL GORDON DUNN

Industrial microbiology Second edition. *New York McGraw Hill* Book Company, Inc., 1949 923 p illus. 23 cm. $9 50. 919

Contents (abridged) Saccharifying agents—methods of production and uses. The production of industrial alcohol by fermentation.

Facts and theories concerning the mechanism of the ethyl alcohol fermentation. Brewing. Wine. The distilling industries. Production of yeast and yeast products. The glycerol fermentation. The acetone-butanol fermentation. The acetone-ethanol fermentation. The butyl alcohol-isopropyl alcohol fermentation. The acetic acid bacteria and some of their biochemical activities. The production of lactic acid by fermentation. Sauerkraut. Pickles. Some fermented milk products. Cheese. The propionic acid fermentation. The production and properties of 2,3 butanediol. Some minor bacterial activities with industrial implications. The molds. The citric acid fermentation. The gluconic acid fermentation. The fumaric acid fermentation. The gallic acid fermentation. The itaconic and itatartaric acid fermentations. The kojic acid fermentation. The production of lactic acid by molds. Mannitol production by molds. Mold enzyme preparations—uses and products. The production of fat by molds. Some minor chemical activities of the lower fungi. Antibiotics. Textile microbiology. The microbiology of wood. Appendices: Detergency, *disinfection, and sterilization. The treatment and disposal of industrial microbiological wastes.* Index.

Note: (1941) This work is both text for college students who have completed introductory courses in such fields as bacteriology and organic chemistry and reference guide for industrial chemists and other technical personnel in industries making use of fermentation. The new edition covers the advances in the field since the publication of the first edition in 1940. Extensive portions were rewritten and new chapters were added, covering the new processes of saccharification, the production and properties of 2,3 butanediol, the itaconic and related fermentations, etc. There are now twice as many illustrations and the volume is almost 400 pages longer.

SPOEHR HERMAN AUGUSTUS AND OTHERS

Fatty acid antibacterials from plants. By H. A. Spoehr J H. C. Smith, H. H. Strain, H. W Milner and G J Hardin. Carnegie Institution of Washington, Division of Plant Biology Stanford California. Washington, D C. Carnegie Institution of Washington, 1949 67 p. illus 25 cm. (Carnegie Institution of Washington. Publication 586) Paper $0 50 Cloth, $0 75 920

Contents Introduction. The large-scale culture of *Chlorella pyrenoidosa.* The extraction of antibacterial material from culture solutions. *Chlorella* cells as source of antibacterial material. Nature of the fatty acids extracted from *Chlorella* cells. Antibacterial material from other plant sources. Antibacterial activity of fatty acids. Antibacterial activit of the fatty acids obtained from the fruits of the California laurel.

Note The results of research project which had as its primary objective the isolation of antibacterial substances from autotrophic organisms are reported in this pamphlet. Culture methods and the techniques of separating the active material from the plants are fully described. An unexpected discovery was that freshly prepared plant extracts showed little or no antibacterial activity but antibacterial properties were developed when the extracts were exposed to light and air It was found that this effect was due to the photo oxidation of certain fatty acids in the extracts and the project was then diverted to an investigation of the antibacterial activity of certain fatty acids of medium chain length.

WERKMAN CHESTER HAMLIN, AND P W WILSON editors

Bacterial physiology New York Academic Press, Inc., 1951 707 p. illus. 24 cm. $9.80 921

Contents: Chemistry of the bacterial cell, by G. Knaysi. The structure of the bacterial cell, by G. Knaysi. Inheritance, variation, and adaptation, by J Lederberg. Growth of bacteria, by I. C. Gunsalus. Physical factors affecting growth and death, by P Mitchell. Chemical factors affecting growth and death, by O. Wyss. Bacterial nutrition—chemical factors, by E. E. Snell. Bacterial enzymes and the theory of action, by F Schlenk. Anaerobic dissimilation of carbohydrates, by C. H. Werkman and F Schlenk. Bacterial oxidations, by E S G. Barron. Autotrophic assimilation of carbon dioxide, by J. W Foster. Assimilation of carbon dioxide by heterotrophic bacteria, by C. H. Werkman. Organic nitrogen, by E. F Gale. Biological nitrogen fixation, by P W Wilson. Mineral metabolism, by B. C. J. G. Knight. The comparative biochemistry of molecular hydrogen, by H. Koffler and P W Wilson. Assimilation by bacteria, by C. E. Clifton. Degradation and synthesis of complex carbohydrates, by H. A. Barker and W Z Hassid. Significance of autotrophy for comparative physiology, by W W Umbreit. Luminous bacteria, by F H. Johnson. Bibliography Subject index. Microorganism index.

Note: A book composed of original papers which are monographic in nature and heavily documented. However, comprehensive survey of the pertinent literature has not been attempted. Thirteen of the twenty papers deal with various aspects of the biochemistry of bacteria and, of course, some of the results reported are applicable to the biochemistry of higher organisms. The short paper by Umbreit is potentially of interest to most persons concerned with biological research. The book is designed mainly for graduate students majoring in bacteriology and biochemistry

TEXTBOOKS

BIRKELAND JORGEN

Microbiology and man being an account of the diverse properties and characteristics of microorganisms, a description of the various tools and techniques for their handling, and an inquiry into their subtle relationships to everyday life. Second edition. Baltimore Williams & Wilkins Company 1949 525 p. illus. 23 cm. $5 00. 922

Contents (abridged) Section I, Fundamentals of microbiology: How we study microorganisms. Biological characteristics of microorganisms. Microorganisms and the carbon and nitrogen cycles. Bacterial heredity and variation. How the environment affects microorganisms. Antibiosis and antibiotics. Section II, Infection and resistance: How the body defends itself against infection. Epidemiology or the natural history of disease. Section III, Common infectious diseases. Section IV Microbiology of air food, milk, water sewage, and soil: Bacterial warfare. Glossary References. Index

Note: (1954a) An introductory textbook primarily for college courses offered to students who need general knowledge of bacteriology but do not plan to do advanced work in the subject. Emphasis is on the methodology of bacteriological research and on the application of the knowledge of bacteriology to personal and community health. In this edition the work has been rather extensively revised. The taxonomic material included in the first edition has been deleted. Six new chapters have been added.

BURROWS WILLIAM

Jordan-Burrows textbook of bacteriology By William Burrows. With the collaboration of Francis Byron Gordon Richard Janvier Porter and James William Moulder Fifteenth edition. Philadelphia W B Saunders Company *1950 981* p illus. *24* cm. $9.50 923

Contents (abridged) Laboratory methods for the study of bacteria. Bacterial physiology The effect of physical and chemical agents on bacteria. Bacterial heredity and variation. The transmission of infection. The bacteriology of water and sewage. The bacteriology of milk and food. Immunity—antigens, antibodies and the antigen-antibody reaction. The staphylococci. The streptococci. The pneumococci. The enteric bacilli. The cholera vibrio and related forms. Brucella. Pasteurella. The hemophilic bacteria. Bacillus—the spore-forming aerobes. Clostridium—the spore-forming anaerobes. Mycobacterium. Medical mycology—the pathogenic actinomycetes, molds, yeasts, and related microorganisms. The spirochetes. Medical parasitology by R. J. Porter. The rickettsiae. Virus diseases of man by F B. Gordon. Bacteriophage. Index.

Note. (*784) A standard textbook addressed to students in medical colleges and to other students with professional interests in applied bacteriology. Practically all microorganisms of clinical interest are described. The fourteenth edition appeared in 1946. This edition exhibits important changes in *the number of sections.* The second chapter on laboratory methods has been completely rewritten. A considerable number of illustrations have been added including variety of electron microphotographs.

FROBISHER MARTIN JR.

Fundamentals of bacteriology Fourth edition, illustrated. Philadelphia W B Saunders *Company 1950. 936* p. *illus. 22* cm. o.p. 924

Contents (abridged) Section I, First principles: The place of microorganisms in the organic system. Optical methods in microbiology Morphology and structure of bacteria. Environmental factors in microbiology The cultivation of microorganisms. Methods of

systematic study of bacteria. Sterilization and disinfection. Enzymes and microbiology. The metabolism of microorganisms. Immunology and microbiology. Microorganisms and disease. Section II, Yeasts, molds and higher bacteria. Section III, The true bacteria (order Eubacteriales) (suborder Eubacteriineae); The microbiology of the soil. The microbiology of the air. The microbiology of milk. The microbiology of foods. Microbiology and industry. Bacterial diseases of plants. Section IV, Some pathogenic microorganisms. The pathogenic Enterobacteriaceae. Diplococcus pneumoniae and pathogenic streptococci. Diphtheria, tuberculosis, leprosy. The genus Neisseria. The "little bacteria." The viruses. The Rickettsiae. The pleuropneumonia-like organisms. The pathogenic Protozoa. Index.

Note: (1940) An established introductory textbook which is used in courses offered to premedical students and other college students in need of more than a general knowledge of microbiology. The section and chapter titles indicate the wide scope. As might be expected, the main emphasis is on public health and medical aspects. The third edition was published in 1940. Many new topics have been introduced in this edition and the treatment of many carried over from the preceding edition has been modified in order to include developments of the past decade. The chapter on the microbiology of foods is a new addition. Recent literature has been added to the extensive bibliographies. The book now contains 420 figures.

SARLES, WILLIAM BOWEN AND OTHERS

Microbiology general and applied. By William Bowen Sarles, William Carroll Frazier, Joe Bransford Wilson and Stanley Glenn Knight. New York Harper & Brothers, 1951 493 p. illus. 24 cm. $4 50 925

Contents (abridged) Part I, An introduction to the microorganisms. Part II, The physiology of microorganisms. Part III, Cultivation, observation and classification of microorganisms. Part IV, Microorganisms in industry. Part V, Soil microbiology. Part VI, Microbiology of sewage, water and air. Part VII, Microbiology of foods. Part VIII, Infectious diseases of animals and plants. Part IX, An outline of the history of microbiology. Appendixes. Index.

Note: An introductory textbook for use in college courses. The part on infectious diseases in animals and plants is less than 100 pages long; and the rest of the book is devoted to the aspects of microbiology which are not related to disease. Applications of microbiology in industry and agriculture are somewhat emphasized. The authors are faculty members of the Department of Bacteriology of the University of Wisconsin, and the book was developed there.

SMITH, DAVID T AND OTHERS

Zinsser's textbook of bacteriology By David T Smith, Norman F Conant, Joseph W Beard, Hilda Pope, D Gordon Sharp, and Mary A. Poston Tenth edition New York Appleton-Century-Crofts Inc. 1952 1012 p. illus. 25 cm $11 00 926

Contents (abridged) The general biology of bacteria and the general methods of bacteriology. Outline of the history and scope of bacteriology. Classification of bacteria. General morphology and reproduction of bacteria. Variability of bacteria. Growth of bacteria. Metabolism of bacteria. Effects of sulfonamides, antibiotics and chemical agents. Bacterial ecology and flora of the normal body. Infection and immunity. Pathogenic microorganisms. The spirochetes. The pleuropneumonia group of organisms. Rickettsiae and the rickettsioses. Diseases caused by the filtrable viruses. Medical mycology. Technical methods: Bacteriology, immunology and serology. Appendix: Antigenic structure of the Salmonella. Index.

Note: (791) The first edition of this work appeared in 1910 and it has been extensively used as a text in schools of medicine and public health ever since that year. The subject is covered from the standpoint of the biology of the microorganisms and the host; nevertheless most of the space is given to specific information on diseases, disease control, and other topics of interest in medicine and public health. In preparing this edition the information on diseases caused by viruses has been much expanded, and information has been added on the effects of ACTH, cortisone, and the recently developed antibiotics on specific microorganisms.

IMMUNITY

KAHN, REUBEN LEON

Serology with lipid antigen with special reference to Kahn and universal reactions. Baltimore The Williams & Wilkins Company 1950 327 p. illus. 24 cm. $6 00. 927

Contents (abridged) Part I, Introductory: Biologically universal nature of the serologic reaction given by syphilis tests with lipid antigen. The universal serologic reactions with lipid antigen. Part II, Serology of syphilis—with Kahn procedures. The serology of syphilis—historical. Practical aspects of standard Kahn reaction. The quantitative Kahn reaction with serum. The presumptive reaction. The standard Kahn reaction with spinal fluid. The standard Kahn reaction with cardiolipin antigen. Potentialities of the serology of syphilis for rendering greater assistance. Serologic aid in the detection of false positive reactions. Optional some reaction 1) in different situations in syphilis and 2) in the detection of "false negatives." Part III, Technique of Kahn procedures: The performance of serologic tests for syphilis—a high responsibility. The Kahn procedures. Antigens and their standardization. Author index. Subject index.

Note: The viewpoint taken in this monograph by the discoverer of the famous Kahn test is that "the serology of syphilis is part of a far more comprehensive serology with lipid antigen." In this work the author has covered the broader field. The discussion of each subtopic named in the chapter titles is thorough and is supplemented by literature references. Kahn and related procedures are described in detail.

SEVAG, MANASSEH GIRAGOS

Immuno-catalysis and related fields of bacteriology and biochemistry (Second edition, revised and enlarged.) With a preface by Stuart Mudd. Springfield, Illinois Charles C Thomas 1951 547 p illus. 23 cm. $12,00 928

Contents (abridged) Part I, Antigens as biocatalysts. Part II, Mechanism of antibody formation. Part III, Antibody as specific enzyme inhibitor. Part IV, Anti-enzyme immunity. Part V, Antibodies against respiratory enzymes. Part VI, Physiology and biochemistry of shock. References. Author index. Subject index.

Note: A notable study in which the author has integrated wide ranges of knowledge to support his central theme that the production of antibodies and substances which inhibit the activities of enzymes, etc., is a catalytic reaction. He emphasizes the parallels between bacteria and their corresponding antibodies and enzymes and their inhibitive reaction products. He states "practically all proteins foreign to the species present special sort of biocatalytic power, namely that of stimulating and directing specifically the synthesis of antibody. The results of certain studies would seem to show that under appropriate conditions specific activity as enzyme and as antigen may and frequently do in fact reside in the same specific chemical configurations of the protein molecule." The book is organized as a monograph with references from text statements to the 53-page bibliography. The first edition appeared in 1945. It was substantially revised and augmented for this edition.

SHERWOOD, NOBLE PIERCE

Immunology Third edition. Illustrated. St. Louis The C. V Mosby Company, 1951 731 p. illus. 22 cm. $8 50. 929

Contents (abridged) Infection and infectious agents. Inflammation and leucocyte response. Anatomical and physiological factors in infection and resistance of the individual. Natural and acquired immunity. Immunity mechanisms in experimental infections. Complement. Blood groups. The Rh and Hr factors of human blood. Measurement of antibodies. Mechanism of antigen-antibody reactions—cellular agglutination. Precipitins. Toxins and antitoxins. Normal, convalescent, and immune sera. Biological and antigenic specificity. Modified and conjugated antigens. Bacterial antigens and specificity. The importance of antibodies in diagnosis. The basis of bacterial complement fixation technique. Flocculation tests in syphilis. Hypersensitiveness. The significance of allergy in tuberculosis and a few other diseases. Colloids. Authors index. Subject index.

Note: (1591) A standard treatise which was used as a text in medical schools and as a survey and guide to the literature by medical graduates. The field is covered in a compact style with frequent references to the source literature. Extensive bibliographies are included in the chapters. Although intended primarily for students who will make clinical applications of the knowledge, the clinical aspects are not emphasized over the fundamental knowledge. The second edition was published in 1941. Important revisions were made throughout the work in preparing this edition. These include changes in the text of many chapters and additions to the bibliographies.

MEDICINE

GENERAL

AMERICAN MEDICAL ASSOCIATION

Standard nomenclature of diseases and operations. By Richard J Plunkett, editor and Adaline C. Hayden, associate editor Fourth edition. Philadelphia The Blakiston Company 1952 1034 p. illus. 22 cm. $8.00. 930

Contents (abridged) Instructions to medical record librarians. Scheme of classification. Nomenclature of diseases. Nondiagnostic terms for hospital records. Supplementary terms. Operations, introduction. Classification of operative procedures. Nomenclature of operations. Anesthesia section. Disease index. Operation index. Appendix. Code numbers of International list of causes of diseases, injuries and causes of death cross-indexed to "standard" code numbers.

Note: (1216) The standard U. S. authority on nomenclature and classification of diseases and operations and on records pertaining thereto. The present edition represents an extensive and careful revision. Among the important changes is the inclusion of code numbers that correlate this work with the *International statistical classification of diseases, injuries, and causes of deaths.*

ANNUAL REVIEW OF MEDICINE. Volume 3 Windsor C. Cutting editor Henry W Newman, associate editor Stanford, Calif Annual Reviews Inc. 1952 442 p. 23 cm. $6.00. 931

Contents: Infectious diseases (the effects of cortisone and adrenocorticotropic hormone on infection) by L. Thomas. Diseases of the gastrointestinal tract, by W Volwiler Diseases of the cardiovascular system, by T Winsor Diseases of the urinary system, by J A. Luetscher Jr Nutrition and nutritional diseases, by L. H. P Davies Diseases of the reproductive system, by J W McArthur. Psychiatry by J. Ruesch Anesthesia, by W Bourne and R. G. B. Gilbert. Radiology by R. A. Harvey Radioactivity (effects of whole body irradiation) by E P Cronkite and G. Brecher. Diseases of the eye, by I. H Leopold and A. H. Keeney Laboratory aids to diagnosis and therapy by I. Davidsohn. Toxicology by L. T. Fairhall. Neoplastic diseases, by D A Karnofsky Diseases of the nervous system, by H. Jasper and W Feindel. Diseases of the reticuloendothelial system and hematology (immunological sciences), by G. Carpenter Diseases of the respiratory system, by M D D'Esopo and E. M Medlar. Annotated list of reviews in medicine, by R. M. MacKay Indexes.

Note: The editors of the present volume of this series have stated in the Preface: "[The] design has been that each section shall be written by an authority in the field concerned, and that it shall be a discussion of the subject in the light of the contemporary literature and the author's special knowledge, rather than a cataloguing of references or stringing together of abstracts Accordingly critical comments and references to reviewers' experiences are found in many of the chapters; however the familiar pattern of terse abstracts blended together so as to form a narrative account has not been avoided Specific statements in the narrative are keynumbered to citations of the source articles. A detailed subject index covers the contents of the volume and an author index includes the names of all authors of cited papers. Particular attention is called to the final section, which is a classified and briefly annotated list of the papers published between January and October, 1951 in which specific areas of medicine are reviewed comprehensively with literature references.

GLASSER, OTTO editor

Medical physics. Volume II. Editor-in-chief Otto Glasser Editorial assistant, Jessie C. Tucker Chicago The Year Book Publishers, Inc., 1950. 1227 p. illus. 28 cm. $25.00. 932

Note (1946) A cyclopedic reference book of physical knowledge applicable to medicine. The first article deals with the high energy electron accelerators such as the cyclotron which are used in nuclear research; a series of articles covers what the editor has termed "bioelectricity"; there is a collection of articles on the digestive tract; one on radiation; another on roentgen rays, etc. Although a few articles are short the typical article is several pages in length. Articles are signed with the names of the authors and contain bibliographies. There is a fully detailed subject index.

GREEN, DAVID EZRA AND W EUGENE KNOX, editors

Research in medical science. New York The Macmillan Company 1950. 492 p. illus. 24 cm. $6 50 933

Contents: Bacteriophages and their action on host cells, by T F Anderson. Viruses, by F M. Burnet. Rickettsial diseases, by H. M. Rose. Epidemiology by J. R. Paul. The methodology of medical genetics, by L. Hogben. Anthropology, by M. F Ashley Montagu. Immunochemistry by R. A. Kabat. Enzyme chemistry and physiologic mechanisms, by W E. Knox. Chemotherapy by E. Q. Baldo, Jr. Microorganisms and vitamin research, by D. D Woods. The biosynthesis and metabolism of porphyrins—an illustration of the use of isotopes in biologic and medical research, by D. Shemin and I. M. London. Differentiation and specialization of biologic media, by J. P Peters. Kidney physiology by R. F Pitts. Pulmonary physiology by D W Richards, Jr Liver injury by P György The role of hepatorenal vasotropic principles in experimental shock, by E. Shorr and others. Plasma proteins in the investigation of disease mechanisms, by S. H. Armstrong, Jr Some aspects of red-cell production, by M. M Wintrobe Endocrinology in cancer research, by C. P Rhoads. Rheumatic fever—a disease for adventure, by A. F Coburn. Hypertension, by L. F Lewis. Pediatrics: Nuclear jaundice (kernicterus) in hemolytic disease of the newborn, by R. Day Congenital malformations, by T H. Ingalls. Galactosemia—glycogen storage disease, by H. H. Mason. The celiac syndrome, by D H. Andersen. The direction of surgical effort, by I. S. Ravdin. Neurology by J Elkin. Research in psychiatry, by K. A. Menninger. Some biochemical problems in military engineering, by A. Weissman.

Note The typical article in this book contains a brief outline of the development of study in the field of medical or biological research named in its title, describes the more important findings to date, and indicates probable lines of future development. Literature references are included for each article. The style is semi-technical and the book is suitable for persons who are thinking of entering research and for physicians, biochemists, and even laymen who want to get a view of the scope of the field or of the more significant discoveries.

HAWLEY PAUL RAMSEY

New discoveries in medicine their effect on the public health. New York Columbia University Press, 1950 134 p illus. 21 cm. $2.50. 934

Contents: Our fabulous blood—Part I, Early discoveries—Part II, Development of transfusion as a therapeutic technique—Part III, The Rh factor Modern surgery of the heart and lungs. Modern prevention and treatment of mental disease. The socio-economic aspects of medical care—Part I, Economic history of medical care—Part II, The prepayment principle.

Note. Collected in this book are the second series of Bampton Lectures in America, which were delivered at Columbia University in 1949 by the Director of the American College of Surgeons. They are addressed to laymen rather than to medical men and they provide readable and authoritative surveys for this audience of some important developments in medicine and surgery

McManus Joseph Forde Anthony, editor

Progress in fundamental medicine. 74 illustrations and 2 colored plates. Philadelphia Lea & Febiger, 1952 316 p. illus. (part col'd) 26 cm. $9 00. 935

Contents: Recent advances in parenteral nutrition with particular reference to protein hydrolysates, by P R. Cannon. Melanotic tumors of the skin, by J A. Cunningham. Pathology of systemic lupus erythematosus, by P Klemperer. The diagnosis of fungus infections with particular reference to staining methods, by A. M. Kligman. The liver, by G. K. Mallory and T B. Mallory A survey of techniques for the histochemical approach to pathology by J. F A. McManus. Coronary artery disease, by J. C. Paterson. The problem of carcinoma in situ with reference to the human cervix uteri, by L. D. Stoddard. The recognition of carcinoma in situ of the cervix uteri by Papanicolaou's method, by W K. Cuyler. Non-silica pneumonoconioses, by J P Wyatt. Index.

Note. A volume made up of original monographs in which the authors have appraised and interpreted significant recent advances in selected areas of medicine. The book is the result of planned effort to do justice to these advances by providing graduate medical practitioners with rather full accounts of them and by providing lists of the literature in which they were originally reported.

Mainland Donald

Elementary medical statistics the principles of quantitative medicine. Philadelphia W B Saunders Company 1952 327 p. illus. 22 cm. $5 00 936

Contents. The place of statistics in medicine. On looking at evidence. Estimating the error in enumeration data. Comparison of samples of enumeration data. Variation between measurements. Relationships between measurements—concomitant variation and trends. Statistical ideas in clinical medicine. Some further hints for investigators. Answers. References. Appendix. Index. Graphs.

Note: An introductory textbook in which the reader is introduced to certain basic statistical concepts and techniques, but in which the main emphasis is on the application of statistical techniques to medical research and other matters of medical interest. The author is Professor of Medical Statistics in the College of Medicine of New York University

Matsen Frederick Albert and others

Pre-medical physical chemistry by F A. Matsen, Jack Myers and Norman Hackerman. New York The Macmillan Company 1949 344 p. illus. 22 cm. $4 75 937

Contents (abridged) Mathematical introduction. Atomic structure. Molecular structure and intermolecular forces. Gases. Imperfect gases and the liquid state. The solid state. Elementary kinetics. Equilibrium and free energy Equilibria in one-component systems. Equilibria in two-component systems. Oxidation-reduction equilibria. pH and determination of pH. Titration. Buffers. Surface equilibria. Molecular orientation at interfaces. The colloidal state and physical means of its investigation. Electrokinetics. Stability of colloidal systems. Membrane phenomena. Biological energy exchanges. Appendices. Index.

Note: The chief topics in physical chemistry that are of interest in medicine are treated in this text for undergraduate college students who are preparing for medical schools. The topics are well chosen, and although the main emphasis is on basic matters, applications to biology and medicine are frequently pointed out in such sentences as A valuable technique in diffusion studies on biological materials is known as the *porous disk method.* The level of treatment assumes previous study of basic physics and general chemistry The authors are members of the faculty of the University of Texas.

Methods in medical research. Volume 2 Julius H. Comroe, Jr., editor in-chief Chicago The Year Book Publishers, Inc., 1950. 361 p. illus. 22 cm. $6 50. 938

Contents (abridged) Section I, Methods of study of bacterial viruses, by M. H. Adams, associate editor Section II, Pulmonary function tests, by J. H. Comroe, Jr., associate editor Section III, Assay of hormone secretions, by E. H. Venning, associate editor. Subject index. Name index.

—— Volume 3 Ralph W Gerard, editor in-chief Chicago The Year Book Publishers, Inc., 1950 312 p. illus. 22 cm. $7.00. 939

Contents (abridged) Section I, Genetics of micro-organisms, by S. E. Luria, associate editor. Section II, Assay of neurohumors, by J. H. Gaddum, associate editor. Section III, Selected psychometer measurement methods, by W R. Miles, associate editor. Section IV Methods for study of peptide structure, by C. H. Li, associate editor. Subject index. Name index.

—— Volume 4 Maurice B Visscher editor in-chief Chicago The Year Book Publishers, Inc., 1951 306 p. illus. 22 cm. $7.00. 940

Contents (abridged) Section I, Histochemical staining methods, by G. Gomori, associate editor. Section II, Fluid and electrolyte distribution, by L. B. Flexner associate editor. Section III, Studies on gastrointestinal pressures, innervation and secretions, by J. P Quigley associate editor. Section IV Tissue culture methods, by C. M. Pomerat, associate editor Subject index. Name index.

—— Volume 5 A. C. Corcoran, editor-in-chief Chicago The Year Book Publishers, Inc., 1952 394 p. illus. 22 cm. $7 50 941

Contents (abridged) Section I, Methods for separation of complex mixtures and higher molecular weight substances, by L. C. Craig, associate editor. Section II, Methods of renal study by A. C. Corcoran, associate editor Section III, Immunochemical methods for determining homogeneity of proteins and polysaccharides, by M. Cohn, associate editor. Subject index. Name index.

Note (901) This valuable series, initiated with the publication of volume 1 in 1948, has been continued by the volumes listed above. Each volume contains an assortment of original monographs on currently important or newly developed methods and techniques in medical research. As the titles show "medical research" has been interpreted broadly Many of the papers such as that by Pickels on ultracentrifugation are of interest in several fields of research. The papers are accompanied by bibliographies and are usually illustrated.

New York Academy of Medicine

Perspectives in medicine, the march of medicine, 1948 New York Columbia University Press 1949 183 p. 21 cm. (The New York Academy of Medicine. Lectures to the laity No. XIII) $2 50 942

Contents: The stars in civil life, by L. L. Strauss. Food and civilization, by Sir R. Cilento. On being old too young, by E. J. Stieglitz. Perspectives in cancer research, by C. P Rhoads. Psychiatry for everyday needs, by W C. Menninger. The inter-relation of pure and applied science in the field of medicine, by J. B. Conant. Index.

—— The future in medicine, the march of medicine 1949 New York Columbia University Press 1950 160 p 21 cm. (The New York Academy of Medicine. Lectures to the laity No. XIV) $2.50. 943

Contents. Law and medicine, by R. P Patterson. The scientist—servant or master? by E. Sharp. Science under dictatorship, by L. Alexander. Blood and man, by W C. Boyd. The criminal within us, by G. E. Gardner. Index.

—— Frontiers in medicine the march of medicine, 1950 New York Columbia University Press, 1951 150 p. 21 cm. (The New York Academy of Medicine. Lectures to the laity No. XV) $2.50. 944

Contents. Frontiers in psychiatry, by F Alexander. Mathematics—myth or promise, by D. Siegel. Frontiers in genetics, by L. H. Snyder. Machines that work like men, by J H. Gibbon, Jr. Bio-

logical aspects of antibiotics, by S. A. Waksman. Concepts and methods of medical research, by T. M. Rivers. Index.

Note. These books contain the lectures given in the 13th, 14th and 11th annual "Lectures to the laity" noted series in which eminent medical practitioners and scientists associated with research in the biological sciences interpret selected areas of their fields for the benefit of laymen. In most of the lectures there is some emphasis on recent advances. The series is both readable and authoritative.

SAPHIR, OTTO
Autopsy diagnosis and technic. Third edition revised and enlarged. Illustrated. Foreword by Ludvig Hektoen New York Paul B Hoeber Inc. 1951 471 p. illus. 20 cm. $6.50 945

Contents: The autopsy permit. General technical considerations. Unexpected death from natural causes and notes on accidental death. External examination—examination of the breast and serous cavities; removal of organs. Examination of the internal organs and tissues. Male genito-urinary tract. Rectum. Female genitalia. Neck organs and oral cavity. Nose and accessory sinuses. Esophagus, larynx, trachea, and bronchi. Chest organs. Gastrointestinal tract. Gallbladder and bile ducts. Liver. Pancreas. Spleen. Skull, meninges, ear, brain, hypophysis, and pineal body. Spinal cord. Peripheral nerves. Skeletal and muscle system. Blood dyscrasias. Autopsies on stillborns and infants. Anatomic findings in vitamin deficiencies. Notes on certain tropical diseases. "Do" or "don't" and certain suggestions for quick orientation. Note on autopsies on embalmed and decomposed bodies. Weights and measurements of organs. Index.

Note: (2006) A standard manual of detailed directions for determining the causes of death on the basis of systemic pathology. Techniques of dissection and diagnostic examinations are explicitly described. The second edition was published in 1946. Useful additions and revisions including one new chapter have been made in this edition.

STUDIES IN MEDICINE A VOLUME OF PAPERS IN HONOR OF ROBERT WOOD KEETON Springfield, Illinois Charles C Thomas, 1951 396 p illus. 24 cm. $8 50. 946

Contents: Robert Wood Keeton, by L. H. Sloan. Bibliography of Robert W. Keeton. The relation of serum colloid osmotic pressure to electrophoretically corrected electrophoretic protein distribution during spontaneous remission of severe nephrosis, by R. H. Armstrong, Jr., and others. Physiologic and clinical basis for sympathetic denervation as therapy in peripheral vascular disorders, by D. I. Abramson. A stereotaxic instrument for use on the human brain, by P. Bailey and S. N. Stein. Some small studies in blood clotting, by C. La Flure-Birch. Gastrectomies—its causes and consequences, by A. J. Carlson and F. Hoelzel. The role of nutrition in surgery by W. H. Cole. Management of diabetes in children, by A. E. Colwell. The control of environmental factors in clinical research, by M. K. Fahnestock and others. The role of protein in liver disease, by E. F. Foley and M. A. Spellberg. Psychiatric implications of dental disease, by F. J. Garty and others. The diagnosis of congenital stenosis of the pulmonic valve with associated muscular septal defect, by R. L. Grissom and others. Studies on factors controlling cholesterol synthesis in the body by R. G. Gould. The present status of knowledge concerning gastrin, by M. I. Grossman and A. C. Ivy. Circulatory failure as cause of fever, by F. K. Hick and M. M. Montgomery. The art of using lantern slides, by T. S. Jones. Nutritional and endocrinological relationships in cirrhosis of the liver by R. M. Kark and M. G. Galloway. The microdeterminations of lipids—the synthesis of labile phosphorus compounds of the phospholipids by reaction with monobasic sodium phosphate, by A. B. Kendrick. The pathologic physiology of the upright posture, by F. C. Landrum. Unusual and diagnostic bone marrow patterns, by L. R. Limarzi and others. The progress of applied pharmacology during Dr. Keeton's life, by H. A. McGuigan. Some metabolic aspects of obesity in man and animals, by H. H. Mitchell. Viscosity studies in whole blood following the administration of heparin, dicumarol and paritol C, by L. A. Malachi and others. Outline of course in practical nutrition for medical students, by E. S. Nelson. Primary tumors of renal pelvis and ureter by V. J. O'Conor. Allergy and immunity to insulin, by H. T. Ricketts and M. G. Goldner. Comments regarding the etiology of sarcoidosis, by A. Rostenberg, Jr. Observations on the behavior of ceruloplasmin, by M. Sacks and others. Fatty hepatitis, by F. Steigmann. Chronic ulcerative colitis—clinical and bacteriological response to aureomycin, by M. H. Streicher. Clinical applications of ACTH and cortisone.

Note: Organized on the familiar *Festschriften* plan, this book contains original papers authored and titled as noted above. Some of the papers incorporate the results of very recent research, some of it hitherto unpublished. Bibliographical references are included with many of the papers.

UNITED STATES ARMY MEDICAL LIBRARY
Army Medical Library catalog 1951 Washington The Library of Congress, 1952 866 p 30 cm. 947

Note. An annual catalogue based on cards printed by the Library of Congress for the Armed Forces Medical Library (formerly called the Army Medical Library). It corresponds to but does not exactly coincide with current accessions. This issue is the fourth in the series, of which the first volume was based on cards printed April-September, 1948. The scope of the catalogue is described as follows, "The 1951 *Army Medical Library catalog* is issued in two parts. Part one, *Authors*, and Part two, *Subjects*. Medical titles published prior to 1921, except bibliographies, biographies, and materials of similar types, are not subject headed in the Army Medical Library; therefore, the subject list does not include those pre-1921 titles included in the author list. Pre-1801 titles and Americana titles through 1820, catalogued in the History of Medicine Division, are not included in the 1951 *Army Medical Library catalog*.

UNIVERSITY OF PENNSYLVANIA. GRADUATE SCHOOL OF MEDICINE
Advances in medicine and surgery Philadelphia W B Saunders Company 1952 441 p. illus. 25 cm. $8.00. 948

Content (abridged) The present status of adrenal cortical hormones. The role of potassium in health and disease. Hypertension newer aspects of medical and surgical treatment. Newer concepts in preoperative evaluation and preparation of patients. Thromboembolism. Pulmonary infections. The relief of pain. Current status of the cancer problem. Recent developments in viral diseases. Functional disorders. Index.

Note. Collected in this volume are some 50 short papers originally presented in course at the University of Pennsylvania, designed "to serve as continuing source of educational material for alumni of the school. The several papers on topic such as viral diseases cover both the fundamental and clinical advances and sum up the significant literature. Bibliographies are included. A majority of the authors are faculty members of the Medical School of the University of Pennsylvania.

DICTIONARIES

DE VRIES LOUIS AND OTHERS
German English medical dictionary New York McGraw-Hill Book Company Inc., 1952 586 p. 24 cm. $12 50 949

Note: This work gives the English equivalents of 40,000 German terms and is meant to be desk book for physicians and others who read or translate medical literature written in German. Terms from related fields, such as psychiatry, physiology and pharmacology are included. Idioms and verbs in the past tense are translated, but definitions, pronunciations, and abbreviations are not given. The author who had the assistance of sixteen medical collaborators is an established authority in the science dictionary field.

DORLAND WILLIAM ALEXANDER NEWMAN
The American illustrated medical dictionary a complete dictionary of the terms used in medicine, surgery dentistry pharmacy chemistry nursing, veterinary science, biology and medical biography with their pronunciation, derivation and definition. Twenty second edition with 720 illustrations, including 49 plates. Editorial board Richard M. Hewitt and others. Contributors Lloyd W Daly and Austin Smith. Philadelphia W B

Saunders Company 1951 1736 p. illus (part col d) 25 cm. $11 50 950

Note: ($10*) One of the standard comprehensive medical dictionaries. In this semi-centennial edition (it first appeared in 1900) there has been considerable revision and the type has been reset. An article on medical etymology by Lloyd W Daly has been added as new feature at the beginning of the book, and at the end of the book there is reference table of modern drugs and dosages compiled by Austin Smith.

GOLDBERG, MORRIS

Spanish English chemical and medical dictionary comprising terms employed in medicine, biochemistry surgery dentistry veterinary biology, pharmacy, allied sciences and related scientific equipment. New York Mc Graw Hill Book Company Inc., 1952 608 p. 24 cm. $17 50 951

Note ($12*) A complement to the author's *English-Spanish chemical and medical dictionary*, New York, 1947 The number of Spanish words for which English equivalents are given is about 32,000. Renderings are brief, not encyclopedic; for instance, "anaritmia, f., anarithmia, form of aphasia characterized by an inability to count. However short definition is always given in addition to the English equivalent of the Spanish term.

JONES HAROLD WELLINGTON, AND OTHERS editors

Blakiston s new Gould medical dictionary A modern comprehensive dictionary of the terms used in all branches of medicine and allied sciences including medical physics and chemistry dentistry pharmacy nursing, veterinary medicine, zoology and botany as well as medicolegal terms with illustrations and tables. Editors Harold Wellington Jones Normand L Hoerr Arthur Osol with the cooperation of an editorial board and 80 contributors. 252 illustrations on 45 plates 129 in color Philadelphia The Blakiston Company 1949 1294 p illus. (part col d) 25 cm. $9 50 952

Note: ($011) The present edition of this standard work is not revision in the usual sense of the term, but is completely new work, edited without regard to preserving matter in previous editions. There are three distinct parts: the vocabulary of 1156 pages, the illustrations (partly colored) on 45 plates, and the tables covering pages 1157–1294 Defined words and terms are arranged two columns to the page and are listed in boldface type with definitions indented, so as to facilitate use. Pronunciations and derivations are given. Terms of medical nature are listed and defined under the common part of the term, g., under *reaction* are defined 78 different specified reactions, under *reagent* are defined 46 different specified reagents, under *soap* 13 soaps, under *sodium* 64 sodium compounds, under *test* 400 tests are defined Medical abbreviations are likewise defined in the main vocabulary Also included are short biographical sketches of persons prominent in medical history The appendix contains 32 extensive tables.

PEPPER, OLIVER HAZARD PERRY

Medical etymology the history and derivation of medical terms for students of medicine, dentistry and nursing Philadelphia W B Saunders Company 1949 263 p 24 cm. $5 50 953

Contents Part I, Introduction Background of medical terminology Prefixes, suffixes, compounds & transliteration. Eponyms and onomatopoetic words. Part II, Preclinical subjects: Anatomy Physiological chemistry Physiology Pathology Bacteriology Pharmacology and therapeutics. Parasitology Part III, Clinical subjects: Medicine. Surgery Pediatrics. Neurology Gynecology and obstetrics Ophthalmology Dermatology Otolaryngology Psychiatry Radiology. Part IV Dentistry: Dental terminology Index of words.

Note: The greater part of this book is taken up with lists of terms arranged under the areas of medicine and the background sciences listed above. Each list of terms is arranged as in dictionary and for each term the following information is usually given: the Greek or Latin source word, English definition of the source word and short comment that throws light on how the term came to be applied. A typical entry follows: acinus. L. acinus — grape. Anyone would naturally be reminded of bunch of grapes by the masses of small, rounded sacs of glandular structure. The book is useful not only to beginning medical students but also as general reference work on the origins of medical terms.

SKINNER, HENRY ALAN

The origin of medical terms. Baltimore The Williams & Wilkins Company 1949 379 p. 26 cm. $7 00 954

Note A reference book for medical students and other nonspecialists in etymology A certain amount of encyclopedic information is included. The source word is always given as is customary in etymological dictionaries, and this information is frequently supplemented by discussion—sometimes many sentences in length—in which is gi en historical and general information on the early uses of the word. Another feature is the inclusion of short biographical sketches of prominent physicians and other persons who made some contribution to the development of medicine. The author is Professor of Anatomy in the University of Western Ontario.

TAYLOR, NORMAN BURKE editor

Stedman s medical dictionary of words used in medicine with their derivations and pronunciation including dental, veterinary chemical, botanical, electrical life insurance and other special terms, anatomical tables of titles in general use, the terms sanctioned by the Basle anatomical convention the new British anatomical nomenclature pharmaceutical preparations official in the U S. and British Pharmacopoeias or contained in the National Formulary and comprehensive lists of synonyms biographical sketches of the principal figures in the history of medicine. Edited by Norman Burke Taylor in collaboration with Allen Ellsworth Taylor Seventeenth revised edition with etymologic and orthographic rules Baltimore The Williams and Wilkins Company 1949 1361 p. illus. (part col d) 25 cm $8.50 955

Note ($13*) A standard work that has held place for many years as one of the world' chief dictionaries of medical terms. Definitions are adequately full and etymology and pronunciation are given for most of the words defined. A selection of abbreviations is included in the main alphabet. Some trade names are included but there are fewer in this 17th edition than in previous editions. Special reference features include preliminary essay on medical etymology, tables of weights and measures, temperature and barometric scales, and comparative table of anatomical nomenclature. The 16th edition was published in 1946. Both deletions and additions of terms were made throughout the alphabet in preparing this edition Two categorical changes were made deletion of most of the trade names and addition of the full names, nationalities, professions, and years of birth and death of men whose names are identified with theories, tests, techniques, etc.

HISTORY

FULTON JOHN FARQUHAR

The great medical bibliographers a study in humanism. Philadelphia University of

Pennsylvania, 1951 107 p illus. 22 cm. (The Rosenbach Fellowship in Bibliography Publications) $4 00. 956

Contents: The beginnings: Trithemius, Champier and Gesner. The seventeenth and eighteenth centuries: medical book sales, Beughem, Van der Linden, Haller and the rise of medical bibliography. Medical subject indexes: Ploucquet, Forbes, Callisen, and Billings. [illegible] and Osler; Keynes and the rise of personal bibliography. Appendices. Index.

Note: The history of medical bibliography is skillfully outlined in this collection of lectures that were delivered in 1950 on the A. S. W. Rosenbach Fellowship in Bibliography at the University of Pennsylvania. The bibliographical accomplishments of the great medical bibliographers are emphasized, but there is enough on their other accomplishments and personal life to make the account interesting. Among the appendix material is a list of early sale catalogues of medical books, bibliographical descriptions of the *Haller Bibliothecae* and descriptions of the bibliographies of Geoffrey Keynes. The illustrations include reproductions of portraits and facsimiles of title pages. The author, himself a noted contributor to medical bibliography, is Sterling Professor of the History of Medicine in Yale University School of Medicine.

FULTON JOHN FARQUHAR

Logan Clendenning Lectures on the History and Philosophy of Medicine. First series I, Vesalius four centuries later II Medicine in the eighteenth century Lawrence, Kansas University of Kansas Press, 1950. 52 p. 22 cm. (University of Kansas. Logan Clendenning Lectures on the History and Philosophy of Medicine. First series) $1 00 957

Note: This book contains two original lectures by an eminent authority on medical history. In the first lecture the author brings out some high points in the life of Vesalius, then discusses from the historical point of view Vesalius' *Tabulae sex*, *Fabrica* and *Epitome*. In the second lecture he describes some of the advances in physiology, pathology and internal medicine that were made during the eighteenth century.

GORDON BENJAMIN LEE

Medicine throughout antiquity Foreword by Max Neuburger 157 illustrations. Philadelphia F A. Davis Company, 1949 818 p. illus. 24 cm. $6.00 958

Contents: Part I, Prehistoric and protohistoric medicine: Introduction. The antiquity of medicine. Paleolithic evidence of the antiquity of medicine. Prehistoric medicine. Primitive concepts of disease and death. Nature worship and medicine. Medicine in Assyro-Babylonia. Medicine of ancient Egypt. Ancient Hebrew medicine. Medicine in ancient Persia. Antiquity of Indian medicine. Medical concepts in China. Medicine in ancient Japan. Medicine among the prehistoric Americans. Part II, The Greco-Roman period: Dawn of Greek medicine. Influence of philosophy on medicine. Medical philosophers and practitioners. Hippocrates, the great teacher. Hippocratism, the classics. The drift towards dogmatism. The Athenians. The Peripatetics, Epicureans, and Stoics. Alexandrian school. Empiricism. Roman medicine. The methodist school. The encyclopedists. The pneumatics and eclectics. Galen. Talmudic medicine. Talmudic diagnosis and treatment. Index.

Note: A comprehensive yet readable account of the art of medicine from the beginning of man's existence to 476 A.D. The book, which is written for both laymen and practitioners, discusses the medical beliefs and knowledge held by the men of this early period, and describes the diseases from which they suffered and the therapeutic measures employed. Numerous extracts from the ancient records upon which the book is based are woven into the general narrative. Chapter bibliographies are provided.

LEAKE, CHAUNCEY D

The old Egyptian medical papyri. Lawrence, Kansas University of Kansas Press, 1952 108 p. 21 cm. (University of Kansas. Logan Clendening lectures on the history and philosophy of medicine. Second series) $2 00. 959

Contents: The chief Egyptian medical papyri. Old Egyptian weights and measures. Drug measurement in the old Egyptian medical papyri. Ancient Egyptian therapeutics. The Hearst medical papyrus. Organization of the Hearst medical papyrus. Diseases in the Hearst medical papyrus. The ingredients of the Hearst papyrus prescriptions. Summary. Appendix—List of prescriptions in the Hearst medical papyrus. References. Index.

Note: In this work the main features of ancient Egyptian medical practice as revealed by the study of eight papyri dating from 1900 B.C. to 1200 B.C. are summarized. The greater part of the book deals with the diseases and methods of treatment described in the Hearst papyrus (1550 B.C.) which was acquired by the University of California in 1901.

SIGERIST HENRY ERNEST

A history of medicine. Volume I Primitive and archaic medicine. New York Oxford University Press, 1951 564 p. illus 24 cm. (Yale Medical Library, Historical Library Publication no. 27) $12 50 960

Contents: Introduction. Primitive medicine. Ancient Egypt. Mesopotamia. Appendices: Histories of medicine. Source books of medical history. Museums of medical history. Literature of paleopathology since 1930. Index.

Note: The first volume published of an eight-volume work planned on a more comprehensive scale than has been attempted before. It is the author's purpose to apply to the history of medicine the same principles as are applied in scholarly histories of other aspects of human life. A reading of the part of his introduction entitled "The historical approach to medicine" is essential to an understanding of his plan, but the subheadings in his chapter on Mesopotamia, "The setting," "Social environment," "Principles and sources of Mesopotamian medicine," "Priests and physicians," "Content of Mesopotamian medicine," "Rational elements in Mesopotamian medicine," indicate the scope of his method, and the inclusion of much material on the social and economic setting. His style is both scholarly and readable. Sources are scrupulously noted.

WOGLOM WILLIAM HENRY

Discoverers for medicine. New Haven Yale University Press, 1949 229 p illus. 24 cm. $3 75 961

Contents: Introduction. The blood pressure—*Stephen Hales*. Respiration—*Antoine Laurent Lavoisier*. The foxglove—*William Withering*. Vaccination—*Edward Jenner*. The laryngeal mirror—*Manuel Garcia*. The Eustachian tube—*Edmé Gilles Guyot*. Eyeglasses and spectacles—*Benjamin Franklin*. The itch—*Simon François Renucci*. Quinine. Phagocytosis—*Elie Metchnikoff*. X-rays—*Wilhelm Conrad Roentgen*. Heredity—*Gregor Johann Mendel*. [illegible]—*John Rowe*. Bibliography. Index.

Note: An informal history of selected advances in medical knowledge and practice that were based on discoveries or inventions of persons not members of the medical profession. Mainly it is organized in the form of biographical sketches of selected individuals. However each sketch contains, in addition to personal biographical data, historical and background information that often includes accounts of the contributions of other persons. Also the introduction mentions advances made in various fields of science by amateurs. The style is popular and the book is suitable for both lay readers and scientists.

GENERAL TEXTS AND TREATISES

ADVANCES IN INTERNAL MEDICINE. Volume IV Editors, William Dock and I. Snapper associate editors, Tinsley R. Harrison, Chester S. Keefer Warfield T Longcope, J Murray Steele. Chicago The Year Book Publishers, Inc. 1950 549 p. illus. 23 cm. $10 00. 962

Contents: Nitrogen mustards in the treatment of neoplastic disease, by D. A. Karnofsky. Use of radioactive isotopes in medicine, by L. R. Wasserman and R. Loevinger. Bronchiectasis, by A. L. [illegible] and W. W. [illegible]. Advances in the neuromuscular disorders, by D.

McEachern and R. Rabinovitch. Use of sodium depletion in therapy, by W Dock. Clinical use of anticoagulants, by J. E. Estes and E. V Allen. Hepatitis and cirrhosis of the liver, by A. J. Patek, Jr Hepatic tests, by H. Popper and F Schaffner The vascular physiology of hypertension, by G. W Pickering. Author index. Subject index. Cumulative index, Volumes I–IV

—— Volume v Editors, William Dock and I. Snapper Chicago The Year Book Publishers, Inc., 1952 464 p. illus. 23 cm. $10.50. 963

Contents: Diseases of the pregnant woman affecting the offspring, by M. H. Ross. Catheterization of the heart, by R. J Bing. Portal hypertension and its treatment, by A. H. Blakemore. The anemia of infection XVII. A review by G. E. Cartwright and M. M. Wintrobe. Gout, derangement of purine metabolism, by A. B. Gutman and T F Yü. Clinical aspects of ganglionic and adrenergic blocking agents, by R. H. Lyons and V L. Love. Aspects of the influenza problem, by J. Mulder. Experiences with adrenocorticotropic hormone (ACTH) and cortisone, by C. Ragan. Abnormal proteins in myeloma, by J Waldenström.

Note: (850*) Further volumes in series in which recent developments are summarized and references are given to the original articles. The papers are not mere abstracts but are long enough to convey the significance and most of the results described in the original publications. The series is addressed to general practitioners, internists, and specialists who wish to keep up with developments in this branch of medicine.

CECIL, RUSSELL LA FAYETTE editor

The specialties in general practice. Philadelphia W B Saunders Company, 1951 818 p. illus. 26 cm. $15 00. 964

Contents. Minor surgery by W A. Barnes. Orthopedic surgery by L. R. Straub. Fractures and dislocations, by C. H. Herndon. Urology by H. J Jewett. Diseases of the anus, rectum and colon, by C. G. Child. Gynecology by L. M. Hellman. Obstetrics, by L. M. Hellman. Pediatrics, by R. C. Eley Ophthalmology by R. T Paton. Diseases of the nose and throat, by A. W Proetz. Diseases of the larynx, bronchi and esophagus, by C. L. Jackson. Otology by E. P Fowler. Dermatology and syphilology, by G. M. Lewis. Psychiatry by D. D. Bond and J M. Flumerfelt. Index.

Note The several chapters of this work have been written by eminent specialists, but the book is designed, as the title indicates, for the general practitioner The emphasis is on knowledge that can be put to practical use in the regular work of general practitioners. Much of the information is—as might be expected—familiar; but some of the techniques, for instance number of those treated in the chapter on orthopedic surgery are outside the usual knowledge of the general practitioner Each chapter is supplemented by literature references. There are 470 figures and an exceptionally full index.

CECIL RUSSELL LA FAYETTE, AND ROBERT F LOEB editors

A textbook of medicine. Edited by Russell L. Cecil, Robert F Loeb associate editors, Alexander B Gutman Walsh McDermott, and Harold G Wolff Eighth edition, illustrated. Philadelphia W B Saunders Company 1951 1627 p illus (part col d) 26 cm. $13 00 965

Contents (abridged) The infectious diseases Viral diseases. Rickettsial diseases. Bacterial diseases—pneumococcal infections—streptococcal diseases—staphylococcal infections—gonococcal infections—meningococcal infections—bacillary diseases. The mycoses. Spirochetal infections. Protozoan infections. Metazoan infections—the Platyhelminthes—the Nematoda—Hirudinea—arthropods and human diseases. Diseases of unproved etiology Diseases of allergy Diseases of collagen. Diseases due to physical agents. Diseases due to chemical agents. Deficiency diseases. Diseases of metabolism. Diseases of the digestive system Diseases of the mouth, salivary glands and pharynx. Diseases of the esophagus. Diseases of the stomach. Diseases of the intestines Diseases of the liver Diseases of the gallbladder and bile ducts. Diseases of the pancreas. Diseases of the peritoneum. Diseases of the respiratory system Diseases of the nose. Diseases of the larynx. Diseases of the bronchi Diseases of the lungs. Diseases of the mediastinum. Diseases of the diaphragm. Diseases of the kidneys. Diseases of the spleen and reticulo-endothelial system. Diseases of the blood. Diseases of the cardiovascular system: Diseases of the heart. Diseases of the peripheral vessels. Diseases of the ductless glands. Diseases of the thyroid gland. Diseases of the pituitary gland. Diseases of the adrenal glands. Diseases of the thymus gland. Diseases of the parathyroid glands. Diseases of the sex glands. Diseases of the locomotor system: Diseases of the muscles. Diseases of the joints. Diseases of the bones. Diseases of the nervous system: Important symptoms and signs. Diseases of the motor tracts. Hereditary familial and congenital diseases. Diseases of various etiology Diffuse and focal diseases of the spinal cord. Diffuse and focal diseases of the brain. Diseases of nerve roots, plexuses and nerves. Diseases of other roots and nerves. Vasomotor and trophic disorders. Psychosomatic medicine. The psychoneuroses. The psychoses. Appendix and index.

Note: (834) A leading American textbook on internal medicine. It is encyclopedic in coverage and is used both as a text in medical schools and as reference book by medical graduates. Most of the space is devoted to descriptions of individual diseases; and each disease is discussed as to definition, epidemiology etiology, bacteriology diagnosis, treatment, prognosis, and prophylaxis. The chapters are all signed with the names of eminent medical teachers and practitioners. The seventh edition was published in 1947 In preparing this edition 20 articles are added on diseases and aspects of diseases not previously covered. In addition, 65 articles were deleted and their places taken by new essays. Recent literature was added to the bibliographies.

CONN HOWARD FRANKLIN, editor

Current therapy 1952 latest approved methods of treatment for the practicing physician. Consulting editors M Edward Davis, Vincent J Derbes Garfield G. Duncan, Hugh J Jewett William J Kerr Perrin H. Long, H. Houston Merritt, Paul A. O'Leary Walter L Palmer Hobart A. Reimann Cyrus C. Sturgis, and Robert H. Williams. Philadelphia W B Saunders Company, 1952 849 p. illus. 27 cm. $11 00. 966

Contents (abridged) Section one, The infectious diseases. Section two, Diseases of the respiratory system. Section three, Diseases of the cardiovascular system. Section four Diseases of the blood and spleen. Section five, Diseases of the digestive system. Section six, Disorders of metabolism and nutrition. Section seven, Diseases of the endocrine system. Section eight, Diseases of the urogenital tract. Section nine, The venereal diseases. Section ten, The allergic diseases. Section eleven, Diseases of the skin. Section twelve, Diseases of the nervous system. Section thirteen, Diseases of the locomotor system. Section fourteen, Obstetric and gynecologic conditions. Section fifteen, Diseases due to physical and chemical agents. Section sixteen, Appendices and Index.

Note: An annual publication, in each volume of which eminent practitioners of medicine and other recognized authorities describe currently used methods of therapy in wide range of diseases. Some of the articles describe only one method of treatment; others describe several. Surgical techniques are not covered, but indications for surgical treatment are given and pre- and post-operative care are described. The book is valuable not only for its clear descriptions of reliable methods but also for its comparisons among therapeutic agents, for example para-aminobenzoic acid was found to be of some benefit, but with the advent of aureomycin and chloramphenicol (chloromycetin) in 1948 and terramycin in 1950, specific treatment for spotted fever was clearly demonstrated.

CORNELL CONFERENCES ON THERAPY [reports] Volume four Edited by Harry Gold, David P Barr Frank Glenn, McKeen Cattell, Walter Modell and George Reader New York The Macmillan Company 1951 342 p. 21 cm. $3.50. 967

Contents. Household poisonings. Treatment of diabetic emergencies. Therapeutic uses of gamma globulin. Treatment of cardiovascular syphilis Treatment of neurosyphilis. Management of dysmenorrhea. Management of myxedema. Treatment of cardiovascular manifestations of thyroid disorders. Management of disorders of cardiac rhythm. Medical management of hypertension. Treatment of painful disorders of skeletal muscle. Use of new antimicrobial agents in genito-urinary infections. Management of the menopause. Treatment of morphine addiction. List of conferences for volumes 1, 2, and 3.

—— Volume five. Edited by Harry Gold, David P Barr McKeen Cattell Frank C. Ferguson, Jr., Frank Glenn and George Reader New York The Macmillan Company 1952 295 p. 21 cm. $4.00 968

Contents: Treatment of cough. The management of fever. General indications for vitamin therapy Treatment of obesity *Low cholesterol* diet in the treatment of atherosclerosis. Use of sedatives and narcotics. Addiction as complication of the therapeutic use of drugs. Treatment of some chronic muscular diseases. Relief of pain by ethyl chloride spray *Use of curare and curare-like agents.* Problems in treatment of the atomic casualty Treatment of acute arterial occlusion. Treatment of carbon monoxide poisoning. Treatment of pneumonia. Treatment of bacterial meningitis. List of conferences for volumes 1, 2, 3, and 4.

Note ('46–'51) The volumes in this series contain edited stenographic reports of discussions held under the auspices of the Departments of Medicine and Pharmacology of Cornell University Medical College-New York Hospital. Participants in the conference include staff members of the college and hospital, pharmacists, visiting practitioners, and specialists. As might be expected, the style of presentation is informal. However the information presented is authoritative and of much current interest, especially to general practitioners.

HYMAN HAROLD THOMAS

An integrated practice of medicine. Progress volume Modern developments in therapeutics and methods of treatment Philadelphia W B Saunders Company, 1950. 4133–4867 p. 24 cm. $10.00. 969

Note. ('50) A supplement to the author's cyclopedia *Integrated practice of medicine.* Its purpose is to cover developments between the writing of that work (which was published in 1946) and some unspecified date in 1950. Topics are arranged alphabetically from actinomycosis to yellow fever and references are given to the pages of the original work, to which the new material is related. The volume contains both the general indexes to the main work and an index to the *Progress* volume itself.

MAYO CLINIC ROCHESTER, MINNESOTA

Collected papers of the Mayo Clinic and the Mayo Foundation. Volume 43 1951 published June, 1952 Philadelphia. W B Saunders Company 1952 833 p. illus. 24 cm. $12.00 970

Contents (abridged). Alimentary tract. Genito-urinary diseases. Ductless glands. Blood and circulatory organs. Skin and syphilis. Head, trunk and extremities. Chest. Brain, spinal cord and nerves. Radiology *Physical medicine and rehabilitation. Anesthesia,* gas and intravenous therapy Miscellaneous. Index of contributors. Index of subjects.

Note ('40–'52) The 43rd in series of annual volumes designed to make generally available reports on advances in medicine which have taken place at the *Mayo Clinic* and *Mayo Foundation.* Many papers are given in full, some in shortened form or in abstract, and still others only by title, but in every case reference is given to the original reading or publication of the paper. Of interest to workers in all branches of medical science.

MEAKINS, JONATHAN CAMPBELL

The practice of medicine. Fifth edition with 518 illustrations including 50 in color St. Louis The C V Mosby Company 1950. 1558 p. illus. (part col'd) 26 cm. $13.50 971

Contents. An introduction to the practice of medicine. Diseases of the nasopharynx and mouth. Specific infections of the nasopharynx and mouth. Diseases of the larynx and bronchial system. Diseases of the lungs. Diseases of the circulatory system. Diseases of the serous membranes, mediastinum and diaphragm. Diseases of the hematopoietic system. Diseases of the gastrointestinal tract. Diseases of the liver and bile passages. Diseases of nutrition. Diseases of metabolism. Diseases of the ductless glands. Diseases of the nervous system. Psychosomatic medicine. Diseases of the locomotor system. Diseases of the urinary system. Infectious diseases. Chemotherapy and antibiotics. Diseases due to allergy Diseases due to abnormal environments. Diseases due to chemicals and drugs. Index.

Note: A standard medical college textbook in which the whole field of clinical medicine is covered from the standpoint of the general practitioner. *Diagnosis and treatment are emphasized.* All but small portion of the space is devoted to descriptions of diseases. In these descriptions, diagnosis, prognosis, and treatment are emphasized; and there is relatively little material on etiology and pathology. The fourth edition was published in 1944. The major changes in this edition consist of new chapter on psychosomatic medicine in place of the former chapter on psychiatry and new chapter on chemotherapy and the antibiotics. Revisions have been made in many of the other chapters and selection of the literature published since 1944 has been added to the lists of references.

MONOGRAPHS IN MEDICINE. Series I. Editor William B Bean. Associate editors, Morton Hamburger John A. Leutscher Jr., and Stewart Wolf Baltimore The Williams & Wilkins Company, 1952 655 p. illus. 24 cm. $12.00 972

Contents: Talking with the patient, by S. Wolf. Precordial noises heard at distance from the chest, by W. B. Bean. Physiology of the body fluids, by W W Wallace. Angiocardiography, by C. T. Dotter and I Steinberg. Portal hypertension, by M. A. Payne and C. G. Child, 3d. Pheochromocytoma, by H. Anner Jr. Respiratory failure in neuromuscular disorders, by F. Plum. Cortisone and ACTH in infectious processes, by M. Michael, Jr. Prevention of rheumatic fever by C. H. Rammelkamp, Jr., and F W Denny Amebiasis, by H. E. Hamilton. The present status of the chemotherapy of human malaria, by L. H. Schmidt. The mosquito, arthropod borne, virus encephalitides, by R. W Schlesinger. Sickle cell anemia, by R. S. Lowell and W A. MacDonald. The growth and maturation of the erythrocyte, by R. W Vilter and J. F Mueller. *Chemical agents used in the treatment of inoperable and far advanced neoplastic disease,* by D. A. Karnofsky. Index.

Note The first volume in new series which has as its purpose the publication of short monographs on medical topics and topics allied to medicine. The monographs are addressed to medical practitioners rather than to students; and, as the titles indicate, they are not confined to any one branch of medicine. Although based on the literature and accompanied by substantial bibliographies, they are more than mere literature digests. The average length is 40 pages.

MUSSER, JOHN HERR, AND MICHAEL G WOHL, editors

Internal medicine its theory and practice. *Originally edited by John H. Musser* Fifth edition edited by Michael G Wohl. With 80 contributors, 236 illustrations and 10 colored plates. Philadelphia Lea & Febiger, 1951 1563 p. illus. 27 cm. $15.00. 973

Contents. Part I, Infectious diseases: Some aspects of infection and resistance, by P R. Cannon. The viral diseases, by C. Wenckebach. The rickettsial diseases, by H. Plotz. Diseases due to spirochetes, by J A. Kolmer. The bacillary diseases, by L Felsen. The coccal diseases, by R. A. Kinsella. The contagious diseases of childhood, by F F Lenhard and A. C. La Boccetta. The protozoan diseases, by C F Craig. The metazoan diseases, by E. C. Faust. Fungous infections or mycoses, by H. F Conant. Principles of antimicrobial therapy by H. F Flippin. Diseases of doubtful etiology, by F F Rosenthal and others. Part II, Diseases due to physical and chemical agents: Diseases due to physical and toxic agents, by D. P Barr. Diseases due to chemical agents, by M. C. Fiorello and R. S. Fisher. Part III, Diseases of nutrition ... glands General considerations, by P Gyorgy Diseases of nutrition, by M. G. Wohl and others. Diseases of metabolism, by J. H. Talbott and others. Diseases of the endocrine glands, by M. G. Wohl and others. Part IV Diseases of allergy and collagen diseases: Diseases of allergy by R. A. Cooke and others. Collagen diseases, by M. G. Wohl and others. Part Systemic diseases: Genetics and medical practice, by L. H. Snyder. Psychosomatic aspects of medical practice, by E. Weiss. Diseases of the heart, by S. Bellet and others. Diseases of the respiratory tract, by I. W Pinkerton and others. Diseases of the kidneys, by L. Leiter. Diseases of blood vessels and lymph vessels and abnormalities of blood pressure, by I. S. Wright and C. D. Murphy. Diseases of the blood, by C. C. Sturgis. Diseases of the spleen and the reticulo-endothelial system, by E B. Krumbhaar and R. P Custer. Diseases of the alimentary tract, by C. M. Jones. Diseases of the locomotor system, by S. R. Mettier Part Care of the aged and rehabilitation: The care of

the aged, by E. A. Kern. Medical practice and rehabilitation, by H. A. Rusk. Part VI, Diseases of the nervous system. Diseases and abnormalities of the mind including the neuroses, by E. A. Strecker and M. M. Pearson. Organic diseases of the nervous system, by G. Wilson and others. Index.

Note. (843) A standard textbook and reference manual which is outstanding for its comprehensiveness. Most of the authors of the various chapters are professors on the faculties of leading medical schools in the United States of America. The fourth edition, the last one edited by the late Professor John H. Musser was published in 1945. Although the length of the book has been increased by only about 30 pages in this edition, the work has been extensively revised and several chapters have been added. The subject index is very detailed.

REHFUSS MARTIN EMIL, AND ALISON HOWE PRICE

A course in practical therapeutics. Second edition. Baltimore The Williams & Wilkins Company 1951 938 p illus. (part col d) 29 cm. $15 00 974

Contents (abridged) Section I, General therapeutic principles: Diagnostic survey Adjustment of the patient. Prescription writing. Dietary principles. Nursing problems of interest to the physician. Contents of the physician's bag. Section II, Symptomatic therapy Section III, Treatment of specific disorders: Vitamin deficiency states and nutritional disorders. Digestive tract disorders. Diseases of blood and blood-forming organs. Diseases of the heart. Diseases of the kidneys. Venereal diseases. Respiratory diseases. Arthritis. Allergic disorders. Physical agents and poisons. Chemotherapy Infectious diseases. Systemic mycoses. Endocrine disorders. Section IV Special treatment Ocular therapeutics. Nasal therapeutics. Otological therapeutics. Dermatological therapeutics. Psychotherapy Industrial therapeutics. Oxygen therapy Radioactive isotopes Physical medicine. Pediatric therapeutics. Prophylactic medicine. Atomic warfare. Index.

Note (845*) A comprehensive, well-organized work which was originally developed from material used in instructing medical students in the two-year course in practical therapeutics in Jefferson Medical College in Philadelphia. In addition to its use as text, it is used as an office reference book by general practitioners of medicine. Only portion of the contents is indicated above. In the second section, for instance, 35 kinds of disorders are discussed. Under infectious diseases all of the diseases likely to be encountered in general practice are covered In the present edition many new drugs that have won recognition since the first edition was written are included The illustrations again include many large-scale reproductions of drawings which show reference points in diagnosis and therapeutic techniques.

YATER WALLACE MASON

Fundamentals of internal medicine. Third edition. New York Appleton-Century-Crofts, Inc., 1949 1451 p. 25 cm. $12 00 975

Contents. Diseases of the heart. Diseases of the blood vessels. Diseases of the kidneys. Diseases of the blood and blood-forming organs. Diseases of the respiratory system. Diseases of the digestive system, by W M. Yater Diseases of the locomotor system. Diseases of the endocrine glands, by E. J. Kepler and F R. Keating, Jr Diseases of the spleen and reticulo-endothelial system. Diseases of metabolism. Diseases of allergy by W M. Yater and G. T Brown. Diseases due to intoxications, by S. M. Rosenthal and W M. Yater Diseases due to physical agents, by S. M. Rosenthal and J. C. Adams. Diseases due to vitamin deficiency and malnutrition, by W H. Sebrell and W M. Yater The infectious diseases. Diseases of the nervous system, by A Schneider and J M. Williams. Mental diseases, by A. Schneider and L Roche Diseases of the skin, by W O. Teichmann Diseases of the ear by F C. Schreiber. Diseases of the eye, by E. J. Cummings. Dietetics. Chemotherapy and therapy with antibiotics, by H. L. Hirsh Symptomatic and supportive treatment, by H. H. Hussey Inhalational therapy by P F Jaquet. Clinical values and useful tables. The physician himself. Index.

Note. (2047) A standard introduction to this field, used chiefly as text for medical college students, but valuable also as reference book to general practitioners of medicine and specialists in fields other than internal medicine. As indicated in the table of contents, many of the chapters were contributed by specialists other than the author. (When no author's name appears in the above table of contents, the chapter was written by Dr Yater himself) The second edition was published in 1944. Much new material was added in preparing this edition and some of the material carried over has been revised. There are now 315 figures as compared to 275 and 1451 pages as compared to 1204. When used as reference book those sections which deal with areas of medicine in which advances are rapid—for instance, chemotherapy—must be supplemented by annual review volumes and periodical literature.

YEAR BOOK OF MEDICINE

The 1952 year book *of* medicine (May, 1951–May, 1952) Edited by Paul B Beeson, J Burns Amberson, William B Castle, Tinsley R. Harrison, George B Eusterman, Robert H. Williams. Chicago The Year Book Publishers, Inc., 1952 735 p. illus. 20 cm. $6 00 976

Contents: Part I, Infections, by P B. Beeson. Part II, The chest, by J. B. Amberson. Part III, The blood and blood-forming organs, by W B Castle. Part IV The heart and blood vessels and the kidney by T R. Harrison. Part The digestive system, by G. B. Eusterman. Part VI, Metabolism, by R. H. Williams. Index. Index to authors.

Note: (846) As in the other volumes in this useful series, the chapters in this one are made up of fairly long abstracts of articles selected from the world's medical periodicals and published during the period indicated in the title. A reference to the original publication is always given. In many instances there is short note by the editor in which the findings of the original author are evaluated or are related to other knowledge or publications in the same area.

CLINICAL MEDICINE

BRAY WILLIAM EDWARD

Clinical laboratory methods. Fourth edition. With 119 text illustrations and 18 color plates. St. Louis The C. V Mosby Company 1951 614 p. illus. (part col d) 22 cm. $7.25 977

Contents: General rules—laboratory examinations of value in various cases. Urinalysis. Hematology Blood chemistry Gastric analysis. Feces and intestinal parasites. Puncture fluid examinations—cerebrospinal fluid examination. Sputum. Bacteriology Mycology. Water and milk examinations. Serology Basal metabolism tests. Allergy tests. Poisons and foreign substances. Surgical pathology Indicators, stains and staining solutions, reagents, renewal of laboratory stains, atomic weights, table of equivalents, table of [illegible]. Index.

Note: (2031a) A long-established reference book addressed to medical college students and clinical laboratory technicians. In it accepted procedures are described step by step and in detail with special reference to such matters as collecting of specimens, clinical and microscopical examinations, staining techniques and special points such as precautions, useful variations in procedures, etc. Literature references are included for many of the methods. The third edition entitled *Synopsis of clinical laboratory methods* was published in 1944. Although much of the content of the fourth edition is identical with that of the third, considerable range of material has been added nevertheless. Also, some outdated material has been deleted.

CANTAROW, ABRAHAM, AND MAX TRUMPER

Clinical biochemistry Fourth edition. Philadelphia W B Saunders Company, 1949 642 p. illus. 24 cm. $8.00 978

Contents: Carbohydrate metabolism. Protein metabolism. Lipid metabolism Calcium metabolism. Inorganic phosphorus metabolism. Phosphatase activity Magnesium metabolism. Metabolism of iron. Sulfur metabolism. Iodine metabolism. Sodium, potassium and chloride metabolism. Water balance. Acid-base balance. Respiratory exchange and basal metabolism. Vitamins. Diabetes mellitus. Renal function. Nephrosis. Hepatic function. Chemical investigation of gastric function. Pancreatic function. Cerebrospinal fluid. Biochemical changes in pregnancy and lactation. Hormone assay and endocrine function, by A. E. Rakoff. Outline of chemical abnormalities in various disorders. Index.

Note (849*) A standard survey of the biochemical knowledge which has significance in clinical medicine. It is designed both for use as medical college textbook and as reference guide to the literature of the field. Correlations between biochemical knowledge and clinical implications are made as direct as possible, but the treatment is from the viewpoint of the medical clinician rather than the biochemist. The third edition appeared in 1943. Important

revisions and additions were made in preparing this edition. Sections on renal and respiratory regulation of acid-base balance, thyroid function, adrenal function, chemical changes in shock are some of those affected. On the other hand, considerable number of the chapters have not been revised at all.

CONSOLAZIO C FRANK AND OTHERS

Metabolic methods clinical procedures in the study of metabolic functions, by C. Frank Consolazio, Robert E. Johnson and Evelyn Marek. With 65 figures 32 tables and 2 charts. St. Louis The C. V Mosby Company 1951 471 p. illus. 26 cm. $6.75 979

Contents (abridged) Section I, Introduction. Section II, The collection and storage of specimens. Section III, Instrumentation. Section IV, Biochemical procedures. Section Microbiological procedures. Section VI, Physiological measurements. Section VII, Studies in the field. Section VIII, Techniques for metabolic wards. Section IX, Clinical laboratory procedures. Section X, Statistical methods. Section XI, Miscellaneous data. Index.

Note Only procedures which the authors have themselves used are described in this book. Although wide range of procedures is presented, the collection is nevertheless selective ones chosen for simplicity and reliability Isotopic ultracentrifuge and electrophoretic techniques are not covered. The greater part of the space is given to sections four through seven. In these parts the descriptions of individual techniques are organized under the following subheadings: (1) literature references, (2) principles, (3) apparatus, (4) reagents, (5) concise description of procedure, (6) general equation for calculating the results, (7) precautions. In addition to one or more literature references for each method, there are general references for each section.

GOODALE RAYMOND HAMILTON

Clinical interpretation of laboratory tests. Second edition. 107 illustrations—3 in color Philadelphia F A. Davis Company 1952 605 p. illus. (part col d) 24 cm. $6.50. 980

Contents (abridged) Part 1 Body fluids, secreta, and functional tests: Hematology Blood chemistry Serology Urine. Gastric and duodenal contents. Cerebrospinal fluid. Sputum. Feces. Transudates and exudates. Spermatozoa. Basal metabolic rate. Tests for liver and biliary function. Bacteriological examinations. Rickettsiae and viruses. Mycological examinations. Skin tests. Toxicologic examinations. Part 2 Diseases with associated laboratory findings: The blood and hematopoietic organs. The respiratory system. Gastrointestinal tract and pancreas. Liver and biliary tract. The genitourinary system. Endocrine glands Central nervous system. Bacteriological diseases. Vitamin deficiency Metabolic disorders. Index.

Note A reference manual of specific information about diseases in the diagnosis of which laboratory tests are useful and about the procedures and interpretations of the results of diagnostic laboratory tests. Somewhat more space is given to background information than to actual technical procedures. Literature references are included. The book is useful to general practitioners of medicine, clinicians, and hospital laboratory technicians. The first edition was published in 1949

HEPLER, OPAL E

Manual of clinical laboratory methods. Fourth edition, revised third printing. With a foreword by James P Simonds Springfield, Illinois Charles C Thomas 1951 387 p. illus 28 cm. $9 50 981

Contents: Urinalysis. Hematology Gastric and duodenal contents. Liver function tests Feces Sputum. Cerebrospinal fluid. Body fluids. Pregnancy tests. Bacteriology Mycology Serology Blood groups. Clinical chemistry Allergy extracts. Tissue sectioning. Basal metabolism. Electrocardiography Solutions used in routine tests. Index.

Note A standard reference book of methods useful in hospital and other laboratories where clinical tests are made. Although in most instances only one method for particular determination is described, wide range of tests is covered. Procedures are detailed specifically usually in numbered steps. However the interpretation of results is not covered. More than 30 tables of reference data are included. The book was developed originally for use by medical students in the Medical School of Northwestern University but it is suitable also for the guidance of laboratory technicians who are not medical graduates. The first three editions were not published commercially

KOLMER, JOHN ALBERT

Clinical diagnosis by laboratory examinations. Second edition. New York Appleton Century Crofts, Inc. 1949 1212 p. illus. 25 cm. $12 00 982

Contents (abridged) Part one, The clinical interpretation of laboratory examinations: Blood examinations. Urine examinations. Blood chemistry examinations. Glucose tolerance tests. Kidney function tests. The basal metabolic rate and the iodine tolerance test. Toxicologic examinations. Liver function tests and examinations of the bile. Examination of the saliva and sputum. Examinations of the stomach, duodenal contents and pancreas function tests. Parasitologic examinations. Cerebrospinal fluid examinations. Bacteriologic examinations. Mycologic examinations. Serologic examinations. Immunologic and allergic skin tests. Examinations for hormones and vitamins. Part two, The practical applications of laboratory examinations in clinical diagnosis Diseases of the blood and hemopoietic system. Diseases of the kidneys and urinary system. The venereal diseases. Diseases of the stomach, intestines and pancreas. Diseases of the liver and biliary tract. Diseases of the cardiovascular system. Diseases of the respiratory tract. Diseases of metabolism. Diseases of vitamin deficiency Diseases of the endocrine glands. Part three, Technic of laboratory examinations: Blood examinations. Urine examinations. Blood chemistry examinations. Functional examinations. Examinations of gastric contents. Feces examinations. Spinal fluid examinations. Bacteriologic examinations. Serologic examinations. Index.

Note: (2059) A comprehensive work on the use of laboratory tests and findings in the diagnosis of disease. The first part—in which diseases are covered by classes and individually—is 616 pages long in this edition. The second part also is addressed to the clinician rather than the laboratory technician and it occupies an additional 330 pages. The third part on the techniques of the laboratory is useful but relatively minor section. The book is very useful as complementary work to standard texts on internal medicine, because of its particular emphasis on laboratory diagnosis. The first edition was published in 1944. Fairly extensive revisions were made in preparing this edition.

KOLMER, JOHN ALBERT AND OTHERS

Approved laboratory technic. By John A. Kolmer Earle H. Spaulding and Howard W Robinson. Fifth edition with 403 illustrations and 28 color plates. New York Appleton-Century-Crofts, Inc., 1951 1180 p illus. (part col d) 25 cm. $12.00 983

Contents (abridged) Part One, General laboratory methods: The microscope and methods of microscopy Diseases of animals and methods for the care, inoculation and bleeding of animals. Part Two, Clinical pathologic methods: Methods for the examination of the blood, by C. J. D. Zarafonetis. Methods for conducting kidney function tests. Methods for the examination of stomach contents. Methods for conducting liver function tests. Methods for conducting pancreas function tests. Methods for the examination of cerebrospinal fluid. Methods for the examination of the blood and urine for hormones. Part Three, Bacteriologic, mycologic and virologic methods: Methods for the collection and handling of specimens. Methods for the preparation of culture media. Diagnostic bacteriologic methods. Methods for the preparation of bacterial vaccines. Methods for testing disinfectants. Diagnostic mycologic methods. Part Four, Parasitologic methods. Part Five, Serologic methods: Methods for the preparation and preservation of plasma and serum. Methods of conducting hemagglutination and blood grouping tests, by L. Davidsohn. Methods for conducting immunologic and allergic skin tests. Part Six, Chemical methods Colorimetric methods. Methods for the preparation of standard volumetric solutions. Determination of basal metabolic rate. Methods for chemical examinations of milk and diabetic foods. Methods for toxicologic examinations Part Seven, Pathologic methods Appendix. Index

Note: (2064) A comprehensive manual of medical laboratory methods of proved value. It contains wide range of information on equipment, care of laboratory animals, laboratory methods of various kinds, and the prevention and emergency treatment of laboratory accidents. In its present edition the work has been very extensively revised. Many new methods have been added. The

authors are members of the faculty of Temple University School of Medicine.

LEVINSON, SAMUEL AZOR, AND ROBERT P MACFATE

Clinical laboratory diagnosis. Fourth edition, thoroughly revised, with 221 illustrations and 13 plates 10 in color Philadelphia Lea & Febiger 1951 1146 p. illus. (part col'd) 24 cm. $12.00 984

Contents: The mouth. The stomach. The duodenum and related organs. The intestine. Metabolism. Chemical analysis of the blood. The kidneys. Chemical analysis of the urine. Hematology Immunology and serology Cerebrospinal fluid. Transudates and exudates. General bacteriology The sputum. Skin tests and other biologic examinations. Laboratory methods in pediatric procedures. Tropical diseases. Milk and water analysis. Histologic technic. Legal medicine and toxicology Appendix. Index.

Note: (853) A standard work, outstanding for its comprehensiveness and its detailed descriptions of laboratory procedures. It is based on the methods currently used in the laboratories of the University of Illinois Research and Educational Hospitals. This fourth edition is considerably larger than the previous ones, although the general plan has not been changed. The chapter on hematology and the section on toxicology have been entirely rewritten, and important revisions made in other parts of the book. There are also more illustrations and references to the recent literature have been added.

LOW BEER, BERTRAM V A.

The clinical use of radioactive isotopes. Springfield, Illinois Charles C Thomas 1950 414 p. illus. (part col d) 24 cm. $10.50 985

Contents. Part I, Physics: The physical nature of the atom. Mass, energy and charge relations of atoms. Radioactivity Detection and measurement of radioactivity Radioactivity units and standards. Safeguards against hazards in the use of radioisotopes. Bibliography of part I. References for part Part II, Clinical applications: Clinical investigations with radioactive isotopes. Dosage determinations with radioactive isotopes. Radioisotope therapy Bibliography of part II. References for part II. Appendixes. Index.

Note: This textbook is introductory in the sense that no previous acquaintance with the principles of radioactivity on the part of the reader has been assumed. On the other hand, the medical terminology employed makes it useful only to advanced students of medicine, medical practitioners, and other persons familiar with clinical terminology and techniques. The first part, which accounts for approximately one-third of the text, is devoted to the physics and other background aspects. The second part contains specific information on clinical applications. The book is based largely on literature survey and list of references included contains 317 citations. There are 58 figures, several of which are colored. The author is Associate Professor of Radiology in the Medical School of the University of California.

MERCK AND COMPANY INC

The Merck manual of diagnosis and therapy a source of ready reference for the physician. Eighth edition. Rahway N J Merck & Co. Inc. 1950 1592 p. 18 cm. $5.00 986

Contents: Part I. Allergy Blood and lymphatic. Cardiovascular. Deficiency and metabolic. Dental and oral. Ear, nose and throat. Endocrine. Eye. Gastrointestinal. Genitourinary Gynecologic and obstetric. Infectious and parasitic. Liver and biliary Musculoskeletal. Nervous system. Neuropsychiatric and psychosomatic. Physical and chemical. Respiratory Skin and connective tissue. Venereal. Part II. Routine immunization procedures. Clinical procedures. Bedside procedures. Preoperative and postoperative routines. Diets. Office laboratory procedures. The physician bag Alternative proprietary preparations. Ready reference guides. Part III. Index.

Note. A long-established manual of quick reference for general practitioners. Diagnosis and treatment are emphasized. Surgical procedures are not covered. Most of the concise monographs under specific diseases are organized under the following headings: etiology and pathogenesis, symptoms and signs, laboratory findings, treatment. Prescriptions for medicine are included. The present edition represents complete revising and major expansion of preceding editions.

NEW YORK ACADEMY OF MEDICINE. SECTION ON MICROBIOLOGY

Diagnosis of viral and rickettsial infections. Symposium held at the New York Academy of Medicine, January 29 and 30, 1948 Edited by Frank L. Horsfall, Jr New York Columbia University Press 1949 153 p. illus. 24 cm. $3 75 987

Contents: Introduction, by F L. Horsfall, Jr Laboratory diagnostic procedures for influenza, by G. K. Hirst. The diagnosis of mumps, by G. Henle and W Henle. The diagnosis of infections caused by the psittacosis-lymphogranuloma group of viruses, including trachoma and inclusion blennorrhea, by G. Rake. The diagnosis of primary atypical pneumonia, by F L. Horsfall, Jr. The diagnosis of neurotropic virus infections, including the viral encephalitides, lymphocytic choriomeningitis, and poliomyelitis, by J. Casals and P K. Olitsky The diagnosis of infection with the virus of herpes simplex, by T F M. Scott and others. The diagnosis of rabies, by H. N Johnson. The diagnosis of dengue, by R. W Schlesinger. The diagnosis of infectious mononucleosis, by J. R. Paul. The diagnosis of epidemic, murine, and scrub typhus, as well as Q fever, by J. E. Smadel. The diagnosis of Rocky Mountain spotted fever and rickettsialpox, by H. R. Cox. The diagnosis of infectious hepatitis, by W P Havens, Jr.

Note. A collection of original papers presented on the occasion mentioned in the book's title. Many of the authors have themselves made contributions to the knowledge of viral and rickettsial infections and some of the information included has not been previously published. The lectures were intended for practitioners of medicine and other graduate scientists with professional interests in the subject. Each paper is accompanied by list of literature references, but there are no indexes.

SUNDERMAN FREDERICK WILLIAM, AND FREDERICK BOERNER

Normal values in clinical medicine. Philadelphia W B Saunders Company 1950. 845 p. illus. (part col d) 26 cm. $15.00. 988

Contents (abridged) Section I, Circulatory system (normal values in cardiology) Electrocardiogram. Roentgen cardiac mensuration. Circulation time. Blood pressure. Section III, Chemical components and physical properties of blood (normal values in blood, extracellular fluids and lymph) Protein and nonprotein components of blood plasma. Blood sugar. Lipids. Hemoglobin, porphyrins and related compounds. Blood vitamins. Body fluids. The lymph. Enzymes and miscellaneous constituents of the blood. Section Digestive system (normal values in gastroenterology) The esophagus and stomach. The small intestine. The colon. The liver The gallbladder. The pancreas. Section VI, The nervous system (normal values in neurology) Encephalogram. The cerebrospinal fluid. Section Endocrines (normal values in endocrinology) Androgens and 17-ketosteroids. Estrogens. Progesterone. Gonadotrophic hormones. Section XVIII, Teeth and saliva (normal values in dentistry) Formation and eruption of teeth. Chemistry of teeth. Relative hardness of teeth. Section XIX, Miscellaneous data Statistical methods. Food values. Drugs and their doses. Isotopes. Life and actuarial tables. Appendix: Tables of weights, measures and standards Index.

Note A reference book of wide scope. There are 400 tables, some of which are several pages in length, and 137 figures. These compact presentations of data are supplemented by considerable verbal discussion. Some sections, for instance the chapter on normal body temperature, consist entirely of verbal discussion and literature references. Both the discussions and the tabulated data have been selected chiefly from published literature to which references are carefully given. In selecting the material the authors had the assistance and advice of an impressive group of collaborators.

DIAGNOSIS

BRUST, RAYMOND W

Physical diagnosis. Introduction by Truman G Schnabel. New York Appleton-Century-Crofts Inc., 1951 294 p. illus. 22 cm. $5 00 989

Contents (abridged) Part one, Orientation. Part two, The body in general. Part three, The pulmonary system. Part four The cardio-

vascular system. *Part five, The gastrointestinal system. Part six,* The nervous system. Index.

Note: A concise text on diagnostic techniques such as can be carried out in the physician's office without resort to laboratory tests. The discussions are direct and specific. The material is arranged logically and liberal use has been made of paragraphs and subtitles to facilitate rapid study and reference use. There are 60 illustrations. The author is member of the faculty of the Medical School of the University of Pennsylvania.

KAMPMEIER, RUDOLPH HERMAN

Physical examination in health and disease. With 550 illustrations 1 in color Philadelphia F A. Davis Company 1950 821 p. illus. (part col d) 24 cm. $8.00 990

Contents (abridged) The case history The body in action, by W F Orr. The general survey The head. The neck. The breast. The chest. The heart and blood vessels. The abdomen. The genitalia, perineum, anus, rectum. Musculoskeletal system and extremities. Index.

Note: A textbook for use in first courses in the subject in medical colleges. The separation of normal and abnormal conditions into separate chapters is feature that facilitates study Also, the textual discussions are shorter and more explicit than in some of the older, more voluminous texts. A majority of the illustrations are reproductions of photographs. The author is member of the faculty of the Vanderbilt University School of Medicine.

LEOPOLD SIMON STEIN

The principles and methods of physical diagnosis correlation of physical signs with physiologic and pathologic changes in disease. 390 illustrations with 19 color plates. Philadelphia W B Saunders Company 1952 430 p. illus. (part col d) 24 cm. $7.50 991

Contents: Routine data. Examination of the head. Examination of the neck. Examination of the musculoskeletal system. Examination of the breasts. Sounds from the thorax—acoustic principles (by R. R. Warren, Jr.) Examination of the chest. Palpation of the chest. Percussion of the chest. Auscultation of the chest. Physical signs in certain diseases of the lungs and pleura—correlative data. Examination of the circulatory system. Physical signs in certain diseases of the heart and great vessels—correlative data. Examination of the abdomen. The gynecologic examination. Examination of the male genitalia, and of the anus, rectum and rectosigmoid colon. Examination of the extremities. Neurologic examination. Psychiatric survey The history Index

Note: A medical college textbook in which the underlying principles and the basic routine of physical diagnosis are emphasized rather than clinical manifestations of disease. A concise, clearly written text is supplemented by high number of illustrations, many of which are reproductions of photographs. The author is Associate Professor of Clinical Medicine at the School of Medicine of the University of Pennsylvania.

MACBRYDE, CYRIL MITCHELL, editor

Signs and symptoms applied pathologic physiology and clinical interpretation Second edition. With 98 illustrations, 50 charts and 8 color plates. Philadelphia J B Lippincott Company 1952 783 p. illus. (part col d) 24 cm. $10.00 992

Contents: Introduction, by C M. MacBryde. Pain, by C. M. MacBryde. Headache, by H. G. Wolff. Sore tongue and sore mouth, by R. W Vilter. Thoracic pain, by J. R. Smith and R. Paine. Abdominal pain, by S. M. Jordan Backache and back pain, by R. H. Freyberg Joint pain, by R. H Freyberg. Pain in the extremities, by R. D. Williams Clubbed fingers and hypertrophic osteoarthropathy by E. S. Lipman and E. Massie. Palpitation and tachycardia, by E. Massie. Cough, by D. M. Skilling, Jr. Hemoptysis, by D. M. Skilling, Jr. Dyspnea, by D P Barr. Cyanosis, by D. P Barr Anorexia, nausea and vomiting, by J L. Horner. Constipation and diarrhea, by J L. Horner Hematemesis and melena, by L. Schiff. Jaundice, by S A. Portis. Nervousness and fatigue, by E. F Gildea. Fever, by P B Beeson. Disturbances of consciousness and of muscle movement, by W G. Lennox. Fainting, by R. A. Bleed, Jr Vertigo and deafness, by H. H Hyland. Dehydration, by C. M. MacBryde. Edema, by H. A. Schroeder. Obesity by C. M. MacBryde. Weight loss and undernutrition, by C. M. MacBryde. Pathologic bleeding, by B. Alexander. Pigmentation of the skin, by H. Jeghers and E. A. Edwards. Itching (pruritus) by S. Rothman and A. L. Shapiro. Index.

Note (338*) A textbook and practical guide to physical diagnosis in medicine. It is composed of series of original monographs hich deal separately with the interpretation of various classes or types of pain and other symptoms and signs. The discussions are systematic and concise. Each chapter is accompanied by selected bibliography of literature in hich fuller discussions of particular points are to be found. The first edition appeared in 1947 In this edition four new chapters have been added, and many of the chapters carried over have been extensively revised and extended.

TASSMAN, ISAAC SAMUEL

The eye manifestations of internal diseases (medical ophthalmology) Third edition. With 279 illustrations including 25 in color St. Louis The C. V Mosby Company 1951 672 p. illus. (part col d) 25 cm. $12.50 993

Contents: Normal structure of the eye and orbit. The general causes of eye manifestations. The examination of the patient. Structural abnormalities and manifestations. Congenital and hereditary eye manifestations. Infections and infectious diseases. Tuberculosis. Virus and related infections. Fungus infections. Ocular parasites and parasitic infections. Focal infections. Drug and chemical intoxications. *Diseases of the cardiovascular system.* Diseases of the blood. Disorders of menstruation and pregnancy Diseases of the endocrine glands and metabolism. Avitaminoses and diseases of nutrition. Diseases of the nervous system. Intracranial tumors. Diseases of the skin. Diseases of bones of the skull and orbit. Index.

Note. (341) The primary purpose of this treatise prepared for the ophthalmologist as well as for practitioners in other medical fields is to facilitate diagnosis of the very large number of conditions in hich the eye may be involved. Preliminary chapters on anatomy and diagnostic examinations of patients are followed by chapters containing specific and detailed descriptions of eye abnormalities and signs which may be seen in examination of the eye. The greater part of the work is concerned with eye conditions in systemic diseases. There are no notable changes in the overall plan of the third edition in comparison to the preceding edition. However, the length of the book has been substantially increased by the addition of new material on retrolental fibroplasia, Harada's disease, Behcet's syndrome, rubella, acute anterior poliomyelitis, Hutchinson's syndrome, and other diseases. The discussion of glaucoma has been completely rewritten. Additions have been made to the bibliographies and to the illustrations.

WALKER, HARRY

Physical diagnosis. With 126 illustrations. St. Louis The C. V Mosby Company 1952 461 p. illus. 26 cm. $8.00 994

Contents (abridged) Physical diagnosis. Diseases of the respiratory system, by E. S. Ray. Diseases of the circulatory system, by R. R. Porter. Index.

Note A textbook for use in medical colleges. The author emphasizes that physical examination is still the foundation for diagnosis. He states when the physical examination is well done, the next step in determining the diagnosis can be taken with more logic and the diagnosis can be arrived at in more direct manner. The more one knows about physical diagnosis, the better diagnostician he is certain to be. The first section of the book is divided into 16 chapters, most of which deal with the examination of characteristics such as build, or regions such as the thorax. In this section the chapter on the abdomen was written by H. C. Lacy the chapter on diagnosis of female pelvic disease was written by E. H. Hagey that on neurologic examination by R. A. Adams and the chapter on psychiatric examination by P H. Drewry Jr. Section three also contains ten chapters on such topics as the diagnosis of the abnormalities of the heart beat and the diseases of the pericardium. Throughout the book the examination techniques are described step by step and the significance of physical signs is indicated.

PATHOLOGY

APPERLY FRANK LONGSTAFF

Patterns of disease on a basis of physiologic pathology 50 figures and 37 charts. Philadelphia J B Lippincott Company, 1951 456 p. illus. 24 cm. $8 00. 995

Contents. Life and disease. Pathology the science of disease. The passive changes in disease—nutrition and its disturbances—disturbances of the peripheral circulation. The reactive changes to injury—the local reaction—inflammation—the general reaction—leukocytosis, fever and antibodies—the local reaction—repair. Infection and resistance. Some special types of inflammation—the reaction to certain other living forms. Pigmentation and certain degenerations. Hypertrophy and hyperplasia. Tumors. Cysts. Diseases of the cardiovascular system. Diseases of blood and the organs of blood formation. Diseases of the urinary system. Diseases of the respiratory system. Diseases of the gastro-intestinal tract and the peritoneum. Diseases of the liver and the gallbladder. Diseases of the pancreas. Diseases of the female reproductive organs. Diseases of the breast. Diseases of the male reproductive organs. Diseases of the cerebrospinal system. Diseases of the ductless glands. Diseases of the locomotor system. Disease and the race. Index.

Note: An unconventional but useful presentation of pathology. The detailed descriptions of diseased tissues and the numerous illustrations that are feature of most texts on pathology are largely lacking. The author has devoted his attention to the beginnings and progressions of diseases and to the compensatory mechanisms set into action by the body. Descriptions of specific diseases and pathological conditions are short but are cast in style that is easy to read. The author is Professor of Pathology at the Medical College of Virginia.

Bell, Elexious Thompson

A text-book of pathology by E. T. Bell. Contributors B. J. Clawson and J. S. McCartney. Seventh edition enlarged and thoroughly revised with 529 illustrations and 5 color plates. Philadelphia Lea & Febiger 1952 1008 p. illus. (part col'd) 24 cm. $12.00 996

Contents: Introduction. Predisposition to disease. Mechanical injuries. Injuries due to physical agents. Injuries due to chemical agents. Diseases due to deficiency of vitamins. Circulatory disturbances. Retrogressive tissue changes. Inflammation. Tuberculosis. The venereal diseases. Other chronic infectious diseases. The mycoses or fungus infections. Bacterial diseases. Tumors. Diseases of the blood. Certain diseases caused by animal parasites. Diseases of the thymus and lymph nodes. Diseases of the spleen. Diseases of the respiratory system. Diseases of the digestive system. Diseases of the pancreas. Diseases of the liver and gall bladder. Diseases of the heart. Diseases of the blood-vessels. Diseases of the urinary system. Diseases of the reproductive organs of the male. Gynecological pathology. Diseases of the ductless glands. Neuropathology. Diseases of the bones and joints. Index.

Note. (865*) A long-established text for medical college students. It is used also as an office reference book by graduate physicians. The descriptions of the pathology of specific diseases are very concise, but they are adequately supplemented by illustrated matter and by references to the literature. The sixth edition was published in 1947. This edition is basically the same but considerable part of the contents has been rewritten. The length of the book has been increased by about 90 pages, 44 illustrations have been added and 17 that appeared in the preceding edition have been dropped. A selection of the recent literature has been added to the bibliographies.

Forbus, Wiley Davis

Reaction to injury pathology for students of disease. Volume II. The reactions of submission and adaptation and the disease entities arising out of their elaboration. 836 illustrations 54 of which are in color. Baltimore The Williams & Wilkins Company 1952 1110 p. illus. (part col'd) 26 cm. $20.00 997

Contents (abridged): Part three. The submissive reaction to injury and the disease entities arising therefrom—disturbances in metabolism and function with and without structural alteration of the tissues. Section one. Disturbances in function and metabolism of cells and tissues with and without their structural alteration. Section two. Disturbances in organic and systemic function and metabolism with and without structural alteration of the tissues. Section three. Disturbance in function and metabolism related to the process of growth and development. Part four. Reaction to injury through adaptation—functionally and structurally adaptive, sometimes compensatory reactions of cells, tissues and organ systems following injury: Section one. Applications of the principle of adaptation to the study of disease. Section two. Adaptive reactions following injury to the circulatory system. Section three. Adaptive reactions following injury to the respiratory system. Section four. Adaptive reactions following obstruction to the passage of body fluids from and through the hollow viscera. Index.

Note: (2084) The second and concluding volume of an unusual treatise on pathology. The author's thesis is that "disease is matter of the abnormal outcome of constantly changing relation between the ultimate biological unit, the cell, and its environment stated another way disease is matter of qualitative and quantitative reaction of an individual to environmental stimulation. A wide range of pathological conditions is covered from this viewpoint and most of the conditions are described in fair detail. Extensive literature references are included. The number of illustrations stated in the title applies to Volume II rather than to the whole work. The author is Professor of Pathology in Duke University Medical School.

Karsner, Howard Thomas

Human pathology. Seventh edition. 562 illustrations in black and white and 22 subjects in color on 14 plates. Philadelphia J. B. Lippincott Company 1949 927 p. illus. 26 cm. $12.00 998

Contents: Part One, General pathology: General phenomena of disease. Pathologic pigmentation. Degenerations and infiltrations. Necrosis and somatic death. Mineral infiltrates and concrements. Atrophy. Disturbances of circulation. Inflammation. Principles of infectious disease. The infectious granulomas. Progressive tissue changes. Tumors. Pathology of special tumors. Part Two, Systemic pathology: The cardiovascular system. The hematopoietic system. The respiratory system. The alimentary canal. Liver and pancreas. The urinary system. The genital system. The ductless glands. The organs of locomotion. The nervous system. The eye and adnexa. The skin. Index.

Note: (2083) A standard and long established work, used both as text in medical colleges and as an office reference book by physicians and surgeons. The scope is comprehensive with both congenital anomalies and the pathology of diseases included, and rare conditions as well as common ones. The sixth edition was published in 1942. The seventh edition represents very extensive revision, in which is reflected the substantial advances gained during World War II and in subsequent years. Two new chapters have been added. About one-fifth of the illustrations are new and about 800 literature references have been added.

Menkin, Valy

Newer concepts of inflammation. Springfield, Illinois Charles C Thomas 1950. 145 p. illus. 22 cm. (American lecture series. Publication no. 70. A monograph in American lectures in dentistry, edited by Edward J. Ryan) $3.50 999

Contents: The problem of increased capillary permeability in inflammation. The role of the hydrogen ion concentration in the development of the inflammatory reaction. The role of inflammation. Defense immunity. Phagocytosis. Chemical factors in inflammation. Leukocytosis in inflammation. The causes of fever and of leukopenia in inflammatory conditions. Repair. Recapitulation and conclusions. Index.

Note. (2084) Supplementary to the author's *Dynamics of inflammation,* New York, 1940, this relatively short book is devoted mainly to the biochemistry of inflammation and especially to the role of biochemical products of injured cells. The chapter on the role of inflammation in immunity also covers developments of recent years. Extensive bibliographies of the recent literature are included.

Miller, Seward Elmore, editor

A textbook of clinical pathology (Formerly edited by Roy R. Kracke and Francis P. Parker) Fourth edition. Baltimore The Williams & Wilkins Company 1952 1060 p. illus. (part col'd) 24 cm. $9.00 1000

Contents: Blood techniques, by L. W. Diggs. Blood cells—bone marrow examination, by L. W. Diggs. Anemias, erythrocytosis, hemoglobinurias, and abnormal hemoglobin compounds, by L. W. Diggs. Laboratory tests used in the diagnosis and management of hemor-

rhagic and thromboembolic diseases, by L. W. Diggs. Diseases primarily affecting leukocytes, by I. Davidsohn. Blood groups, by I. Davidsohn. Blood chemistry by C. Cohn and A. Kaplan. Liver function tests, by S. E. Miller. Renal function tests, by S. E. Miller. Immunologic tests, by R. McBurney. Bacteriologic examination of blood and feces, by R. McBurney. The assay of chemotherapeutic and antibiotic agents, by A. Milzer. Diagnosis of viral and rickettsial diseases, by A. Milzer. Blood parasites, by S. E. Miller. Intestinal parasites—feces, by S. E. Miller. The assay of vitamins, by E. von Haam. The assay of hormones, by E. von Haam. Examination of transudates, exudates, skin and mucous membranes, by E. von Haam. The diagnosis of venereal lesions, by E. von Haam. Syphilis serology, by S. E. Miller. Cerebrospinal fluid, by S. E. Miller. Urine and seminal fluid, by S. E. Miller. Sputum, by S. E. Miller. Gastric and duodenal contents, by S. E. Miller. Index.

Note: (847) In its fourth edition this standard work has been extensively revised. Much less space is now given to descriptions of technical procedures in laboratories and more attention is paid to the selection of tests and to the interpretation of laboratory reports. Simple tests such as can be made in physician's office are still described in detail. Three new chapters have been added and most of the others have been rewritten. Also many new illustrations have been added.

MOORE, ROBERT ALLAN

A textbook of pathology pathologic anatomy in relation to the causes pathogenesis, and clinical manifestations of disease. Philadelphia W B Saunders Company 1951 1048 p. illus. (part col d) 26 cm. $13.00 1001

Contents (abridged) Part I, General pathology: Disturbances in the metabolism of proteins. Disturbances in the metabolism of carbohydrates. Disturbances in the metabolism of lipids. Disturbances in the fluidity of the blood. Inflammation. General pathology of tumors. Part II, Diseases caused by living agents: Portal of entry the skin—bacteria, spirochetes. Lymphogenous or hematogenous routes of infection—bacteria. Portal of entry the alimentary canal—bacteria, spirochetes. Venereal diseases—bacteria, spirochetes, viruses. Miscellaneous infections. Part III, Diseases caused by physical agents: Diseases caused by physical trauma. Diseases caused by changes in atmospheric pressure. Diseases caused by radiant energy. Part IV Diseases caused by chemical agents. Part Diseases caused by deficiencies. Part VI, Diseases of pregnancy and of the extremes of life. Part VII, Diseases of unknown or obscure cause—systemic pathology: The alimentary and respiratory tracts. The cardiovascular-renal system. Rheumatic fever—complications and sequelae. Bright's disease—renal insufficiency. The blood forming tissues. The endocrine glands. The reproductive organs. The nervous system. The musculoskeletal system. The teeth, ears, eyes and skin. Index.

Note: A medical college textbook of wide scope. By treating the subject from the standpoint of disturbances of metabolism, the author has given more than the usual emphasis to the physiologic and chemical aspects of pathology. As the section and chapter titles show diseases of known causes are arranged by cause and portal of entry and diseases of unknown or obscure causes are grouped according to the organs or systems which they affect. The discussions of the individual diseases are very concise. However, literature references classified by disease are included in the chapters. The first edition was published in 1945. In the second edition new chapters have been added on several subjects, including diseases peculiar to the aged, and many paragraphs and longer sections have been added to other sections. Also there has been considerable rearrangement. Pertinent literature published since 1945 has been added to the bibliographies.

NEUBUERGER, KARL THEODORE

Atlas of histologic diagnosis in surgical pathology With a section on Exfoliative cytology by Walter T Wikle. Photography by Glenn E. Mills. Baltimore The Williams & Wilkins Company 1951 460 p. illus. 26 cm. $11 00. 1002

Contents: Skin and subcutaneous tissues. Lymph nodes. Spleen. Muscles and tendons. Bones, joints, and bursae. Nose and paranasal sinuses. Larynx and trachea. Bronchi and lungs. Pleura. Thymus. Thyroid. Parathyroids. Branchiogenic lesions. Carotid body. Oral cavity. Salivary glands. Tonsils. Esophagus. Stomach. Intestines. Appendix. Peritoneum. Liver. Gall bladder. Pancreas. Adrenals. Kidneys and ureters. Urinary bladder and urethra. Prostate. Male genitalia except prostate. Uterus. Fallopian tubes. Ovaries. Vagina and vulva. Breast. Meninges (cerebral). Brain. Spinal cord and spinal meninges. Pituitary. Peripheral and sympathetic nervous systems. Blood vessels. Eye. Ear. Exfoliative cytology: Vaginal tract. Respiratory tract. Gastrointestinal tract. Urinary tract. Body fluids. Supplement. Index.

Note: A comprehensive work in which the author has endeavored to include microphotographs that exhibit all the common lesions observable in tissues. Rare conditions have been omitted; nevertheless considerable range of material has been included for all of the principal systems and organs. The special section on exfoliative cytology pertains to the interpretations of smears. Each of the 830 figures is accompanied on the same page with short description in which diagnostic features are emphasized. The author is Professor of Pathology in the School of Medicine of the University of Colorado.

UNITED STATES NAVAL MEDICAL SCHOOL

Color atlas of pathology Prepared under the auspices of the U S Naval Medical School of the National Naval Medical Center Bethesda, Maryland. Illustrated with 1053 figures in color on 365 plates. Philadelphia J B Lippincott Company 1950 546 p illus (col d) 25 cm. $20.00 1003

Contents: Diseases of the hematopoietic system. Diseases of the reticulo-endothelial system. Diseases of the respiratory tract. Diseases of the cardiovascular system. Diseases of the alimentary tract. Diseases of the liver. Diseases of the kidney and urinary tract. Diseases of the musculoskeletal system. Index.

Note: The wide range of colored illustrations makes this work unique. Each of the chapters is divided into "descriptive survey" and color unit. The descriptive survey is compact summary of the diseases of specific physiological system. The color survey consists of reproductions of colored photographs of gross and microscopic pathological specimens. These are reproduced three to the page and in the outer column. The inner column is occupied by concise but specific description of the illustration. The book was prepared over considerable period of years at the National Naval Medical Center. Essentially it is reference volume of interest to pathologists, diagnosticians, and medical practitioners in all fields.

YEAR BOOK OF PATHOLOGY AND CLINICAL PATHOLOGY

The 1951 year book *of* pathology *and* clinical pathology (January–December 1951) Pathology edited by Howard T Karsner Clinical pathology edited by Arthur Hawley Sanford. Chicago The Year Book Publishers, Inc., 1952 454 p. illus. 20 cm. $5.50 1004

Contents: Pathology: General pathology. Cardiovascular system. Hemopoietic system. Respiratory system. Alimentary tract and associated glands. Urinary system and male genitalia. Female genitalia and breast. Glands of internal secretion. Bones and muscles. Skin. Nervous system and eye. Clinical pathology: Hematology. Chemistry. Bacteriology. Mycology. Serology. Cerebrospinal fluid. Parasitology. Allergy—cytology—endocrinology. Microscopy. Apparatus. Index. Index to authors.

Note: (870*) As in the related books issued by the publisher this annual is designed to provide digest and key to the significant literature in this field published in the world's medical periodicals during the period noted in the title. The chapters consist chiefly of abstracts of fair length. Some abstracts are supplemented by notes written by the editor. The issue at hand contains as special features four signed articles. There are 147 figures.

PHARMACOLOGY AND TOXICOLOGY

AMERICAN MEDICAL ASSOCIATION COUNCIL ON PHARMACY AND CHEMISTRY

Epitome of the Pharmacopeia of the United States and the National Formulary with comments. Ninth edition. Philadelphia J B Lippincott Company 1951 255 p. 20 cm. $2.50 1005

Note: A standard compendium of information on drugs selected from the standpoint of their usefulness to practicing physicians. It is based on the *U. S. Pharmacopeia* XIV and the *National Formulary* IX but the technical information concerning tests that appears in these books is omitted. For each of the drugs listed information is given on the following points: "Official title, synonyms, definitions, physical properties, actions, uses and dosage.

AMERICAN MEDICAL ASSOCIATION COUNCIL ON PHARMACY AND CHEMISTRY

New and nonofficial remedies containing descriptions of the articles which stand accepted by the Council on Pharmacy and Chemistry of the American Medical Association on January 1 1951 Philadelphia J B Lippincott Company 1951 782 p illus. 20 cm. $3 00 1006

Contents: Section A, Accepted products: Agents used in allergy. Analgesics. Anesthetics. Local anti-infectives. Systemic anti-infectives. Antispasmodic preparations. Astringents, caustics and sclerosing agents. Autonomic drugs. Blood. Agents affecting blood formation and coagulation. Cardiovascular agents. Central nervous system depressants and stimulants. Contraceptives. Diagnostic aids. Diuretics. Gastro-intestinal agents. Hormones and synthetic substitutes. Immunologic agents. Agents used in metabolic disorders. Oxytocics. Pharmaceutic and therapeutic aids. Unclassified therapeutic agents. Vitamins. Section B, Tests and standards for nonofficial products. Section C, Bibliography of unaccepted products.

Note (2097) An annual publication in which drugs submitted voluntarily by pharmaceutical manufacturers to the Council are described and critically reviewed. The information on each drug covers the following: trade name, chemical name, structural formula (in most cases) actions and uses, dosage, names of manufacturers, and forms (i.e. tablet, ampul, solution) and types and sizes of packages in which the product is currently marketed. The "bibliography of unaccepted products" is list of articles—most of which were published in the *Reports* of the Council—on remedies that were submitted but were not accepted for inclusion in NNR. Although much of the text of any particular edition is carried over to the succeeding edition, all of it is carefully reviewed and no product is retained in the list that is no longer considered useful. The 1951 edition represents more extensive revision than usual because the rules for the submission of articles were modified and reorganized and standard style for description was adopted.

AMERICAN MEDICAL ASSOCIATION COUNCIL ON PHARMACY AND CHEMISTRY

Useful drugs a selected list of essential drugs with brief discussions of their actions, uses and dosage. Issued under the direction and supervision of the Council on Pharmacy and Chemistry of the American Medical Association. Fifteenth edition. Philadelphia J B Lippincott Company 1952 262 p. 29 cm. $2 50 1007

Note (2098) The purpose of this authoritatively selected list of drugs is stated as follows in the preface to the fifteenth edition. *Useful drugs* may be regarded as being selected materia medica. It contains authoritative information on the chemical and the physical properties, as well as the actions, the uses and the dosages of well established medicinal agents. By virtue of the degree of selection employed for its contents, *Useful drugs* may well serve as basis for medical school instruction and state board examination. The arrangement of the book is alphabetical by name of drug. The information given on each drug includes description of properties, action and uses, and dosage. The present edition is based on review of the fourteenth edition of *The United States Pharmacopeia*, the ninth edition of the *National Formulary* and the 1950 edition of *New and non-official remedies.*

BARON ABRAHAM LOUIS

Handbook of antibiotics. New York Reinhold Publishing Corporation 1950. 303 p 24 cm. $8.00 1008

Note: A reference manual in which information about 141 antibiotics is presented. The main part of the work is arranged alphabetically by name of substance; for example: actidione, actinomyces lysozyme, actinomycetin, actinomycin, actinorhodine, actinorubin. Under the name of each compound information is generally presented on the following points: name of discoverer and date of discovery; source; isolation and purification; chemistry; bacteriology; pharmacology; and pertinent literature. Other features of the volume are an article on the certification of antibiotics, by Henry Welch of the United States Food and Drug Administration; one on the selection and registration of trademarks for antibiotics, by W. J. Derenberg of the United States Patent Office; and tabulation of existing registrations for antibiotics.

BECKMAN, HARRY

Pharmacology in clinical practice. With 152 illustrations. Philadelphia W B Saunders Company 1952 839 p. illus. 25 cm. $12.50. 1009

Contents. Section 1, Clinical use of drugs: Allergy Anesthesiology Antibiotics. Autonomic pharmacology Cardiology (including the vascular diseases) Dentistry Dermatology Endocrinology Gastroenterology Hematology Internal medicine. Neuropsychiatry Obstetrics and gynecology Ophthalmology Otorhinolaryngology. Pediatrics. Sulfonamides. Surgical specialties. Venereology Section II, Drug data: A compendium of drugs. Index.

Note. In this the author Director of the Departments of Pharmacology at the Marquette University Schools of Medicine and Dentistry has made special effort to present pharmacology from the viewpoint of practitioners of medicine and dentistry. The table of contents given above shows the special arrangement of the material. Under each of the main headings in the first part diseases and other conditions amenable to drugs are concisely described first, then the pharmacology is taken up. Drugs are discussed in connection with conditions to which they apply and their dosage and effects are indicated. The second section is concise catalogue of drugs in which their chemical nature, physical properties, etc., are briefly stated. It is arranged alphabetically and includes some U. S. A. proprietary names. Instead of referring to an extensive literature, the author mentions books for supplementary reading. An excellent index covering nearly 70 pages facilitates reference use of the volume.

BEYER, KARL H.

Pharmacological basis of penicillin therapy Springfield Illinois Charles C Thomas 1950. 214 p illus. 22 cm. (American lecture series. Publication number 77 American lectures in pharmacology edited by Chauncey D Leake) $4.50 1010

Contents (abridged) Penicillin pharmacology Mode of action of penicillin. Repository penicillin preparations. Penicillin excretion. Addendum—benemid. Index.

Note. The reactions of the body to penicillin rather than the reactions between drug and organisms with which the body may be infected are the subject of this monograph. The physiological reactions to aqueous solutions and to oleaginous suspensions, for example, are described; and there is much discussion of methods of delaying the elimination of penicillin from the body. One chapter is devoted to discussion of the enzymological basis of the inhibitory effect of carinamide on the renal excretion of the drug. There is bibliography of 47 references. The book is of interest both to general medical practitioners and to pharmacologists.

BURGER ALFRED

Medicinal chemistry chemistry biochemistry therapeutic and pharmacological action of natural and synthetic drugs. New York. Interscience Publishers Inc., 1951 2 vols. 23 cm. Each $10 00 1011

Contents (abridged) Volume 1: Historical development of medicinal chemistry. Relation of chemical structure and biological activity. Physical properties and biological activity. Biological study of drugs. Anesthetics. Hypnotics and sedatives. Anticonvulsant drugs. Analeptics. Cardiovascular drugs. Parenteral fluid therapy. Diuretics. Anticoagulants. Drugs eliciting symptoms in the gastro-intestinal tract. Adrenergic drugs. Parasympathetic stimulants. Curare and curariform drugs. Antispasmodics. Histamine and antihistaminic drugs. Diagnostic agents. Thyroid and antithyroid drugs. Drugs for the treatment of cancer. The vitamins. Selected drugs.

Index. Volume III The hormones. Essential amino acids and fatty acids. Theories of metabolite antagonism. Dynamics in chemotherapy. The sulfonamide drugs. Antimalarials. Chemotherapy of acid-fast infections. Metal-free drugs used in tropical diseases. Antibiotics. Antifungal agents. Anthelmintics. Antiseptics. Cumulative index, volumes I–III.

Note: An inclusive treatise in which the chief drugs currently used in medicine are discussed and described. The preliminary chapters are brief; for example, the chapter "Relation of chemical structure and biological activity" is only nine pages long. Most of the space is given to chapters on the classes and groups of drugs which are named in the table of contents. In these chapters the drugs are described from the chemical standpoint. A formula diagram is usually included; and in addition such points as theory of action, methods of testing, and synthesis are covered. Numerous references to pertinent articles are given as footnotes but the author did not attempt an extensive bibliography.

DACK, GAIL MONROE

Food poisoning. Revised edition. Chicago The University of Chicago Press, 1949 184 p 23 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $3 75 1012

Contents: Chemical poisoning in food. Poisonous plants and animals. Botulism. Staphylococcus food poisoning. Salmonella. Alpha-type streptococci (*Streptococcus fecalis*) in relation to food poisoning. Significance of other bacteria in food poisoning. Infections to be differentiated from food poisoning. Author index. Subject index.

Note (1197) A compact survey of this subject written from the public health viewpoint. It describes the chief causative agents, their effects, cites typical outbreaks of public health interest, and refers to selected literature. The clinical manifestations of the various forms of food poisoning are usually mentioned, but the author has not attempted to cover these from the viewpoint of clinical medicine. The first edition appeared in 1943. In this edition the work is 60 pages longer and now incorporates many advances in the knowledge of this subject made during World War II and the subsequent years. Both the text and bibliographies have been revised.

DAVISON, FORREST RAMON

Handbook of materia medica, toxicology and pharmacology for students and practitioners of medicine. Fourth edition With 35 illustrations, including 4 in color St. Louis The C. V Mosby Company 1949 illus. (part col d) 720 p. 22 cm. $9.00 1013

Content (abridged) The basic principles of pharmacology. Materia medica. Prescription writing. Toxicology. Drugs acting on skin and mucous membranes. Antiseptics, disinfectants, and anti-infectives. Drugs acting on the central nervous system. Drugs acting on the peripheral nervous system. Cardiovascular drugs. Oxytocic drugs. Diuretics. Biologicals. Miscellaneous drugs. Index.

Note: A standard handbook. The fundamentals of pharmacology, prescription writing, toxicology, etc., are outlined in the preliminary chapters, as indicated in the table of contents. However, most of the space is given to specific descriptions of classes of drugs and individual drugs. In a typical monograph on a drug information is supplied on the following points: name, chemical structure, pharmacological action, toxicology, therapeutic uses, and preparations. Literature references are furnished, and in this edition they include publications issued as recently as 1948.

GROLLMAN ARTHUR

Pharmacology and therapeutics a textbook for students and practitioners of medicine. 104 illustrations. Philadelphia Lea & Febiger 1951 828 p illus. 24 cm. $10 00 1014

Contents: Introduction. General anesthesia. The aliphatic alcohols. Morphine and other opium alkaloids. Analgesics and antipyretics. Hypnotics and sedatives. Anticonvulsants or antiepileptics. Convulsants and analeptics. The xanthines—caffeine, theobromine and theophylline. Drugs acting on autonomic effector cells. Epinephrine and other drugs stimulating structures innervated by adrenergic nerves. Drugs inhibiting structures innervated by adrenergic nerves. Drugs stimulating structures innervated by cholinergic nerves. Depressants of the postganglionic cholinergic nerves. Inhibiting autonomic ganglia and skeletal muscles. Histamine and antihistaminic compounds. Local and regional anesthetics. Drugs acting primarily on the cardiovascular system. Drugs acting primarily on the gastrointestinal tract. Chemotherapy. The sulfonamides and related compounds. The antibiotics. Quinine and other antimalarials. Emetine and other amebicidal drugs. Local anti-infectives and other drugs characterized chiefly by their local action. The hormones and drugs acting on the endocrine organs. The vitamins. Drugs acting on the blood and hematopoietic system. Water and other non-metallic compounds. The metalloids—arsenic, antimony and bismuth. The heavy metals. Vaccines, sera and miscellaneous biologicals. Appendices. Index.

Note: A modern work in which the great advances in chemotherapy in recent years are adequately reflected. As is common in books of this kind, most of the space is devoted to discussions and descriptions of groups of drugs and specific drugs. In general, the information given on each drug includes chemical name, structural formula (if known), physiological action, therapeutic uses, dosage, and methods of administration. The appendices contain a short statement on prescription writing. Selected literature references are given throughout. The author is Chairman of the Departments of Physiology and Pharmacology of the Southwestern Medical School of the University of Texas.

HAMERSLAG FRANK E

The technology and chemistry of alkaloids. New York D Van Nostrand Company Inc., 1950 319 p. illus. 23 cm. $7.00 1015

Contents: Introduction. Production of alkaloids. The alkaloids of aconite. Atropines and related alkaloids. The alkaloids of coca. Colchicine. The curare alkaloids. Alkaloids of ephedra. The alkaloids of ergot. Hydrastine and berberine. The alkaloids of ipecacuanha. The alkaloids of lobelia. Nicotine. The alkaloids of nux vomica. Physostigmine and related alkaloids. Alkaloids of pilocarpus. Sparteine. The solanaceous alkaloids. Veratrine. Yohimbine. Index.

Note: Essentially, this is a book on the manufacture of alkaloid compounds. For each kind of compound listed in the table of contents the following information is given: chemistry, natural sources, manufacturing methods, pharmacological properties and therapeutic uses, analytical methods. There are good reference lists appended to the chapters; these cite the patent as well as the periodical material.

JENKINS GLENN LLEWELLYN AND WALTER H. HARTUNG

The chemistry of organic medicinal products. Third edition New York John Wiley & Sons Inc., 1950. 745 p illus. 24 cm. $7.50 1016

Contents: Hydrocarbons. Halogenated hydrocarbons. Hydroxyl derivatives of hydrocarbons. Ethers and other peroxides. Carbonyl group. Carboxyl group. Natural mixtures. Amines and amino derivatives. Cyanides and allied compounds. Sulfur compounds. Compounds of phosphorus, arsenic, and antimony. Metallic derivatives of organic compounds. Heterocycles containing one heteroatom. Heterocycles containing two or more heteroatoms. Stereoisomerism. Some physicochemical properties of medicinal products. General bibliography. Index.

Note (2160) An introductory but fairly substantial survey. The organization of the book and much of the discussion are based on the chemical aspects rather than the medical. Usually the material on a substance or product includes its chemical history, one or more structural diagrams, and descriptions of the important methods of synthesis. However, physiological reactions and medical uses also are mentioned. In this edition many sections, particularly those on the antibiotics, the antimalarials, the antihistamines, and enzymes, have been rewritten in line with recent advances. Also, there have been extensive changes in the bibliographical footnotes and some additions to the general bibliography. In addition to its use as a text for college students of organic chemistry, medicine, pharmacology, etc., the book has some value as a reference manual.

KAREL LEONARD, AND ELIZABETH SPENCER ROACH, compilers

A dictionary of antibiosis. New York Columbia University Press 1951 373 p. 25 cm. $8.50. 1017

Note: A reference book of comprehensive scope within its field. It includes not only the names of fungi and other plants from which antibiotic substances have been derived but also the names of those that have been tested; the names of organisms (mostly bacteria) used

its tests, and the names of antibiotic substances. Most entries are short and serve only to define the term and provide literature reference. However articles of considerable length are included for the successful antibiotics. The article on aureomycin, for instance, runs to eight columns and covers a wide range of chemical and clinical information. There is an extensive bibliography of the international literature.

KRANTZ JOHN CHRISTIAN, JR., AND C JELLEFF CARR

The pharmacologic principles of medical practice a textbook on pharmacology and therapeutics for medical students, physicians and the members of the professions allied to medicine. Second edition. Baltimore The Williams & Wilkins Company 1951 1116 p. illus. (part col d) 24 cm. $10 00. 1018

Contents (abridged) Part I, The history of pharmacology pharmacologic principles, and an introduction to drugs The historical development of pharmacology The nature and source of drugs. Drug control—the Pharmacopeia and other drug compendia. Methods of drug administration and factors which modify dosage. Part II, The anti-infective drugs. Part III, The response of the skin and mucous membranes to drugs. Part IV The response of the central nervous system to drugs. Part V The response of the autonomic nervous system to drugs. Part VI, The pharmacologic response of the heart and circulation. Part VII, The pharmacologic response of the reproductive system. Part VIII, Effect of pharmacologic agents on metabolism. The response of water balance to pharmacologic agents. Altering renal threshold by pharmacologic agents. Treatment of the arthritides—the adrenal corticotrophic hormone and cortisone. Calcium-phosphorus metabolism and calciferol and parathyroid hormone. Part IX, Appendix: The discovery and evaluation of new drugs. Typical prescriptions. Index.

Note. A successful textbook in which the main emphasis is on pharmacologic principles. However, most of the space is devoted to concise discussions of individual drugs. In these discussions the properties and chemical structure of the drug are first described, then the physiologic effects on blood pressure, the heart, respiration, muscle, gastrointestinal tract, metabolic processes, the fate of the drug in the body its toxicology and finally its uses are covered. The first edition appeared in 1949 The authors are members of the faculty of the School of Medicine of the University of Maryland.

MEDICINAL CHEMISTRY Volume I. A series of reviews prepared under the auspices of the Division of Medicinal Chemistry of the American Chemical Society C M. Suter editor in chief New York John Wiley & Sons Inc. 1951 473 p. illus. 24 cm. $10 00 1019

Contents: Antithyroid compounds, by G W Anderson. Antispasmodic derivatives of carboxylic acids, by R. R. Burtner Antibiotics from plants, by C. J Cavallito Benzoates and substituted benzoates as local anesthetics, by T P Carney Analgesics: A. Arylalkylamines, by E. L. Fellows and G. E. Ullyot, B. Partial structures related to morphine, by J Lee. Index.

Note: The first volume published of a series that will contain lengthy monographic reviews of the knowledge of groups of chemical compounds of medicinal interest. Special attention will be given to relations between chemical structure and pharmacological activity In the monographs in the volume at hand much of the data is presented in tabular form and more information is included than the length of the book would indicate Footnote references are given to the pertinent literature including patents. The work is of interest not only to medical men but also to manufacturing pharmacists and biochemists.

MODERN DRUG ENCYCLOPEDIA AND THERAPEUTIC INDEX. Edited by Marion E. Howard. Fifth edition. New York Drug Publications, Inc. 1952 1431 p 24 cm. $15 00 1020

Contents: Pharmaceuticals. Biologicals. Allergens. Addenda. Therapeutic index. Generic name index. Manufacturers' and distributors' index. General index.

Note: A standard reference book of information about drug products manufactured in the United States of America. Products are entered under the names under which they are sold, whether this is a generic name or a trade name. For example, there is a description of "Cevalin" as well as one of Vitamin C. Generally speaking the following information is given for each drug: the trade name and its pronunciation, manufacturer's name, general description, action and uses, methods of administration, dosages, and forms (i.e. tablet, liquid, etc.) in which it is supplied. The volume is thoroughly indexed. Quarterly supplements issued by the same publisher serve to keep the information up to date. New descriptions introduced in the present edition number 1475 and many of the descriptions carried over have been rewritten.

NATIONAL ACADEMY OF SCIENCES

The chemistry of penicillin. Report on a collaborative investigation by American and British chemists under the joint sponsorship of the Office of Scientific Research and Development, Washington D C. and the Medical Research Council, London. Compiled under the auspices of the National Academy of Sciences, Washington D C., pursuant to a contract with the Office of Scientific Research and Development. Princeton Princeton University Press, 1949 1094 p. illus. 28 cm. $36 00. 1021

Contents (abridged) Brief history of the chemical study of penicillin, by H. T Clarke and others. Isolation and characterization of the various penicillins, by O. Wintersteiner and others. Penillic acids and penillamines, by A. H. Cook. Desthiobenzylpenicillin and other hydrogenolysis products of benzylpenicillin, by E. Kaczka and K. Folkers. The thiocyanate derivative of benzylpenicillin methyl ester, by V du Vigneaud and D B. Melville. The X-ray crystallographic investigation of the structure of penicillin, by D. Crowfoot and others. Infrared spectroscopic studies on the structure of penicillin, by H. W Thompson and others. The constitution of penicillins, by J R. Johnson and others. Penicillamine, its analogs and homologs, by H. M. Crooks. Penilloaldehydes and penaldic acids, by E. V Brown. Biosynthesis of penicillins, by O. K. Behrens. Chemical modifications of natural penicillins, by R. D. Coghill and others. Oxazoles and oxazolones, by J W Cornforth. Attempted synthesis of penicillins, by W E. Bachmann and M. W Cronyn. Methyl benzylpenaldopenicilloate, by J. H. Hunter and others. Thiazolidines, by A. H. Cook and I. M. Heilbron. The chemistry of β-lactams, by R. A. Ballard and others. Synthetic benzylpenicillin, by V du Vigneaud and others. Assay of penicillins, by J. V Scudi and H. B. Woodruff Appendix. Subject index.

Note A comprehensive survey of the results of an international effort during World War II and later to ascertain the chemical formula of penicillin, and to synthesize it in the laboratory. Thirty-nine British and American scientific groups participated in the effort and some hundreds of progress reports were issued for the information of all participants while the research was going on. This book is based on these progress reports. However, instead of reprinting the reports, they have been used as the basis of the twenty nine chapters of the present work. Aside from its major and fundamental significance in chemotherapy the work is a monument to large-scale international collaboration on a scientific problem such as had never been attempted before.

NEW YORK ACADEMY OF MEDICINE. SECTION ON MICROBIOLOGY

Evaluation of chemotherapeutic agents. Symposium held at the New York Academy of Medicine, March 25 and 26 1948. Edited by Colin M. MacLeod. New York Columbia University Press, 1949 205 p. illus. 23 cm. $4 00 1022

Contents Foreword, by G. Shwartzman. Introduction, by C. M. MacLeod. The significance of drug concentration in the blood, as applied to chemotherapy by E. K. Marshall, Jr. Blood levels, renal clearance, and chemotherapeutic activity with particular reference to arsenicals and penicillin, by H. Eagle. The binding of chemotherapeutic agents to proteins and its effect on their distribution and activity by B. D Davis. The problem of microbial resistance to chemotherapeutic agents, by H. E. Alexander. Defense mechanisms of the host in relation to chemotherapy of acute bacterial infections, by W B. Wood, Jr. The nature of the lesion and the response to antimicrobial therapy by W McDermott. Transmission antibiotic

therapy of localized soft tissue infections, by E. K. Sanders and J. R. Lockwood. Chemoprophylaxis of meningococcal infections and of bacillary *dysentery* by F. R. Cheever. An evaluation of chemoprophylaxis of streptococcal infections, by A. T. Wilson. [illegible] of antimalarial drugs, by J. A. Shannon. The chemotherapy of tick [illegible] diseases, by J. F. Fox. Chemotherapy of [illegible] infections, by F. L. Horsfall, Jr. and H. R. Ginsberg. The experimental evaluation of chemotherapeutic agents in cancer by C. C. Stock and C. P. Rhoads. The clinical evaluation of chemotherapeutic agents in cancer by D. A. Karnofsky and J. H. Burchenal.

Note. A collection of original papers prepared for the symposium named in the book's title. The symposium was planned as [illegible] general evaluation of chemotherapeutic drugs and as [illegible] general presentation of evaluatory techniques in relation to particular groups of diseases. No attempt was made to assess the value of specific substances, for example, penicillin. The papers are addressed to graduate workers in fields concerned with chemotherapeutic agents, particularly medicine. Each paper is accompanied by literature references. There is no index to the volume.

SALTER, WILLIAM THOMAS

A textbook of pharmacology: principles and application of pharmacology to the practice of medicine. Philadelphia W B Saunders Company 1952 1240 p. illus. 26 cm. $15.00 1023

Contents (abridged) Part I, General principles of pharmacology. Part II, Drug action on physiological mechanisms: Section I, The relief of pain and sensory disturbance. Section II, General anesthesia. Section III, Convulsions and coma. Section IV Drugs acting on the circulation. Section [illegible] Endocrine and vitamin regulators. Section VI, The autonomic nervous system. Part III, The application of drugs in clinical medicine: Section VII, Drugs and body systems. Section VIII, Toxic substances of industrial and homely origin. Section IX, Chemotherapeutic and chemoprophylactic agents. Part IV Toxicology. Epilogue. Index.

Note. The material in this text has been judiciously selected from the standpoint of [illegible] that is valuable to present-day medical students and practitioners. Nevertheless, the book is [illegible] large one with about 800,000 words of text. Information is included on background aspects such as the development of pharmacological knowledge and the development of our knowledge of drugs, but most of the space is given to discussions of the pharmacological principles of specific drugs and groups of related drugs. In the drug descriptions, the emphasis is on physiological effects and on what becomes of the drug in the human body but information is included also on the appearance and other properties of the drugs and on dosage. Most of the chapters contain an interesting section called "unsolved problems." The chapters are supplemented by substantial reference lists. The author is Professor of Pharmacology in the Yale University School of Medicine.

SOLOMON CHARLES

Pharmacology and therapeutics. With the collaboration of Elizabeth S. Gill. Sixth edition. 100 illustrations, many in color Philadelphia J B Lippincott Company 1952 656 p. illus. (part col'd) 21 cm. $4.50 1024

Contents: Unit I, Introduction. Pharmacy (drugs and solutions) Unit II, Drugs acting on the skin and the mucous membranes. Antiseptics and disinfectants (anti-infectives). Unit III, Drugs acting on the nervous system. Cerebrospinal stimulants. Cerebrospinal depressants. Drugs affecting the peripheral nervous system. Drugs acting on the autonomic nervous system. Unit IV Drugs used for their effect upon the respiratory tract. Unit [illegible] Drugs which affect the heart and blood vessels. Drugs affecting the blood and blood-forming organs. Unit VI, Drugs acting on the alimentary tract. Unit VII, Drugs acting on the urinary tract. Unit VIII, Drugs acting chiefly on the reproductive system. Drugs affecting the temperature of the body. Unit IX, Specifics and so-called specific drugs. Substances affecting metabolism, nutrition and growth. Biologic products. Allergens. Hormones. Enzymes and enzyme systems. Toxicology. Nonmedical therapeutics. Treatment of emergencies. Dosage of commonly used drugs. Glossary of the terms used in the text. Bibliography. General index. Index of symptoms and diseases.

Note: (2344a) A text and reference book for students and graduate nurses. Its purpose is to provide the general and specific knowledge of drugs and their uses that is necessary to assist in cooperating with physicians and in prescribing and administering in emergencies when no physician is available. In the first few units, certain essentials of pharmacy such as weights and measures and dosages are covered. Most of the remainder of the book is devoted to descriptions of specific drugs, especially in regard to their properties, physiological actions, preparations, and dosage. The 5th edition was published in 1948 and was entitled *Pharmacology, materia medica and therapeutics.* In this edition the book has been revised to conform to *United States Pharmacopeia* XIV and *National Formulary* IX. Many paragraphs and larger sections have been revised or entirely replaced with new material. Improvements have been made in the indexing of the book. Also the type has been reset and the book is now printed in [illegible] new two-column format.

TANNENBAUM ALBERT editor

Toxicology of uranium survey and collected papers. New York McGraw Hill Book Company Inc. 1951 333 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division IV—Plutonium project record. Vol. 23) $4 75 1025

Contents: Part A, Introduction to the toxicology of uranium: Introduction and general considerations, by A. Tannenbaum and H. Silverstone. Nature of uranium poisoning as observed in mice, by A. Tannenbaum and H. Silverstone. Factors affecting uranium poisoning, by A. Tannenbaum and H. Silverstone. Distribution in tissues and excretion of uranium, by A. Tannenbaum and H. Silverstone. Gross and microscopic pathology of uranium poisoning, by A. Tannenbaum. Biochemical effects of uranium poisoning, by S. Schwartz. The mechanism of action of uranium and the transport of uranium in the tissues, by E. S. G. Barron. Summary of experimental studies. Relation to uranium poisoning in man, by A. Tannenbaum and H. Silverstone. Part B, Collected papers: Uranium poisoning. Review of literature to 1943 by S. T. Cantril and J. I. Nickson. Some aspects of the toxicology of uranium compounds, by A. Tannenbaum and H. Silverstone. Failure to affect toxicity of ingested uranium chloride by dietary acid (HCl) or base ($NaHCO_3$) by A. Tannenbaum and H. Silverstone. Accumulation of uranium in the tissues of mice ingesting uranyl nitrate, by A. Tannenbaum and H. Silverstone. Relation of uranium excretion to the total amount of uranium in the mouse, by A. Tannenbaum and H. Silverstone. Studies on acquired tolerance to uranium, by A. Tannenbaum and H. Silverstone. Distribution of U^{233} in tissues of mice following injection of uranyl nitrate, by A. Tannenbaum and others. Tracer studies of the distribution and excretion of uranium in mice, rats, and dogs, by A. Tannenbaum and others. The transport of uranium in the tissues, by J. A. Muntz and E. S. G. Barron. Tissue metabolism of rats treated with uranyl nitrate, by J. Meyer and others. The reversible inhibition of enzymes by uranium, by T. P. Singer and others. Effect of uranium on the metabolism of yeast and bacteria, by J. A. Muntz and others. An introduction to the nonclassified literature dealing with biochemical studies of experimental uranium poisoning, by S. Schwartz and E. J. Katz. Uranium distribution studies, by E. J. Ferretti and S. Schwartz. The effect of uranium exposure on urinary catalase excretion, by E. J. Katz and others. Studies of porphyrin metabolism—the effect of metals on coproporphyrin excretion, by S. Schwartz and E. M. Zagaria. *Index.*

Note: A volume made up chiefly of reports of original investigations on the toxicology of uranium made in the course of the work on the Manhattan Project during World War II. The findings are summarized in the papers in Part A. In Part B the reports themselves are assembled. Literature references are included with the papers.

TRELEASE SAM FARLOW AND ORVILLE A. BEATH

Selenium its geological occurrence and its biological effects in relation to botany chemistry agriculture, nutrition, and medicine. New York Published by the authors, 1949 292 p. illus. 24 cm. $5.50 1026

Contents History. Selenium indicator plants. Distribution of selenium in rocks and soils. Accumulation of selenium by plants. Selenium poisoning in animals. Selenium in relation to public health. Prevention and control of selenium poisoning. Chemistry of selenium. Bibliography. Author index. Subject index.

Note The poisoning of cattle as [illegible] result of eating vegetation grown on seleniferous soils is [illegible] serious local problem in some parts of the United States. The poisoning of human beings in the same way has not been so clearly established, but some cases appear in clinical literature and there have been several area studies by public health authorities. This book is [illegible] summary of the current knowledge.

A considerable part of the space is devoted to background information such as data on plants that absorb selenium and the quantities absorbed. There is an extensive bibliography

VOEGTLIN, CARL, AND HAROLD C HODGE, editors

Pharmacology and toxicology of uranium compounds with a section on the pharmacology and toxicology of fluorine and hydrogen fluoride. New York McGraw Hill Book Company Inc. 1949 2 v illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division VI—Vol. 1) $14.25 1027

Contents: Part I, The pharmacology and toxicology of uranium compounds. The chemistry of uranium compounds, by A. L. Dounce and J. F Flagg. Analytical methods for determining uranium and fluorine, by J. F Flagg. Statistical methods, by D. V Tholemes and others. Pathological anatomy following uranium poisoning, by T R. Barnett and R. G. Metcalf. Characteristics of uranium poisoning, by J. H. Wills. Toxicity following parenteral administration of certain soluble uranium salts, by F Haven and H. C. Hodge. Studies of toxicity of various uranium compounds when fed to experimental animals, by E. A. Maynard and H. C. Hodge. The toxicology of compounds of uranium following applications to the skin, by J. A. Orcutt. The toxicology of uranium compounds following application to the eye, by J A. Orcutt. Toxicity following inhalation, by H. E. Stokinger and others. The distribution and excretion of uranium, by W F Neuman. Tolerance to uranium compounds, by F Haven. The action of uranium on enzymes and proteins, by A. L. Dounce and T H. Lan. Catalasuria as a sensitive test for uranium poisoning, by A. L. Dounce and others. The mechanism of action of uranium compounds in the animal body by A. L. Dounce. Studies on human exposure to uranium compounds, by J W Howland. Part II, The pharmacology and toxicology of fluorine and hydrogen fluoride: Toxicity following inhalation of fluorine and hydrogen fluoride, by H. E. Stokinger. Appendix. Index.

Note: These volumes are based on the work of the Division of Pharmacology of the Manhattan District Project which, during World War II, was charged with the development of the atomic bomb. Much of the information contained in them was derived from original investigations; however results reported in the literature have been included also.

VON OETTINGEN W F

Phenol and its derivatives the relation between their chemical constitution and their effect on the organism. From the Laboratory of Physical Biology Experimental Biology and Medicine Institute, The National Institutes of Health. Washington D C Government Printing Office 1949 408 p illus. 23 cm. (United States. Federal Security Agency Public Health Service National Institutes of Health bulletin no. 190) Paper $0.80. 1028

Contents (abridged) Introduction. The monophenols: Relation between chemical constitution and physiological properties of monophenols. The diphenols: Relation between chemical, physical, and physiological properties of diphenols. The triphenols: Relation between the physicochemical properties of triphenols and their physiological effect. The halogenated phenols: Comparison of the antiseptic and toxic properties of mono- di- tri- tetra- and pentachlorophenols. Halogenated alkyl phenols. Relation between chemical constitution and antiseptic and toxic action of chlorinated phenols. The aminophenols. The nitrophenols: Comparison of the pharmacological and toxicological properties of mono- di- and trinitrophenols. The phenolic aldehydes. The phenolic acids. The phenolic ethers. Comparison of the action of phenolic ethers with those of phenol. Comparison of the effects of blocking the phenolic group of various phenolic compounds and their physiological action. Bibliography. Index.

Note. Phenols and the compounds synthesized from them are described in the work from the standpoint of physiological or toxicological effect. The publication forms also a review of the literature of the subject and includes a bibliography of 35 pages. It is of interest to industrial chemists, pharmacologists, and other persons who are concerned professionally with industrial and public health.

VON OETTINGEN, W F

Poisoning a guide to clinical diagnosis and treatment. New York Paul B Hoeber, Inc., 1952 524 p 24 cm. $10.00. 1029

Contents: Part one, Introduction Classification and diagnosis of poisoning. Medico-legal responsibilities. Emergency measures and equipment. Part two, Diagnosis: Taking the patient's history Structural and functional pathology Biochemical changes. Laboratory tests. Part three, Management: The rationale of treatment. Removal of the toxic agent. Elimination of the toxic agent. Detoxication of the absorbed poison. Symptomatic treatment. General measures; treatment of after-effects. Part four Symptoms and treatment of 441 types of poisoning. Index.

Note: An authoritative and detailed work which is organized as a reference guide for practical office use by physicians. Part two contains an extensive arrangement under physiological systems of signs and symptoms with lists of poisonous substances that may give rise to them. Part four runs to 270 pages and is an alphabetically-arranged collection of short essays on individual poisonous substances. In each essay a specific compound is described physically and chemically and physiological reactions to it are stated. Usually treatment is discussed briefly and one or more literature references are furnished. The author a physician, is associated with the National Institutes of Health of the U S. Public Health Service.

WAKSMAN, SELMAN ABRAHAM

The literature on streptomycin 1944–1952 New Brunswick New Jersey Rutgers University Press, 1952 553 p. 24 cm. $5 00. 1030

Contents: Actinomycetes. General references. Streptothricin. Streptomycin. Author index. Subject index.

Note. ("897) This second edition contains 3300 references to the literature of streptomycin as compared with 1171 in the 1948 edition. Uses of the antibiotic other than in the treatment of disease are now included, such as in animal feeding and in the preservation of semen and viruses. A more detailed and enlarged index has also been provided. As in the previous edition, the arrangement is chronological.

WAKSMAN, SELMAN ABRAHAM, editor

Streptomycin nature and practical applications Baltimore The Williams & Wilkins Co. 1949 618 p. illus. 24 cm. $10 00 1031

Contents: Section I, Microbiological and chemical aspects: Historical introduction, by S. A. Waksman. *Streptomyces griseus*, nature and nutrition, by S. A. Waksman. Strain selection and strain specificity of *Streptomyces griseus*, by G. M. Savage. Production and isolation of streptomycin, by M. Tishler The chemistry of streptomycin, by M G. Brink and K. Folkers. Microbiological and chemical methods of assay for streptomycin, by H. Welch. Section II, Antibacterial and pharmacologic properties of streptomycin: Action of streptomycin on microorganisms in vitro, by G. P Youmans and M. W Fisher. Antibacterial activity of streptomycin in vivo, by F R. Heilman and G. Rake. Streptomycin in experimental tuberculosis, by W H. Feldman and A. G. Karlson. Development of streptomycin-resistant and streptomycin-dependent bacteria, by C. P Miller and M. Bohnhoff. Streptomycin resistance of tubercle bacilli, by W Steenken, Jr., and E. Wolinsky. The mode of action of streptomycin, by R. J Henry and G. L. Hobby. Synergism between streptomycin, by antibacterial substances with special reference to streptomycin, by F S. Thatcher. Absorption, distribution and excretion of streptomycin, by G. Rake and R. Donovick. Pharmacology of streptomycin, by H. Molitor. Section III, Clinical uses of streptomycin: Clinical indications for streptomycin therapy, by C. S. Keefer. Methods of administration and dosage, by W E. Herrell. Streptomycin in the treatment of tuberculosis in man, by A. M. Walker and others. Streptomycin in the surgical treatment of pulmonary tuberculosis, by E. J O'Brien and W M. Tuttle. Clinical significance of bacillary resistance in the treatment of pulmonary tuberculosis with streptomycin, by N D'Esopo. Bacteremia, by E. J Pulaski. Meningitis: *H. influenzae* meningitis, by H. E. Alexander. Tularemia, by L. Foshay. Brucellosis, by W W Spink. Plague, by K. F Meyer and S. F Quan. *Friedländer's bacillus* (*Klebsiella pneumoniae*) infections. Whooping cough: their treatment with streptomycin, by H. M. Ruppin. Non-tuberculous infections of the bronchial tree, by A. M. Olsen. Lung abscess and empyema, by E. J Pulaski. Intestinal infections, by H. A. Reimann. Urinary tract infections, by W L. Herrell. Cholangiohepatitis and peritonitis, by I. S. Ravdin and H. A. Zintel. Prevention of wound infection, by E. L. Howes. Clinical wound infections, by E. J. Pulaski. Therapy of *Granuloma inguinale*, by R. B. Greenblatt. Chancroid and chancroid

by L. E. Putnam. Ear infections, by B. H. Senturia. Ophthalmology by J. G. Bellows. Skin infections, by E. D. DeLamater. Toxicity of streptomycin in the human, by P. A. Bunn and R. E. Westlake. Alterations in the normal bacterial flora of man and animals and secondary infections occurring during streptomycin treatment, by L. Weinstein. Section IV Miscellaneous uses of streptomycin: Use of streptomycin and other antibacterial agents for recovery or isolation of viruses, by C. A. Brandly and M. S. Winslow. Streptomycin in small animal medicine, by W. G. Venzke and C. R. Smith. Streptomycin in the treatment of certain infections of the bovine mammary gland, by O. W. Schalm. Streptomycin and penicillin-streptomycin for the control of bacteria in bovine semen, by J. O. Almquist. Use of streptomycin in agriculture, by P. A. Ark. Subject index.

Note: A collection of original papers designed as a comprehensive presentation of the status of the antibiotic streptomycin as of approximately the close of the year 1948. Short lists of references accompany each paper but the scientists in search of a comprehensive bibliography should consult *The literature on streptomycin, 1944–1948* described above.

YEAR BOOK OF DRUG THERAPY

The 1952 year book of drug therapy (August, 1951–August, 1952) Edited by Harry Beckman. Chicago The Year Book Publishers, 1952 606 p illus. 20 cm. $5.50 1032

Contents: Introduction Allergy Antibiotics and sulfonamides. Cardiovascular diseases. Dermatology Endocrinology Hematology Internal medicine. Neuropsychiatry Obstetrics and gynecology Ophthalmology Otorhinolaryngology Pediatrics. Surgery Venereology Author index. Subject index.

Note: An organized presentation of information which appeared in the periodical literature during the period noted in the book's title. The chapters consist of abstracts of periodical articles. The typical abstract is several hundred words in length and in many instances is supplemented by a brief editorial comment which adds to the information given in the abstract or critically evaluates the author's methods or conclusions. The book can be used as a survey of developments without reference to the original articles or as a guide to the published literature. There are full author and subject indexes.

PHYSICAL THERAPY

BIERMAN WILLIAM AND SIDNEY LICHT

Physical medicine in general practice. With twenty-two contributors. Third edition. New York Paul B Hoeber Inc. 1952 798 p illus. $12.50. 1033

Contents: Part I, Methods: Heat and cold, by C. S. Wise. Hydrotherapy by W Bierman. Climatotherapy and spa therapy by W S. McClellan. Visible and infrared radiation, by W D. Paul. Diathermy by F B. Moor and W Bierman. Surgical diathermy by W Bierman. Galvanic and low frequency current, by W Bierman and S. Licht. Ultraviolet radiation, by W Bierman. Ultrasound, by F Friedland. Massage, by W Bierman. Manipulation, by J. Bastow Functional muscle testing, by H. O. Kendall and F P Kendall Exercise, by T L. DeLorme. Occupational therapy by S. Licht. Medical rehabilitation, by S. Licht. Part II, Clinical applications: The conduct of treatments, by W B. Snow Diseases of the locomotor system, by W Bierman. Arthritis and rheumatic diseases, by W M Solomon. The lower extremity amputee, by S. Brunnstrom. Neurologic diseases, by S Mead Anterior poliomyelitis, by M. E. Knapp. Neuromuscular reeducation for paralysis, by H. Kabat. Cardiovascular diseases, by K. Harpuder. Diseases of the digestive system, by C. O. Molander. Genitourinary diseases, by V S. Dick. Gynecologic diseases, by W Bierman. Eye, ear nose, and throat diseases, by W Bierman. Respiratory diseases, by W Bierman. Dermatologic diseases, by S M. Peck and G. Klein. Index.

Note: (2173) A standard manual for general practitioners of medicine and beginners in the field of physical therapy In the first part methods which are currently considered to have therapeutic value are described explicitly In the second part the uses of physical therapy in various types of diseases are discussed Literature references are included in each chapter The preceding edition was published in 1944 and was written by Dr. Bierman. In preparing this edition the contributors named in the contents above have revised or completely rewritten the chapters now signed with their names. Without changing the purpose or level of the book, much obsolete material was eliminated and a wide range of new material added.

BUCHWALD, EDITH AND OTHERS

Physical rehabilitation for daily living, by Edith Buchwald in collaboration with Howard A. Rusk, George G Deaver and Donald A. Covalt. New York McGraw Hill Book Company Inc. 1952 183 p. illus. 29 cm. $7.50 1034

Contents. Functional training. Bed and mat exercises. Wheelchair exercises. Self-care. Ambulation. Elevations and travel on crutches. Special problems: Wheel chairs. Braces. A.D.L. testing. Equipment and furniture for A D.L. Index.

Note. Based upon the program developed at New York University-Bellevue Medical Center this manual is intended for physical therapists, physicians, and nurses who are concerned with teaching the skills necessary for physical independence to persons who have lost the proper use of their legs and must rely upon braces, crutches, wheel chairs. The volume outlines the step-by-step procedures for such activities of daily living ("A.D L.") as toilet activities, dressing activities, eating activities, getting from place to place, walking, climbing stairs, and use of the wheel chair. Nearly half of the pages of the book contain photographic illustrations showing the recommended steps and positions. While primarily intended for hospital programs of rehabilitation, the publication is written in non-technical language and should be valuable also to patients themselves and their families.

COZEN LEWIS

Office orthopedics. With 156 illustrations. Philadelphia Lea & Febiger 1950 232 p. illus. 24 cm. $5.00 1035

Contents Materials. Physical therapy Local anesthesia. Prosthesis fitting. The foot. The ankle and the calf. The knee. The thigh and the hip. The back. Coccygodynia. The neck. The shoulder. The elbow The hand. Childhood. Limp in a child Crooked back in a child. Child walks pigeon-toed. Bowlegs and knock knees. Clumsiness of hands in a child. Wry neck. Painful arm or leg in a child. Abnormal leg or arm in a child. Inability of a child to sit up. Painful arm or leg in an adult. Deformity of arm or of leg in an adult. Weakness of arm or of leg in an adult. Coldness and pain in an extremity Complaint of painful jaw Myositis. Fractures. Recent progress in office orthopedics. How to examine orthopedic cases for the law court. Index

Note. Orthopedics as practiced in offices of general practitioners and in clinics is the subject here. Surgical treatments and hospital procedures are not included. Instead, detailed information on simple therapeutic methods needed by the general practitioner are presented and illustrated. Tests, treatments, and medical devices are considered with detailed instructions as to time and place of use. A general bibliography precedes the text while more specific references are listed at the end of each chapter. The author is a member of the faculty of the College of Medical Evangelists, Los Angeles.

DUNTON WILLIAM RUSH JR. AND SIDNEY LICHT editors

Occupational therapy principles and practice. Springfield, Ill. Charles C Thomas, 1950 321 p. illus. 24 cm. $8 00 1036

Contents: History of occupational therapy by W R. Dunton, Jr. The principles of occupational therapy by S. Licht. The prescription, by W R. Dunton, Jr. Occupational therapy for psychiatric disorders, by W K. Burton. Kinetic occupational therapy by S. Licht. Occupational therapy for amputees, by P Lyttleton. Occupational capacity and therapy in heart disease, by P D White. Occupational therapy in tuberculosis, by A. L. Banyai. Occupational therapy in the treatment of cerebral palsy by R. W Bonynge and W M. Phelps. Education for hospitalized patients, by S. Licht. Bibliotherapy in neuropsychiatry by J. M. Schneck. Recreational therapy by J. E. Davis Dance therapy by A. P Solomon. Index.

Note: The purpose of this book is to provide medical practitioners rather than physical therapists with information about the scope and methods of occupational therapy The several chapters are by prominent physicians and other persons with professional associations in the field, and they were written especially for this book. References to related literature are included.

GOLDTHWAIT JOEL ERNEST AND OTHERS

Essentials of body mechanics in health and disease. By Joel E. Goldthwait, Lloyd T

Brown Loring T Swaim, John G Kuhns. 135 illustrations. Fifth edition. Philadelphia J B Lippincott Company 1952 356 p. illus 20 cm. $6 00 1037

Contents: The problem of chronic illness. Body types. Body mechanics. Developmental deformities. Backache and other spinal sprains. The circulatory system. Diseases of the abdominal viscera. Diseases of the nervous system. Chronic arthritis. Treatment. The feet and body mechanics. Public health aspects of body mechanics. Geriatrics and body mechanics. Index.

Note. A practical discussion of the relationship between body structure and chronic illness. The book is written for the general practitioner and stresses the need for therapeutic measures which will correct faulty body mechanics and the resultant diseases. Case studies, photographs of patients before and after treatment, and chapter bibliographies are included.

KENDALL HENRY O , AND OTHERS

Posture and pain By Henry O Kendall, Florence P Kendall and Dorothy A. Boynton Baltimore The Williams & Wilkins Company 1952 204 p illus. 29 cm. $7 00 1038

Contents: Part I, Alignment The standard posture. Postural faults. Part II, Mobility Joint and muscle analyses and relation to posture. Tests for muscle length. Tests for muscle strength. Procedure for postural examination. Part III, Treatment Pain associated with faulty body mechanics. Painful conditions of the low back, leg, knee, foot. Painful conditions of the upper back, neck, arm. Part IV Prevention of postural faults Developmental factors and environmental influences affecting posture. Index.

Note. The title of this work is somewhat misleading for postural faults not associated with pain are considered as well as those that are painful. The authors are all associated with the Physical Therapy Department of the Children's Hospital School in Baltimore, and the book is based on approximately 12,000 cases on file in that department. Nevertheless, it is not a highly technical treatment for specialists. Instead, the analyses, treatment, and prevention of postural faults are discussed simply and practically. There are 159 illustrations, some of which contain several illustrations. The book is of interest not only to physical therapists but also to general practitioners of medicine and to teachers and others interested in the promotion of good posture.

KESSLER HENRY HOWARD

The principles and practices of rehabilitation. By Henry H. Kessler in collaboration with other authors With 132 illustrations and a colored plate. Philadelphia Lea & Febiger 1950 448 p illus (part col d) 24 cm. $9 00 1039

Contents: Part I, Principles General considerations, by H. H. Kessler Physical restoration, by H H Kessler Rehabilitation with plastic surgery by J B Brown and M P Fryer Rehabilitation with plastic surgical prosthetic restorations, by A. M Brown. Physical therapy in rehabilitation by R. Kovács Physical conditioning, by D A Covalt The principles of occupational therapy in the rehabilitation of the physically handicapped, by W L. West. Physical rehabilitation of the industrial injured, by H D Storms. A rehabilitation center by B Grove Disability evaluation, by F A. Hellebrandt. Guidance, training, and placement, by M. E. Odoroff. Placement, by B. Hansen. Part II, Practices Rehabilitation of the amputee, by H H Kessler Psychiatric disabilities including epilepsy and mental deficiency by V H Vogel. The rehabilitation of cerebral palsy by W M. Phelps. Physical rehabilitation of neurological disabilities, by A. B. C Knudson. Rehabilitation in poliomyelitis, by R. L. Bennett. Rehabilitation of the patient with heart disease, by M. C. Becker Rehabilitation and the tuberculous, by H. Hudson. Rehabilitation of the blind, by E C McKay Hearing rehabilitation, by R. R. Macrae and F L. Lederer Index.

Note. A practical, inclusive manual. It is addressed primarily to graduate nurses and medical practitioners who are entering rehabilitation work from other specialties or who need fundamental and practical information about it because they occasionally have rehabilitation cases. The typical chapter is a compact outline of specific rehabilitory techniques, supplemented by selected literature references which serve to guide the non-specialist to books and papers where fuller discussions of particular techniques are available.

KOVÁCS, RICHARD

Electrotherapy and light therapy, with essentials of hydrotherapy and mechanotherapy Sixth edition thoroughly revised with 368 illustrations and a color plate. Philadelphia Lea & Febiger 1950 739 p. illus. (part col d) 24 cm. $10.00 1040

Contents (abridged) Part I, Electrophysics. Part II, General electrotherapy and electrodiagnosis: Electromedical currents, apparatus and accessories. Electrophysiology Electrodiagnosis. The galvanic current and ion transfer. Medical diathermy Hyperthermy. Electrosurgery Electrical injuries. Part III, Light therapy: Physics of radiant energy Infrared and luminous radiation. Ultraviolet radiation—physics and effects. Heliotherapy Part IV Essentials of hydrotherapy and mechanotherapy: Hydrotherapy Hypotherapy Massage. Exercise. Part V Applied physical therapy: Cardiovascular conditions. Chronic arthritis and fibrositis. Affections of the central nervous system. Affections of bones, joints, muscles and tendons. Gynecological and genito-urinary conditions. Proctological conditions, by R. V Gooch. Dermatological conditions. Diseases of the ear, nose and throat, by W Morrison. Physical therapy in office practice. Physical therapy in institutional practice. Physical medicine and rehabilitation in general practice, by A. B. C. Knudson. Appendix. Glossary Author's index. Subject index.

Note (905*) A standard reference manual of physical medicine. Although there is some emphasis on electrotherapy and light therapy as indicated by the phrasing of the title, all of the physical therapies are included. The material is presented from the viewpoint of graduate physicians and physical therapists. Techniques are described explicitly first in general, then in relation to particular diseases. Selected literature references are included. The fifth edition was published in 1945. In this edition there is one new chapter and many sections of those carried over have been revised or augmented. Seventy-five of the illustrations are new

KOVÁCS RICHARD

Light therapy Springfield, Illinois Charles C Thomas, 1950. 112 p illus. 22 cm. (American lecture series Publication no 57 A monograph in American lectures in physical medicine, edited by W A. Selle) $2.25 1041

Contents The history of light therapy Physics of radiant energy Infrared and luminous radiation. Ultraviolet radiation. Bibliography. Index.

Note. A brief survey of the current techniques in the therapeutic use of light and of infrared and ultra violet radiation. Literature published as late as 1947 appears in the bibliography hence there is some information in the book which is not to be found in older books on the subject. Essentially however it is a book to be read by graduate physicians who are not specialists in physical medicine but desire to know something about the status of light therapy. The techniques discussed are those used in hospitals, doctors' offices, etc.; in fact a warning against home use of "sunlamps" without the supervision of a physician is included in the book.

KRAUS HANS

Principles and practice of therapeutic exercises. Illustrations by Richard Kroth. Springfield, Illinois Charles C Thomas, 1949 309 p. illus 24 cm. $7.50 1042

Contents. Part I, Fundamental working principles: Clinical pathophysiology of muscle exercises. Measurements. Exercise techniques. Treatment of pain and painful muscle spasm. The exercise prescription. Supporting prescriptions. Part II, The application of therapeutic exercises to particular fields: Musculo-skeletal conditions. The nervous system. Respiration Part III, General exercises. General exercises. Bibliography Index

Note Relatively little space in this book is given to the detailed description of exercises. Instead, the author deals with the basic physiology and with the general principles of therapeutic exercises. Although intended for beginners, the treatment is more mature and is more directly related to medical practice than are some books on therapeutic exercises A typical passage reads chronic tightness and pain in neck muscles may have an occupational and postural background or may be chronic phases of acute trauma. The supportive prescription with regard to occupation, eyesight, posture, etc., is therefore vitally important. The author is a member of the faculty of the New York University College of Medicine.

KRUSEN FRANK HAMMOND, editor
Physical medicine and rehabilitation for the clinician. Philadelphia W B Saunders Company, 1951 371 p. illus. 25 cm. $6.50 1043

Contents: The scope of physical medicine and rehabilitation, by F H. Krusen. I, Therapeutic application of physical agents and procedures: Prescription writing in physical medicine, by G. M. Martin. Therapeutic uses of heat, by G. M. Martin. Therapeutic uses of massage, by D. J Erickson. Basic principles used in therapeutic exercise, by E. C. Elkins. Factors involved in posture, by E. C. Elkins. Training the patient to rest and relax, by F H. Krusen. Ultraviolet radiation in medicine, by G. M. Martin. Experimental studies in microwave diathermy by J F Herrick. Ultrasonics and medicine, by J. F Herrick. Occupational therapy for the medical patient, by G. Patton. Occupational therapy for rheumatic diseases, by G. Patton. II, Diagnostic applications of physical agents and procedures: Electrodiagnostic methods—evaluation and interpretation, by D. L. Rose. Simple muscle testing procedures in the clinical evaluation of pain, by D. L. Rose. Skin resistance testing in neurologic diagnosis, by J. R. Gay Studies of the circulation as evidenced by measurements of the temperatures of the skin in health and disease, by G. M. Roth and C. Sheard. III, Clinical aspects of physical medicine and rehabilitation: Physical medicine and rehabilitation in a general hospital, by H. A. Rusk. The function of the medical social worker in rehabilitation planning, by L. Schoenemann. Physical medicine in neurology by A. L. Watkins. The clinician approaches the problem of backache, by H. F Polley Rheumatoid spondylitis—clinical features and methods of treatment, by H. F Polley Physical treatment of arthritis, by H. F Polley Psychosomatic problems with neuromuscular and joint manifestations, by H. P. Rome. The stiff and painful shoulder by R. K. Ghormley. Breathing exercises for asthmatics, by D. J. Erickson. Physical treatment of the hemiplegic patient in general practice, by H. Deaton. Painful feet—evaluation and management of painful metatarsals, by F J. Kottke. The treatment of poliomyelitis, by M. E. Knapp. Physical medicine in treatment and rehabilitation of patients having tuberculosis and other pathologic lesions of the chest, by H. Deaton. Management of the family of the patient having cerebral palsy by G. R. Logan. Evaluation and management of the patient having cerebral palsy by G. M. Martin. Physical rehabilitation of the paraplegic, by E. C. Elkins. Experimental studies on fasciitis and fibrositis, by H. E. Dunn and F H. Krusen. IV Fundamentals of anatomy therapeutic exercise and physiology as related to physical medicine and rehabilitation: Functional anatomy of the upper limb, by W H. Hollinshead. Functional anatomy of the lower limb, by W H. Hollinshead. Functional anatomy of the back, by W H. Hollinshead. The skeletal musculature in health and disease, by K. G. Wakim. *Fundamentals of therapeutic exercise*, by F H. Krusen. The physiological effects of bed rest and immobilization, by H. L. Taylor. Index.

Note: The editor of this work is head of the section on Physical Medicine and Rehabilitation of the Mayo Clinic, and most of the contributors are members of the Mayo Clinic staff. A typical chapter is about nine pages in length and is accompanied by list of references. The book is addressed to medical men who are not specialists in physical medicine.

NATIONAL SOCIETY FOR CRIPPLED CHILDREN AND ADULTS INC
A manual of cerebral palsy equipment. Chicago The National Society for Crippled Children and Adults, Inc. 1950 illus. 30 cm. Looseleaf flexible binder $5.00 1044

Note: In this work wide variety of furniture and other equipment useful in the care and training of persons affected with cerebral palsy is described. Each piece of equipment is described separately—usually on single sheet. The descriptions usually include an illustration and specific data on dimensions and materials. Both standardized equipment and equipment that must be custom-made are included. Besides the descriptions of equipment, the book includes list of commercial firms manufacturing such equipment in the United States of America and bibliography

POHL JOHN FLORIAN
Cerebral palsy Saint Paul, Minnesota Bruce Publishing Company 1950 224 p. illus. 21 cm. $5.00 1045

Contents: The medical problem. Plan of treatment—general principles. Education. Introduction to neuromuscular training. Neuromuscular training: anterior neck and trunk. Neuromuscular training: posterior neck and trunk. Neuromuscular training: upper extremity Neuromuscular training: lower extremity Developmental patterns. Walking. Occupational therapy Speech. Index.

Note: Essentially this book is manual of the therapy and training of children affected with cerebral palsy It is addressed both to medical practitioners and to nonmedical therapists he are concerned with the treatment of such children. There are 130 illustrations but no literature references. The author is Orthopedic Surgeon for the Michael Dowling School for Crippled Children in Minneapolis.

SHRINER, MILDRED
Foundations for walking a practical guide for therapists, teachers and parents of cerebral palsied children. Chicago Illinois The National Society for Crippled Children and Adults, Inc., 1951 93 p. illus. 23 cm. Paper $1 00. 1046

Contents: Locomotion goals. The child needs the proper chair for sitting. The child needs other equipment to aid sitting balance. The child sits and gets around on wheels. The child is lifted and carried. The child stands. The child walks. The author. Bibliography

Note: An authoritative booklet of practical up-to-date techniques in the teaching of walking to children affected with cerebral palsy Most of the illustrations show special apparatus such as chairs, skate shoes, crawlers, specially adapted tricycles, parallel bars, and practice stairs. There is bibliography of 18 references.

WEPMAN JOSEPH M
Recovery from aphasia. With a foreword by Wendell Johnson. New York The Ronald Press Company 1951. 276 p illus. 24 cm. $5.50. 1047

Contents (abridged) Part I, Nature of aphasia: Introduction to aphasia therapy Etiology of aphasia. Nonlanguage characteristics of aphasics. Classification and nomenclature of aphasia symptoms. Part II, Research findings during World War II. Part III, Aphasia therapy and therapists Theory and working principles. The professional aphasia therapist. Associated therapies and therapists. Direct therapy in receptive aphasia. Direct therapy in expressive aphasia. Bibliography *Index of names. Index of subjects.*

Note: Currently in the United States of America the aphasia therapist may be person who has background in teaching, speech pathology psychotherapy or some other fields. Medical practitioners and nurses also play active parts in the treatment of aphasics. This book is survey of the field for persons he are engaged in aphasia therapy or he are interested in entering the profession. The author has assumed some acquaintance with the fundamentals of education and psychology but not necessarily any previous acquaintance with aphasia. The aspects of the subject which are of interest to practical therapists are discussed fully and in clear explicit style. There is due emphasis on the necessity of viewing the aphasic patient as person with family and other social relationships such as important factors in his recovery The author is member of the faculty of the Medical School of the University of Chicago.

YEAR BOOK OF PHYSICAL MEDICINE AND REHABILITATION
The 1951 year book *of* physical medicine *and* rehabilitation (December 1950–January 1952) Edited by Frank H. Krusen. Associate editors Earl C Elkins and George G. Deaver Chicago The Year Book Publishers, Inc. 1952 382 p. illus. 20 cm. $5.50 1048

Contents. Introduction. Spina bifida, by G G. Deaver and others. General aspects. Physiologic and anatomic considerations. Diagnostic applications Electromyography Devices and mechanical procedures. Exercise. Artificial respiration. Heat and cold therapy Hydrotherapy Medical electricity Short wave and microwave diathermy Ultrasonics in medicine. Poliomyelitis. Cerebral palsy Amputees. Orthopedic conditions. General medical conditions. Neurologic and psychiatric conditions. Obstetrics. Urology Geriatric conditions. Teaching. Index. Index to authors.

Note: (910*) An annual publication organized on the plan of the other books in this useful series. In it selections from the world's medical literature are summarized and classified. Each chapter is

made up of a number of abstracts of substantial length. Frequently the abstract is accompanied by a short supplementary note written by the editor. A reference to the original article is given in all cases. In the issue at hand there are 160 figures. Also in this issue is a special article on *spina bifida* as indicated in the table of contents. This article is not an abstract but is a full-length discussion of treatment and rehabilitation of children afflicted with this condition.

NUTRITIONAL THERAPY

GOODHART, ROBERT S editor

Nutrition in the practice of medicine with comments on nutrition, disease and geography Proceedings of the Nutrition Symposium held at the University of California, School of Medicine, San Francisco October 30 1951 Edited by Robert S Goodhart. New York The National Vitamin Foundation, Incorporated, 1952 163 p illus. 23 cm. (Nutrition symposium series. No. 4) $1 50 1049

Contents: Some factors related to intestinal absorption, by P. J. Culver. Nutritional aspects of liver disease in man, by R. M. Kark. Influence of pancreatic insufficiency on nutrition, by H. Necheles. Nutritional and metabolic disturbances in ulcerative colitis, by J. A. Bargen. Some aspects of nutrition in relation to tissue devitalization and maintenance, by F. J. Stare. Some features of tissue changes induced by nutritional deficiencies, by P. R. Cannon. Some international economic aspects of nutrition, by J. B. Condliffe.

Note. Each of the papers in this book is original and is written at the research level. In most instances the results of recent investigations and observations are described, and in some of the papers particular stress is laid on problems still waiting solution. A transcript of the discussion which followed the presentation of each paper is included and literature references are supplied.

JOLLIFFE, NORMAN AND OTHERS, editors

Clinical nutrition Edited by Norman Jolliffe, F F Tisdall and Paul R. Cannon for the Food and Nutrition Board of the National Research Council. With 78 tables and 127 illustrations, 61 in full color New York Paul B Hoeber Inc. 1950 925 p illus. (part col d) 24 cm. $12.00 1050

Contents: Part I, Diagnosis of nutritional deficiency The pathogenesis of deficiency disease, by N Jolliffe. The dietary and medical history by N Jolliffe. The clinical signs, by N Jolliffe and others. Biochemical methods, by O A Goldsmith. Radiologic examination of the digestive tract, by R. Golden. Critique of laboratory aids in the diagnosis of malnutrition, by H. Pollack. Part II, The nutrient elements Protein malnutrition by R. Elman and P R Cannon. Carbohydrate malnutrition, by S Soskin and R. Levine. Caloric deficiency and starvation, by A. Keys. Calcium and phosphorus malnutrition, by I Snapper. Iron malnutrition, by R. F Farquharson. Sodium, potassium, and chloride malnutrition, including water balance and shock, by J A. Dumphrson. Iodine malnutrition, by G. M. Curtis and M. B. Fertman. The essential trace elements, by C. V Moore and others. Vitamin A malnutrition, by S. W Clausen. Vitamin D malnutrition and rickets, by E A Park. Vitamin K malnutrition, by E. D Warner. Thiamine malnutrition, by R. D Williams and R. M. Wilder. Riboflavin malnutrition, by G. A. Goldsmith. Niacinamide malnutrition and pellagra, by T D Spies. The pteroylglutamates in nutrition, by W J Darby and E Jones. Choline malnutrition, by C. H. Best and C. C. Lucas. Vitamin C malnutrition and scurvy by F F Tisdall and N Jolliffe. Pyridoxine, pantothenic acid, biotin, inositol, and vitamin E, by E. S Gordon. Part III, Therapy and prevention Principles of nutrition therapy by N. Jolliffe. Diet therapy by M. G Wohl. Dietotherapy by M. G. Wohl and N G. Schneeberg. Obesity, by L. H. Newburgh. The relation of nutrition to health, by F F Tisdall. Nutrition in public health practice, by W H. Sebrell, Jr and H. R. Sandstead. Food and nutrition problems associated with industrial work, by R. S. Goodhart and M E Shils. Appendix. Index.

Note. An important work planned and written as a means of disseminating to graduate physicians the current scientific information on human nutritional requirements, the clinical signs of deficiencies, the diagnosis and differential diagnosis of deficiencies, and methods of treatment. Extensive bibliographies are included.

MCLESTER, JAMES SOMERVILLE, AND WILLIAM J DARBY

Nutrition and diet in health and disease. Sixth edition. Philadelphia W B Saunders Company 1952 710 p. 24 cm. $10 00. 1051

Contents (abridged) Part I, Nutrition in health: Utilization of food. The vitamins. Inorganic nutrients. Milk and milk products. Meat, fish and eggs. Other foods. Feeding of infants. Nutrition in pregnancy and lactation. Part II, Nutrition in disease: Deficiency diseases. Diabetes mellitus. Gout. Obesity and leanness. Diseases of the kidney and urinary tract. Diseases of the digestive organs. Febrile diseases. Diseases of the heart and arteries. Diseases of the joints. Diseases of the nervous system. Endocrine disorders. Diseases of the skin. Nutrition in surgery Special methods of feeding. References. Supplementary tables. Composition of foods. Index.

Note: (1208) A technical survey of the available information on nutrition both in health and in disease. Although it contains much information which is valuable to physicians, nurses, and public health workers it is addressed not only to such readers but is intended also for nutritionists, teachers of home economics, etc. It is based on the literature and both the text and the tables are referenced to the bibliographies. The first edition was published in 1927 and the fifth edition in 1949. The sixth edition is the first one to bear the name of a collaborator on the title page. In comparison with the preceding edition it is very extensively revised with newly added information in practically every chapter. There are now 145 tables, some of which are statements of recommended menus for patients for use in the treatment of specific diseases. The bibliographies are not comprehensive but include the classical references and the more useful modern studies.

MAYO CLINIC COMMITTEE ON DIETETICS

Mayo Clinic diet manual. Philadelphia W B Saunders Company 1949 334 p. illus. 24 cm. $4.50. 1052

Contents (abridged) Standard hospital diets. Standard tube feedings. Dietary programs following operations in general. For gastric and duodenal ulcer For obstructing gastric and duodenal lesions. For use following gastric surgery For diseases of the gallbladder. For diseases of the liver For use before and after operations on the lower part of the intestinal tract. For use after operations on the colon or vaginal hysterectomy For irritable bowel with constipation. For chronic ulcerative colitis. For sprue. For allergy For urinary calculi. For cardiorenal vascular disease. For diabetes. For gout. For hypercalcemia. For hyperlipidemia. For iron deficiency anemia. For obesity For pregnancy For simple underweight. For underweight due to anorexia. For infants. For children. For children who have celiac disease. For children who have epilepsy For children who have chronic renal disease. Low calcium test diet (quantitative) High potassium, low sodium chloride test diet. High purine test diet. Test diet for steatorrhea and for nitrogen excretion. Appendix. Recommended dietary allowances, revised 1945 (amounts per day) Vitamin supplements. Excess of acidity or alkalinity in foods. Foods high in calcium. Foods high in cholesterol. Foods high in iron. Foods high in oxalic acid. Foods high in sodium. Classification of foods according to carbohydrate content. Average composition of 100 gm of various foods. Recipes for certain foods in alphabetical list of approximate composition of food. Standard diabetic diets for children. Standard diabetic diets for adults. Food nomogram. Index.

Note: A reference manual of specific information and detailed descriptions of specified diets developed and used at the Mayo Clinic and associated institutions. It is designed for persons with training in medicine or dietetics rather than for patients and the general public.

POLLACK HERBERT AND SEYMOUR LIONEL HALPERN

Therapeutic nutrition Prepared with collaboration of the Committee on Therapeutic Nutrition, Food and Nutrition Board. Committee on Therapeutic Nutrition, Russell M. Wilder chairman. Washington D C. National Academy of Sciences—National Research Council, 1952 94 p. 25 cm. (National Academy of Sciences—National Research Council. Publication 234) 1053

Contents (abridged) Functions of components of the diet in metabolism. Non-dietary factors affecting metabolism. The endocrine glands and metabolism. Evaluation of nutritional status. Consequences of nutritional deficiency. The relation of protein disequilibrium to disease. Nutritional requirements of the sick, injured, and convalescent. Therapeutic nutrition for specified conditions. The treatment of starvation and severe undernutrition. Problems of nutrition under emergency disaster situations. References.

Note: A presentation of what is currently known about the part played by proper nutrition in hastening the recovery of sick, wounded, and convalescent patients. The material is based on survey of the literature of the subject. The discussions of the relationship of nutrition and disease and the outlined therapeutic measures designed to meet specific needs represent the consensus of opinion of experts in the field. Emphasis "is placed primarily on recovery from acute catabolic episodes that produce drastic metabolic derangement of normal physiological processes. Prolonged partial or chronic malnutrition of population groups is not primary consideration in this report. The subjects of interest are generally *in the class of hospitalized patients. The bibliography of 783 references* is keyed to the textual material.

RICE, THURMAN BROOKS

Low-sodium diet a manual for the patient. *Philadelphia Lea & Febiger 1951* 103 p. 24 cm. $2 75 1054

Contents: The forms of sodium found in food. Why sodium may be injurious. Where and how does one get low sodium food? "Eating out. Originality and ingenuity in the low-sodium diet. The psychology of dieting. Errors and penances. Body weight in relation to the low-sodium diet. The use of sodium compounds in the processing of foods. Suggestions for the preparation of low-sodium menus. Food lists rated by content of native sodium. Typical food charts for study and consideration. Water supplies in relation to sodium content. Appendix. Index.

Note A graduate physician who is on low-sodium diet himself wrote this practical guide for those who must also follow such diet and for those who prepare meals for them.

RADIOLOGY

BEARD DONALD E., AND OTHERS

Radiologic diagnosis of the lower urinary tract. By Donald E. Beard, William E. Goodyear and H. Stephen Weens Springfield, Illinois Charles C. Thomas, 1952 143 p. Illus. 24 cm. $6.50 1055

Contents Introduction. The normal urethrogram. Diseases of the anterior urethra. The membranous urethra. The posterior urethra. The bladder. Urethrography and cystography in children. References. Index.

Note: A practical introduction to urethrography and cystography *as diagnostic techniques in studying disorders of the lower urinary* tract. The authors present simplified technique for urethrography based on the use of contrast medium consisting of 17 per cent sodium iodide in peanut oil. Essentially the book is an atlas of approximately 300 pictures, most of which are reproductions of roentgenograms. The pictures are accompanied by descriptive captions and brief, clearly written text.

BUSCHKE, FRANZ AND OTHERS

Supervoltage roentgentherapy By Franz Buschke, Simeon T Cantril, and Herbert M. Parker Springfield Illinois Charles C Thomas, 1950 297 p. illus. 24 cm. $10.50 1056

Contents: Physical considerations of supervoltage roentgentherapy at the Tumor Institute. Carcinoma of the oral cavity. Malignant tumors of the pharynx. Carcinoma of the esophagus. Carcinoma of the maxillary sinus. Carcinoma of the larynx. Carcinoma of the bladder. Carcinoma of the breast. Carcinoma of the cervix uteri. Pituitary adenoma. Conclusions. Index.

Note: In this book three members of the Tumor Institute of the Swedish Hospital in Seattle, Washington summarize the experience with this hospital's high voltage X-ray apparatus, which was installed in 1932 and has been in use since that year. The installation which operates at about 800 K. V is described in the first chapter The remainder of the book is made up chiefly of detailed discussions of case histories. Although the authors avoid "hard and fast conclusions they have found some advantages in the use of X-ray voltages above 300 K. V. The book contains 180 illustrations, some of which are colored. Bibliographies are included with the chapters.

CAFFEY, JOHN

Pediatric X-ray diagnosis a textbook for students and practitioners of pediatrics, surgery & radiology Second edition. Chicago The Year Book Publishers, Inc. *1952 862* p. Illus. 27 cm. $22 50. 1057

Contents (abridged) Section I, The head and neck: The skull. Individual cranial structures. Intracranial structures. Intracranial pneumography The neck. Section II, The thorax: The thoracic walls. The respiratory tract. Pathologic intrathoracic changes. Primary pulmonary tuberculosis. The mediastinum. The heart. Section III, The abdomen & gastro intestinal tract Diseases of the abdominal walls. The liver. The biliary tract. The spleen. The pancreas. Mesentery and omentum. The digestive tract. Section IV The pelvis and genito-urinary tract: The pelvis. The urinary tract. The adrenal glands. The reproductive system. Section The extremities: The *soft tissues. The bones. The joints. Section VI, The vertebral column:* Congenital disturbances. Traumatic lesions. Diseases involving vertebral column. Index.

Note. (919*) A comprehensive treatment based on many years of collective experience at the Baby's Hospital, New York. Information and illustrations from the periodical literature have been incorporated also. Under each of the anatomical regions named in the chapter titles, *conditions which are of interest in roentgenology are* discussed. Generally speaking, there is brief description of the specific disease or abnormality and this is followed by longer discussion of the anatomy and pathology in relation to roentgen diagnosis. Normal roentgen appearances are described and illustrated for purposes of comparison. The first edition was published in 1945. In spite of the short interval between the two editions, the second edition contains *fair amount of new text and 734 new illustrations.* A selection of recent literature has been added to the reference lists printed in numerous places throughout the book.

DE LORIMIER, ALFRED ALEXANDRE

The arthropathies, a handbook of roentgen diagnosis. Second edition. Chicago The Year Book Publishers, Inc. 1949 335 p. Illus. 21 cm. $7.00. 1058

Contents: Part I, The peripheral joints: Developmental malformations. Osteochondritis. Group in which changes are essentially concerned with mechanical stresses. Group essentially concerned with protein reactions, toxins or actual bacterial invasion of the joint—the true arthritides. Part II, The joints of the spine. Developmental malformations. Spondylolisthesis. Osteochondritis. Group in which changes are essentially concerned with mechanical stresses. Group essentially concerned with protein reactions, toxins or actual bacterial invasion of the joint. Ochronosis. Neoplasms. Spinal arthralgias—miscellaneous causes. Part III, The temporomandibular joints. Arthropathies. Selected references. Index.

Note: A thorough work on the use of X-ray in diagnosis of diseases of the joints. In this edition there are 57 plates and the majority of them contain reproductions of two or more roentgenograms. The plates are accompanied by descriptions of the abnormalities and disease manifestations which can be seen in them. The chapters on diseases are preceded by an introduction in which the techniques of producing high quality roentgenograms of the joints and surrounding tissues are described. The first edition was published in 1943. Both the text and the illustrations have been extensively revised and augmented.

ECKER ARTHUR

The normal cerebral angiogram. Springfield, Ill. Charles C Thomas, 1951. 190 p Illus. 24 cm. $7.25 1059

Contents Part I, Technic. General technical considerations. Specific technic. Complications. Part II, Angiographic anatomy. Arteriographic anatomy. Venographic anatomy. Artefacts. Vascular relations to the tentorial notch and foramen magnum. References. Index.

Note: A short but valuable monograph on the radiography of the blood vessels of the brain. In the first part specific and detailed descriptions of techniques are supplied. The second part is built around series of remarkable X-ray photographs of blood vessels in

the brain. The purpose of the work is to describe the normal (and "normal variations") anatomy of the major blood vessels of the brain as these are seen in angiograms and to describe the technique of angiography for the guidance of neurologists and neuroradiologists.

FERGUSON, ALBERT BARNETT

Roentgen diagnosis of the extremities and spine. Second edition, revised and enlarged. With six hundred and twenty-five roentgen ray studies and eight line cuts. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers 1949 519 p. illus. 27 cm. (Annals of roentgenology, a series of monographic atlases. Vol. seventeen) $16 00 1060

Contents: Introduction. Calcareous matter Reticular bone. Diaphyseal fractures and infections. Diaphyseal malignancy Metaphyseal bone. Inherent disturbances of bone formation. Cartilage lines, fracture lines and anomalies. Fractures. Healing of fractures. Epiphyses and small bone masses. Non-osseous tissues. Arthritides. Tuberculous arthritis. Non-tuberculous infectious arthritis. Specific tumors. Primary bone malignancy The spine. Index of case histories. General index.

Note. (2191) A standard work in which the author correlates roentgenographic and clinical findings and discusses particular roentgenograms from the viewpoint of the evidences of pathologic change. The discussions are clinical and diagnostic rather than anatomic. The book is intended as a practical guide to the use of X-ray in diagnosing bone diseases and is of interest not only to roentgenologists but also to orthopedic and general surgeons. This edition contains the text and illustrations of the original edition plus two added chapters and 71 new illustrations. The new chapters are those entitled "Specific tumors" and "Primary bone malignancy

GLASSER, OTTO, AND OTHERS

Physical foundations of radiology By Otto Glaser Edith H. Quimby Lauriston S Taylor and J L. Weatherwax. Second edition, revised and enlarged. New York Paul B Hoeber Inc. 1952 581 p. illus. 20 cm. $6.50 1061

Contents Preface to second edition. Preface to first edition. Milestones in radiology Fundamental concepts of matter Fundamental concepts of radiation. Interaction of radiation and matter. Fundamental concepts of electricity and magnetism; basic electric instruments. Production and nature of Roentgen rays. Roentgen-ray tubes. Roentgen-ray circuits Supervoltage generators, high energy accelerators; nuclear reactors. Physical principles of Roentgen-ray diagnostic procedures. Measurement of Roentgen-ray quantity Measurement of Roentgen-ray quality Tissue dosage in Roentgen-ray therapy Radioactivity Measurement of gamma-ray quantity Dosage calculation in radium therapy Measurement of radiations from radioactive isotopes. Dosage considerations in the use of radioactive isotopes administered internally Dependence of the biologic reaction on quality and time factors. Protection in radiology Appendix: Roentgen ray depth dose tables. Index of names Index of subjects.

Note (2191a) A concise and practical discussion of the physical principles underlying the production, properties, and utilization of X-rays. The treatment is elementary and non-mathematical, and the book is intended to serve as a text for medical students and a guide for practicing physicians. The first edition appeared in 1944 and has been widely used. It was extensively revised for this edition. New developments relating to X-ray quantity and quality and diagnostic procedures were incorporated and two chapters on radioactive isotopes and high energy accelerators were added.

GRUBBÉ EMIL HERMAN

X ray treatment its origin birth and early history Saint Paul The Bruce Publishing Company 1949 153 p illus. 24 cm. $3.00. 1062

Contents (abridged) Vacuum tube research preceding Roentgen's work. The actual discovery of X-rays by Roentgen. The author's work before Roentgen's discovery The author's work following Roentgen's discovery The first X-ray burn. The origin of X-ray therapy The effects of X-rays on the author' body The early history of X-ray therapy *Number of diseases amenable to X ray treatment.* X-ray apparatus and devices designed by the author. The early pioneers of the X-ray X-ray therapy tomorrow. The author's bibliography The author's biography

Note: This book is a short personal account of the author's pioneer work in the use of X-rays as a therapeutic agent. He was the first to test the use of X-rays in the treatment of disease and was also the first professor of roentgenology in any medical college. The book is not a systematic history but is an autobiographical document of interest to students of this phase of the history of medicine.

HAHN, PAUL F , editor

A manual of artificial radioisotope therapy New York Academic Press, Inc. 1951 310 p. illus. 23 cm. $6.80 1063

Contents: Introduction to radiation therapeutic problems, by A. H. Dowdy Terminology and standards, by R. D. Evans. Criteria for the use of therapeutic isotopes, by P F Hahn. Dosimetry of internally administered radioactive isotopes, by E. H. Quimby Radiophosphorus in the treatment of polycythemia vera and the leukemias, by C. F Stroebel and B. E. Hall. Radioactive iodine in the diagnosis and treatment of hyperthyroidism, by J. B. Hamilton and J. W Kerr. Radioactive iodine in the study and treatment of carcinoma of the thyroid, by R. W Rawson and J. B. Trunnell. Radioactive colloids in the treatment of lymphoid-macrophage diseases, by P F Hahn. Tumor therapy by direct infiltration of radioactive colloidal metallic gold, by P F Hahn. Radiological instrumentation in a therapeutic program employing artificial radioactive isotopes, by R. L. Weiland. Health physics, by K. Z. Morgan. Autoradiography as a tool in medical research, by C. P Leblond and J. Gross. Availability of isotopes and means of procurement, by P C. Aebersold. Planning the radioisotope program in the hospital, by E. H. Quimby and C. B. Braestrup. Author index. Subject index.

Note: A book made up of short monographic chapters written by eminent American scientists and physicians who are active in the production of radioactive isotopes or in their therapeutic applications. As the chapter titles show, therapeutic rather than physical aspects are emphasized. The book is designed for biologists, radiologists, and physicians and it serves both as a manual of tested therapeutic techniques and a guide to the pertinent literature. The editor is associated with the Cancer Research Laboratories of Meharry Medical College, and the contributors are mostly members of the faculties of outstanding medical schools.

KAPLAN IRA I.

Clinical radiation therapy With 614 illustrations. Second edition. New York Paul B Hoeber Inc. 1949 844 p. illus. 24 cm. $15 00 1064

Contents. Historical development of radiation therapy Radiation physics. Principles of radiation therapy General considerations in the use of radiation therapy Radiation in skin conditions. Radiation in ear, nose, and throat conditions. Radiation in eye conditions. Radiation in chest conditions. Radiation in inflammatory conditions. Radiation in breast conditions. Radiation in gastrointestinal conditions Radiation in gynecologic conditions. Radiation in genitourinary conditions. Radiation in neurologic conditions. Radiation in bone conditions. Radiation in soft tissue sarcomas. Radiation in blood dyscrasias. Radiation of specific diseases of the lymph nodes. Radiation of specific diseases of the reticuloendothelial system. Radiation in endocrinology Complications and injuries associated with X-ray and radium therapy Trauma and cancer The legal aspects of radiation therapy Index.

Note The author of this work is Clinical Professor of Radiology in New York University Medical College and Director of the Radiation Department of Bellevue Hospital in New York City The book is based on an extensive experience and a large file of case histories. A wide range of diagnostic and therapeutic techniques is included and each is extensively described. The illustrations include reproductions of numerous roentgenograms as well as photographs. The first edition was published in 1937 Numerous changes in various parts of the book were made in preparing the present edition, and the chapter on the legal aspects of radiation therapy was added.

MARKOVITS EMERIK

Bone and joint radiology New York The Macmillan Company 1949 446 p. illus. 26 cm. $20 00. 1065

Contents (abridged) Part one. General part. Section A— Anatomy physiology and radiologic anatomy of bones and joints.

Section B—Diseases of the bones. Section C—Diseases of the joints. Section D—Diseases of the muscles and of the soft tissues. Part two, Regional part. The skull. The spine. The pelvis and the hip joint. The femur The knee joint. Tibia and fibula. The ankle joint. Tarsal and metatarsal bones and phalanges of the foot. The thorax (ribs, clavicle, sternum, and scapula) The shoulder joint. The humerus. The elbow joint. Radius and ulna. The wrist joint. Carpal and metacarpal bones and the phalanges of the hand. Bibliography Index.

MARKOVITS, EMERIK

Visceral radiology New York The Macmillan Company 1951 612 p. illus. 26 cm. $24.00 1066

Contents (abridged) Part one, The chest and the respiratory system. Part two, The circulatory system. Part three, The digestive system. Part four, The abdomen and abdominal organs. Part five, The genitourinary system. Part six, The central nervous system. Bibliography Index.

Note: This and the preceding title are similar in organization and basic viewpoint. However, they may be used independently In each the basic plan of organization is by system. Under each system there is, first, concise discussion of the anatomy and physiology then follow fuller discussions of diseases and, finally there is some information on radiographic techniques and specific information on the interpretation of radiographs. Both books are fully illustrated. They are based on long experience in radiology most of it in Vienna and Budapest, but part of it in the United States.

MESCHAN ISADORE

An atlas of normal radiographic anatomy With the assistance of R. M. F Farrer Meschan. 1044 illustrations on 362 figures. Philadelphia W B Saunders Company 1951 593 p. illus. 26 cm. $15.00. 1067

Contents Fundamental background for radiographic anatomy Introduction to the radiographic anatomy of the skeletal system. Radiographic anatomy of the upper extremity The radiographic anatomy of the pelvis and lower extremity Radiographic anatomy of the skull. Detailed consideration of certain areas of the skull. The radiographic study of the brain. The radiographic anatomy of the vertebral column and subarachnoid space. Radiographic anatomy of the respiratory system. The radiographic anatomy of the mediastinum. Special studies of the heart and major blood vessels. The radiographic anatomy of the upper gastrointestinal tract. Radiographic anatomy of the intestine beyond the duodenum. Radiographic anatomy of the abdomen and peritoneal space. The urinary tract. The genital system. Index.

Note. As indicated in the title, this textbook is concerned with normal anatomy as it appears in radiographs. In their discussions of the various regions and systems the authors combine verbal descriptions with drawings and radiographs Many of the drawings are assembled in sets consisting of (1) diagram of the positioning of the subject, (2) reproduction of radiograph made in this position and (3) line drawing in which the various parts visible in the radiograph are identified. The author is Head of the Department of Radiology in the School of Medicine of the University of Arkansas

POHLE, ERNST ALBERT, editor

Clinical radiation therapy Second edition, enlarged and thoroughly revised, with 201 illustrations and a colored plate. Philadelphia Lea & Febiger 1950 902 p. illus. (part col d) 24 cm. $15.00. 1068

Contents: Radiation therapy in diseases of the blood and blood-forming organs, by O. O. Meyer Radiation therapy in diseases of the circulatory system, by R. Golden and H. W Jacox. Radiation therapy in diseases of the respiratory system and of the breast, by G. E. Richards. Radiation therapy in diseases of the gastro-intestinal tract, by G. T Pack and G. McNeer Radiation therapy in diseases of the female genital organs, by C. L. Martin. Radiation therapy in malignant diseases of the genito-urinary tract, by A. L. Dean and E. J. Gottmann. Radiation therapy in diseases of the nervous system, by R. W Buchanan. Radiation therapy in diseases of the eye and ear, by A. U. Desjardins. Radiation therapy in diseases of the muscles, bones, joints and tendons, by H. F Hare and M. L Sandal. Radiation therapy in diseases and dysfunctions of the glands of internal secretion, by L. J. Marnelle. Radiation therapy in inflammatory diseases, by E. A. Clark. Radiation therapy in diseases of the skin, by J. L. Eller and E. A. Clark. Radiation reactions and injuries, by G. M. MacKee and A. C. Cipollaro. The civil liability of the radiologist, by S. W Donaldson. Supplement I. Low intensity radium needles, by C. L. Martin. Supplement II. Dosage calculation in radium therapy Index.

Note: (1199) Together the chapters of this work constitute useful and authoritative guide to the potentialities and techniques of radiation therapy The coverage of techniques is not comprehensive, but those included are described explicitly and in detail. Literature references are included both for the techniques described in full and those only mentioned. In this edition the title was changed from the former *Clinical roentgen therapy* to indicate the inclusion of techniques based on radium, radioactive iodine, etc. Revisions of text and additions to the bibliography are found throughout the book.

POPPEL MAXWELL HERBERT

Roentgen manifestations of pancreatic disease. Springfield, Illinois Charles C Thomas, 1951 389 p. illus. 25 cm. $8.50 1069

Contents. General considerations. The pancreas. The duodenum. Roentgen methods of examination. Roentgen manifestations. Calcareous diseases of the pancreas. Primary pancreatic tumors. Pancreatic infections. *Pancreatic (exocrine) insufficiency Lesions of the pancreas of secondary origin.* Differential diagnosis. Statistics. *References.* Index.

Note: A series of 144 reproductions of roentgenograms, some of which illustrate conditions never portrayed before, are feature of this valuable monograph. The work is not limited to pancreatic disease but includes diseases and abnormalities of the surrounding viscera as well. The author is Associate Professor of Clinical Radiology at New York University-Bellevue Medical Center

RABIN COLEMAN B

X ray diagnosis of chest diseases. Baltimore *The Williams & Wilkins Company* 1952 208 p. illus. 26 cm. $12 00. 1070

Contents (abridged) Part I, General considerations: The value of special examinations. The use of accessory apparatus. The use of contrast media. *Fluoroscopy* Part II, General Roentgen pathology—the roentgenologic manifestations of simple pathologic processes: The normal chest. Conditions bordering on the normal. Congestion of the lungs. Pulmonary infiltration. Cavitation. Calcification. Part III, Regional Roentgen pathology—roentgenologic manifestations of the diseases. Part IV Differential diagnosis of certain Roentgen shadows: Abnormalities of the pulmonary markings. Sharply defined linear shadows. Round circumscribed shadows. *Differential diagnosis* of pulmonary cavities. Interpretation of Roentgen artifacts. Bibliography Index.

Note: A thorough treatment addressed primarily to specialists in radiology What can be seen of chest abnormalities and diseases by fluoroscopy and roentgenography is discussed thoroughly and in detail. Diseased conditions that do not show on roentgenograms but must be diagnosed by other techniques are also mentioned. As might be expected, most of the space is devoted to roentgenography, but fluoroscopy is given about 37 pages. There are 238 figures and an extensive bibliography The importance of studying series of roentgenographs of the same patient is stressed.

RITVO MAX

Chest X ray diagnosis. With 615 illustrations on 418 engravings and a colored plate. Philadelphia Lea & Febiger 1951 558 p. illus. (part col d) 26 cm. $15.00 1071

Contents (abridged) The lungs. The mediastinum. The diaphragm. The pleura. The bony thorax and the soft tissues of the chest wall. The soft tissues of the neck. The heart and great vessels. The aorta. The pulmonary artery The pericardium. Index.

Note: A treatise based on the author's 30 years of experience in the Department of Radiology of Boston City Hospital and in private practice. It covers specifically and in detail the diagnosis by means of roentgenography of disorders and diseases of the tissues of chest and neck. Although the greater part of the space is given to diseases of the heart and lungs and the tissues directly associated with them, there are discussions of other tissues, for instance the breast, which are not always included in books devoted to the chest. The limits of X-ray diagnosis in this region are discussed as well as its uses. Specialized techniques such as kymography are discussed. The illustrations, most of which are reproductions of roentgenograms, are an especially valuable feature. Literature references are included.

RITVO, MAX

Roentgen diagnosis of diseases of the skull. With four hundred and sixty-six illustrations. Foreword by George W Holmes. New York Paul B Hoeber Inc., 1949 409 p. illus. 27 cm. (Annals of roentgenology a series of monographic atlases. Vol. XIX) $16.00 1072

Contents: The roentgenologic examination of the skull. Congenital, hereditary and developmental anomalies. Traumatic and postoperative changes. Infections. Nutritional, endocrine, and metabolic disturbances. Roentgen study of the fetal skull during pregnancy. Intracranial calcifications; foreign bodies; intracranial accumulations of iodized oil; intraocular calcifications. Neoplasms. Cerebral angiography. Index.

Note: Most of the illustrations in this work are reproductions of roentgenograms selected from the files of the Boston City Hospital. The author has made special effort to represent rare conditions as well as common ones. Another useful feature is the inclusion for purposes of comparison of roentgenograms of normal skulls, both infant and adult. The illustrations take up most of the space; but the long legends which accompany them and the more generalized text are valuable also. The author is member of the faculty of the Medical School of Harvard University

RITVO MAX AND I A. SHAUFFER

Gastrointestinal X ray diagnosis. 470 illustrations with 2 in color Philadelphia Lea & Febiger 1952 838 p. illus. (part col d) 24 cm. $20 00 1073

Contents. General considerations. The pharynx—the esophagus. The stomach. The duodenum. The jejunum and the ileum. The colon. The appendix. The gallbladder The liver. The pancreas, spleen, mesentery omentum, peritoneum and abdomen. Hernia. Index.

Note. A comprehensive treatise in which both common and rare gastrointestinal conditions subject to diagnosis by X-ray are covered. It is addressed primarily to graduate roentgenologists and gastroenterologists. Although limited largely to diagnosis, certain amount of background and incidental information useful in diagnosis is included, for instance "There is distinction between erosions, acute ulcers and chronic ulcers. An acute ulcer is localized loss of tissue which penetrates deeper than the muscularis mucosae. A more superficial loss of tissue is referred to as an erosion. Extensive lists of the related literature are included. Most of the illustrations are reproductions of roentgenograms. In some instances larger scale would have been desirable, but in general the reproductions are clear

SCHWARTZ CHARLES WADSWORTH AND LOIS COWAN COLLINS

The skull and brain roentgenologically considered. Springfield Illinois Charles C Thomas 1951 386 p. illus. 24 cm. $10 50 1074

Contents Technique Normal skull Practical considerations. Congenital anomalies Traumatic disorders. Neoplastic disease—skull—intracranial. The meningiomas. The gliomas. Tumors of the hypophysis cerebri Tumors of the acoustic nerve. Lesions of blood vessel origin. Miscellaneous tumors. Infectious disease. Miscellaneous diseases. Index.

Note. A reference manual on the interpretation of roentgenograms of the skull and brain It is organized around more than three hundred excellent reproductions of roentgenograms The pictures are accompanied by concise discussions of the anomalies and diseases manifested in them. Roentgenograms that are clearly typical of the disorders represented were chosen rather than borderline cases. However special points useful in differential diagnosis are included in the discussions and in three charts. The authors are members of the faculty of the College of Physicians and Surgeons of Columbia University

SHURTLEFF, FORREST E

Children's radiographic technic. Philadelphia Lea & Febiger 1951 80 p. illus. 26 cm. $3 75 1075

Contents: Equipment and accessories. Children's radiographic positions. Special radiographic procedures. Children's technic. Index.

Note: A brief but clear description of the special techniques which have been developed at the Children's Medical Center in Boston for X-ray examinations of children. Thirty-two figures illustrating positions and apparatus are included. The final chapter tabulates the procedures according to the part of body being X-rayed and age of the child.

STEEL DAVID

Roentgen anatomy Roentgen anatomia. Springfield Illinois Charles C Thomas, 1951 109 p illus. 32 cm. $8 00. 1076

Note. An atlas of reproductions selected so as to illustrate the appearance in roentgenograms of normal anatomic structures. The book is organized so that each roentgenogram faces a diagram in which the structures are identified in both English and Spanish terms.

STORCH, CHARLES B

Fundamentals of clinical fluoroscopy with essentials of roentgen interpretation. New York Grune & Stratton, 1951. 196 p. illus. 26 cm. $6 75 1077

Contents: Basic concepts—mechanics, protection and dark adaptation. Fluoroscopy of the chest. General fundamentals. Fluoroscopy of the pathological chest. Fluoroscopy of the heart: Types of heart. Fundamentals of specific chamber enlargement. Procedure for cardiac fluoroscopy Fluoroscopy of the pathological heart. Fluoroscopy of the pharynx, hypopharynx and esophagus: Fundamentals. Pathological examination. Fluoroscopy of the stomach: Fundamentals. Fluoroscopic procedure. The pathological stomach. Fluoroscopy of the colon. Fundamentals. Fluoroscopic methods of examining the colon. Fluoroscopic study of the pathological colon. Bibliography Index.

Note A comprehensive and practical guide to the techniques of fluoroscopic examinations. It is written for general practitioners and other physicians who are not specialists in roentgenology but who use the fluoroscope in diagnosis. Each chapter includes descriptions of the anatomy of the region under discussion, preliminary preparation of the patient, positioning, examination procedures, and diagnostic interpretations of the fluoroscopic images. There are 111 figures and selected bibliography The author is member of the staff of the Radiodiagnostic Department of Beth-El Hospital, Brooklyn, New York.

YEAR BOOK OF RADIOLOGY

The 1952 year book of radiology (June, 1951–June, 1952) Radiologic diagnosis edited by Fred Jenner Hodges and John Floyd Holt. Radiation therapy edited by Harold W Jacox and Vincent P Collins. Chicago The Year Book Publishers, Inc., 1952 416 p. illus. 23 cm. $7 50 1078

Contents. Part I, Diagnosis: Introduction. Technical developments. The head. The spine and extremities. The chest. The gastrointestinal tract. The genitourinary tract. Part II, Radiation therapy: Introduction. Head and neck. Breast. Gynecology Genitourinary system. Blood dyscrasias, lymphomas and allied diseases. Miscellaneous conditions. Hazards and injuries. Treatment technics. Physics and dosimetry Radiobiology Index. Index to authors.

Note. (919*) The twenty-first issue of series that provides an annual review of the latest developments and experiences as these were reported in the international literature published June, 1951–June, 1952. Each chapter consists of series of abstracts, each of which gives the gist of an original article and is often supplemented by an editorial note which evaluates the author's findings and relates them to other work. The original source is cited in all cases. There are 317 figures in the present issue.

ZIRKLE, RAYMOND ELLIOTT editor

Effects of external beta radiation. New York McGraw Hill Book Company Inc., 1952 242 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division IV—Plutonium project record. Vol. 22 E) $3.50 1079

Contents: Techniques of external irradiation with beta rays, by J. R. Raper and others. Gross effects of beta irradiation on restricted surface of rabbits, by J. R. Raper and others. Comparative lethal effects of external beta irradiation, by J. R. Raper and others. Gross effects of total surface beta irradiation, by J. R. Raper and K. K. Barnes. Rate of recovery from total surface beta irradiation, by J. R. Raper and K. K. Barnes. Additivity of lethal effects of external beta and gamma irradiation, by J. R. Raper and K. K. Barnes. Influence of total-surface beta irradiation on the gross metabolic pattern of rats, by E. A. Barnes. Histopathological effects of single doses of total surface beta radiation on mice, by R. S. Snider and J. R. Raper. Effects of external irradiation with beta rays on the peripheral blood of rabbits, by J. R. Raper and K. K. Barnes. Changes in peripheral blood after single doses of external beta radiation, by E. A. Barnes. Reactions of human skin to single doses of beta rays, by J. E. Wirth and J. R. Raper. Delayed effects of single exposures to external beta rays, by J. R. Raper and others. Effects of periodic total-surface beta irradiation, by J. R. Raper and others. Aberrant tissue developments of rats exposed to beta rays, late effects of P^{32} beta rays, by P. S. Henshaw and others. Review of information bearing on the tumor-inducing action of superficial radiations, by P. S. Henshaw and R. S. Snider. Index.

Note. The papers in this volume are summarized reports of experimental investigations carried out as "part of an intensive radiobiological program" at Clinton Laboratories, Oak Ridge, Tennessee during World War II. Experimental methods employed and the results are both described explicitly. As the chapter titles indicate, most of the experiments were concerned with external beta rays. The energy of this radiation is entirely absorbed in superficial layer of tissues and it can therefore do direct damage only to the skin and exposed organs. However, some experiments were made to throw light on the effects of exposure to gamma radiation simultaneously or subsequently to the exposure to beta rays. Literature references are included with most of the chapters.

DISEASES GENERAL

BODANSKY MEYER

Biochemistry of disease, by M Bodansky and O Bodansky Second edition thoroughly revised and enlarged, by Oscar Bodansky New York The Macmillan Company 1952 1208 p. illus. 24 cm. $12 00 1080

Contents: Diseases of the blood. Diseases of the heart and cardiovascular system. Diseases of the respiratory tract. Diseases of the kidney and genitourinary tract. Disorders of the digestive system. Disorders of the liver and biliary tract. Diseases of the pancreas. Diseases of the adrenals. Diseases of the pituitary. Diseases of the thyroid. Diseases of the parathyroids. Diseases of bone. Diseases of muscle. Diseases of the male gonads. Applications of biochemistry in obstetrics and gynecology. Miscellaneous disorders of nutrition. Miscellaneous disorders of metabolism. Biochemical aspects of neurological and psychiatric disorders. Appendix. Index of subjects.

Note (1951) As the title indicates, this treatise is concerned with the biochemical aspects of clinical medicine. It is addressed to upperclass medical college students and to practicing physicians. It is of interest also to the upper ranks of technical personnel in diagnostic laboratories. The scope is comprehensive. Thus, there is not only discussion of the biochemistry of thyroid diseases, but also of such matters as the biochemical aspects of electric shock used in the treatment of psychoses. Extensive bibliographies are included. *The first edition appeared in 1940. This edition represents* an almost complete rewriting and considerable expansion. Many diseases are now included which were not mentioned in the first edition.

BOYD WILLIAM

The pathology of internal diseases. Fifth edition thoroughly revised with 391 illustrations and 11 colored plates. Philadelphia Lea & Febiger 1950 866 p. illus (part col'd) 24 cm. $11 00 1081

Contents: Diseases of the heart. Diseases of the arteries. Diseases of the respiratory system. Diseases of the stomach and duodenum. Diseases of the intestines. Diseases of the liver and gallbladder. Diseases of the pancreas. Diseases of the kidneys. Diseases of the adrenal glands. Diseases of the thyroid gland. Diseases of the parathyroid glands. Diseases of the pituitary body. Diseases of the blood. Diseases of the spleen. Diseases of the lymph nodes and thymus gland. Diseases of the nervous system. Diseases of the bones and joints. Index.

Note: (1952) A long-established textbook of internal medicine written from the point of view not of diagnosis or of treatment but of the mechanism of disease. Thus the pathologic and histologic aspects of diseases are fully discussed; and the relation of symptoms to lesions concludes the discussion of most subjects. The fifth edition includes new chapter on diseases of the bones and joints; and numerous smaller sections have been incorporated in various parts. However considerable part of the book is identical with the preceding edition and few references to recent literature have been added to the bibliographies.

EVANS, EARL ALISON JR.

Biochemical studies of bacterial viruses. Chicago The University of Chicago Press, 1952 68 p. illus. 21 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $2 75 1082

Contents: The nature of the virus particle. The origin of viral components. The mechanism of virus reproduction. Bibliography

Note: The lectures collected in this volume are in effect condensed survey of the results of recent work done at the University of Chicago on the biochemical aspects of the relationships between viruses and host cells. Some results from related research of other workers are incorporated. The lectures were originally delivered under the auspices of the Institute of Atomic Research at Iowa State College. They were addressed to graduate scientists working in other fields; hence the author assumed familiarity on the part of his audience (and readers) with the technical terminology of biology and chemistry. Literature references are included, therefore the book can be used also as guide for published papers which relate to the studies done at the University of Chicago.

HARRIS HAROLD JEROME

Brucellosis (undulant fever) clinical and subclinical. Second edition revised and enlarged. With the assistance of Blanche L. Stevenson. Foreword by Walter M. Simpson. With 111 illustrations 12 in full color New York Paul B Hoeber Inc., 1950. 617 p. illus. (part col d) 24 cm. $10 00. 1083

Contents: Introduction. Etiology. Epidemiology. Pathology. Symptomatology. Diagnosis. Psychologic studies in chronic brucellosis. Prognosis. Treatment. Prophylaxis. Addenda. Bibliography. Index of authors. Index of subjects.

Note: A comprehensive monograph written primarily for general medical practitioners. However its scope is so inclusive that it is useful also to specialists in clinical medicine, public health personnel, etc. The author himself attended some 700 cases of brucellosis over 15-year period. In addition to this experience he has surveyed the literature and incorporated the findings of other investigators, whose writings are listed in the 44 page bibliography. Such troublesome phases of the problem as differential diagnosis are discussed at length. Public health aspects also are covered. The first edition was published in 1941. The present edition is based on substantially higher number of cases and on the pertinent literature published since 1941. All of the chapters have been revised and enlarged.

NEW YORK ACADEMY OF MEDICINE

The musculoskeletal system. A symposium presented at the twenty third graduate fortnight of the New York Academy of Medicine, October ninth to twentieth, 1950 Edited by Mahlon Ashford. New York The Macmillan Company 1952 368 p. illus. 22 cm. $6.50 1084

Contents: The structure and biological reactivity of connective tissue, by J. Gross. The chemistry of connective tissue, by M. Schubert. On certain aspects of the physiology of muscle, by J. L. Lilienthal, Jr. Diseases and disorders of muscle function, by D. McEachern. Metabolism of calcium and phosphorus in bone, by J. E. Howard. Metabolic bone disease—facts and theories, by I. Snapper. Skeletal changes associated with diseases of the blood, by M. L. Sussman. The clinical effects of cortisone and ACTH on rheumatic diseases, by J. J. Bunim. Rheumatoid arthritis—the natural history of the disease and its management, by C. Ragan.

hemorrhagic diseases and their diagnosis. Treatment of the hemorrhagic diseases and surgical handling. Venous thrombosis. Part II, Laboratory methods. Index.

Note. In this valuable monograph the author traces the history and current status of the study of the coagulation of the blood and hemostasis in general. He then puts forth his own theory which is based on his own experiments and the data from the work of other researchers. The second and larger part of the book is devoted to description and critical discussion of laboratory tests and procedures currently used in the author's own laboratory. Bibliographies at the end of each chapter are extensive where experimentation has been extensive.

STRUMIA, MAX MAURICE, AND JOHN J MC GRAW, JR.

Blood and plasma transfusions. 124 illustrations. Philadelphia F A. Davis Company 1949 497 p. illus. 24 cm. $7.50 1096

Contents Functions of blood and its component elements. Blood groups and blood types. The Rh-Hr blood types. Indications for transfusion. Apparatus for collection and administration of blood. Storage of blood. Preparation and administration of plasma. Storage of plasma. Organization and operation of blood and plasma service. Universal use of group-O blood. Adverse reactions—transmission of disease. Preparation of crystalloid solutions. Technical appendix. Index.

Note. A practical manual designed for the information and guidance of medical practitioners, surgeons, and clinical pathologists and other hospital personnel in charge of blood banks. Basic information, such as blood grouping and blood types, is covered adequately for the purpose. However most of the space is given to discussions of clinical aspects and techniques. The chapter on storage of plasma—to take an example—is 44 pages long. Literature references are included with the chapters. The authors are members of the faculty *of the Graduate School of Medicine of the University of Pennsylvania.*

UNITED STATES ARMY ARMY MEDICAL LIBRARY

Plasma substitutes except those derived from human blood 1940–1951 An annotated bibliography compiled by Karl A. Baer Washington, D C. Army Medical Library, 1951 141 p. 26 cm. Sent free to libraries and institutions. 1097

Note A bibliography of 1[illegible] references to the international literature. The main arrangement is by substances—for example "acacia," "animal serum," and "polyvinylpyrrolidone." However there are also entries under such headings as "infusion therapy" and "shock." An author index is included.

WALL ROBERT L.

Practical blood grouping methods a manual of immunohematology Springfield, Illinois Charles C. Thomas 1952 175 p. 22 cm. (American lecture series. Publication number 122 A monograph in the Bannerstone Division of American lectures in hematology edited by Russell L. Haden) $5.00 1098

Contents: The development of the blood groups. Materials and methods. The ABO blood group system. The Rh blood group system. The MN(S) and P blood group system. Other blood group systems. Autoagglutinins, panagglutinins, "cold type" agglutinins. Antibodies associated with hemolytic type anemias. The cross-matching tests. Differential agglutination tests Recent advances and trends in immunohematology Appendix Bibliography Index.

Note A compact manual of basic information and tested methods It is addressed primarily to laboratory and hospital personnel and to medical practitioners, but its scope and organization make it useful as reference book to anyone with professional interests in the field.

WINTROBE, MAXWELL MYER

Clinical hematology Third edition, thoroughly revised. 220 illustrations and 17 plates, 13 in color Philadelphia Lea & Febiger 1951 1048 p illus (part col'd) 24 cm. $12.50. 1099

Contents. The origin and development of the cells of the blood in the embryo, infant and adult. The erythrocyte. The leukocyte. Blood platelets and coagulation. The blood as whole. The principles and technic of blood examination. Anemia—general considerations and treatment. Pernicious anemia and related macrocytic anemias. The normocytic anemias. Hemolytic anemias. Hypochromic microcytic (iron deficiency) anemia. Anemia in infancy and childhood. Polycythemia. The purpuras. Hemophilia and other hemorrhagic disorders. Leukemia. Tumors and tumor-like conditions involving the blood forming organs. Agranulocytosis and infectious mononucleosis. Appendices. Index.

Note: (933*) A standard comprehensive treatise, based on the literature of the subject and written to meet the needs of general practitioners. Emphasis is placed on the importance of accurate diagnosis and laboratory procedures which may be carried out in the office of the average physician are considered in detail. However, all aspects of the various diseases are adequately covered. There are now about 4000 literature citations.

YOUMANS JOHN B., editor

Plasma proteins. Springfield, Illinois Charles C Thomas, 1950 352 p. illus. 24 cm. (Symposia on nutrition of The Robert Gould Research Foundation Inc., Volume II) $6.50 1100

Contents: Fractionation and properties of the proteins of normal human plasma, by J L. Oncley Equilibrium treatments of the binding of ions to proteins illustrated by serum albumin, chloride, and thiocyanate, by S. H. Armstrong, Jr Plasma protein formation in disease states, by R. C. Madden. Studies on the rates of formation of serum proteins in man, by L. M. London. Some aspects of the biosynthesis of amino acids, by D. Shemin. Use of C^{14}-labeled amino acids in the study of peptide bond synthesis, by L D. Frantz, Jr., and P C. Zamecnik. The role of dietary proteins on plasma protein regeneration, by R. F Chow Some relationships between diet, protein stores, and plasma proteins, by J R. Allison. Clinical problems in hypoproteinemia due to protein deprivation, by R. Elman. Studies on the fate of intravenously administered human plasma proteins in idiopathic hypoproteinemia and in osteoporosis, by F Albright and others. Studies concerning nutritional edema and tissue proteins, by H. Gounelle. Studies on protein deficiency and temperature in relation to edema, by D M. Hegsted and others. Physiological properties of amino acid antagonists, by K. Dittmer. Studies on liver proteins, by P P. Cohen and S. Brand. The metabolism of human serum albumin administered to man, by R. D. Eckhardt and C. S. Davidson. Protein metabolism in relation to resistance to infection, by P R. Cannon. Quantitative immunochemical studies of antibody-containing serum fractions obtained by salt precipitation, alcohol precipitation, or delipidation, by M. Heidelberger and R. C. Krueger. Influence of the adrenal cortex on plasma protein formation and utilization, by A. White and S. Roberts.

Note. Original papers presented at symposium held in Chicago in September 1949 under the auspices of the University of Illinois form the contents of this volume. They are addressed to graduate scientists and medical men. Several of the papers describe the results of recent investigations. All of them were written by eminent specialists in medicine or biochemistry. Literature references are included for the individual papers, but there is no general index to the volume.

CARDIOVASCULAR AND RENAL DISEASES

ALLEN ARTHUR CHARLES

The kidney medical and surgical diseases. 1115 illustrations. New York Grune & Stratton, 1951 583 p illus. 28 cm. $15.00. 1101

Contents: Introduction. Embryology. Anatomy. Normal and abnormal physiology. Uremia. Malformations. Diseases of the glomeruli. Diseases of the tubules. Interstitial nephritis. Specific infections. Pyelonephritis. Renal pelvis calculi. Renal rickets. Diseases of the vessels. Tumors of the kidney. Histologic artefacts. Index.

Note. A survey of the current knowledge of the kidney and its diseases. Special attention is paid to the correlation of pathology with clinical observations. The author points out that changes in the kidney are often important in the diagnosis of numerous other

diseases. Descriptions of diseases are explicit and adequately detailed. Verbal descriptions are directly related to the illustrations of which there are so many that the book could justly be described as an atlas of kidney diseases and abnormalities. The total number of plates is 139 and most of the plates contain reproductions of several photographs or microphotographs. Long lists of references are included.

ALTSCHUL RUDOLF

Selected studies on arteriosclerosis. Springfield, Ill. Charles C Thomas 1950 182 p. illus. *24 cm. $5 50* *1102*

Contents Relationship between human and experimental arteriosclerosis. Experimental cholesterol arteriosclerosis. Cytology of endothelium. Dedifferentiation and metaplasia of endothelium. On the formation of foam cells in arteriosclerosis. Experimental ligature of arteries—appendix to chapters II and VI. On the simulation of experimental arteriosclerosis. Variations of tissue and organ responses in experimental arteriosclerosis. On various time factors in arteriosclerosis. Systematic description of cholesterolosis in tissues and organs. Results from modified experimental approaches. Attempts to influence the intensity of cholesterolosis. Summary and comment. Bibliography Author index. Subject index.

Note The author of this book describes its purpose as follows: "Several different aims were pursued in the preceding chapters: to bring out more distinctly some unsolved morphological problems in human and experimental arteriosclerosis; to attempt an accurate analysis of cellular pathology in various angiopathies and to correlate them; to report on findings in human and in experimental arteriosclerosis which had hitherto been overlooked; and also to describe results in experimental cholesterol arteriosclerosis which had not previously been obtained; and to modify the technique of experimental arteriosclerosis with the idea of *obtaining new results*. In it he has correlated certain results of his own experimental investigations with the findings of other workers in the field.

BARKER, JOSEPH M

The unipolar electrocardiogram a clinical interpretation By Joseph M. Barker assisted by Joseph J Wallace, advised by Wallace M. Yater Foreword by Frank N Wilson. New York Appleton-Century-Crofts, Inc., 1952 *655 p. Illus. 25 cm. $12.50.* 1103

Contents (abridged) General considerations of electrocardiography and of the electrocardiogram Fundamental electric phenomena and the electrocardiogram. The components of normal electrocardiogram. The standard extremity leads. Electrophysiology—basis for interpretation of the electrocardiogram. The normal myocardium. The potential variations of the extremities. Bundle branch block and other types of intraventricular block. *Myocardial infarction.* Transient myocardial ischemia and injury Ventricular hypertrophy or ventricular enlargement The auricular (atrial) complex and introductory considerations of the cardiac arrhythmias. The arrhythmias. disturbances of cardiac rhythm due to impulses arising from homogenetic foci—disturbances of impulse conduction (heart block) —disturbances of cardiac rhythm due to impulses arising from heterogenetic foci. Anomalous atrioventricular conduction. Reading, reporting and coding electrocardiograms. Bibliography Index

Note A substantial treatise written from the standpoint of practical use of the electrocardiogram in the diagnosis and study of heart disease. Basic matters such as the electrical fundamentals, definitions, and descriptions of electrocardiographic instruments are well covered in the first six chapters. The remainder of the book consists of chapters based on and consisting chiefly of discussions of particular case histories and the electrocardiograms made in the course of their diagnosis and treatment. However, the author has invariably drawn conclusions from the cases of which the following is typical: "There is no way to be sure of right ventricular hypertrophy from the extremity leads alone. The precordial electrocardiogram is more reliable in revealing the definitive diagnosis of either condition. There are 448 figures, of which the majority are reproductions of cardiograms discussed in the text. The bibliography is an extensive one.

BELL, ELEXIOUS THOMPSON

Renal diseases. Second edition, thoroughly revised, with 123 illustrations and 4 color plates. *Philadelphia Lea and Febiger 1950* 448 p. illus. (part col d) 24 cm. $8.00 1104

Contents: Introduction—Classification of renal diseases. Normal histology Normal and pathological physiology Developmental anomalies. Obstruction of the urinary tract—hydronephrosis. Glomerulonephritis. Tubular diseases. Extrarenal azotemia. Exudative interstitial nephritis (pyelonephritis) Diseases of the blood vessels. Diseases of the kidney related to metabolic disorders. Tumors of the kidneys. Index.

Note: (937*) The purpose of this monograph is to bring about closer cooperation between the pathologist and the clinician in the understanding of renal disease. Accordingly for each disease covered the structural changes in the kidney are correlated with the clinical manifestations. In the case of diseases where the pathology is not fully understood, the crush syndrome for instance, the views of various authorities are concisely stated. The book is based on experimental studies and very extensive series of cases. In this second edition the basic plan has not been changed, but several chapters have been revised and the bibliographies brought up to date.

BROWN, HERBERT RUTHERFORD, JR., AND OTHERS

Clinical ballistocardiography by Herbert R. Brown, jr, Vincent deLalla, jr Marvin A. Epstein, and Marvin J Hoffman. New York The Macmillan Company 1952 188 p illus. *22 cm. $5.50* 1105

Contents: Part one, Normal section: What is the ballistocardiogram and what is its value? The history of the ballistocardiograph. Types of apparatus used in recording the ballistocardiogram. Physical considerations in the construction of ballistocardiograph. The normal ballistocardiogram. Cardiac output. Respiratory variation of the ballistocardiogram. Part two, Abnormal section Significance of normal and abnormal patterns. *Abnormal respiratory variation* of the IJ stroke. Hypertension. Myocardial infarction. Angina pectoris. Congestive failure. Rheumatic heart disease. Miscellaneous disorders. Index.

Note: Ballistocardiograph apparatus has only recently become available as clinical means for the identification of circulatory and cardiac disorder. The monograph was written by four medical doctors who made special study of the technique and its application over the period 1946–1952 at the University of Rochester. The authors present all pertinent data in the field as guide to other doctors interested in the use of ballistocardiograph apparatus. Included are many examples of normal and abnormal ballistocardiograms and the summarized findings of records made in the laboratory of the authors.

CONFERENCE ON ELECTROKYMOGRAPHY

Proceedings of the first Conference on Electrokymography held May 25–26 1950 in Bethesda, Md., sponsored by the National *Heart Institute. Editors Bert R. Boone*, Frederick G Gillick, Russell H. Morgan, and Morton J Oppenheimer Washington, D C. Government Printing Office, 1951 215 p. illus. 23 cm. (United States. Federal Security Agency Public Health Service publication 59) Paper $0 75 1106

Contents: Introduction. Physiological and clinical papers: Electrokymographic recordings of displacements of the heart, by G. C Ring. Left ventricular border motion, by Simon Dack. Correlation of the border motion of the heart and great vessels as recorded by the electrokymograph with intracardiac pressure changes, by J. H. Long. Great vessel motion, by H. E. Hoyer and others. Atrial phenomena, by A. A. Luisada. Pulsations of the pulmonary vessels, by A. A. Luisada. Electrokymographic studies of electrical and mechanical asynchronism in the cardiac cycle, by P Boyer and others. Use of the electrokymograph for determination of pulse wave velocity by F L. Rawson, jr Electrokymography in constrictive pericarditis—comparisons with roentgenkymography and right ventricular pressure curves, by V A. McKusick. Electrokymographic studies of the middle arch, by F A. Bowen. Measurement of the diameter of the aorta with the electrokymograph—a progress report, by H. L. Taylor and others. Historical discussion, by W E. Chamberlain. Instrumental papers. The electrokymograph—studies in recording fidelity by H. F Zinsser, jr and others. Some characteristics of an electrokymographic instrument, by M. Landowne. Density calibration and logarithmic amplifiers, by *F W Noble*. Calibration of border motion, by G. C. Henny Papers presented by title and abstract. Bibliography on electrokymography Index.

Note: The electrokymograph is photoelectric instrument developed in 1945 by the Temple University School of Medicine and the United States Public Health Service to record the movements of the heart and great vessels. This conference was held to survey recent developments in the field of electrokymography to indicate directions of investigations which might prove fruitful for future work. It is pointed out in the publication that further progress in the evaluation of the instrument and its applications is needed before it can be recommended for routine clinical use. References are given at the conclusions of the papers, and four page bibliography of the subject appears at the end of the work.

DAVIS HARRY AARON

Shock and allied forms of failure of the circulation. New York Grune & Stratton, 1949 595 p. illus. 24 cm. $12 00 1107

Contents Historical introduction and classification. The diagnosis of shock and shocklike states. Pathogenesis of traumatic shock and hemorrhage. Physiologic changes in traumatic shock and hemorrhage. Biochemical changes in traumatic shock and hemorrhage. Pathology of traumatic shock and hemorrhage. The effects of anoxia and hypoxia in man and lower animals. Irreversible shock. Circulatory failure associated with toxemias and infections. Medical and obstetrical shock. Circulatory failure associated with diseases of the liver and of the adrenal glands. The nervous system in relation to failure of the circulation. Failure of the circulation due to disturbances of the thorax and its contents. Failure of the circulation resulting from burns and from other forms of thermal injury. Failure of the circulation resulting from anesthesia. The circulatory weakling. Treatment of shock and allied forms of circulatory failure. Index.

Note. A comprehensive treatise on acute circulatory failure. It appears to have been based on a very extensive literature survey and most of the chapters include long bibliographies. The chapter on treatment is one of the longest in the book. It includes detailed descriptions of procedures for cases of circulatory failure under all of the common clinical and surgical conditions. The technique of cardiac massage is included. The book is addressed to surgeons, obstetricians, general practitioners, and anesthesiologists. It has some interest also for physiologists.

DOTTER CHARLES T., AND ISRAEL STEINBERG

Angiocardiography With 635 illustrations on 252 figures. New York Paul B Hoeber Inc. 1952 304 p illus. 27 cm. (Annals of roentgenology Vol. xx) $16 00 1108

Contents History Angiocardiographic technic. Roentgenographic equipment and technic for angiocardiography Contrast substances for angiocardiography; angiocardiographic mortality The normal angiocardiogram. Syphilitic aortitis and aneurysm. Rheumatic, arteriosclerotic, and hypertensive heart disease. Pulmonary heart disease. Miscellaneous acquired heart diseases. Noncyanotic congenital heart disease. Cyanotic congenital heart disease. Mediastinal tumors. Pulmonary tumors. Pulmonary disease. Index

Note The current status of angiocardiography diagnostic method based on the use of X-rays to study the cardiac chambers and thoracic great blood vessels, is presented in this work. Equipment, techniques, and the interpretation of angiocardiograms are covered in detail. The reproductions of angiocardiograms, which constitute majority of the illustrations, are an especially valuable feature. Substantial bibliographies are included The authors are faculty members of Cornell University Medical College.

DRESSLER, WILLIAM AND HUGO ROESLER

An atlas of electrocardiography Springfield, Illinois Charles C Thomas 1949 503 p. illus. 21 cm. $14 00 1109

Contents (abridged) Electrocardiographic patterns (not including disturbance of rhythm) Patterns of disturbance of rhythm. Advances in the electrocardiographic diagnosis of myocardial infarctions. Interpretation of the electrocardiogram with the aid of unipolar limb leads. Index

Note. More than 400 electrocardiograms have been reproduced without retouching in this work The book is organized so that the reproductions appear on right-hand pages and textual interpretations and clinical data appear on the facing left-hand pages. Special attention is given to the interpretations of electrocardiograms with similar patterns, and points that aid in differential diagnosis are mentioned.

ENGEL, GEORGE LIBMAN

Fainting: physiological and psychological considerations. Springfield Illinois Charles C Thomas, 1950 141 p. illus. 22 cm. (American lecture series. Publication number 37 Edited by Charles D Aring) $3 50. 1110

Contents: Introduction. Fall in arterial blood pressure. Cardiac standstill. Cerebral vascular disorders. Disturbances in cerebral metabolism. Hysterical fainting. Hyperventilation. Cardiac disease. Fainting during air travel. Sudden death. Incidence and diagnosis of syncope. Differential diagnosis. References. Index.

Note. In this book the clinical aspects of fainting, including fatal syncopes, are discussed against the background of the underlying physiology and psychology There is bibliography of 78 references. The book is of interest to wide range of medical practitioners.

FAHR, LEE E

Treatment of the nephrotic syndrome. Springfield, Illinois Charles C Thomas, 1951. 61 p. 22 cm. (American lecture series. Publication no 64 A monograph in American lectures in circulation edited by Irvine H. Page and Arthur Curtis Corcoran) $2.25 1111

Contents: Treatment of edema. Treatment of malnutrition. Treatment of the renal lesion. Treatment of complications. Nephrotic crises. Cortisone, ACTH and nitrogen mustard. General comments. References.

Note: A brief survey addressed primarily to the general practitioner of the various treatments currently used on patients with nephrotic syndrome. It is based both on an analysis of published experiments and on clinical practice. Advantages and disadvantages of each treatment are discussed. There is bibliography of 71 citations.

FRIEDBERG CHARLES KAYE

Diseases of the heart. Philadelphia W B. Saunders Company 1949 1081 p. illus. 25 cm. $12 00 1112

Contents (abridged) Part I, Circulatory failure: Cardiac insufficiency and cardiac failure. Cardiac and circulatory compensation. Enlargement of the heart. Etiology of chronic (congestive) heart failure. The pathogenesis of congestive heart failure. The pathogenesis of individual manifestations of congestive heart failure. Acute circulatory failure. Part III, The coronary circulation and disturbances in cardiac blood supply: Variation of coronary artery disease. Coronary arteriosclerosis. Angina pectoris. Acute coronary occlusion and myocardial infarction. Part IV Structural abnormalities of the heart Acute pericarditis. Myocarditis and myocardial disease of obscure origin. Endocarditis and endocardial disease. Mitral valvular disease. Aortic insufficiency Aortic stenosis. Tricuspid and pulmonic disease. Congenital valvular disease. Part Etiologic forms of heart disease. Congenital heart disease. Rheumatic fever. Bacterial endocarditis. Syphilis of the heart and aorta. The heart in infections. The heart in hypertension and renal disease Acute cor pulmonale and pulmonary embolism. The heart in hyperthyroidism. The heart and circulation in myxedema. Other endocrine, metabolic and nutritional disturbances. The heart and circulation in anemia. Traumatic heart disease. Cardiac tumors. Part VI, Special problems in heart disease: Pregnancy and heart disease Surgical procedures in the cardiac patient. Insurance and medicolegal problems in cardiac disease. Index.

Note A comprehensive treatise in which the main emphasis is on pathologic physiology and the clinical manifestations of cardiac diseases. The treatment is even more detailed than the above abridged table of contents indicates. For example, three chapters are devoted to the various facets of acute coronary occlusion and myocardial infarction. All chapters are supplemented by lengthy bibliographies and numbered references are made from statements in the text to the bibliographies. The book is suitable for use as a textbook in medical schools and also as reference book in the office libraries of general practitioners. The author is associated with Mount Sinai Hospital in New York City

GOLDBERGER EMANUEL

Heart disease its diagnosis and treatment. 90 illustrations. Philadelphia Lea & Febiger 1951 651 p. illus. 24 cm. $10.00. 1113

Contents (abridged) Section 1 The normal heart: Physical examination of the cardiovascular system. Recording and timing of heart sounds and murmurs, and pulsations of the heart and blood vessels. X-ray examination of the heart. Electrocardiographic examination. Tests of circulatory efficiency Section 2 The abnormal heart: Symptoms referable to the cardiovascular system. Abnormal physical signs referable to the cardiovascular system. Abnormal findings on fluoroscopic and X-ray examination. Abnormal electrocardiographic findings. Abnormal findings in tests of circulatory efficiency Section 3 Cardiac syndromes: Congestive heart failure. The shock syndrome. Syncope and related states. The anginal syndrome. Neurocirculatory asthenia. The cardiac arrhythmias. Premature contractions, and paroxysmal tachycardia. Auricular flutter, and auricular fibrillation. Bundle branch block. Section 4 Systematic description of cardiac abnormalities: Congenital heart disease. Auricular septal defects. Ventricular septal defects. Congenital valvular and endocardial lesions, and congenital abnormalities of the veins. Myocarditis. Rheumatic fever. Bacterial endocarditis. Rheumatic heart disease. Syphilitic heart disease. Hypertensive heart disease. Diseases of the coronary arteries. Diseases of the pericardium. Diseases of the aorta, pulmonary artery and other blood vessels. The heart in endocrine diseases. The heart in nutritional, metabolic and other diseases. Tumors of the heart. Cardiac trauma. Section 5, Special conditions complicating heart disease. Index.

Note: A textbook and reference manual in which techniques of physical diagnosis are emphasized. However basic information on the use of such techniques as electrokymography and electrocardiography is included also. The point of view from which the book is written is that physical techniques are still the most useful in the diagnosis when the patient is first seen, and that they can still be employed to provide a wide range of dependable information about the heart disorders of most patients. The discussions of most diseases are very concise and cover, generally speaking, pathology pathological physiology signs and symptoms, findings in fluoroscopic, X-ray angiocardiographic, catheterization, and electrocardiographic studies, diagnosis, course and prognosis, and treatment. Most of the illustrations are diagrammatic representations of essential features of fluoroscopic and X-ray pictures and of electrocardiograms. Selected bibliographies which are largely limited to easily accessible literature in the English language are included.

GOLDBERGER EMANUEL

Unipolar lead electrocardiography Second edition, thoroughly revised with 221 illustrations. Philadelphia Lea & Febiger 1949 392 p. illus. 24 cm. $10.00 1114

Contents (abridged) Section I, The principles of electrocardiography and the normal electrocardiogram: The electrical currents produced by normal heart muscle. The method of taking augmented unipolar extremity leads and unipolar precordial leads. The basic normal unipolar lead patterns. The normal electrocardiogram—the effect of the position of the heart on the normal electrocardiogram. Measurements of the waves and amplitudes of the electrocardiogram and their normal values. Section II, Abnormal electrocardiographic patterns: The effects of hypertrophy of the heart on the electrocardiogram. Bundle branch block. Myocardial injury Functional changes in the RS-T segment and T wave. Section III, Normal and abnormal cardiac rhythms: Sinus rhythms. A-V nodal rhythm. A-V block and A-V dissociation. Premature contractions. Paroxysmal tachycardia. Auricular flutter and auricular fibrillation. Appendices. Index.

Note: ([illegible]) The standard treatise on electrocardiography with unipolar leads, or leads arranged so as to record the potentials from a single region of the body It is based on the author's own extensive study of this technique and on the literature. The first edition was published in 1947 In this edition the work contains fully twice as much text and 221 illustrations in comparison to 88. As was the first edition, this edition is addressed primarily to medical college graduates who are taking graduate work in heart diseases or who are beginning the practice of this specialty

GRANT ROBERT P., AND E HARVEY ESTES JR.

Spatial vector electrocardiography: clinical electrocardiographic interpretation. New York The Blakiston Company 1952 149 p. illus. 22 cm. $4.50 1115

Contents: Part I, The spatial vector method of interpretation The vectors of the heart. The limb leads as vector measurements. The precordial leads as vector measurements. The method for calculating the spatial vectors from conventional leads. Part II, The clinical application of the spatial vector method: The characteristics of the spatial vectors in the normal subject. The abnormal ECG. Abnormalities of the QRS vectors. Abnormalities of the T vector. The vectors in myocardial infarction. The ventricular gradient. Broader implications of the spatial vector method. Bibliography Index.

Note: This little volume is not intended to serve as a textbook on electrocardiography but rather to explain how vector methods may be applied in the clinical interpretation of electrocardiograms. The book is written for the general practitioner and does not require any special training in physics or mathematics. Technical terminology has been avoided, and only those theoretical aspects of the subject which are essential to a clear understanding of the clinical applications are included.

GRAYBIEL ASHTON AND OTHERS

Electrocardiography in practice, by Ashton Graybiel, Paul D White, Louise Wheeler Conger Williams. Third edition with 294 figures. Philadelphia W B Saunders Company 1952 378 p. illus. 28 cm. $10 00 1116

Contents (abridged) Part I, Introduction: Physiologic principles. Principles of operation of the galvanometer. Part II, Methodology: Methodology Part III, The typical normal electrocardiogram and its variations: Electrical orientation of the heart. Chest and esophageal leads. Limb leads. Electrocardiographic variations due to physiologic factors. Artifacts and technical errors. Part IV Disorders of rhythm and conduction. Part V Electrocardiographic alterations due to drugs and chemicals. Part VI, Electrocardiographic patterns. Part VII, Etiologic types: Congenital heart disease. Rheumatic heart disease. Subacute bacterial endocarditis. Cardiovascular syphilis. Diphtheria. Endocrine disorders. Hypertensive heart disease. Cor pulmonale. Coronary heart disease. Part VIII, Electrocardiograms for practice in interpretation. Index.

Note: ([illegible]) A useful book for the general medical practitioner. The first three parts are introductory to the subject; however, following them most of the space is given to reproductions of electrocardiograms. Each electrocardiogram is accompanied by a concise description and a fairly detailed interpretation. The range of cases illustrated is sufficiently varied to lend the book some interest for the specialist. The second edition was published in 1946. This third edition represents an extensive revision. Now the first chapter outlines the historical development of electrocardiography; the principles of vector cardiography are explained although the reader is warned that this technique is not yet ready for general clinical use, and many new electrocardiograms have been included. The format of the volume has been improved.

GREGG DONALD EATON

Coronary circulation in health and disease. 73 illustrations. Philadelphia Lea & Febiger 1950 227 p. illus. 24 cm. $4.50 1117

Contents: Introduction—a statement of the problem. General anatomic considerations Experimental approaches to the coronary circulation. Preparations. Cardiac pressures and their determination. Experimental approaches to the coronary circulation. Coronary flow—its determination Distribution of coronary blood flow Phasic flow curves. The determinants of coronary blood flow and their evaluation. Metabolism and work. The coronary circulation in heart disease and heart failure. Index.

Note: In this original monograph the author has summarized the results of his own fifteen years of experimental investigation of coronary circulation and the related work of other scientists. After outlining the extent of the heart disease problem he proceeds to analyze and discuss experimental findings and techniques. Most of the experiments covered were made on animals, especially the dog, but in the final chapter the author considers human heart disease and especially atherosclerosis in man. Each chapter has an extensive bibliography of studies done throughout the world during the past 15 years. The author is Chief Research Physician, Medical Department, Field Research Laboratory Fort Knox, Ky

HOLDEN WILLIAM D

Acute peripheral arterial occlusion. Springfield, Illinois Charles C Thomas, 1952 illus. 66 p. 22 cm. (American lecture series. Publication no. 141 A monograph in American lectures in circulation, edited by Irvine H. Page and A. C. Corcoran) $2.35 1118

Contents: The etiology of acute arterial occlusion. Hemodynamic changes following an acute arterial occlusion. Clinical manifestations. Management of acute arterial occlusion. Bibliography. Index.

Note: A brief but valuable presentation of medical and surgical therapies and related knowledge bearing on acute peripheral arterial occlusion. It is addressed to general physicians and surgeons and the final chapter consists of very specific suggestions for emergency and restorative treatments of patients stricken with this disorder. The author is Professor of Surgery in the School of Medicine of Western Reserve University.

HURST, JOHN WILLIS, AND GRATTAN C WOODSON, JR.

Atlas of spatial vector electrocardiography New York The Blakiston Company, Inc. 1952 214 p. illus 16 cm. $6.00 1119

Contents: Part one, The spatial vector method. The spatial vector method. Part two, Clinical application of vector electrocardiography. The normal ventricular electrocardiogram. Right and left ventricular hypertrophy. Myocardial infarction. QRS conduction defects. Effects of digitalis. Pericarditis. Pulmonary embolism. Summary. Appendix. Bibliography. Index.

Note: This work is largely a pictorial presentation of techniques of interpreting, by the vector method, standard electrocardiograms. It is designed as a companion work to R. Grant and H. Estes, *Spatial vector electrocardiography* described above. The first chapter of the Atlas is a concise outline of the principles and techniques of the spatial vector method. The rest of the book is made up largely of reproductions of electrocardiograms which are accompanied by interpretive diagrams and descriptions. There are 90 figures and most of them are full page in size.

LEPESCHKIN, EUGENE

Modern electrocardiography Volume I The P-Q-R-S-T-U complex. Foreword by Frank N Wilson Baltimore The Williams & Wilkins Company 1951 598 p illus. 26 cm. $12 00 1120

Contents: Electrocardiographic artifacts and their prevention. The leads of the electrocardiogram and their laws. Electrical activity of heart muscle as the basis of the ECG. The electrocardiogram of animals. The normal human electrocardiogram and its interpretation. Influence of physiological factors on the electrocardiogram. Influence of physical agents. Chemical, pharmacological and toxicological influences. Vitamins and hormones. Intraventricular conduction disturbances. Ventricular hypertrophy and strain. Myocardial infarction. Coronary insufficiency. Pericarditis. Myocarditis in acute infections and allergic states. Bibliography and author index. Subject index.

Note: The first volume of a comprehensive, well-organized presentation of the information on electrocardiography that has appeared in the periodical literature from the beginning of 1914 to May 1950. Generally speaking, under each heading and subheading enough information is included on specific points to satisfy the needs of the medical practitioner who is seeking information on diagnosis and techniques. On the other hand, the specialist (or general practitioner) who desires more information on a particular point can find it by means of the numbered references to the particular source articles. The bibliography contains more than 10,000 references to the international literature. The author is at present a member of the faculty of the University of Vermont College of Medicine.

LEVINE, SAMUEL ALBERT

Clinical heart disease. Fourth edition, illustrated. Philadelphia W B Saunders Company 1951 556 p. illus. 25 cm. $7 75 1121

Contents: Rheumatic fever. The development of rheumatic heart disease—mitral valve disease. Diseases of the aortic and tricuspid valves. Diseases of the pericardium. Angina pectoris and coronary thrombosis. Hypertensive heart disease, arteriosclerosis, chronic myocarditis, and rare forms of heart disease. Thyroid heart disease. Syphilitic heart disease. Bacterial endocarditis. Congenital heart disease. Functional heart disease. Paroxysmal rapid heart action. Acute cardiovascular emergencies. The significance of bronchial and other factors in the production of dyspnea. The clinical significance of the systolic murmur. The patient with heart disease as a surgical or obstetric risk. Nature and treatment of congestive heart failure. Clinical electrocardiography. Index.

Note: (973.) A standard work in which heart disease is presented for the general practitioner of medicine rather than the specialist or student preparing for a specialty. Not as many conditions are covered as in the full-scale treatises but the presentation is simpler and better suited to the needs of the physician concerned with the ordinary care of a few heart patients. The main emphasis is on diagnosis and prognosis. Surgical treatments are discussed for the information of the general practitioner, but surgical techniques are not described. The discussion of electrocardiography covers 100 pages, and most of the illustrations in the book are reproductions of electrocardiograms. In the present edition revisions have been made to incorporate the major advances of recent years such as surgery in the treatment of congenital heart disease, anticoagulants in the treatment of coronary thrombosis, and antibiotics in the treatment of bacterial endocarditis.

LEVINE, SAMUEL ALBERT, AND W PROCTOR HARVEY

Clinical auscultation of the heart. Illustrated. Philadelphia W B Saunders Company 1950 327 p. illus. 24 cm. $6.50. 1122

Contents: Heart sounds. Cardiac irregularities. Cardiac murmurs. Miscellaneous auscultatory findings. Index.

Note: The diagnostic value of the sounds of the heart as heard in the stethoscope and recorded by the phonocardiograph is the main theme of this thorough book. The authors stress the importance of informed use of the stethoscope and deplore the tendency to neglect its use in present-day diagnostic examinations. They discuss heart sounds in detail from the standpoint of general practitioners of medicine and clinicians. Most of the 214 figures in the work illustrate electrocardiograms and phonocardiograms taken simultaneously on the same patient. Correlations between the two kinds of records are discussed. Both authors are associated with the Harvard Medical School.

MACLEAN, JOHN T

Acute renal failure, including the use of the artificial kidney Springfield Illinois Charles C Thomas 1952 114 p. illus. 24 cm. $6.50. 1123

Contents: Factors concerned in the production of acute renal failure. The role of acid base balance in renal failure. Renal circulation—intrarenal circulation—renal anoxemia. Lower nephron nephrosis. The diagnosis of acute renal failure due to lower nephron nephrosis. The treatment of acute renal failure due to an ischemic lesion of the lower nephron nephrosis type. Methods of removing the excess waste products from the blood. Dialysis with the artificial kidney. Adreno-cortico trophic hormone. Index.

Note: A useful brief summary addressed to general practitioners. The causes and physiology of renal failure are discussed with particular emphasis on the biochemical and clinical aspects. Methods and treatment within the scope of the practitioner with limited hospital and laboratory facilities are described compactly and literature references are given to fuller discussions. Although the artificial kidney is not an instrument available to physicians practicing in small communities, its principles and applications are described so that the general practitioner will know what may be accomplished by its use. The author is a prominent Canadian urologist.

MCMANUS JOSEPH FORDE ANTHONY

Medical diseases of the kidney (an atlas and introduction) 100 illustrations. Philadelphia Lea & Febiger 1950 176 p. illus. 26 cm. $6 00 1124

Contents: The nephron in general. Connective tissue, vessels and nerves. The glomerular root. General reactions of the kidney to injury. Acute renal failure—clinical features—acute glomerulonephritis—the crush kidney—acute hypertension. [illegible]—acute pyelonephritis; the toxic nephroses. Chronic renal failure. The problem of nephritis. Chronic pyelonephritis. Chronic glomerulonephritis; the shrunken kidney. Polycystic kidneys. Intercapillary glomerulosclerosis. The kidney in hypertension—in diabetes—in amyloidosis—in lead poisoning—in embolism—in syphilis. Incidental diseases. References. Index.

Note: An introductory work in the form of an atlas containing 100 pictures, many of which are reproductions of microphotographs. Most of the photomicrographs are taken from sections prepared by the periodic acid Schiff's reagent technique. The illustrations are accompanied by many discussions and rather long legends. The book is divided in the two main groupings of acute renal failure and chronic renal failure. The bibliography is selected. The author is Professor of Pathology in the Medical College of Alabama.

MARPLE, CHARLES DALLIBA, AND IRVING S. WRIGHT

Thromboembolic conditions and their treatment with anticoagulants. Springfield Illinois Charles C Thomas 1950 418 p. illus. 24 cm. $9.50 1125

Contents (abridged) Section I, Thromboembolic phenomena in clinical medicine: Venous thrombosis and pulmonary embolism. Thromboembolic phenomena in cardiovascular disease. Thromboembolic phenomena in coronary occlusion with myocardial infarction. Section III, Rationale for the use of the anticoagulants: Heparin and experimental thrombosis. Dicumarol and experimental thrombosis. Section Technics for the administration of the anticoagulants: The administration of heparin. The administration of dicumarol. Section IX, Miscellaneous observations: Hyperheparinemia, or hyperheparinemia. The effect of anticoagulants on the erythrocyte sedimentation rate. The effect of anticoagulants on the electrocardiogram. Appendices. Method of determining the coagulation time of whole blood. The determination of prothrombin. Two-stage prothrombin determination. Method for the determination of the prothrombin clotting time. The protamine titration. References. Index.

Note: A monograph based partly on an extensive survey of the literature and partly on the authors' own clinical experiences. It makes available to medical practitioners and to research workers in medicine and allied fields the gist of the more important literature down to approximately the end of 1949. Apparently considerable time elapsed between the writing of the original part of the book and its publication, for the section titled "Recent developments" is 108 pages long and is based mostly on the publications of 1949. The arrangement of the book makes it necessary for the reader to consult both main chapter and supplement to it under "Recent developments" in order to cover specific topic.

MASTER, ARTHUR MORRIS, AND OTHERS

Normal blood pressure and hypertension new definitions. By Arthur M. Master Charles I. Garfield and Max B Walters. With 36 illustrations. Philadelphia Lea & Febiger 1952 144 p. illus. 24 cm. $4 00 1126

Contents: History of principles and methods of clinical sphygmomanometry. History of blood pressure, evolution of normal limits. Factors affecting the blood pressure level. The need for increasing the range and limits of normal blood pressure—new limits of hypertension. Presentation of new limits of normal blood pressure. Interpretation and clinical application of new blood pressure limits. Index.

Note. The currently accepted values of "140–150 mm. mercury as the upper limit of the normal systolic pressure, and 90–95 mm. as the upper limit of the normal diastolic pressure, irrespective of age and sex" are shown in this book to be based on selected rather than representative population. New values based on statistical study of 74,000 unselected individuals, representative of the average healthy working population, are offered. The authors state "these new limits have been found to be definitely higher than those heretofore used, and to vary with the age, the sex, and the weight of the subject." The importance of correlating blood pressure with other elements of the clinical picture is stressed. The results of the study are presented in considerable detail in 33 tables, and the findings are related to other data in the literature. Each chapter contains an extensive bibliography.

MILLER, HEYMEN RUDOLPH

Angina pectoris and myocardial infarction with special reference to the autonomic nervous system New York Grune & Stratton, 1950 336 p. illus. 24 cm. $8 75 1127

Contents: Section one, General clinical aspects: Clinical features of angina pectoris (acute coronary insufficiency) and acute myocardial infarction. Electrocardiographic findings in angina pectoris, acute myocardial infarction and acute extracardiac conditions. Section two, Physiological aspects: General autonomic regulations. The autonomic regulation of circulation. Section three, Autonomic pathways for cardiac pain. The sympathetic pathways for anginal pain. The vagal supply to the heart and aorta. The anastomoses between the sympathetic and vagal systems. Section four, Reference, distribution and modulation of anginal pain. The dermatomes concerned with anginal pain. The distribution or reference of anginal pain. The dissolution of anginal pain, angina pectoris, and acute myocardial infarction. Section five, Concept and mechanism of anginal pain. Section six, Psychosomatic disorders of the heart. Section seven, Treatment of angina pectoris and myocardial infarction. General management and medical treatment. Surgical treatment. Author index. Subject index.

Note: The author of this text expresses his primary aim in these words "to point out the relative role of the autonomic nervous system in regard to clinical manifestations, differential diagnosis, functional pathogenesis and the medical, surgical and psychological management of cardiac pain." Considerable attention is given to the relations between cardiac pain and the autonomic nervous system. Most of the 62 illustrations are diagrammatic three-dimensional representations of nerves and connections. The chapters on medical and surgical treatment account for only 30 pages, but they are well-supplemented by literature references; in fact, extensive literature references are a feature of the entire book. This work replaces an earlier one on the same subject by the author which appeared in 1939 and was reissued with an appendix in 1942. It contains much material that did not appear in the earlier version.

MOVITT, ELI RODIN

Digitalis and other cardiotonic drugs. Second edition, revised and enlarged. New York Oxford University Press, 1949 245 p illus. (part col d) 24 cm. $5 75 1128

Contents (abridged) I, Digitalis folium. Historical data. Source and chemical structure. Pharmacology. Clinical applications. II, Digitalis lanata. Source and chemical structure. Pharmacology. Clinical applications. III, Lanatoside C: Chemical structure. Pharmacology. Clinical applications. IV Other cardiotonic glycosides from digitalis plants: Digitaline nativelle. Digoxin. Gitalin (amorphous). V, Strophanthus. Historical data. Source and chemical structure. Pharmacology. Clinical applications. VI, Squill. Historical data. Source and chemical structure. Pharmacology. Clinical applications. VII, Other cardiotonic agents of plant origin. Thevetia. Various glycosides of plant origin. VIII, Cardiotonic glycosides of animal origin and cardiotonic alkaloids: Toad poisons. Erythrophleine. Conclusions. Appendices. Index of subjects. Index of authors.

Note (1st ed. 1946) A survey for the general medical practitioner of current knowledge regarding the chemical, pharmacological, and clinical behavior of drugs used in the treatment of heart diseases. It is based on a survey of the literature and each chapter concludes with an extensive bibliography. Important revisions and additions have been made in the second edition. Changes have been made both in the text and in the bibliography and the length of the book has been increased by about forty pages.

PRINZMETAL, MYRON AND OTHERS

The auricular arrhythmias. By Myron Prinzmetal, Eliot Corday, Isidor C. Brill, Robert W Oblath, H. E. Kruger and Associate authors Joshua Fields, Walter Flieg, Alfred Goldman Harold Karpman, S Rexford Kennamer John A. Osborne, Alvin L. Sellers, and L. Allen Smith. Springfield Illinois Charles C Thomas 1952 387 p illus. (part col d) 29 cm. $16 50 1129

Contents: The normal auricles. Auricular premature systole. Auricular paroxysmal tachycardia. Experimental production of auricular premature systoles and auricular paroxysmal tachycardia in man. The motion of the auricles in auricular flutter. Electrocardiographic studies of auricular flutter. An electrocardiographic analysis of the structure of the auricular deflections of auricular flutter and tachycardia. Electrocardiographic observations of spontaneous auricular flutter and auricular paroxysmal tachycardia in man. Further clinical observations on auricular flutter and tachycardia. Examples of physiologic diagnosis of auricular tachycardia and flutter. Clinical aspects of auricular fibrillation. The motion of the auricles in auricular fibrillation. The electrical activity of fibrillating auricles. Further considerations on the nature of auricular fibrillation. Ventricular aberration in the auricular arrhythmias. Pharmacologic considerations in the auricular arrhythmias. Treatment of the auricular arrhythmias. The unitary nature of the auricular arrhythmias. Appendix—methods and equipment. Bibliography. Index.

Note: A contribution of major importance. It is based on an extensive series of experimental and clinical observations in which the high speed cinematograph was applied for the first time to the study of auricular arrhythmias. Studies with this instrument were supplemented by studies with the dual beam cathode ray oscillograph and the multiple-channel electrocardiograph. The original observations were made on experimental animals, but these were later supplemented by observations on human beings. A much more complete

and more accurate picture of the auricular arrhythmias is presented here than was available hitherto. There are 514 illustrations, of which 22 are reproduced in color; and a bibliography of 636 references. The book is potentially of interest both to specialists in cardiology and to medical practitioners in other branches of medicine including general practice.

RINZLER, SEYMOUR H.

Cardiac pain Springfield Illinois Charles C Thomas 1951 139 p. illus. 22 cm (American lecture series Publication no 113 A monograph in American lectures in circulation edited by I. H. Page and A. C Corcoran) $3 75 1130

Contents. History Nerve pathways of the heart. Mechanism of production of cardiac pain. Medical therapy Surgical therapy Summary References. Index.

Note. A short but well-documented review of the contemporary status of diagnosis and treatment of cardiac pain. The author views the clinical and pathological knowledge as fairly complete, and states that "we are entering a brighter more hopeful period of therapeutics. Both medicine and surgery are making rich contributions to the relief of pain of cardiac origin. The principal studies which have contributed to current therapies are described and the source articles are cited. The medical and surgical therapies of demonstrated value are critically evaluated. The book is addressed to general practitioners and to specialists in clinical medicine. The author is a member of the staff of the Cardiovascular Research Unit of Beth Israel Hospital, New York City

ROBB GEORGE PORTER

An atlas of angiocardiography Prepared for the American Registry of Pathology Armed Forces Institute of Pathology Washington American Registry of Pathology 1951 141 p. illus. 22 cm. $7 50 1131

Contents Introduction. The technique of angiocardiography The clinical uses of angiocardiography Angiocardiographic interpretation. The normal angiocardiogram Lesions of the superior vena cava and tributaries. Congenital heart disease Acquired heart disease Disorders of the pericardium Acquired aortic disease. Intrathoracic tumors. Lesions of arteries. References Index of cases.

Note. In this work the technique, clinical uses, and other basic aspects of angiocardiography are discussed by the originator of the currently used technique The preliminary basic material extends to and includes the section on the normal angiocardiogram and occupies nearly half of the book. The remainder of the space is devoted to illustrations and discussions of forty individual cases in which angiocardiography was used In each of these case histories there are reproductions of one or two angiocardiograms.

SAMUELS, SAUL SIMON

Management of peripheral arterial diseases. New York Oxford University Press, 1950 345 p. illus. 23 cm. $7.50 1132

Contents General considerations. Symptoms of occlusive arterial disease of the extremities. Objective evidence of occlusive disease of the arteries of the extremities. Oscillometry Thrombo-angiitis obliterans. Arteriosclerosis obliterans. Raynaud's disease Erythromelalgia. Acrocyanosis. Periarteritis nodosa. Essential thrombophilia. Embolism. Cervical ribs and scalenus anticus syndrome. Thrombosis of the axillary vein. Frostbite. Ergotism. Glomus tumor Aneurysm of the peripheral vessels. Medico-legal aspects of peripheral arterial disease. Index of authors Subject index.

Note. (2780) As in the earlier edition the author argues for conservative therapy rather than amputations in the treatment of gangrene and other conditions of arterial insufficiency in the extremities. The book is based on an experience extending over a period of 25 years, and the details of many case histories are given. Most of the 112 illustrations are from case records. Short bibliographies are included with the chapters.

SMITH, HOMER WILLIAM

The kidney structure and function in health and disease. New York Oxford University Press, 1951 1049 p. illus. (part col'd) 24 cm. $15 00 1133

Contents (abridged) Anatomy Studies on individual nephrons. Measurement of the filtration rate. Excretion of urea. Clearances involving active tubular reabsorption. Clearances involving tubular excretion. Other clearances. Excretion of protein. The reliability of inulin as a measure of glomerular filtration. The antidiuretic hormone and the excretion of water. Excretion of sodium and other strong electrolytes. The adrenal cortex and Addison's disease. Acid-base equilibria in plasma and urine. The control of the renal circulation and the action of pharmacodynamic agents. Trophic and other factors related to renal function. Renal function in infancy and childhood. Renal hemodynamics. Limitations of clearance methods during disturbed renal function. Disturbances of renal function in non-renal disease. Chronic congestive heart failure. Essential hypertension. Acute renal failure related to traumatic and toxic injuries. The juxtamedullary circulation. Diseases of the kidney and urinary tract. Diuretics. Bibliography Index.

Note: A comprehensive monograph of the current knowledge of renal function and dysfunction. It covers both the physiology of the kidney and the part played by the kidney in the physiology of the body The work is based on a comprehensive survey of the literature and a good part of the text consists of concise digests of previously published papers including the author's own. Statements in the text are key numbered to the bibliography and as an added reference feature the page numbers on which references are made to particular publications are noted in the bibliography The books and papers listed in the bibliography number 2800.

STEWART, HAROLD J

Cardiac therapy New York Paul B Hoeber Inc., 1952 622 p illus. 26 cm. $10.00. 1134

Contents (abridged) Congestive heart failure. Mercurial diuretics. Digitalis. Anticoagulant drugs. Congenital heart disease. Rheumatic fever and rheumatic heart disease. Cardiovascular syphilis. Hypertension and heart disease due to hypertension. Hypotension. Arteriosclerotic heart disease. Coronary artery disease and angina pectoris. Myocardial infarction, coronary thrombosis, coronary occlusion. The heart in hyperthyroidism. Pulmonary heart disease. Beriberi heart disease. Diseases which may have cardiac manifestations or simulate cardiac disease. Acute myocarditis. Diseases of the pericardium and the mediastinum. Subacute bacterial endocarditis. Neurocirculatory asthenia (effort syndrome, Da Costa's syndrome) Cardiac pain. Carotid sinus syndrome. Glossopharyngeal neuralgia (tic douloureux associated with cardiac arrest) Heart disease in the aged. Heart disease and pregnancy Surgery in patients with heart disease. Effect of electrolyte changes in blood on heart and circulation. Prevention of heart diseases. Diets in heart disease. Index.

Note. As the title indicates, the primary emphasis in this work is on the treatment of heart disorders. The author has assumed that his readers will have the essential background knowledge of etiology pathology etc. In most of the chapters there is a paragraph or two on these aspects, but most of the space is given to detailed discussions of treatment both medical and surgical. Recently developed drugs and recently developed surgical techniques are both fully covered Literature references are included in the chapters. The author is head of the Division of Cardiology of the Department of Medicine of New York Hospital-Cornell Medical Center.

STROUD WILLIAM DANIEL editor

Diagnosis and treatment of cardiovascular disease. Fourth edition. 808 illustrations—five full-page color plates. Philadelphia F A. Davis Company 1952 2 v illus. 27 cm. $25 00 1135

Contents: Volume 1 Some historical comments pertaining to cardiology by F A. Willius. The prevention and relief of heart disease as a public health problem, by H. M. Marvin. Introduction to diseases of the cardiovascular system, by H. B. Sprague and P D. White. The normal heart—its output and the circulatory rate, by J. T King, Jr Heart sounds, by C. C. Wolferth and A. Margolies. Congenital cardiovascular abnormalities, by R. Ash. Rheumatic fever—Epidemiology of rheumatic fever by J R. Paul. Rheumatic heart evaluation of active infection, by T D. Jones. Rheumatic heart disease, by C. McEwen. Bacterial endocarditis, by W. R. Mitchell. Cardiovascular syphilis, by J E. Moore and M. B. Treatment of cardiovascular syphilis, by J. H. Stokes and M. F. Falk. The heart in diseases of the endocrine glands, by D. P. Barr. The heart in hyperthyroidism, by H. M. Thomas, Jr. The heart in anemia, by W B. Porter The heart in pulmonary disease, by J. R. Vander by T M. Durant. Chronic valvular heart disease, by J. R. Vander

Vess. Cardiac hypertrophy and dilatation (cardiac failure), by H. Rossler. Congestive heart failure, by A. W Bronner Digitalis, by A. W Bronner. Effects of digitalis on the electrocardiogram, by T M. McMillan and S. Bellet. Pathogenesis and treatment of edema, by E. M. Landis. Left ventricular failure and paroxysmal cardiac dyspnea, by A. W Bronner The cardiac patient as a surgical risk, by S. A. Levine. The cardiovascular patient in pregnancy by B. E. Hamilton. Acute pericarditis, by W B. Porter Chronic constrictive pericarditis, by P D. White. Surgery of the heart and pericardium, by C. S. Beck. Normal blood pressure and its physiologic variations, by E. V Allen and E. A. Hines. Low arterial pressure, by J. H. Barach. Venous pressure, by H. G. Schlater Psychic factors in essential hypertension, by W R. Houston. Index. Volume 2, Arterial hypertension, by I. H. Page. Arterial hypertension, by K. J. Sitapalle. The cardiovascular system with relation to the kidneys, by J. M. Hayman, Jr. Capillary circulation, by A. C. DeGraff and A. M. Oakley. The diagnosis of coronary insufficiency by R. L. Levy Coronary disease including angina pectoris, by W D. Stroud and M. W Stroud. Relief of pain in angina pectoris, by F C. Grant. Nourishment of the heart by channels other than the coronary arteries, by S. Bellet. Disturbances of the heartbeat, by G. R. Herrmann. Use of quinidine in cardiac irregularities, by W J. Kerr and J. B. Logan. Cardiac neuroses, by L. A. Conner. Psychosomatic aspects of cardiovascular disease, by E. Weiss. Trauma of the heart, by H. Barber Shock, by N. E. Freeman. Physical therapy in cardiovascular disease, by C. R. Comstock and W D. Stroud. The rehabilitation of cardiac patients and their placement in industry by W D. Stroud and H. A. Rush. Term of the electrocardiogram, by F N. Wilson and F D. Johnston, Electrocardiography by S. Bellet and T M. McMillan. The ballistocardiogram, by I. Starr. Roentgenology of the heart and great vessels, by H. K. Ungerleider and R. S. Gubner. The heart in diphtheria and other conditions, by J. A. Wagner and J. E. Strang. Periarteritis nodosa, by R. Fitz. Thromboangiitis obliterans, by H. Montgomery Erythromelalgia (erythermalgia) of the extremities, by E. V Allen. Lymphedema of the extremities, by E. V Allen. Sudden embolism and thrombosis of arteries of the extremities, by E. V Allen Thrombophlebitis, by N. W Barker. Acquired arteriovenous fistula, temporal arteritis, and aneurysm, by E. A. Hines, Jr. Arteriosclerosis obliterans, by I. S. Wright. Raynaud' syndrome and acrocyanosis, by I. S Wright. Vascular anomalies, by G. de Takats. Varicose veins, by G. de Takats. Index.

Note: A comprehensive treatise made up of 64 monographic chapters authored and titled as noted above. Literature references are included in the chapters. One of the most useful changes apparent in the present edition is a new index which does justice to the contents of the two volumes.

Symposium on Hypertension

Hypertension a symposium held at the University of Minnesota on September 18 19 and 20 1950 in honor of Elexious T Bell Benjamin J Clawson and George E. Fahr Minneapolis University of Minnesota Press, 1951 573 p. illus. 24 cm. $7 50. 1136

Contents: Anatomical considerations of hypertension, by H. Goldblatt. Experimental studies on hypertension, by A. Grollman. Experimental hypertension in the rabbit, by G W Pickering. The renal angiotonin pressor system, by I H. Page The participation of hepatorenal factors in experimental renal hypertension, by E. Shorr Blood volume and extracellular fluid volume in experimental hypertension, by E. Braun-Menendez. The role of the adrenal cortex in the pathogenesis of experimental hypertension, by H. Selye. The mechanism of hypertension due to desoxycorticosterone, by E. Braun-Menendez Sympathic adrenal factors in hypertension, by M. Nickerson Experimental hypertension, by E. Braun-Menendez. The pathological anatomy in primary hypertension, by E. T Bell. Some observations on renal vascular disease in hypertensive patients based on biopsy material obtained at operation, by R. H. Smithwick and B. Castleman The mechanism of hypertension in chronic glomerulonephritis, by G. E Fahr Renal hemodynamics in essential hypertension, by H. Chasis The heart in essential hypertension, by B. J. Clawson. The adrenal cortex and hypertensive vascular disease, by G. A. Perera. Hypercortical factors in essential hypertension in man, by E. Shorr Pulmonary hypertension, by R. V Ebert A summary of experimental evidence relating life stress to the pathogenesis of essential hypertension in man, by S Wolf and H. G Wolff. Vascular reactivity and hypertensive disease, by E A Hines, Jr. Cerebral attacks in hypertension, by G W Pickering. The natural history of hypertensive vascular disease, by G A. Perera. Blood lipid transport in hypertensive patients and its relation to atherosclerotic complications, by J W Gofman. The hemodynamic effects of various types of therapy in hypertensive patients, by R. W Wilkins. Sympathetic blockade in the therapy of hypertension, by M. Nickerson. The effect of sympathectomy upon the mortality and survival rates of patients with hypertensive cardiovascular disease, by R. H. Smithwick. The management of hypertensive patients: observations on the pertinence of life situations, attitudes, and emotions to variations in the course of essential hypertension and to the occurrence of associated symptoms, by H. G. Wolff and S. Wolf. Recent experiences with the pharmacologic treatment of hypertension, by R. W Wilkins Some effects of the rice fruit diet on patients with essential hypertension, by C. B. Chapman. Pyrogens in the treatment of malignant hypertension, by I. H. Page and others. Bibliography

Note: A collection of original papers prepared for the occasion mentioned in the book's title. Many of the papers describe the results of recent investigations or describe concisely the current status of a recent development in which the author of the paper played a conspicuous part. Excerpts from the discussions of the papers at the meetings are included Bibliographies for each paper are collected at the end of the volume. There is no index.

White Paul Dudley

Heart disease. Fourth edition New York The Macmillan Company 1951 1015 p. Illus. (part col d) 24 cm. $12.00 1137

Contents (abridged) The evolution of our knowledge of the heart and its diseases. Part 1, Cardiovascular examination, symptoms and signs: The range of the normal heart. The patient's history and symptoms. Physical examination. Cardiovascular roentgenology The palpation of heart and blood vessels. Electrocardiography Part II, The significance, prevalence, causes, and types of heart disease The social and economic aspects of heart disease. Prevalence of heart disease and of its etiologic types. Congenital cardiovascular defects. Rheumatic heart disease, acute and chronic. Acute and subacute bacterial (infective) endocarditis. Cardiovascular syphilis. The heart in diphtheria, scarlet fever and tuberculosis and in other bacterial infections, infestations, and virus diseases. Hypertensive heart disease. Pulmonary heart disease. Coronary heart disease. Neurocirculatory asthenia. Part III, Structural cardiovascular abnormalities: Myocardial disease. Endocardial and valvular disease. Pericardial disease Vascular disease. Part IV Disorders of cardiovascular function. The circulation of the blood. Myocardial insufficiency Disorders of vascular function Disorders of cardiac rhythm. Atrial fibrillation and flutter Ventricular fibrillation and flutter Quinidine therapy Bradycardia and heart block—sinoatrial, atrioventricular intraventricular. Ventricular escape. Atrioventricular nodal rhythm. Wide QRS wave with short P-R interval. Sudden death. Subject index.

Note (1133) A well known standard treatise in which the subject is surveyed primarily from the clinical viewpoint Presentation is concise, but is adequately detailed for ordinary uses. The diseases included are discussed as to incidence, mechanism, etiology pathology symptoms, signs, course of prognosis, complications, treatment, differential diagnosis. In addition, extensive literature references are furnished Important and fairly extensive changes have been made in this edition. A number of parts have been compressed in order to make room for new material without lengthening the book In some instances, the accounts of new developments—for instance, ballistocardiography—are very brief but are supplemented by numerous references to the literature. The comprehensiveness of the work is indicated by the length of the index which runs to 12 columned pages.

Wright Irving Sherwood

Vascular diseases in clinical practice. Second edition. Chicago The Year Book Publishers, Inc. 1952 552 p. illus. 21 cm. (General practice manuals) $8 50. 1138

Contents (abridged) Classification of diseases and abnormalities of blood and lymph vessels of the extremities. Methods of study of the patient. Arteriosclerosis obliterans-atherosclerosis. Thromboangiitis obliterans. Ergotism. Raynaud' syndrome and related conditions. Essential polyangiitis (periarteritis nodosa; Kussmaul-Maier disease) Cranial arteritis (temporal arteritis) Lupus erythematosus disseminatus. Neurovascular syndromes of the shoulder girdle. Aneurysms. Arteriovenous anastomoses. Syndromes produced by temperature changes (excluding Raynaud' syndrome). Livedo reticularis (cutis marmorata) Erythema nodosum. Erythema induratum. Acrocyanosis. Erythermalgia (erythromelalgia) Acute arterial occlusion (arterial embolism—acute arterial thrombosis) Thrombophlebitis. Acute axillary or subclavian venous thrombosis. Dependency edema. Varicose veins Thrombocytic acrocyanosis. Tumors of the blood and lymph vessels. Industrial and medicolegal medicine—its relation to peripheral vascular disease and injury Amputation—psychologic and physical care. Appendix Method for determining plasma prothrombin. Index.

Note This book is addressed to graduate medical practitioners and is planned for use both as a guide and reference manual in diagnosis and treatment. The author states that it is intended as

supplement to existing volumes on heart disease and not as a full-scale treatise. Study of the whole patient in order to get the correct clinical picture is emphasized and the author includes suggested form for history taking. The style of presentation is concise. Selected literature references are appended to the chapters. There are 114 figures.

DERMATOLOGY

BAER, KARL AMADEUS

Pathology and physiology of burns 1942–1951 an annotated bibliography Washington, D C. Armed Forces Medical Library Reference Division 1952 107 p. 20 cm. 1139

Contents. Body fluids and electrolytes. Bones and cartilages. Cardiovascular system. Classification and standardization. Death (mechanisms, rates) Endocrine system. Gastrointestinal tract. General and review articles. Infection and bacteriology Kidneys. Legal aspects. Liver Muscles. Nervous system. Nitrogen balance. Respiratory system. Skin. Spleen. Systemic effects (including shock) Author index.

Note An annotated bibliography of the international literature published since 1942. It is limited to literature bearing on the physiology and pathology of burns.

LEVER WALTER F

Histopathology of the skin. With 221 illustrations, including 8 subjects in color on 4 plates. Philadelphia J B Lippincott Company 1949 449 p illus (part col d) 24 cm. $10 00 1140

Contents. Introduction. Embryology of the skin. Histology of the skin. Laboratory methods. Morphology of the mesodermal cells. Congenital diseases (Genodermatoses) Noninfectious inflammatory diseases. Eruptions due to drugs. Degenerative diseases. Bacterial diseases Spirochetal diseases. Fungous diseases. Diseases caused by protozoa. Diseases caused by viruses Metabolic diseases. Systemic diseases of unknown cause. Epidermal tumors. Mesodermal tumors. Melanomas Lymphoma and mycosis. Index.

Note A book of primary interest to dermatologists. The background embryology histology and laboratory technology are briefly covered in preliminary chapters, but most of the space is given to the pathology of skin diseases. Both gross and microscopic clinical features are described, but considerable part of the text and most of the illustrations deal with microscopic pathology The book was developed in courses given by the author in Harvard Medical School to graduate students. Extensive literature references are included. The illustrations are of excellent quality

LEWIS GEORGE MORRIS

Practical dermatology for medical students and general practitioners. Philadelphia W B Saunders Company 1952 328 p illus. 25 cm. $7.50 1141

Contents Diagnostic methods Acne and the seborrheic dermatoses. Pruritus (symptomatic and essential psychogenic implications) The eczematous dermatoses. Urticaria, "toxic" erythemas, and drug eruptions. The so-called collagen diseases The chronic vesiculo-bullous disorders. The vascular papulo-squamous diseases. The pyodermas. Fungus infections Tuberculosis and allied disorders. Syphilis Virus and other infections Diseases due to animal parasites. Hyperpigmentation depigmentation atrophy Congenital (nevoid) anomalies. Disorders of the mucous membranes Diseases of the nails and hair Diseases due to physical agents The skin and other organs. Benign tumors Metabolic disorders Premalignant and malignant tumors, including lymphoblastoma Dermatologic therapy Dermatologic formulary Bibliography Index

Note Ninety-nine plates, each made up of from one to six reproductions of original photographs, are special feature of this concise guide. The textual descriptions cover symptoms, etiology diagnosis, and treatment, with occasional variations in form. Lists of tests, terms, and formulary of common medications plus bibliography of general texts and special monographs round out the usefulness of the book in the general practitioner' library The author is Professor of Clinical Medicine (Dermatology) in Cornell University Medical College.

PECK, SAMUEL MORTIMOR, AND GEORGE KLEIN

Therapy of dermatologic disorders including a guide to diagnosis and a dermatologic pharmacopeia. Philadelphia Lea & Febiger 1951 383 p. illus. 24 cm. $6.50. 1142

Contents (abridged) Part I, Guide to diagnosis. Part II, Classification and treatment of the various skin disorders: The broad principles underlying dermatologic therapy Physical therapy in dermatology Diagnosis and treatment of venereal diseases, by W Leifer. Part III, Dermatologic pharmacopeia; Removal of medical stains. Index.

Note: A compact reference book for the office libraries of medical practitioners. It covers the most common skin diseases in regard to their etiology clinical characteristics, and treatment. Much of the specific data on diagnosis is organized in 10-page table entitled "Differential diagnosis of the most common skin diseases. The pharmacopeia section contains an alphabetically arranged list of drugs and of selected proprietary compounds which are useful in dermatologic therapy In each instance the drug is described in chemical and physical terms and its usage and dosage are stated. According to the authors, the contents of the book have been selected on the basis of their own experience. The first-named author is member of the faculty of the College of Physicians and Surgeons of Columbia University the second-named, a member of the faculty of New York Medical College.

SULZBERGER, MARION B , AND JACK WOLF

Dermatology essentials of diagnosis and treatment. Chicago The Year Book Publishers Inc., 1952 592 p. illus. 22 cm. $10.00. 1143

Contents General dermatologic management. Eczematous dermatoses. Urticaria—giant hives. Atopic dermatitis. Dermatoses due to fungi. Acne vulgaris and other acneform dermatoses. Pyodermas. Sulfonamides—calciferol—cortisone-ACTH. Psoriasis and seborrheic dermatitis. Bullous and vesicular dermatoses. Zoonoses (diseases due to animal parasites) Common tumors of the skin. Miscellaneous dermatoses. Drug eruptions. Miscellaneous skin disorders. Early syphilis. Other forms of syphilis. Index.

Note. (947*) A revision of the author's well known *Dermatologic therapy in general practice*, of which the third edition appeared in 1948. Although it bears new title, the purpose of the work is unchanged and its content has been changed only to the extent necessary to bring it abreast of new developments. Most of the revised material pertains to the newer antibiotics, ACTH-cortisone, etc. Chapter eight, for instance, has been completely rewritten. Although "sulfonamides" still appears in its title, the authors state in its text that except in the rarest of exceptional circumstances, the topical application of sulfonamides no longer has place in dermatologic therapy The book remains an introduction for medical college students and reference book for general practitioners of medicine.

SUTTON RICHARD LIGHTBURN AND RICHARD L SUTTON, JR.

Handbook of the diseases of the skin. With 1057 illustrations St. Louis The C. V Mosby Company 1949 749 p. illus. 24 cm $13.50. 1144

Contents: Anatomy Embryology Physiology Symptomatology and pathology Etiology Diagnosis. Treatment. Dermatoses due to physical agents. Dermatoses due to chemical agents. Dermatoses due to bacteria. Dermatoses due to rickettsiae. Dermatoses due to animals. Dermatoses due to fungi. Dermatoses due to animals. Dermatoses of vascular origin. Dermatoses of metabolic disturbances. Dermatoses of neurologic and psychogenic origin. Dermatoses of unknown cause. Dermatoses of purpura and vascular gangrene. Dermatitides of unknown cause. Dermatoses characterized by atrophy Dermatoses of mentary disorder Dermatoses characterized by atrophy Diseases particularly manifestations of malformation and neoplasia. Diseases of mucous adjacent affecting the cutaneous appendages. Diseases of the skin. Index.

Note A compact but comprehensive manual in which the authors have covered not only common diseases but also "have held to the policy of at least mentioning almost everything." The chapters are printed in two sizes of type, with those matters of lesser importance covered in the smaller type. The preliminary chapters on anatomy physiology diagnosis, etc., run to only 62 pages; the

remainder of the book is devoted to descriptions of specific diseases. Generally speaking, symptoms, etiology, pathology, diagnosis, and treatment are covered for each disease. Thousands of literature references are embedded in the text.

TOBIAS NORMAN

Essentials of dermatology Fourth edition. 186 figures, 6 subjects in color on 3 plates. Philadelphia J B Lippincott Company 1952 596 p. illus. (part col d) 20 cm. $6.00 1145

Contents: Basic survey The erythema group. The eczema group. Drug eruptions. Psoriasis. The toxic bullous diseases. The pyodermas. Diseases due to vegetable parasites. Diseases due to animal parasites. Diseases due to filtrable viruses. Diseases due to psychosomatic and nerve disorders. Lichen planus. Diseases due to physical agents. The deep infective dermatoses. Tuberculosis of the skin. Syphilis. Benign tumors of the skin. Malignant growths of the skin. The metabolic dermatoses. The atrophies of the skin. Scleroderma and allied diseases. The vascular diseases of the skin. Pigmentations. The cutaneous lymphoblastomas. The erythrodermas. Diseases of the hair and the scalp. Diseases of the sebaceous glands. Diseases of the sweat glands. Diseases of the nails. Diseases of the mucous membranes. Congenital disorders. Dermatologic therapeutics. Eruptions of the hands. Index.

Note: (2200) An established survey and reference volume addressed especially to general practitioners of medicine and medical college students. Most of the space is devoted to descriptions of specific diseases, organized in groups as the chapter titles show. The individual diseases are discussed as to etiology pathology diagnosis, and treatment. Histology is not covered. The third edition was published in 1948. In preparing this edition important revisions were made in most of the chapters. Short descriptions of the testing of the various groups of diseases were added.

YEAR BOOK OF DERMATOLOGY AND SYPHILOLOGY

The 1951 year book *of* dermatology *and* syphilology (December 1950–November 1951) Edited by Marion B Sulzberger and Rudolf L. Baer Chicago The Year Book Publishers, Inc. 1952 476 p. illus. 20 cm. $5.50 1146

Contents: Some common errors in the management of skin diseases. Treatment and prevention (exclusive of venereal diseases) X-ray and other physical therapy Eczematous dermatitis and urticaria (allergic and nonallergic)—allergy Drug eruptions (allergic and nonallergic) Miscellaneous heterogeneous dermatoses. Other dermatoses. Cancer—precancerous—other tumors Fungous infections. Other infections—infestations Venereal diseases and their treatment. Investigative studies. Miscellaneous. Index. Index to authors.

Note (990*) The progress of dermatology and syphilology is summarized annually in this illustrated digest of the international periodical literature of these specialties. The period covered in the volume at hand is indicated in the title. The significant articles are selected and are abstracted in fair length. In all cases reference to the original publication is given and in many instances the abstract is supplemented by short comment written by the editor In this issue there are 61 figures. As in the previous years, the index is fully detailed.

OTOLARYNGOLOGY

BOIES LAWRENCE RANDALL AND OTHERS

Fundamentals of otolaryngology a text book of ear nose and throat diseases. By Lawrence R. Boies and associates Charles E. Connor Anderson C Hilding, Jerome A. Hilger John J Hochfilzer Conrad J Holmberg, Kenneth A. Phelps, Robert E. Priest, and George M. Tangen. Philadelphia W B Saunders Company 1949 443 p. illus. 24 cm. $6 75 1147

Contents (abridged) Part I, The ear Applied anatomy and physiology of the ear Examination of the ear. Diseases of the external ear and external auditory canal. Acute otitis media. Chronic suppurative otitis media. Tinnitus. Vertigo. Hearing aids and speech (lip) reading. Part II, The nose: Applied anatomy and physiology of the nose. Examination of the nose. The common cold. Nasal allergy Chronic nasal obstruction. Acute and chronic sinus disease. Complications of sinusitis. Headache and neuralgia of nasal origin. Epistaxis. Atrophic rhinitis. Injuries to the nose. Part III, The throat: Applied anatomy and physiology of the throat. Diseases of the nasopharynx. Acute and chronic sore throat. Tonsils and adenoids. Hoarseness. Laryngeal obstruction. Dysphagia due to disorders of the esophagus. Foreign bodies in the air and food passages. Tumors of the nose and throat. Prescriptions and therapeutic procedures. Index.

Note: A textbook for use in undergraduate courses in medical schools and an office manual for general practitioners of medicine. It is limited to diagnosis, treatment, and related aspects that especially concern the practicing physician. Literature references are furnished with the chapters. There are 184 illustrations, considerable number of which depict operative techniques. The author is member of the faculty of the University of Minnesota Medical School.

HANSEL FRENCH KELLER

Allergy in relation to otolaryngology An official publication of the American College of Allergists. Saint Paul Bruce Publishing Company 1949 77 p. illus. 20 cm. $2.50. 1148

Contents. Introduction. Allergy in relation to otolaryngology Panel discussion by L. B. Goldman, K. L. Craft, G. F. Knight, M. M Kafka, W E. Owen, H. A. Kuhn, J Glaser J H. Mitchell, and H. A. Abramson. Questions and answers following panel discussion.

Note The title article occupies the first thirty-one pages of this short book and the panel discussion occupies most of the remainder. The two parts together constitute an informal but authoritative statement of current United States of America medical thought and technique on allergy in disorders of the nose and throat.

HOLLENDER, ABRAHAM RISKL

Office treatment of the nose throat & ear Third edition. Chicago The Year Book Publishers, Inc., 1950 620 p. illus. 21 cm. (The general practice manuals) $7 50 1149

Contents (abridged) Section One, Part I, General survey: Evaluation of office treatment of nose, throat and ear diseases. Immunization. Endocrine therapy Nutritional management. Pharmacotherapy Physical therapeutic procedures. Office surgery Radiotherapy Psychosomatic approach to otolaryngology Section Two, Part II, Diseases of the nose. Part III, Diseases of the paranasal sinuses. Part IV Diseases of the mouth and pharynx. Part Diseases of the larynx. Part VI, Diseases of the ear Part VII, Neurologic disorders. Index.

Note (844*) A widely used manual of the techniques of otolaryngology which can be carried out in practitioners' offices as distinguished from those which must be carried out in fully equipped hospitals. The style of presentation is compact and rather wide range of conditions is covered. As the author points out office treatment now comprises the larger part of the management of ear, nose and throat diseases. Most of the therapies included are physical such as the uses of diathermy but there is chapter on minor surgical operations. The second edition was published in 1946. This edition not only longer by some 70 pages, but substantial sections of text that were included in the second edition have been deleted or extensively rewritten.

LEDERER FRANCIS LOEFFLER

Diseases of the ear nose, and throat. Principles and practice of otorhinolaryngology Clinical technics and procedures. Sixth edition With 979 illustrations, 20 in color Philadelphia F A. Davis Company 1952 1430 p. illus. (part col d) 27 cm. $20.00. 1150

Contents (abridged) Section I, The ear Anatomy of the ear. Examination and functional tests of the ear. Diseases of the external ear. Diseases of the tympanic membrane and middle ear Chronic suppurative middle ear disease. Neoplasms of the middle and inner ear. Diseases of the mastoid region. Labyrinthitis. Diseases of the

internal ear. Temporal bone fractures. Section 3, The nose and paranasal sinuses: Diseases of the external nose. Chronic forms of rhinitis. Diseases of the nasal septum. Sinus disease. Naso-orbital infections. Section 3 The mouth and pharynx: Infections and infectious diseases of the mouth. Diseases of the tongue. Acute diseases of the pharynx. Chronic pharyngitis. Neuroses and paralyses of the pharynx. Section 4, The larynx, trachea, bronchi and esophagus: Diseases of the larynx. Obstructive conditions of the larynx. Chronic forms of laryngeal disease. Tumors of the larynx. Surgery of the larynx and trachea. The trachea and bronchi. The esophagus. Section 5 General and correlated considerations: Progress in otolaryngology Diagnostic and therapeutic facilities. Neuralgias of the head and neck. Allergy Disorders of speech and voice. Ophthalmological aspects. Roentgenography of the head. Oncologic relations to otolaryngology Index.

Note. (1308) A comprehensive work suited to the needs of specialists and graduate medical college students preparing for specialization in otorhinolaryngology Background information such as anatomy and physiology are covered very concisely Almost all of the space is given to descriptions of diseases and to related matters, such as roentgenography, which are of interest to the specialist. Specific diseases are fully discussed and the textual discussion is supplemented by a variety of illustrations of good quality The length of the work and its scope have been very substantially increased in the present edition in order to maintain its purpose as an encyclopedic treatment. Literature references are not included.

PALMER, EDDY D

The esophagus and its diseases. Illustrations by Phyllis Anderson. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1952 553 p. illus. (part col d) 24 cm. $15 00. 1151

Contents: Anatomy Clinical physiology Congenital atresias and fistulas. Diverticulosis. Diaphragmatic hernias. Achalasia and cardiospasm. Other mechanical disturbances. Foreign bodies. Ruptures and perforations Esophagitides. The esophagus in acute infectious diseases. Tuberculosis. Syphilis. Mycoses. Animal parasites. Esophagitis due to corrosive agents. Ulcers. Strictures and webs. Benign epithelial tumors. Carcinoma. Benign nonepithelial tumors and cysts. Sarcomas. Varices and hemorrhage. Allergy drug damage; the endocrinopathies. Diffuse collagen diseases. Deficiency diseases. Extrinsic disease. Index.

Note. The disorders of the esophagus are covered comprehensively in this work. The chapter titles indicate the wide scope. Diseases and their treatment are discussed fully and many illustrative cases are described. The text is based on a survey of the international literature, including the author's own writings. There are 93 illustrations. The author is Chief of the Gastrointestinal Section of Walter Reed Hospital of the United States Army Medical Center.

PARKINSON ROY HARVEY

Tonsil and allied problems. New York The Macmillan Company 1951 432 p. illus. 26 cm. $12 00 1152

Contents. The normal tonsil and tonsil fossa. Muscles of the pharynx and eustachian tube. Potential spaces around the tonsil. Nasopharynx, adenoid, lingual tonsil, and other allied lymphatic structures. Carotid arterial system. Veins draining the tonsil region. Nerve supply of tonsil and allied structures. Lymphatic drainage of the tonsil. Histology of the tonsil and allied structures. Embryology and postnatal cycles of the tonsil. Physiology of the tonsil. Acute inflammatory diseases of the tonsil. Chronic inflammatory diseases of the tonsils. Tumors involving the tonsil and adenoid regions. Miscellaneous conditions involving the tonsils. Indications and contraindications for tonsillectomy Technique of tonsillectomy Complications following tonsillectomy Index.

Note A comprehensive study of a small part of the body that is responsible, according to one authority for one third of all operations performed on the urban population of the United States of America. Currently employed surgical techniques are fully described, but there is no special emphasis on this phase of the subject. Equal emphasis is given to diagnosis, and the discussions of the circulatory system, nerve supply histology etc., are as full as the subject requires. There are 210 figures and a bibliography of 82 references.

VAN ALYEA, OLIVER EDMOND

Nasal sinuses an anatomic and clinical consideration. Second edition. Baltimore The Williams & Wilkins Company 1951 327 p. illus. (part col d) 23 cm. $9 00 1153

Contents: Histopathology Nasal physiology Acute nasal infection. Maxillary sinus. Frontal sinus. Ethmoid sinus. Sphenoid sinus. Sinus disease in children. Allergy Tumors. Complications. Relation of sinuses to other conditions. General therapeutic measures. Subject index. Author index.

Note. (1313) A detailed treatise of interest to advanced medical students, general practitioners, and specialists in rhinology It is based both on the author's own studies and clinical observations and on the pertinent literature. In the present edition it has been widely revised. The chapter on allergy is new Tumors are discussed at greater length and the discussion of therapeutic matters and measures has been revised to include the antibiotics and other important advances. Each of the chapters is now accompanied by revised selected references. There are 143 figures.

WILLIAMS, HENRY L

Ménière's disease. Springfield, Ill. Charles C Thomas, 1952 349 p. illus. 22 cm. (American lecture series. Publication no. 129 A monograph in The Bannerstone Division of American lectures in otolaryngology audiology and broncho-esophagology, edited by Norton Canfield) $7 00 1154

Contents: Ménière's description and some misconceptions. Anatomy and physiology of the labyrinth. Histopathology and physiopathology. Etiology vertiginous crisis and loss of hearing. Diagnosis and differential diagnosis. Fundamental identity of allergy and autonomic dysfunction. Medical treatment. Surgical treatment. Recapitulation and conclusions. Index.

Note: A comprehensive critical monograph on the ear disease named after Prosper Ménière. In the first chapter the author compares Ménière's original papers with the misconceptions that have grown up about the syndrome. In the succeeding chapters he covers the basic anatomy physiology and pathology then goes on to present a critical survey of contemporary diagnosis and treatment, based partly on the literature and partly on his own experience. Selected bibliographies are included in the chapters. The author is Head of the Section on Otolaryngology and Rhinology of the Mayo Clinic.

YEAR BOOK OF THE EYE, NOSE AND THROAT

The 1951 year book *of the* eye, ear nose *and* throat (October, 1950–September 1951) The eye edited by Derrick Vail. The ear, nose and throat edited by John R. Lindsay Chicago The Year Book Publishers, Inc., 1952 456 p. illus. 20 cm. $5 50 1155

Contents. The eye: The eyelids and lacrimal apparatus. The orbit and exophthalmos. The conjunctiva. The cornea. The lens and cataract. The iris, ciliary body and choroid. The optic nerve. The retina. Neurology and visual fields. Glaucoma. Refraction and motility Surgery Therapy Miscellaneous. The ear: Hearing and hearing tests. Vertigo, deafness and Ménière's disease. Tubal function and otitis media. Otosclerosis and fenestration. Miscellaneous. The nose and throat. The nose and sinuses. The oropharynx and nasopharynx. Plastic procedures. The larynx and hypopharynx. Trachea, bronchi and esophagus. Allergy Miscellaneous. Index. Index to authors.

Note (999*) An illustrated annual review of the world wide developments in these specialties. It is similar in scope and arrangement to the other volumes in the series. The more significant articles which appeared in periodicals throughout the world during the period indicated in the title are represented by abstracts of fair length. Some of the abstracts are supplemented by brief editorial notes in which the editor criticizes the findings of the author or relates them to other studies in the same area. There are 131 figures in this issue.

GASTROINTESTINAL DISEASES

BACON HARRY ELLICOTT

Anus, rectum, sigmoid colon diagnosis and treatment. Third edition. Philadelphia. J B. Lippincott Company 1949 2 vol. illus. (part col d) 26 cm. $30.00 1156

Contents (abridged) Volume 1: Anatomic considerations. Examination and diagnosis. Malformations of the anus and rectum—megacolon—Hirschsprung's disease—megarectum. Fissure in ano. Anorectal

stenoses. Fistula. Pruritus ani. Proctitis and sigmoiditis. Diverticulosis and diverticulitis of the sigmoid. Lymphogranuloma venereum. Venereal disease of anus and rectum. Tuberculosis of anus, rectum and sigmoid colon. Hemorrhoids. Prolapse and procidentia. Volume II: Malignancy of the anus, rectum, and sigmoid colon. Treatment of malignant tumors. Volvulus of the sigmoid colon. Foreign bodies in the rectum. Anesthesia and analgesia. Preoperative and postoperative treatment of patients undergoing major surgical procedures. Bibliographic index. Subject index.

Note (3316) An outstanding work used both as a text for instruction in medical schools and as a reference book by general practitioners and specialists. The latter group of readers will be interested in such portions as the author's evaluation of abdominoperineal proctosigmoidectomy without colostomy. Throughout the book the applicable therapies, including both surgical and nonsurgical, are described. Also palliative measures are discussed. The illustrations, of which there are well over 1000 in this edition, are an outstanding feature. The significant related literature is carefully cited and the names of the authors of the listed papers have been assembled in the bibliographic index. The second edition was published in 1941. In preparing this very thorough revision many hundreds of pages of text were added and the number of illustrations was greatly increased. The author is Head of the Department of Proctology of Temple University Medical School and Hospital.

BARGEN JACOB ARNOLD

Chronic ulcerative colitis (thrombo-ulcerative colitis) Springfield Illinois Charles C Thomas 1951 62 p illus. 22 cm. (American lecture series. Publication no. 101 A monograph in American lectures on abdominal viscera, edited by Lester R Dragstedt.) $2.25 1157

Contents Introduction. Pathologic changes. Diagnosis. Complications. Treatment. Summary and conclusions. References.

Note. In this monograph on a single intestinal disease each phase of the disease from diagnosis through final treatment is carefully explained in terms of the author's general and clinical experience. The chapter on treatment includes medical and surgical therapies and includes three illustrations of a skin-grafted ileostomy constructed according to Dragstedt's technique. The author is a member of the Mayo Clinic staff.

BENEDICT EDWARD BENSON

Endoscopy as related to diseases of the bronchus esophagus, stomach, and peritoneal cavity Baltimore The Williams & Wilkins Company 1951 373 p. illus. (part col d) 24 cm. $10.00 1158

Contents (*abridged*) History of endoscopy Part I, Bronchoscopy: Anatomy and physiology of the tracheobronchial tree. Technic. Indications, contraindications and complications. Bronchial obstructions. Specific infectious diseases. Foreign bodies in the tracheobronchial tree. Bronchogenic carcinoma. Metastatic malignant disease of the bronchus. Tumors of the trachea. Part II, Esophagoscopy Anatomy and physiology of the esophagus. Technic. Indications, contraindications and complications. Esophagitis. Hiatus hernia. Esophageal ulcer. Benign stricture. Lye stricture. Web. Achalasia (cardiospasm). Diverticulum. Varices. Benign tumor. Carcinoma. Foreign bodies in the esophagus. Extrinsic pressure. Trauma. Bronchoesophageal and tracheoesophageal fistula. Specific infectious diseases. Miscellaneous conditions affecting the esophagus. Paralytic dysphagia. Functional disorders of swallowing. Part III, Gastroscopy: Anatomy, physiology and gastroscopic appearance of normal stomach. Technic. Indications, contraindications and complications. Gastritis. Gastric ulcer. Benign tumor. Carcinoma. Other malignant tumors involving the stomach. Specific infectious diseases. Miscellaneous conditions affecting the stomach. Part IV, Peritoneoscopy. History, technic and indications. Evaluation of the method and analyses of results. Endoscopic photography. Index.

Note. The fitting of endoscopic techniques into the whole picture of diagnosis and treatment is an outstanding feature of this authoritative work. The chapter on bronchogenic carcinoma—to take an example—is organized under the following subheadings: definition, occurrence, etiology, pathology, symptomatology, diagnosis, differential diagnosis, bronchoscopy, bronchoscopic determination of operability, exploratory thoracotomy, cytologic study, treatment, prognosis, and literature references. Endoscopic techniques are correlated with other diagnostic techniques, especially radiography. Discussions of case histories are included in most of the chapters. There are [illegible] illustrations in color and 127 in black and white. The author is Endoscopist of the Massachusetts General Hospital and a member of the faculty of Harvard Medical School.

CANTOR ALFRED JOSEPH

Ambulatory proctology With a foreword by Beaumont S. Cornell. Second edition, revised. With 382 illustrations. New York Paul B Hoeber Inc., 1952 563 p illus. 24 cm. $10.00. 1159

Contents: Clinical anatomy. Diagnosis. Anesthesia, analgesia, hemostatic agents. Preoperative and postoperative management. Sulfonamide and antibiotic therapy. Surgery by electric current or thermal cutting unit. Pediatric proctology. Pruritus ani. Cryptitis and papillitis. Anorectal fistula. Perianal and perirectal abscesses and infections. Anal ulcer. Hemorrhoids. Prolapse and procidentia. Diarrhea—diagnostic methods and general therapy. Enterocolitis and colitis. Ulcerative colitis. Bacillary dysentery. Tuberculosis. Lymphogranuloma venereum. Venereal diseases. Intestinal parasites. Constipation. Mucous colitis. Diverticulosis and diverticulitis. Benign tumors. Multiple adenomas. Malignant neoplasms. Pilonidal disease, sinus, cyst, and abscess. Coccygodynia. Rectal stricture and anal stenosis. Anal incontinence. Foreign bodies and rectal trauma. Index.

Note (1001) By "ambulatory proctology" the author designates the diagnosis and treatment of diseases of the anus, rectum, and sigmoid bowel by techniques which do not confine the patient to bed. The text is divided about equally between conditions which can be treated by surgical methods in the doctor's office and conditions which can be treated medically. Also there is considerable material on conditions which can be diagnosed in the office, but require hospitalization for treatment. The book is addressed particularly to general practitioners of medicine. Two new chapters and other important additions have been made in this edition. Also recent literature has been added to the bibliographies and there are many new illustrations.

CANTOR MEYER O

Intestinal intubation Springfield, Illinois Charles C Thomas, 1949 333 p illus. 24 cm. $7.50 1160

Contents: Introduction. The history of the invention and development of the gastro-intestinal tubes. Normal anatomy of the gastro-intestinal tract as related to intubation. Intestinal physiology as related to intestinal intubation. Distention in the gastro-intestinal tract. Intestinal decompression tubes in use today. Technic of intestinal intubation. Role of mercury in intestinal decompression tubes. Disorders of the small bowel requiring intubation. Intestinal intubation in lesions of the colon. Errors and safeguards in the use of intestinal decompression tubes. Nursing care of patient with intestinal intubation. Types of suction and methods of use. Responsibility of the surgeon in the use of intestinal intubation. The role of the roentgenologist in patients to be intubated. Intubation in infancy and childhood. Effect of intestinal gases upon balloons of intestinal decompression tubes, by E. E. Phelps and others. Effect of hydrogen sulphide gas upon the balloons of intestinal decompression tubes. Reference bibliography. Author index. Subject index.

Note. A comprehensive presentation of a major technique in the treatment of intestinal distention, written by the inventor of the Cantor tube. Most of the space is devoted to matters pertaining to the use of gastro-intestinal tubes, but the history and other background aspects are also fully covered. There are [illegible] illustrations and extensive bibliographies. The book is of interest to nurses as well as to surgeons, roentgenologists, and specialists in gastroenterology.

CHENEY GARNETT

Medical management of gastrointestinal disorders. Chicago The Year Book Publishers, Inc., 1950. 478 p. illus. 21 cm. $7.00. 1161

Contents (*abridged*) Part I, The patient approach: Examination of the patient. Clinical laboratory procedures. Endoscopic and biopsy examinations. X-ray examination. Part II, Symptoms diagnosis and treatment. Sore mouth and tongue. Loss of appetite. Dysphagia and substernal distress. Indigestion, belching of gas and heartburn. Nausea and vomiting. Hematemesis. Management of the peptic ulcer problem. Severe abdominal pain and colic. Management of liver disease. Management of gallbladder and bile duct disease. Lower abdominal distress and anorexia. Abdominal distention. Abdominal tumors.

Contents: Adrenolescence, by G. A. Pincus. Recent knowledge on the nature of hypophyseal adrenocorticotropic hormone (ACTH), by C. H. Li. Serum cholesterol—a probable precursor of adrenal cortical hormones, by J W Cook and others. Factors regulating the adrenal cortical secretion, by C. N. H. Long. Physiological regulation of the zona glomerulosa of the rat's adrenal cortex, as revealed by cytochemical observations, by H. W Deane. On certain factors conditioning the action of the pituitary-adrenal system, by F R. Skelton. Control of regeneration of the adrenal cortex in the rat, by D. J. Ingle. Experimental adrenal cortical tumors, by G. W Woolley. Studies on the site and mode of action of the adrenal cortex in protein catabolism, by F L. Engel. The protective role of adrenal cortical secretion in the hypersensitive state, by T F Dougherty. Modification of body structure by adrenocortical secretions with special reference to the regulation of growth, by B. L. Baker. Preliminary observations on the relation of adrenal cortex to electrolyte metabolism in the rat, by R. O. Greep. The adrenal cortex in water metabolism, by R. Gaunt and others. Does methyl testosterone modify the effects of adrenocorticotropic hormone (ACTH) and of desoxycorticosterone glucoside (DOCG)? by F C. Bartter and others. Evaluation of the metabolic effects of peptide mixture derived from pure adrenocorticotropic hormone, by L. W Kinsell and others. Observations on the metabolic effects of cortisone and ACTH in man, by R. G. Sprague and M. H. Power. The response of neoplastic lymphoid tissue to increased adrenal cortical function, by O. H. Pearson and others. Adrenal function in the newborn, by E. H. Venning. Steroid excretion and adrenal function in neoplastic disease, by K. Dobriner and others. Isolation of adrenal cortical hormones from urine, by H. L. Mason. Adrenal cortex in hypertension, by A. C. Corcoran. The adrenal cortex in diabetes mellitus, by E. S. Gordon. Pituitary-adrenocortical function in patients with severe personality disturbances, by H. Hoagland.

Note: A collection of papers presented at the symposium named in the book's title. The typical paper is compact summary of recent research correlated with the results of other investigations reported in the literature, and it is supplemented by list of references.

AMERICAN RHEUMATISM ASSOCIATION

Rheumatic diseases. Based on the proceed ings of the seventh International Congress on Rheumatic Diseases. Prepared by the Com mittee on Publications of the American Rheumatism Association. Charles H. Slocumb chairman. Philadelphia W B Saunders Company, 1952 449 p. Illus. 25 cm. $12 00. 1171

Contents (abridged) General information about rheumatic diseases. Rheumatic fever. Rheumatoid arthritis. Atypical rheumatoid arthritis. Rheumatoid spondylitis. Reflex dystrophy. Fibrositis and psychogenic rheumatism. Osteoarthritis. Effects of endocrine secretions. Gold salts and copper salts. Orthopedic and physical treatment and study. Specific infectious arthritis. Gout. Scleroderma. Pathology of rheumatic diseases. Physiologic aspects of rheumatic diseases. Investigative studies of immune reactions, antigens and enzymes. Studies on blood plasma and amino acids. Studies of connective tissue. Experimental arthritis. Subject index. Author index.

Note. A collection of about 85 papers that were originally presented at the congress named in the title of the book. The majority of authors are U S A. physicians or teachers in medical colleges, but there is also considerable number of contributors from other countries. The typical paper is short and is accompanied by literature references. In some instances an excerpt of the discussions at the congress is included. The volume is of interest primarily to medical practitioners, both general and specialists. However some of the papers are of interest to research workers in pharmacology

BARACH JOSEPH H

Food and facts for the diabetic. New York Oxford University Press, 1949 113 p. Illus. 24 cm. $4 00 1172

Contents: Clinical manifestations of diabetes. Laboratory diagnosis. Planned treatment. Principles of diet in health and diabetes. Caloric values of foods. Quantities as in the measured diet. Insulin. Complications in the use of insulin. Causes of high blood and urine sugars and their control. Hygiene—a way of life for the diabetic. Complications in diabetes. Diabetic coma and its treatment. Prevention of diabetes and its complications. Diabetes in children. Diet section. Index. Index to adequate maintenance diets.

Note: A manual of information for patients rather than physicians. Aspects of diabetic treatment for which the patient is primarily responsible are discussed at some length. The self-administration of insulin is fully described. Included in the book but not counted in the paging is long section of daily menus or diets. The author is member of the faculty of the School of Medicine of the University of Pittsburgh.

BLOTNER, HARRY

Diabetes insipidus. Edited by Henry A. Christian. (Reprinted from Oxford loose-leaf medicine with the same page numbers as in that work) New York Oxford University Press 1951 Illus. 24 cm. $4.50. 1173

Contents (abridged): History Anatomy of pituitary gland and associated structures. Physiology Pathology Etiology Incidence. Symptoms. Physical examination. Laboratory studies. Diabetes insipidus associated with other conditions. Diagnosis. Treatment. Bibliography

Note: A short treatise written primarily for general practitioners of medicine. The author points out that diabetes insipidus is rarely encountered but that it is fascinating disease because of its relationship to endocrinology and the ease with which it may be diagnosed and treated. Treatment with extracts of posterior pituitary is described at length, since it is the chief method, but other methods are described also. There is bibliography of 470 references.

CRILE, GEORGE, JR.

Practical aspects of thyroid disease. Philadelphia W B Saunders Company 1950. 355 p. illus. 20 cm. $6.50 1174

Contents. Physiology of the thyroid. Pathology of endemic goiter. The prevention and treatment of endemic goiter. Intrathoracic goiter. Clinical and pathologic aspects of hyperthyroidism. Diagnosis of hyperthyroidism. Iodine in the treatment of hyperthyroidism. Antithyroid drugs in treatment of hyperthyroidism. Roentgenotherapy and radioactive iodine in the treatment of hyperthyroidism. Preoperative management of hyperthyroidism. Anesthesia for thyroidectomy Anatomy of the thyroid. Technic of thyroidectomy. Results of thyroidectomy and evaluation of technic. Complications during thyroidectomy. Postoperative care. Postoperative complications. Recurrent hyperthyroidism. Hyperthyroidism in extremes of life. Diseases associated with hyperthyroidism. Congenital abnormalities of the thyroid and thyroglossal tract. Classification of malignant tumors of the thyroid. Incidence of carcinoma of the thyroid. Papillary carcinoma of the thyroid. Nonpapillary carcinoma of the thyroid. Nonencapsulated sclerosing tumor of the thyroid. Thyroiditis. Conclusions. Index.

Note An inclusive presentation of current techniques in the diagnosis and treatment of thyroid disorders. Treatment by means of antithyroid drugs, radioactive iodine, and roentgenotherapy is covered as well as surgical treatment. The work is addressed both to specialists in internal medicine and to surgeons, and its purpose is to inform practitioners in both these branches of medicine of newly developed techniques. Selected references are appended to the chapters and there are 101 black-and-white figures.

DECOURCY JOSEPH LUKE, AND CORNELIUS B DECOURCY

Pathology and surgery of thyroid disease. Springfield, Illinois Charles C Thomas, 1949 476 p. illus. 26 cm. $10.50. 1175

Contents. Preview—surgical aspects of thyroid disease. Historical aspects of the thyroid gland—past and present—European and American. Embryology Anatomy histology and cytology of the thyroid. Physiological aspects. Pharmacology and therapeutic aspects—iodine metabolism and blood iodine—thiouracil, propylthiouracil and related drugs in treatment of thyrotoxicosis—radioactive isotopes of iodine use in therapy of diffuse toxic goiter. Pathology Thyroiditis. Exophthalmic goiter. The thyroid gland in later life. Preoperative considerations. Anesthesia in thyroid surgery. Operative considerations. Postoperative care. Postoperative sequelae. Future of thyroid surgery. Index.

Note A comprehensive text based on very extensive experience with thyroid disorders at the DeCourcy Clinic in Cincinnati. The authors are surgeons and surgical techniques are described at length, but there is no undue emphasis. The treatment of thyroid disorders with drugs is well covered, and these chapters like the others are supplemented with good bibliographies. There are approximately 80 figures, several of which are in color

DUNCAN, GARFIELD GEORGE

Diabetes mellitus principles and treatment. Philadelphia W B Saunders Company 1951 289 p. illus. 24 cm. $6.25 1176

Contents: Introduction—definition of diabetes. Progress in the understanding of diabetes. History of diabetes. Incidence of diabetes. Etiology of diabetes. Prognosis. Insulin. Carbohydrate metabolism and the blood sugar. Disturbed physiology in diabetes. Pathology of diabetes. The urine and blood in diabetes. Symptomatology physical signs and diagnosis of diabetes. Food requirements. Treatment. Insulin therapy Complications of diabetes. Acute complications of diabetes. Diabetic coma. Pregnancy complicating diabetes. The diabetic child. Appendix. Index.

Note: A manual of practical treatment devoted mainly to those aspects of diabetes mellitus which are of concern to the general practitioner Diets, insulin therapy complications, etc., are given relatively more space than pathology, for instance. A considerable range of useful reference data are presented in tables. Literature references are few The author is Clinical Professor of Medicine in Jefferson Medical College.

DUNCAN GARFIELD GEORGE, editor

Diseases of metabolism detailed methods of diagnosis and treatment. With contributions by Walter Bauer and others. Third edition, illustrated. Philadelphia W B Saunders Company 1952 1179 p. illus. 25 cm. $15 00. 1177

Contents: Introductory considerations, by G. G. Duncan. Carbohydrate metabolism, by S. Soskin and R. Levine. Protein metabolism, by A. White. Lipid metabolism, by A. White. Mineral metabolism, by A. Cantarow Water balance in health and disease, by J. P Peters. Vitamins and avitaminoses, by T D. Spies and H. R. Butt. Undernutrition, by A. Keys Obesity by F A. Evans. Xanthomatoses—glycogen disease—and disturbances of intermediary metabolism, by E. Mason. Gout, by W Bauer and F Klemperer. Spontaneous hypoglycemia, by G. G. Duncan. Diabetes insipidus, by G. G. Duncan. Melituria, by A. Cantarow Diabetes mellitus, by G G. Duncan. Diabetes in childhood, by P White. Diseases of the thyroid, by R. W Rawson and J. E. Rall. Diseases of the kidney by M. Muller and and J M. Hayman, Jr. Porphyrin metabolism, by C. J. Watson. Appendix, by G. G. Duncan. Author index. Subject index.

Note: (1017*) A comprehensive review made up of chapters written by eminent authorities in this field. It is intended to provide graduate physicians with basis for the understanding, diagnosis, and treatment of metabolic diseases. Each chapter is supplemented by selected though rather extensive bibliography of the international literature. In comparison to the preceding edition, published in 1947 this edition exhibits considerable rewriting and augmentation The chapter on porphyrin metabolism is new Several chapters have been thoroughly rewritten and expanded; others have been condensed. The bibliographies have been completely overhauled.

FARQUHARSON, RAY FLETCHER

Simmonds' disease extreme insufficiency of the adenohypophysis. Springfield Illinois Charles C Thomas, 1950 93 p. illus. 22 cm. (American lecture series. Publication no 34 A monograph in American lectures in endocrinology edited by Willard O Thompson) $2.00 1178

Contents: Initial recognition. Pathogenesis and pathology The clinical picture Summary and conclusion. Bibliography Index.

Note: A presentation of "the pathological and clinical picture of the syndrome of extreme insufficiency of the adenohypophysis. It is based on reports of cases in the published literature which include adequate descriptions of the clinical and pathological features including the findings in autopsies.

GREENBLATT ROBERT BENJAMIN

Office endocrinology Fourth edition. With a foreword by G Lombard Kelly Springfield, Illinois Charles C Thomas, 1952 561 p. illus. (part col'd) 24 cm. $10 50 1179

Contents (abridged): Section one, General endocrinology: Part 1, The pituitary Part 2, The thyroid and parathyroids. Part 3 The adrenals. Part 4 Miscellaneous—endocrine headaches. Acne. Obesity and leanness. Section two, Female endocrinology: Part 1, Disorders of menstruation. Part 2, Sterility and allied disorders. Part 3, Disorders in the sexual sphere. Part 4, Miscellaneous—Nausea and vomiting of endocrine origin. Disorders of micturition due to endocrine imbalance. Section three, Hormonology: Chemistry of steroid hormones. Estrogens. Androgens. Adrenal cortical hormones. Pellet implantation. Section four Diagnostic procedures: The vaginal smear The correlation of basal temperature and ovarian activity Laboratory procedures. Tests for pregnancy and their practical application. Section five, Male endocrinology: Hypogonadism. Male sterility and impotence. Testicular biopsy by W O. Nelson. Estrogen therapy in the male. Index.

Note: (1021) A standard treatment which is primarily designed for office use by physicians who are not specialists in endocrinology but who do require in their regular practice knowledge of the common manifestations of endocrinological malfunction. Each of the 64 chapters is concise discussion of specific disorder or of diagnostic or therapeutic technique. Diagnostic techniques and therapies which are available to the general physician who must work with limited laboratory facilities are described explicitly Literature references are included, some of which are to articles on more specialized techniques. In the present edition approximately one-third of the chapters are new and other chapters which have been carried over have been extensively rewritten. There are many new illustrations and the literature references have been extended.

JOSLIN ELLIOTT PROCTOR, AND OTHERS

The treatment of diabetes mellitus, by Elliott P Joslin Howard F Root, Priscilla White and Alexander Marble. Ninth edition, thoroughly revised, illustrated. Philadelphia Lea & Febiger 1952 771 p illus. (part col'd) 24 cm. $12 00 1180

Contents: Present concepts of diabetes, by E. P Joslin. The incidence of diabetes, by E. P Joslin The etiology and prevention of diabetes, by E. P Joslin and P White. The physiology of diabetes, by A. Marble. The pathology of diabetes, by S. Warren and P M. LeCompte. Examination of urine and blood in diabetes, by A. Marble. The diet in health and diabetes, by E. P Joslin. Definition, diagnosis, classification, symptomatology and prognosis of diabetes, by E. P Joslin. The treatment of diabetes, by E. P Joslin. Hypoglycemia due to insulin, by A. Marble. Hyperinsulinism, by A. Marble. Diabetic coma, by H. F Root. Allergy and diabetes, by A. Marble. Cardiovascular-renal disease, by H. F Root. Infections in diabetes, by A. Marble. The digestive system in diabetes, by A. Marble. The nervous system and diabetes, by H. F Root and A. J. Kenny The genito-urinary system in diabetes, by C. Bryan. Disorders of the skin in diabetes, by A. Marble. Blood complications in diabetes, by H. F Root and R. D. Story The eyes and diabetes, by H. F Root. Tuberculosis, by H. F Root and R. Dochat. Cancer complicating diabetes, by A. Marble. Surgery and diabetes, by H. F Root. Clinical disorders of the glands of internal secretion complicating diabetes, by H. F Root. Diabetic children and their later lives, by P White. Pregnancy complicating diabetes, by P White. Non-diabetic melliturias, by A. Marble. Index.

Note (1018*) A comprehensive monograph based on the authors' experience of some 40,000 patients. It is widely used as guide and reference book both by general practitioners of medicine and by specialists The primary emphasis is on the treatment, but the table of contents shows other aspects of this disease are covered also. The first chapter is of special public health interest because it outlines the facts on the incidence, mortality rates, and related public health aspects of diabetes. The eighth edition was published in 1946. The ninth edition represents thorough revision. Though shorter than the preceding edition, much new material has been added in the text and many new bibliographic references appear in the footnotes. Included among the appendix material is new method of calculating diabetic diets.

LICHTMAN SOLOMON SYDNEY

Diseases of the liver gallbladder and bile ducts. Second edition, thoroughly revised, with 147 illustrations and two color plates. Philadelphia Lea & Febiger 1949 1135 p. illus. (part col d) 24 cm. 1181

Contents: Part 1, Diseases of the liver: The structure of the liver. Physiology of the liver. The pathogenesis and pathology of jaundice. The symptoms and signs of liver disease. Liver function tests and

procedures—interpretation of results. Acute and subacute inflammatory diseases of the liver. Acute and subacute liver necrosis. Cirrhosis of the liver. Hemolytic jaundice. New growths of the liver. Echinococcus disease of the liver. Liver abscess. The liver in hyperthyroidism. The liver in pregnancy. Metabolic hepatomegalies. The liver in heart disease. Diseases of the blood vessels of the liver. Specific infections of the liver. Hepatic disease and the hematopoietic apparatus. Differential diagnosis—general considerations. The treatment of liver disease. Part II, Diseases of the gallbladder and biliary passages: Anatomic features. Physiology of the extrahepatic biliary tract. Diseases of the gallbladder. Diseases of the extrahepatic bile ducts. Diagnostic procedures in extrahepatic biliary tract disease. The treatment of biliary tract disease. Index.

Note. (1121) A comprehensive work written both for use as textbook in medical colleges and reference book for general practitioners and gastroenterologists. Although the general chapters are adequate, most of the space is devoted to discussions of specific diseases. For each disease attention is paid to etiological factors, pathogenesis, pathologic features, clinical features, treatment, and prognosis. Very extensive literature references are included in most of the chapters. The first edition was published in 1943. About 200 pages of new matter was added in this second edition, and chapters and sections carried over from the preceding edition have been revised where advances have added new knowledge. Among the prominent changes is completely rewritten discussion of infectious hepatitis.

McGavack, Thomas Hodge
The thyroid. With a section on surgery by James M Winfield and Walter L. Mersheimer and a section on history by Dorothy B Spear and Thomas Hodge McGavack. St. Louis The C V Mosby Company 1951 646 p illus. 26 cm. $14 00 1182

Contents (*abridged*) Section I, History: Iodine and goiter Anatomy, physiology and chemistry Hypothyroidism. Some recent discoveries—newer tools for investigation and therapy Section II, Anatomical, chemical and physiological considerations: The metabolism of iodine The synthesis and nature of thyroid hormone. The extrathyroidal production of hormonally active iodinated proteins. Extrathyroidal factors known to influence the follicle and its cyclic activity The thyrotrophic thyroid hormone-iodide balance (iodophthalothyroid axis) Known physiological actions of thyroid hormone. Interrelationship between the thyroid and other glands of internal secretion. Antithyroid compounds. Radioactive isotopes of iodine and the thyroid. Pregnancy and the thyroid. Section III, Morbid states. Classification of thyroid disease. Disturbances of the thyroid gland due to or closely associated with congenital anomalies. Intrathoracic goiter. Thyroiditis. Iodine deficiency goiter (endemic goiter) Hypothyroidism. Dysphrenic myxedema. Nodular goiter. Carcinoma of the thyroid gland Hyperthyroidism. Ophthalmopathic Graves' disease. Section IV Surgical considerations History of the technic of thyroidectomy Indications for surgery Preoperative preparation. The technic of subtotal resection of the thyroid gland. Postoperative care. Index.

Note. A comprehensive work in which the main emphasis is on the biochemistry and physiology of the thyroid in health and disease Essentially it is critical literature digest, and the author has paid careful attention to the citing of source articles. Diseases are specifically described with particular attention being paid to such aspects as pathology clinical picture, diagnosis, prognosis, and treatment. The section on surgery is brief. Extensive bibliographies of the modern literature are included. The book is potentially of interest to advanced medical students, graduate research workers, and other scientists in need of comprehensive survey of the current knowledge and literature.

Rifkin Harold and others
Diabetic glomerulosclerosis the specific renal disease of diabetes mellitus. By Harold Rifkin Louis Leiter [and] James Berkman. Springfield, Illinois Charles C Thomas 1952 102 p illus 22 cm. (American lecture series. Publication number 130 A monograph in American lectures in metabolism, edited by Paul György and others) $3 50 1083

Contents. The clinical syndrome. Pathology Pathogenesis. Analysis of clinical data. Laboratory aids in diagnosis. Differential diagnosis. Treatment. Bibliography Index.

Note. A short monograph based partly on studies made by the authors at Montefiore Hospital, New York City and partly on the published studies of other clinicians. It covers complication of diabetes mellitus on which relatively little has been published. The authors stress the importance of early diagnosis and also of further study of the condition. Under treatment they offer no specific therapy but point out the necessity of a high level of control of the patient diabetes so as to delay and possibly prevent degenerative vascular changes.

Soffer, Louis Julius
Diseases of the endocrine glands by Louis J Soffer with the assistance of J Lester Gabrilove with a section on carbohydrate metabolism hypoglycemia, and diabetes mellitus by Henry Dolger and the section on the gonads by Arthur R. Sohval. 88 illustrations and 3 colored plates. Philadelphia Lea & Febiger 1951 1142 p. illus. (part col'd) 24 cm. $15 00 1184

Contents (*abridged*) Section I, The hypophysis: The embryology anatomy and histology of the hypophysis. The physiologic functions of the hypophysis. Diseases of the hypophysis. Section II, The adrenals: The anatomy morphologic structure, and embryology of the adrenals. Physiology of the adrenals. Addison's disease. Adrenogenital syndrome. Sympathogonioma, neuroblastoma, and ganglioneuroma of the adrenal. Section III, The gonads: Physiology of the testis, by A. R. Sohval. Diseases of the testis, by A. R. Sohval. The ovary by A. R. Sohval. The virilizing syndrome. Section IV The thyroid: Embryology, gross and microscopic anatomy, and the physiology of the thyroid gland. The value of laboratory aids in the diagnosis of thyroid disease. Inflammatory diseases of the thyroid gland. Hypothyroidism. Tumors of the thyroid gland. Section The thymus, and parathyroids. Section VI, Hypoglycemia, hyperinsulinism and diabetes mellitus. Appendix: Laboratory tests of endocrine function. Index.

Note. A comprehensive work in which common as well as rare diseases are covered. The point of view is definitely that of the clinician. Embryology and anatomy are covered in each of the sections but the treatment of these aspects is brief. Much of the text consists of very compact summaries of published articles. In each chapter textual statements are key-numbered to the chapter bibliographies which in many instances run to more than 100 citations. The book is suitable for use both as graduate text and reference manual. The author is Head of the Endocrine Research Laboratory and Clinic of Mount Sinai Hospital, New York City

Soskin Samuel editor
Progress in clinical endocrinology New York Grune & Stratton 1950 641 p. illus. 24 cm. $10 00 1185

Contents (*abridged*) I, Introductory: The role of hormones in metabolism, by S. Soskin and R. Levine. Endocrine regulation of cellular protein metabolism, by A. White. II, Thyroid: Relation of nodular goiter to thyroid carcinoma, by L. M. Zimmerman and D. E. Wagner The thyrotoxic myopathies, by H. A. Eder. Hypothyroidism in children, by L. Wilkins. Use of radioactive iodine in the diagnosis, clinical study and treatment of diseases of the thyroid, by S. Hertz. Clinical use of the antithyroid drugs, by E. B. Astwood. III, Parathyroid: Diagnosis and treatment of Hyperparathyroidism, by I. Snapper. Diagnosis and treatment of hypoparathyroidism, by M. Tashenberg. IV Adrenal cortex: Pituitary regulation of adrenal cortical activity, by G. Sayers. Electrolyte regulation by the adrenal cortex, by H. K. Hardman. Adrenogenital syndrome, by S. F Wilhelm. The diagnosis and treatment of Addison's disease, by L. J Soffer Adrenal medulla: Pheochromocytoma, by J. Aranow Jr. Adrenergic blocking drugs, by E. R. Loew VI, Pancreas: Diabetes mellitus of pancreatic origin, by H. T. Ricketts. Insulin resistance, by H. E. Martin. The treatment of diabetic acidosis with potassium salts, by E. H. Rynearson and C. F Gastineau. Treatment of diabetes with "free diet" during the past ten years, by E. Tolstoi. Insulin mixtures and modifications, by F. R. Peck. Spontaneous hypoglycemia, by J W Conn. VII, Ovary: Attempted induction of ovulation in women, by W E. Brown. Hormone-producing tumors of the ovary by R. E. Greene. The diagnostic significance of pregnanediol excretion, by H. S. Guterman. Gynecography in the diagnosis of ovarian disorders, by I. F. Stein. Clinical significance of FSH excretion, by H. F Klinefelter. Clinical use of progesterone, by J. S. Guterman. VIII, Testis: Metabolic influence of the androgens, by C. D. Kochakian. Endocrine aspects of infertility in the male, by E. T. Engle and A. Soskin.

Hormonally active tumors of the testes, by G. H. Twombly. The treatment of cryptorchidism, by M. M. Steiner. IX, Special aspects of sex endocrinology: The influence of the liver on sex endocrine functions, by R. L. Glass. Methods for chronic administration of steroid hormones, by A. Segaloff. X, Anterior pituitary: The nutritional and endocrine control of growth in children, by E. R. Kantsaker. Antihormones, by K. W. Thompson. XI, Posterior pituitary: Principles of the posterior lobe of the pituitary body, by H. B. van Dyke. Diabetes insipidus and its differential diagnosis, by R. C. de Bodo and I. H. Kiser. XII, Use of hormones in nonendocrine conditions: Hormone therapy of carcinoma of the prostate, by R. H. Flocks. Experimental use of testosterone compounds in premature infants, by E. K. Shelton and others. The role of hormones in the pathogenesis and treatment of gout, by W. Q. Wolfson. XIII, General endocrine topics: Influence of the endocrines on the skeleton in health and disease, by J. P. Weinmann. The relationship of the endocrine glands to obesity, by E. Strouse and C. D. Strouse. Index.

Note: The first volume published in a series that is planned to present periodically a summary of current knowledge and recent developments. The volume at hand contains 79 papers. The typical paper is an eight page digest of published literature and is accompanied by a bibliography. The papers are addressed to graduate physicians and to scientists in other fields who are familiar with the terminology of clinical medicine and endocrinology.

THANNHAUSER, SIEGFRIED J

Lipidoses, diseases of the cellular lipid metabolism. *Edited by Henry A. Christian.* (Reprinted from Oxford loose-leaf medicine with the same page numbers as in that work) Second edition. New York Oxford University Press, 1950 595 10 p. illus. (part col d) 24 cm. $12 00 1186

Contents (abridged): Part I, The physiology and chemistry of lipid metabolism. Part II, Hyperlipemia. Part III, Xanthomatoses: Hypercholesteremic xanthomatoses. Hyperlipemia (accumulation of neutral fat in serum) with secondary eruptive xanthoma. Normocholesteremic xanthomatoses. Part IV, Gaucher's disease (reticular and histiocytic cerebrosidosis). Part V, Niemann-Pick's disease (reticular and histiocytic sphingomyelinosis). Supplement: Infantile amaurotic idiocy. Hurler-Pfaundler syndrome (gargoylism). Index.

Note: A monographic survey of the groups of diseases named in the part titles. The first chapter is an outline with key-numbered references to the literature of the knowledge of the biochemistry of lipid metabolism. Comprehensive lists of international literature pertaining to each group of diseases are a special feature. There are 124 figures. The first edition was published in 1940. Moderately extensive revisions are evident in several parts of this edition.

THOMAS LEWIS editor

Rheumatic fever A symposium held at the *University of Minnesota on November 29 30* and December 1 1951 under the sponsorship of the Minnesota Heart Association. Minneapolis University of Minnesota Press, 1952 349 p. illus. 24 cm. $10.00 1187

Contents: The natural history of rheumatic fever, by T. D. Jones and E. F. Bland. The epidemiology of rheumatic fever, by J. J. Schwentker. The histopathology of rheumatic fever—a critical review, by G. E. Murphy. Inflammatory complications of congenital heart disease, by T. J. Dry and D. C. Connolly. The biology of group A hemolytic streptococci, by M. McCarty. Studies on the epidemiology of rheumatic fever in the armed services, by C. H. Rammelkamp and others. Infection and reinfection by hemolytic streptococci in early childhood, by L. A. Rantz and others. Nonrheumatic myocarditis, by H. L. Hodes. Acute-phase reactions in rheumatic fever, by R. A. Good. The immune response in rheumatic fever, by M. McCarty. Attempts to induce rheumatic fever in experimental animals—a critical review with particular reference to the Aschoff bodies in the myocardium, by G. E. Murphy. Experimental bacterial endocarditis and glomerulonephritis—a description of a method of production utilizing streptococcal infection, and a summary of the results of antibiotic therapy, by C. W. Lillehei and others. Tissue factors in streptococcal infections, by D. W. Watson and W. J. Cromartie. The biochemistry of connective tissue and rheumatic fever, by A. Dorfman. The penetration of antigens into connective tissue, by A. H. Coons. The pathogenesis of the Shwartzman and Arthus phenomena and their relation to human rheumatic fever, by C. A. Stetson, Jr. The generalized Shwartzman reaction in rabbits infected with group A hemolytic streptococci, by L. Thomas. The surgical problem in rheumatic valvular heart disease, by R. L. Varco and I. D. Baronofsky. Subacute bacterial endocarditis, by W. E. Herrell and F. R. Heilman. Acute rheumatic fever treated with cortisone and corticotropin, by A. R. Barnes and others. Therapy of rheumatic fever—a discussion, by A. G. Kuttner. The prevention of rheumatic fever, by C. H. Rammelkamp and others. The management of rheumatic fever, by M. J. Shapiro. Bibliography.

Note: Many of the papers collected in this volume describe recent advances in the understanding and therapy of rheumatic fever, including the results of studies carried out by the United States Armed Forces. Several of the papers are accompanied by transcripts of the discussion which took place at the symposium. Some include extensive bibliographies.

UNITED STATES ARMY ARMY MEDICAL LIBRARY

The pituitary-adrenocortical function ACTH, cortisone and related compounds. A bibliography compiled by Karl A. Baer and Marjory Spencer with the assistance of Paulyne Tureman and Stanley Jablonski. Washington D C. Army Medical Library 1950. 366 p. 26 cm. Paper Sent free to libraries and institutions. 1188

Note: A bibliography consisting of 3441 references to the international literature. The arrangement is alphabetical by disease and other biochemical and medical aspects. Examples of subject groups are Addison's disease, "arthritis," "blood-chemistry" and "metabolism." An author index is included.

WARREN SHIELDS AND PHILIP M LECOMPTE

The pathology of diabetes mellitus. Third edition thoroughly revised. 112 illustrations and 3 colored plates. Philadelphia Lea & Febiger 1952 336 p illus (part col d) 24 cm. $7.50. 1189

Contents (abridged): Diabetes mellitus and the pancreas. Lesions of the pancreas in nondiabetic individuals. Pathological evidences of abnormal carbohydrate metabolism. Pathological evidences of abnormal fat metabolism. The pathology of acidosis and coma. Diabetes and infection. Vascular disease in diabetes. Gangrene. The heart. The kidney. The eye. The nervous system. The pituitary. The adrenal glands. Other endocrine glands. The pathology of diabetes in children. Hemochromatosis. The pathology of insulin-resistant cases. Hyperinsulinism and the pathological effects of insulin. Infants of diabetic mothers. Cancer and diabetes. Experimental diabetes. The etiology and pathogenesis of diabetes. A unifying concept of the pathology of diabetes. Appendices. Index.

Note: The current knowledge of the pathology of diabetes mellitus is presented very compactly in this work. The historical development of the insular hypothesis of the etiology of the disease is outlined in the seven pages of the first chapter but the outline is supplemented by 90 literature citations. This combination of a brief text keyed to a large number of literature citations is typical. There is considerable emphasis on the experimental and clinical evidence which underlies the current knowledge. Controversial issues and aspects which require further investigation are discussed. The second edition was published in 1938 and ran to 244 pages. Much material was added and the discussions of numerous topics were revised in preparing this edition. Recent literature was added to the bibliographies.

WILLIAMS ROBERT HARDIN editor

Textbook of endocrinology Philadelphia W B Saunders Company 1950 793 p illus. (partly col d) 24 cm. $11.00 1190

Contents: General principles of endocrinology, by R. H. Williams. Pituitary, by R. H. Williams. Thyroid, by R. H. Williams. The adrenals: Part I, Chronic adrenal hyperfunction, by E. J. Kepler and W. Locke. Part II, Adrenal cortical insufficiency, by G. W. Thorn and P. H. Forsham. The testes, by J. E. Howard and W. W. Scott. The ovaries, by G. V. S. Smith. The pancreas and diabetes mellitus, by G. W. Thorn and P. H. Forsham. Diseases of the parathyroid glands, by E. C. Reifenstein, Jr. Influence of endocrine glands upon growth and development, by L. Wilkins. Nonendocrine

and psychodynamic aspects of the endocrinopathies, by H. B. Friedgood. Obesity by L. H. Newburgh. Laboratory diagnostic and assay procedures, by R. H. Williams. Index.

Note. Each of the chapters in this book is in effect condensed monograph of the specific facet of endocrinology that is named in its title. Background information in anatomy physiology and chemistry is always included, but the emphasis is on the clinical aspects, particularly diagnosis, treatment, and prognosis. Some of the authors have included very specific information such as dosages and sample diets. In addition to its use as textbook, the book is suitable one for the office libraries of general practitioners.

YEAR BOOK OF ENDOCRINOLOGY

The 1951 year book *of* endocrinology (January 1951–January 1952) Edited by Gilbert S Gordan. Chicago The Year Book Publishers Inc., 1952 415 p. illus. 20 cm. $5 50 1191

Contents: Introduction. The pituitary gland. The thyroid gland and exophthalmos. The parathyroids, calcium metabolism and metabolic bone diseases. The adrenal medulla. The adrenal cortex. Cortisone, corticotrophin and allied compounds. Sexual precocity. Female reproductive system. The testes. Diabetes mellitus and carbohydrate metabolism. Endocrine treatment of neoplastic disease. Miscellaneous. Index. Index to authors.

Note. (1033*) As in other volumes of this important series the significant literature published throughout the world during the period noted in the title is presented in the form of abstracts. In many instances the abstract is supplemented by note written by the editor in which the conclusions of the author are criticized or commented upon in some way. Also, most of the chapters or sections are prefaced with critical review of current developments written by the editor. As might be expected, the section on cortisone and allied compounds is one of the longer ones in the book.

NEUROLOGY

ALVAREZ WALTER CLEMENT

The neuroses diagnosis and management of functional disorders and minor psychoses. Philadelphia W B Saunders Company 1951 667 p. 24 cm. $10 00 1192

Contents (abridged) Part II, Diagnosis: Hints for recognizing in moment the neurotic patient, or the one whose troubles are likely to be functional. Hints for the taking of history. The ordering or not ordering of tests. Part III, Causes of neuroses and psychoses: Common causes of neuroses and minor psychoses. Nervous syndromes due to physiologic rather than psychic storms. A poor nervous heredity the cause of many neuroses. Marriage as cause of neuroses. Appendixes. Bibliography. Index.

Note: This book is both unusual and informal. Written by an eminent specialist in internal medicine, it presents neuroses from the viewpoint of the physician who first sees the ill or complaining patient in the clinic. The importance of patience and care in the taking of histories is stressed. The author's viewpoint on treatment is one of "common sense" instead of professional psychiatry. However he does include advice on the referring of patients to specialists in psychiatry. Many anecdotes and summaries of case histories from the author's long practice are included. Also material has been taken from the literature, and the bibliography is substantial one.

ASSOCIATION FOR RESEARCH IN NERVOUS AND MENTAL DISEASES

Multiple sclerosis and the demyelinating diseases. Proceedings of the association December 10 and 11 1948 New York. With 153 illustrations and 124 tables. Baltimore The Williams & Wilkins Company 1950. 675 p. illus. 23 cm. (Association for Research in Nervous and Mental Diseases Research publications. Volume XXVIII. Editorial board Henry W Woltman and others) $12.00 1193

Contents: Part I, Multiple sclerosis—historical retrospect, by W Thomas. Part II, Ecology of multiple sclerosis: The geographic distribution of multiple sclerosis and its estimated prevalence in the United States, by C. C. Limburg. Multiple sclerosis in rural community by A. R. MacLean. The social significance of multiple sclerosis, by L. C. Kolb. Part III, Etiology of the demyelinating diseases: Critique of theories concerning the etiology of multiple sclerosis, by H. H. Reese. Demyelination resulting from endogenous toxins, by A. B. Baker. Demyelinating diseases of animals, by I. E. M. Innes. Experimental production of encephalomyelitis in guinea pigs, by E. C. Alvord, Jr and L. D. Stevenson. Experimental studies on acute disseminated encephalomyelitis in rhesus monkeys, by E. A. Kabat and others. The effect of starvation on the myelin sheaths of the peripheral nerves of rats, by R. L. Swank and O. A. Bessey. Emotional stress in relation to attacks of multiple sclerosis, by R. M. Brickner and D. J Simons. The familial occurrence of multiple sclerosis and its implications, by R. P Mackay. Blood and plasma transfusions in multiple sclerosis, by L. Alexander and others. Part IV Blood flow in multiple sclerosis: Cerebral blood flow in multiple sclerosis, by W M. Tucker and others. The significance of peripheral vascular changes in multiple sclerosis, by G. O. Grain and V F. Johnson. The significance of localized vasoconstrictions in multiple sclerosis, by R. M. Brickner. Part Anatomic and chemical aspects of the myelin sheath. The ultrastructure of the nerve myelin sheath, by F O. Schmitt. The chemistry of myelination and demyelination, by W M. Sperry and H. Waelsch. Part VI, Pathologic aspects of the demyelinating diseases. Pathology of multiple sclerosis, by H. M. Zimmerman and M. Netsky. Diffuse sclerosis and other unusual demyelinating processes, by C. Davison. The pathology and pathogenesis of encephalomyelitis associated with vaccination and the exanthemas, by K. H. Finley. The naturally occurring demyelinating diseases of animals, by L. Z. King and M. C. Meulen. Part VII, Symptoms and signs, clinical course and diagnosis of multiple sclerosis: Retrobulbar neuritis in multiple sclerosis, by P J. Leinfelder. Sheathing of the retinal veins in multiple sclerosis, by C. W Rucker. The ocular findings in multiple sclerosis, by M. Savitsky and L. Rangell. The syndrome of the medial longitudinal fasciculus, by M. B. Bender and E. A. Weinstein. The electroencephalogram in multiple sclerosis, by H. Jasper and others. The cerebrospinal fluid in multiple sclerosis, by D A. Freedman and H. H. Merritt. Cerebrospinal fluid examination in diagnosis of multiple sclerosis, with emphasis on the quantitative gold reaction, by T J. C. von Storch and others. The mental changes associated with multiple sclerosis, by F J. Braceland and M. E. Giffin. Some psychodynamic factors in multiple sclerosis, by R. R. Grinker and others. The results of psychometric and personality tests in multiple sclerosis, by M. Harrower. The course of multiple sclerosis as determined by autopsy proven cases, by S. Carter and others. Multiple sclerosis—prognosis for ambulatory and nonambulatory patients, by J. A. Lazarte. On the diagnosis of multiple sclerosis, by F. Kennedy. The effect of injuries and illness on the course of multiple sclerosis, by M. Keschner. The effect of pregnancy on multiple sclerosis and its management, by A. J R. Tillman. Part VIII, Current treatment of multiple sclerosis: The treatment of multiple sclerosis, by T. J. Putnam. The problems of rehabilitation in multiple sclerosis, by H. A. Rusk. A survey of the maladjustment problems in multiple sclerosis and the possibilities of psychotherapy, by O. R. Langworthy. Cumulative bibliography. Index. List of members.

Note: A collection of original papers prepared for the occasion mentioned in the book's title. A very wide range of information is included. Many of the chapters are accompanied by excerpts of the discussions at the meeting and by lists of references.

BENDER, MORRIS B

Disorders in perception, with particular reference to the phenomena of extinction and displacement. Springfield, Illinois Charles C Thomas, 1952 109 p illus. 22 cm. (American lecture series. Publication number 120 A monograph in American lectures in neurology) $3 00. 1194

Contents: Introduction. Modes of stimulation and the phenomenon of extinction. Sensory phenomena obtained on simultaneous stimulation in the normal. Extinction phenomena in disease. Spatial displacement in extinction. Extinction and the phenomenon of sensory displacement. Theories on extinction. Summary. Bibliography. Index.

Note. The results of series of studies made by the author and his collaborators between 1941 and 1950 at the United States Naval Hospital in San Diego, California, and in the Laboratory of Psychophysiology of New York University-Bellevue Medical Center. Among the author's findings are (1) double simultaneous stimulation may reveal sensory changes not revealed by single stimulation, (2) spinal cord lesions as well as cerebral disorders may produce extinction of perception, (3) there is well-defined spatial pattern among the

areas which yield extinction, dominance, or displacement, and (4) extinction of sensation is never an isolated disorder

BROCK, SAMUEL, editor

Injuries of the brain and spinal cord and their coverings neuro-psychiatric, surgical, and medico-legal aspects. Contributors Bernard J Alpers (and others) Third edition. Baltimore The Williams & Wilkins Company 1949 783 p. illus. 24 cm. $10 00 1195

Contents. General considerations in injuries of the brain and spinal cord and their coverings, by S. Brock. General pathological considerations in brain injury by G. B. Hassin. Fractures of the skull—osteomyelitis of the cranial bones—post-traumatic epidural and subdural abscess—septic thrombophlebitis of the dural venous sinuses, by J Browder. Concussion and contusion of the brain and their sequelae, by Sir C. Symonds. Injury to cranial nerves and optic chiasm, by W R. Russell. Massive intracerebral hemorrhage of traumatic origin, by E. D. Friedman. Extradural hematoma, subdural hematoma, subdural hydroma, cephalhematoma, by M. M. Peet. Post-traumatic brain abscess—post traumatic meningitis, by F C. Grant. Gunshot wounds of the brain and their complications—foreign bodies—cranial defects—traumatic cerebrospinal fluid rhinorrhea and spontaneous pneumocephaly by L. M. Davidoff and E. H. Feiring. Cerebral birth injuries, by B. J Alpers The post-traumatic convulsive and allied states, by A. R. Elvidge. Neuroses following head and brain injuries, by P Schilder. Neuroses following head and brain injuries, by *R. R. Grinker and J. Weinberg. Psychotic states* following head and brain injury in adults and children, by K. M. Bowman and A. Blau. Simulation (malingering) in relation to injuries of the brain and spinal cord and their coverings, by M. Keschner The relationship of brain injury to other organic diseases of the brain, by I. S. Wechsler The roentgenological aspects of fractures of the skull and injuries of the brain, by C. G. Dyke. General pathological considerations in injuries of the spinal cord, by C. Davison. Birth injuries of the spinal cord, by B. Crothers. Injuries of the vertebral column and spinal cord, by J. E. Scarff. Herniation and protrusion of intervertebral disc tissue, by F A. Echlin. The relationship of spinal cord injuries to other diseases of the spinal cord, by T K. Davis. The effects of electric shock on the nervous system, by G. H. Hyslop. Compressed air illness (caisson disease) cerebral fat embolism, cerebral air embolism, by C. C. Hare. The medico-legal aspects of injuries of the brain and spinal cord and their coverings, by M. Keschner. The electroencephalogram in cases of head injury by P F A Hoefer Index

Note (1641) A comprehensive treatment composed of series of monographs written by outstanding neurologists and psychiatrists. Although it is of interest to specialists such as neurologists and neurosurgeons, serves also as manual of information for general practitioners of medicine and for insurance company personnel, court officers, etc., who are concerned with injuries of this class from the legal and compensation angles. In the present edition nine chapters have been carried over unchanged from the second edition. Most of the other chapters have been extensively revised, and two of them are new additions.

COHN ROBERT

Clinical electroencephalography New York McGraw-Hill Book Company Inc., 1949 639 p. illus. 23 cm. $16.00 1196

Contents: General considerations. Within the range of normal variation. Intracranial space-taking lesions. Cerebral vascular lesions. Arterial hypertension. Encephalopathies. Head injury—recent—old. Epilepsy—petit mal—grand mal and epileptic equivalents. Migraine. Headaches. Normal sleep and disorders of sleep (narcolepsy). Alcoholism. Some important clinical electric correlations. Disorders of behavior. Recommended reference reading. Index.

Note: Essentially this work is an atlas of 373 electroencephalograms in which the illustrative matter is preceded by some 20 pages of background information on brain wave phenomena and the electroencephalograph. The electroencephalograms are classified under the headings given in the above table of contents and each one is accompanied by specific discussion of the case, the diagnosis, and the features of the EEG. The author is Electroencephalographer and Director of Neurological Research in the U S. Naval Hospital, Bethesda, Maryland, and the book is based on recordings made over 5-year period at this hospital.

COURVILLE CYRIL BRIAN

Pathology of the central nervous system, a study based upon a survey of lesions found in a series of forty thousand autopsies. Third edition, Mountain View California Pacific Press Publishing Association, 1950 473 p. illus. 26 cm. 1197

Contents: Introduction—a survey of histologic alterations occurring in the nervous elements. Congenital malformations and anomalies of the central nervous system. Diseases of the intracranial and intraspinal blood vessels. Infectious diseases of the central nervous system and its envelopes. Effects of trauma on the central nervous system. Intoxications and deficiency diseases. Diseases of unknown etiology, degenerative diseases, abiotrophies. Tumors of the intracranial and intraspinal spaces. Appendices. Index.

Note: (1034) A medical college textbook based on an extensive series of autopsies. The author has not attempted to describe all pathological conditions of the central nervous system, but the range of diseases covered is wide one. Common diseases of the brain and spinal cord are all described with special emphasis on the clinical aspects. Although not lavishly illustrated, the present edition contains more than 200 figures, considerable number of which are reproductions of photographs of pathological specimens. The second edition was published in 1945. Although the third edition does not represent as extensive revision as did the second edition, useful material has been added on many topics and some sections have been rewritten in order to simplify them. Literature references are included.

DAVIDOFF LEO MAX, AND CORNELIUS G DYKE

The normal encephalogram. Third edition thoroughly revised by Leo M. Davidoff 190 illustrations on 156 figures. Philadelphia Lea & Febiger 1951 240 p. illus. 24 cm. $6 00. 1198

Contents: General considerations. The ventricles, interventricular foramina, and aqueduct of Sylvius. The cerebral convolutions and sulci. The subarachnoid cisterns and their contents. Intracranial structures and their related fluid spaces. Bibliography Index.

Note: (1037*) In this book the fundamentals of encephalography as used in the diagnosis of diseases within the intracranial cavity are presented for neurosurgeons, roentgenologists, pediatricians, internists, and general practitioners. The text is based on the senior author's experience with several thousand cases and on review of the international literature. The third edition does not differ much from the second edition published in 1946. Material has been added to few sections and some corrections were made. About 15 papers published since 1945 have been added to the bibliography

DAVIDOFF LEO MAX, AND BERNARD S EPSTEIN

The abnormal pneumoencephalogram. 695 illustrations on 289 figures. Philadelphia Lea & Febiger 1950 506 p illus. 27 cm. $15 00 1199

Contents (abridged) Part 1. Tumors of the brain Section 1. Neoplasms. *Frontal lobe tumors. Parietal lobe tumors.* Occipital lobe tumors Temporal lobe tumors Parasagittal tumors. Meningiomas of the olfactory groove, tuberculum sellae, sphenoid wings and sylvian fissure. Tumors of the optic nerves and chiasm. Pituitary adenomas. Craniopharyngiomas. Tumors of the basal ganglia and thalamus. Pineal tumors. Lateral ventricle tumors. Tumors of the peduncles and pons. Tumors of the posterior cranial fossa. Section 2. Non-neoplastic tumors: Chronic subdural hematoma. Brain abscess. Vascular anomalies of the brain. Cerebral hemorrhage and thrombosis. Part 2 Non-tumorous lesions of the brain. Lesions of the septum pellucidum. Lesions of the aqueduct of Sylvius. Cerebral atrophy Congenital hydrocephalus; amaurotic family idiocy. Serous meningitis. Encephalitis, encephalopathies and rare infections of the nervous system. Tuberous sclerosis. Bibliography Index.

Note: (037*) This work is complementary to L. M. Davidoff and C. G. Dyke, *The normal encephalogram,* third edition, described above. It is comprehensive treatment of the use of pneumoencephalography in diagnosing disorders, written for all who are *professionally concerned with neurological diagnosis,* but addressed particularly to radiologists. The emphasis is on interpretation of pneumoencephalograms but the relevant pathology is well covered. Clinical syndromes are briefly described; illustrative case reports are included and supported by many illustrations, most of them pneumoencephalograms. The bibliography is extensive.

FORD FRANK RODOLPH

Diseases of the nervous system in infancy childhood and adolescence. Third edition. Springfield Illinois Charles C Thomas 1952 1181 p. illus. 26 cm. $18 50 1200

Contents. The examination of the nervous system. Clinical aspects of the anatomy and physiology of the nervous system. Prenatal and developmental defects of the nervous system. Heredofamilial and degenerative diseases of the nervous system. Infectious and parasitic invasions of the nervous system. Toxic and metabolic disorders involving the nervous system. Vascular lesions and circulatory disorders of the nervous system. Neoplasms and related conditions involving the nervous system. Injuries of the nervous system by physical agents. The epilepsies and paroxysmal disorders of the nervous system. Diseases of the autonomic system. Diseases of the muscles. Disorders of growth and development including dwarfism, sexual infantilism, sexual precocity pigmentation, obesity and emaciation. Index.

Note. (2171a) A comprehensive treatise in which all neurological diseases that occur in childhood are covered. It is addressed primarily to graduate neurologists and pediatricians and is organized for reference use as well as study Generally speaking, the discussion of each disease covers the following points. definition, pathological analysis, clinical features, diagnosis, prognosis, treatment, and literature references. Epidemiology is also covered for infectious diseases such as epidemic encephalitis. The second edition was published in 1945 The work was widely revised and considerably expanded for the present edition. There are now 195 figures, some of which contain more than one illustration.

FREEMAN, WALTER, AND JAMES W WATTS

Psychosurgery in the treatment of mental disorders and intractable pain. Second edition. Springfield Illinois Charles C Thomas 1950 598 p. illus. (part col d) 26 cm. $12 50 1201

Contents (abridged) Introduction. Part I, The frontal lobes. Part II, Surgical aspects of prefrontal lobotomy: Operative technic—precision method. Preoperative and postoperative management. Choice of type of operation. Complications and sequels. Part III, Clinical observations Observations on the operating table. Postoperative condition. The patient comes home Occupational adjustment. Recreational and spiritual adjustment, morals. Creative capacity Part IV, Special studies. Motor functions after lobotomy The pathology of prefrontal lobotomy Personality changes after psychosurgery Associated physical and psychosomatic disorders. Pain. Part Prefrontal lobotomy and mental disorder: The schizophrenic reaction type. Affective reaction types. Obsessive-compulsive and obsessive-ruminative tension states. Results of prefrontal lobotomy Prefrontal lobotomy—indications and contraindications. The functions of the frontal lobes. Bibliography Index

Note An important treatise in this field. The authors performed in September 1936, the first prefrontal lobotomy in the United States of America and have had jointly an extensive experience in psychosurgery There is some emphasis on those aspects which are of primary interest to neurologists and psychiatrists, but the techniques of operations are also clearly described A special feature is the inclusion of the complete case histories of patients observed over period of years following brain operations. The first edition was published in 1942 and was based on only 80 cases. For the present edition the authors drew on their experiences in more than 1000 cases, and on the advances made by other workers in this active field, including especially the methods and findings of the Columbia-Greystone Project, whose report edited by Mettler is described below

FRIEDMAN ARNOLD P

Modern headache therapy St. Louis The C. V Mosby Company 1951 164 p. illus. 23 cm. $4 50 1202

Contents Diagnosis. Treatment. Mechanisms of pain. Headaches associated with intracranial disorders. Headaches associated with extracranial disorders. Headache due to systemic disorders. Migraine headache Psychogenic headache Posttraumatic headache Index.

Note. A practical, clearly written summary of the current knowledge bearing on the causes, diagnosis, and treatment of chronic headache. It is addressed to general medical practitioners, and it is so organized that it can be used independently of the literature or as guide to the important books and articles. The author is Physician-in-Charge of the Headache Clinic of Montefiore Hospital, New York City

FULTON JOHN FARQUHAR

Frontal lobotomy and affective behavior a neurophysiological analysis. New York. W W Norton & Company Inc., 1951 159 p. illus. (part col d) 21 cm. $3 00 1203

Contents: Historical background—the psychobiological approaches. The new functional anatomy of the cerebral cortex. Recent behavioral studies in animals. Lobotomy in man. References. Index.

Note. The second of these books, as well as the first, is based on series of lectures. The occasion for the second book was the Thomas William Salmon Memorial Lectures of the New York Academy of Medicine in 1950. The two books complement one another. The earlier one is skillful summary of the knowledge of the effects of frontal lobotomy to about the beginning of 1948. The second book in effect brings the account down to late 1950. The author is leading investigator in this field, and he has included also the results of the investigations and experiences of other workers in the field. Substantial reference lists to the published literature are included in both books. There are 33 figures in the earlier book and 70 in the later one.

FULTON JOHN FARQUHAR

Functional localization in relation to frontal lobotomy Being the William Withering Memorial Lectures delivered at the Birmingham Medical School, 1948 New York Oxford University Press 1949 140 p. illus. 21 cm. $3 00. 1204

Contents: Introductory appreciation of William Withering. The frontal lobes—the precentral motor cortex. The frontal areas and the orbital surface—subhuman primates. The frontal areas and the orbital surface—man. The cerebellum reconsidered. Index.

GIBBS FREDERIC ANDREWS, AND ERNA L. GIBBS

Atlas of electroencephalography Cambridge, Mass. Addison Wesley Press, Inc., *1950–52 2 v illus. 27 cm. Vol. I, $17.50* Vol. II, $25 00 1205

Contents (abridged) Volume one, Methodology and controls, second edition. History The shape of the problem. Physics and chemistry Physiology Methodology General characteristics of the electroencephalogram. Changes with age, awake. Changes with asleep. Other modifying factors. Appendices: Practical aspects of laboratory organization and operation. Minimal requirements of the American Medical Association for acceptable direct-reading electroencephalographs. Specifications for electroencephalographic apparatus recommended by the American Electroencephalographic Society Instructions for making and applying external electrodes. Bibliography. Index. Volume II, Epilepsy: Perspectives. Neurophysiology [illegible] genesis. Clinical correlates of paroxysmal cerebral dysrhythmias [illegible] nostic outline—material and methods of classification. [illegible] spasms Petit mal variant. Petit mal. Myoclonic seizures. Grand mal [illegible] Psychomotor epilepsy Jacksonian seizures and focal convulsions—[illegible] foci in cortical areas other than the anterior temporal. Thalamic and hypothalamic epilepsy Mixed seizure activity and [illegible] Methods of activating seizure discharges. Medication. [illegible] surgery Bibliography Index.

Note The large-scale reproductions of electroencephalograms are the main feature of this work Each of the plates is approximately 30 cm. by 20 cm. and there are 210 plates in volume 1 and [illegible] in vol. 2. Each plate is accompanied by an interpretation caption. In addition to the captions each of the volumes contains [illegible] background chapters. The work is addressed to electroencephalographers, both those who are already engaged in the recording and interpretation of electroencephalograms and those who are preparing for work in this specialty The first edition of volume 1 was published in 1941. The set described here consists of the second edition of volume 1 and the first edition of volume 2.

GREENBLATT MILTON AND OTHERS editors

Studies in lobotomy Milton Greenblatt, Robert Arnot and Harry C. Solomon, editors. New York Grune & Stratton Inc. 1950 495 p. illus. 24 cm. $10.00. 1206

Contents: Part I, Clinical considerations: Introduction, by H. C. Solomon. Psychosurgery—a review of recent literature, by M. Green-

blatt. Evolution of psychosurgery technic, by D. Falrman. Technic and complications of the standard prefrontal lobotomy by J. L. Poppen. Postoperative behavior by A. S. Rose. Nursing procedures and problems, by R. Bradford. One to four year follow up of 205 cases of bilateral prefrontal lobotomy by R. Arnot and others. The lobotomized patient during the first year at home (social problems in 35 cases) by H. Bradman. Sexual behavior after lobotomy by J. Levine and H. Albert. Problems in rehabilitation of patients after lobotomy by R. W Hyde and others. The results of unilateral and bimedial lobotomy; pilot study by J. S. Bockoven and M. Greenblatt. Illustrative cases of lobotomy by M. Greenblatt and J. S. Bockoven. Part II, Special studies: Anatomical study of lobotomy by P Yakovlev and others. Corticospinal fluid changes after bilateral prefrontal lobotomy by W J Beckowski and H. Mannich. Relation of the frontal lobe to autonomic nervous system in man, by M. Rinkel and others. The effect of lobotomy and of electrical stimulation of the orbital surface of frontal lobes upon respiration and blood pressure in man, by W P Chapman and others. Lobotomy and urinary bladder by M. Rinkel and others. Skin temperature changes after unilateral and bilateral prefrontal lobotomy by D Falrman and others. Measurement of motor withdrawal reaction in patients following frontal lobotomy by W P Chapman and others. Lobotomy for the relief of intractable pain, by J. R. Dynes. Electroencephalographic and clinical effect of prefrontal lobotomy with consideration of postlobotomy convulsive seizures, by S. Levin and others. Psychometric changes following lobotomy by C. R. Atwell. Application of sociometric technic to the study of lobotomized patients, by J S. Bockoven and R. W Hyde. Occupational therapy for lobotomy cases, by R. W Hyde and A. C. Wood. Part III: Summary by M. Greenblatt and H. C. Solomon. Index.

Note: This book is a collection of special studies based on the experiences with lobotomy at the Boston Psychopathic Hospital since the use of this procedure was initiated at this hospital in 1943. All of the studies bear directly or indirectly on the results of lobotomy in specific cases. The techniques used in analyzing results are carefully described. Excerpts from numerous case histories are included. In the summary at the end of the book the overall experience with 500 patients is discussed under the following subheadings: immediate post-operative changes, autonomic nervous system, response to pain, electroencephalogram studies, psychological studies, changes in work behavior, clinical investigations, indications, and specific indications for lobotomy. Literature references are supplied for most of the chapters.

GRINKER, ROY RICHARD, AND PAUL C BUCY

Neurology Fourth edition. Springfield Illinois Charles C Thomas 1949 1138 p. illus. 26 cm. $12 50 1207

Contents. Technic of neurological examination. The spinal roots and nerves. Tumors of the peripheral nervous system and spinal cord. The vegetative nervous system. The brain stem and the cranial nerves. The motor system. The cerebrum. Intracranial tumors. The cerebrospinal vascular system. Inflammatory and infectious diseases of the nervous system. Degenerative diseases. Developmental defects. Syphilis of the nervous system. Trauma of the central nervous system. The epilepsies. Exogenous toxins and noxious agents affecting the nervous system. The myopathies. Headaches. Bibliography. Index.

Note: (3374) A widely used medical college textbook in which the subject is covered from the standpoint of clinical medicine. The third edition appeared in 1943. This is the first edition written with a coauthor. Much reorganization and revision is evident both in the text, illustrations, and bibliography. The book is sufficiently comprehensive and documented to make it useful to graduate physicians who are not specialists in neurology but find themselves in need of a survey and reference book.

HAMBY WALLACE BERNARD

Intracranial aneurysms. Springfield, Ill. Charles C Thomas, 1952 564 p. illus. 25 cm. $14.25 1208

Contents: The cerebral circulation. General considerations. Diagnosis of intracranial aneurysms. Intact intracranial aneurysms. Ruptured intracranial aneurysms. Arterio-venous aneurysms. General remarks concerning intracranial vascular surgery. Bibliography. Author index. Subject index.

Note: The author, Professor of Neurological Surgery at the University of Buffalo School of Medicine, wrote this book with the aim to give the physician, and particularly the surgeon, a large collection of data on intracranial aneurysms. The information presented has been gathered in a wide search of the literature. Forty eight case reports and numerous illustrations, many of them presenting excellent X-ray photographs, are incorporated in the text. The bibliography at the end of the volume is international in scope and gives full citations of 700 papers.

HICKS SAMUEL PENDLETON AND SHIELDS WARREN

Introduction to neuropathology New York McGraw Hill Book Company Inc., 1950 494 p. illus. 26 cm. $12.50 1209

Contents: Reaction patterns in tissues of the nervous system. Circulatory disturbances, cerebral vascular accident. Disturbances of the cerebrospinal fluid and intracranial pressure relationships. Inflammatory diseases of the nervous system. Metabolic, toxic, and degenerative diseases. Mechanical injuries of the nervous system. Tumors of the nervous system. Maldevelopments and anomalies, mental diseases, epilepsy. Index.

Note. Among the outstanding features of this work are a relatively brief text and a relatively large number of illustrations. The authors emphasize the viewpoint that the pathology of nervous tissue is not a separate field from general pathology. They state, "the belief that nervous tissue has a set of pathological laws quite different from all other organs is not any more true than it would be in the case of the heart opposed to the kidney." In discussing such topics as vascular accidents of the brain, they deal with the mechanisms as well as the pathological lesions. Most of the illustrations are reproductions of photographs of microscopic and macroscopic specimens. Literature references are included. The authors are faculty members of the Department of Pathology of Harvard Medical School.

HIMWICH HAROLD EDWIN

Brain metabolism and cerebral disorders. Baltimore The Williams & Wilkins Company 1951 451 p illus. 24 cm. $6 00 1210

Contents: Part I, Energetics: Introduction. Foodstuff of the brain. Mechanisms for maintaining the carbohydrate supplies of the brain. Mechanisms maintaining brain metabolism during hypoglycemia. The oxidation of carbohydrate in the brain. Aspects of cerebral circulation. Cerebral metabolism during growth of lower mammals—a biochemical basis for neurophylogenesis. Human cerebral metabolic rate. Therapeutics and their application to brain metabolism. Part II, Patterns of nervous activity: The somatic division of the central nervous system—studied through the symptoms of hypoglycemia and acute anoxia. The autonomic division of the central nervous system—pattern of activity in the five phyletic layers. The barbiturates and some other depressant drugs—a classification of clinical signs and theory of narcosis. Prospects and problems for the future. Bibliography. Index.

Note: In this monograph recently developed techniques for the study of the metabolism of the brain and the measurement of cerebral metabolic rates are described, the accumulated information on brain metabolism is stated and discussed in some detail; then the significance of brain metabolic rates and their possible control by drugs are related to cerebral disorders and their treatment. The work is a survey of progress to date and an examination of its significance rather than a definitive statement of principles and practice. The bibliography lists 1043 pertinent books and papers. The author is Chief of the Clinical Research Branch, Medical Division of the Army Chemical Center Maryland.

INTERNATIONAL POLIOMYELITIS CONGRESS

Poliomyelitis papers and discussions presented at the first International Poliomyelitis Conference. Philadelphia J B Lippincott Company 1949 360 p. illus. 27 cm. $5.00 1211

Contents: Session one, The importance of poliomyelitis as a world problem: Epidemiologic patterns of poliomyelitis in different parts of the world, by A. B. Sabin. Economic aspects of the management of poliomyelitis, by H. J Seddon. Session two, Poliomyelitis—pathogenesis of the early stage. The evolution of signs and symptoms of poliomyelitis, by L McQuarrie. Poliomyelitis—pathologic anatomy by D. Bodian. Some aspects of the pathologic physiology of poliomyelitis, by F Bucklahl. Session three, The management of poliomyelitis—the early stage. Diagnosis and treatment of poliomyelitis in the early stage, by J A. Anderson. Session four, Poliomyelitis—the convalescent stage. The progressive pathology of poliomyelitis, by E T Bell. Progressive disabilities in poliomyelitis, by A. L. Watkins. Progressive deformation in poliomyelitis, by R. K. Ghormley and C. S. Allen. Session five, The management of poliomyelitis—the convalescent stage: The management of poliomyelitis

—the convalescent stage, by W T Green. Session six, Problems of rehabilitation The management of poliomyelitis—the late stage, by J S. Barr Session seven, Bulbar poliomyelitis: Bulbar poliomyelitis—pathologic aspects, by K. T Neuberger N urologic signs of bulbar poliomyelitis, by A. B Baker. Outline of essential treatment of bulbar poliomyelitis, by J. L. Wilson. Session eight, Immunology and chemotherapy in poliomyelitis: Mechanisms of immunity in poliomyelitis, by I. M. Morgan. Immunologic types of poliomyelitis viruses, by J R. Paul. Experimental chemotherapy of poliomyelitis, by R. N Bieter and H. N Wright. Session nine, Public health aspects of epidemic poliomyelitis: Public health measures, by J. G. Molner Hospitalization for the poliomyelitis patient, by C. W Munger The families of children with poliomyelitis, by E. P Rice. Session ten, Poliomyelitis throughout the world. Index.

—— —— Papers and discussions presented at the second International Poliomyelitis Conference. Philadelphia J B Lippincott Company 1952 555 p. illus. 27 cm. $7 50 1212

Contents (abridged) Symposium one, Virus and its interaction with the host cell Viruses as organisms, by C. H Andrewes. Viruses as chemical agents, by W M. Stanley Virus and its interaction with the host cell—biochemical aspects, by F C. Bawden. Virus multiplication and variation, by M. Delbrück. External factors influencing virus, by F L. Horsfall, Jr Review one, Pathology and pathophysiology of poliomyelitis: The multiplication and properties of poliomyelitis viruses in cultures of human tissue, by J F Enders. Functional organization in the spinal cord, with particular reference to the normal and disordered response of motoneurons, by D. P C. Lloyd Virus and host factors determining the nature and severity of lesions and of clinical manifestations, by D Bodian. Some recent studies of skeletal muscle in anterior poliomyelitis and other neuromuscular disorders in man and the experimental animal, by R. E. M. Bowden The motor unit in poliomyelitis, by P Buchthal. Symposium two, The Coxsackie group of viruses. The Coxsackie viruses—isolation and properties, by G. Dalldorf. Immunology epidemiology and clinical aspects of Coxsackie virus infection by E. C. Curnen Symposium three, Differential diagnosis in acute poliomyelitis Differential diagnosis in paralytic poliomyelitis, by R Debré and S. Thieffry Laboratory aspects of the differential diagnosis in acute poliomyelitis, by J E Smadel and C. V Adair A specific complement-fixation for poliomyelitis, by J Casals. Immunologic classification of the poliomyelitis virus, by J. Salk. Review two Treatment of poliomyelitis: Management of respiratory insufficiency by J L. Wilson. Reconstructive surgery of the upper extremity by H. J Seddon Surgical rehabilitation of the hand disabled by poliomyelitis (with emphasis on the restoration of pinch) by C E Irwin. Correction of scoliosis, by J. R. Cobb Physical medicine in poliomyelitis—points of emphasis, by R. L. Bennett. Social problems of poliomyelitis, by A. Bruun. Psychological aspects of poliomyelitis, by M. Seidenfeld. Symposium four Immunity and resistance in poliomyelitis and other virus infections Antibodies and immunity to poliomyelitis, by H A. Howe. Latent survival of viruses and persistence of immunity by J L. Melnick Factors which influence the clinical course of poliomyelitis, by W R. Russell Inoculation procedures as provoking factor in poliomyelitis, by A B Hill Review three, Epidemiology of poliomyelitis Extrahuman sources of poliomyelitis, by J H. S Gear Distribution of poliomyelitis virus in community by T Francis, Jr The epidemiologic pattern of poliomyelitis in Sweden from 1905 to 1950, by O Olin Knowledge and trends in poliomyelitis—a summary by J R Paul Scientific exhibits Index

Note The scope of these books is obvious from their titles and the tables of contents. Many of the papers are summaries of recent research or original presentations of data gathered from recent experience Transcripts of discussions are included In the first volume the final part consists of short summaries of poliomyelitis experience in the various countries of the world In the second volume the final section is reproduction of scientific exhibits shown at the conference.

MAYFIELD, FRANK H.

Causalgia. Springfield Illinois Charles C Thomas, 1951 65 p illus 22 cm. (American lecture series Publication 58 A monograph in American lectures in neurosurgery edited by Michael E deBakey and R. Glen Spurling Neurosurgical division editor Barnes Woodhall) $2.25 1213

Contents: Introduction. Material. Incidence Symptoms and signs. Differential diagnosis. Pathology Treatment Surgical technique—surgical sympathectomy of the arm—surgical sympathectomy of the leg. End results. Causative mechanism. References. Index.

Note A compact presentation of the information available on causalgia, the symptom complex set off "by wounds to peripheral nerves. The basis of the study is data from 105 cases of true causalgia seen in military service and treated by sympathectomy and lesser number of cases treated in civilian practice. The military cases are summarized and tabulated as are the results of survey of former medical officers in Army neurosurgical centers. The balance of the book is concerned with diagnosis, treatment, illustrations of techniques, and consideration of the many opinions on the condition and its treatment.

METTLER, FRED A., editor

Problems of the human brain. Selective partial ablation of the frontal cortex a correlative study of its effects on human psychotic subjects. By The Columbia-Greystone Associates. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1949 517 p. illus. 26 cm. $10 00 1214

Contents Section I, Introduction Nature of the project, by F A. Mettler and M. A. Curry Prognostic expectations of the patients under ordinary institutional care, by H. A. Cotton, Jr and E Frankel. Institutional management and social implications, by M. A. Curry and H. A. Cotton, Jr Surgical procedure, by J. L. Pool and others. Cytoarchitecture, by F A. Mettler. Section II, Medical survey: General medical condition and laboratory findings, by R. G. Heath and others. Laboratory findings, by C. M. Sagert and others. Audiometric findings, by P J. Gamboli. Vestibular function, by L. A. Sheppard and others. Visual apparatus: visual fields and acuity, color vision, autokinesis, by R. G. Heath and others. Gastrointestinal motility by D G. Melvin. Electroencephalography by J. F Zimmerli Section III, Psychological investigation Design of the psychological investigation, by J Zubin. Intellectual function, by H. E King. Learning and retention, by A. K. Stauffer Ability to abstract, by W R. King Word association experiments, by S. R. Riddick. Time judgment, by J Chasen. Critical flicker frequency by K. H Young Affectivity by M. Garrison, Jr. Rorschach test, by J. Zubin. Other tests, by R. M. Reschley and others. Test results one year after operation, by C. Landis, and others. Psychologic changes following topectomy by C. Landis. Section IV Psychiatry—neurology—pathology: Psychiatry by R. G. Heath and others. Neurology by J L. Pool and others. Pathology by A. Wolf and D. Cowen Section Summary Anatomy and physiology by F A. Mettler. Psychology by C. Landis. Psychiatry by R. G. Heath Bibliography Index.

Note The findings of cooperative investigation set up "to discover whether technically improved and less drastic neurosurgical approaches to the therapy of the mentally ill would yield results as satisfactory as, or better than, those obtained by lobotomy" are presented in this work. The study was scientifically planned and involved the use of control group. Topectomy was the operation particularly studied however, the study was broad one and much information on other aspects of surgical therapy in mental disorders is included in this report.

MOENCH LOUIS GARDNER

Headache. Second edition. Chicago The Year Book Publishers Inc. 1951 217 p. illus. 21 cm. (The general practice manuals) $4 50. 1215

Contents Pathologic anatomy and physiology of headache. Headaches from intracranial pathology spinal puncture and ventriculography Cranial nerve neuralgias. Headache of ocular origin. Headache of nasal origin. Headache from pathology in the neck and scalp. Headache from systemic disorders. Histamine headaches. Migraine. Headache of emotional origin. Index.

Note (1050*) A useful and authoritative manual intended for the information of general medical practitioners. Each chapter is summary of the current knowledge on incidence, physiology, diagnosis, and treatment of type of headache, and is supplemented by literature references In this edition the revisions are not major and consist chiefly of references to new treatments reported in the literature since 1947

MUNRO DONALD

The treatment of injuries to the nervous system. Philadelphia W B Saunders Company 1952 284 p. illus. 24 cm. $7.50. 1216

Contents: The central nervous system. The treatment of injuries to the cranial nerves. The treatment of injuries to the spinal roots. The treatment of injuries to the peripheral nervous system. The treatment of injuries to the autonomic nervous system. The effect of spinal anesthesia on the central nervous system. Emergency operations and other surgical procedures. The cost of medical care in paraplegia and how it may be modified by rehabilitation services. The responsibility of the hospital trustees and staff. Rehabilitation. Bibliography Index.

Note: A concise treatise designed for the information and guidance of general surgeons and general practitioners rather than specialists. It is devoted mainly to therapies which have been successfully used in the Department of Neurosurgery of the Boston City Hospital, of which department the author is Surgeon-in-chief. Diagnosis, prognosis, and the applicable therapies are covered. Complications are discussed. The importance of rehabilitation is indicated, but the techniques are not covered. The bibliography lists papers on procedures of interest but with which the author has had no direct experience.

NIELSEN JOHANNES MAAGAARD

A textbook of clinical neurology Third edition, revised and reset. With 212 illustrations. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1951 709 p. illus. 28 cm. $10.00 1217

Contents: Diseases of the spinal nerves. Structures between the nerves and the spinal nerves. Diseases of the spinal cord. Diseases of the cranial nerves. Syndromes of the brain stem. Syndromes of the cerebellum. Syndromes of the thalamus. Diseases of the corpus striatum and subthalamic region. The vegetative nervous system. Clinical cerebral localization. Inflammations and intoxications. Intracranial and spinal tumors. The epilepsies. Migraine and headaches in general. Multiple sclerosis. Trauma to the brain and spinal cord. Diseases manifesting themselves in the muscles or myoneural junctions. Degenerative diseases of the nervous system and the leuko-encephalitides. Idiocy imbecility and other congenital defects. Diseases of bone affecting the nervous system. Vitamins and avitaminoses. Electroencephalography Intracranial angiography The psychoneuroses. Addiction. Landmarks in clinical neurology Index.

Note: (1032*) Clinical aspects are given primary emphasis in this established text for medical college students. The background anatomy and physiology are outlined concisely and most of the space is devoted to descriptions of diseases, diagnosis, and therapies. Although written for students, the conciseness of the writing, the specific descriptions of diseases, and the literature references make useful survey and reference book for medical graduates who are not specialists in neurology In comparison to the preceding edition, chapters have been added on intracranial angiography and the psychoneuroses, and several other chapters and sections, notably those on epilepsy poliomyelitis, and syphilis, have been rewritten.

PENFIELD WILDER, AND KRISTIAN KRISTIANSEN

Epileptic seizure patterns. A study of the localizing value of initial phenomena in focal cortical seizures. Springfield Ill. Charles C Thomas, 1951 104 p. illus. 22 cm. $3 75 1218

Contents: Introduction and case classification. Historical note. Material. Seizure patterns: Initial unconsciousness—Initial motor phenomena—Initial sensory phenomena—Initial autonomic motor and sensory phenomena—Psychical phenomena—Miscellaneous phenomena. Summary Clinical application. References. Case index. Subject index.

Note: In this short monograph the authors discuss the value of seizure patterns in determining the region of the brain in which epileptic discharge occurs. The work is based on series of 219 cases of focal epilepsy studied and operated on by them and their colleagues. The cases were studied thoroughly by "preoperative electroencephalography operative electrocorticography craniotomy under local anesthesia, electrical stimulation of the cortex, local cortical excision and postoperative observation. Location of the discharge in the cortex was established in 123 of the cases The book complements their *Epilepsy and cerebral localization*, Springfield, 1941.

SCHWAB ROBERT SIDNEY

Electroencephalography in clinical practice. Philadelphia W B Saunders Company 1951 195 p. illus. 25 cm. $6 50 1219

Contents: Historical summary The relation of neurophysiology to electroencephalography The normal and abnormal electroencephalogram. Technique. The electroencephalogram in epilepsy The electroencephalogram in neurological and neurosurgical problems. Electroencephalography in psychiatry The electroencephalogram in research. Laboratory organization, training of staff, and interpretation of records. Glossary Index.

Note: The uses and limitations of electroencephalography its techniques, and the characteristic features of electroencephalograms, form the main subject matter of this book. Its purpose to inform nonspecialists, particularly general practitioners, neurologists, and psychiatrists, about electroencephalography The 106 figures include reproductions of many electroencephalograms. The author is Director of the Brain Wave Laboratory of the Massachusetts General Hospital.

WARTENBERG ROBERT

Hemifacial spasm a clinical and pathophysiological study Foreword by Macdonald Critchley New York Oxford University Press, 1952 86 p. illus. 22 cm. $4 00 1220

Contents: Hemifacial spasm—clinical features. Etiology of hemifacial spasm. Nuclear origin of hemifacial spasm. Cryptogenic hemifacial spasm and facial paralysis. Hemifacial spasm and spastic syndrome. Hemifacial spasm—a release phenomenon. Causes of release. Summary and conclusions. Bibliography Index.

Note: A small, carefully written monograph based both on clinical observation and study of the pertinent literature. The author reviews critically the observations and theories of other investigators and finally draws conclusions of his own, the chief of which is that "hemifacial spasm is an organic disease of the nervous system and usually is not caused by reflex stimulation of the facial nerve. There is bibliography of about 100 references.

WECHSLER, ISRAEL SPANIER

A textbook of clinical neurology, with an introduction to the history of neurology Seventh edition illustrated. Philadelphia W B Saunders Company 1952 801 p illus. 24 cm. $9.50 1221

Contents (abridged) I. Methods of examination: Neurological examination and the interpretation of signs and symptoms Psychological diagnosis, by D Wechsler. II, The spinal cord: Acute anterior poliomyelitis (infantile spinal paralysis) Family periodic paralysis. Compression of the spinal cord. Injuries to the spine and spinal cord Vascular disorders of the spinal cord Muscular atrophies (the amyotrophies) III, The peripheral nerves: Neuritis and neuropathy Diseases of the spinal nerves and plexuses. Tumors of nerves; neuromas Diseases of the cranial nerves. Neuralgias. IV The brain: General symptomatology and focal or regional diagnosis Diseases of the brain Aphasia Circulatory disturbances of the brain. Meningitis. Encephalitis Chorea (Sydenham's chorea, St. Vitus dance). Syphilis of the nervous system. Tumors of the brain. Injuries of the brain Disorders of motility and diseases of the basal ganglia. The epilepsies and the convulsive or paroxysmal state. The migraines or paroxysmal headaches (hemicrania) Affections of the autonomic nervous system Neuroses: Classification of the neuroses. Clinical manifestations of the neuroses Treatment of the neuroses. Trauma and the nervous system. Index.

Note (1034*) A widely used textbook and reference manual of the neurological conditions which are of clinical interest. Historical material is collected in one chapter and case reports are lacking. Most of the space is devoted to concise discussions of symptoms, diagnoses, treatment, and other relevant aspects of wide variety of neurological syndromes. This seventh edition is an extensive revision with many changes in text, illustrations, and bibliographies.

YEAR BOOK OF NEUROLOGY AND PSYCHIATRY

The 1951 year book *of* neurology *and* psychiatry (November 1950–October 1951) Neurology edited by Roland P Mackay Psychiatry edited by Nolan D C. Lewis. Chicago The Year Book Publishers, Inc. 1952 356 p. illus. 20 cm. $5 50 1222

Contents Neurology Introduction Physiology Pathology Trauma. Infectious diseases. Vascular disturbances. Degenerative diseases. Tumors of the brain. Tumors of the spinal cord. Epilepsies, Cranial and spinal nerves. Diagnosis and therapeutic methods. Psychiatry:

Introduction. General topics. Child psychiatry. Schizophrenia, affective disorders and miscellaneous reactions. Organic disorders and toxic reactions. Psychoneuroses and psychosomatic disorders. Therapy. Index. Index to authors.

Note (1039*) This annual publication is edited and organized similarly to the other annuals in the same series. The chapters consist of abstracts of articles selected from the world medical periodicals during the period noted in the title. A footnote reference to the original publication is given in all cases. The abstracts are long enough so that it is possible in most instances to describe the original author's findings in considerable detail. In many instances there is also a note by the editor in which the findings are evaluated or related to other studies in the same area.

OPHTHALMOLOGY

BERENS, CONRAD editor

The eye and its diseases By 92 international authorities. Second edition with 436 illustrations eight in color Philadelphia W B Saunders Company 1949 illus. (part col d) *1092 p. 26 cm.* $16.00 1223

Contents (abridged) I, Embryology anatomy and postnatal development of the eye II, Physiology and physiologic optics: Physiology of the eye, by L. H. Leopold. Physiology of vision, by F B. Walsh. Physiologic chemistry of the eye, by A. C. Krause. Accommodation, by W H. Luedde. III, Examination of the eye. Visual acuity by F C Keil, Jr Ophthalmoscopy by L. H. Hardy Tonometry by P C Kronfeld The color sense and its derangements, by B Chance. Transillumination or diaphanoscopy by C. E. G. Shannon and W T Hunt, Jr Gonioscopy by M. Uribe Troncoso. IV Refraction and accommodation Diagnosis and treatment of errors of refraction, by D H O'Rourke. Asthenopia, by K. M. Ogle. Anomalies of accommodation, by W H. Luedde. Diseases of the eye Diseases of the orbit, by W L. Benedict. Diseases of the conjunctiva, by P Thygeson. Trachoma, by K. Lindner Diseases of the sclera, by F B. Fralick. Diseases of the vitreous, by W E. Fry Glaucoma, by H S. Gradle, revised by Sir S. Duke-Elder VI, Medical ophthalmology Tuberculosis of the eye, by B. Samuels Ocular syphilis, by J H. Waite. VII, Movements of the eyeballs and their anomalies. VIII, Injuries of the eye. IX, The eye and the nervous system X, Treatment Surgery of the eye, by F C. Cordes and G S Campion. Anesthesia, by C. S. O'Brien. Operations on the eyelid and plastic surgery by E. B. Spaeth. Operations on the cornea, by M. Wiener Operations on the retina, by M. Amsler Operations for glaucoma, by D Vail. Operations on the ocular muscles, by W B Lancaster Surgery of the orbital cavity by E L. Goar XI, Preventive ophthalmology XII, Immunology XIII, Legal aspects of ophthalmology XIV Laboratory diagnosis Index

Note There are 76 chapters in the present edition of this lengthy treatise. A majority of the contributors are United States of America citizens but the medical profession of several countries is represented. The typical chapter is a concise but useful presentation of the essential clinical information, supplemented by an extensive list of references to the international literature. Both medical and surgical therapies are covered. A considerable range of important material has been added in this edition. Some of the chapters are new and many of them have been revised. There are new illustrations, and references to the recent literature have been added to the bibliographies. The first edition was published in 1936.

FRIEDENWALD, JONAS S , AND OTHERS

Ophthalmic pathology an atlas and textbook. By Jonas S Friedenwald, Helenor Campbell Wilder A. Edward Maumenee, T E Sanders, John E L. Keyes Michael J Hogan, W C and Ella U Owens. With the editorial assistance of Helen Knight Steward. Published under the joint sponsorship of the American Academy of Ophthalmology and Otolaryngology and the Armed Forces Institute of Pathology Philadelphia W B Saunders Company 1952 489 p. illus. *29 cm.* $18.00 1224

Contents. Introduction—anatomic and physiologic considerations. Histology Growth and aging. Nature and mechanism of inflammation. Endophthalmitis and phthisis bulbi. Focal lesions in endogenous endophthalmitis. Granulomatous inflammations. Injuries. Extrabulbar diseases. Diseases of conjunctiva and cornea. Diseases of the lens. Intraocular fluid circulation, glaucoma and hypotony. Diseases of the ocular blood vessels. Retina, optic disc and optic nerve. Congenital and developmental anomalies. Prenatal and neonatal diseases. Heredofamilial and degenerative diseases. Tumors. Index.

Note. A well-sponsored work designed for use as a teaching aid at the graduate level. The atlas portion consists of 214 plates, most of which contain reproductions of several microphotographs. The text is an authoritative statement—based on the literature—of the current knowledge of pathology of the eye. The book is put together so that appropriate sections of the atlas are bound between text chapters, hence related parts of the text and the atlas are adjacent to one another. The pictorial material has been drawn from the Registry of Ophthalmic Pathology a division of the American Registry of Pathology. The illustrations are clearly reproduced.

HOGAN, MICHAEL JOHN

Ocular toxoplasmosis. New York Published for the American Ophthalmological Society by Columbia University Press 1951. 86 p illus 24 cm. $2 75 1225

Contents Introduction. Toxoplasma. Clinical manifestations. Clinical ocular manifestations. Histopathology. Diagnosis of toxoplasmosis. Serologic diagnosis. Differential diagnosis. Treatment of toxoplasmosis. Relationship between toxoplasmosis and uveitis. Case reports. Ocular findings in experimental toxoplasmosis. Therapeutic effect of drugs and antibiotics against toxoplasma. Discussion. Summary. References.

Note A monograph based both on the literature and on original studies carried out by the author. One of its features is a tabulated list of ocular findings in 78 cases of proved or probably congenital toxoplasmosis which have been reported in the literature. Detailed case reports are included for six cases. Among the author's conclusions is "a positive diagnosis of toxoplasmosis may be made on the basis of clinical findings plus isolation of toxoplasma from body fluids or observation of the parasite in suspected tissues. The monograph contains much information on diagnostic techniques.

LANCASTER, WALTER B

Refraction correlated with optics and physiological optics and motility limited to heterophoria. Springfield, Illinois Charles C Thomas, 1952 310 p illus. 24 cm. $7 75 1226

Contents (abridged) Part I, Optics and physiological optics Light—condensation of lenses. Shadows—reflection by plane surfaces —image formation by mirrors—magnification. Refraction of light. Refraction by curved surfaces. Cylindrical lenses. Prismatic effects of lenses. The eye as an optical instrument. Accommodation. Range of lenses. Part II, Errors of refraction and motility: Myopia. Hypermetropy Part II, Errors of refraction and motility: Myopia. Hypermetropia. Astigmatism. Measurement of ametropia. Subjective methods. Presbyopia. Ocular motility an essential part of subjective technique Vergence. Classification of phorias as a basis for treatment. Eyestrain. Appendix. Index.

Note In this book the author has related refraction and motility to the daily work of the graduate ophthalmologist. The book is intended as a supplement to standard treatises and therefore devotes little space to aspects that are in the authors' opinion adequately treated in other works. The treatment of lenses optics is selective and is related as directly as possible to the eye and to spectacle lenses. His discussions of such ophthalmological conditions as presbyopia are couched in the terminology of ophthalmologic office practice.

MAY CHARLES HENRY

May's manual of the diseases of the eye, for students and general practitioners. Twentieth edition, revised and edited by Charles A. Perera. With 378 illustrations including 32 plates, with 93 colored figures. Baltimore Williams & Wilkins Company 1949 512 p. illus. (part col d) *20 cm.* $5 00 1227

Contents (abridged) External examination of the eye and its adnexa. Subjective or functional examination of the eye. Objective examination of the eye conducted in the dark room. Oblique illumination, the ophthalmoscope, transillumination and the corneal microscope with slit-lamp. Affections of the eyelids. Diseases of the

lacrimal apparatus—the orbit—the conjunctiva—the cornea—the sclera—the iris—the ciliary body—the choroid. Perforating wounds of the globe. Intraocular tumors. Glaucoma. Diseases of the vitreous—the lens—the retina—the optic nerve. Amblyopia. Optical consideration of the eye. Errors of refraction. Disturbances of motility of the eye. Ocular therapeutics. General rules for eye operations. The ocular manifestations of general diseases. Appendix: Ocular requirements for entrance into the Army Navy Marine, Coast Guard and Air Services of the United States. Index.

Note: (1070*) A concise manual for medical students and general practitioners of medicine rather than for specialists. It has been standard work since the appearance of the first edition in 1900 and it has been translated into many languages. In this edition the text has been thoroughly revised and the type from which the book is printed was reset. The length and the scope are essentially the same, but there is much new material and a number of new illustrations. The reviser is a member of the faculty of the College of Physicians and Surgeons of Columbia University

PASCAL JOSEPH IRVING

Studies in visual optics. St. Louis The C. V *Mosby Company 1952 800 p. illus. 22 cm.* $12.50 1228

Contents (abridged) Lenses—physical and optical properties. Transposition of lenses. Toric lenses. The radian method in ophthalmic calculations. A physiological approach to refractive errors. Ophthalmic calculations by the "dual" formula. Observations on visual and orthoptic exercises. A non-geometric exposition of the theory of retinoscopy. Principles and application of cylinder retinoscopy. Specialized techniques in the practice of retinoscopy. The concept of reduced vergence, reduced power and reduced distance. Axes and angles of the eye. The cardinal points and planes. Some observations on myopia. Calculating stereoscopic vergence. The stereoscope as an aid in the correction of esotropia. The mechanism and measurement of accommodation. The mechanism and measurement of convergence. Binocular duction tests and their significance. A new approach to cross cylinder tests. Cross cylinder methods vs. line chart methods. True and spectacle correction of esotropia. Self-correction vs. lens correction in hyperopia. Specialized training of the visual functions. Refraction by prisms. Refraction by spherical surfaces. Refraction by thin lenses. Thick lenses and lens combinations. Lens form relative to lens power. Optical oddities of contact lenses. Optical and visual effects of tilted lenses. A graphic study of the ocular muscles. Diplopia fields as charted from tangent ring. Appendix. Index.

Note. Altogether there are 44 chapters in this book which is not a systematic treatise but a collection of writings on various topics. The wide range of topics is obvious from the selected titles given above. The author states, "I have chosen a number of topics which I felt needed clarification, and/or a new interpretation and/or considerable amplification." Some of the chapters, for instance that on the "dual" formula, offer useful short cuts, others such as the one on "Optical oddities of contact lenses" attempt to clear up points that are poorly understood or misunderstood by ophthalmologists. The book is of interest primarily to graduate ophthalmologists and optometrists.

PROGRESS IN OPHTHALMOLOGY AND OTOLARYNGOLOGY a quadrennial review Volume I. Part One—Ophthalmology edited by Meyer Wiener and A. Edward Maumenee. Part Two —*Otolaryngology edited by* Percy E. Ireland and Joseph A. Sullivan. New York Grune & Stratton 1952 666 p. illus. 24 cm. $15.00 1229

Contents (abridged) I, Basic science in ophthalmology: Anatomy and embryology, by J J Prendergast. Biochemistry pharmacology and toxicology of the eye, by W M Grant. Congenital anomalies, by A. M. Yudkin. Electrophysiology of vision, by S. H Bartley. II, Diagnosis and treatment of diseases of the eye: The lids and lacrymal apparatus, by A. Callahan. Conjunctiva, by J. G. Bellows. Contact and corneal lenses, by M W Nugent. Retrolental fibroplasia in premature infants, by W. C. Owens and E. U Owens. Orbital lesions, by J W Bettman. Recent advances in the treatment of glaucoma with autonomic drugs, by G. R. Koelle. Tumors, by J. S McGavic. Progress in neuro-ophthalmology, by M. Fine. ACTH and cortisone therapy in ophthalmology, by J McLean. Antibiotics in ocular infection, by A. E Braley. III, Surgery of the eye: Recent advances in surgery of the eye, by R. Y Alvis and E. B. Alvis. The use of fibrin coagulum in ocular surgery, by A. L. Barnes. Enucleation and the newer implants, by N L Cutler. IV, Related subjects in ophthalmology: Industrial ophthalmology since World War II, by H. S. Kuhn. Education and rehabilitation of the blind, by M. B. Frampton. I, The ear: Otitis media with effusion, by G. D. Hoople. Recent advances in the use of labyrinthine tests, by W J McNally and E. A. Stuart. Theories of hearing, by M. H. Lurie. Progress in the surgical treatment of otosclerosis, by J. A. Sullivan and J. E. R. Smith. Surgery of Ménière's disease, by F D Lathrop. Recent advances in the surgical treatment of facial paralysis and Bell's palsy, by J. A. Sullivan. The problem of noise in industry, by H. P House. Therapeutic and toxic effects of streptomycin and other antibiotics on the ear, by A. Glorig. II, Nose, sinuses and nasopharynx: Nasal cilia and nasal mechanisms, by G. E. Tremble. Treatment of acute frontal sinusitis, by R. L. Goodale. The modern conception of headache, by L. R. Boies. X-ray findings in malignancy of sinuses, nose and nasopharynx, by A. E. MacMillan and A. S. MacMillan, Jr. III, Larynx, tracheo-bronchial tree and esophagus: Treatment of carcinoma of the larynx, by L. H. Clerf. Recent advances in surgical treatment of lesions of the esophagus, by P. E. Ireland and D. P. Bryce. IV, Allergy: Outline on allergy as related to otolaryngology, by F. K. Hansel. The basis for use of cortisone and ACTH in treatment of otorhinologic conditions, by H. L. Williams. Index.

Note: (1074) A complementary volume to M. Wiener *Ophthalmology in the war years*, Chicago, 1946–48. It covers the developments *reported in the literature from July 1946 through 1951.* Each of the 43 chapters is a concise literature digest accompanied by a bibliography. The purpose of the work is to aid general practitioners of medicine and other medical men in keeping abreast of developments.

SAMUELS BERNARD AND ADALBERT FUCHS

Clinical pathology of the eye a practical treatise of histopathology With 418 illustrations, 191 in full color New York Paul B Hoeber Inc. 1952 420 p illus. (part col d) 28 cm. $20 00 1230

Contents (abridged) General pathology. The cornea. The uvea. The sclera. The lens. The retina. The optic nerve. The vitreous body. Myopia. Tuberculosis. Syphilis. Postoperative pathologic findings and their complications. Injuries. Tumors. Index.

Note: A large collection of microphotographs, of which a considerable number are reproduced in color, is an outstanding feature of this work. These microphotographs are supplementary to rather detailed descriptions of pathological disorders of the eye, and the authors have given special attention to elucidating observations which may be difficult to interpret. For example "a foreign body lying on the retina may simulate a white patch within the tissue. . . . A dark gray splinter of iron may so reflect the light's rays as to appear white." The book is based primarily on the authors' laboratory and clinical experiences in Vienna and New York City

SOMMERS IGNATIUS GEORGE

Histology and histopathology of the eye and its adnexa. New York *Grune & Stratton,* 1949 784 p. illus. 22 cm. $12.00 1231

Contents (abridged) Part one Normal histology of the eye. Embryology of the eye. Senescence of the eye. Part two General pathology in relation to the eye. Part three Histopathology of the eye. Pathology of the cornea. Pathology of the sclera. Pathology of the uvea. Pathology of the retina. Pathology of the optic nerve. Pathology of the lens. Pathology of the vitreous body. Pathology of the conjunctiva. Pathology of the eyelids. Pathology of the lacrimal organs. Pathology of the orbit. Ocular developmental abnormalities. Glaucoma. Myopia. Injuries. Surgery and its complications. Index.

Note: The first two parts of this book on normal histology and on general pathology occupy only 139 pages, whereas 613 pages are devoted to the third part. In the chapters of this part disorders of the various elements of the eye are fully discussed, chiefly in terms of the histology. The organization of the chapters is unconventional. First there is a detailed description, then a concise summary of the pertinent literature identified only by authors' names and, finally a formal bibliography of the international literature. There are only 69 figures, but these are of good quality. According to the author the book is an elaboration of instruction lectures that he gave over a period of years to undergraduate medical students. The bibliographies taken together constitute a fairly comprehensive list of the world literature from 1920 to 1947 but unfortunately the authors' names have not been indexed.

STERN JOHN JACOB

Nutrition in ophthalmology New York The National Vitamin Foundation, Incorpo-

rated 1950 137 p. 23 cm. (Nutrition monograph series. No. 1) $1 50. 1232

Contents: Conjunctiva, cornea and sclera. Lens and aqueous. Retina, optic nerve and visual act. Appendix: Reviews on vitamins in ophthalmology not quoted in bibliography. Subject index.

Note. A statement, based on literature survey of the available knowledge pertaining to the effects of nutrition on the eye. In each of the chapters research findings and recommended treatments are described concisely and referenced to the source articles. The purpose of the book is to make available in convenient form information which is usually omitted or at least not stressed in texts on ophthalmology

TAIT, EDWIN FORBES

Textbook of refraction. Illustrated. Philadelphia W B Saunders Company 1951 418 p. illus. 25 cm. $8 00 1233

Contents (abridged) Ocular relaxation. Accommodation stimulus-response mechanisms. Emmetropia and ametropia. Hyperopia. Myopia. Astigmia. Presbyopia and aphakia. Isometropia and anisometropia. Aniseikonia. Amblyopia. Reading difficulties—alexia and dyslexia. Illumination and photophobia. Preliminary considerations in binocular coordination. Vergence stimulus-response mechanisms. Binocular fusion. Ocular dominance. Retinal correspondence. Ocular muscle anomalies. Orthophoria and heterophoria. Binocular anomalies at the near point. Heterotropia. Keratometry. Skiametry. Static skiametry. Cycloplegics, mydriatics, and miotics. Subjective methods of refraction in normal and subnormal vision. Orthoptics. Accommodation tests. Stereopsis. A system of refraction with interpretation and correlation of data. Index.

Note. The author's critical selection of the material included and his authoritative comments on difficult points in diagnosis and correction are special features of this book. Disorders of refraction and neuromuscular abnormalities are covered comprehensively; but controversial concepts and techniques not yet thoroughly established are omitted from the text though papers on some of these are included in the literature lists. The book is addressed to medical college students who have acquired the basic knowledge of the anatomy and physiology of the eye and of physiological optics. History taking and diagnostic procedures are compactly outlined in the final chapter. The author is Associate Professor of Ophthalmology in Temple University

TOWN ARNO E.

Ophthalmology 208 illustrations and 4 colored plates. Philadelphia Lea & Febiger, 1951 511 p illus (part col d) 24 cm. $10.00 1234

Contents: The objective examination of the eye. *Physiology of vision*, by I. H. Wagman. Correction of optical defects of the eye, by D. Maldoff. The extraocular muscles. The orbit. The lacrimal apparatus. The eyelids. The conjunctiva. The cornea, by I. H. Leopold. The sclera. The uveal tract. The uvea, by W F Duggan. The crystalline lens. The retina. The optic nerve. Glaucoma, by I. H. Leopold. Neuro-ophthalmology by J. Waldman. Ocular changes in general diseases, by A W Howland. Symptomatic diagnosis. Ocular therapeutics. Standing orders for traumatic cases in industrial dispensaries: eye accidents and injuries. Surgery of the eye.

Note. In this concise work the emphasis has been placed upon eye conditions which may come to the attention of the general practitioner in everyday practice and on the eye as a guide to diagnosis and prognosis of systemic infections elsewhere in the body. Over 200 illustrations direct attention to particular malfunctions and methods of diagnosis and treatment. Selected references are inserted at the ends of sections within chapters to aid those desiring more extensive information on the particular subject. The author is Professor of Ophthalmology in Jefferson Medical College, and his contributors are also teachers in the same or closely allied fields.

TRONCOSO MANUEL URIBE

Internal diseases of the eye and atlas of ophthalmoscopy Second edition. 285 illustrations including 94 full-page color plates. Philadelphia F A. Davis Company 1950. 684 p. illus. (part col d) 26 cm. $22 00 1235

Contents (abridged) Part I, Ophthalmoscopy; Methods and technic of ophthalmoscopic examination. Part II, Structural features of the internal eye. The normal fundus. The physiology and pathology of the circulation in the retinal vessels. Part III, The visual field. Field testing (campimetry). General pathology of the visual field. Part IV Anomalies of development. Part V Diseases of the optic nerve. Part VI, Atrophy of the optic nerve: Pressure atrophy. Glaucomatous and nutritional atrophies. Acute neuritis of the retina and optic nerve. Tumors of the optic nerve. Part VII, Vascular diseases of the retina. Part VIII, Diseases of the retina: Retina in diseases of the blood. Congenital systemic maldevelopments and tumors. Part IX, Diseases of macular region, area centralis and allied conditions. Part X, Retinitis in infectious diseases. Part XI, Pigmentary retinitis and allied diseases. Part XII, Retinal detachment, parasites and tumors. Part XIII, Diseases of the choroid. Part XIV Pathological changes in the vitreous body. Part XV Injuries of the choroid, retina and optic nerve. Index.

Note: (1404) A standard textbook in which the author has treated the subject by emphasizing the pathological changes in physiopathology first, then deducing the symptoms from the lesions. The purpose of the method is to show the student the importance of correlating pathology and symptomatology. Descriptions of diseases are briefer than in many texts but they are adequate. The color plates are a feature of particular value. The first edition was published in 1942. In the second edition the work has been enlarged by some 150 pages and now includes new sections on a considerable number of diseases and conditions which were not covered in the first edition. The number of illustrations has been increased somewhat. The author is a member of the faculty of the College of Physicians and Surgeons of Columbia University

PARASITOLOGY AND TROPICAL DISEASES

BELDING, DAVID LAWRENCE

Textbook of clinical parasitology Second edition. New York Appleton-Century-Crofts, Inc. 1952 1139 p. illus. 25 cm. $12.00. 1236

Contents (abridged) Section one, General parasitology: The pathology of parasitic infections. The immunity of parasitic infections. The transmission of parasitic diseases. The diagnosis of parasitic diseases. The treatment and prevention of parasitic diseases. Section two, The protozoa. Section three, The nemathelminthes or roundworms. Section four The Cestoidea or tapeworms. Section five, The Trematoda or flukes. Section six, Arthropoda. Section seven, Technical methods for the diagnosis and treatment of parasitic infections. The examination of parasitic protozoa. The examination of helminths. Serological and chemical methods of diagnosis. The methods of examination of intermediate and reservoir hosts, including mollusks, fishes, birds, mammals and arthropods. Useful drugs in the treatment of parasitic diseases. Insecticides and repellents. Index of authors. Index of subjects.

Note: (1407) In this book designed for the instruction of medical students, public health officials, etc., the zoology of the parasite has been subordinated to the pathology, diagnosis, treatment, and prevention of diseases. This is true though the greater part of the work is arranged by systematic zoological groups. In the discussion of each group and subgroup there is some information on classification and morphology but more space is given to descriptions of life cycles, pathogenicity, treatment, and other aspects of interest in medicine and public health. The material added in the present edition includes recently developed knowledge in the sulfonamides, antibiotics, etc., recently developed diagnostic methods, and new therapeutic agents. The bibliographies and illustrations have been revised. The scaled drawings of the morphology and life cycles of particular parasites which were a feature of the first edition have been retained.

BOYD MARK FREDERICK editor

Malariology a comprehensive survey of all aspects of this group of diseases from a global standpoint. By sixty five contributors. Philadelphia W B Saunders Company 1949 2 v 1237
illus. 26 cm. $35.00.

Contents (abridged) Volume I Section I, Introduction: Historical review by M. F Boyd. Section II, Parasitology: A catalogue of the species of the genus *Plasmodium*, and index of their hosts, by R. Coatney and R. L. Roudabush. Life cycles of the malaria parasites with special reference to the newer knowledge of pre-erythrocytic stages, by C. G. Huff. The human parasites of the genus *Plasmodium*, by ... dson, by E. Brumpt. A photographic atlas of human plasmodia, by L. T ... M. F Boyd. Synopsis of species found in other animals, by R. Coggeshall. Synopsis of species of avian malaria parasites, by R. Boyd Hewitt. Laboratory diagnosis of malaria infections, by M. F Boyd

and others. In vitro methods for study and cultivation of plasmodia, by Q. M. Geiman. Section III, Definitive hosts: Insect vectors, by Col. Sir R. Christophers. Anopheline mosquitoes—morphology in different stages and instars—life history by H. S. Leeson and F A. Buxton. The physiology of mosquitoes, by V B. Wigglesworth. Ecology of anopheline mosquitoes, by M. Bates. Culicine and sabethine mosquitoes and the malaria infections of lower animals, by L. Vargas. Laboratory technics for the study of avian malarias, by R. J. Porter. Technics applicable to experimental infection of birds, by R. Hewitt. Section IV Intermediate host: Epidemiology of malaria—factors related to the intermediate host—factors related to the definitive host, by M. F Boyd. Endemic and epidemic prevalence, by Col. Sir R. Christophers. Volume II. Surveys—epidemiologic and entomologic, by M. F Boyd and others. The pathologic anatomy of malaria, by H. C. Clark and W J. Tomlinson. The physiologic pathology of malaria, by J. D. Fulton and B. G. Maegraith. Immunity in the malaria infections, by W H. Taliaferro. Old and new plasmodicides, by L. T Coggeshall and R. Craige. Prevention of malaria infections by drug prophylaxis, by J. J. Sapero. Treatment of patent infections, by W S. Dove. Induced malaria as therapeutic agent, by F T Becker Section Control and eradication: General considerations in control and eradication, by Sir M. Watson. Species sanitation and species eradication for the control of mosquito-borne diseases, by F L. Soper. Mosquito repellents, by E. F Knipling. Insecticides, by F C. Bishopp. Drainage of mosquito-breeding water collections, by K. H. Magoon and others. Larvicides, by F C. Bishopp. Naturalistic methods of anopheline control, by K. R. Williamson. *Control of malaria in the United States Army*, by J. S. Simmons. Planning for malaria control, by M. F Boyd. Appendices. Indices.

Note: The contributors to this monumental work include authorities of several nations and their papers were written especially for it. The two volumes contain together 70 papers or chapters. Not listed above but nevertheless valuable are three series of six papers each which cover the anophelines, the incidence of malaria, and the control of malaria in the various regions of the world. The appendices contain lists of equipment for field and laboratory investigations, directories of manufacturers and distributors of equipment and supplies for use in antimalaria control. Each chapter is accompanied by extensive references. The indexes are exceptionally full, and the author index includes the names of authors of cited papers.

CHANDLER, ASA CRAWFORD

Introduction to parasitology with special reference to the parasites of man. Eighth edition. New York John Wiley & Sons, Inc. *1949* 756 p. illus. 24 cm. $6.50. 1238

Contents (abridged) Parasites in general. Part I—Protozoa: Spirochetes. Amebae. Intestinal flagellates and ciliates. Hemoflagellates. The Sporozoa. Part II—Helminthology: The trematodes or flukes. The Cestoidea or tapeworms. Acanthocephala (spiny headed worms) Trichinella, Trichuris, and their allies. The hookworms and their allies. Filariae, spirurids, and guinea worms (Suborders Spirurata and Camallanata) Part III—Arthropoda: The Acarina. Ticks. *Bedbugs and other Hemiptera. Lice, Anoplura, and Mallophaga.* Fleas. Diptera. Sources of information. Index.

Note: (2400) A long established introductory text in which biological rather than public health or medical aspects are emphasized. It is used as text for first courses in the subject in medical schools, schools of nursing, etc. In this edition there are many new illustrations, and some of those carried over from previous editions have been redrawn. There are new discussions of such topics as insecticides and insect repellents, arthropod borne viruses, etc. The bibliographies have been revised.

CRAIG CHARLES FRANKLIN AND ERNEST CARROLL *FAUST*

Clinical parasitology With a chapter on "Control of medically important arthropods" by Albert Miller Fifth edition, thoroughly revised, illustrated with 326 engravings and 6 colored plates. Philadelphia Lea & Febiger 1951 1032 p. illus. (part col d) 24 cm. $12.00 *1239*

Contents (abridged) Section General introduction and orientation: The epidemiology of parasitic infections. The disease processes produced by parasites in the human body and their manifestations. Diagnosis, prognosis and treatment of parasitic infections. The geographical distribution of parasitic infections, with special reference to human disease. Scientific nomenclature. Section II, Protozoa and protozoan infection. Section III, Helminths and helminthic infections: The roundworms. The aphasmid nematode parasites of man. The Gordiacea or "hairworms. The morphology biology and classification of the flatworms (Platyhelminthes). The digenetic trematodes of flukes, general considerations. The cestodes or tapeworms of man. The Acanthocephala or thorny-headed worms. The leeches (Hirudinea) Section IV, Arthropods and human disease: The morphology biology and classification of arthropods of medical importance. Insects of medical importance. Biting lice (Mallophaga) and sucking lice (Anoplura) The flies or Diptera. The fleas or Siphonaptera. Insects causing vesication, urtication and venenation of man. Section Technical appendix: Technics and aids for the collection, culture, preparation and identification of parasitic protozoa. Technics and aids for collection, culture, preparation and identification of helminths. Technics and aids for the collection, preparation and identification of arthropods of medical importance. Synoptic tables on diagnosis, recommended treatment and teaching aids in clinical parasitology Section VI, The literature of clinical parasitology Index of authors Subject index.

Note (1078) A long-established comprehensive text for students and reference manual for practitioners, laboratory workers, and directors of diagnostic laboratories. In it are presented the most essential facts regarding symptoms, methods of diagnosis, treatment and control of those parasites which are of clinical and public health interest. The fourth edition was published in 1945. A substantial amount of material has been added in the present edition, reflecting the development of new drugs, new insecticides, and the other advances *made during World War II and subsequently* Also, the recent literature has been added to the extensive, classified bibliography.

FAUST ERNEST CARROLL

Human helminthology A manual for physicians sanitarians, and medical zoologists. Third edition, thoroughly revised with 313 engravings. Philadelphia Lea and Febiger 1949 744 p. illus. 24 cm. $10.00 1240

Contents (abridged) Section I, The scope of helminthology: The phenomenon of parasitism in helminth groups. The zoogeography of helminthic infections. The interrelation of the helminth parasite and its host Control of the helminthic infections of man—the scope of the problem. The scientific nomenclature of helminth parasites. Section II, The Platyhelminthes or flatworms. The trematodes or flukes. The human blood flukes. Trematode parasites of the intestinal tract, biliary passages and lungs. The cestodes or tapeworms. Section III, The Acanthocephala, or thorny-headed worms. Section IV The Nematoda, or true roundworms The aphasmid nematode parasites of man. The phasmid nematode parasites of man. Section The Nematomorpha. The Gordiacea or "hair worms. Section VI, The Annelida: The leeches (Hirudinea) Section VII, Technical aids in the diagnosis and treatment of helminthic infections The basic equipment required for the diagnosis of helminthic infections. The collection, preparation and preservation of helminthological material. The identification and differential diagnosis of helminth parasites, their larvae and eggs. Intermediate and reservoir hosts involved in human helminthic infections. Anthelmintics and their use. Important literature on human helminthology: General literature. Literature on special groups. Author index. Subject index.

Notes (2412) A comprehensive manual which is used both for teaching and for reference The third edition is an extensive revision of the previous edition. New data and concepts have been introduced, including information from findings resulting from investigations conducted during military operations in warm climates during the war years 1942–1945; older information has been re-evaluated. The chapter on Hirudinea (leeches) is new as is glossary of zoological and medical terms contained in the first chapter The bibliography has been substantially increased and brought up to date. Thirty-four new illustrations have been added and many older ones revised and remodeled.

GRADWOHL RUTHERFORD BIRCHARD HAYES AND OTHERS editors

Clinical tropical medicine. R. B H. Gradwohl, editor in-chief Luis Benitez Soto Oscar Felsenfeld, editors. With 473 illustra*tions and 6 color plates.* St. Louis The C. V Mosby Company 1951 1647 p. illus. (part col d) 26 cm. $22.50 1241

Contents (abridged) Intestinal protozoa of man, by E. Rabinovitch. Amebic dysentery hepatic abscess, and other intestinal conditions caused by protozoa, by O. Felsenfeld and V M. Young. Malaria,

by J W Colvin. Chagas' disease, by S. Mazza. Pinta, mal del pinto, or carate, by F Leon-Blanco and E. Sánchez-García. Relapsing fever by A. A. Packchanian. Weil' disease, by A. A. Packchanian. Fevers due to ratbite (including sodoku) by A. Castañeda Hernández. Yellow fever by H. de Azevedo Penna. Psittacosis (ornithosis, psittacosis) by K. F Meyer. Lymphogranuloma venereum, by J L. Soto Rosa. Tularemia, by L. Foshay Plague, by A. Macchiavello, translated by A. Donovan. Cholera (Asiatic cholera) by E. Henderson and H. Sanera. Leprosy by V Pardo Castelló. Tropical phagedenic ulcer (Vincent's ulcer) by G. Pardo-Rickettsialpox, by M. Greenberg. Dracontiasis or Guinea worm disease, by A. E. A. Hudson. Schistosomiasis japonica, by F B. Bang. Tropical mycosis—introduction, by A. González-Ochoa. South American blastomycosis, by F Pardo de Almeida. Histoplasmosis and melioidosis, by R. D H. Grudwohl. Diseases caused by ticks, mites, centipedes, and flea, by L. Vargas. Snake venenation (ophidism), by A. do Amaral. Diseases due to nutritional disturbances, by A. Clerch Ríos. Sprue, by R. M. Suárez. Beriberi, by E. R. Whitmore. Pellagra, by R. K. Butler. Therapeutics of tropical diseases, by H. J Reeside. The use of antibiotics in tropical diseases, by O. Felsenfeld and S. J Ishihara. Rapid frozen section methods in tropical diseases, by A. A. Krajian. Index.

Note A very comprehensive work in 71 chapters written by more than 50 leading specialists in the various fields of tropical medicine. The authors include the citizens of several South American countries as well as citizens of the United States of America. Although the organization and scope of the chapters vary considerably each one which is devoted to specific disease or group of diseases summarizes the current information regarding etiology epidemiology pathology, symptomatology laboratory tests, diagnosis, treatment, and prophylaxis. The book is suitable for use both as text in graduate courses and as reference manual by graduate physicians practicing in the tropics and subtropics. Extensive bibliographies are included.

HERMS WILLIAM BRODBECK

Medical entomology with special reference to the health and well-being of man and animals. Fourth edition. Based on the book known as *Medical and veterinary entomology* New York The Macmillan Company 1950 643 p illus. (part col d) 24 cm. $9 00 1242

Contents Introduction. Scope and method. Parasites and parasitism. How arthropods cause and carry disease. Structure, development, and classification of insects and arachnids. Insect and arachnid mouth parts. Cockroaches and beetles. Bugs. The flea. Gnats (exclusive of mosquitoes) Mosquitoes—classification and biology Mosquitoes as vectors of disease. Mosquito abatement. Horseflies, deer flies, and snipe flies. Houseflies Bloodsucking muscoid flies. Myiasis. Louse flies. Fleas. Ticks and tick-borne diseases. Mites. Venomous and urticarial arthropods Index.

Note (2415) A standard textbook and reference work in which the *subject is presented chiefly from the standpoint of public health.* However there is also good deal of material of veterinary interest, for instance detailed descriptions of the technique of the control of poultry lice by dipping the birds. Statements in the text are carefully identified with the source articles, hence the book serves as guide to considerable range of literature It has been substantially revised in this edition and now includes discussions of DDT and *other new insecticides in the control of insect pests. It does not of* course include material on all of the recently developed insecticides.

NEW YORK ACADEMY OF MEDICINE. SECTION ON MICROBIOLOGY

Parasitic infections in man. Symposium held at the New York Academy of Medicine, March 15 and 16, 1949 Edited by Harry Most. New York Columbia University Press 1951 229 p. illus. 24 cm. $4 50 1243

Contents. Introduction—the world health importance of parasitic diseases, by P F Russell. The significance of new findings in the life cycle of malarial parasites, by C G Huff Immunological mechanisms in parasitic infections, by J T Culbertson. Immunological diagnosis of parasitic diseases, by John Bozicevich Diagnosis of intestinal helminths and protozoa—current perspective, by N R Stoll. *Studies on growth and metabolism of Endamoeba histolytica*, by W W Frye. The physiology of blood flagellates, by T von Brand Biochemistry and metabolism of malarial parasites, by R. W McKee. The cultivation of malarial parasites, by Q M Geiman. Metabolism of helminths, by E. Bueding. Pharmacologic evaluation and clinical application of amebacides with special reference to the diamoebas, by H. H. Anderson. The status of anthelmintic drugs, by Q. R. Cantney Theory of filariasis and the more common intestinal helminths, by H. W Brown. The treatment of schistosomiasis, by F J. Brady

Note: A collection of original papers prepared for delivery at the symposium mentioned in the book's title. The authors are recognized authorities in parasitology and related fields and their papers are addressed primarily to professional workers in medicine and public health. The book as whole presents cross section of the current knowledge and research in human parasitology Substantial lists of references accompany most of the papers. The book contains neither subject nor author indexes.

SHATTUCK, GEORGE CHEEVER

Diseases of the tropics. New York. Appleton-Century-Crofts, Inc. 1951 803 p. illus. 25 cm. $12 00 1244

Contents (abridged) Part one, Protozoa of the blood and tissues. Part two, Spirochaetoses. Part three, Rickettsial diseases. Part four, Bacterial diseases. Part five, Viral diseases. Part six, Helminthic diseases. Part seven, Intestinal protozoa. Part eight, The mycoses. Part nine, Miscellaneous diseases. Part ten, Disorders of nutrition. Part eleven, Tropical climates and health. Part twelve, Noxious animals, plants and arthropods. Index.

Note. A compact presentation in which the emphasis is on prevalent *and potentially epidemic diseases.* The discussions of specific diseases are organized under the following subheadings synonyms, definition, geographical distribution, epidemiology etiology transmission, prevention, pathology symptoms, diagnosis, prognosis, treatment, and literature references. The discussions of some diseases include, in addition, information on insect vectors, vaccination, quarantine practice, diagnostic laboratory tests, etc. The book is *suitable for use as text and also as reference guide for physicians concerned with the care of either military or civilian personnel in tropical regions.* It is of interest also to public health officials in these regions.

STRODE GEORGE K editor

Yellow fever New York McGraw Hill Book Company Inc., 1951 710 p. illus. 26 cm. $9 50 1245

Contents. Preface, by G. K. Strode. Landmarks in the conquest of yellow fever, by A. J. Warren. The virus, by M. Theiler. The pathology of yellow fever by J C. Bugher. *Immunology* by K. C Smithburn. The arthropod vectors of yellow fever by L. Whitman. The mammalian host in yellow fever by J. C. Bugher. The clinical aspects and diagnosis of yellow fever, by J A. Kerr. Epidemiology by R. M. Taylor Controlling yellow fever by H. H. Smith. Costs and man power by G. K. Strode. Bibliography Index.

Note More than 30 years of basic research and field study by the *International Health Division of the Rockefeller Foundation* were the bases for this comprehensive and authoritative work. The monographic chapters are based almost entirely on the scientific articles published by staff members of this organization and its annual reports. Only incidental references are made to the publications of independent workers. Nevertheless so extensive was the work of the International Health Division that this limitation to the publications of one organization did not prevent the production of an essentially complete presentation of the current status of yellow fever in both its clinical and public health aspects.

VON BRAND THEODOR

Chemical physiology of endoparasitic animals New York Academic Press, Inc. 1952. 339 p. illus. 23 cm. $7 50. 1246

Contents (abridged) Part I, Chemical composition of endoparasites: Dry matter and inorganic substances. Carbohydrates. Lipids. Proteins. Miscellaneous physiologically active substances. *Pigments. Toxic substances. Part II,* Metabolism of endoparasites: Water metabolism and osmotic relationships. Carbohydrate metabolism. Lipid metabolism. Protein metabolism. The aerobic and post-anaerobic metabolism. The growth requirements of parasites. Part III, gaseous exchanges. Chemical host parasite relationships: Nutritional relationships between parasites and hosts. Metabolic disturbances in parasitic infections. Endocrinological relationships. Parasite physiology and chemotherapy Author index. Subject index.

Note A summary of the established knowledge of the chemical composition, metabolism, and biochemical aspects of host parasite relationships of such parasites as protozoa and the endoparasitic arthropods. The text is compact literature digest with careful ref

erences to the source articles. The author index includes the names of all authors of cited papers. The book is of interest to professional biochemists, physicians specializing in tropical medicine and parasitology and zoologists doing research in parasitology. The author is associated with the Laboratory of Tropical Diseases of the National Institutes of Health.

WARSHAW, LEON J

Malaria, the biography of a killer New York Rinehart & Company Inc., 1949 348 p. 22 cm. $3 75 1247

Contents (abridged) Part one, Chills and fever: The world's greatest killer. Great men and fever Malaria in America. Part two, From miasma to mosquito Laveran's discovery The mosquito theory Manson, the father of tropical medicine Ross and mosquito day Grassi and the anopheles. Part three, Mosquito control Watson in Malaya. Gorgas and the Panama Canal. The Brazilian epidemic. Ditches, dusts and sprays Nets and repellents. Part four, Cinchona, quinine and atabrine: The fever tree. The active principle. The victory of quinine. Cinchona in the East Indies. Quinine and the parasite. The ideal drug. Part five, Malaria in war. Part six, Artificial malaria. Part seven, The future. Bibliography Index.

Note: A popular account of mankind's not yet victorious battle against malaria. There is no emphasis on the sensational aspects of the subject, but the facts and the author's lucid style hold the reader's attention. The bibliography is a selected one of books and articles used by the author in the preparation of this book. However it is not keyed in any way to passages in the book.

RESPIRATORY DISEASES

DAWBER, THOMAS ROYLE, AND LLOYD E HAWES

Diseases of the chest. Baltimore The Williams & Wilkins Company 1952 440 p. illus. 26 cm. $10 00. 1248

Contents: Introduction. Normal chest. Methods of examination. Chest wall Diseases of the diaphragm. Diseases of the pleura. Diseases of the mediastinum. Diseases of the trachea and bronchi. Pulmonary tuberculosis. Diseases of the heart. Diseases of the lungs (other than tuberculous) Bibliography Index.

Note: One of the authors of this book is a surgeon and the other is a specialist in radiology Both have been interested for many years in chest diseases. The use of X-ray in the diagnosis of chest diseases is covered thoroughly and all of the 216 figures are reproductions of chest roentgenograms However the text is not limited to the roentgenology of the chest The whole subject is covered with due attention to other diagnostic techniques such as tuberculin skin tests and examination of sputum. Therapeutic measures are well covered also.

MYERS JAY ARTHUR

Tuberculosis among children and adults. Third edition. An introduction by Allen K. Krause. Springfield Illinois Charles C Thomas, 1951 894 p. illus. 24 cm. $13.50 1249

Contents (abridged) Introduction to first and second editions, by A. K. Krause Part I, Tuberculosis in infancy Recent progress in tuberculosis and its practical application in diagnosis, treatment, and prevention. Sensitization and immunity Congenital tuberculosis. Results of exposure to tuberculosis. First infection type of tuberculosis in infants Other forms of tuberculosis in infancy Tuberculous meningitis, by C A Stewart Part II, Tuberculosis in childhood Diagnosis and treatment of first infection type of tuberculous lesions in the chest in childhood Prognosis and prevention of first infection type tuberculosis in childhood Other tuberculous lesions in childhood Chronic non tuberculous basal pulmonary damage in childhood, by C. A Stewart Part III, Tuberculosis among young adults and other considerations First infection type of tuberculosis among young adults Diagnosis of reinfection type of pulmonary tuberculosis among young adults. Treatment, prognosis and prevention of reinfection type of pulmonary tuberculosis among young adults. Dangers to children from tuberculosis among elderly persons Part IV Recent progress in tuberculosis control: The diagnosis. Mass surveys and the detection of tuberculosis. Children and tuberculosis control. Control of tuberculosis among students. Tuberculosis and war. Treatment of pulmonary tuberculosis by mechanical therapy by R. C. Matson and W S. Conklin. Contemporary in the treatment of pulmonary tuberculosis, by J. D. Steele. Extrapleural thoracoplasty in the treatment of pulmonary tuberculosis, by J R. Head. Exercise in the treatment of pulmonary tuberculosis, by O. T Clagett. Effectiveness of tuberculosis control measures. Index.

Note: A standard treatise in which both clinical and public health aspects are covered. The author has been one of the most active American workers in the advancement of the control of tuberculosis, and he has incorporated in this book the gist of not only his own writings but of those of other authorities in the United States of America and abroad. The book is addressed to graduate medical practitioners and public health personnel rather than to undergraduate students. The second edition was published in 1944. Much material reflecting the great advances in the control of tuberculosis and its decline as a major disease among children and young adults has been added in this edition. The additions include the whole fourth part.

RICH ARNOLD RICE

The pathogenesis of tuberculosis. Second edition. Springfield, Illinois Charles C Thomas, 1951 1028 p. illus. 26 cm. $15.00 1250

Contents (abridged) The relation of the chemical constituents of the tubercle bacillus to pathogenesis. The different types of tubercle bacilli. The nature and effects of virulence. Native resistance—species and racial resistance—individual resistance—the influence of heredity—the influence of sex and age. The mechanism of native resistance. Hypersensitivity Desensitization. Acquired resistance. The mechanism of acquired resistance. Factors that influence resistance. The influence of the number of bacilli. The factors responsible for the characteristics of tuberculous lesions and symptoms. Exogenous or endogenous reinfection—is an arrested primary infection protective or deleterious? Application of the principles of pathogenesis, as illustrated by tuberculous lesions of the lungs, meninges and serous cavities. The decline in the mortality from tuberculosis, and the outlook for the future. Bibliography Author index. Subject index.

Note: (1445) A comprehensive presentation of the valid knowledge of tuberculosis with particular attention given to the mechanisms of infection, resistance to infection, and the arrest of infections. Essentially it is an expert critical survey of the literature, and references are carefully made from statements in the text to the bibliography *The scope and much of the content of the work are unchanged* in this edition. Nevertheless, the revision has been carefully done in order to include all of the significant results published in the literature since the writing of the first edition. The author is a member of the faculty of Johns Hopkins University School of Medicine and Pathologist-in-Chief of the Johns Hopkins Hospital

SINGER JACOB JESSE

Differential diagnosis of chest diseases *with 171 illustrations.* Philadelphia Lea & Febiger 1949 344 p illus. 24 cm. $7.50 1251

Contents (abridged) Diagnostic methods: Laboratory methods. Mechanical aids. Roentgenology Thoracic cage Deformities, fractures and inflammations of the thoracic cage Tumors of the chest wall Diseases of the pleura. Mediastinum. Diaphragm. Tracheobronchial tree and lungs: Anatomy and miscellaneous diseases. Bronchiectasis Bronchopneumonia. Lobar pneumonia Lipoid pneumonia. Virus (atypical) pneumonia. Pulmonary abscess Pneumoconiosis. Pulmonary mycoses. Hodgkin's disease Tuberculosis Benign tumors of the lung. Cancer of the lung (carcinoma) Sarcoidosis Index.

Note. A concise work designed primarily for the guidance of general practitioners of medicine. The main theme is accurate differential diagnosis based on information obtained from all applicable techniques Roentgenology is included but its value is not overemphasized. Generally speaking each disease is discussed under the following heads etiology pathology clinical symptoms, physical signs, Roentgen-ray findings, laboratory findings, and differential diagnosis. The presentation is concise, but a bibliography of related books and periodicals is given for each disease The author is Medical Director of the Rose Lampert Graf Foundation.

VORWALD ARTHUR J editor

Pneumoconiosis Beryllium bauxite fumes, compensation. Leroy U Gardner memorial volume. (Sixth Saranac symposium) Edited by Arthur J Vorwald with the collaboration

of Manfred Bowditch, Thomas M Durkan, and Theodore C. Waters New York Paul B Hoeber Inc. Medical Book Department of Harper and Brothers, 1950 659 p Illus. (part col d) 24 cm. $7.50 1252

Contents: Part I, The beryllium problem history industrial aspects: History of the beryllium problem, by Thomas L. Shipman. Beryllium alloys, by Andrew J. Jackson. The manufacture of fluorescent lamps, by Karl C. Beyer Present and future uses of beryllium, by Charles B. Sawyer. A common denominator by Charles R. Williams. Part II, The beryllium problem the acute disease. Acute beryllium poisoning, by H. S. VanOrdstrand. Acute pneumonitis in beryllium workers with case histories, by Joseph DeNardi. Part III, The beryllium problem; the chronic or delayed disease: Clinical and epidemiological aspects, by Harriet L. Hardy Roentgenologic aspects, by S. A. Wilson. Physiologic aspects, by George W Wright. Pathologic aspects, by Arthur J Vorwald. Differential diagnosis, by Joseph C. Aub. The chronic disease in neon tube workers, by O. A. Sander Postmortem observations in cases in which the patients had been exposed to beryllium, by Harrison S. Martland. Part IV The beryllium problem, toxicity studies in connection with atomic energy production Introduction by Joe W Howland. Biochemical studies of workers exposed to beryllium, by J J. Nickson and Elaine J. Katz. Pathology of acute experimental beryllium poisoning; changes resulting in venous blood from the intravenous administration of beryllium sulfate, by James K. Scott. Preliminary data on rat feeding with beryllium, by Elliott A. Maynard and others. Certain aspects of the acute toxicity of beryllium injected intraperitoneally by Harold C. Hodge and others. Preliminary studies in the toxicology of beryllium the effect of intratracheal injection of beryllium in experimental animals, by Charles W LaBelle and Martha Reed Cucci. Initial studies of the toxicity of inhaled beryllium sulfate dust and beryllium metal fume, by George F Sprague and others. A review of analytical methods for beryllium, by William F Neuman. An analysis of dust and fume hazards in a beryllium plant, by Sidney Laskin and others. Summary of the beryllium problem in connection with atomic energy production, by Joe W Howland. Part V The beryllium problem: experimental aspects: Animal methods, by Arthur J Vorwald. Chemical methods, by Thomas M. Durkan. Spectroscopic methods, by A. Forsky A further program, by Willard Machle Conclusions of sessions on the beryllium problem, by B. L. Vosburgh. Part VI, Shaver's disease: Clinical aspects of Shaver's disease, by A. R. Riddell. Chemical aspects of Shaver's disease, by C. M. Jephcott Summary by Theodore F Hatch. Part VII, Compensation for occupational disease Introduction, by Theodore C. Waters. The industrial medical practitioner's point of view by Leonard C. McGee. Viewpoint of workmen's compensation administration as to occupational diseases, by Mary Donlon. The insurance viewpoint, by Henry D. Sayer The management viewpoint, by Andrew Fletcher Medical referee' point of view by Dwight O'Hara. Synthesis of viewpoints, by Theodore C. Waters. Participants in the sixth Saranac symposium. General bibliography on beryllium. Index.

Note. In the 1940's two disease entities, one caused by the inhalation of dust containing beryllium and the other by fumes arising from bauxite furnaces, were first noted among industrial employees. This book, which contains the papers and discussions at a symposium in which representatives of medicine, chemistry law insurance, and labor participated, offers a comprehensive and authoritative exposition of present knowledge concerning the two pneumoconioses and of the medico-legal problems they raised. The bibliography records 444 items of pertinent literature concerning beryllium which appeared to 1950 and notes where they are abstracted The book is illustrated with 196 photographs and diagrams and five colored plates.

WILLIS, HENRY STUART AND MARTIN MARC CUMMINGS

Diagnostic and experimental methods in tuberculosis. Second edition Springfield Illinois Charles C Thomas 1952 373 p. Illus. 24 cm. $10.00 1253

Contents. Part I, Laboratory diagnosis Description of the secretions, excretions and constituents of the body in tuberculosis The tubercle bacillus. Demonstration of the tubercle bacillus by staining methods. Demonstration of the tubercle bacillus by methods of concentration and cultivation. Culture media. Demonstration of the tubercle bacillus by inoculation of animals. The non pathogenic acid-fast bacteria. Part II, Related clinical and laboratory methods. Protective occlusion. Antibacterial agents—methods of determining sensitivity The preparation and application of tuberculin Serological diagnosis. Part III, Some methods of value in the study of tuberculosis experimentally produced: Inoculation of animals with the tubercle bacillus. Induced tuberculosis in animals. Methods of studying induced tuberculosis in animals. Histological technique. Bibliography. Author index. Subject index.

Note. About one-third of this work is devoted to descriptions of laboratory techniques which are useful in the diagnosis of tuberculosis, and the remaining two-thirds is devoted to related clinical and experimental methods. It is addressed to upperclass students in medical schools, to graduates in clinical medicine, to public health workers, and to beginners in medical research. Techniques are described in adequate detail for most purposes, and formulas are included for culture media, etc. Moreover, the text is cross referenced to the bibliography of 501 literature citations for the benefit of those readers who need fuller information on specific points. The first edition was published in 1928. The work was almost wholly rewritten for this edition in order to incorporate the great advances in this field in the past two decades.

ZACKS DAVID

Photoradiography in search of tuberculosis. Baltimore The Williams & Wilkins Company 1949 297 p Illus. 26 cm. $5 00. 1254

Contents. Introduction. Organization. Planning for the arrival of the X-ray field unit. X ray field unit in action. Essentials for production of satisfactory photoradiograms. Problems in screening photoradiograms. Interpretation of chest roentgenograms in tuberculosis case finding. The role of the general practitioner. The role of the industrial medical department. The role of the diagnostic chest clinic. Duration of follow-up period. Follow-up plan. Cost of mass chest X-ray surveys. Illustrations. Promotional and educational materials. Record forms and reports. Bibliography Index.

Note A manual of the organization and administration of "mass" X-ray surveys made to detect tuberculous individuals in communities or other groups. Tested techniques for preparing the group for reception of the X-ray field unit are described and are followed by descriptions of practical methods for evaluation of the results of the survey in the medical and public health programs. The illustrations include a serial X-ray study of fourteen typical cases such as might be discovered in a mass survey and an atlas of 230 reproductions of chest photoradiograms with discussions.

VENEREAL AND GENITOURINARY DISEASES

BRAASCH, WILLIAM FREDERICK, AND JOHN L. EMMETT

Clinical urography an atlas and textbook of roentgenologic diagnosis. Philadelphia W B Saunders Company 1951 736 p. Illus. 26 cm. $25 00 1255

Contents. Methods in urographic diagnosis. The plain film of the urinary tract. The normal urogram. Dilation of the urinary tract, urinary stasis, the obstructive uropathies, atony, neurogenic and neuromuscular dysfunction. Urinary calculi. Nontuberculous infections of the urinary tract. Tuberculosis of the genito-urinary tract. Anomalies of the Renal cysts. Tumors of the genito-urinary tract. Anomalies of the urinary tract. Urethrography seminal vesiculography rectography and other special methods of examination. Miscellaneous. Index.

Note A comprehensive, lavishly illustrated treatise. There are 1341 figures, most of which contain reproductions of more than one roentgenograph. Throughout the book the textual discussion is directly related to the roentgenographs. Nevertheless, the text is organized so that it constitutes a monograph of urographic diagnosis. Selected bibliographies are appended to the chapters. The authors are associated with the Mayo Clinic.

COLBY FLETCHER HATCH

Essential urology Baltimore The Williams & Wilkins Company 1950. 580 p Illus. 24 cm. $8.00 1256

Contents (abridged) Part one, Embryology anatomy and physiology of the genito-urinary organs. Part two, Examination of the urological patient. Part three, Diseases of the genito-urinary organs. Index.

Note In this textbook for medical college students there is considerable emphasis on both gross and microscopic pathology. Besides over normal embryology anatomy and physiology are outlined. Diseases of particular organs, for example the bladder are discussed individually under the following subheadings: etiology pathology, symptoms, diagnosis, treatment, and prognosis. Also a list of references.

ences is supplied. The author is Chief of the Urological Service of the Massachusetts General Hospital and member of the faculty of Harvard Medical School.

HERBUT PETER ANDREW

Urological pathology 527 illustrations, including 2 in color Philadelphia Lea & Febiger, 1952 2 v illus. (part col d) 24 cm. $24 00. 1257

Contents: Volume I: Embryology of urinary system. Urethra. Bladder Ureters and pelves. Kidneys. Index. Vol. II: Adrenals. Embryology of male genital system. Penis Prostate. Seminal vesicles. Spermatic cord. Epididymides. Testes. Scrotum. Index.

Note. A comprehensive, well illustrated work. It is arranged by region, and under each region the individual diseases are discussed under the following subheadings: definition, distribution, cause, clinical manifestations, microscopic appearance, gross appearance complications, clinicopathologic correlation, diagnosis, treatment and prognosis. Extensive literature references are included. Although suitable for use in instruction, the book is essentially reference work rather than textbook. The author is Professor of Pathology on the faculty of Jefferson Medical College.

LIPPMAN RICHARD WILLIAM

Urine and the urinary sediment, a practical manual and atlas. Springfield, Illinois Charles C Thomas, 1952 124 p. illus. (part col d) 26 cm. $7.50 1258

Contents: Proteinuria and elements of the urinary sediment. Observations on the urine in disease. General considerations and technique. References Index.

Note: The main feature of this short monograph is series of 87 reproductions in color of photographs of urinary sediments. These photographs are original and were made by the author. In the text of the book the author has discussed the examination of urine from the standpoint of the clinician interested in the diagnosis of disease. Also he has described specifically and in detail related clinical laboratory procedures. The list of references includes 93 citations.

McCREA, LOWRAIN EDWARD

Clinical cystoscopy technic, procedures diagnosis treatment. Drawings by R. Engle Shafter With 742 illustrations 201 in color Second edition. Philadelphia F A. Davis Company 1949 585 p. illus. (part col d) 26 cm. $28.00 1259

Contents (abridged) Vol The cystoscope. Introduction of the cystoscope. The normal bladder. Cystitis Miscellaneous affections of bladder. Tumors of the bladder Vesical calculus. The neurogenic bladder. Prostatic hypertrophy The ureters. Ureteral catheterization. Bibliography Index. Vol. II Renal anomalies. Renal function tests. Hydronephrosis Nontuberculous infections of the kidney Medical diseases of the kidney Specific infections of the kidney Renal cysts. Tumors of the kidney Retroperitoneal cysts and tumors. Urology in the female. Urology in children. Urological roentgenography Bibliography Index.

Note A comprehensive, fully detailed treatise addressed to upperclass and graduate medical college students, general practitioners of medicine, gynecologists, and specialists in urology The various cystoscopic manipulations and procedures are both described in the text and shown in the illustrations. The illustrations are special feature. Not only are they numerous but they are clear and well reproduced. Many of the colored illustrations are reproductions of photographs taken in color The first edition was published in 1941. Many useful revisions and augmentations have been made in this edition. Both the textual material and the illustrations have been increased. The index has been much improved.

NARATH PETER ALFRED

Renal pelvis and ureter New York Grune & Stratton, 1951 429 p. illus. 26 cm. $12.50 1260

Contents: Terminology The embryology of the ureter and the renal pelvis. The final form of the renal pelvis. The normal anatomy of the ureter and the renal pelvis. The normal histology of the renal pelvis and the ureter. The dynamics of the upper urinary tract. The tonus of the urinary tract. Resorption and absorption in the upper urinary tract. Various forms of extravasations. The roentgenography of the upper urinary tract. Bibliography. Index of authors. Index of subjects.

Note: A monograph on the embryology, gross and microanatomy and the physiology of major part of the urinary system. Basic knowledge is emphasized, but since the book is designed to be of practical aid to urologists, considerable information that is directly related to diagnosis is included. The book is based both on the literature and on the author's own investigations. The bibliography covers publications from 1477 to 1950 and is arranged chronologically The 164 figures include reproductions of many exceptional roentgenographs.

PRATHER, GEORGE CALVIN

Urological aspects of spinal cord injuries. Springfield Ill. Charles C Thomas 1949 146 p. illus. 22 cm. (American lecture series. Publication no 30 A monograph in American lectures in surgery edited by Michael E. DeBakey and R. G. Spurling. Division of neurosurgery editor Barnes Woodhall) $3 75 *1261*

Contents: The bladder. Changes in upper urinary tract after spinal cord injury Changes in sexual organs after spinal cord injury Genito-urinary complications. Results of treatment. Military policy Suggested program for treatment. References. Subject and author index.

Note: An authoritative resume of the pertinent neurological and urological knowledge, of methods of treatment, and of experience, especially in World War II. Essentially it is digest of previously published literature including the authors' own contributions. Since references are incorporated in the text to the citations of source articles in the extensive bibliography the book is also guide to the literature of the subject.

THOMAS EVAN WELLING

Syphilis its course and management. Foreword by John F Mahoney Chapter on "Public health aspects of syphilis" by Theodore J Bauer New York The Macmillan Company 1949 317 p. illus. 24 cm $5.50 1262

Contents Etiology of syphilis. A general description of the course of untreated syphilis. Immunology of syphilis. Interpretation of quantitative serologic tests for syphilis (STS) Iodides, bismuth, arsenicals, and fever therapy Antibiotics in the treatment of syphilis. Principles underlying antisyphilitic treatment. The examination and education of the patient. The diagnosis and treatment of early infectious syphilis. Latent syphilis. Late benign syphilis. Cardiovascular syphilis. Neurosyphilis. Syphilis and pregnancy Congenital syphilis. The public health aspects of syphilis. Index.

Note A comparatively short presentation in which modern diagnostic tests and treatment with antibiotics, especially penicillin, are stressed. Many data are presented in tabular form to save space. The book is based largely on an extensive experience with the rapid treatment of early syphilis at Bellevue Hospital

YEAR BOOK OF UROLOGY

The 1951 year book *of* urology (November *1950–October 1951*) *Edited by* William Wallace Scott. Chicago The Year Book Publishers Inc. 1952 383 p. illus. 20 cm. $5.50. 1263

Contents: A month with English urologists General considerations. The kidney The adrenals The ureter. The bladder. The prostate. The genitalia. Index. Index to authors.

Note: (1111*) This annual is similar in scope and organization to the other volumes in the same series. Under each of the chapter headings noted in the contents fairly long abstracts are presented. These abstracts give the essence of several hundred significant articles selected from the world's medical periodicals published during the period noted in the title. Some of the abstracts are supplemented by brief note in which the editor comments on the author's findings or relates the articles to other studies in the same field.

ALLERGY

EPSTEIN STEPHAN, editor

Allergic pruritus its dermatologic management. An official publication of The American College of Allergists Inc. Saint Paul Bruce Publishing Company 1952 76 p. illus. 20 cm. $2 50 1264

Contents Physiology and pharmacology of pruritus, by S. Rothman. Diagnosis of some nonallergic itching dermatoses, by C. Laymon. Classifications of eczema, by F W Lynch. The treatment of pruritus, by H. Rattner The local treatment of itching dermatoses, by J R. Webster ACTH and cortisone in allergic dermatoses, by R. L. Baer Psychosomatic aspects in eczema, by F W Lynch. Bacterial eczemas, by S. Epstein. The role of focal infection in skin diseases, by S. Epstein.

Note The papers presented at the Symposium on Itching Dermatoses held in connection with the sixth annual congress of the American College of Allergists in April, 1950, are collected in this volume. The authors are medical practitioners and the papers are addressed both to specialists in allergy and to general practitioners. The majority of the papers include references to related literature and illustrations. Some include formulas for ointments and other medicines.

RINKEL HERBERT JOHN, AND OTHERS

Food allergy By Herbert J Rinkel Theron G Randolph and Michael Zeller Springfield, Ill. Charles C Thomas 1951 492 p illus. 24 cm. $9.50 1265

Contents (abridged) Introduction The clinical importance of the cyclic concept of food allergy Etiology Symptomatology The specific diagnosis of food allergy The treatment of food allergy Specific foods as allergens. Recipes for use with therapeutic diets. Clinical case records. Appendix. Index.

Note A monograph in which most of the emphasis is on the practical aspects of food allergy However the basic mechanisms of food allergy are adequately discussed in the earlier chapters From chapter four onwards the book is devoted to recognition, specific diagnosis, and treatment. There are two chapters on symptomatology five on specific diagnosis, and two on treatment. Also, there is long chapter of recipes The book is primarily of interest to general practitioners of medicine and other medical practitioners who do not specialize in allergy Literature references are supplied with each chapter.

TAUB SAMUEL JAMES

Clinical allergy a practical guide to diagnosis and treatment. Second edition revised and reset. New York Paul B Hoeber Inc., 1951 276 p. 24 cm. $4 50 1266

Contents Introduction Immunochemistry and its relation to clinical allergy The dynamics of allergy Seasonal pollenosis or seasonal hay fever Perennial hay fever Asthma Etiologic diagnosis and treatment of asthma Molds. Disturbances of the skin due to allergy Drug allergy Miscellaneous allergic conditions Serum sickness and prophylaxis Preparation of extracts Appendix Index.

Note (1117*) In its second edition this useful work remains brief practical manual suitable for the general medical practitioner or medical student who is unable to make detailed study of allergic diseases. The main types of allergy are described concisely with reference to symptoms, tests, diagnosis, methods of treatment. Summarized case histories are included In this edition number of useful additions and revisions have been made and the book is about 75 pages longer than the first edition

TUFT, LOUIS

Clinical allergy Second edition with 54 illustrations 3 colored plates and 46 tables. Philadelphia Lea & Febiger 1949 690 p. illus. (part col d) 24 cm. $12 00 1267

Contents (abridged) Section I, General principles: Anaphylaxis. Methods of diagnosis. Methods and principles of treatment Section II, Etiologic types. Serum allergy Drug allergy Food allergy Pollen allergy Allergy to fungi. Allergy to other inhalants. Bacterial allergy Physical allergy Section III, Clinical manifestations: Asthma. Allergic rhinitis. Hay fever. Gastro-intestinal allergy Migraine. Section IV Allergic dermatoses and allergy in relation to the specialties Allergic dermatoses—general principles and methods of diagnosis. Urticarial dermatoses. Atopic dermatitis. Contact dermatitis. Allergy in children. Allergy in relation to the other specialties. Appendix. Bibliography Index.

Note. An authoritative manual addressed primarily to general practitioners of medicine. The style is concise and more information is included than the number of pages might indicate. Aspects of interest to the general practitioner such as clinical manifestations, diagnosis, and treatment are emphasized. However there are adequate discussions of general principles and etiology Typical illustrations are presented in synopsis form. A variety of useful information on laboratory methods, preparation of extracts, rules for patients, household and food allergies, and special diets is included in the appendix.

MALIGNANT GROWTH

AMERICAN CANCER SOCIETY

Manual of tumor nomenclature and coding. Prepared by Subcommittee of the Statistics Committee American Cancer Society New York American Cancer Society 1951 119 p. 29 cm $2 50 1268

Contents: Introduction. Histogenetic classification of neoplasms. Malignancy code. Numeric list. Alphabetic index. Appendix

Note The histogenetic and malignancy codes presented in this work are intended to be used "with the site codes in either the American Medical Association's Standard Nomenclature of Diseases or the World Health Organization's International Statistical Classification of Diseases, Injuries and Causes of Death. The manual is basic one for use in the record libraries, tumor registries, and in statistical presentations of tumor data.

AMERICAN CANCER SOCIETY

Mouth cancer and the dentist, by Hayes Martin. New York American Cancer Society 1949 63 p. illus. (part col d) 23 cm. 1269

Contents (abridged) Symptoms of mouth cancer. Early diagnosis of mouth cancer Differential diagnosis of mouth cancer. Miscellaneous benign lesions sometimes confused with mouth cancer. Causative factors of mouth cancer What the dentist can do to combat mouth cancer Current methods of treatment of mouth cancer Effects of radiation therapy on tooth structures. Indications for the extraction of teeth either before or after treatment of mouth cancer. Prognosis of mouth cancer. Summary.

—— Cancer of the lung, by Richard H. Overholt and Sherman W Atwell. New York American Cancer Society, 1950 51 p. illus. 23 cm. 1270

Contents Historical frontispiece. Introduction. Chronology of cases. Differential diagnosis: Complete Roentgen ray examination. Cytological examination. Bronchoscopy Exploratory thoracotomy. Multiple responsibility and where it rests. The first doctor consulted. The doctor who labels the shadow The thoracic surgeon. What has been purposefully omitted. Conclusions.

—— Carcinoma of the breast, by C. D Haagensen New York American Cancer Society 1950 120 p illus. 23 cm. 1271

Contents: Preface. Carcinoma of the breast. Chapter I, The problem of diagnosis. Chapter II, Treatment of carcinoma of the breast. Summary References.

—— Cancer of the esophagus and the stomach, by Owen H. Wangensteen. New York American Cancer Society 1951 112 p. illus 23 cm. 1272

Contents: Cancer of the esophagus and the stomach. Cancer of the esophagus. Cancer of the stomach. The future. References.

—— Value of early diagnosis of malignant lymphomas and leukemias, by Lloyd F

Craver New York American Cancer Society 1952 47 p. illus. 23 cm. 1273

Contents: Value of early diagnosis of malignant lymphomas and leukemias. Chapter I, The leukemias. Chapter II, The malignant lymphomas. References.

Note: A series of authoritative pamphlets which are addressed to dentists and medical practitioners who are not specialists in cancer but are often the first to see patients with cancer. The emphasis is on recognition and diagnosis. Some information is included on prognosis and therapy. The series is very well illustrated.

CANTRIL, SIMEON THEODORE

Radiation therapy in the management of cancer of the uterine cervix. Springfield Illinois Charles C Thomas, 1950 196 p illus. 22 cm. (The American lecture series. No. 55 A monograph in American lectures in radiation therapy edited by Milton Friedman) $5.50 1274

Contents: Introduction. Clinical considerations. The pathology and spread of cancer of the cervix. The complications of cervical cancer. Staging of cancer of the cervix. Biopsy. Radiation therapy. Cancer of the cervical stump. Cancer of the cervix in pregnancy. The position of surgery in the management of carcinoma of the cervix. Appendixes. The staging of cancer of the uterine cervix. Dosimetry in intracavitary radium therapy. References. Index.

Note: This monograph serves dual purpose in reviewing those features of cancer of the cervix manageable by roentgen and radium therapy and in presenting history of the development of radiation therapy based on the concepts as evolved from the Swedish and French schools of radiotherapy. Some emphasis is placed on X-ray therapy and the technics of application as well as on problems of dosimetry. Excellent diagrams and X-ray photographs and summary of worldwide results of radiation treatment made this volume useful reference work. The author is Director of the Tumor Institute of the Swedish Hospital in Seattle, Washington.

COLEY BRADLEY LANCASTER

Neoplasms of bone and related conditions their etiology pathogenesis, diagnosis and treatment. With 622 illustrations and 53 tables. New York Paul B Hoeber Inc. 1949 765 p. illus. 26 cm. $17.50 1275

Contents (abridged) Section one, Classification, etiology and diagnosis. Diagnostic survey in suspected cases of bone tumor. Differential diagnosis. Blood chemistry in the diagnosis of diseases of bone, by H Q Woodard. Section two, Benign tumors and tumorlike lesions of bone. Osteoma. Nonosteogenic fibroma of bone. Chondroma. Benign chondroblastoma of bone. Hemangioma of bone. Solitary bone cyst. Fibrous dysplasia of bone. Giant cell tumor. Adamantinoma. Chordoma. Sarcoma as late development in benign lesions of bone. Section three, Primary malignant tumors of bone. Section four. Tumors involving bone by extension. Section five, Metastatic tumors involving bone. Section six, Tumors of bone in special localities. Tumors of the skull—jaw bone—thoracic wall—pelvic bones—vertebral column—hands and feet. Tumors of bone in childhood. Section seven, Surgical treatment. Section eight, Radiation therapy. Section nine, Constitutional therapy. Effects of bacterial products on tumors of bone. Biochemical treatment of tumors of bone. Treatment with radioactive isotopes. Section ten, Lesions of the skeletal system that may simulate neoplasms of bone. Section eleven, Miscellaneous: Pathologic fracture. Medicolegal aspects of trauma in tumors of bone. The experimental production of bone sarcoma. Index.

Note. A comprehensive work written from the clinical viewpoint. The 74 subsections cover all facets of the subject which are pertinent to diagnosis, prognosis, and treatment. Most of the conditions discussed are shown also in the illustrations. An unusual feature is the inclusion of more than 30 tables in which data from case histories are summarized. The book is based primarily on the author's extensive experience in the Bone Tumor Department of Memorial Hospital for Cancer and Allied Diseases in New York City. However, here he has also searched the literature and has incorporated the pertinent results of other workers in the field. Each of the sections concludes with bibliography.

CONFERENCE ON CANCER DIAGNOSTIC TESTS

Proceedings of the first Conference on Cancer Diagnostic Tests, sponsored by the National Advisory Cancer Council, 1950 Federal Security Agency Public Health Service National Institutes of Health, National Cancer Institute. Washington, D C. Government Printing Office, 1951 91 p. illus. 23 cm. (United States. Public Health Service. Publication no 96) Paper $0.30. 1276

Note: A collection of the papers and discussions, together with bibliographical references, that constituted the proceedings of conference held in Chicago on October 14 1950. The conference was divided into three successive sessions, at each of which the pattern was the same: main speaker followed by three or four members of panel he spoke more briefly. The three sessions covered the three fields in which the chief diagnostic test work had been done, namely blood proteins, enzymes, and immunology. The work is of interest primarily to medical clinicians and to biochemists and other scientists engaged in research in the field.

CORSCADEN, JAMES ALBERT

Gynecologic cancer Baltimore The Williams & Wilkins Company 1951 368 p illus. 23 cm. $6.00. 1277

Contents: Introduction. Diagnosis. Cancer of the vulva. Cancer of the vagina. Cancer of the cervix. Cancer of the corpus uteri. Neoplastic diseases of the chorion. Cancer of the fallopian tube. *Cancer of the ovary.* The menopause. *Management of the cancer patient.* The nature of cancer. Index.

Note. The author stressing the importance of early detection, shows that the cures in cases of gynecologic cancer can today be more than doubled without the discovery of any new principle or technique in diagnosis or therapy and puts the responsibility upon the medical profession. The work is comprehensive illustrated manual for either general practitioner or specialist. The bibliographical references at the ends of the chapters are both extensive and up to date.

CUNEO, HENRY M AND CARL W RAND

Brain tumors of childhood. Springfield Ill. Charles C Thomas, 1952 224 p illus. 23 cm. (American lecture series. Publication no 104 A monograph in American lectures in surgery) $5 75 1278

Contents: Astrocytoma. Medulloblastoma. Craniopharyngioma. Ependymoma. Pinealoma. Papilloma of the choroid plexus. Glioblastoma (spongioblastoma) multiforme. Meningioma. Glioma of the optic nerve. Metastatic and malignant invasive tumors. Eosinophilic granuloma of bone, xanthomatosis and reticulo-endotheliosis. Infectious granulomata. General considerations. Index.

Note: A monograph based primarily on decade of experience in the Children's Hospital in Los Angeles during which "83 verified cases of brain tumor and/or granulomatous lesions were encountered" and secondarily on the literature. The classes of tumors named in the table of contents above are discussed against background of actual case histories. The 60 illustrations are largely drawn from the same cases. The book is of interest to tumor specialists and pediatricians.

DYER, HELEN MARIE

An index of tumor chemotherapy A tabulated compilation of data from the literature on clinical and experimental investigations. Washington D C. Government Printing Office, 1950 329 p. 23 × 29 cm. (United States. Federal Security Agency Public Health Service) Paper 1279

Contents. Historical record. Selection of material for the Index. Classified index of therapeutic data: Inorganic compounds. Metal— and halogen—containing organic compounds. Organic sulfur compounds and sulfur derivatives of miscellaneous organic compounds. Organic compounds. Aliphatic compounds. Aromatic compounds. Miscellaneous carbocyclic compounds. Miscellaneous heterocyclic compounds. Aldehydes. Alkaloids. Antibiotics. Carbohydrates. Carcinogenic compounds. Dyes. Lipids. Mustard gas and nitrogen mustards. Miscellaneous oils. Proteins and protein derivatives. Sulfonamides and related substances. Vitamins, provitamins and vitamin antagonists. Peroxides. Radioactive agents. Miscellaneous materials; Coagulants and anticoagulants of blood. Enzymes. Hormones. Plant products. Venoms. Alphabetical index of agents. References.

Note. A comprehensive survey of the literature on the treatment of tumors by chemical methods is presented in this index for investigators in cancer research. The work consists of four parts: (1) 13 pages of introductory text, (2) 148 pages of the classified tabulated index of chemotherapeutic tests, comprising 3011 numbered items, (3) 33 pages of alphabetic index, and (4) 94 pages containing 2313 bibliographical citations of periodicals and other sources for the indexed items. Tabulated for each of these 3011 reported experiments are the following: its number the name of the chemical agent, the type of tumor the species (whether man, dog, rabbit, rat, mouse, etc) f the host, the number of hosts involved in the experiment, the dosage, the number and period of treatments, the route (whether oral, local, injected, subcutaneous, inhaled, etc.) of the treatment, the effect (or effects) claimed, the reference number to the bibliographical list, and the date of the report.

ELLER, JOSEPH JORDAN AND WILLIAM DOUGLAS ELLER

Tumors of the skin benign and malignant. Second edition thoroughly revised and enlarged 550 illustrations and 3 colored plates. Philadelphia Lea & Febiger 1951 697 p. illus. (part col d) 24 cm $15 00 1280

Contents General considerations. Benign tumors of the skin: Tumors of connective tissue origin. Tumors originating from muscle or nerve tissue. Nevi and other developmental disturbances of the skin. Tumors of infectious origin. Precancerous conditions of the skin. Malignant tumors of the skin. Carcinomas of the skin. Malignant melanoma. Sarcomas. Lymphomas (leukosis) Cutaneous surgery and plastic repair of skin tumors. Radiation physics. Author's index. Subject index

Note (1446) Skin tumors and tumors of other tissues, such as those of the mouth, which are often first seen by the dermatologist are covered in this book The treatment is comprehensive with emphasis on diagnosis and treatment. The book is based both on the authors' own extensive experience and on the literature. A considerable fraction of the illustrations are photographs selected from wide range of cases Extensive bibliographies are included. The revisions and additions made to the text, illustrations, and bibliographies for this edition are substantial.

FARBER SEYMOUR MORGAN AND OTHERS

Cytologic diagnosis of lung cancer By Seymour M Farber Milton Rosenthal, Edwin F Alston Mortimer A. Benioff and Allen K. McGrath, jr Springfield *Illinois* Charles C Thomas 1950 59 p illus 29 cm. $7.50 1281

Contents. Introduction Evolution of cytologic technique. Technique. *Histology of the respiratory tract in normal and benign pathologic conditions.* Pathology of bronchogenic carcinoma. Technical advantages for the study of cell detail with wet smears. Identification of non-malignant cells. Cytologic criteria of malignancy Clinical material and data. Clinical and pathologic results. Conclusion. Bibliography Color plates.

Note. An authoritative work on the diagnosis of lung cancer by examination of sputum and bronchial washings, technique hich affords much earlier diagnosis than is possible with other diagnostic procedures. The work is based on study of 1128 cases. Cytologic diagnosis was found to be fully as accurate as bronchoscopy However the authors point that is sensitive method that is reliable only after the cytologist has gained considerable experience with it. A bibliography lists 98 references. There are 60 reproductions in color of microphotographs of tissues and cells.

GATES, OLIVE, AND SHIELDS WARREN

A handbook for the diagnosis of cancer of the uterus by the use of vaginal smears. With a *foreword by George N Papanicolaou.* Third edition. Cambridge, Mass. Harvard University Press 1950 214 p illus. 28 cm. Paper $5 50 1282

Contents General considerations relating to the vaginal smear method. Technique. Morphology of genital tract. Normal cytology of the vaginal smear Pathology of cancer of the uterus. Characteristics of malignant cells in smears. Diagnosis of smears taken following radiation therapy Sources of error in diagnosis. General aids in use *of the vaginal smear method.* Current appraisal of the vaginal smear method. The vaginal smear in relation to carcinoma in situ and early carcinoma. References. Plates. Index.

Note (1124) *A standard laboratory guide written for both the* practicing pathologist and the laboratory technician. The material is presented so as to be of particular value to those who must resort to self-training in learning this technique for detecting cancer in its incipient forms. The third edition reflects further experience with the technique and some extension of its applications. Changes have been made in the text of all but two of the chapters. The wide interest in the technique is reflected in the 70 references which have been added to the bibliography 18 illustrations have been added.

GESCHICKTER CHARLES FREEMAN, AND MURRAY M. COPELAND

Tumors of bone. Third edition. 642 illustrations. Philadelphia J B Lippincott Company 1949 810 p illus. 26 cm. $17.50 1283

Contents (abridged) Part One, Embryogenesis of bone and its relation to skeletal tumors. Part Two, Tumors of osseous origin: Osteochondromas. Multiple exostoses or hereditary deforming chondrodysplasia. Chondromas or chondromyxomas. Forms of osteogenic sarcoma—primary chondrosarcoma—secondary chondrosarcoma. Chondroblastic tumors; benign and malignant. Osteogenic sarcoma. Histologic variants of the bone cyst and the multiple form of osteitis fibrosa (von Recklinghausen's disease) Fibrous dysplasia. Benign giant-cell tumor—osteoclastoma. Microscopic variants and recurrent cases of giant-cell tumor. *Extraskeletal* giant-cell tumors. Part Three, Tumors of nonosseous origin: Ewing' sarcoma. Multiple myeloma. Skeletal metastases arising from carcinoma and neuroblastoma. Osseous changes in disease of the bone marrow and lymphoid tissue. Fibrosarcoma of the bone and bone involvement by direct extension of sarcoma of the neighboring soft parts. Part Four, Tumors of specialized skeletal structures: *Primary tumors of the cranial bones.* Tumors of the jaw Tumors of tendon sheaths, joints and bursae. Tumors of the spine. Part Five, Differential diagnosis: Differential diagnosis. Juvenile lesions of bone. Endocrinopathies and rare diseases of bone. Index.

Note. A carefully prepared reference book for the roentgenologist, the pathologist, the surgeon, and the practitioner The various bone tumors are individually presented roentgen observations, microscopic features, clinical course and diagnosis, prognosis, and treatment are discussed. The text, referring to an extensive international literature, is accompanied by excellent illustrations. More than 400 case reports are condensed in tabular form. The third edition, published 13 years after the second one, includes number of new chapters, such as those devoted to fibrous dysplasia, osteoid osteoma, tumors of the spine, endocrine changes in bone, and rare diseases of bone. Several older chapters have been entirely rewritten. There are also many new illustrations.

HARTWELL JONATHAN LUTTON

Survey of compounds which have been tested for carcinogenic activity Second edition. Washington D C. Government Printing Office, 1951 583 p. illus. 24 cm. (United States Federal Security Agency Public Health Service. Publication no. 149) $4.25 1284

Contents: Introduction. Tabular review Inorganic compounds. Organic compounds: Aliphatic. Monocyclic. Bicyclic. Tricyclic. Tetracyclic. Pentacyclic. Hexacyclic and higher. Azo compounds. Unclassified. Addenda. Bibliography. Heterocyclic compounds.

ography Compound index. Route index. Site-of-application index. Species index. Tumor-site index. Vehicle index.

Note: This book lists in systematic fashion 1329 chemical compounds which have been tested on animals, chiefly mice and rats, for carcinogenic activity as reported in the literature of the subject through 1947. Only chemical compounds are listed. Mixtures such as tars, irradiated sterols and articles of diet were excluded. Also excluded were reports where the observations extended for period of less than one month from the first administration. Tabulated for each compound are the following: reference to the literature by author and date, animal and number of animals, strain or type of animal, sex, preparation and dose, site and route, number of animals with tumors and the type of tumor if any, survival records, and duration of the experiment. The first edition of the survey was published in 1941. The second edition included the tests that were listed in the first edition and about as many more, the results of which were published from 1940 to 1947

MULLIGAN RICHARD MICHAEL

Syllabus of human neoplasms. With 230 illustrations. Philadelphia Lea & Febiger 1951 317 p. illus. 26 cm. $7.50 1285

Contents: Introduction. Epithelial neoplasms of skin and appendages. Neoplasms of mesenchymal origin. Neoplasms of neuroectodermal origin. Neoplasms of the alimentary tract. Neoplasms of the respiratory tract. Neoplasms of the urinary tract. Neoplasms of male genitalia. Neoplasms of female genitalia. Neoplasms of endocrine glands Miscellaneous neoplasms. Supplement. Index.

Note: An introductory guide addressed to medical students, interns, and graduate practitioners of medicine. Pathological and clinical features of the common neoplasms are correlated. Data are included on incidence by age, sex, and race, and on survival rates. The illustrations are reproductions of microphotographs. Literature references are included in the chapters. The author is Professor of Pathology in the School of Medicine of the University of Colorado.

MURPHY, DOUGLAS POWER

Heredity in uterine cancer Cambridge, Mass. Published for The Commonwealth Fund by Harvard University Press 1952 128 p. 22 cm. $2 50 1286

Contents (abridged) Section I, The literature: Study by Bobeck of familial incidence of uterine cancer. Other reports of familial occurrence of cancer and related diseases. Discussion of the literature. Section II, Materials and methods: Purpose of investigation. Pilot and main studies. Plan of investigation. Cancer probands. Control probands. Sources of information for locating individuals. Family visiting. Compilation of family record. Coding of histories. Section III, The results: The tables. Characteristics of probands. Characteristics of relatives. Section IV, Discussion Selection of the families. Methods employed in collecting data. Results. Conclusions. References. Index.

Note: A report of study conducted to find out whether disposition toward cancer is inherited. Data were collected on the occurrence of cancer among the relatives of 201 women who were suffering from uterine cancer and from the relatives of 215 control probands, total of 6,445 individuals. The methods of study are fully described and the results are analyzed in series of more than 50 tables. Among the conclusions is "the evidence supports the conclusion that heredity factors affect the frequency with which cancer appears in the uterus. The author is associated with the Gynecean Hospital Institute of Gynecologic Research of the University of Pennsylvania.

NATIONAL CANCER CONFERENCE

Proceedings of the first National Cancer Conference. American Cancer Society and The National Cancer Institute of the U S. Public Health Service, Federal Security Agency 1949 310 p. illus. 23 cm. 1287

Contents (abridged) Outline of the conference: its background and its purposes, by C. S. Cameron. Part one, Biological phenomena of growth: Differentiation of strains of guinea pigs under inbreeding, by S. Wright. Mutations in transplantable tumors, by G. D. Snell. Phosphatases of the mitotic apparatus in cultured normal and malignant mouse cells, by J J. Biesele. Chromosomes, chemical stimulators, and inhibitors of normal and abnormal plant growth, by A. F Blakeslee. The problem of cellular differentiation, by P Weiss. Genetic evidence of vertebrate individuality, by M. R. Irwin. Androgens and growth phenomena, by C. E. Moore. Factors influencing endometrial growth in monkeys, *Macaca mulatta*, by F L. Hisaw Mode of action of the nitrogen mustards—a new working hypothesis and its possible relation to carcinogenesis, by A. Haddow Part two, Principal addresses: Time and the cancer problem, by E. C. D. Hickman. Fundamental scientific research and its applications, by B. Cohen. Part three, Panel discussions: Tumors of the reproductive tracts and breast, including endocrinology The lymphoblastomas. Head-and-neck tumors. Lung cancer. Soft-part tumors. Bone tumors. Tumors of the nervous system. Epidemiology including environmental and occupational cancer. Professional education techniques as they relate to cancer. Services and facilities. Cancer registration. Administration of grants in cancer Index.

Note: The conference whose proceedings are published in this work was planned effort to foster communication of ideas among various groups of researchers, clinicians, and others concerned with the cancer problem. Nine formal papers and two addresses, whose titles and authors are given above, were presented on the first day of the conference. The rest of the proceedings consisted of panel discussions. In the published volume the summaries of the panel discussions occupy three-fifths of the space. The work is convenient and readable summary of the fundamentals of cancer knowledge with some emphasis on cancer research as of 1949.

NETTLESHIP ANDERSON

Basic principles of cancer practice a book on diagnosis, prognosis, and treatment of human neoplasms for the general practitioner and medical student. Baltimore The Williams & Wilkins Company 1952 398 p. illus. 24 cm. $7 00 1288

Contents (abridged) The status of present day cancer practice. Clinical behavior of neoplasms. Methods of cancer diagnosis. The clinical pathology of neoplasms. Local and systemic effects of cancer. Treatment of cancer. Neoplasms of children. Neoplasms of the skin. Neoplasms of the gastro-intestinal tract, liver, and pancreas. Neoplasms of the breast. Neoplasms of the female genital system. Neoplasms of the male genito-urinary system, kidney bladder, and prostate. Neoplasms of blood forming organs. Neoplasms of the lung, nasopharynx, larynx, trachea, and bronchi. Neoplasms of bone, muscle, and connective tissue. Neoplasms of the central nervous system. Neoplasms of the endocrine organs. A review of the biochemistry of cancer. Relation of occupation and trauma to cancer. Index.

Note: The expressed purpose of this book is to make available to advanced medical college students and general practitioners of medicine the highlights of the contemporary status of cancer diagnosis and treatment. The physician is offered information on general aspects such as the pathological behavior of tumors and also on very specific topics such as the current status of hormone therapy No subject is covered exhaustively Good literature lists are included for those physicians who wish to read further There are 106 figures. The purpose of the book is to alert the general physician to the detection of cancer and to inform him about therapies and about the prognoses of various types. The author is Professor of Pathology in the University of Arkansas.

RANKIN FRED WHARTON AND A. STEPHENS GRAHAM

Cancer of the colon and rectum its diagnosis and treatment. Second edition. Springfield, Illinois Charles C Thomas, 1950. 427 p. illus. 24 cm. $8 50 1289

Contents: Part I, General considerations: Anatomy and physiology Incidence, occurrence and etiology Pathology Symptoms and diagnosis. Differential diagnosis. Part II, Treatment. Operability resectability and prognosis. Choice of operation. Radiotherapy of carcinoma of the rectum. Operative mortality and end-results. Preoperative and postoperative treatment. Part III, Operative procedures: Historical considerations. Procedures for overcoming obstruction. Procedures for extirpation of lesions of the colon. Procedures for extirpation of lesions of the rectosigmoid, rectum, and anus. Palliative and miscellaneous procedures. Author index. Subject index.

Note: A treatise for graduate physicians and surgeons. The importance of early diagnosis is emphasized and the authors describe the various techniques of diagnosis and differential diagnosis fully. About half of the book is devoted to descriptions of the surgical techniques and related matters of concern to the surgeon. The book is on the authors' own extensive experience and also on the experience of others as reported in the literature. A wide range of data on such details as frequency of symptoms, accuracy of diagnosis

and mortality rates is presented in more than 100 tables. Extensive bibliographies are included. The first edition appeared in 1939. Much important material has been added in this edition.

REESE, ALGERNON B

Tumors of the eye. With 511 illustrations, 122 in full color New York Paul B Hoeber, Inc., 1951 574 p. illus. (part col'd) 27 cm. $20 00 1290

Contents: Epithelial tumors of the lid, conjunctiva, and cornea. Epithelial tumors of the uvea. Retinoblastoma. Glioma. Meningioma. Tumors of the peripheral nerves. Pigmented tumors. Angiomatous tumors. Leiomyoma. Rhabdomyoma, rhabdomyosarcoma, myosarcoma, and granular cell myoblastoma. Fibroma, fibrosarcoma, myxoma, and myxosarcoma. Bony and cartilaginous tumors—ossification. Lymphomatous tumors, myeloma, and chloroma. Mixed tumors, carcinoma, muco-epidermoid tumor, and adenoma of the lacrimal gland. Dermoid cyst, dermoid tumor, dermolipoma, and teratoma. Neoplastic metastasis to the eye and orbit. Orbital neoplasms and lesions simulating them. Index.

Note. A comprehensive presentation of the accumulated knowledge of tumors of the eye and its adnexa. The main emphasis is on the clinical aspects of the subject, but many of the illustrations of malignant growths are potentially of interest also to specialists in pathology and tumors. Unusual and unique tumors are described as well as those of more common occurrence. Radiation therapy and surgery are both covered. The author has surveyed the literature and has included extensive bibliographies to which statements in his text are keyed. However much of the material in the book has been drawn from his own experience at the Institute of Ophthalmology in Presbyterian Hospital and other institutions in New York City

SACHS ERNEST

Diagnosis and treatment of brain tumors and care of the neurosurgical patient. Second edition. 348 illustrations and ten color plates. St. Louis The C. V Mosby Company 1949 552 p. illus. (part col d) 25 cm. $16 00 1291

Contents: Surgical anatomy and physiology. Methods of examination. The surgical pathology of brain tumors. General symptoms and signs of increased intracranial pressure. Cerebral tumors, local signs and symptoms. Tumors of cerebellum, pons, and medulla. Diseases of the pituitary gland. Differential diagnosis between brain tumors and other conditions. Anesthesia. Operative technique and general discussion of neurosurgical methods. Cranial cases with the operative procedures that were employed. Spinal and peripheral nerve operations. Closure of wounds. Postoperative care. Review of neurological surgery and glimpse into its future. Index.

Note. (1214) In this work the author's *Diagnosis and treatment of brain tumors*, St. Louis, 1931 and his *The care of the neurosurgical patient before, during and after operation*, St. Louis, 1945, have been integrated and at the same time revised and expanded. The new work—which apparently takes its edition numbering from *Diagnosis and treatment of brain tumors*—is an inclusive treatise suitable for study by advanced students in medical colleges who are preparing for the specialty of neurology and young neurosurgeons. Operative techniques are described explicitly and are shown in the illustrations, which include a number of roentgenograms. A considerable range of case histories is included. Selected references to the related literature have been supplied as footnotes.

VINCENT MEMORIAL HOSPITAL

The cytologic diagnosis of cancer By the staff of the Vincent Memorial Laboratory of the Vincent Memorial Hospital, a gynecologic service affiliated with the Massachusetts General Hospital, Boston, Massachusetts. The Department of Gynecology, Harvard Medical School. Published under the sponsorship of the American Cancer Society Philadelphia W B Saunders Company 1950 229 p. illus. (part col d) 25 cm. $7 00 1292

Contents: Normal cells from cervical and vaginal squamous epithelium. Normal cells from columnar epithelium of endocervix and endometrium. Cells not originating from epithelium of female genital tract. Squamous cell carcinoma of the cervix. Adenocarcinoma of the endometrium. Adeno-acanthoma of uterus. Other tumors of the female genital tract. Radiation changes in normal and malignant cells of the vaginal secretion. Cells of squamous epithelium of respiratory tract. The columnar epithelium of respiratory tract. Cells of non-epithelial origin in sputum. Squamous cell carcinoma of the lung. Other types of pulmonary carcinoma. Normal columnar cells from gastric mucosa. Carcinoma of the stomach. Normal cells of the urinary tract. Carcinoma of the genito-urinary tract. Normal cells of pleural and peritoneal fluid. Malignant cells in pleural and peritoneal fluid. Technic. Appendix. Bibliography. Index.

Note. A reference and study guide for physicians, cytologists, and other persons who are concerned with the interpretation of smears taken in the diagnosis of not only genital cancer but cancer of the lung and respiratory tract, cancer of the stomach, etc. A considerable part of the space has been devoted to reproductions of microphotographs, some of which are reproduced in color. Specific discussions of the microphotographs are preceded in each chapter by background discussion of the histology of the tissue that forms the subject of the particular chapter. Special emphasis is given to the interpretation of difficult smears and to the correct identification of cells that are deviations from normal forms. The book is based on very extensive experience with cytologic diagnosis at the Vincent Memorial Hospital Laboratory

WARD, GRANT EBEN, AND JAMES W HENDRICK

Diagnosis & treatment of tumors of the head and neck (not including the central nervous system) Baltimore The Williams & Wilkins Company, 1950. 832 p. illus. 26 cm. $15 00 1293

Contents: Introduction. The early development of the head and neck. Benign tumors and premalignant lesions of skin of the head and neck. Malignant neoplasms of the skin of the head and neck. Benign tumors and premalignant lesions of the lips. Cancer of the lips. Benign tumors and premalignant lesions of the oral cavity. Malignant tumors of the oral cavity Cancer of the tongue and floor of the mouth. Tumors of the jaws. Salivary gland tumors. Tumors of the tonsils, pharynx and base of tongue. Tumors of the paranasal sinuses and nasal mucous membranes. Tumors of the eye and adnexa. Tumors of the ear. Tumors of the larynx. Tumors primary in the neck. Tumors primary in the lymph nodes of the head and neck. Metastatic tumors of the neck. Tumors of the skull. Rehabilitation. Index.

Note: A full-scale treatment of clinical aspects designed both for general practitioners and specialists. The senior author organized the tumor clinics at the Johns Hopkins Hospital and the University of Maryland Hospital, and the junior author was associated with him at both institutions. The book is based mainly on the extensive experience of the authors, but information has been included from the published literature. Also some sections, for instance the one on malignant tumors of the nasal pharynx, have been written especially for this book by other specialists. The work is lavishly illustrated and there are extensive reference lists.

PEDIATRICS

ADVANCES IN PEDIATRICS. Volume V Editor S Z. Levine, associate editors, Allan M. Butler Margaret Dann L. Emmet Holt, jr., and A. Ashley Weech. Chicago The Year Book Publishers, Inc., 1952 272 p. illus. 24 cm. $7.00 1294

Contents: Advances in the treatment of bacterial meningitis, by H. E. Alexander. The nephrotic syndrome in children, by H. L. Barnett and others. The relation of vitamin K deficiency to hemorrhagic disease of the newborn, by H. Dam and others. Angiocardiographic studies in children, by J. Lind and C. Wegelius. Iron metabolism in infants and children—serum iron and iron binding protein—diagnostic and therapeutic implications, by C. K. Smith and others. BCG vaccination, by A. J. Wallgren. Subject index. Author index.

Note: (1129*) As in the earlier volumes of this series, each of the chapters or papers is a monographic survey of recent investigations and discoveries in a specific area of pediatrics. An extensive list of references is included to which statements in the papers are keyed. The editorial plan is thus different from reviews in which the significant literature of a single year is surveyed. The series is addressed to general practitioners of medicine.

THE AMERICAN ACADEMY OF PEDIATRICS. COMMITTEE FOR THE STUDY OF CHILD HEALTH SERVICES

Child health services and pediatric education. Report of the Committee for the Study of Child Health Services of the American Academy of Pediatrics with the cooperation of the United States Public Health Service and the United States Children's Bureau. New York The Commonwealth Fund, 1949 270 p. illus. 23 cm. $3 50 1295

Contents (abridged) Part I, Child health services: The study of child health services. Total volume of child health services. Private practice. Hospitals. Community health services. Health supervision for the preschool child. Part II, A, Undergraduate education. Part II, B, Graduate education. Staff in hospitals approved for pediatric residency. General inpatient training. Outpatient training. Ward rounds and conferences. Part III, General summary. References. Appendix. Tables referring to pediatric education. List of 70 approved medical schools in the United States, 1946–1947. Staff of pediatric departments in each of three groups of medical schools. Clinical facilities for pediatric teaching in each of three groups of medical schools. Content of pediatric course in each of three groups of medical schools. Pediatric department and medical school budgets in each of three groups of medical schools.

Note. This volume reports the results of a three-year study the objective of which was to bring attention to deficiencies in child health services and pediatric education in the United States with a view to correcting them. As the task assigned to the Study Committee was to collect the facts and report them, the Committee did not attempt to formulate recommendations based upon the findings. The Committee's supplement to this report *Child health services and pediatric education—methodology and tabulations on services*, New York: Commonwealth Fund, 1949 30 p $3.50 contains statistical tables and a survey of the methods pursued in gathering the data.

BRIDGE, EDWARD M.

Epilepsy and convulsive disorders in children. New York McGraw Hill Book Company Inc. 1949 670 p illus. 24 cm. (McGraw Hill series in health science Amos Christie, consulting editor) $10.50. 1296

Contents: Part one: Introduction and general concept. The hereditary factor. The factor of brain injury. Physiological factors. Personality factors. Environmental factors. The total background of epilepsy. Part two: The onset of epilepsy. Major seizures. Minor seizures. General management. Dietary treatment. Psychotherapy. Outcome. Community aspects and prevention. Part three: Diagnostic procedures. Appendix: Outlines for clinical study. Evaluation of etiologic factors. Screening tests of maturity and intelligence. Statistical recording of data. Care of patients. Prescriptions and preparations in common use. Determination of bromide in blood. Normal diets. Ketogenic diets. Dehydration diets. Creative activities for children with epilepsy. Occupations for persons with epilepsy. Alphabetical list of references. Index.

Note: An important work which is based principally on material accumulated at the Epilepsy Clinic organized in 1935 at Johns Hopkins Hospital where a group of pediatricians, psychiatrists, neuro-surgeons, social workers, laboratory technicians, and representatives from community agencies formed a team to study the various aspects of the problem. The clinical problems of causation and diagnosis, the sociological and psychiatric aspects, and details of practical care of affected children are considered. Each chapter opens with a pictorial table of contents which, with the other excellent illustrations, are aids in assimilating the material. The style is technical, and the book is intended for physicians, social workers, and others with professional training rather than lay readers. A 21-page bibliography is appended.

CAMPBELL MEREDITH

Clinical pediatric urology With a section on nephritis and allied diseases in infancy and childhood by Elvira Goettsch and John D Lyttle. Philadelphia W B Saunders Company 1951 1113 p. illus. 26 cm. $18.00 1297

Contents: Methods of examination and diagnosis. Urinary obstruction. Embryology and anomalies of the urogenital tract. Urinary infections. The male genital tract and the female urethra. Urogenital injuries. Urinary calculous disease. Tumors of the urogenital tract. The adrenals. Neuromuscular uropathy. Enuresis. Urologic surgery. Operative procedures. Nephritis and allied diseases in infancy and childhood. Index.

Note: A comprehensive treatise based both on the author's own experience in the urology of infants and children and on the pertinent literature. Although much information that is necessarily basic to adult urology as well has been necessarily included, the book's special value lies in its full discussion of the special diagnostic and operative techniques required in urologic practice with children. The long chapter (198 pages) on embryology and anomalies is of special interest to pediatricians and to urologists with pediatric practices. There are 543 figures, a considerable number of which contain reproductions of more than one drawing or photograph. Long bibliographies accompany all of the chapters. The author is Professor of Urology in New York University Post-Graduate Medical School.

CHOBOT, ROBERT

Pediatric allergy New York McGraw Hill Book Company Inc. 1951 284 p. illus. 21 cm. $6.00 1298

Contents: Forms of hypersensitivity. Diagnostic procedures. Asthma. Food allergy. Vasomotor rhinitis. Hay fever: pollens—molds and fungi. Skin allergies. Serum reactions and drug allergy. Allergy of the eye. Migraine. Physical allergy. ACTH, cortisone, and the future. Appendices: Anaphylaxis and human sensitivity. Common allergens. A typical allergen test table. Cases. Index.

Note. A relatively brief text and manual. The author has made no attempt to include something on every phase of the subject or to illustrate a wide range of cases. Instead he has presented a simple, to-the-point survey of topics most useful to the pediatrician and the general practitioner who is not a specialist in allergy. Selected literature references are included in most chapters. Synopses of 28 cases are given in an appendix. The author is Director of the Pediatric Allergy Clinic of New York University-Bellevue Center.

GREULICH WILLIAM WALTER, AND S IDELL PYLE

Radiographic atlas of skeletal development of the hand and wrist. Based on the Brush Foundation study of human growth and development, initiated by T Wingate Todd. Stanford, California Stanford University Press, 1950 190 p. illus. 31 cm. $10.00 1299

Contents (abridged) The rationale and technique of assessing the developmental status of children from roentgenograms of the hand and wrist. The need for a dependable method of determining the physical developmental status of children. The inadequacy of height-weight-age tables for determining developmental status. The relationship of the developmental status of the skeleton to that of the reproductive system. The relationship of the developmental status of the reproductive system to the degree of general bodily maturity. Skeletal status and general bodily maturity. Some effects of illness on the developing skeleton. The value and the limitations of the X-ray film of the hand in appraising the physical developmental status of children. How the standards were selected. Maturity indicators. How to proceed in assessing a hand film. A graphic method of recording skeletal assessments. What constitutes a significant deviation from normal? Male standards. Female standards. Maturity indicators of individual bones and epiphyses.

Note: A reference work based upon an original study carried on from 1931 through 1942 on a group of children without gross physical or mental defects. "The children were examined at three months intervals during the first post-natal year, at six months intervals from 12 months to five years of age, and annually thereafter. At each examination the child was measured and weighed, X-ray films were made of left shoulder, elbow, hand, hip, knee, and foot; psychometric and other psychological tests were administered; and a health history covering the period since the previous examination was obtained from the parents and the family physician. On the basis of the study the standards and the maturity indicators—to which about three-fourths of the space in this volume is devoted—were constructed. Each standard is in the form of a radiograph with accompanying legend. The maturity indicators are presented in the form of diagrammatic sketches of bones and epiphyses. In the

preliminary portion of the book relationships among skeletal developments and other manifestations of development, such as changes in the reproductive system, are discussed. The book is of interest to pediatricians, public health nurses, and other persons who are concerned with the development status of infants and children.

GRULEE, CLIFFORD GROSELLE, AND R. CANNON ELEY

The child in health and disease a textbook for students and practitioners of medicine. Second edition. Baltimore The Williams & Wilkins Company, 1952 1255 p illus 26 cm. $15 00 1300

Contents (abridged) General considerations. Nutrition. The newborn and prematurity Communicable diseases Acute infections. Chronic infections. The circulatory system including the blood, spleen, and lymph nodes. Blood and lymph. The respiratory system. The gastro-intestinal tract. The genito-urinary tract. Diseases of the nervous system including mental deficiency and psychiatric disturbances. The muscles, bones, and joints. Allergy eczema, and diseases of the skin The endocrines, abnormal endocrine states, obesity, dwarfism. The eye Adolescence. Surgical conditions and surgical principles in pediatrics. Miscellaneous subjects. Index.

Note (1132*) There are 100 chapters in the present edition of this comprehensive practical text and reference book. The 89 contributors represent not only the special field of pediatrics but also allied fields such as neurology orthopedics, bacteriology pathology dermatology dentistry and otolaryngology The typical chapter is concise, well-organized statement of the main facts on specific topic which is of concern to the pediatrician such as urinary infections, and it is supplemented by literature references. The second edition of the work is 190 pages longer than the first edition published in 1948. Several new chapters have been added and revisions have been made in most if not all of the chapters carried over

HAAS, SIDNEY VALENTINE AND MERRILL PATTERSON HAAS

Management of celiac disease. Philadelphia J B Lippincott Company 1951 188 p. illus. 24 cm. $5 00 1301

Contents. Scope and purpose of the work. History Definition. Incidence. Etiology Clinical symptoms Pathology Roentgenographic evidence. Digestion and absorption. Digestive juices, enzymes, etc Endocrine system. Nervous system and psychological considerations. Allergy Diagnosis Treatment. Prognosis. Celiac disease today—a concept based on the authors' experience. Course. An etiologic hypothesis. Summary Bibliography Index.

Note A monograph on digestive dysfunction of infancy and early childhood, defined by the authors in the following words: we define celiac disease as condition, seen primarily in infancy and childhood, here there exists prolonged intermittent diarrheal state resulting in various degrees of malnutrition. The authors' viewpoint is primarily clinical. They point out that the etiology of the disease is still unknown and that is "no clearcut diagnostic test or procedure Prognosis, however is excellent if polysaccharides (complex carbohydrates) are removed from the diet and monosaccharides, together with proteins and fats, substituted. The book is based both on the authors' extensive experience and on review of the literature. That is bibliography of 443 references.

HESS JULIUS HAYS AND EVELYN C LUNDEEN

The premature infant medical and nursing care. 101 illustrations. Second edition. Philadelphia J B Lippincott Company 1949 381 p. illus. 21 cm. $6 00 1302

Contents (abridged) Physiologic development. Growth and development. Minimum requirements for nurseries for full-term infants and premature infant stations Incubators. Routine of the premature infant station and routine procedures. Immediate care after birth. Transportation. Home care. Feeding and feeding technics. Breast milk. Artificial feeding. Vitamins and medication. Medical therapeutic agents. General therapeutic measures. Oxygen therapy Hemorrhage in the newborn premature. Erythroblastosis fetalis. The liver and bile passages. The skin. The eyes. The ears. Diseases of the respiratory tract. Disorders of the gastro-intestinal tract. Hernia. Anemia in the premature infant. Rickets, tetany and scurvy Meningitis. Syphilis. Later physical and mental development. Index.

Note (1117) A standard treatment for the instruction and guidance of nurses and physicians who are concerned with the care of premature infants. The subject is covered fully and techniques are described in detail. Much important material has been added to this edition including newly added information on the Rh factor, the use of antibiotics, and methods of feeding. Also, there new chapter in hich city-wide and state-wide plans for the care of premature infants in various parts of the United States of America are described.

LANMAN, JONATHAN T

Modern trends in infant nutrition and feeding With a foreword by L. Emmett Holt, jr New York Sugar Research Foundation, Inc., 1952 96 p illus. 23 cm. (Scientific report series. No. 14) 1303

Contents Historical. The composition of milks. Nutritive requirements in infancy: Protein. Fat. Carbohydrates. Water. Vitamins. Minerals. Trace elements. Feeding in infancy Bibliography.

Note. A convenient summary of accumulated knowledge and guide to selection of the significant literature. Although entitled Modern trends it is based on the literature and consists of accepted opinions and of facts derived from experimental investigations. Part of its usefulness derives from the existence of literature on the minor aspects of the subject as ell as on the major ones. There are 184 references in the bibliography Although sponsored by an organization dedicated primarily to research in the common sugars, there is no bias in favor of sugar except for table which shows that among the carbohydrates commonly used in infant feeding, sugar was the lowest in cost in New York in January 1952.

MEDICAL CLINICS OF NORTH AMERICA

Symposium on pediatrics. Philadelphia number Philadelphia W B Saunders Company 1952 1513–1875 p. illus. 23 cm. (Medical clinics of North America, November 1952) Cloth, $18 00 per year paper $15.00 per year 1304

Contents. Foreword, by W E. Nelson. The pediatric health examination, by T E. Shaffer. Developmental appraisal by the general practitioner by M. Sarchek. Posture changes in the growing child, by P A. Barba. Mother-child relationship in the first year, by J. A. by E. M. Flach. The relation of the family to the hospital, by J. A. Ross. Practical aspects of infant feeding, by E. P Baron. The first day of life—the physician's responsibility by C. C. Fischer. Management of the premature infant, by M. Kendall. Extraintestinal diarrhea by P E. McDonald. Lead poisoning in children, by E. A. Apathy Immunization procedures in private practice, by A. C. McGuinness. Antibiotics in pediatric practice, by A. D. Hunt, jr. The treatment of meningeal, miliary and pulmonary tuberculosis in children, by R. H. High. Encephalitis associated with the exanthems, by T F McN Scott. Infectious mumps and vaccination procedures, by T F McN Scott. Infectious (epidemic) hepatitis in infancy and childhood, by M. E. Drake. Recognition and management of rheumatic fever in childhood, by R. Ash. Clinical diagnosis of congenital heart disease, by C. R. E. Wells Cardiac catheterization and contrast study of the heart and great vessels in congenital cardiovascular defects, by D. F Downing. Iron deficiency in infants and children, by N J. Smith. Hemorrhagic disease in children—notes on its pathological physiology and clinical management, by L. M. Tocantins and R. Rodriguez. Precocious puberty and pseudopuberty by K. E. Paschkis. Gynecologic problems in the preadolescent and adolescent years, by E. R. Carrington. Diagnosis and treatment of hydrocephalus, by M. Scott. Nonfectious common lesions of infants and children, by H. M. Sinclair. Management of hernias in infants and children, by S. L. Crowe. Undescended testicle—differential diagnosis and management, by C. E. Koop. The deaf child, by D. Myers. Cancer in childhood, by J. R. Arey Index to volumes 34, 35 and 36 (1950, 1951 and 1952).

Note *Medical clinics of North America* is published six times year Each issue is devoted to symposium on topic of current importance. The November, 1952 issue contains the original papers in pediatrics which are listed above. Literature references are included with the papers and many of them are illustrated. The total number of figures in the book is 201. An unusual feature of this number is the inclusion of cumulative index to the *Medical clinics of North America* for the years 1950, 1951, and 1952.

NELSON WALDO EMERSON editor

Mitchell Nelson textbook of pediatrics. With the collaboration of sixty-three contrib-

utors. Fifth edition with 426 illustrations, 19 in color Philadelphia W B Saunders Company 1950 1658 p. illus. 26 cm. $13.50 1305

Contents (abridged) The field of pediatrics. Care and evaluation of well children. General factors in the care of sick children. Prenatal disturbances. The newborn infant. The premature infant. Unexpected sudden death. Nutritional disturbances. Miscellaneous diseases. Malignant tumors in early life. Infectious diseases. Poisoning from drugs, metals and food. The digestive system. The respiratory system. The blood. The spleen. The lymphatic system. The thymus gland. Disturbances of cellular fluid metabolism and related conditions. The genito-urinary system. Psychologic disorders. Disorders in language functions. The nervous system. Convulsive disorders. The cerebral palsies. The endocrine system. Diabetes mellitus. Hypoglycemia. The bones and joints. The muscles. Allergic diseases. The skin. The eye. Adolescence. Appendix. Index.

Note: (1133) A standard textbook for medical students and office reference book for medical practitioners. The scope and organization are indicated by the section titles given above. The typical section consists of a number of signed chapters supplemented by literature references. The chapter authors are outstanding teachers and practitioners in pediatrics and allied fields such as neurology pathology and dermatology The fourth edition published in 1945 was the first one edited by Professor Nelson, a former pupil of Dr. Mitchell, the original author of the work. That edition was a very substantial revision; however in the edition at hand the book has again been extensively revised. New sections have been added, and most of those carried over from the preceding edition have been rewritten in some degree.

RATNER, BRET

Allergy in relation to pediatrics. An official publication of The American College of Allergists. Saint Paul Bruce Publishing Company *1951 228 p. illus. 20 cm. $3 75 1306*

Contents: Genesis of allergy in infancy and childhood, by B. Ratner. Site of formation of antibodies, by T M Harris. Infection in the allergic child, by B. F Feingold. Critical evaluation of diagnostic tests for sensitization in infancy and childhood, by M. M. Peshkin. Significance of skin tests in respiratory and dermatologic allergy by L. W Hill. Asthma before the age of two, by W P Buffum. Asthma and hay fever in childhood, by E. R. O'Keefe. Allergy of the intestinal tract, by W A. McGee. Neurological allergy by R. C. Dees. Less commonly recognized allergic conditions in infants and children, by A. J. Horesh. Maternal infections in allergic children, by D. W Baruch and H. Miller. Prophylaxis of allergy in children, by R. H. Todd. Environmental control, by W C. Deamer. Drug therapy in hay fever and asthma in children, by J C. Overall. Practical treatment of eczema in the infant and young child, by A. V Stoesser. Office management of the allergic child, by J Glaser.

Note: The papers presented in cooperation with members of the Allergy Section of the American Academy of Pediatrics at the fifth annual meeting of the American College of Allergists in April, 1949 are collected in this volume. One contributor is a psychologist; all of the others are medical practitioners or teachers. Most of the medical practitioners are specialists in allergy or pediatrics. The book is of value both to specialists and to general practitioners.

SMITH CLEMENT ANDREW

The physiology of the newborn infant. Second edition. Springfield, Illinois Charles C Thomas 1951 348 p. illus. 24 cm. $8.50 1308

Contents. Introductory. Respiration—*fetal* aspects—neonatal aspects. The circulatory system. The blood. Icterus neonatorum. Metabolism and heat regulation. The physiology of the digestive tract. Fetal and neonatal nutrition—assimilation and metabolism of specific food substances. Minerals and vitamins. Renal physiology—regulation of water and electrolytes. Neonatal endocrinology. Neonatal immunology. Index.

Note: The physiology of the period of life in which more physiological alterations and adjustments occur than in any other comparable span is the subject of this book. Except for the omission of a discussion of the nervous system, the subject is covered thoroughly with careful cross-referencing between the text and the literature citations in the extensive chapter bibliographies. Some data based on animal experimentation are included, but most of the information has been derived from observations on human infants. The book is of primary interest to obstetricians and pediatricians.

The first edition was published in 1945. Revisions have been made in the text of most chapters and the length of the book has been extended by 25 pages. Recent literature has been added to the bibliographies.

SLOBODY, LAWRENCE BORIS

Survey of clinical pediatrics. New York McGraw Hill Book Company Inc., *1952 471* p. 24 cm. $7.50 1307

Contents: Growth and development. Feeding of infants and children. Vitamins. Preventive pediatrics. Psychologic problems. Treatment. Fluid and electrolyte balance. The normal newborn infant. Diseases of the newborn. Prematurity. Infectious diseases. Respiratory diseases. Heart disease. Gastrointestinal diseases. Surgical conditions of the abdomen. Genitourinary diseases. Neurologic conditions. Diseases of the skeletal system. Blood disorders. Neoplasms of infancy and childhood. Endocrine diseases. Allergy. Skin disorders. References. Index.

Note: Based on material previously used in teaching by the pediatric staff of the New York Medical College, this textbook covers the subject for medical students and general practitioners who wish to have the facts of modern practice in a convenient format. The outline form is the principal method of presentation and, together with the 22 tables in the text, is skillfully used to give a wealth of essential information at a glance. Most of the book is made up of condensed monographs on specific diseases and abnormalities. In general the material on a specific disease covers etiology, clinical features, diagnosis, prognosis, and treatment. The up-to-date bibliography consists of five books for general collateral reading and 33 books for additional readings on particular subjects. Dr. Slobody received the 1950 award of the Association for Help of Retarded Children.

TALBOT NATHAN BILL, AND OTHERS

Functional endocrinology from birth through adolescence. By Nathan B Talbot, Edna H. Sobel, Janet W McArthur [and] John D Crawford. Published for the Commonwealth Fund. Cambridge, Massachusetts Harvard University Press 1952 638 p. illus. 26 cm. $10.00 1309

Contents: The thyroid. The parathyroids. The adrenal cortex. The adrenal medulla. The ovaries. The testes. The anterior pituitary. The posterior pituitary. The pancreatic islets. Appendix. Index.

Note. This book covers (to use the words of the authors) "the actions of endocrine systems in health and ordinary disease and ... the management of endocrinopathies as they appear in young people." It is addressed to graduate practitioners, particularly pediatricians and general practitioners, but the authors have not assumed any previous knowledge of endocrinology on the part of the reader. *Within the age limitations as stated the field is covered comprehensively* with particular emphasis on diagnostic and clinical aspects. Although *for* practical purposes the book is self-contained, literature references are included. The first-named author is Associate Professor of Pediatrics in the Medical School of Harvard University.

TOVERUD KIRSTEN UTHEIM AND OTHERS

Maternal nutrition and child health an interpretative review By Kirsten Utheim Toverud, Genevieve Stearns and Icie G Macy Prepared for the Committee on Maternal and Child Feeding of the Food and Nutrition Board, National Research Council, Icie Macy Hoobler chairman. Washington D C. Published by the National Research Council, National Academy of Sciences, 1950 174 p illus. 25 cm. (National Research Council. Bulletin number 123 November 1950) Paper $2.00 1310

Contents (abridged) Maternal and infant mortality. Specific nutritional factors in maternal and infant health. Energy value and proximate composition. Composition of milk. Calcifying processes. Vitamin D. Vitamin A. Vitamin C. Thiamine. Riboflavin. Niacin. Folic acid. Iron. Vitamin K. Iodine. Preconceptional, prenatal, and postnatal care. Bibliography

Note: A compact presentation of accumulated knowledge and experience. The principal author was Dr Toverud, Norwegian whose professional career was devoted chiefly to the relationships between maternal nutrition and child health. The work was completed after Dr Toverud' death by the other authors named on the title page. It is based mainly on critical review of the world literature. The essential facts are stated in the text and the statements are referenced to the source articles. There are 17 tables of data. The bibliography contains 1008 citations.

WILKINS, LAWSON

The diagnosis and treatment of endocrine disorders in childhood and adolescence. Springfield Illinois Charles C Thomas, 1950 384 p. illus. 29 cm. $15.00. 1311

Contents (abridged) Endocrine relationships and their influences upon growth and development. Methods of endocrine study and diagnosis. Thyroid disorders. Dwarfism. Variations in the pattern of adolescent development. Sexual precocity of isosexual pattern. Sexual infantilism. Adrenal cortex—hormones and their actions—adrenal insufficiency—hypercorticism—adrenogenital syndrome and Cushing's syndrome. Heterosexual development. Pituitary tumors and intracranial lesions causing endocrine disorders. Diabetes insipidus. Calcium and phosphorus metabolism. Carbohydrate metabolism and spontaneous hypoglycemia. Obesity Congenital anomalies sometimes mistaken for endocrinopathies. Index.

Note. The emphasis in this work is on clinical diagnosis, and special attention is given to recently developed diagnostic tests and techniques. Differential diagnoses are discussed. Current methods of treatment are outlined. The book is based largely on studies done at the Johns Hopkins Hospital. There are more than 400 illustrations including six reproduced in color A considerable number of the illustrations are photographs of endocrine cases. Each chapter concludes with list of references to related literature.

YEAR BOOK OF PEDIATRICS

The 1952 year book of pediatrics (June, 1951–May 1952) Edited by Sydney S. Gellis. Isaac A. Abt, editor emeritus. Chicago The Year Book Publishers Inc., 1952 423 p. illus. 20 cm. $5.50 1312

Contents The premature and the newborn. Nutrition and metabolism. Infectious diseases and immunity Allergy Dentistry and otolaryngology Ophthalmology Respiratory tract. Gastrointestinal tract. Genitourinary tract Heart and blood vessels. Blood. Endocrinology Orthopedics Dermatology Neurology and psychiatry Therapeutics and toxicology Miscellaneous Index. Index to authors.

Note. (1138*) An annual volume organized and edited on the same plan as other books in this useful series The chapters consist of fairly long abstracts of important articles selected from the medical periodicals of the world issued during the period noted in the title. In numerous instances the abstract is supplemented by an editorial comment which criticizes the conclusions of the author or relates them to other studies on the same subject. There are 112 figures in the present issue.

ZIEGLER, ROBERT F

Electrocardiographic studies in normal infants and children. Springfield Illinois Charles C Thomas 1951 207 p illus. 29 cm. $10 50 1313

Contents Introduction and review of the literature. Material and method. The cardiac mechanism Auricular activation and auriculo-ventricular conduction Ventricular activation Electrical axes of QRS and T and the ventricular gradient The initial ventricular deflections. The final ventricular deflections. Representative electrocardiograms at various ages. Appendix. Statistical data in the study of electrocardiograms of normal infants and children Definition of terms. Index.

Note. This work is the result of planned effort to establish standards of normal for the electrocardiogram of infants and children without heart disease. It is based on the electrocardiograms of three groups of children ranging in age from birth to 16 years and totaling 613 in number A series of electrocardiograms identified with the sex and age of the subject are reproduced. The appendix contains series of charts on which the observed percentage incidence and the predicted distribution of values for such measurements as heart rate, duration of P-wave measured in seconds, and amplitude of T-wave in precordial lead V6 measured in 1/10 millivolt. Both the observed and the predicted charts are arranged by age groups. The author is in charge of the Section of Pediatric Cardiology in the Henry Ford Hospital in Detroit.

GERIATRICS

LANSING, ALBERT INGRAM, editor

Cowdry's Problems of ageing: biological and medical aspects. Third edition, edited by Albert I. Lansing. Baltimore The Williams & Wilkins Company, 1952 1061 p. illus. $15.00. 1314

Contents: Section I, Biological and cellular problems of ageing: General physiology by A. I. Lansing. Ageing of tissue fluids, by E. V Cowdry Ageing of individual cells, by E. V Cowdry Ageing processes considered in relation to tissue susceptibility and resistance, by W deB. MacNider. Quantitative histochemical changes in ageing, by O. H. Lowry and A. B. Hastings. Chemical aspects of ageing and the effect of diet upon ageing, by C. M. McCay Longevity in retrospect and in prospect, by L. I. Dublin. Section II, Clinical and organic problems of ageing: Ageing in the nervous system, by J. L. O'Leary The eye, by J. S. Friedenwald. The ear by W P Covell. The heart and great vessels in old age, by P D. White. Hematologic values in the aged, by J B. Shapleigh and others. Arteriosclerosis (lipid metabolism) by J M. Steele. Experimental hypertension, by W S. Hartroft. The thyroid, pancreatic islets, parathyroids, adrenals, thymus, and pituitary by A. J. Carlson. Cytologic changes in the cells of the pituitary thyroids, adrenals, and sex glands of ageing fowls, by F Payne. Homeostatic and histochemical aspects of the endocrine glands, by E. W Dempsey Ageing of homeostatic mechanisms, by N. W Shock. Teeth and jaws, by H. B. G. Robinson and L. R. Boling. Digestive system, by A. C. Ivy and M. I Grossman. Lymphatic tissue, by W Andrew The respiratory system in the aged, by H. A. Bickerman. Age changes in renal function, by N W Shock. Urinary system, by J. R. Oliver. Female reproductive system, by W H. Masters. Male secondary sexual organs, by R. A. Moore. Male reproductive system, by E. T Engle. Metabolism of specialized tissues and changes associated with ageing, by J. E. Kirk and P F Hansen. Ageing of the skin, by Z. K. Cooper. Skeleton, by W M. Cobb. Surgical problems in the aged, by R. Elman. Anesthesia in the aged, by E. Apgar. Degeneration and regeneration, by W B. Kountz. Cancerological aspects of ageing, by M. Cheatle. Rehabilitation for the chronically ill and aged, by H. A. Rusk and E. J. Taylor. Cancer and ageing, by J. A. Barton, Jr. Section III, Social and economic problems of ageing: Trends in the ageing population, by P M. Hauser and E. Shanas. The older worker in industry by R. K. Burns and L. R. Brown. Roles and status of older people, by E. J. Havighurst. Personal adjustment in old age, by R. S. Cavan.

Note (1316) A distinguished and useful work in which specialists in gerontology and related subjects cover the developments of the last decade and also discuss significant trends. As the section and chapter titles show the book is not limited to the biological and medical aspects, but includes also papers on social and economic phases. The first two editions were edited by Edmund Vincent Cowdry who is contributor to the third edition. The book is of interest to general practitioners, specialists in geriatrics, graduate physiologists, and other persons with professional interests in the medical and socio-economic questions generated by the ageing process and the increasing numbers of the aged.

MONROE, ROBERT THORNHILL

Diseases in old age a clinical and pathological study of 7941 individuals over 61 years of age. Cambridge Harvard University Press, 1951 407 p. 22 cm. (Harvard University monographs in medicine and public health, editorial committee, A. Baird Hastings, chairman. Number 11) $5.00. 1315

Contents: General features of the group. Diseases of the nervous system. The cardiovascular system. Diseases of the respiratory system. Diseases of the gastrointestinal system. Diseases of the kidneys. Diseases of the [illegible] ureter and bladder Diseases of the blood. Diseases of the endocrine system. Venereal diseases. Nutritional disorders and alcoholism. Diseases of the bones and joints. Malignant disease. Summary of [illegible]

cal findings. The community resources essential for old people. References. Index.

Note: A study based chiefly on the records of the Peter Bent Brigham Hospital, Boston, from 1913 to 1941. Approximately 100 tables of statistical data are accompanied by critical interpretative text. Included are social and psychological factors as well as pathological findings and therapy. Tentative conclusions are drawn, but the author points out the need for many more such studies before geriatrics can be established as a distinct field of medicine.

SHOCK NATHAN WETHERIL

A classified bibliography of gerontology and geriatrics. Prepared for Stanford University under a grant from The Forest Park Foundation Peoria, Illinois. Stanford California Stanford University Press, 1951 599 p. 28 cm. $15.00 1316

Contents (abridged) History of aging: Cellular biology and physiology. Climacteric. Exercise. Longevity. Metabolism. Nutrition. Physiological age. Rejuvenation. Theories. Organ systems: Blood. Cardiovascular system. Connective tissue and cartilage. Endocrine system. Gastro-intestinal tract. Kidney. Lymphatic system. Muscular system. Nervous system. Reactions of the body as a whole. Reproductive system. Respiratory system. Sense organs. Skeletal system. Skin and integument. Urogenital system. Geriatrics: Medical care. Diagnosis and physical examinations. Disease. Surgery. Psychological processes: Intellectual functions. Motor responses. Personality. Social and economic aspects: Miscellaneous: Historical references. Lay texts. Research methods, organizations, programs and institutes. Abbreviations of journals cited. Index of authors. Index of subjects.

Note: A comprehensive, international bibliography. The classification is detailed. Shown above are part titles and the titles of main subdivisions. However, the larger subclasses, for instance endocrine system, are broken down into appropriate subgroups. Titles are given for the cited publications in addition to other usual bibliographical data. The number of references exceeds 18,000. The United States Public Health Service, Stanford University, and the Forest Park Foundation shared in the work's preparation.

GYNECOLOGY AND OBSTETRICS

BECK, ALFRED CHARLES

Obstetrical practice. Fifth edition. Baltimore The Williams & Wilkins Company 1951 1073 p. illus. 26 cm. $10 00 1317

Contents (abridged) The ovarian cycle. Relation of menstruation to ovulation, fertilization, and implantation. Chronological development of pregnancy Physiology of the fetus. Diagnosis of pregnancy Management of pregnancy Presentation, position and posture. Management of labor The puerperium. Lactation. Multiple pregnancy Diseases of the decidua and fetal membranes. Abortion. Ectopic gestation. Medical and surgical complications of pregnancy The pathology of labor. Faulty passages. Placenta previa and abruptio placentae. Retained and adherent placenta. Postpartum hemorrhage. Puerperal infection. Artificial interruption of pregnancy Methods used to hasten or complete the dilatation of the cervix. Forceps. Cesarean section. Destructive operations. Repair of lacerations. Resuscitation of the newborn child. Analgesia amnesia and anesthesia. Appendix. Index.

Note: (1146) A standard and widely used textbook and reference book which is notable for the clarity of both the text and the drawings. The discussions are unusually detailed and practical. Many of the drawings were done in sequences so as to show successive steps of procedure. The work was extensively rewritten for the present edition, and important additions were made in both the text and illustrations. There are now 947 figures of which about 100 are new and about 400 are redrawings of illustrations that appeared in the previous edition. Also, 22 reproductions of radiograms have been added at the end. The scope and the plan of the book are unchanged.

BRADY LEO AND OTHERS

Essentials of gynecology Second edition. By Leo Brady, Ethna Louise Kurtz, and Eileen McLaughlin. New York The Macmillan Company, 1950 256 p. illus. 21 cm. $3 50 1318

Contents: Anatomy Physiology of the female reproductive organs. The gynecological history and examination. Gynecological symptoms and their importance. The gynecological infections. Uterine displacements and obstetrical injuries. Ectopic or extra-uterine pregnancy Sterility Gynecological cysts and tumors. Gynecological surgery The equipment and supplies in the gynecological operating room. The student nurse in the operating room. Postoperative treatment. Postoperative complications. Female urology Radiation therapy in gynecology Index.

Note. (2157) An authoritative and useful outline for student nurses. It is based primarily on requirements and practices at Johns Hopkins Hospital. The chapter on radiation therapy in gynecology is newly added, certain other chapters and passages—particularly that on equipment and supplies in the gynecological operating room—have been rewritten.

CURTIS ARTHUR HALE, AND JOHN WILLIAM HUFFMAN

A textbook of gynecology Sixth edition with 466 illustrations, chiefly by Tom Jones, including 37 in color Philadelphia W B Saunders Company, 1950 799 p. illus. (part col d) 26 cm. $11.00. 1319

Contents (abridged) Section I, Anatomy Section II, Physiology (exclusive of the endocrine glands) Section III, The endocrines. Section IV, History and examination. Section Infectious processes Gonorrheal diseases of the female genitalia. The "cellulitis group" of pelvic infections. Genital tuberculosis. Syphilis. "Nonspecific" infections. Section VI, Tumors of the uterus. Section VII, Tumors of the ovary Tumors of fallopian tubes, ligaments and pelvic cellular tissues. Section VIII, Displacements and relaxations. Section IX, Disturbances of function. Section X, Endometriosis. Ectopic pregnancy. Leukorrhea. Genital fistulae. Backache. Disturbances of the pelvic veins. Endometritis. Lesions of the cervix. Inversion of the uterus. Congenital malformations. The early months of pregnancy (from gynecological aspect) Urinary tract problems in gynecology Radiotherapy Index.

Note. (1149*) The first edition of this standard text for medical college students appeared in 1930. This sixth edition is the first one to bear the name of a collaborating author. The scope and purpose are unchanged; the book is still primarily text and secondarily reference book for general practitioners and gynecologists. The fifth edition was published in 1946. For this edition two chapters were extensively revised, some new material was added to other chapters, and selection of recent literature was added to the reference lists. Before his retirement the senior author was Chairman of the Department of Obstetrics and Gynecology in the Medical School of Northwestern University The junior author is currently Associate Professor of Obstetrics and Gynecology in the same school.

DECKER ALBERT

Culdoscopy, a new technic in gynecologic and obstetric diagnosis. With a foreword by Richard W TeLinde, Philadelphia W B. Saunders Company 1952 148 p. illus. 22 cm. $3.50. 1320

Contents. Culdoscopy: its history and development. Anatomy of the vagina. The Decker culdoscope. Culdoscopic technic. Culposcopic contents. Ectopic pregnancy Culdoscopy in the management of sterility Culdoscopic stenosis and insufflation. Pneumoperitoneum. Culdoscopy in the diagnosis of endometriosis. Culdoscopic observation of ovulation and ovum transfer. Endoscopic photography Case reports. References.

Note: A thorough and adequately illustrated presentation of relatively new instrument and technique which permit visual examination of the pelvic viscera in the course of diagnosis. It is addressed to graduate obstetricians and gynecologists. The bibliography is comprehensive.

EASTMAN NICHOLSON JOSEPH

Williams obstetrics. Tenth edition. New York Appleton-Century-Crofts, Inc. 1950. 1176 p illus. 25 cm. $12 50. 1321

Contents (abridged) Section one, Orientation. Section two, Anatomy and physiology of reproduction. Section three, Management of normal pregnancy Section four, Physiology and conduct of labor. Section five, The puerperium and the newborn. Section six, Abnormalities of pregnancy. Section seven, Abnormalities of labor. Section eight, Abnormalities of the puerperium. Section nine, Abnormalities of the newborn. Section ten, Operative obstetrics. Index.

Note: (2378) A long-established standard textbook. The first six editions were written by J. Whitridge Williams, the next three were the work of Henricus J. Stander The present edition is the first one prepared by Eastman, who is Professor of Obstetrics in Johns Hopkins University and Obstetrician-in-Chief to the Johns Hopkins Hospital, positions which were held by Williams during his professional career In comparison to the preceding edition the book has been very extensively revised both in the text and illustrations. However, its purpose remains the same. It is still intended for the instruction of upperclass medical college students and the guidance of graduate general practitioners. Selected but very extensive bibliographies are appended to most of the chapters, and there are now 639 figures.

FAULKNER, ROBERT LEE, AND MARION DOUGLASS

Essentials of obstetrical and gynecological pathology Second edition. With 300 illustrations including 3 color plates. St. Louis The C. V Mosby Company 1949 357 p illus. (part col d) 26 cm. $8.75 1322

Contents: The surgical specimen. Elementary histology The vulva. The vagina. The cervix. The endometrium. The myometrium. Endometriosis. The fallopian tube. The ovary Pregnancy Index.

Note: A simplified and straightforward presentation written for medical college students who are not primarily interested in pathology and for graduate medical practitioners who want quick survey of current knowledge. Almost as much space is given to illustrations as to text. All but few of the illustrations are reproductions of ordinary photographs or microphotographs of pathological specimens. There is no bibliography The authors are present and former faculty members of the Medical School of Western Reserve University The first edition was published in 1939. In this edition many new illustrations have been added and there have been some revisions, mostly of minor nature, in the text.

FLUHMANN CHARLES FREDERIC

Medical treatment in obstetrics & gynecology Baltimore, Maryland The Williams & Wilkins Company 1951 157 p. illus. 24 cm. $3 00. 1323

Contents: Diagnosis and medical therapy in obstetrics and gynecology Therapeutic measures. Nutrition. Office and hospital procedures. Index.

Note: An office reference book which contains concise information on many topics ranging from suggesting diets for pregnant women to lists of equipment for treatment room associated with physician's office. A tabulation of useful drugs is included. The miscellaneous material even includes suggested "permission forms" for operations and treatments. Some literature references are supplied. The author is Clinical Professor of Obstetrics and Gynecology in the School of Medicine of Stanford University

GREENHILL JACOB PEARL

Principles and practice of obstetrics. Originally by Joseph B DeLee. Tenth edition with 1140 illustrations on 864 figures, 194 in color Philadelphia W B Saunders Company, 1951 1020 p. illus. (part col d) 26 cm. $12 50 1324

Contents (abridged) Part I, The physiology of reproduction, pregnancy labor and the puerperium: Physiology and conduct of pregnancy Physiology and conduct of labor Physiology and conduct of the puerperium. Part II, The pathology of pregnancy labor and the puerperium: The pathology of pregnancy Pathology of labor. Pathology of the puerperium. Operative obstetrics. Index.

Note. (1150*) A standard text and reference book with lineage going back to the first edition published in 1913. It covers the care of obstetrical cases from conception through the puerperium. Surgical procedures associated with delivery are fully covered. The illustrations are exceptionally clear and numerous. The present edition represents another very extensive revision in both text and illustrations. Some of the changes are due to planned effort by four leading American authors of textbooks on obstetrics to achieve more uniformity in definitions, terminology classifications, and procedures. Others are due to advances in knowledge and techniques, while still others are apparently changes and additions suggested by the users of the previous edition.

GREENHILL JACOB PEARL

Surgical gynecology, including important obstetric operations. Illustrated by Angela Bartenbach. Chicago The Year Book Publishers Inc., 1952 350 p. illus. 21 cm. $8.50. 1325

Contents: Preoperative preparation and postoperative care and complications. Vulvar and perineal operations. Vaginal operations. Abdominal operations. Index.

Note: In this book the first chapter is 70 pages long; and the remainder of the space except that occupied by the index is devoted to 101 plates, most of which contain reproductions of several drawings. The book is organized so that plate on left hand page faces page of printed text of description of the particular plate. The illustrations were made from original drawings of techniques employed by the author who is Professor of Gynecology in Cook County Graduate School of Medicine. The book is potentially of interest to general surgeons and to beginners in gynecology

INTERNATIONAL CONGRESS ON OBSTETRICS AND GYNECOLOGY

Transactions of the International and fourth American Congress on Obstetrics and Gynecology Sponsored by the American Committee on Maternal Welfare, Inc. Held in New York City, New York, May 15–19 1950 Edited by George W Kosmak. Published as a supplementary volume to the American journal of obstetrics and gynecology volume 61A June, 1951 St. Louis The C. V Mosby Company 1951 823 p. 26 cm. o.p. 1326

Contents (abridged) The implantation and early development of the human ovum, by A. T Hertig and J. Rock. On some hormonally induced complications of gestation, by R. Courrier Contractility of the human uterus and its physiological basis, by S. R. M. Reynolds. The management of occiput posterior positions, by G. W Gustafson Genetics in cancer, by C. Little. The relationship of viruses to neoplastic disease, by H. B. Andervont. Hormonal factors in experimental ovarian tumorigenesis, by W U. Gardner. Studies on the circulation in normal and toxemic pregnancies, by C. Kennedy The etiological aspect of toxemia of pregnancy and abruptio placentae, by S. Mira. Some present trends in the management of the toxemias of pregnancy by H. B. Van Wyck. Experience with radiotherapy in carcinoma of the uterine cervix, by H. L. Kottmeier The early diagnosis of uterine cancer, by H. F Traut. Shifting trends in abdominal hysterectomy by T C. Peightal. The logical approach to prolapse, by E. Stacey The influence of inherited cranial form on the course of labor, by E. Philipp. Tuberculosis of the female genital tract and its detection by examination of the uterine secretions, by I. Halbrecht. Creation of new vagina with amniotic membranes, by S. Vidakovic. Treatment of varicose veins in pregnancy by E. Solomons. Indications and contraindications for cesarean section, by H. E. Schmitz and J. E. Towne. Pregnancy and delivery following cesarean section, by S. A. Cosgrove. Our experiences in the use of Decker's culdoscope, by A. G. F Ramon. The management of the pregnant diabetic patient, by W P. Given. Endocrine therapy in gynecology, its uses and its possibilities, by E. Rydberg. The nature of the blood coagulation mechanism and its relationship to some unsolved problems in obstetrics and gynecology by W H. Seegers and C. L. Schneider. Prophylactic attempts to control fetal erythroblastosis by diet, by R. S. ten Berge. On the pathogenesis and life history of endometriosis, by J. Varangot. Experimental endometriosis, by R. W T Linde and R. B. Scott. The kidney in abruptio placentae, by H. L. Sheehan. Genital cancer and pregnancy by J De Rezende. Tubal obstruction as cause of sterility and its nonoperative treatment, by I. C. Rubin. Physiology of the isthmus uteri and its part in sterility and habitual abortion, by R. Palmer. Rational endocrine therapy in infertility by M. E. Davis. The association of intercurrent disease and obstetric shock, by H. R. MacLennan. Alterations in the coagulation mechanism as cause of intra- and postpartum hemorrhage, by D. E. Reid. Studies on crystallization of cervical mucus and its relationship to cervical receptivity of spermatozoa, by A. Campos da Paz. The painless delivery in saddle block anesthesia, by G. Dellepiane. Our experience with the Wertheim operation, by J. A. Bulnes. Authors' index. Subject index.

Note: A collection of the papers which were presented on the occasion indicated in the volume title. Although number of the papers were written in languages other than English, all were translated into English for the volume. Following presentation at the Congress each paper was discussed by participants. Transcripts of these discussions follow the individual papers in the book.

KLEIN HENRIETTE R. AND OTHERS

Anxiety in pregnancy and childbirth. By Henriette R. Klein Howard W Potter and Ruth B Dyk. New York Paul B Hoeber,

Inc. 1950. 111 p. 24 cm. (A psychosomatic medicine monograph) $2 75 1327

Contents: Description of study. Attitudes and reactions towards conception and pregnancy. Anxieties—expectations and misconceptions. Psychosomatic relationships in pregnancy and childbirth. Summary. Bibliography. Appendices. Case histories.

Note: This study of the attitudes and anxieties of 27 primiparous patients was made at the Long Island College Hospital in New York City under the sponsorship of the Committee on Obstetrics and Gynecology of the American Psychosomatic Society. The findings of the study are presented in the first 70 pages, most of the remaining space is taken up with summarized case histories.

KROGER, WILLIAM S., AND S CHARLES FREED

Psychosomatic gynecology including problems of obstetrical care. Philadelphia W B Saunders Company 1951 503 p. 25 cm. $8 00 1328

Contents (abridged) Part I, Psychosomatic aspects of fetus and infant: The maternal-fetal relationship—the prenatal period. The postnatal period—breast feeding and rooming-in plan. The significance of early psychosexual development to gynecologic disorders. Part II, Psychosomatic aspects of the mother during pregnancy: Psychosomatic aspects of pregnancy by G. D. Read. "Suggestive relaxation" or hypnosis in labor—psychologic and physiologic aspects of analgesia and anesthesia. Miscellaneous obstetric conditions. Part III, Psychosomatic aspects of neuroendocrinology: Neuroendocrine mechanisms—their psychosomatic aspects. Menstrual dysfunctions. Part IV Common psychosomatic problems: Psychogynecic aspects of contraception. Sterility Frigidity Low back pain. Obesity Menopause. Miscellaneous psychosomatic disorders. Glossary Index.

Note: A pleasant summary of current thought, some of it controversial in nature, but most of it deserving of attention from practicing obstetricians and gynecologists. It was based chiefly on survey of selected literature, and statements in the text are keyed to the chapter bibliographies. Although psychoanalytical terminology is used to considerable extent, the authors have succeeded in presenting the subject so that their discussions can be understood by medical practitioners who are not specialists in psychoanalysis.

LOWRIE, ROBERT J editor

Gynecology diseases and minor surgery Vol. I. Compiled and edited by Robert J Lowrie. Foreword by Claude E. Heaton. Springfield, Illinois Charles C Thomas, 1952 806 p 27 cm. $22 50 3129

Contents (abridged) Section I, Anatomy and physiology of the female reproductive system and associated structures: Vulva, vagina, musculature, fascia, peritoneum, cervix, uteri, corpus uteri, urethra, bladder and rectum, by J. W Davies. Vascular system of the female pelvis, by W Filler. Innervation of the female pelvis, by J. R. Labate. Section II, Normal and abnormal development: Embryological and histological development of the female genital tract, by P J Kearns. Anatomical formations in the female genital tract with associated developmental defects, by P J. Kearns. Section III, Diagnostic methods. Section IV Endocrine principles, menstrual and cyclic phenomena. Endocrine principles, by R. C. Freed. The normal menstrual cycle, by J P Greenhill. Section V, Venereal diseases and tuberculosis. Section VI, Diseases and conditions of the vulva and vagina: Inflammatory and other diseases and conditions of the vulva, by M. D. Speiser. Trichomonas vaginalis vaginitis, by W Filler. Malignant diseases of the vulva, by C. White. Benign and malignant tumors of the vagina, by R. M. Rutherford. Urinary incontinence in the female, by W T Kennedy Urinary fistulas, by J. C. Mair. Disorders of the immature vulva and vagina, by G. C. Schauffler Section VII, Diseases and conditions of the uterus: Clinical aspects of the developmental anomalies of the uterus, by R. J. Lowrie and S. J. Siegel Chronic inflammatory and traumatic lesions of the cervix, by M. C. Sturgis Malignant disease of the cervix uteri, by J. V Meigs. Malignant disease of the corpus uteri, by F A. Pemberton. Displacements of the uterus, by R. J Lowrie. Endometriosis, by W A. Scott Abortion and miscarriage, by R. N Rutherford. Section VIII, Diseases and conditions of the fallopian tube, ovary and pelvic ligaments. Clinical aspects of the developmental anomalies of the fallopian tube, ovary and the pelvic ligaments, by R. J Lowrie. Puerperal sepsis, pelvic cellulitis and thrombophlebitis, by W K. Stockford. Benign and malignant tumors of the fallopian tube and pelvic ligaments, by L. A. Emge. Ectopic pregnancy—(ectopic gestation, extrauterine gestation, extrauterine pregnancy tubal gestation, tubal pregnancy) by H. B. Atlee. Section IX, Menstrual disorders, functional disease of the endometrium, the abnormal menopause. Section X, Abnormalities of the reproductive and sex functions: Infertility in women, by S. J. Kleegman. Contraception, by C. L. Mendelson. Section XI, Physical therapy and minor gynecological surgery Section XII, Medications. Subject Index. Author Index.

Note: In this first volume published of projected two-volume work there are 33 contributed chapters, of which selection is noted above. The second volume will be devoted to surgery The level of treatment is post-graduate, and most of the chapters are concise. Generally speaking, the following points are covered for each disease incidence, etiology pathology, signs and symptoms, diagnosis, therapy and prognosis. Illustrations are adequate and bibliographies are included in the chapters.

MAZER CHARLES, AND S LEON ISRAEL

Diagnosis and treatment of menstrual disorders and sterility Third edition, revised. With 137 illustrations. New York Paul B Hoeber Inc. 1951 583 p. illus. 24 cm. $10.00 1330

Contents (abridged) The pituitary gland. The ovary Puberty in the female. The normal menstrual cycle. The hormonal balance of the normal menstrual cycle, by W H. Perloff. Dysmenorrhea as an abnormal manifestation of the menstrual cycle. Premenstrual tension as an abnormal manifestation of the menstrual cycle. Migraine as an abnormal manifestation of the menstrual cycle. Breast hyperplasia as an abnormal manifestation of the menstrual cycle. Vicarious menstruation as an abnormal manifestation of the menstrual cycle. Amenorrhea. Diagnosis and treatment of hypomenorrhea. Uterine bleeding. Sterility Artificial insemination. The diagnosis and treatment of male sterility by C. W Charny Critical analysis of etiology and treatment of 697 cases of primary and secondary sterility. Relative sterility Appendix—the available endocrine products. Index.

Note. (1137*) Although intended for both students and practitioners of medicine, this standard work is aimed primarily at the family physician who is usually the first to treat women who are suffering from sterility and from menstrual disorders. Procedures which can be carried out in the physician's office are emphasized, and treatments which require special technical skill or elaborate equipment available only in hospitals are not described in detail. The second edition appeared in 1944. Although only 14 pages longer, a considerable range of information has been added in this edition including a discussion of the menstrual toxin theory, clinical evaluation of the Papanicolaou vaginal smear, the medical treatment of endometriosis, etc. Also there has been some revision of the illustrations and the bibliography

MEIGS, JOE VINCENT, AND SOMERS H. STURGIS, editors

Progress in gynecology Volume II. New York Grune & Stratton, 1950. 821 p. illus. 24 cm. $9.50 1331

Contents (abridged) Growth and physiology: Embryology and development of the female reproductive tract, by W Schiller. The ovary Functioning ovarian neoplasms, by M. R. Dockerty The morphological and endocrine basis for menstrual bleeding, by J. E. Markee. The intrinsic metabolism of the endometrium of the uterus, by J. C. [illegible] The endometrial biopsy by [illegible] R. C. Hughes. Diagnostic methods. Endometrial biopsy by [illegible] Burch and D. Phelps. The clinical evaluation of the vaginal smear, by S. L. [illegible] by R. M. Graham. Diagnostic tests for pregnancy by [illegible] Functional disorders: Functional [illegible] of uterine bleeding. The ovary by E. C. Hamblen. Dysmenorrhea, by F M. Ingersoll. The [illegible] genital syndrome of aplastic ovaries, by M. B. Goldberg and [illegible] Lisser The psychiatric component in gynecology by H. Deutsch. Interrelationship of endocrine glands: Hormones in relation to the [illegible] mones of the female, by I. T. Nathanson. The corpus luteum hormone in gynecology by J. S. L. Browne and others. The thyroid in gynecology, by J Lerman. Gonadotropins in gynecology by W E. Brown and J. T Bradbury The relation of the adrenal cortex to gynecology, by E. C. Reifenstein. Androgen therapy in gynecology, by U J. Salmon. Sterility and reproduction: Diagnostic technique and treatment of the sterile couple, by F A. Simmons. [illegible] possibilities and management of threatened abortion, by E. D. [illegible] Colvin. Ectopic pregnancy by W D. Beacham. Hydatidiform mole and chorionepithelioma, by A. T Hertig. Infections and their treatment: The treatment of vulvovaginitis in children, by [illegible] Trichomonas vaginalis vaginitis, by S. J. Kleegman. The management of uterine abortion complicated by infection, by W [illegible] [illegible] Benign growths: Treatment of the fibroid uterus, by W T. [illegible] Malignant growths: Endometriosis, by W R. Dobson. [illegible]

Treatment of carcinoma of the ovary, by H. C. Taylor Jr. Adenocarcinoma of the uterus, by C. L. Randall. The present-day status of noninvasive cervical carcinoma, by R. W. Te Linde and G. A. Galvin. Cancer of the cervix—principles of radiation treatment, by A. N. Arneson. Radical hysterectomy for cancer of the cervix with bilateral pelvic lymphadenectomy (the so-called Wertheim operation) by J. V. Meigs. Radiotherapy in uterine cancer, by H. L. Kottmeier. The surgical problem of advanced pelvic cancer—partial and complete pelvic exenteration, by A. Brunschwig and V. K. Pierce. Carcinoma of the vulva, by L. Parsons. Supervoltage radiation in gynecology, by L. L. Robbins and M. D. Schulz. Cancer of the cervix in pregnancy, by A. B. Hunt and R. D. Mussey. Operative technique: Vaginal hysterectomy, by A. D. Campbell. The management of prolapse of the uterus and vagina, by L. E. Phaneuf. The Manchester-Fothergill operation, by T. L. Montgomery. Complete tear of the perineum, by R. P. Watson. The treatment of stress incontinence of urine, by C. D. Reed. Enterocele, by J. V. Meigs. Vaginal atresia and construction of the vagina, by L. R. Wharton. Preoperative and postoperative care. Anesthesia for gynecological procedures, by H. K. Beecher. Antibacterial therapy in gynecological surgery and pelvic infections, by C. Lyons. Surgical treatment of the pain of pelvic disease, by B. Selverstone and J. C. White. Commercial preparations of endocrine products used in gynecology, by P. H. Benedict. Index.

Note: (1131) The pattern of the first volume published in 1946 has been followed in volume 2 of this series. Again there are 30 short monographs, each of which has been written by a specialist who has made a "hobby" of the subject about which he writes. Most of the monographs are therefore summaries of the current status of the topic rather than reviews of progress during the period of arbitrary length. Short lists of literature references accompany many of the papers, but no author has attempted a comprehensive bibliography. The series is addressed to graduate medical practitioners. The editors are members of the faculty of Harvard Medical School.

MOLOY, HOWARD CARMAN

Clinical and roentgenologic evaluation of the pelvis in obstetrics. Philadelphia W B Saunders Company 1951 119 p. illus. 22 cm. (American monograph series) $3.00 1332

Contents: General morphology of the pelvis. Clinical examination of the pelvis. The fetus. The mechanism of labor. Forceps operations. Breech delivery. Version and breech extraction. Roentgenologic technic. The roentgenological report. Methods for quantitative estimation of cephalopelvic disproportion. Summary. Problems for future investigation. Bibliography.

Note: The accumulated knowledge of pelvic types and variations and of their significance in obstetrics is compactly but clearly presented in this monograph addressed both to medical college students and to practicing obstetricians. The four classical types of pelves and intermediate variations are described, and this basic material is then related to practical techniques in pre-delivery examinations and to the use of forceps in delivery. In the final section the degree of inlet disproportion is related to methods of delivery found necessary in a series of 163 cases.

NATIONAL COMMITTEE ON MATERNAL HEALTH

Menstruation and its disorders. Proceedings of the Conference. Edited by Earl T Engle. Springfield, Illinois Charles C Thomas, 1950 358 p illus. 24 cm. $6.50 1333

Contents: Studies on the effects of steroid sex hormones on alkaline phosphatase in the endometrium, by W. B. Atkinson. The chemical histology of the human uterine cervix with supplementary notes on the endometrium, by G. B. Wislocki and others. Methods of study for tissue lipase, by G. Gomori. Enzymes in the ovarian tissues of rats, by R. K. Meyer and W. H. McShan. Abortive menses and associated endometria, by A. T. Hertig and J. Rock. The histophysiology of the human endometrium, by H. Okkels. The relation of blood flow to endometrial growth and the inception of menstruation, by J. E. Markee. Menstrual toxin—experimental studies, by O. W. Smith. Menstrual toxin—clinical significance, by G. V. S. Smith. Humoral factors related to peripheral vascular homeostasis, by E. Shorr and B. W. Zweifach. Endometrial pathology of functional bleeding, by R. W. TeLinde. The atypical secretory phase, by C. L. Buxton. The physiology and pharmacology of the myometrium, by R. A. Woodbury. Summary of proceedings, by J. Rock. List of members of the conference on menstruation.

Note: A collection of original papers, most of which present information based on recent investigations and not published hitherto. Excerpts from the discussions at the conference are included for some of the papers, and literature references are appended to most of them.

NOVAK, EMIL

Gynecologic and obstetric pathology with clinical & endocrine relations. Third edition. With 630 illustrations, 19 in color Philadelphia W B Saunders Company 1952 595 p illus. (part col d) 26 cm. $10.00 1334

Contents (abridged): The endocrinology of the menstrual cycle and pregnancy. Diseases of the vulva. Diseases of the vagina. Benign lesions of the cervix, cervicitis, cervical erosion and cervical polyps. Carcinoma of the cervix. Histology of the endometrium. Hyperplasia of the endometrium. Endometritis, endometrial polyps, myometritis. Myoma and other benign tumors of uterus. Adenomyosis (adenomyoma) uteri. Sarcoma of the uterus. Carcinoma of the endometrium. Salpingitis. Tumors of the tube, parovarium, and uterine ligaments. Inflammatory diseases of the ovary. Non-neoplastic cysts of ovary. Cystadenomas of ovary. Primary carcinoma of the ovary. Metastatic ovarian carcinoma. Brenner tumors of ovary. Dysgerminoma of the ovary. Arrhenoblastoma of the ovary. Adrenal tumors of ovary; masculinovoblastoma, hilus cell tumor (masculinizing tumors). Ectopic pregnancy. Pelvic endometriosis. Hydatidiform mole and chorionepithelioma malignum. Abnormalities and diseases of the placenta and appendages (other than hydatidiform mole and chorionepithelioma) by L. M. Hellman. Common breast lesions of gynecologic interest. Index.

Note: (1161) A comprehensive textbook designed for medical students, practitioners, pathologists, and specialists. The subject is covered in terms of all the important features, such as gross and microscopic characteristics, malignancy and histogenesis of neoplasms, and histology of the female genital organs. Special attention is given to the correlation of pathology with clinical practice, and to endocrinologic aspects. The third edition has been extensively revised, and the book now includes material on many uncommon lesions not discussed in previous editions. About 90 illustrations have been added. The chapter on common breast lesions of gynecologic interest has been added. References to recent literature have been incorporated in some of the bibliographic lists.

NOVAK, EMIL, AND EDMUND R. NOVAK

Textbook of gynecology Fourth edition. Baltimore The Williams & Wilkins Company 1952 800 p. illus. 24 cm. $9.00 1335

Contents (abridged): Embryology of the female generative organs. The gynecological history and examination. Physiology and endocrinology of menstruation. Cyclical histology of the genital tract. Clinical features of menstruation. Congenital anomalies of the female generative organs. Diseases of the vulva. Diseases of the vagina. Cervicitis and cervical polyp. Carcinoma of the cervix. Genital lacerations, relaxations and fistulae. Displacements of the uterus. Myoma of the uterus. Adenocarcinoma of the corpus uteri. Sarcoma of the uterus. Acute pelvic inflammatory disease. Tuberculosis of female generative organs. *Malignant tumors of the ovary.* Tumors of the tube, parovarium, and uterine ligaments. Endometriosis. Leukorrhea. Problems of sex life. General principles of gynecological organotherapy. The management of the menopause. Amenorrhea and hypomenorrhea. Dysmenorrhea. Sterility. Pregnancy conditions in gynecological practice. Common disorders of the female urinary organs, by H. S. Everett. Index.

Note: (1161?) A standard American work in which diagnosis and treatment are emphasized but in which there is also much information on endocrinology and other biological aspects of gynecology. The book is used both by undergraduate students in medical colleges and graduate practitioners. The present edition is coauthored by the author's son and associate in Johns Hopkins Medical School. The revisions are numerous but not so extensive as to affect the plan of the book. The text has been amended and rewritten in various parts; 42 illustrations have been added, and recent literature has been included in the bibliographies.

PARMELEE, ARTHUR HAWLEY

Management of the newborn. Chicago The Year Book Publishers, Inc., 1952 358 p. illus. 21 cm. $7.00 1336

Contents: Introduction. The fetus. Birth and neonatal adjustments. Characteristics of the newborn. The premature infant. Care and management of the newborn. Disturbances directly due to birth

processes. Disturbances due to abnormal variations of physiologic peculiarities. Disturbances due to prenatal factors. Disturbances due to acquired infections and other postnatal hazards. Index.

Note. A readable short treatise designed mainly for general practitioners. It makes available to the nonspecialist many of the advances in knowledge that have been published in recent years in such books as Potter and Adair *Fetal and neonatal death*, 2nd edition, 1949 and Smith, *The physiology of the newborn infant* 1947 Also much material has been included from the author's own extensive experience at Cook County and Presbyterian Hospitals in Chicago. The diagnosis and treatment of disorders and unusual conditions are stressed. The chapters are supplemented by useful lists of references and there are 47 figures.

POTTER, EDITH LOUISE

Pathology of the fetus and the newborn. Chicago Year Book Publishers, Inc., 1952 574 p. illus. 27 cm. $19 00. 1337

Contents. Early development of fetus and placenta. Rate of intrauterine growth. Chorionic vesicle and placenta. Abortion. Causes of fetal and infant death. Postmortem examination. Prematurity. Anoxia. Birth trauma. Infections. Malformations. Tumors. Multiple pregnancies and conjoined twins. Heart and blood vessels. Lungs and trachea. Thymus and glands of internal secretion. Mouth, esophagus, stomach and intestine. Diaphragmatic and abdominal hernia. Liver and gallbladder. Pancreas. Spleen. Kidneys, ureters, urinary bladder and urethra. Sex organs, gonads and mammary glands. Central nervous system. Skeleton. Skeletal muscles and joints. Skin. Blood. Index.

Note: A notable contribution to the knowledge of abnormalities, physiological disorders, and certain diseases of infants from time of conception to about one year of age. A considerable part of the material pertains to conditions that result in prenatal death or death soon after delivery The book is based on an intensive study of many thousands of autopsies performed at Chicago hospitals, particularly the Chicago Lying-in Hospital where the author holds the position of Pathologist. There are 601 figures nearly all of which are reproductions of photographs. Each of the chapters is accompanied by a list of references.

POTTER, EDITH LOUISE, AND FRED L. ADAIR

Fetal and neonatal death a survey of the incidence, etiology and anatomic manifestations of the conditions producing death of the fetus in utero and the infant in the early days of life. Second edition. Chicago The University of Chicago Press, 1949 173 p illus. 22 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $3 75 1338

Contents The normal fetus and infant. Postmortem examination. Survey of the principal causes of fetal and neonatal death. Special pathology Statistical data pertaining to births, maternal deaths, infant deaths, and stillbirths Index

Note. (1571) A compact handbook on the nature, importance, and identification of the principal causes of death of human infants before birth or in the days immediately following birth. Normal anatomy and standards are first covered, then the authors describe techniques of the postmortem examination, outline the principal causes of death, cover the pathology in some detail, and finally summarize the statistical data of the fetal and infant deaths in the United States of America. Literature references are included. The first edition was published in 1937 For this edition the book was extensively revised especially in the bibliographies and statistical data. Material was added on topics such as the effects of rubella and other virus infections of the mother during the first few months of pregnancy

REICH, WALTER J., AND MITCHELL J NECHTOW

Practical gynecology With 187 illustrations including 55 subjects in color Philadelphia J B Lippincott Company 1950 illus. (part col d) 449 p. 24 cm. $10 00 1339

Contents: Psychosomatics of gynecology Practical approach to gynecologic diagnosis. Biopsy and the early detection of cancer. Laboratory findings in gynecology Reproductive endocrinology Menstruation. Disturbances of menstrual function. Anomalies and malpositions of the female genitalia. Inflammatory lesions. Infections. Traumatic lesions. Neoplasms. Common gynecological complaints. Genital fistulas. Technics and apparatus. Low fertility and sterility Premarital examination and counsel. Index.

Note. Although limited mainly to procedures which can be carried out in the general practitioner's office, this modern manual covers a wide range of gynecologic disorders and related matters. Both medical and minor surgical treatments are included. There is more than the usual emphasis on diagnostic techniques and on psychosomatic aspects, but most of the space is devoted to clear, explicit descriptions of techniques. The book is based on extensive experience in the outpatient clinics of Cook County Hospital in Chicago and on teaching the subject in the Cook County Graduate School of Medicine.

REYNOLDS SAMUEL ROBERT MEANS

Physiological bases of gynecology and obstetrics. Springfield, Ill. Charles C Thomas, 1952 153 p 23 cm. (American lecture series. Publication no. 128 A monograph in American lectures in gynecology and obstetrics, edited by E C. Hamblen) $5.50. 1340

Contents. Problems in uterine physiology and their interrelations. Contractility of the human uterus and its physiological basis. The period of cervical dilatation. Abnormal labor and incoordinate uterine action. The physiological basis of menstruation. Somatic vascular actions of steroid hormones. The ovarian vasculature and ovarian function. The regulation of ovular activity in the ovary. The endocrine effects of hysterectomy The physiological effects of uterine distention. Uterine growth during pregnancy Uterine circulation during pregnancy Fetal maturity at birth. Ovarian function and uterine gradients. Physiological conditions in the uterus at the onset of labor. Supplementary reading list. Index.

Note: This book may be used as a supplement to the author's *Physiology of the uterus*, 2nd ed. (see number 812) or as a quite separate work. It is a concise review of advances made since about 1948, together with selected background information. As to the origin of the material the author has stated: "The lectures contained in this volume are part of a larger course given on the postgraduate level for physicians at the Facultad de Medicina de Montevideo.

ROMMER, JACK JAY

Sterility—its cause and its treatment. Springfield Illinois Charles C Thomas, 1952. 424 p illus. (part col d) 26 cm. $12.50. 1341

Contents: Part I, The infertile female: Historical background to sterility Physiology of coitus, orgasm, libido and fertilization. Anatomy and embryology Psychic trauma and fertility Causes of sterility—a summary and a check-list. Other factors associated with sterility Fertility in relation to the size and structure of the sex organs. Gynecologic pathology and sterility The history and physical examination of sterile patients. Means of investigation of the infertile female. Sterility and the endocrines. Review of the female sex hormones. Menstruation and the menstrual cycle. The medical treatment of infertility Office treatment of gynecologic conditions. Hormonal and other special means for treating sterility. Surgery in the treatment of sterility Part II, The infertile male: The infertile male. Male endocrinology The history and examination of the male. Therapy of male infertility Index.

Note A comprehensive treatise into which the author has gathered information on such facets of the problem as the relation of emotional status to fertility in addition to a full coverage of anatomical, physiological, and clinical aspects. Diagnostic and therapeutic techniques are well described, and abundant literature references are supplied. There are 181 figures.

SNOW WILLIAM

Roentgenology in obstetrics and gynecology Second edition. With 273 illustrations. Springfield Charles C Thomas, 1952 363 p. illus. 24 cm. $10.50. 1342

Contents: General discussion of Roentgen study of pregnancy. The Technic of Roentgen study of pregnancy Pelvic architecture. The Roentgen study of pregnancy. Some factors which influence occiput presentations and posterior presentations. Breech presentation, engagement, and delivery Atypical presentations. The fetus. Roentgen study of the soft parts of pregnancy. Placenta previa. Premature placental separation. Extra-uterine pregnancy.

The size of the uterus in pregnancy Utero-salpingography. The internal genitalia and the urinary tract. The internal genitalia and the gastro-intestinal tract. Growths in the pelvis, review Roentgen study in bleeding with pregnancy Recovery of tissue from X radiation. Index.

Note: Obstetric and gynecologic roentgenology is special field attended by difficulties in interpretation because the soft tissues under study produce roentgenograms of low contrast. This book by radiologist who has had extensive experience in this specialty is an introductory but comprehensive text. As might be expected, most of the illustrations are reproductions of roentgenograms. The illustrations are carefully and specifically interpreted in the text. In numerous instances where it was not possible to make clearly contrasted reproduction, the roentgenogram is supplemented by drawing.

TAYLOR, E STEWART

Manual of gynecology With 70 illustrations. Philadelphia Lea & Febiger 1952 204 p illus. 24 cm. $4 50 1343

Contents: History taking and physical examination. Anatomy and embryology of the female generative organs. Physiology and endocrinology of the female generative tract. Cyclic histology of the female generative tract and menstruation. Congenital anomalies of the female genital tract. Diseases of the external genitalia. Diseases of the vagina. Benign conditions of the cervix. Malignant diseases of the cervix. Benign conditions of the uterus. Malignant diseases of the uterus. The use of biopsy and the vaginal smear in gynecology by N P Isbell. Acute pelvic inflammatory disease. Pelvic abscess and chronic inflammatory disease. Benign tumors of the ovary Malignant and potentially malignant tumors of the ovary and tube. Endometriosis. Ectopic pregnancy Hydatidiform mole and chorionepithelioma. Abortion. Genital lacerations, relaxations, fistulas, and displacements. Management of menstrual excesses. Endocrinopathic primary and secondary amenorrhea and hypomenorrhea. The menopause, dysmenorrhea, frigidity and dyspareunia. Infertility The use of hormone preparations in gynecology and orientation as to proprietary hormone products. Index.

Note The essentials of contemporary gynecology are covered very concisely in this work, which is addressed primarily to medical college students and secondarily to general practitioners. The straightforward but abbreviated text is supplemented by brief references to the readily available recent literature. The author is head of the Department of Obstetrics and Gynecology in the School of Medicine of the University of Colorado.

YEAR BOOK OF OBSTETRICS AND GYNECOLOGY

The 1952 year book *of* obstetrics *and* gynecology (July 1951–June, 1952) Edited by J P Greenhill. Chicago The Year Book Publishers Inc., 1952 575 p. illus. 20 cm. $5.50 1344

Contents: Obstetrics: Pregnancy Labor. Puerperium. The newborn. Gynecology General principles. Diagnosis. Infertility. Operative technic. Infections. Benign tumors and endometriosis. Special ovarian tumors. Malignant tumors. Menstrual disorders. Endocrinology Index. Index to authors.

Note: (1171) An annual edited and organized similarly to the other books in the same series. Chapters consist of fairly long abstracts selected from the world medical literature. In many instances the abstract is supplemented by comment written by the editor. There are 90 figures in the present issue.

SURGERY

GENERAL

AMERICAN COLLEGE OF SURGEONS

Surgical forum. Proceedings of the forum sessions thirty-seventh clinical congress of the American College of Surgeons San Francisco California, November 1951 Surgical forum committee Owen H. Wangensteen and others. Philadelphia W B Saunders Company 1952 667 p illus. 25 cm. $10 00 1345

Contents (abridged) The lungs and esophagus. Evaluation of chest suction with an artificial thorax, by E. E. Eaves, Jr. A method for the production of reversible endobronchial obstruction in dogs, by C. H. McCroskey and others. The effects of hemorrhage and intravenous and intra-arterial infusion upon respiration and the volume of blood in the lungs, by R. Wilson and A. F. Reid. Endobronchial Geiger counter studies of intrathoracic malignancies utilizing radioactive phosphorus, by K. P. Klassen and others. The effect of streptokinase and streptodornase on wound healing in pulmonary resection, by O. Creech and others. The stomach and spleen. An experimental study of the effect of banthine and atropine upon gastric secretion and peptic ulceration, by H. N. Harkins and L. R. Sauvage. The effect of radiation from radioactive iodine on gastric secretion, by R. A. Ross(?) and others. The use of ACTH in hypersplenism, by P. C. Kiernan(?) and O. E. Hunter(?) Jr. The intestines. The experimental use of hyaluronidase in the prevention of intestinal adhesions, by J. E. Connolly and V. Richards. Influence of size of meals and frequency of feeding on motility of the small intestine, by P. H. Schrecker(?) and others. Experimental studies on closed colon loops, by A. W. Ulin and others. Suture strength and healing strength of end-to-end intestinal anastomoses, by N. M. Fallows(?) and others. The liver and portal system. Studies on the hepatic circulation in the *Macaca mulatta* monkey and in man, by C. G. Child and others. Studies of hepatic response to changes in blood supply, by W. E. Burnett and others. Reciprocal hydrostatic relationship between the portal and caval systems—its application to the problem of ascites, by H. Leffman(?) and others. The effect of diversion of bile to various parts of the intestines, by C. Blake(?). The role of concentration of bile in toxicity, by J. R. Johnson. The heart. A physiologic evaluation of the surgical treatment of mitral stenosis, by H. Hellgren(?) and others. A cinematographic study of the function of the mitral valve in situ, by A. Kantrowitz and others. Homologous heart grafts—transplantation of the heart in dogs, by E. Marcus and others. The maintenance of circulation by cross-transfusion during experimental operations on the open heart, by E. Kerr(?) and others. Practical exposure to permit experimental surgical procedures within the left heart, by O. H. A. Cheves(?), Jr. Blood vascular system and blood flow. Long femoral and ilio-femoral grafts, by J. Austin(?) and others. Early results of experimental studies of the action of high intensity electrons on aortic homografts, by K. K. L. Hui(?) and others. Arterial ligation—should the vein be ligated too? by H. Swan and others. The retardation of clotting of whole blood on contact with stainless steel, by C. W. Walter and others. Dural sheet studies in relation to radical operations of the neck, by A. J. Aalbyn(?) and others. The influence of ACTH on venous thrombosis, by K. O. Nelson(?). Experience with parenterally circulating fibrinolytic enzyme in surgical diseases, by R. R. Margulis and J. P. Pratt. The urogenital tract: The effect of nitrofurans(?) on tumors of the human testis and prostate gland, by C. E. Friedgood and C. B. Ripstein. Mode of development of electrolyte imbalance in ureterosigmoid anastomoses, by J. Lapides. Extraperitoneal pneumography—an experimental study, by D. R. Smith and others. Neurophysiology and neurosurgery. The absorption of the cerebrospinal fluid—studies with radioactive phosphorus (P^{32}), by L. Mann(?) and J. E. Adams. The effect of cortisone and ACTH on scarring in the brain and in peripheral nerves, by E. Weidner(?) and others. Air emboli complicating operations on the brain and spinal cord, and measures to prevent them, by R. Jasper(?). Treatment of hydrocephalus by direct shunt from ventricle to jugular vein, by F. E. Nulsen and E. B. Spitz. Orthopedics: Human electromyogram, by B. Libet and B. Feinstein. Experimental study of the fate of bone grafts, by C. Campbell and others. A preliminary report on studies of basic calcium phosphate in bone replacement, by R. D. Ray and A. A. Ward, Jr. Experimental increase in leg length—a preliminary report, by C. L. Wilson. Repair and regeneration. An experimental method for the study of skin homografts, by P. Randall and others. The effects of ACTH and cortisone on experimental skin homografts, by P. Randall and others. The effect of cortisone on wound healing, blood regeneration and growth, by E. Haley(?) and J. F. Lam(?). Some observations on connective tissue growth and tissue culture in relation to keloid formation—a preliminary report, by D. W. Robinson and others. Evaluation of the exposure method in the treatment of burns, by E. J. Pulaski and others. The prevention of adhesions in the chest and the pericardium by cortisone, by S. R. Schiebing(?) and others. The topical use of streptokinase-streptodornase in infected and necrotic lesions, by S. L. Tunnicliffe(?) and others. The endocrines: Studies on the control of salt-regulating adrenal hormone, by B. Zimmermann and M. M. Schoenbaum(?). Effect of autonomic blocking drugs on experimental pancreatitis, by J. D. Palmer. Physiological studies on the external pancreatic secretion in man, by J. M. Howard and others. Body fluid and electrolytes, blood volume and shock: The turnover rate of body water in the human, by H. F. Haley and others. The use of radioactive iodinated human serum albumin (RIHSA) for clinical total blood volume studies, by J. R. Aust and others. A new approach to fluid and electrolyte therapy, by A. Horwitz and others. The absorption and excretion of [illegible] agents in hemorrhagic shock, by T. M. Cloud and others. Comparative effectiveness of certain colloidal substances in maintaining plasma volume after blood loss, by R. C. Kratoon(?) and others. Index.

Note: Original papers bearing on recent experimental investigations, on advances in the knowledge of chemistry or newly developed surgical techniques, etc., prepared for the congress named in the volume title have been collected in this book. Altogether 114 papers are reprinted in full and many others are represented by abstracts. The average length of an individual paper is about five and one-half pages, but in this small space most authors have succeeded in giving enough information to enable a reader of the volume to judge whether the process or technique under discussion is of value to him. Most of the papers are supplemented by literature references and illustrations.

ANSON BARRY JOSEPH AND WALTER G. MADDOCK

Callander's surgical anatomy Third edition with 929 illustrations. Philadelphia W B Saunders Company 1952 1074 p. illus. 26 cm. $14 00. 1346

Contents (abridged) Part I, The head. Part II, The neck. Part III, The thorax. Part IV Abdomen. Part The pelvis. Part VI, Male perineum and external genitalia. Part VII, Female perineum and external genitalia. Part VIII, The vertebral column, vertebral canal, and spinal cord. Part IX, Upper extremity. Part X, Lower extremity. Index.

Note (2391) One of the standard American texts for medical college students preparing for surgery. The primary emphasis is on anatomy but the basic material is carefully related to surgical techniques and to related topics such as anesthesia. The previous edition appeared in 1939 and was the work of Dr. C. L. Callander. In this edition the work is substantially enlarged and there are many new illustrations. The authors are members of the faculty of Northwestern University Medical School.

BLAND JOHN H.

The clinical use of fluid and electrolyte. Illustrated. Philadelphia W B Saunders Company 1952 259 p. illus. 28 cm. $6.50. 1347

Contents: Basic physiologic considerations of body fluid and electrolyte. "Pure" and mixed water and sodium chloride depletion. Normal and [illegible]. Water and electrolyte in congestive heart failure. [illegible] Water and electrolyte in patients [illegible] abnormal potassium metabolism. [illegible] patients. Fluid and electrolyte in the aged and [illegible]. Fluid and electrolyte in renal disease. Fluids in surgical patients. [illegible]

Fluid and electrolyte in diabetes mellitus. Fluid and electrolyte in adrenal cortical insufficiency. Adverse effects of heat on body water and electrolyte. ACTH and cortisone—physiologic effects in body fluid and electrolyte. Behavior of body water and electrolyte in shock, burns, crush and blast injury, roentgen irradiation and exposure to cold and other stress.

Note: Current knowledge of the interrelationships of body fluid and electrolyte as in this work summarized and interpreted for the benefit of general practitioners of medicine, clinicians, and those who are concerned with the pre- and post-operative care of surgical patients. The basic knowledge and the experimental and clinical observations on which it is based are adequately covered, but the emphasis is on the aspects that have practical applications in diagnosis and treatment. Statements in the text are referenced to fuller discussions in the literature. However, explicit information is given on diets, nutrition, drugs and dosages in the book itself. The author is member of the faculty of the College of Medicine of the University of Vermont.

CHRISTOPHER, FREDERICK

A textbook of surgery by American authors. Fifth edition. 1465 illustrations on 742 figures. Philadelphia W B Saunders Company 1950. 1550 p. illus. 27 cm. $13 50 1348

Contents (abridged) Inflammation and wound healing. Shock; acidosis and alkalosis; water and electrolyte balance. Bacteriology and chemotherapy. Bacterial, fungus and virus diseases. Thermal, chemical, electrical and irradiation injuries. Muscles, ligaments and bursae. Tendons, tendon sheaths and fascial spaces. Infections and tumors of bones and joints. Fractures. Dislocations. Deformities; paralytic disorders; derangements of bones and joints. Amputations and prostheses. The nervous system. The endocrine system. The vascular system. The lymphatic system. The skin and adjacent tissues. The head. The neck. The breast. The thoracic wall, pleura and lungs. The heart and pericardium. The mediastinum, including the esophagus. The abdominal wall. The peritoneum. The stomach and duodenum. The small and large intestines. Anal canal and rectum. The liver and biliary system. The pancreas. Hernia. The genitourinary tract. Gynecology. Military surgery. Plastic surgery. Aseptic surgical technic. Preoperative and postoperative care. Roentgenology. Anesthesia. Index.

Note. (1175*) A standard and widely used medical college textbook. The chapters have been written by eminent surgeons and teachers of surgery and each man has covered a branch of surgery in which he is recognized as an expert. In the present edition there are 230 chapters or subsections written by 187 authors. Chapters are devoted to such specific topics as surgical treatment for congenital obstructions of the bile ducts. In general for each disorder covered the etiology, pathology, symptoms, diagnosis and medical and surgical treatments are concisely described. In numerous instances medical treatment is emphasized. Not all surgical techniques are covered but several leading ones are often described for a specific disorder. The fourth edition was published in 1945. Approximately 30 new sections have been added in this edition and about a dozen sections carried over have been extensively revised. Recent literature has been added to the lists of references.

COLE, WARREN HENRY editor

Operative technic. Introduction by Frank H. Lahey New York Appleton-Century Crofts, Inc., 1949 2 v illus. (part col d) 25 cm. Vol. I $18 00 Vol. II, $16 00 1349

Contents: Volume I, General surgery Wound healing and the care of wounds, by E. L. Howes. Hemorrhage and shock, by J. D. Stewart. Burns, by C. C. Lund and S. M. Levenson. Preoperative and postoperative care, by R. Elman. Amputations, by F. M. Mc Keever. The face, mouth and jaws, by J. B. Brown and F. McDowell. The esophagus, by W. E. Adams. Abdominal incisions, by F. A. Coller and E. F. Maclean. Surgery of stomach and duodenum, by W. Walters. Gastric vagotomy in the treatment of peptic ulcer, by L. R. Dragstedt. Surgery of the small intestine, by C. Dennis. The pancreas and adrenal, by A. Brunschwig. The gallbladder and bile ducts, by W. H. Cole. The liver and subphrenic space, by A. Ochsner and M. E. DeBakey. The colon and appendix, by R. R. Graham and J. Gray. The lower part of the sigmoid, the rectum and anus, by C. F. Dixon and A. L. Lichtman. The lymphatic system, by R. K. Gilchrist. Splenectomy, by W. H. Cole. The surgery of portal hypertension, by H. A. Wenzel. Abdominal hernias, by E. F. Lehman and C. E. Davis, Jr. The breast, by T. G. Orr. The thyroid and parathyroid glands, by J. de J. Pemberton and B. M. Black. The muscles, fasciae, tendons and bursae, by H. L. Mc Laughlin. Acute vascular injuries, by M. E. DeBakey. Traumatic aneurysms and arteriovenous fistula, by D. Elkin. Varicose veins, by M. E. DeBakey. Surgery of the hand and its tendons, by H. S. Allen and S. L. Koch. The skin and subcutaneous tissue, by F. Glenn. Index. Volume II, Specialty surgery. Introduction, by A. O. Whipple. Plastic surgery, by F. W. Grosby. Thoracic wall, pleural cavity, lungs and diaphragmatic hernia, by J. M. Dorsey. The heart and mediastinum, by C. S. Beck. Fractures, by J. A. Key. Hematogenous osteomyelitis, by F. Dickson. Deformities and neoplasms of the bone, by C. E. Badgley. Surgical approaches to the joints, by L. C. Abbott and others. The orthopedic surgical treatment of spastic paralysis and anterior poliomyelitis, by F. A. Chandler. Scalp, cranium and brain, by H. A. Brown and H. C. Naffziger. The spinal cord, by C. Pilcher and W. F. Meacham. Surgery of the intracranial nerves, by F. C. Grant. Peripheral nerves, by R. G. Spurling. The autonomic nervous system, by R. H. Smithwick. Gynecological surgery, by J. V. Meigs and L. Parsons. The male genito-urinary system, by D. K. Rose. Index.

Note: A broad presentation edited by the head of the Department of Surgery of the College of Medicine of the University of Illinois and written by eminent surgeons of the United States of America and Canada. Each of the papers or chapters is essentially a short monograph in which most of the space is given to explicit descriptions of techniques but which contains background information on anatomy and physiology, usually some information on the history of the operation and also literature references. Together, the two books contain over 900 figures of which a few are reproduced in color.

COLE WARREN HENRY AND ROBERT ELMAN

Textbook of general surgery Foreword by Evarts A. Graham. Sixth edition. New York Appleton-Century-Crofts, Inc., 1952 1154 p. illus. 24 cm. $12.50 1350

Contents (abridged) Inflammation and repair. Acute surgical infections. Ulcer, gangrene, sinus, fistula. Surgical methods. Anesthesia. Wounds. Amputations. Surgery in diabetes. Shock and hemorrhage. Thermal, chemical and electrical trauma. Fractures, dislocations and sprains. Blood vessels. The lymphatic system. The nervous system. Liver, gallbladder, pancreas and spleen. The alimentary tract. The peritoneal cavity. Hernia. Surgical diseases of the chest, by E. A. Graham and T. H. Burford. The endocrine glands. Gynecology. Military surgery, by F. B. Berry. Index of authors. Index of subjects.

Note: (1176*) A standard textbook for medical college courses. It covers the physiological and pathological bases of surgery and describes the main surgical diseases with emphasis on their etiology and clinical manifestations. The treatment of each disease is also outlined and non surgical therapies are considered along with surgical ones. Numbers inserted in the text lead the reader to citations of related literature where fuller discussions of particular therapies can be found. The fifth edition was published in 1948. Important though moderate revisions and additions were made in preparing this edition. The revised and added material relates to such fields as thoracic surgery, cardiac surgery, gastrointestinal surgery and vascular surgery.

CUTLER, ELLIOTT CARR, AND ROBERT M. ZOLLINGER

Atlas of surgical operations. Second edition. Illustrated by Mildred B Codding. New York The Macmillan Company 1949 225 p. illus. 38 cm. $12.00 1351

Contents (abridged) A. General considerations. Surgical technic. Anesthesia. Preoperative and postoperative care. B. Surgical operations. Neck. Chest. Abdominal wall. Gastro-intestinal system. Pilonidal sinus. Spleen. Gynecologic system. Extremities. Genito-urinary system. Central nervous system.

Note: (1181) In this work the common surgical operations are described by means of a brief text and fairly detailed drawings arranged in sequence for each operation. The book is made up so that the drawings are on right-hand pages and the explanatory text is on facing left-hand pages. It is not a work for specialists but it is a useful one for advanced medical students, young surgeons, and general practitioners doing occasional surgery. In the present edition 30 procedures have been added. New illustrations are of course included for these and in addition many of the illustrations that were in the original edition have been redrawn.

some diagnostic problems, by R. A. Cooke. Surgical diagnosis in cancer of the head and neck, by H. P. Royster. Surgical disorders of the thyroid gland—the complete diagnosis, by T. A. Shallow and others. The diagnosis of carcinoma of the larynx, by L. H. Clerf and others. The diagnosis of benign lesions of the esophagus, by K. E. Fry and F. J. Putney. The diagnosis of lung cancer, by F. F. Allbritten, Jr., and others. The diagnosis of mediastinal tumors, by W. E. Burnett and others. Surgical diagnosis of genito-urinary conditions, by T. R. Fetter and W. C. Drake. Surgical diagnostic problems in obstetrics, by T. L. Montgomery. Acute abdominal pain of female genital origin, by P. O. Klingensmith. Adequate measures in the diagnosis of uterine cancer—with regard to management and treatment, by L. C. Scheffey and W. R. Lang. The Roentgen diagnosis of neoplasms of bone, by R. S. Bromer. Accurate diagnosis in lesions of the shoulder and knee joint, by A. F. DePalma. Ruptured intervertebral disks, by F. C. Grant and F. K. Nelson. The recognition of deficient blood volume in surgical patients, by J. Y. Templeton, III, and R. K. Finley, Jr. Clinics on other subjects. The management of polyps of the colon and rectum, by H. R. Hawthorne. Surgery of the mitral valve. Index to volumes 30, 31 and 32.

Note. (1603a) *Surgical clinics of North America* is published six times a year and is continuously paged through the volume as a periodical. However each issue is devoted to a symposium on a topic of current interest, and the issues are available bound in cloth as well as in paper. The December 1952 issue contains the papers listed above. The authors are teachers and practitioners of surgery and the volume is intended for graduate surgeons.

THOREK, MAX

Modern surgical technic. With a foreword by Fred W. Rankin. Second edition. 2,590 illustrations including 57 full color plates. Philadelphia, J. B. Lippincott Company, 1952. 4 v. and index. illus. (part col'd) 26 cm. $79.00 1362

Contents (abridged): Volume I. Part I, General operative considerations: The surgeon and his art. Selection and management of "poor risk" patients. Postoperative considerations. Anesthesia, by C. J. Betlach. Blood transfusion. Electrosurgery. Part II, Surgery of head and neck and principles of plastic surgery: Surgery of the orbit and eye, by J. Igersheimer. Surgery of the ears and adjacent structures, by W. L. Gatewood. Surgery of the face. Surgery of the jaws. Surgery of the sinuses and tonsils, by W. L. Gatewood. Surgery of the neck and the cervical endocrine glands. Principles of plastic surgery and skin grafting. Volume II. Part III, Surgery of the nervous and vascular systems: Surgery of the central nervous system, by H. C. Voris. Surgery of the arteries, by R. W. McNealy. Surgery of the veins, by H. O. McPheeters. Part IV, Surgery of the chest, by R. Nissen. Part V, Surgery of bones and joints. Orthopedic surgery, by K. Eichelbaum and H. K. Turner. Fractures, dislocations and sprains, by J. J. Callahan. Volume III. Part VI, Surgery of the breast. Part VII, Surgery of the abdomen. Surgery of the stomach and the duodenum. Surgery of the intestines. Surgery of liver, gallbladder and biliary passages. Surgery of the pancreas. Surgery of the spleen. Volume IV. Part VIII, Hernias. Part IX, Gynecology and genito-urinary surgery. Index.

Note. (1604) A cyclopedic work of reference nature. The techniques described are those in fairly wide, current use. Each technique included is covered explicitly in considerable detail. The textual descriptions are supplemented by illustrations and many of these are arranged in step-by-step series. Short lists of selected references are included in most chapters. The book is well suited to use as a reference work in the offices of general medical practitioners and general surgeons. It is useful also to surgeons practicing specialties who are sometimes called upon to perform operations outside their own fields. The first edition was published in 1938 in three volumes and was reissued in 1942 in a one-volume edition for the use of medical officers of the Armed Forces. In this second edition more than 400 pages of text have been added and the number of illustrations has also been substantially increased.

THORNDIKE, AUGUSTUS

A manual of bandaging, strapping and splinting. Second edition, with 119 illustrations. Philadelphia, Lea & Febiger, 1950. 148 p. illus. 19 cm. $2.00 1363

Contents: The dry sterile dressing for clean wounds. Septic wound dressing. Sprains, strains, and contusions. Dislocations and emergency splinting. Transportation of fractures. The use of plaster of Paris and similar bandages in splinting. Bibliography. Index.

Note. (1606) A brief, illustrated manual addressed primarily to medical students, student nurses, and hospital orderlies. The second edition has been revised to incorporate the changes in practice brought about as a result of experience and research stimulated by World War II, including, among other new forms and types of useful bandaging materials, the plastic impregnated bandage used as a substitute for plaster of Paris bandage.

YEAR BOOK OF GENERAL SURGERY

The 1952 year book of general surgery (June, 1951–May 1952). Edited by Evarts A. Graham. With a section on anesthesia edited by Stuart C. Cullen. Chicago, The Year Book Publishers, Inc., 1952. 670 p. illus. 20 cm. $6.00. 1364

Contents: Introduction. General topics. Anesthesia. Shock. Water and electrolytes. Nutrition. Chemotherapy—antibiotics. Wounds, wound infection and burns. Neoplasms. Nervous system. Face, buccal cavity and neck. The thyroid and parathyroid. Breast. Mediastinum and thorax. Lung. Heart and major blood vessels. Peripheral arteries. Sympathectomy. Peripheral veins—thrombophlebitis. Esophagus. Abdomen—general. Hernia. Liver and spleen. Stomach and duodenum. Biliary tract. Pancreas. Small intestine. Vermiform appendix. Colon and rectum. Anus. Kidney. Adrenal gland. Extremities and spine. Anesthesia: Premedication. Inhalation anesthesia. Ventilation. Barbiturates. Muscle relaxants. Spinal anesthesia. Local anesthetics. Circulation. Miscellaneous. Index. Index to authors.

Note. Another volume in this useful series. Significant articles are selected from the medical literature of the world and are reduced to abstracts which average 500 words in length. These abstracts are classified under the various headings given in the contents above. They are not highly condensed summaries but are written in narrative fashion so that they can be read with ease. A reference to the original source is given and in numerous instances the abstract is supplemented by an evaluatory note written by the editor. There are 235 figures in the present issue.

ANESTHESIA

ADRIANI, JOHN

The pharmacology of anesthetic drugs; a syllabus for students and clinicians. Third edition, completely revised. Springfield, Illinois, Charles C Thomas, 1952. 179 p. illus. 28 cm. $9.50 1365

Contents: Effects of physical and chemical properties on pharmacological activity. Administration, absorption and elimination of anesthetic drugs. General systemic effects. Administration of anesthetic drugs. Gaseous agents. Volatile agents. Inorganic non volatile agents. Aliphatic non volatile agents. Barbiturates and other non volatile agents derived from urea. Opium alkaloids and synthetic analgesics. Local anesthetics. Non anesthetic drugs used in conjunction with anesthesia. Inorganic gases used in conjunction with anesthesia. Some clinical considerations. Glossary. References. Index.

Note. (2610) An illustrated digest of fundamental facts about the properties, actions, and techniques of administration of anesthetic drugs in current use. It is organized in chapters whose titles are given above. Within most of the chapters the drugs are taken up one by one. The history, preparation, properties, administration, uses, advantages, disadvantages, contraindications are all covered concisely. In addition, the physiological actions are summed up in diagrams based on the human figure. The book contains a number of auxiliary reference aids such as a glossary, tabulation of dosages, literature references, and a very detailed index. The second edition was published in 1942. For this edition the work was revised and expanded throughout and is now almost twice as long.

BURSTEIN, CHARLES L.

Fundamental considerations in anesthesia. New York, The Macmillan Company, 1950. 153 p. illus. 22 cm. $4.50. 1366

Contents: The autonomic nervous system. The respiratory pattern during general anesthesia. Respiratory disturbances: Apnea and carotid body reflexes. Hypercapnea, hypopnea, tachypnea, bradypnea, Cheyne-Stokes' respiration, bronchoconstriction, upper respiratory obstruction. Laryngeal spasm. Circulatory disturbances: Shock. Celiac plexus reflex. Carotid sinus reflex. During spinal anesthesia. Other than vagal. Cardiac arrhythmias. Parasympathetic reactions.

Vagal respiratory. Vagal cardiac. Gastrointestinal autonomic reactions. Pulmonary control. Index.

Note: A monograph for clinicians and teachers, describing and analyzing complications that may arise during surgery. It covers problems that occur during clinical anesthesia; considers the pharmacology, physiology, and physio-pathology involved in these problems; and indicates the proper treatment for various reactions. The author emphasizes the importance of a knowledge of basic physiology and pharmacology. Bibliographical references are printed at the end of each chapter.

CLEMENT, FREDERICK WALTER

Nitrous oxide-oxygen anesthesia. Third edition, thoroughly revised with 129 illustrations Philadelphia Lea & Febiger 1951. 369 p. illus. 24 cm. $6.50 1367

Contents (abridged): Part I, General considerations: Properties and manufacture of gases. Theory of nitrous oxide-oxygen anesthesia. Signs of nitrous oxide-oxygen anesthesia. Metabolism and premedication. Charting and shock. Classification of patients. Part II, The administration of N_2O–O_2 anesthesia: The gas apparatus. Rebreathing. Obstruction, airways and resuscitation. Nitrous oxide-oxygen and curare. Oxygen want—oxygen excess—cyanosis. Part III, Special techniques: Primary and secondary saturation. Pressure. Carbon dioxide absorption. Endotracheal anesthesia. Part IV Summary of N_2O–O_2 anesthesia. Advantages and disadvantages of N_2O for anesthesia. Comparison of nitrous oxide-oxygen with other gaseous anesthetics. Part V Dental anesthesia analgesia. Part VI, Some physical factors in the administration of gaseous anesthetics, by E. I. McKesson. Index.

Note: (1941) The standard treatise on this kind of anesthesia. The author in association with the late E. I. McKesson played a considerable part in its development. The first two editions of the book were largely limited to covering the McKesson-Clement technique; but in this considerably expanded edition the whole subject is covered, including the advances in the fundamental knowledge of anesthesia and the modifications in technique which have taken place in recent years. The book is of interest not only to anesthetists but also to surgeons and to dentists. Literature references are included.

COLLINS, VINCENT J

Principles and practice of anesthesiology 99 illustrations. Philadelphia Lea & Febiger 1952 528 p. illus. 24 cm. $10 00 1368

Contents (abridged): Section I, General considerations History and scope of anesthesiology Anesthetic equipment and its maintenance Positioning of patients. Preanesthetic preparation and premedication. Inhalation technics. Carbon dioxide absorption technic. Endotracheal technic Curare—an adjunct to anesthesia. Principles of spinal anesthesia. Intravenous anesthesia Rectal anesthesia Refrigeration anesthesia. Explosions and fire hazards. Respiration—transportation of physiologic gases Section II, Regional technics: Blocks of the head Blocks of cervical spinal nerves. Extremity blocks. Miscellaneous blocks. Section III, Pharmacologic considerations. Section IV, Complications Respiratory derangements Autonomic reflexes. Cardiac arrhythmias Complications of spinal anesthesia. Temperature regulation and heat problems. Postoperative complications. The management of patients in coma. Resuscitation. Shock. Section V Special considerations Pediatric anesthesia. Anesthesia in the aged. Anesthesia in abdominal surgery Anesthesia for thoracic surgery Anesthesia for head and neck surgery Management of the diabetic patient. Anesthetic management of the cardiac patient. Obstetrical analgesia and anesthesia. Section VI, Intravenous and inhalation therapy Index

Note: An inclusive work in which all phases of anesthesia are covered very compactly It is organized in 64 chapters, some of which are as short as six pages. However most chapters are supplemented by selected but fairly extensive lists of literature references. Information is included not only on all the established anesthetic drugs and techniques but also on the history of anesthesia, pertinent aspects of clinical medicine and of pharmacology, pre- and post-operative complications of anesthesia, blood transfusion, inhalation therapy etc. The book is suitable for use as a text in accelerated courses and as a reference book by graduate physicians. The author is Director of the Department of Anesthesiology of St. Vincent's Hospital, New York City

CULLEN STUART CHESTER

Anesthesia in general practice. Third edition. Chicago The Year Book Publishers, Inc. *1951 292* p. illus. *21* cm. (The general practice manuals) $4.50 1369

Contents: Use of depressant drugs. Airway Inhalation anesthesia—agents. Inhalation anesthesia—technics. Spinal analgesia. Regional, infiltration and topical analgesia. Signs of anesthesia. Choice of anesthetic agent and technic. Recognition and treatment of shock. Oxygen therapy Pre- and postanesthetic care of the patient. Explosion hazards. Appendix Anesthetic agents available for office use. Index.

Note: (1193) A short manual addressed to general practitioners and part-time anesthetists rather than to specialists. Although the chief anesthetic drugs are described, the emphasis is on basic matters and standard techniques. The second edition was published in 1948. In this edition the first chapter has been extensively revised and less prominent changes have been made at various points in the other chapters. The length of the book has been increased by about 30 pages.

GRAUBARD DAVID J , AND MILTON C. PETERSON

Clinical uses of intravenous procaine. Springfield Illinois Charles C Thomas 1950 104 p. illus. 22 cm. (American lecture series. Publication no 73 A monograph in American lectures in *anesthesiology edited by* John Adriani) $2.50 1370

Contents: Introduction. Chemistry and pharmacology Intravenous local anesthesia. Pruritus. Serum sickness and other states of sensitivity Analgesia in burns and postoperative pain. Acute arrhythmias during anesthesia. Pain in traumatic and inflammatory conditions. Acute anterior poliomyelitis. Other indications. Index to authors.

Note: Rather than a brief survey based on a selection of the pertinent literature, this work is a comprehensive review of its subject. The text is very concise; nevertheless the essential data in the source articles are stated. Some transcripts of case histories are included. The bibliographies appended to the chapters are international in scope. About 240 names appear in the author index, indicating the extensiveness of the literature coverage.

GUEDEL ARTHUR ERNEST

Inhalation anesthesia a fundamental guide. Second edition. New York The Macmillan Company 1951 143 p. illus. 22 cm. (Macmillan surgical monographs) $3 75 1371

Contents: Part I, Principles of inhalation anesthesia. Mechanism of inhalation anesthesia. Stages of anesthesia. Signs of anesthesia. Depth of anesthesia. The mechanism of various anesthetic requirements. Part II, Anesthetic accidents: Accidents due to changes in blood pressure during anesthesia. Ventricular fibrillation Central respiratory failure. Accidents due to peripheral respiratory interference Aspiration of debris. Miscellaneous accidents. Cyanosis. Anesthetic explosions. Selected references. Index.

Note: (2414) A concise, authoritative guide addressed to students and teachers in medical colleges, nurses, physicians and surgeons as well as to anesthetists Special attention has been given to describing the signs of anesthesia. The anesthetic requirements for various operations are stated explicitly The second part, which is devoted to anesthetic accidents, constitutes half of the book. Although a few cases are discussed, this part consists mainly of descriptions of techniques and precautions that guard against accidents.

WATERS RALPH MILTON editor

Chloroform a study after 100 years. Madison The University of Wisconsin Press 1951 138 p. illus. 22 cm. $2 75 1372

Contents: The effect of chloroform on hepatic function, by O. S. Orth and others. The effect of chloroform on renal function, by O. S. Orth and R. B. Cohen. The effect of chloroform on the cardiovascular system, by O. S. Orth and others. A clinical evaluation of chloroform, by M. A. Gillespie. Chloroform in blood and expired atmosphere, by L. E. Morris. Conclusions, by R. M. Waters. References. Index.

Note. The results of a series of planned studies of chloroform as an anesthetic drug are reported in this short but valuable book. The studies were arranged so that they were made of an old drug rather than a new one. Some of the studies were conducted on a-

SURGERY

GENERAL

AMERICAN COLLEGE OF SURGEONS

Surgical forum. Proceedings of the forum sessions thirty-seventh clinical congress of the American College of Surgeons San Francisco California, November 1951 Surgical forum committee Owen H. Wangensteen and others Philadelphia W B Saunders Company 1952 667 p illus. 25 cm. $10 00 1345

Contents (abridged) The lungs and esophagus: Evaluation of chest suction with an artificial thorax, by B. E. Howe, jr A method for the production of reversible endobronchial obstruction in dogs, by C. H. McCroskey and others. The effects of hemorrhage and intravenous and intra-arterial infusion upon respiration and the volume of blood in the lungs, by R. Wilson and A. F Reid. Endobronchial Geiger counter studies of intrathoracic malignancies utilizing radioactive phosphorus, by K. P Klassen and others. The effect of streptokinase and streptodornase on wound healing in pulmonary resection, by O. Creech and others. The stomach and spleen. An *experimental study of the effect of banthine and atropine upon* gastric secretion and peptic ulceration, by H. N Harkins and L. R. Jurrage. The effect of radiation from radioactive iodine on gastric secretion, by R. A. Foote and others. The use of ACTH in hypersplenism, by F C. Kiernan and O. B. Hunter jr The intestines. The experimental use of hyaluronidase in the prevention of intestinal adhesions, by J E. Connolly and V Richards. Influence of size of meals and frequency of feeding on motility of the small intestine, by F H. Schrecker and others. Experimental studies on closed colon loops, by A. W Ulin and others. Suture strength and healing strength of end-to-end intestinal anastomoses, by N M. Fallows and others. The liver and portal system. Studies on the hepatic circulation in the *Macaca mulatta* monkey and in man, by C. G. Child and others. Studies of hepatic response to changes in blood supply, by W E. Burnett and others. Reciprocal hydrostatic relationship between the portal and caval systems—its application to the problem of ascites, by H Laufman and others. The effect of diversion of bile to various parts of the intestines, by C. Links. The role of concentration of bile in toxicity by J. R. Johnson. The heart. A physiologic evaluation of the surgical treatment of mitral stenosis, by H. Hallgren and others. A cinematographic study of the function of the mitral valve in situ, by A. Kantrowitz and others. Homologous heart grafts—transplantation of the heart in dogs, by E. Marcus and others. The maintenance of circulation by cross-transfusion during experimental operations on the open heart, by E. Karr and others. Practical exposure to permit experimental surgical procedures within the left heart, by G H A. Clowes, jr Blood vascular system and blood flow. Long femoral and ilio-femoral grafts, by J. Annola and others. Early results of experimental studies of the action of high intensity electrons on aortic homografts, by K. K. L. Hui and others. Arterial ligation—should the vein be ligated too?, by H. Swan and others. The retardation of clotting of whole blood on contact with stainless steel, by C W Walter and others. Dural sinus studies in relation to radical operations of the neck, by A. J. Aslyan and others. The influence of ACTH on venous thrombosis, by K. O. Nelson. Experience with normally circulating fibrinolytic enzymes in surgical diseases, by R. R. Margulis and J. F Pratt. The urogenital tract. The effect of nitrofurazone on tumors of the human testis and prostate gland, by C. E. Friedgood and C. R. Ripstein. Mode of development of electrolyte imbalance in ureterosigmoid anastomosis, by J. Lapides. Extraperitoneal pneumography—an experimental study by D E. Smith and others. Neurophysiology and neurosurgery. The absorption of the cerebrospinal fluid—studies with radioactive phosphorus (P^{32}) by L. Mann and J. E. Adams. The effect of cortisone and ACTH on scarring in the brain and in peripheral nerves, by E. Baldrey and others. Air emboli complicating operations on the brain and spinal cord, and measures to prevent them, by R. Jaeger. Treatment of hydrocephalus by direct shunt from ventricle to jugular vein, by F E. Nulsen and E. B. Spitz. Orthopedics. Human electromyography, by B. Libet and B. Feinstein. Experimental study of the fate of bone grafts, by C. Campbell and others. A preliminary report on studies of basic calcium phosphate in bone replacement, by R. D. Ray and A. A. Ward, jr Experimental increase in leg length—a preliminary report, by C. L. Wilson. Repair and regeneration: An experimental method for the study of skin homografts, by P Randall and others. The effects of ACTH and cortisone on experimental skin homografts, by P Randall and others. The effect of cortisone on wound healing, blood regeneration and growth, by R. Haley and J. F Lane. Some observations on connective tissue growth and tissue culture in relation to keloid formation—a preliminary report, by D. W Robinson and others. Evaluation of the exposure method in the treatment of burns, by E. J. Pulaski and others. The prevention of adhesions in the chest and the pericardium by cortisone, by S. R. Schamberg and others. The topical use of streptokinase-streptodornase in infected and necrotic lesions, by S. L. Tabachnick and others. The endocrines: Studies on the control of salt regulating adrenal hormones, by B. Zimmermann and M. M. Schoenbrenner Effect of autonomic blocking drugs on experimental pancreatitis, by J. D. Palmer. Physiological studies on the external pancreatic secretion in man, by J. M. Howard and others. Body fluid and electrolytes, blood volume and shock: The turnover rate of body water in the human, by H. B. Haley and others. The use of radioactive iodinated human serum albumin (RIHSA) for clinical total blood volume studies, by J. R. Aust and others. A new approach to fluid and electrolyte therapy by A. Hurwitz and others. The absorption and excretion of [illegible] agents in hemorrhagic shock, by T M. Cloud and others. Comparative effectiveness of certain volemic substances in maintaining plasma volume after blood loss, by R. C. Knutson and others. Index.

Note. Original papers bearing on recent experimental investigations, on advances in the knowledge of chemistry as newly developed surgical techniques, etc., prepared for the congress named in the volume title have been collected in this book. Altogether 114 papers are reprinted in full and many others are represented by abstracts. The average length of an individual paper is about five and one-half pages, but in this small space most authors have succeeded in giving enough information to enable the reader of the volume to judge whether the process or technique under discussion is of value to him. Most of the papers are supplemented by literature references and illustrations.

ANSON BARRY JOSEPH AND WALTER G. MADDOCK

Callander's surgical anatomy Third edition with 929 illustrations. Philadelphia. W B Saunders Company 1952 1074 p. illus. 26 cm. $14 00. 1346

Contents (abridged) Part I, The head. Part II, The neck. Part III, The thorax. Part IV Abdomen. Part V The pelvis. Part VI, Female perineum. Male perineum and external genitalia. Part VII, Female perineum and external genitalia. Part VIII, The vertebral column, vertebral canal, and spinal cord. Part IX, Upper extremity. Part X, Lower extremity. Index.

Note (2391) One of the standard American texts for medical college students preparing for surgery. The primary emphasis is on anatomy but the basic material is carefully related to surgical techniques and to related topics such as anesthesia. The preceding edition appeared in 1939 and was the work of Dr. C. L. Callander. In this edition the work is substantially enlarged and there are many new illustrations. The authors are members of the faculty of Northwestern University Medical School.

BLAND JOHN H.

The clinical use of fluid and electrolyte. Illustrated. Philadelphia W B Saunders Company 1952 259 p. illus. 28 cm. $6.50. 1347

Contents. Basic physiologic considerations of body fluid and electrolyte. "Pure" and mixed water and sodium chloride depletion. Water and electrolyte in congestive heart failure. Normal and abnormal potassium metabolism. Water and electrolyte in pediatric patients. Fluid and electrolyte in the aged and aging. Parenteral fluids in surgical patients. Fluid and electrolyte in renal disease.

Fluid and electrolyte in diabetes mellitus. Fluid and electrolyte in adrenal cortical insufficiency. Adverse effects of heat on body water and electrolyte. ACTH and cortisone—physiologic effects in body fluid and electrolyte. Behavior of body water and electrolyte in shock, burns, crush and blast injury roentgen irradiation and exposure to cold and other stress.

Note: Current knowledge of the interrelationships of body fluid and electrolyte is in this work summarized and interpreted for the benefit of general practitioners of medicine, clinicians, and those who are concerned with the pre- and post-operative care of surgical patients. The basic knowledge and the experimental and clinical observations on which it is based are adequately covered, but the emphasis is on the aspects that have practical application in diagnosis and treatment. Statements in the text are referenced to fuller discussions in the literature. However, explicit information is given on diets, solutions, drugs and dosages in the book itself. The author is a member of the faculty of the College of Medicine of the University of Vermont.

CHRISTOPHER, FREDERICK

A textbook of surgery by American authors. Fifth edition. 1465 illustrations on 742 figures. Philadelphia W B Saunders Company 1950 1550 p. illus. 27 cm. $13 50. 1348

Contents (abridged) Inflammation and wound healing. Shock; acidosis and alkalosis; water and electrolyte balance. Bacteriology and chemotherapy. Bacterial, fungus and virus diseases. Thermal, chemical, electrical and irradiation injuries. Muscles, ligaments and bursae. Tendons, tendon sheaths and fascial spaces. *Infections and tumors of bones and joints.* Fractures. Dislocations. Deforming paralytic disorders; derangements of bones and joints. Amputations and prostheses. The nervous system. The endocrine system. The vascular system. The lymphatic system. The skin and adjacent tissues. The head. The neck. The breast. The thoracic wall, pleura and lungs. The heart and pericardium. The mediastinum, including the esophagus. The abdominal wall. The peritoneum. The stomach and duodenum. The small and large intestines. Anal canal and rectum. The liver and biliary system. The pancreas. Hernia. The genitourinary tract. Gynecology. Military surgery. Plastic surgery. Aseptic surgical technic. Preoperative and postoperative care. Roentgenology. Anesthesia. Index.

Note: (1175*) A standard and widely used medical college textbook. The chapters have been written by eminent surgeons and teachers of surgery and each man has covered a branch of surgery in which he is recognized as an expert. In the present edition there are 230 chapters or subsections written by 197 authors. Chapters are devoted to such specific topics as surgical treatment for congenital obstructions of the bile ducts. In general for each disorder covered the etiology pathology symptoms, diagnosis and medical and surgical treatments are concisely described. *In* numerous instances medical treatment is emphasized. Not all surgical techniques are covered but several leading ones are often described for a specific disorder. The fourth edition was published in 1945. Approximately 30 new sections have been added to this edition and about a dozen sections carried over have been extensively revised. Recent literature has been added to the lists of references.

COLE, WARREN HENRY editor

Operative technic. Introduction by Frank H. Lahey New York Appleton-Century Crofts, Inc. 1949 2 v illus. (part col d) 25 cm. Vol. I, $18.00 Vol. II, $16.00 1349

Contents: Volume I, General surgery. Wound healing and the care of wounds, by E. L. Howes. Hemorrhage and shock, by J. D. Stewart. Burns, by C. C. Lund and S. M. Levenson. Preoperative and postoperative care, by R. Elman. Amputations, by P. M. McKeever. *The face, mouth and jaws,* by J. B. Brown and F. McDowell. The esophagus, by W. E. Adams. Abdominal incisions, by F. A. Coller and K. F. Maclean. Surgery of stomach and duodenum, by W. Walters. Gastric vagotomy in the treatment of peptic ulcer, by L. R. Dragstedt. Surgery of the small intestine, by C. Dennis. The pancreas and adrenal, by A. Brunschwig. The gallbladder and bile ducts, by W. H. Cole. The liver and subphrenic space, by A. Ochsner and M. E. DeBakey. *The colon and appendix,* by R. E. Graham and J. Grey. The lower part of the sigmoid, the rectum and anus, by C. F. Dixon and A. L. Lichtman. The lymphatic system, by R. K. Gilchrist. Splenectomy by W. H. Cole. The surgery of portal hypertension, by M. A. Wenisch. Abdominal hernia, by R. F. Lehman and C. E. Davis, Jr. The breast, by T. G. Orr. The thyroid and parathyroid glands, by J. de J. Pemberton and B. M. Black. *The muscles, fascias, tendons and bursae,* by H. L. Mo-

Leuchlin. *Acute vascular injuries,* by M. E. DeBakey. *Traumatic* aneurysm and arteriovenous fistula, by D. Elkin. Varicose veins, by M. E. DeBakey. *Surgery of the hand and its tendons,* by H. S. Allen and S. L. Koch. The skin and subcutaneous tissues, by F. Glenn. Index. Volume II, Specialty surgery. Introduction, by A. O. Whipple. *Plastic surgery* by P. W. Greeley. Thoracic wall, pleural cavity lungs and diaphragmatic hernia, by J. M. Dorsey. The heart and mediastinum, by C. S. Beck. *Fractures,* by J. A. Key. Hematogenous osteomyelitis, by F. Dickson. Deformities and neoplasms *of the bone,* by C. E. Badgley. *Surgical approaches to the joints,* by L. C. Abbott and others. The orthopedic surgical treatment of spastic paralysis and anterior poliomyelitis, by F. A. Chandler. Scalp, cranium and brain, by H. A. Brown and H. C. Naffziger. The spinal cord, by C. Pilcher and W. F. Meacham. *Surgery of the intracranial nerves,* by F. C. Grant. Peripheral nerves, by R. G. Spurling. The autonomic nervous system, by R. H. Smithwick. Gynecological surgery by *J. V. Meigs and L. Parsons. The male genito-urinary system,* by D. K. Rose. Index.

Note. A broad presentation edited by the head of the Department of Surgery of the College of Medicine of the University of Illinois and written by eminent surgeons of the United States of America and Canada. Each of the papers or chapters is essentially a short monograph in which most of the space is given to explicit descriptions of technique but which contains background information on anatomy and physiology usually some information on the history of the operation and also literature references. Together the two books contain over 900 figures of which a few are reproduced in color

COLE, WARREN HENRY AND ROBERT ELMAN

Textbook of general surgery Foreword by Evarts A. Graham. Sixth edition. New York *Appleton-Century-Crofts, Inc., 1952* 1154 p. illus. 24 cm. $12.50. 1350

Contents (abridged) Inflammation and repair. Acute surgical infections. Ulcer, gangrene, sinus, fistula. Surgical methods. Anesthesia. Wounds. Amputations. Surgery in diabetes. Shock and hemorrhage. Thermal, chemical and electrical trauma. Fractures, dislocations and sprains. Blood vessels. The lymphatic system. The nervous system. Liver, gallbladder, pancreas and spleen. The alimentary tract. *The peritoneal cavity.* Hernia. *Surgical diseases of the chest,* by E. A. Graham and T. H. Burford. The endocrine glands. Gynecology. Military surgery by F. R. Berry. Index of authors. Index of subjects.

Note: (1174*) A standard textbook for medical college courses. It covers the physiological and pathological bases of surgery and describes the main surgical diseases with emphasis on their etiology *and clinical manifestations. The treatment of each disease is* also outlined and non-surgical therapies are considered along with surgical ones. Numbers inserted in the text lead the reader to citations of related literature where fuller discussions of particular therapies can be found. The fifth edition was published in 1948. Important though moderate revisions and additions were made in preparing this edition. The revised and added material relates to such fields as thoracic surgery cardiac surgery gastrointestinal surgery and vascular surgery

CUTLER, ELLIOTT CARR, AND ROBERT M ZOLLINGER

Atlas of surgical operations. Second edition. Illustrated by Mildred B Codding. New York The Macmillan Company 1949 225 p. illus. 38 cm. $12.00 1351

Contents (abridged) A. General considerations: Surgical technic. Anesthesia. Preoperative and postoperative care. B. Surgical operations: Neck. Chest. Abdominal wall. Gastro-intestinal system. Pilonidal sinus. Spleen. Gynecologic system. Extremities. Genito-urinary system. Central nervous system.

Note: (1181) In this work the common surgical operations are described by means of a brief text and fairly detailed drawings arranged in sequence for each operation. The book is made up so that the drawings are on right hand pages and the explanatory text is on facing left hand pages. It is not a work for specialists but it is useful one for advanced medical students, young surgeons, and general practitioners doing occasional surgery. In the present edition 30 procedures have been added. New illustrations are of course included for them and in addition many of the illustrations that were in the original edition have been redrawn.

FRANTZ, VIRGINIA KNEELAND, AND HAROLD DORTIC HARVEY

Introduction to surgery Second edition. New York Oxford University Press, 1951 233 p illus. 19 cm. $2 75 1352

Contents (abridged) History Injury and inflammation. Degeneration, hypertrophy atrophy regeneration. Deformities. Cysts. Neoplasms. Contusions. Abrasions. Incised wounds. Wounds with loss of substance. Repair of accessory skin structures. Repair of mucous membranes. Repair of muscle. Repair of tendon. Repair of hollow and solid viscera. Repair of nervous system. Repair of serous and synovial surfaces. Repair of cartilage. Repair of bone. Calculi. Infection. Infection in serous and synovial cavities. Infection in bone. Drainage. Operative wounds. Accidental wounds. Ulcers. Burns. Gangrene. Hemorrhage. Shock. Contact with the patient. Surgical technique. Anesthesia. Plastic surgery Experimental surgery The new surgery Bibliography Index.

Note. (1190*) A short, lucid and useful presentation of information about the injury inflammation, surgical repair and natural healing of tissues. It is intended for student surgeons but it contains background knowledge rather than detailed descriptions of surgical techniques. In the present edition chapter entitled "The new surgery" in which the great surgical advances based on better understanding of the blood, body water and electrolytes, the development of the antibiotics, etc are described. Various statements and passages elsewhere in the book have been revised.

HARDY JAMES D

Surgery and the endocrine system physiologic response to surgical trauma—operative management of endocrine dysfunction. Philadelphia W B Saunders Company, 1952 153 p. illus. 25 cm. $5 00 1353

Contents: The alarm reaction in the surgical patient—general endocrine relationships. Metabolic aspects of body fluid regulation and of shock. The dynamics of nutrition—the relation of nutrition to an adequate response to trauma. The physiologic basis of early ambulation—notes on convalescence. The endocrinology of surgical infections, thermal burns, tissue repair and neoplasia. Endocrine therapy in surgical patients. The thyroid gland. Hyperparathyroidism. Functioning tumors of the islands of Langerhans. The adrenal glands—surgical considerations. The pituitary thymus, and gonads. Index.

Note. The dual viewpoint in this book is indicated both in its title and in the table of contents. In it are presented (1) concise survey of the relations between the endocrine system and surgical trauma and (2) the surgical management of endocrine disease. Most of the chapters are short and are essentially outlines. However, each one is supplemented by long list of references. The author is member of the faculty of the Medical College of the University of Tennessee.

LAHEY CLINIC Boston

Surgical practice of the Lahey Clinic by members of the staff 784 illustrations on 509 figures Philadelphia W B Saunders Company, 1951 1014 p illus. 26 cm. $15.00 1354

Contents (abridged) The thyroid gland and neck: Experience with the preoperative use of the antithyroid drugs, by F H. Lahey and E. C. Bartels. Technic of subtotal thyroidectomy by F H Lahey Surgical treatment of hyperthyroidism, by R. B. Cattell. The surgical treatment of progressive exophthalmos, by J. L. Poppen. Malignancy in adenomas of the thyroid, by F H. Lahey and H. F Hare. Radical dissection of the neck, by F H. Lahey Tracheotomy after thyroidectomy by F H. Lahey and W B. Hoover. Tumors of the neck, by F H. Lahey Trends in surgery for carcinoma of the larynx, by W B. Hoover The esophagus, lungs and heart The surgical management of obstructing lesions of the esophagus, by H. D. Adams. The technic of total pneumonectomy by D P Boyd. The surgical treatment of extrapulmonary neoplasms, by D. P Boyd and J M. Moody Treatment of portal hypertension and associated acute hemorrhage, by H. D Adams. The stomach and duodenum The surgical treatment of diaphragmatic hernia—clinical report of 73 cases, by D. P Boyd and J. N Clemens. Partial gastric resection for peptic ulcer by K. F Marshall. Should total gastrectomy be employed in early carcinoma of the stomach? Experience with 139 total gastrectomies, by F H. Lahey and S. F Marshall. *The small intestine, colon, sigmoid and rectum:* Resection of the small intestine, by K. W Warren. Technic of ileostomy by R. P Colcock. Indications for surgical intervention in ulcerative colitis, by F H. Lahey Polyps of the colon and rectum, by K. W. Swinton and J. H. Hall. Prognosis in carcinoma of the colon and rectum, by R. P Colcock. Abdominoperineal resection for carcinoma of the rectum, by R. B. Cattell. The biliary tract: Experience with the operative management of 280 strictures of the bile ducts, with description of new method and complete follow-up study of the end results in 229 of the cases, by F H. Lahey and L. J. Pyrtek. The spleen, adrenal gland and pancreas: Splenectomy: when is it indicated? by F H. Lahey and J. W Norcross. Partial pancreatectomy by R. B. Cattell. An appraisal of pancreatoduodenal resection follow-up study of 61 cases, by R. B. Cattell and L. J. Pyrtek. *Pheochromocytoma—its diagnosis and treatment*, by E. C. Bartels and R. B. Cattell. The pelvis: Presacral neurectomy, by C. E. Sedgwick. Treatment of prolapse of the uterus, by R. P Colcock. The management of vesicovaginal fistula, by E. E. Emett. The bones and joints: The treatment of primary malignant bone tumors of the humerus, by G. E. Haggart. The management of chronic suppurative osteomyelitis of the femur by G. E. Haggart and M. T Hurley. The brain, spinal cord and nerves: Treatment of tumors of the pineal body by G. Horrax. The end results of complete versus intracapsular removal of acoustic tumors, by G. Horrax and J. L. Poppen. Meningiomas and neurofibromas of the spinal cord, certain clinical features and end results, by G. Horrax and others. The herniated intervertebral disk; 400 proven cases 18 months to 10 years following operation, by J. L. Poppen. Relief of angina pectoris by sympathectomy by J. A. Evans and others. The technic of lumbar sympathectomy by J. L. Poppen. Anesthesia: Preoperative preparation and premedication, by M. J. Nicholson. Technic of endotracheal anesthesia, by M. J Nicholson. Complications of spinal anesthesia, by U. H. Eversole. Experiences with cardiac arrest, by F H. Lahey and R. R. Ruzicka. Miscellaneous *Surgery of Ménière's disease*, by F D. Lathrop. The practical anatomical and surgical considerations for exposure of the facial nerve, by F D. Lathrop. Anticoagulant treatment of postoperative venous thrombosis and pulmonary embolism, by J. A. Evans and J. F Dee. *Surgical management of arteriovenous aneurysms, by H. D. Adams.* Repair of incisional hernia, by R. B. Cattell. The repair of inguinal hernia, by K. W Warren. Index.

Note. Surgical procedures which have become standardized at the Lahey Clinic are described and illustrated in this work. Dr. Lahey has stated in the book's preface: we have continued to be impressed with the fact that, with allowance for the natural variations in anatomy and pathology the employment of standardized operative procedures by all of the surgeons in the clinic makes for refinement of operative detail and 'unhesitating cooperation on the part of the operating nurses and assistants. Altogether there are 75 papers of which only selection is noted above by author and title. The book is of interest to students of surgery and to practitioners individually and to the staffs of surgical clinics.

MARKOWITZ, JACOB

Experimental surgery, including surgical physiology Second edition. Baltimore The Williams & Wilkins Company, 1949 546 p. illus. 24 cm. $7.00. 1355

Contents (abridged) The antivivisection movement. Care and feeding of animals. Anesthesia. Equipment, technic, sutures and instruments. Technic of opening and closing abdominal cutaneous incisions. Technic for opening and closing the thorax of dogs—laparotomy. Technic for opening and closing the thorax of dogs. Elementary exercises suitable for undergraduate medical students. Standard technical procedures in the surgery of the alimentary canal. *Gastric fistulas. Intestinal fistulas.* The experimental production of chronic peptic ulcer. Exteriorization of an intestinal loop. Absorption, excretion and motility of the isolated colon. Experimental surgery of the esophagus. Experimental surgery of the pancreas. Total surgery of the esophagus. Experimental surgery of the gall bladder. Transplantation of biliary fistula. Experimental surgery of the gall bladder. Transplantation of ducts. *Vascular transplantation.* The experimental surgery of bone. Several standard intracranial operations. The experimental surgery of the heart. Experimental surgery of the autonomic nervous system. Vascular surgery. Transplantation of organs. The experimental surgery of the liver. Index.

Note: (2400) A pioneer text which is designed primarily for the use of medical students enrolled in introductory surgery courses. The operating techniques described are for use on animals, particularly dogs. The first edition was published in 1937. Except for one minor change the chapter titles are the same in this edition. However, important revisions have been made throughout, and the type from which the book is printed has been reset. Again, there are extensive lists of references.

MONOGRAPHS ON SURGERY 1952. B Noland Carter editor Advisory editors Gynecology Joe V Meigs Urology Charles Huggins Or

thopedic surgery, Alfred R. Shands. Baltimore The Williams & Wilkins Company 1952 430 p. illus. 26 cm. $12.50 1356

Contents: The radical surgery of pancreaticoduodenal cancer by A. O. Whipple. Radioactive iodine in the diagnosis and treatment of thyroid disease, by G. M. Curtis and C. V Meckstroth. The management of acute chest injuries, by B. Blades and R. C. Garby. Urinary incontinence in the female: Introduction, by J. V Meigs. The etiology of urinary stress incontinence in women, by R. R. Mueller. Operative technic for stress incontinence of urine in the female, by W T Kennedy. The vaginal approach in the surgical treatment of stress incontinence, by L. F Frost. Transplantation of fascia for relief of urinary stress incontinence, by A. H. Aldridge. The use of the pubococcygeal muscles in the repair of stress incontinence, by A. Ingelman-Sundberg. Physiologic therapy of urinary stress incontinence, by A. H. Kegel. The internal fixation of fractures of the shafts of long bones, by G. W N. Eggers. Intracapsular fractures of the femoral neck—their care and complications, by K. R. Schottstaedt and others. Aseptic (avascular) necrosis of the femoral head in adults, by W Cooper. Arthroplasty by R. A. Knight. Congenital ureteral and pelvic dilatation as evidence of obstruction, by F Hinman, Jr. Renal neoplasms, by W F Whitmore. Surgery of the large arteries, by N. E. Freeman and others. Index.

Note: This third volume in series which is designed to replace Nelson's *Loose leaf surgery* contains the monographs noted above. Each volume of the series contains new monographs on selection of topics in surgery. The typical monograph is critical survey of the techniques and practice in specific area of surgery. The purpose of the series is to make information on new techniques and experience generally available to surgeons. A liberal use is made of illustrations; for instance, Eggers' monograph on the "Internal fixation of fractures of the shafts of long bones" in the present volume contains 44 figures. Literature references are furnished with each monograph.

Moore, Francis D and Margaret R. Ball

The metabolic response to surgery Metabolic diagrams by Mildred B Codding. Springfield Illinois Charles C Thomas, 1952 156 p. illus. 29 cm. (American lecture series. Publication number 132 A monograph in American lectures in surgery edited by Michael E De Bakey and R. Glen Spurling) $7.50 1357

Contents: Technique—subjects and methods; presentation and charting; terminology and interpretation. The response to single trauma. The detection; being separate consideration of starvation, immobilization and endocrine factors in the operative response. Further responses to trauma and depletion. Complex problems in metabolic response. Changing the balance. Facts and corollaries; being summary of the book, together with clinical corollaries which may be drawn in applying these concepts to the care of surgical patients. Appendix: Surgical diets and parenteral supplements. Bibliography.

Note: A work based partly on original studies made by the authors at Peter Bent Brigham Hospital and Massachusetts General Hospital, Boston, and partly on the literature. The original studies were made on "everyday surgical patients" with the use of healthy persons for control studies. The book is addressed to practicing surgeons and its purpose is to provide authoritative information on the metabolic factor in the responses of patients to surgery. It includes rather full discussions of variety of case histories. The last chapter in which the knowledge is compactly summarized is useful feature. The bibliography runs to 18 columns and includes not only literature cited in the text but also other studies which the authors believe have potential usefulness for their readers.

Moyer, Carl A.

Fluid balance a clinical manual. Chicago The Year Book Publishers 1952 191 p. 18 cm. 1358

Contents: Early studies on body fluids. Chemistry of body fluids. Body fluid equilibrium. Disturbances of body fluid equilibrium. Evaluation of diagnostic signs of fluid imbalance. Clinical and laboratory signs of changes in fluid volume and osmolar concentration. Diagnosis of changes in ionic composition of body fluids. Distributional shift of extracellular fluid. Descriptive diagnosis of fluid imbalance. Treatment of fluid imbalance. Role of fluid therapy in surgical patients and in trauma. Complications of parenteral fluid therapy. Index.

Note: A short but useful volume on the diagnosis and treatment of fluid and electrolyte imbalances. There is some emphasis on the rapid interpretation of signs and symptoms. Lists of literature references are included. The author is Professor of Surgery in the School of Medicine of Washington University.

Orr, Thomas Grover

Operations of general surgery Second edition. With 1700 step-by-step illustrations on 721 figures. Philadelphia W B Saunders Company 1949 890 p. illus. 27 cm. $14.50 1359

Contents: Wound healing. Treatment of fresh wounds. Sutures and knots. Amputations. The skin and subcutaneous tissues. Muscle, fascia, and bursa. Tendons and tendon sheaths. Thorax and respiratory system. The breast. Circulatory system. Abdominal incisions. Digestive system. Hernia. Bones and joints. The nervous system. The sympathetic nervous system. Lymphatic system. Endocrine system. Congenital anomalies. Genito-urinary system. Female reproductive system. Index.

Note: (1402) A successful textbook for students in medical colleges and manual for practicing surgeons. Surgical technique is of course the main subject matter but surgical anatomy dangers, and safeguards, as well as other practical information, are included also. All surgical techniques are not described; instead, only one or two proven techniques for each operation are given. The illustrations are of high quality and include number of step-by-step sequences. The first edition was published in 1944. In the present edition the work has been enlarged by 140 pages and the number of illustrations substantially increased. Additions have been made to the chapter bibliographies.

Schafer, Paul W

Pathology in general surgery With 495 plates. Chicago The University of Chicago Press 1950. 581 p. illus. (part col d) 27 cm. (The University of Chicago Committee on Publications in Biology and Medicine, edited by Lester R. Dragstedt and others) $17.50 1360

Contents: Painless and general aspects. Vascular system. Endocrine glands. Breast. Lung and mediastinum. Head and neck. Esophagus. Stomach. Duodenum and small intestine. Appendix, colon, and rectum. Pancreas. Liver. Gall-bladder and bile ducts. Peritoneum. Index.

Note: *The pathology of diseases usually treated by surgery is the* subject of this book. The author points out that the duty of surgeons is "to follow resected tissues into the laboratory there to determine their gross and microscopic character. Such clinical pathologic correlations not only represent the basis for improvement in the practice of medicine, but should also be regarded as the reference point from which may be derived original concepts so vital to the continued advance of the frontiers of medical knowledge. The chapters whose titles are listed above are subdivided by specific diseases. For example, the chapter on the pancreas has the following subheads: "Pancreatic cysts, Acute pancreatitis, "Chronic pancreatitis, "Islet-cell tumors," "Carcinoma of the pancreas, and "Sarcoma of the pancreas. Each individual disease is discussed in several pages of text, which are accompanied by large illustrations of typical pathological specimens. There are 495 plates and more than half are reproduced in color. Literature references are included.

Surgical clinics of North America

Symposium on safeguards in surgical diagnosis. Philadelphia number Philadelphia W B Saunders Company 1952 1563–1903 p. illus. 23 cm. (Surgical clinics of North America, December 1952) Paper $15.00 per year cloth, $18.00 per year 1361

Contents: Foreword, by J. H. Oldham, Jr. Intracranial aneurysm—surgical diagnosis and treatment, by R. Jaeger. Neurosurgery—

some diagnostic problems, by R. A. Cooke. Surgical diagnosis in cancer of the head and neck, by H. P Royster Surgical disorders of the thyroid gland—the complete diagnosis, by T. A. Shallow and others. The diagnosis of carcinoma of the larynx, by L. H. Clerf and others. The diagnosis of benign lesions of the esophagus, by K. K. Fry and F J Putney The diagnosis of lung cancer by F F Allbritten, Jr., and others. The diagnosis of mediastinal tumors, by W E. Burnett and others. Surgical diagnosis of genito-urinary conditions, by T R. Fetter and W C. Drake. Surgical diagnostic problems in obstetrics, by T L. Montgomery Acute abdominal pain of female genital origin, by P O. Klingensmith. Adequate measures in the diagnosis of uterine cancer—with regard to management and treatment, by L. C. Scheffey and W R. Lang. The Roentgen diagnosis of neoplasms of bone, by R. S. Bromer. Accurate diagnosis in lesions of the shoulder and knee joint, by A. F DePalma. Ruptured intervertebral disks, by F C. Grant and F K. Nelson. The recognition of deficient blood volume in surgical patients, by J Y Templeton, III, and R. K. Finley Jr Clinics on other subjects: The management of polyps of the colon and rectum, by H. R. Hawthorne. Surgery of the mitral valve. Index to volumes 10, 11 and 12.

Note. (1603a) *Surgical clinics of North America* is published six times a year and is continuously paged through the volume as a periodical. However each issue is devoted to a symposium on a topic of current interest, and the issues are available bound in cloth as well as in paper. The December 1952 issue contains the papers listed above. The authors are teachers and practitioners of surgery and the volume is intended for graduate surgeons.

THOREK MAX

Modern surgical technic. With a foreword by Fred W Rankin. Second edition. 2 590 illustrations including 57 full color plates. Philadelphia J B Lippincott Company 1952 4 v and index. illus. (part col d) 26 cm. $79 00 1362

Contents (abridged) Volume I. Part I, General operative considerations: The surgeon and his art. Selection and management of "poor-risk" patients. Postoperative considerations. Anesthesia, by C. J. Betlach. Blood transfusion. Electrosurgery Part II, Surgery of head and neck and principles of plastic surgery: Surgery of the orbit and eye, by J Igersheimer Surgery of the ears and adjacent structures, by W L. Gatewood. Surgery of the face. Surgery of the jaws. Surgery of the sinuses and tonsils, by W L. Gatewood. Surgery of the neck and the cervical endocrine glands. Principles of plastic surgery and skin grafting. Volume II. Part III, Surgery of the nervous and vascular systems: Surgery of the central nervous system, by H C Voris. Surgery of the arteries, by R. W Mc-Nealy Surgery of the veins, by H O McPheeters. Part IV Surgery of the chest, by R Nissen. Part V Surgery of bones and joints Orthopedic surgery by K. Eichelbaum and H. K. Turner. Fractures, dislocations and sprains, by J J Callahan. Volume III. Part VI, Surgery of the breast. Part VII, Surgery of the abdomen Surgery of the stomach and the duodenum. Surgery of the intestines. Surgery of liver gallbladder and biliary passages Surgery of the pancreas. Surgery of the spleen Volume IV Part VIII, Hernias. Part IX, Gynecology and genito-urinary surgery Index.

Note (2604) A cyclopedic work of reference nature. The techniques described are those in fairly wide, current use. Each technique included is covered explicitly in considerable detail. The textual descriptions are supplemented by illustrations and many of these are arranged in step-by-step series Short lists of selected references are included in most chapters The book is well suited to use as a reference work in the offices of general medical practitioners and general surgeons It is useful also to surgeons practicing specialties who are sometimes called upon to perform operations outside their own fields. The first edition was published in 1938 in three volumes and was released in 1942 in a one-volume edition for the use of medical officers of the Armed Forces. In this second edition more than 400 pages of text have been added and the number of illustrations has also been substantially increased

THORNDIKE, AUGUSTUS

A manual of bandaging strapping and splinting. Second edition with 119 illustrations. Philadelphia Lea & Febiger 1950 148 p. illus. 19 cm. $2.00 1363

Contents The dry sterile dressing for clean wounds. Septic wound dressing Sprains, strains, and contusions. Dislocations and emergency splinting Transportation of fractures. The use of plaster of Paris and similar bandages in splinting Bibliography Index.

Note: (1404) A brief, illustrated manual addressed primarily to medical students, student nurses, and hospital orderlies. The second edition has been revised to incorporate the changes in practice brought about as a result of experience and research stimulated by World War II, including, among other new forms and types of useful bandaging materials, the plastic impregnated bandage used as a substitute for plaster of Paris bandage.

YEAR BOOK OF GENERAL SURGERY

The 1952 year book of general surgery (June, 1951–May 1952) Edited by Evarts A. Graham. With a section on anesthesia edited by Stuart C. Cullen. Chicago The Year Book Publishers, Inc., 1952 670 p. illus. 20 cm. $6 00. 1364

Contents: Introduction. General topics. Anesthesia. Shock. Water and electrolytes. Nutrition. Chemotherapy—antibiotics. Wounds, wound infection and burns. Neoplasms. Nervous system. Face, buccal cavity and neck. The thyroid and parathyroid. Breast. Mediastinum and thorax. Lung. Heart and major blood vessels. Peripheral arteries. Sympathectomy Peripheral veins—thrombophlebitis. Esophagus. Abdomen—general. Hernia. Liver and spleen. Stomach and duodenum. Biliary tract. Pancreas. Small intestine. Vermiform appendix. Colon and rectum. Anus. Kidney Adrenal gland. Extremities and spine. Anesthesia. Premedication. Inhalation anesthesia. Ventilation. Barbiturates. Muscle relaxants. Spinal anesthesia. Local anesthetics. Circulation. Miscellaneous. Index. Index to authors.

Note. Another volume in this useful series. Significant articles are selected from the medical literature of the world and are reduced to abstracts which average 500 words in length. These abstracts are classified under the various headings given in the contents above. They are not highly condensed summaries but are written in narrative fashion so that they can be read with ease. A reference to the original source is given and in numerous instances the abstract is supplemented by an evaluatory note written by the editor. There are 203 figures in the present issue.

ANESTHESIA

ADRIANI, JOHN

The pharmacology of anesthetic drugs a syllabus for students and clinicians. Third edition, completely revised. Springfield, Illinois Charles C Thomas, 1952 179 p. illus. 28 cm. $9 50 1365

Contents: Effects of physical and chemical properties on pharmacological activity Administration, absorption and elimination of volatile anesthetic drugs. General systemic effects. Administration of volatile drugs. Gaseous agents. Volatile agents. Inorganic non volatile agents. Aliphatic non volatile agents. Barbiturates and other non volatile agents derived from urea. Opium alkaloids and synthetic analgesics. Local anesthetics. Non anesthetic drugs used in conjunction with anesthesia. Inorganic gases used in conjunction with anesthesia. Some clinical considerations. Glossary References. Index.

Note (3410) An illustrated digest of fundamental facts about the properties, actions, and techniques of administration of anesthetic drugs in current use. It is organized in chapters whose titles are given above. Within most of the chapters the drugs are taken up one by one. The history preparation, properties, administration, advantages, disadvantages, contraindications are all covered concisely In addition, the physiological actions are summed up in diagrams based on the human figure. The book contains a number of auxiliary reference aids such as a glossary tabulation of dosages, literature references, and a very detailed index. The second edition was published in 1941. For this edition the work was revised and expanded throughout and is now almost twice as long.

BURSTEIN CHARLES L.

Fundamental considerations in anesthesia. New York The Macmillan Company 1950. 153 p. illus. 22 cm. $4.50 1366

Contents: The autonomic nervous system. The respiratory pattern during general anesthesia. Respiratory disturbances: Apnea and during general anesthesia. Respiratory disturbances: Apnea, bradypnea, carotid body reflexes. Hyperpnea, hypopnea, tachypnea, upper respiratory Cheyne-Stokes' respirations, bronchoconstriction, upper airway obstruction. Laryngeal spasm. Circulatory disturbances: Cardiac plexus reflex. Carotid sinus reflex. During spinal anesthesia. Celiac plexus reflex. Carotid sinus reflex. Parasympathetic reactions: Other than vagal. Cardiac arrhythmias. Parasympathetic reactions: Other than vagal.

Vagal respiratory Vagal cardiac. *Gastrointestinal autonomic reactions.* Pulmonary control. Index.

Note: A monograph for clinicians and teachers, describing and analyzing complications that may arise during surgery It covers problems that occur during clinical anesthesia; considers the pharmacology physiology and physio-pathology involved in these problems and indicates the proper treatment for various reactions. *The author emphasizes the importance of* knowledge of basic physiology and pharmacology Bibliographical references are printed at the end of each chapter

CLEMENT FREDERICK WALTER

Nitrous oxide-oxygen anesthesia. Third edition, thoroughly revised, with 129 illustrations. Philadelphia Lea & Febiger 1951 369 p. illus. 24 cm. $6.50 1367

Contents (abridged) Part I, General considerations Properties and manufacture of gases. Theory of nitrous oxide-oxygen anesthesia. *Signs of nitrous oxide-oxygen anesthesia.* Metabolism and premedication. Charting and shock. Classification of patients. Part II, The administration of N_2O–O_2 anesthesia: The gas apparatus. Rebreathing. Obstruction, airways and resuscitation. Nitrous oxide-oxygen and curare. Oxygen want—oxygen excess—cyanosis. Part III, Special techniques Primary and secondary saturation. Pressure. Carbon dioxide absorption. Endotracheal anesthesia. Part IV Summary *of N_2O–O_2 anesthesia: Advantages and disadvantages of N_2O* for anesthesia. Comparison of nitrous oxide-oxygen with other gaseous anesthetics. Part Dental anesthesia analgesia. Part VI, Some physical factors in the administration of gaseous anesthetics, by E. I. McKesson. Index.

Note: (1641) The standard treatise on this kind of anesthesia. The author in association with the late E. I. McKesson played considerable part in its development. The first two editions of the book were largely limited to covering the McKesson-Clement technique; but in this considerably expanded edition the whole subject is covered, including the advances in the fundamental knowledge of anesthesia and the modifications in technique which have taken place in recent years. The book is of interest not only to anesthetists but also to surgeons and to dentists. Literature references are included.

COLLINS, VINCENT J

Principles and practice of anesthesiology 99 illustrations. Philadelphia Lea & Febiger 1952 528 p illus. 24 cm. $10 00 1368

Contents (abridged) Section I, General considerations: History and scope of anesthesiology Anesthetic equipment and its maintenance. Positioning of patients. Preanesthetic preparation and premedication. Inhalation technic Carbon dioxide absorption technic. Endotracheal technic Curare—an adjunct to anesthesia. Principles of spinal anesthesia Intravenous anesthesia Rectal anesthesia. *Refrigeration anesthesia* Explosions and fire hazards. Respiration—transportation of physiologic gases Section II, Regional technics: Blocks of the head. Blocks of cervical spinal nerves. Extremity blocks. Miscellaneous blocks Section III, Pharmacologic considerations. Section IV, Complications Respiratory derangements. Autonomic reflexes Cardiac arrhythmias Complications of spinal anesthesia. Temperature regulation and heat problems. Postoperative complications. The management of patients in coma. Resuscitation. Shock. Section Special considerations: *Pediatric anesthesia.* Anesthesia in the aged. Anesthesia in abdominal surgery Anesthesia for thoracic surgery Anesthesia for head and neck surgery Management of the diabetic patient Anesthetic management of the cardiac patient Obstetrical analgesia and anesthesia Section VI, Intravenous and inhalation therapy Index

Note: An inclusive work in which all phases of anesthesia are covered very compactly It is organized in 44 chapters, some of which are as short as five pages. However most chapters are supplemented by selected but fairly extensive lists of literature references. Information is included not only on all the established anesthetic drugs and techniques but also on the history of anesthesia, pertinent aspects of clinical medicine and of pharmacology pre- and post-operative complications of anesthesia, blood transfusions, inhalation therapy etc. The book is suitable for use as text in accelerated courses and as reference book by graduate physicians. The author is Director of the Department of Anesthesiology of St. Vincent's Hospital, New York City

CULLEN STUART CHESTER

Anesthesia in general practice. Third edition. Chicago The Year Book Publishers, Inc., *1951 292* p. illus. *21* cm. (The general practice manuals) $4 50 1369

Contents: Use of depressant drugs. Airway Inhalation anesthesia—agents. Inhalation anesthesia—technics. Spinal analgesia. Regional, infiltration and topical analgesia. Signs of anesthesia. Choice of anesthetic agent and technic. Recognition and treatment of shock. Oxygen therapy Pre- and postanesthetic care of the patient. *Explosion hazards.* Appendix Anesthetic agents available for office use. Index.

Note: (1193) A short manual addressed to general practitioners and part-time anesthetists rather than to specialists. Although the chief anesthetic drugs are described, the emphasis is on basic mastery and standard techniques The second edition was published in 1948. In this edition the first chapter has been extensively revised and less prominent changes have been made at various points in the other chapters. The length of the book has been increased by about 30 pages.

GRAUBARD DAVID J AND MILTON C PETERSON

Clinical uses of intravenous procaine. Springfield, Illinois Charles C Thomas 1950 104 p. illus. 22 cm. (American lecture series, Publication no 73 A monograph in American *lectures in anesthesiology edited by John* Adriani) $2.50. 1370

Contents: Introduction. Chemistry and pharmacology Intravenous local anesthesia. Pruritus. Serum sickness and other states of sensitivity Analgesia in burns and postoperative pain. Acute arrhythmias during anesthesia. Pain in traumatic and inflammatory conditions. Acute anterior poliomyelitis. Other indications. Index to authors.

Note. Rather than brief survey based on selection of the pertinent literature, this work is comprehensive review of its subject. The text is very concise; nevertheless the essential data in the source articles are stated. Some transcripts of case histories are included. The bibliographies appended to the chapters are international in scope. About 240 names appear in the author index, indicating the extensiveness of the literature coverage.

GUEDEL, ARTHUR ERNEST

Inhalation anesthesia, a fundamental guide. Second edition. New York The Macmillan Company 1951. 143 p illus. 22 cm. (Macmillan surgical monographs) $3 75 1371

Contents: Part I, Principles of inhalation anesthesia: Mechanism of inhalation anesthesia. Stages of anesthesia. Signs of anesthesia. Depth of anesthesia. The mechanism of various anesthetic requirements. *Part II, Anesthetic accidents. Accidents due to changes in* blood pressure during anesthesia, Ventricular fibrillation. Central respiratory failure Accidents due to peripheral respiratory interference. Aspiration of debris. Miscellaneous accidents. Cyanosis. Anesthetic explosions. Selected references Index.
